I strongly agree with this recommendation: "Establishing student organizations as semi-professional entities with structured guidelines and expectations allows students to understand the reality of most post-college professional settings while enjoying shared interests with other students." During my time at A&M, I was involved in many student organizations, some were larger than others, but in all of them, I learned the importance of budgeting, vendor contracting, verbal and written communication with external companies, and leadership. Some of the organizations had a very involved faculty advisor, whereas others didn't and I leaned on my fellow student leaders to make decisions and "figure it out". I graduated 8.5 years ago, and I'm so thankful for some of these experiences as I entered the workplace already possessing some of these skills. However, many other new graduates haven't had these same experiences. I

also know that I could have learned more if there had been structured guidance or resources for some of these activities. I know that the activities will greatly vary by student organization and its mission, but having some generic guidance on common practices that most student organizations will perform will help (i.e. budgeting, SOFC coordination, forecasting, etc.).

Other groups to include with actual recognition include the Greek system, diversity-specific groups (LGTB would be one example), etc. There could be more topical participation areas within this group (athletics; music and arts; hometown or regional meet ups; charity/service; etc.)

From the remote former student perspective, parts of "student affairs" appears to be a mess, likely a result of external political influences. Restructuring is likely needed, but the new structure should be reluctant to make politically-coined acronyms the purpose for reorganization. This should be about helping students achieve personal goals, and the resources available to do that.

I would like to see a higher percentage of students feeling like A&M is headed in the right direction. The university is WAY TOO big in the sense that there are too many students currently at TAMU. It is hard for students to find parking spots on campus. As much as I don't want there to be less AGGIES graduating from TAMU, TAMU needs to limit the number of people attending the school. Students are just a number--too many to hear their voices and concerns.

With regard to mental health provisions for students, I believe this is extremely important with such a large population. Even when I was a student eons ago, there were situations that were uncomfortable for me, and I felt lucky to have caring friends to watch out for me. But not all students will have this kind of support. Having support and advertising the availability of counseling or anonymous discussions to students will make A&M a safer place. College Station is also a safer city than many in Texas, and this could be good marketing for student recruitment along with mental health services.

Agree

Not sure if this is the correct department does this feedback... but I can only see positive outcomes to adding more students of color to the TAMU student body. Sure it's great that we have five generations of Louie Gohmerts, but are we really proud of these "legacies"? How about helping out the Hispanic and Black population? Recruit the best and brightest. Give them the best scholarships. Assign a person in leadership to support them all the way through. Hand-hold if you have to—but do something! The lack of diversity is embarrassing. There were no (I mean zero) students of color in my graduating college. How could this be possible? Because we weren't striving to be anti-racist. We rest on our laurels and traditions and forget there are brilliant minds who don't look like us and pass them by. We can do so much better. I'll give my money to TAMU when they show even a 5% improvement in the enrollment of black students.

Keeping the students informed, not only about current affairs, but also the history & traditions of TAMU helps the student body to understand why we have traditions & their importance to all Aggies. This information would help each student to understand why we are Aggies & to support maintaining said traditions. Each Aggie should feel a level of ownership to TAMU while there & after leaving.

Seem logical and streamlined, communication to students and potential students is key. A marketing program aligned around how to navigate this department would be beneficial to students, potential students and their parents would be extremely helpful. Enrollment requirements are high but the process and ongoing needs of students, where and who to go to for what, should be fairly easy to communicate.

Vehemently disagree with the Student Affairs SWOT Analysis in its entirety. The statement "a desire for a cultural shift [away] from allowing students a large amount of freedom to run and manage student organizations with limited boundaries and guidelines" as a means to \*enhance\* leadership training is an utterly contradictory notion; it suggest removing the very thing that accrues leadership traits to an individual. The student experience belongs to the students, not to chaperones who remove the ability for students to try, fail, and learn. The University is certainly within its rights to establish a code of conduct and set guard rails for acceptable activities, and likewise to impose consequences for infractions; however, to insert itself into individual organizations and amongst individual leaders would be a grave disservice to the development of those student leaders. The last statement in the section exposes just how little of the culture the consultancy was able to come to understand.

Agree with recommendations

None

I know there is a high percentage chance this will fall on deaf ears, but I want to warn those implementing this report that there is much danger to streamlining our Student Organization structure to be just like every other university. One of the things that makes Texas A&M so special is that students are given more responsibility than at other universities, and given the reigns to succeed or fail. I would not be who I am today without that opportunity, and it is the single most reason I am thankful to have attended Texas A&M. I could have received the same education at a multitude of other schools, but the student involvement and leadership responsibility is what set A&M apart. Without it, we grow more and more like every other school. I would like to mention the report's comments in the threat analysis regarding Fish Camp. The report states "There is a lack of control over the content of the camp. The challenges of polarized politics have the potential to threaten core values.", immediately after mentioning A&M's huge problem with diversity. Fish Camp is one of the most forward thinking organizations on campus, and continually tackles A&M's issues head on. They don't always do it perfectly, but at least they aren't reading off a script hand approved by the Board of Regents, President's Office, and VP of Student Affairs. Taking away that control from the students not only cheapens the experience of the student leaders, it also cheapens the experience of the new students coming to the camp. Students aren't dumb, and can tell when someone is speaking something they actually believe and are passionate about compared to what they are required to say. I would hope that TAMU leadership allows these students to be leaders, speak to their authentic experiences, and challenge TAMU to get better and be more diverse. My hope is that after this report, students continue to have the opportunity to lead and make decisions for all organizations on campus, and that the university provides them more support to do so. Thanks and Gig 'em, [REDACTED] '16 and '17

---

While not discussed here, A&M is losing quality student enrollment. Former Aggies are intelligent and raise their children with high standards. Somewhere, someone decided that Aggies will send their kids to A&M no matter what. So, that group decided to discriminate against legacy Aggies. Scholarships and opportunities are given to new generation Aggies and Legacy Aggies are not considered. The result is a new generation of Aggies, ones that do not know or appreciate the traditions. Over time, this has resulted in a loss of tradition for the school. Quality students are going to other schools because other schools are showing value in these students with not only scholarships but also personal phone calls, emails, and handwritten letters. I for one was very embarrassed at what A&M provided in terms of scholarships and communication. My daughter received \$83,000 in scholarships from a competitor school. A&M offered a one time scholarship of \$1000.

---

No opinion.

---

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

---

My most important concern. The cost of students attending A&M continues to rise faster than inflation (although 2021 inflation may be impossible to exceed). Thus the cost for students to obtain a degree makes it necessary to obtain student loans requiring years of repayment or for parents to use retirement funds for their children's education. Something must be done to correct this.

---

Bring back bonfire

---

I agree that high impact practice services like the money education center should be aligned with student affairs. It should be equal in status to the career center. Students at every stage of their college education should have ready access to the money education center. The class taught by the money education center staff called foundations of money education is excellent. Now that the class is a part of the core curriculum, it should be promoted even more heavily and be available to more students.

---

I do worry that moving Career Center away from Provost might lessen the visibility and types of recruiting activities done at TAMU. Theoretically I agree with many of the recommendations, but I am concerned with a lessening of recruitment and Aggie hiring, which is why the students are attending TAMU.

---

I am 'shocked' at the absence of any discussion around college tuition and the cost to attend college. The approach to funding college education is changing and needs to change. A&M should be 100% focused on placing students in jobs (hence stronger collaboration with business) and, after placed, collecting for the cost of education. Business can and should make investments in reducing college costs also...it is their future also!

---

Do not sell out to Critical Race Theory Keep political bias out of the classroom Protest the free exchange of thoughts and ideas that is supposed to take place at a university.

---

I have serious concerns about the movement of the Memorial Student Center here. This facility and all activities pertaining to it are sacred. I do not believe a staff member needs to be involved and policing every student organization. This is exactly what the Aggie Honor Code was created for. If you don't trust your Aggies you don't belong there. Offer a training for groups leaders at the beginning of the year and then let them go. They are not little kids. Stay out of the clubs and stay out of the groups....this is not socialist big brother. This is Aggies!

---

Stop promoting/prioritizing the jab

---

I must have missed any recommendations for the Women's Resource Center. This was of interest to me as I have endowed the WRC.

---

Student organizations and conferences need to be run by student for students. Student organizations should be accountable to their members and target audience, not to university staff. A&M has some of the best "other education" opportunities in the country just because these organizations are student-led rather than staff managed. The University has a role in supporting, rather than managing or controlling, student organizations.

---

Advising has always been terrible (in the sense of hit or miss) at A&M. I like the idea of centralization, but I do worry that bureaucrats will advise students based on simple numbers. What we need are BOTH people that actually know their students and also know their programs. Right now we have neither - consistently. I speak as both a former student and as a current parent.

---

No specific comments here.

---

I absolutely agree there need to be changes to the oversight of student organizations. Freshmen are pushed at New Student Conferences to join a leadership group to be a part of "FLO". So many students try and don't get it, and their esteem/confidence is shot at a vulnerable time during some of their first experiences at A&M. Sadly, what is later learned is that many times the people selected for the groups were selected because they know someone or are a good "party buddy". How can the school encourage our freshmen to join these leadership groups that have such a biased process? Sororities/Fraternities are different since the school does not promote them, but if the school promotes these leadership programs at New Student Conferences there needs to be better oversight of the selection process for these organizations. I have heard so many parents complain about the current process, and I think it is because the student groups have little to no accountability. Also, I think if the school wants to continue to grow, it is absolutely critical that you have the most outstanding A&M personalities leading tours with potential students. I have heard from several parents who told me that the student who led their tour of campus did nothing to promote the true spirit of A&M and as a result, their children chose other schools (which included Texas). In fact, they told me that had I given the tour, their children probably would have chosen A&M. That is a critical time to introduce A&M to student prospects, so I would suggest you have a thorough review of the process selecting students for those positions.

---

We can not lose our unique ethos. The heart and soul of our school needs to be focused on those core values. If we lose our focus and commitment to those values, and fail to inculcate them into our students we have failed in our mission to the citizens of the state of Texas and to our nation. Academic achievement devoid of core values only promotes soulless elites. We have enough of those in our country.

---

Agree

---

I believe that the plan for supporting students that are struggling emotionally is still short of the need. It is very difficult for many students to adjust to the size of Texas A&M

---

Major Kudos to the Corps of Cadets Academic office. They have been a huge help to my son who is a fish in the FTAB. I dearly wish we had something like that back in 1984 when I was a fish, I'm sure my academic career would have been much better than it turned out. I've been really impressed with that department. Merideth and her team are doing a fantastic job for our cadets!

---

NEVER EVER allow disgusting perverted shows on campus like "Draggieland." That is what made me stop my annual donations to TAMU.

---

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M.

---

Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

no comments

SA as a whole is decent to mediocre on campus. Many universities have much more robust and active units.

Very disappointed with Students chanting F\*\*k Joe Biden at Kyle Field....This is not the Aggie Spirit I am accustomed to...lets leave politics out of our athletic endeavors

Increase the Corps enrollment. The Corps is A & M in the eyes of many in industry.

Agree with all findings and the rationale for each.

No doubt oversight needs to happen with student organizations, esp. those that are large and high profile. No doubt Fish Camp is out of control. Moving OPAS out of the MSC is a HUGE mistake. Just like moving Parent's Weekend Committee out of Student Government. Those are MAJOR student leadership development opportunities that need to stay where they've been. Sure hope the current interim VPSA is not the final choice as permanent replacement.

none

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

DEI is the death of Texas A&M. Anyone can apply to the school. Why not ask current and former students of color to comment on their experiences? Why did they come to TAMU? Trying to make admission easier for some and not others is racist! You are basically saying that people of color are too dumb to get in on their own merit.

Advocating for fringe groups that do not align with our CORE Values as Aggies is a concern. For example, allowing the "Gay Pride" groups a louder and brighter presence on the campus does not give equal opportunity for students to see a more conservative front that A&M has portrayed in the past. Tradition is important. This is why we chose Aggieland. Not a progressive Aggieland. Those students have other places in Austin to choose.

Fine as presented

No strong feelings here... Reorganization could have some benefits, as would getting resources aligned.

I am concerned with the recommendations regarding counseling services and student organizations. While I am glad to see the recommendations acknowledge the increased use of counseling services and other health services, I do not think the problem here is necessarily one that involves realignment but one having to do with funding and priorities. I feel that the university often has not funded counseling services in the ways it should. This can easily be seen through the creation of several new buildings on campus that were given priority treatment over the building that would house counseling services. Additionally, the relegation of counseling to West Campus in portable buildings that were nearly impossible to access for students suffering from mental health problems was problematic and I believe that these are concerns that should have been noted in the report. I am not certain that combining the student counseling services into another area will make this better. I worry that the opposite will happen and counseling services will be competing for more resources and staff and will be even less available to students in need. Additionally, I wish the report had highlighted more of the issues associated with student organizations. As someone who was highly involved in organizations throughout my time at Texas A&M, including being the executive of an organization, the current structure of student organizations at A&M is problematic and I applaud this report for acknowledging the current issues that plague student organizations. However, I do not believe that this report ultimately says anything meaningful about what needs to happen to fix these problems. Fish Camp (and they are not the only organization with this issue) was recently revealed in the Battalion to have had major issues with sexual assaults of both freshman attendees and staff members, to which the organization shrugged its shoulders and moved on doing what they always do with no new protections in place. This kind of behavior can no longer continue at Texas A&M. It saddens me to see a university that does not consider any real changes to organizational structure to prevent sexual assaults and protect the many students who are victims of sexual assault because of organizations like fish camp that lack any kind of meaningful oversight. If student activities are going to be restructured or reconsidered, institutional oversight must occur and a plan must be created to

lessen the number of assaults on students.

I'm about to have two children reach college age. As I dreamed of them becoming aggies one day in the past, I'm now concerned that the campus is no longer a safe place for conservative students. The college's actions on masks, vaccines, asking students to report on other students and other political issues show a clear slant in the leadership of the college. What the hell has happened to Aggieland?

Need balancer curriculum.

Adding to the student organizational management (speaking as one who oversaw student orgs at a different institution after leaving A&M), if you want to improve the structure and success of student orgs, you need more full-time staff oversight. Sport Clubs (within Recreational Sports) is a good example of that. 2 full-time staff (plus other support staff) for 30+ clubs is still ALOT of work for that staff. Just make sure if you have increase student org management training/oversight, that you add the appropriate amount of staff oversight or else they will burnout and it will be worse.

Fraternity hazing is still allowed to permeate the campus. IFC lacks university direction and leadership.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED] Class of 2014

Improving student access to health services, including counseling and psychological support, should be paramount.

No comments.

Lots of good organizations on campus.

I am concerned about trying to conform the student body to a "standard", consisting of "underrepresented" people. Students need to be recruited according to ability and talent and experience, not because they meet a profile need of some misaligned expectation. A&M was a conservative college in my day, class of '82, and should continue to be so. That is what made A&M a top university.

I think this new structure would be great. As someone who was involved in SA alot, I think it will help put the students first.

## Student Affairs - Other

Please provide your comments related to Student Affairs:

N/A

No comments.

NA

There is a major crowding issue on the College Station campus that seems to be impacting the educational process and resulting in a dwindling percentage of students who can graduate in 4 years. Student population growth may need to be halted until this can be addressed. Student mental and physical health needs must be met appropriately in order to develop future leaders. I am afraid that the pandemic has highlighted this need. An urgent care model for student health service is needed to assist those who are very ill and unable to get themselves to off campus care, as well as to prevent the spread of contagious illness in a large, dense population of students. It seems like the SHS facility and the

staffing are significantly inadequate to support the level of need and outreach teams may need to be called in to fill the gap.

All I really want to ask is who on Earth thinks centralizing advising for all undergraduate students in all those diverse colleges and departments in a huge university is going to help those students lost in advising by people who are not focused on the student's major or aware of departmental opportunities. Advising is done well the close to home possible.

These recommendations support our renewed focus on student success, retention, support and graduation.

Please add more help for students struggling with anxiety and depression. There is not enough help on campus and the wait for an off campus appointment is months! More education and action is needed too with student alcohol consumption on and around campus.

Mental health is a great concern and services should be readily available. At other colleges we toured, the college used the counseling education program to offer extensive counseling services to students. This allowed the students to practice and provided a needed service. We saw suicide and suicided attempts happen around my child in the dorm. I think Covid restrictions had a huge affect on that, but it clearly indicated there is a problem. Parents report that there is a 1 year wait to get into a counselor in town. The university should leverage its resources and utilize the opportunity to both train future practitioners and meet a critical need.

More advisory staff and hours available

n/c

none

I completed the SAAHE program at TAMU in 2013 and always found the student organization culture at TAMU to be very unique. I think unfortunately longstanding tradition that has allowed the student org culture to act in very autonomous ways has led to a lack of oversight and safety in big events and integral operations to the university's functioning. More regulation in the student org leadership and training I think is important.

In general while i think close relationships with students is necessary we should remember that the vast majority of our students are 'kids', maybe young adults...but far from being 'stand alone adults'. Even our cadets that graduate with commissions are sent to much more training and education before they are allowed to lead...and i submit the average cadet graduates with significant more leadership skills than the average 'non reg' graduate....a big part of that is maturity. The administration exists to facilitate the education and guidance of these young people....the faculty exists to teach and guide these young people. While some input from the student body is good, history has shown us that a student body with unbalanced influence can be counter productive....it is not intended for the student body to advise the administration and/or faculty on what or how to educate them.....tail wagging the dog. Along these lines i think most student surveys are superfluous. If they dont like the A&M experience.....Highway six runs both ways....they can go somewhere else. More meaningful surveys would be those asking for parental input....or from grads 3-5 years after graduation.

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

No comment.

I'm not sure if advising falls under this but I'll put it here. The College of Geoscience currently offers incredible a academic advising, programs, internships, and so much more. The size of this college makes the overall student relationship more personable which makes for a better overall student experience. Advising should not be centralized because advising is not a one-for-all answer. I was impressed with how A&M offered advising at each respective college based on degree plan. That absolutely should not change. The advisors being IN the college and getting to know the students is what helps make Geoscience students so successful.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting,

management, law, communications, etc. • Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers). • Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students? • CIAC’s influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC’s influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering. • Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

No comment

---

The major issue here is that of student advising. While it important that all student advisers be singing from the same song sheet, putting them all together as a centralized group will not improve matters. Advisers need to be close to the students they advise, which means in the colleges/schools/departments. Such things as course requirements change on a regular basis, often very quickly, and if the advisers are not located in the units where such changes occur, they will likely not know about them. This comes back to the whole idea of centralization, which in this case seems to be for the sake of it, rather than for serving the students. In my opinion, the advisers themselves have a pretty good grapevine that allows them to consult each other as needed.

---

This one is a freaking hot mess and that's an understatement of the century! MUST be reorganized from the top down. There's political crap going on, targeting those who have views of the opposite party. My student was targeted by an RA she literally stalked him AFTER we turned her in for her conduct as she was one of those assigned to deliver food and didn't follow protocols.... he was in quarantine due to his roommate's false positive test result.... instead of putting the food down at the door and step back 6+ ft she'd stand there wait for him to answer then YELL at him for answering his door, staying within the confines of his door for not wearing a mask. Complaints made it as high as Mr McGinnis who stated he'd have a word with them. SHE is the reason we decided it was best to live off campus the following school year.

---

N/A

---

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

---

Entirely too many student organizations and offices. Many student organizations are NOT inclusive. Why do we have to have clubs for everything? We don't. Students should do this stuff on their own time. A&M should not be a small town. It's focus should be on teaching and research.

---

I'm not 100% sure where the comment belongs, but I'm disappointed the report did not address systemic racism, especially prevalent in the Corps, as well as the fact that this is 2021 and the ENTIRE military is gender-integrated, but the Corps of Cadets continues to have all-male units. What does this teach these students? That it is OK to exclude half our population? That it is OK to embrace male supremacy? Something else? This absolutely needs to stop along with the racism. Come on man, let's get your act together and address these issues.

---

Being a university with so many beautiful traditions and core values, I most definitely agree that changes need to be made in order to hold organizations and some of the student body accountable for their actions. I believe from what I have seen and heard throughout campus and events attended that core values are slowly disappearing.

---

none

---

None

---

I think so many of youth challenges lie with how we as adults hobble them. We validate and label anxiety and depression when most often they are having normal emotional responses to life's challenges. We lower our expectations rather than raise them. We shelter them instead of challenge them. We fail to teach them our values and instead allow their peers and society to influence them. We feminize our boys with safety and gentleness rather than let them get bloodied and experience danger. And so we blur the lines of male and female.

A&M's culture and traditions is what makes it unique. The Corps is an integral part of the culture, not a hindrance as the report states. Aggies should be united by their love for this culture. Stop accepting students just to make quotas based on race or economic status but those who want a quality education and want to help continue upholding the Aggie Spirit. Students could use more help in academic advising to help choose the right major. Changing a major should not be so difficult.

I look forward to the potential changes with the counseling services (CAPS) to join Health Science. I was unable to provide feedback as a former staff with this survey so I am glad I am able to give some input now. There were a lot of turn over at CAPS in the last few years so they were unable to retain staff which can be a flag by itself. Staff were asked to provide high quantity and short term services while the administrators (over 10 administrators at one time) seemed to have much lower service delivery expectations. I heard CAPS recently cut back the number of administrators but the problems remain because the staff moral may still be low. I worry that the instability of staff could affect the quality of services students receive. I left because I did not feel I could provide the quality of services that could meet my own expectations although I understand changes were needed. Also, I agree with the assessment with the transition from CAPS to the community providers can interrupt students' academic progress. One of the questions would be if the current staff would have the experiences and if the center would have resources to treat these longer term or more serious conditions since many experienced "retired". Several people retired from CAPS and started their own practice in the community. Finally, some of these former staff may be willing to provide some feedback if opinions or feedback are sought so our voices could be heard since there was no exit interviews when I left.

Removing the counseling center from student affairs would be detrimental to the crisis response and collaborative services that are provided by CCAPS across campus. Response to a student death, response to crisis situations, a pandemic, and indeed, timely outreach response have never been provided by the HSC. Additionally, very few university counseling services are housed under medical schools. Nearly all who tried this administrative approach have failed miserably. Funding will also be an issue since nearly all CCAPS funding is from the Student Service Fee. This limits who may use the services—definitely not townspeople, faculty, or staff who do not pay the fee. The HSC provides service to all comers. Finally, the report is in error when it states that students with long term needs are referred out after 3-4 sessions. In fact, if it is ascertained that the student needs long term treatment, the student is referred out after that first assessment. And a case referral specialist helps him/her get connected to community resources. Centralization is good to a point; centralization to connect all similar offices without considering the impact on departments and divisions is what led to the decentralization that we now have.

Excellent

## **Q6 - Please provide your comments related to Facilities:**

### **Facilities - Faculty**

Please provide your comments related to Facilities:

Some entities on campus have much higher facilities demands and require more specific expertise that has been developed over many years, the Libraries for example. Losing facilities to centralization would greatly hamper the Libraries' ability to safeguard its special collections and preserve its vast holdings across many buildings.

I never read about any bricks and mortar funding for buildings that would house research (and teaching, etc) -- only things for athletes, band members, cadets, etc.

The College of Architecture is fragmented, living in multiple buildings. A new facility to house the College in one location would be good.

It is unclear how space decisions will be made or made equitably with these changes. Further, bragging about the outsourcing to SCC shows a clear failure on the university's part. Those employees of SCC are unpaid and overworked to the point that a nonprofit emerged from TAMU students to help those staff. Many of these employees utilize the local food banks regularly. It is a dishonor to TAMU values that our own staff cannot feed themselves on the wages they are offered. And the quality of the service has dropped not due to the employees themselves but due to not having enough employees.

---

Centralization can be wonderful when done correctly - I do worry about services such as SRS ITS IRB

---

More faculty lounges and seminar rooms would be really nice. Some departments have neither. What is available in Zachry now is a good model.

---

The Office for Diversity should not be shunted into Facilities Mgmt for two reasons: 1) that office engages students, faculty, and staff about recruiting, retention, equity, and climate--in other words, the entire spectrum/foundation of a university; 2) to engage at that level, and be seen as a primary force at TAMU, it needs to remain in direct report to the provost/president.

---

No Comment

---

the transition to outsourcing Facility services resulted in dirty rooms, lack of supplies in restrooms- offices on my floor were waxed and there was HAIR AND DIRT embedded in the waxed floor in my office. This is another example of how outsourcing and centralizing services has resulted in very poor services.

---

The statements about facilities in the report is where the MGT report lost all credibility with me. The outsourcing of facilities is not generally viewed as successful on the main campus. As an end user of their services, getting something properly fixed on campus is neither easy nor efficient. You often have to settle for good enough. I even had to ask people to not come back and leave things broken because it was easier than dealing with the SSC people/process. It is hard to know if creating a new division of Facilities and Planning and Construction can fix a system as broken as the one in place at A&M. It seems as though the best remedy would be to hold the folks who have overseen the construction of faulty buildings on campus accountable for these failings. There is a lot of mumbo jumbo in the paragraph of the report below Rationale #2 (Facilities section, page 55) that is not convincing that expanding an organization will address any of the existing issues with facilities on campus. I believe that the consultants missed an opportunity with this part of the report.

---

I'm not sure if this goes here, but it was disappointing to see that ADA supports were not at all addressed in the report. Currently, ADA compliance is isolated to the individual buildings, making the experiences of our students, faculty, and staff with disabilities even more needlessly difficult.

---

I am constantly amazed that we continue to rebuild, renovate and build facilities and walking/movement spaces without WATCHING how people move! e.g. Why build a square bike rack, useless but attractive sitting area and walls in the middle of route from ACAD to the MSC, forcing people/bikes/skateboards into a narrow walkway? 2nd e.g. Why build rectangular grass boxes in areas where people have to walk diagonally (like all around Evans)? To cite the "successful outsourcing models for dining, custodial, and maintenance services" is a joke. Our custodial staff now work longer for less pay and benefits.... I am lucky to get my office vacuumed once a semester. Our custodial person earns so little we do a collection plate them twice a year! Food on campus is far more expensive than in town.

---

Transportation activities should be separate cost centers, e.g., parking permit fees should be used for parking and not for buses or bicycle racks.

---

The outsourcing of Maintenance has been a negative action, and should not be used as a model. Standard cleaning is now done irregularly, thorough cleaning never.

---

Can we not contract our cleaning services to a third-party contractor? The maintenance of our building has been incredibly spotty, clearly with high turn-over and poor employee support.

---

In connection with my role as [REDACTED] of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

---

One unified system for facilities makes sense for the rationale (#3) given. This merge is, simply, good business for record keeping and data collection as well as maintenance. But this system does not necessitate college to merge.

---

While centralization of facilities is good, the details is in the implementation. we do not want delays in renovations and constructions.

Facilities personnel have highly specific knowledge that supports instrumentation and laboratories specific to disciplines. College-centralized facilities work well – within colleges with a single mission. Centralized services across not only a college of CAS, but all other operations on campus would result in lack of specific expertise where needed.

Centralization of facilities will tremendously increase the bureaucracy as we have seen it happen in the College of Engineering. This was mostly because of the failure of the facilities director of the college at that time communicating with the college constituents and making decisions by himself. After he moved to the university facilities office and assignment of the new person, everything was much better and easier. The new person listens the constituents. I hope the university will not ask the same person to centralize the university facilities operation and will learn from the lessons learned.

The decision made years ago to outsource Facilities management was penny-wise and pound-foolish. The campus grounds and buildings are not kept up the way they were prior to that earlier decision.

The Libraries' facilities are unique and require expertise understanding of the mission of Libraries in order to meet the needs of our students, researchers, and collections.

I think that the University Center and Special Events is so intentional about helping students learn about event planning and risk management as a part of Student Affairs that we would be missing out on that if it moved to facilities. Student learning matters more here.

Centralization does not necessarily equal "efficiency" or even cost savings. The report suggests that centralization is always a good, and this is definitely not the case.

Not everything can be or should be centralized. Some of our buildings have unique research needs and centralizing facilities will make it harder to get specific services only needed in a specific location. Loss of local knowledge of buildings and their equipment and needs seems unwise.

I support whole heartedly investment in gardens, museums, performance spaces, and the like for the creation of an artistic and creative life on the campus. These public spaces also allow for the community to take part in the intellectual life of the campus. There should be more to the campus than just Kyle field.

These are good recommendations

None.

Because our facility superintendent oversees the 90-acres of campus surrounding the Bush Center, and fully supports both the Presidential Library and Museum, and the Presidential Conference Center, I would greatly prefer to keep him under the administrative control of the Bush School Dean.

Centralization does not necessarily improve operations.

Research Facilities Administration and General Facilities are two very different operations. They should coordinate their efforts but maintain individual and separate existence.

None

100% support all recommendations

Having been responsible for facilities for the past three years - we do lots of things wrong! This is why projects are so expensive. There needs to be a task force created to go through the TAMU general conditions for small projects and re-write that document. If you want a corridor painted, the painter must attain a performance bond and have a \$10,000,000 liability policy. This requirement completely eliminates most painters and the cost of those requirement are likely more that the materials and labor on the project. The same is true for on-site supervision. I had 8 bathrooms renovated over a period of a year for over \$1,000,000. There was a superintendent in the building sitting in the building all day every day for a year, that alone had to be 15 to 20% of the cost of the project. That superintendent could have managed numerous project. Additionally, the personalities need to be removed from projects. Local contractors talk about the so and so bump that is required if a particular person is involved. Create programs to engage and encourage contractors to work for TAMU. Partner with Construction Science and the Business school in a contractor mentoring program. Give student the opportunity to assist in setting up workshops to help with business plans and project control procedures. The more people interested in working on campus the more competitive the process. Changing the organization is of little value, unless you look at the endemic issues. Having recently started the process of Camera Installation, I was shocked at the lack of standards or reporting or video storage. There are two competing entities,

Transportation and Res-Life for all cameras and there are differing pricing structures. I totally agree that this needs to be addressed and some consistency established. Use Res-life as the guide - much better pricing and service! Key control as pointed out in the report is a real challenge. While centralizing it will enhance control, it also creates its own set of logistic challenges. Will we continually be sending people to a central location on west campus to get a key to their office? That is not a workable solution. I would rather see the university make a commitment to doing away with keyed locks and using ID cards for access. This, while expensive, would eliminate the key issue and allow for quick changes without gathering keys. The same is true with the current system, where we are using two systems - there needs to be one. The card access locks need to be located on a map so they can be found as compared to going and swiping your card and then going back to your office and look at a log to see the lock name / designation. I applaud anything that fixes this broken system. This is not a reflection on the people that work with this on a daily basis - they are amazingly helpful. They are just dealing with legacy issues. Please focus on Customer Service!

---

The building proctor system works well in the College of Geoscience.

---

While I recognize a number of the problems that the report identifies concerning facilities, I argue that at least some of these problems are the result of out-sourcing what used to be TAMU administered functions, such as maintenance. When SSC took over maintenance, employees who had worked at TAMU for years quit because of poor salary, unpleasant and inequitable working conditions, and demands that are inconsistent with the core values of TAMU. Since maintenance has been outsourced [approximately 10 years ago], turnover rates are high, staff shortages are critical, and offices are cleaned very rarely (my trash is emptied regularly, but my office is vacuumed only once a year or so) so that staff can keep the public spaces clean. I've been here for 30 years, and until maintenance was outsourced, these were not problems. The university continues to point to this as a success, but those who live and work on campus know better. This MGT report in its desire to further centralize facilities will lead to the same kinds of things that make the SSC (and I suspect, Chartwells) so problematic is that the management of TAMU personnel and processes is out of state, not connected to the environment at TAMU, and blind to the needs of its employees and of TAMU. Centralizing all of these services in other areas of TAMU will yield the same kind of blind disinterest and failure of services. More centralized may look good on paper, but it rarely looks good in reality and in people's lives.

---

None

---

We had over 800,000 visitors in our buildings over the course of the first two months of the fall semester. The idea that we would "centralize" our facilities staff in order to be more efficient and effective makes me nervous about how the Libraries would make out in this new structure. We have certainly experienced a reduction in the cleanliness of our buildings since custodial was outsourced. This is not due to the fault of the custodial staff who work incredibly hard to keep our spaces clean but since that change these staff have been pulled to work in other locations in addition to our buildings and weekend coverage has been spotty at times, despite the fact we have facilities open and some are operating 24/7 on Sundays. I am concerned we will experience something similar in terms of building support in this new model.

---

none

---

The report suggests that the outsourcing of maintenance at facilities is a good thing. It probably has some cost savings but the quality of service has definitely gone down. Thus, if outsourcing is done for many different services, I would highly recommend checks and balances to ensure that the mission of the University is not jeopardized by poor services.

---

As dean of the College of Veterinary Medicine & Biomedical Sciences, I would like to thank the writers of the report for recognizing the importance of a new Small Animal Teaching Hospital. Extensive discussions have occurred already as to how this facility can enhance student success, catalyze interdisciplinary research across the university to promote animal and human health, support the land-grant mission of the university, and elevate the national ranking of the college. As I noted previously, I strongly endorse investment in outstanding spaces to support the fine arts.

---

No comment

---

This is a common-sense change.

---

Centralization is not always a good thing. Having common systems across a decentralized structure is always a plus. A poorly functioning centralized system fails the whole University, not just a small section. For example, for business systems, the gap between the faculty and the business associates increases the chances of miscommunication and

reduces efficiencies. Same for IT and other essential services. What works for one College doesn't necessarily work for others, there is no "one size fits all" system. This is just flawed thinking that centralization is always better.

Again, not an area I know much about, but it seems that any facilities must also deal with the TAM System FP&C office that coordinates building and renovations across all campuses.

If we centralize keys and card access systems, my concern is that users will have a longer wait to get the help they need or to use what they are currently authorized to use or do.

no comment

Centralization may be more efficient but not effective. This can slow down many aspects of research and teaching. Need to look at evidence from past centralization in some units - slowed down processes, lost effectiveness, no clear evidence of cost savings.

I have no comments on this matter. There are some people who think centralization is always bad others think it is always good. I think it needs to be evaluated case-by-case.

Current facilities maintenance is a disaster. Facility maintenance needs to be prioritized by safety concerns and dilapidation, not by current importance of programs/units housed within.

Facilities does not work in a very timely way now. I'm not sure how the organizational changes will address that.

Good plan.

We have serious problems with responsive service from our facilities support at SSC.

The old buildings for the College of Veterinary Science are very "long in the tooth" and very depressing in appearance. A&M can do better.

reducing time delays, costs are the most important areas to target.

Agreed that consolidation, centralization, and outsourcing is needed. Look to how businesses are now operating. Consider Aggie entrepreneurs for outsourcing.

No comments

The idea of a new museum (a state-of-the art natural history museum) is outstanding and something that is very long overdue at TAMU. Our university and our community need a legitimate facility of which we can be proud. A natural history museum would enhance research (consolidate and properly curate valuable collections that are overcrowded in poor facilities), provide facilities for TAMU course instruction (currently students must drive off campus for course labs) and public education/outreach activities, provide education and tourism opportunities and economic growth for the BCS community, bring more people to campus with a positive experience (alumni, visitors, dignitaries, recruits, etc.).

Outsourcing facilities may save money, and that may be the only consideration that matters. However, where this has been done in the past (physical plant and dining), quality of the services has suffered greatly.

Centralized facilities management would be welcomed so long as there is a direct report for each area/building and timely response once issues are reported.

Student Safety should be a top priority. Many buildings maintenance and upkeep need to be addressed. For instance, the building I am in is a fairly new building but I see 5 lights that need to be replaced looking out my office hallway.

1) The campus needs to be brought up to standards. Currently there are corners of campus in which assault or vandalism can happen without capturing the event. Security needs to be better and standardized. 2) We need an Institute (or Center) of Culture. It needs to have its own building and it needs to be visible on the main campus. TAMU needs to make a big proactive statement rather than continuing to respond to our image as an institution that has a lot of racists and misogynists through baby steps and reactive responses 3) We need more images and statues of individuals who aren't white men. This needs to be something that shows up in every space so that our diverse constituents can all see themselves represented (and not just tokenism).

I am concerned about the evidence base substantiating the recommendations made.

Support Recommendation 1. Consolidating facilities will enhance security and safety, and efficiency. It will also ease the burden on individual colleges and departments. Support Recommendation 2. Consolidating strategic planning will help the university. Support Recommendation 3. Another great idea to reduce organizational backlog.

No comments.

Value the embodied energy of existing buildings.

Perhaps this could be better. We are not served well now.

Further analysis is required to better understand specific space allocation, expected growth and support spaces for new, emerging programs with high potential for growth. Collaborative classroom and studio spaces are needed throughout engineering and architecture. Realignments of Facilities with Finance is appropriate. The office of Risk Assessment and public safety will need to be further addressed. The office of sustainability need additional support and attention in order to meet the energy, carbon, water and resilience goals necessary to assess and prepare for severe weather events such as those experienced last year.

Since privatizing the care of facilities, the conditions have worsened.

This section actually makes sense

I am very concerned that that the office of sustainability is lost in the realignment of Facilities. I would support the overall changes proposed with the detail the Office of Sustainability remain. It would require the a shift in the org chart so that it is clearly reporting to senior management. Eliminating this office is going against the best practices of our peer institutions, and thus contrary to the objective of this report -- that is, to be the best among our peers. See, for example, UW Madison (<https://sustainability.wisc.edu/>) or others. This moves TAMU in the wrong direction.

As someone who has professional dealt with FP&C and the different departments, such as IT on Main Campus - I think the creation of Stephen Franklin's new position is a huge move towards improvement.

I am supportive of this move provided it truly helps make the process of facility management more efficient. However, I would be concerned if this centralization ends up resulting in a less responsive system.

I concur with these recommendations.

I'm on my department's space committee. This recommendation "Create a Division of Facility Information Systems to maintain information in support of TAMU operations." makes my socks roll up and down with delight.

I am a curator of the Biodiversity Research and Teaching Collections and we have sent countless reports and 1-pagers "up the chain" regarding the value of our collections (BRTC, ENTO, SM Tracy Herbarium) to research and teaching. We will benefit enormously from a new natural history museum to house collections and serve as a hub for undergraduate and graduate teaching, outreach, research and public exhibits. We have been promoting this for decades, please move it forward!

Build a Performing Arts Center! It is not only a bold statement for the support of the arts but would solve a huge problem for the arts...a space to perform. This Center could house the new School of the Visual and Performing Arts bringing all the arts together under one roof. This move would foster wonderful partnerships among the art area faculty but would also foster collaborations between faculty and students of all the art disciplines. This space would bring in additional art performances for the campus and community from beyond B/CS, be a space for community organizations to come to perform and host events, serve as a visual presence of the arts, provide space for collaborations, and the list goes on. This Center has the potential to provide an impact on events, promotions, and performance beyond the campus community. One important aspect to consider in order to make this center not only grande but to ensure it has a theatre (or even two) that considers the needs of all the art areas. Producing a dance work has very different needs from stage theatre and even different needs to an orchestra. It is essential that committee is formed to ensure that the space is usable for all the arts. This committee should consist of upper administration, a representation of all the academic art areas on campus, and community members who would potentially benefit from this new center. It is important that it is built right in order to attract performers from all over the nation.

Regarding Recommendation #1: Restructure of Facilities and Operations/Safety and Security to include all facilities services under a new centralized management structure in Facilities Management. While I understand the need to centralize certain services on campus and some of Facilities duties, there is a benefit to having individual Facilities units within certain units on campus. For example, within the Libraries, which consists of 6 buildings on campus, it is valuable having Facilities staff available who knows the buildings inside and out, knows the library culture, works closely with library staff and faculty as we communicate with architects during renovations, and are available when we have

immediate needs. I could see how working closely with Facilities Management, in addition to their line in the Libraries could be useful, however, I believe this is already done.

---

No comments

---

TAMU has been in need of a Performing Arts Center for a long time. As academic programs, it is impossible to access Rudder. It is cost prohibitive for our academic programs. The Rudder Facilities are also not conducive to the size of dance shows our program offers. Having a space designed for dance performance with a house of 300 would be an amazing facility to help foster the arts at TAMU. It would have to be available to the arts for no fee or the venue keeps a portion of the ticket sales. Texas State has a beautiful facility that was built and their dance program has access to the space for multiple shows through the year. This space would need a stage manager that knows dance, Krissie Day who is employed through Rudder has extensive knowledge of dance and how to produce these types of shows.

---

As very new faculty, I have not had enough experience with facilities to be able to provide useful comment. However, in my experience at other institutions, centralization of operations often came with hidden costs that undermined productivity. I understand that efficiency may be improved by some metrics with centralization. But it also creates barriers because central operations become so large that the personal relationships are removed, which makes it harder to actually get the things done that need to get done.

---

I do not agree with the centralization of facilities management. Although this may save in administrative costs, it will likely substantially degrade the service each unit receives from local building managers who know what the problems are with facilities and can quickly respond when emergencies arise. There is no way to replace decentralized and effective service with nominally more costly and inefficient service. The recommendation for creating units for Facilities Planning and Facility Information Systems seem useful as long as this unit is transparent about how they rank construction of new facilities and repair and upgrade existing facilities.

---

The findings and recommendations seem reasonable.

---

Recently, TAMU utilized successful outsourcing models for dining, custodial, and maintenance services and, to a limited extent, student residences." Notably, "successful" has not been defined in terms of providing higher quality services, or even maintaining the quality of services. It is generally agreed that services have indeed been outsourced. It is the perception of my peers that quality is much worse.

---

I am very concerned that centralizing facilities will have a negative (and potentially catastrophic) impact on laboratories that handle hazardous materials if there is not multiple personnel with deep understanding of how these must be handled. Similarly, when a water pipe in the library bursts at 2:00AM (yes, this has actually happened!), will there be someone who understands the special requirements for mitigating damage to the collections and facilitating recovery available immediately?

---

Need improvement on websites of core facilities

---

No comments. Recommendations seem reasonable.

---

Broadly, our facilities need work. My department is spread out over 4 buildings, and have had to move at the whims of Engineering more than once. New investment in modern research and teaching spaces in conjunction with critical deferred maintenance is hugely important. Generally, the proposed steps from the report are necessary, but moving forward, even more aggressive moves to improve facilities would be beneficial

---

I perceive consolidation of Facilities is to cut staff (RIF)

---

They are already in a great shape

---

The idea of a centralized Facilities Operations makes sense for smaller buildings without facilities expertise or departmental ownership. However, there should be an exception that allows local facility coordination for larger specialized buildings with unique safety, security, or environmental concern. These would include the MSC/Rudder complex, University Libraries, Lab Buildings (ILSB, Chemistry, Veterinary, etc).

---

We are hurting people by removing them from our community. Privatization has proven limits. Create community at all levels, not disposable jobs. Facilities is not a gig-economy like Uber, we should treat them with respect and stability if we want to improve our community inside and outside.

---

This part of the report is unclear to those outside of facilities.

---

Needs to be fully staffed

---

Generally OK with the proposals if departments can retain a "matrix" with imbedded HR assets as appropriate ... who will know best and in a more timely about their facility needs

---

SSC is a joke. they need to be fired.

---

Centralization could be effective provided that individuals within a department/program continue to report to those units. This is critical to ensure correct and timely service.

---

Please improve the Academic Building. It is a disgrace. Get some decent and wholesome food on campus.

---

An opportunity that TAMU could pursue that has been missed by this study involves both facilities that are needed for the university to function and research and engineering projects of TAMU's Energy Institute. New sustainable energy systems and carbon capture facilities could be demonstrated through collaboration between facilities and faculty and students of the Energy Institute. As nations around the globe come to understand the need for new carbon-free and sustainable energy sources and carbon capture and storage, Texas A&M could take a leading role in developing energy systems and carbon capture systems of the future. As an engineering school with a large physical plant, we could initiate demonstration projects that go well beyond theoretical concepts and papers in the scientific and engineering literature. As a start, the lack of solar power generation on campus and agricultural plots of TAMU is stunning. Roofs of the entire campus are dominated by tar and rubber membranes (that often leak) rather than banks of solar panels. Effective use of solar and wind generated power requires better batteries, again a technology that could be designed and tested here. Carbon capture is a major challenge if we are to prevent a complete collapse of our climate and humankind through increases in greenhouse gases in the atmosphere. TAMU could be leader here as well, testing atmospheric carbon capture systems on campus. These systems will require innovation and design by engineering faculty and students, the scaled implementation of systems by the physical plant of the university, and testing as educational engineering projects.

---

Facilities Rec #1 1 Research facilities into facilities management - need to maintain most management functions of facilities that house living organisms to care professionals. Facilities Rec #1 2 Facilities department should not be the first responder in most cases for any animal facilities - Attending Veterinarian and staff should be first alert. VPR or VPR-designee must retain IO/compliance/AV oversight for animal facilities, research lab compliance, etc. Facilities in CVMBS/Vetmed that would move to AgriLife if CVMBS managed by AgriLife create some difficulty/ need a lot of clarification regarding how these would be managed, kept in compliance, etc. In addition, would Biology vivarium and animal facilities be moved to AgriLife management as well?? Impact of facilities and people move from CVMBS to AgriLife- Attending Veterinarian reporting to TAMU IO currently provides oversight to AgriLife Brazos & Burleson Co facilities. Move would significantly increase AV, IACUC, IBC, (some IRB?) efforts dedicated to AgriLife - thus financial and oversight models may need to change. CMP provides ABSL-3 support in VRB, full support for MSRB (all CVMBS researchers), TIPS animal support (CVMBS researchers). Would this management change. The majority of CMP effort would be for direct benefit of AgriLife and TAMU Health. Remaining support would serve primarily Psychology, Biomed Eng and some effort for GHRC + external contracts. CMP leads most of Residency Program and also provides supervised surgical opportunities to CVMBS veterinarians & students. Core and service Lab price structures might require change, may be subject to AgriLife financial impositions and limitations. IO responsibilities would be greatly altered by facility moves to AgriLife. IACUCs - greatest percentage users would serve AgriLife and TAMU Health. IBC - large percentage users would serve AgriLife and TAMU Health. AAALAC accreditation effort and cost. Investigator training and support by CMP veterinarians, CMP and DOR compliance staffs would largely serve AgriLife and Health.

---

There is a cost to centralizing and outsourcing. This was not included in the report.

---

"The Qatar campus is viewed as a strong component of the TAMU campus." My contacts in Qatar said that they didn't even get to take this survey. If so, then this statement is complete nonsense. The university seems to have a big problem with authoritarian leadership at TAMU-Q, and is not interested in faculty input there. It is more of the TAMU Same—more top down rule, which always has been a big problem at TAMU. With this MGT report advocating more "centralization," this problem will not only remain, but will be enhanced. Outsourcing: These jobs often put students to work, and that should be maintained. Also, these university jobs give workers benefits—health care and retirement.

---

We are a public university and the last thing we want to do is save a few bucks and cut off some of our fine staff from benefits.

A strong concern about centralizing facilities management is the specialized knowledge that is required to maintain laboratory facilities. When maintenance was outsourced, tremendous institutional knowledge was lost that made upkeep of our building more difficult. I am also concerned about the response time for maintenance requests being delayed.

We need significant increases in investment on facilities for promoting biological and biomedical research.

The university has been investing on engineering departments heavily but ignoring the needs from other fields. If TAMU really tries to become a respectable university that enjoys global recognition, it has to stop considering itself an "engineering school". No doubt that engineering has made tremendous contributions to TAMU, but other fields are account for the majority of growth.

I don't have strong feelings about this.

Ensuring local facilities coordinators is paramount

It might be a good idea to reorganize Facilities, but once again, it will depend on implementation. Stakeholder input must be sought, and more than just a survey.

Focus on deferred maintenance. Too much has been deferred for too long and it shows (and ends up being a problem for all who work here).

Centralization would ensure adherence to standards and some accountability.

Page 50, last bullet point: "Realign facilities proctors to become professional level Facilities Coordinators." In our model, these proctors are members of the college staff, often unpaid, who volunteer their time for this function. This suggestion appears to be clueless...

Centralization of facilities is worrisome. Previous cost-saving measures such as outsourcing of custodial services have seriously hurt our campus (classrooms and stairwells in my building are never swept anymore, they used to be done daily). More recently, the "control" of equipment in the classrooms in our building transferred from department staff to Harrington. Department staff in building would respond to calls in a minute or less. Harrington response times are in excess of 15-20 minutes. That's a big hit to instruction time when a class is only 50 minutes long. Having people currently working under the banner of "facilities" or "support staff" in our department who are an invaluable asset to our teaching and research missions. Creating a "system" where these individuals no longer work for our department will cause the quality of service we receive to be lessened. We've seen it happen too many times before to believe this won't happen again.

Realigning the dedicated building facilities from the Libraries to a centralized model needs further study. How does this enhance the level of service to the building occupants? Experience has shown that our internal team is responsive and knowledgeable about our unique spaces.

Library facilities are complicated and include not just the building itself, but the collections and resources housed in them. The people in our facilities department have learned the unique needs of a library and are able to meet them. Centralizing our facilities means that people who don't understand the needs will have to figure it out as they are assigned here for a specific ticket, creating inefficiency.

We must align our decisions with our basic university values such as selfless service. Outsourcing Transportation does not align with these values, it once again threatens the least powerful among our community. Outsourcing Housekeeping, Maintenance, and Food Services has not been a general good as the report claims. It is not clear the valuation criteria MGT applied to laud this change, but it did not take into account the people affected. The least powerful people on campus lost benefits and earning power. They were once a part of our community and now are treated as mere contract workers. The results have not been positive. Our spaces are dirtier, maintenance harder to implement, the sustainable approaches in food services have all but disappeared.

I only note that there are currently serious problems and I hope that the recommendations will make improvements. A personal example: I teach in classroom MPHY 203. A number of ceiling lights are burned out and need to be replaced. A work order was submitted from my department at the beginning of this semester (Fall 2021). Nothing has been done and I have been told it won't be until after the semester is over. The lighting is inadequate but we will have to live with

it for the entire semester. This is outrageous! Another personal comment: I park in Lot 50. Access to this lot in the morning (around 9 am) by turning off University Drive onto Polo Road is very poor and requires long waits through several traffic light cycles while blocking one of the lanes of University Drive because the turn lane is filled. Leaving the lot between 5 and 6:30 pm is also very slow, several light cycles. In a phone conversation with Parking and Transit they said they can't do anything. Light cycle is run by City of College Station and the fundamental defects in access structure is due to Campus Architect. So no one takes responsibility nothing is done.

I am concerned about centralization of facilities, concerning the diverse needs of faculty and students. For example, visual arts students require long hours on campus to create their work, alongside specialty tools and materials. The recommendations appear to presume a computer-centered "average" that does not exist in practice.

I disagree that outsourcing has resulted in better service - especially with housekeeping. Staff are now underpaid with no benefits for what they do and cleaning is rather sporadic - such as running the vacuum in offices. Different operations have different facility concerns. Putting everything in one place could easily result in a stiff, bureaucratic structure that does not serve the rest of the university. When this happens, people get impatient and tend to find their own solutions and those not always for the best. There is often a certain level of flexibility, responsiveness and relationship building that happens when units 'live with' the people they are there to help.

can't comment

Centralization will bring many challenges and inefficiencies for the end-user. Further outsourcing may increase cost at a lower service level.

Any help here would be appreciated. Facilities management is horrendous and I doubt it is possible to make it worse. They are uncoordinated, unresponsive and unaccountable.

Outsourcing has had an overall negative impact on those who rely on the services of Facilities. Costs are higher at the unit level and service is worse.

I think centralization of facilities management is the right thing to do.

B. Recommendations for Reorganization based upon - Best Fit within the new Academic Framework - Current Collaborators - Recent move and current location on West Campus near the AgriLife Building, Nutrition, Bio-Bio, ILSB, PEAP Building - The entirety of the MTG Report - Academic Health and Excellence 1. A new Department of Kinesiology would be placed within AgriLife - Resources would include the Gilchrist Building and laboratories, the PEAP Building, and Huffines Institute for Sports Medicine - PEAP would be folded into Kinesiology again and would be rebranded the Physical Activity Program - The Huffines Institute and PEAP would be our Extension Program and integrated into AgriLife's Extension program and resources - The Department of Kinesiology would be positioned for greater integration with the Department of Nutrition and proposed Precision Nutrition/Medicine initiative. The University of Missouri has a similar model and a new laboratory institute completed this year. Cornell also has a similar integrative model. 2. Community Health, and possibly Allied Health, would migrate away from Gilchrist into TAMU Public Health and TAMU Health 3. HCRF would be housed within TAMU Health and Public Health as a clinical research wing. 4. Sport Management options include: - migration into Recreation Parks, and Tourism Science within AgriLife - integration into Mays School of Business - migration out of Gilchrist - Expansion of 3rd Floor Gilchrist Laboratories for Funded Investigators - Potential new Facilities/Building for Nutrition and Kinesiology; integration into proposed Precision Nutrition

Proposed centralization is very good for many reasons, including security, maintenance, disaster response, etc.

All for more better facilities esp for the Life Sciences. Integrating Safety and Security with Facilities and Operations makes sense. A more aggressive preventative maintenance program would save money in the long term. I thought we already had Facilities Planning and Construction activity. If not it sounds appropriate.

Outsourcing of activities that results in a loss of benefits and adequate pay for staff should not be done. If outsourcing can be done in a manner that provides the kind of support staff need, it seems reasonable to consider. My understanding is that the cleaning staff are now sub-contractors with very low pay and no benefits.

See comments above. I agree that Facilities management should be centralized.

A&M is blessed with adequate and superior facilities.

No comment

Higher education is about people, and the success of the university relies on employing and developing amazing people – students, faculty, AND staff. Please consider the efficiency and effectiveness of dotted-line personnel embedded in the units they know well, and please do not remove the human element in the spirit of consolidation and efficiency. Facilities staff who are located proximally to their customers provide far better customer service and also have a much greater sense of institutional pride. Those who know the mission and enterprise need to remain near the customers they support, while at the same time benefitting from centralized training, reporting and management.

Finding #1 is likely the most important finding in the document. Transparency of decisions, ability to provide valuable feedback and prioritize facilities issues and general lack in deferred maintenance are likely the biggest issue holding TAMU back in being competitive with a high ranking institution. Acknowledging and addressing the issues laid out in this report are essential for our future.

I think some of the recommendations will be helpful.

I fully support fixing our Facilities operations. They are currently slow and ineffective.

We need better infrastructure for experimental research -- for example, in materials science and the frontiers of physical and biological science. With increased enrollment, we also need more facilities for teaching. BUT WE ALSO NEED MORE FACULTY (and a smaller bureaucracy). When I joined the faculty as an assistance professor in 1970, there were about 15,000 students with 36 faculty in our department. Now there are 4 times as many students and less than twice as many faculty in our department. Since the College of Engineering has recently chosen quantity (rather than quality) as a priority, departments in the College of Science have greatly increased teaching loads (and, in the spirit of increasing engineering enrollments, have essentially been instructed by the College of Engineering to give higher grades for lower performance).

A new Performing Arts Center would be an asset to not only the university but to the local and surround communities. This new Center could not only have offerings for numerous performances on and off campus but could also foster many collaborations between students and faculty on campus.

As I understand, one recommendation is to consolidate IT resources at the university. This would mean no IT Department in the Mays Business School for example (note: am a faculty member in this college). This centralization would be disastrous to research faculty. We need frequent access to IT professionals to help with office computers used in research. Without our college IT folks, I know that I would be in serious trouble. Highly recommend not eliminating our college level IT department!

- Capitalize and align the FP&C office with others where there is a Vice Chancellor or Vice Provost of Capital Projects and provide the office with the responsibility and accountability for securing and maintaining the additional classrooms, labs, and supporting facilities needed to retain A&M's world class rankings and student experience.

Some buildings are in extreme need of renovation and/or replacement while others are magnificent examples of incredible places to work and study. Bathrooms are in short supply in both Fermier and Thompson Hall, often out of order and few if any are ADA compliant as one example of out of date and out of compliance.

Sustainability needs to remain as part of Facilities, and must be involved in land-use planning throughout the university. Ventilation in all buildings should be improved, both for general air quality and for pandemic response - we need windows that can open. Otherwise, consolidation of Facilities seems useful, though I worry that it may make it harder for departments to grant access to their buildings for graduate students and other members.

When facilities in COE were centralized, there were a lot of issues. Many have been resolved, but centralizing further would have a very negative impact on service.

Public private partnerships are arrangements that have significant benefits for organizations such as Texas A&M, both locally and at satellite locations; with the caveat that they need to be managed by experienced personnel who understand the partnership aspects being managed. Meaning, public private partnerships when mismanaged in the public sector are avenues for exploration of public funds. Coming from a company that performed public private partnerships with organizations similar to Texas A&M, the representative from the organization in the public part of the conversation, if not knowledgeable of the topic at hand can be easily convinced to incur costs that are unnecessary and accept contractor performance that is sub par. This aspect should definitely be expanded at Texas A&M and exploited to its fullest potential with the anticipation fully that contract work is work of convivence and should be cancelled as

soon as the need is no longer needed or managed to constantly increase efficiency and performance. Too often performance and efficiency degrade over time with no management adjustments and programs that no longer serve a purpose are extended for no benefit to the organization - so again, repeating - a knowledgeable representative from Texas A&M who understands the industry perspective of the Public partnership being managed should be able to manage through experience and not because of seniority or some other unqualifying factor that has the contractors being managed by unknowledgeable parties. In that same thread, this university, the main campus, spends money on construction and maintenance of buildings in the most disorganized fashion I have ever seen. Coming from a heavy construction background, I am baffled by the amount of money that is wasted with inefficiencies with construction at this campus. There seems to be no one at the top making decisions with costs and efficiency in mind and this whole aspect needs serious inspection and management dissection. It could start with the campus taking stock with what space they already have and allocating that space accordingly, instead of building new projects that have wasted space and fancy looking lobbies and added features that add no benefit to the educational aspect of the conversation. The university should 100% be exploring distance education avenues, which just got the test of a lifetime with COVID, and building with that in mind, but instead keeps trudging along with 360 classrooms and teaching spaces to accommodate larger classes that never get used or only get used at less than optimum capacity. Last semester having to teach all over campus opened my eyes to all the classrooms that exist on site and how many of them likely never get used or very seldomly get used to full capacity; and more importantly how many of them are very poorly setup for distance education - which is the future, regardless of whether or not the organization here at A&M wants to admit defeat to that fact. This ties directly into the McAllen and satellite campus conversation, the solution already exists, distance education, make them part of the main campus through seamless distance education, which this school is not prepared for, but this is the solution; not duplicating another set of departments and more staff down there.

---

No recommendations.

---

No Comment

---

Core facilities are very weak on this campus due to fragmentation among TAMU, Ag and Engineering. Those could become the envy of all of us if there was a common effort to develop and use such valuable resources to support all on the College Station campus.

---

Knowing who to contact to get a light replaced in a classroom would be great. Currently you ask one group they come and look and find out they don't do those lights so you need to submit a ticket to a different group.

---

Of course more PM is needed. The highest priority is always given to what ever crisis is at hand, and so many things slip down the list and never get done. I personally feel that we had better service before facility services was outsourced.

---

I agree with the commentary on facilities - work never gets done because of the various systems and/or bureaucracy involved.

---

Well done leave it alone. Fix the Air Conditioning more often.

---

Comments and Suggestions Regarding Finding #2 and Finding #9: • Separation of Health & Kinesiology from the College of Education and Human Development – I think this is appropriate re: better fit within the new Academic framework. HLKN has moved to West Campus in closer proximity to AgriLife and TAMU Health programs, which have academic programs and interests that are more closely related to Health & Kinesiology. • Academic and Physical migration of the Dance Program into a Fine Arts unit within the College of Arts and Sciences. The Dance Program should move into a Fine Arts facility on East Campus. • Recommendation 9d: Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health and Kinesiology. The Department of Health and Kinesiology (HLKN), located in the College of Education and Human Development, and the Department of Health Promotion and Community Health Sciences (HPCHS), located in the School of Public Health (SPH), have similar program offerings. HPCHS and HLKN have attempted to differentiate their degree programs for several years with little success. The overlapping degrees are the Bachelor of Science in Public Health, Master of Public Health, and Doctor of Public Health within HPCHS, and the Bachelor of Science, Master of Science, and Doctor of Philosophy in Community Health at HLKN. - This is an oversimplification as written. Overlapping and redundancy of programs are true primarily for the Health Division within HLKN and TAMU Health. The Kinesiology Division is distinct from all other programs at Texas A&M and historically includes applied scientists and investigators in Exercise Physiology, Motor Neuroscience, and applied Biomechanics as well as PEAP. Investigators in the Kinesiology Division have been funded by NIH, NASA, NSBRI, DOD, NSF, American Heart Association, Muscular Dystrophy

Association, American Lung Association, foundations, etc. - There are universities nationwide where Kinesiology programs are within a College of Health or Public Health: University of South Carolina, University of Utah, University of Oregon, University of Illinois, Chicago. However, there are Kinesiology programs that are housed or fit in with AgriLife: UCLA, University of Missouri. Investigators in Kinesiology have established strong research relationships and collaboration with the Departments of Nutrition, Animal Science and ILSB faculty. Many of our Kinesiology faculty are members of the Graduate Faculty in Nutrition - The Sport Management in HLKN has overlap with the Mays Business School as well as Recreation, Park, and Tourism Sciences. - HLKN is a large department with 3-4 divisions, that in some universities (e.g., University of Florida, University of Illinois, University of South Carolina, East Carolina) are a full college - In order to (a) optimize facilities and resources, (b) find best academic fit, (c) reduce academic redundancy and overlap, and (d) promote externally funded research I propose the following models and suggestions in response to Finding #9 and Finding #2: Option 1: • Health Education merged and moved into Public Health in TAMU Health • Sport Management merged and moved into Business or RPT • Dance to Fine Arts and College of Arts and Science • Department of Kinesiology formed, retaining PEAP and HCRF within TAMU Health o Could add Physical Therapy program to Kinesiology Option 2: • Health Education merged and moved into Public Health in TAMU Health • Sport Management merged with Business or RPT • Dance to Fine Arts and College of Arts and Science • Athletic Training to TAMU Health • Department of Kinesiology formed, retaining PEAP and HCRF within AgriLife Option 3: (My preference) • Health Education merged and moved into Public Health in TAMU Health • Sport Management merged with Business or RPT • Dance to Fine Arts and College of Arts and Science • Athletic Training to TAMU Health • Kinesiology merges with Nutrition to the new Department of Nutrition and Kinesiology (retaining PEAP and HCRF) shared by AgriLife and TAMU Health ☐ This model is used to great success with the University of Missouri, Virginia Tech • Most faculty within the Nutrition/Kinesiology hybrids are NIH funded In my view, these 3 models, coupled with externally funded new hires and reorganization of facilities would carry the Kinesiology program to #1 Graduate status in the nation. My understanding is that the sole #1 graduate program at TAMU is currently Petroleum Engineering.

---

This again seems like an expansion of upper administrators which is hard to justify

---

There were a number of blanket statements about the success of contracting out and consolidating facilities services supported by no data that is totally at odds with some of the real problems I've seen with the contracting out of these services.

---

I agree with outsourcing facilities as is the practice. However, there needs to be an increase in support of qualified specialists in HVAC and maintenance of research laboratories.

---

No comment.

---

I strongly support the creation of a Facilities Planning and Construction (FPC) units. It just makes sense, and I am surprised to hear we don't have one already!

---

## Facilities - Staff

Please provide your comments related to Facilities:

---

I am concerned about the recommendations regarding Facilities; the benefits of centralization are often touted, but if the reorganization is not carried out effectively the results are often disappointing. I agree that we need to improve the various facilities departments, and if the university decides to move ahead with the plan to centralize these functions they will need careful planning and strong leadership to carry it out.

---

Report neglects to understand why management of some facilities are dispersed. For example, the University Center was previously not within Student Affairs, but the MSC and student organizations had a very difficult time fulfilling their missions effectively when they had little voice in the management of the facilities they were dependent on for their programs. When the University Center was brought back into student Affairs, the relationship dramatically improved the MSC's ability to be effective.

---

Facilities: Finding #1, Recommendation #1: Restructure of Facilities and Operations/Safety and Security to include all facilities services under a new centralized management structure in Facilities Management. The rationale provided was based on breakdowns within TAMU's decentralized operational model with breakdowns between departments and

service entities and inconsistent safety and security systems across campus. I would suggest that removing facilities managers from their units and the facilities, faculty, staff and students they support would be contrary to the stated goals of breakdowns between departments and service entities. Since I oversee the facilities manager for our college, the issue isn't a breakdown between the departments/colleges and service units, alternatively, the responsiveness of the service unit itself tends to be where the breakdown occurs. A more helpful approach to this issue is to ensure that department/college facility managers are communicated with on appropriate steps to take to ensure that all are working with the same set of guidelines. Additionally, having service areas provide better response time to requests will prevent multiple requests from being placed for the same activity. In summary, my recommendation is to not centralize the facilities, but to provide better communication and guidance from administration to the facilities managers currently in place in colleges.

The outsourcing of facilities has resulted in a system that does not work and has exacerbated the claims of findings in this report. The priority of the outsourced entity is to make money by doing as little work as possible and charge as much for it as possible. As an example, work orders reporting leaks result in someone showing up who is incapable of repairing a leak (but is apparently capable of charging for the lack of expertise). When someone does show who can fix a leak, they have forgotten to bring the tools necessary to do the job. I realize that the idea was to make things more efficient and cost-effective for the university, but that has failed. Work takes longer to get done, the quality of work being done is less, and the employees have had their pensions and work-life adversely affected. This is a BAD SUGGESTION. Again, as staff, we are relegated to outsourcing instead of buy-in. This administration needs to do more than what is in this report for staff retention. You will continue to have brain-drain and retirement of staff feeling unappreciated, undervalued, and under-supported. This is a failure on the administration. The problem is this university is hellbent on building buildings instead of supporting staff and programs already built. This move only further serves to centralize to outsource as the University's administration has done time and time again, to the detriment of the staff and those who the staff serve at this university. There is no saved expense, only lost value with these suggestions.

Campus has grown enormously over the last 20 years and the growth is not finished. Centralizing Facilities seems to make sense but may prove to be overwhelmingly difficult and expensive to administer.

All recommendations were great and should provide a more streamlined process.

It is imperative that facilities operations personnel dedicated to high containment (e.g., BSL-3, ACL-3, etc.) laboratory oversight remain within the Division of Research. In order to comply with federal, state, and local regulations, and to ensure the safety and integrity of TAMU, these personnel are required to be highly trained and must meet very specific security requirements. The centralization of this particular component of facilities would put the institution at risk for another incident, such as the Sunshine Project in 2006-2007. There are high containment facilities at the College of Veterinary Medicine, Global Health Research Complex, Medical Research & Education Building, Texas Veterinary Medical Diagnostic Laboratory, and the Office of the State Chemist.

Regarding the moving of Residence Life facilities operations to the University Wide Facilities Operations. Residence Life having their own facilities operation is critical to the success of the on campus housing program and student satisfaction with the services provided by the Department of Residence Life. The facilities staff within Residence Life is critical to the Residence Life Operation. Residential buildings are very different than classroom buildings and need round the clock care, attention and service. They must be a priority given the building serve as a home to thousands of students. Since the consolidation and outsourcing of all custodial and maintenance staff to SSC, it has been a struggle to get close to the level of service, dedication and ownership in our buildings that was present when Residence Life had their own Maintenance and Custodial Staff. Removing the few Facilities staff we have (brought in out of need after the outsourcing to SSC) would further push Residence Life backward in the service we are able to provide to residential students. These staff are critical to ensuring building repairs, maintenance, upgrades, renovations, construction projects and deferred maintenance items are strategically planned out and accomplished. I worry that centralizing the facilities staff from Residence Life will result in a reporting situation that will not be of benefit to Residence Life or the students we serve. Special care, ownership and dedication is required around the clock to keep the homes for thousands of our students safe/secure and healthy - that is what our facilities staff do.

No comment

I am particularly concerned with the consolidation of Safety into facilities. While elements of safety and security are concerned with facilities, much of their work revolves around behavioral components. I worry that this will be largely

eclipsed and minimized. In an era of increasing expectations for accountability (particularly around student safety), I think this puts us in a precarious spot. On the positive side, I do think that centralized control of facilities is helpful.

More discussion and information is needed to better understand how this will be implemented.

This group has been through so many transitions and changes and still they literally keep the doors open and the lights on - Centralizing facilities kind of seems like a tough decision too because of the complexities of our physical spaces and all of the different skills, trades, experiences people have to have...

No comments

No comment

Since I work for the contracted facilities group, I have direct knowledge of the current process. I couldn't be happier reading the recommendations presented in the report. I truly believe the standardization and centralization of key components regarding facilities will provide better services for Students and Faculty. Not to mention, clear up quite a bit of confusion regarding funding responsibilities and maintenance expectations that are still unclear years after SSC has taken over.

No comments.

I believe that the current method of requesting work be done at a facility is cumbersome and items tend to fall through the cracks too often. Work is being done to bring units under a central camera system, there is still more work to be done in that aspect but it is a step forward. I would suggest creating a working committee to talk about cameras needs and usage on campus to better align a path forward.

N/A

I would like further clarification about student affairs facilities and what the report stated about those.

The most significant issue in this is the funding. It showcases that auxiliary functions are being moved out of Student Affairs, which is, in multiple cases, the funding source for the programs that are to stay in Student Affairs. What funding will be provided to the Division of Student Affairs to ensure programs for the students (including health and safety, leadership, risk management, etc. programs). Move the Memorial Student Center OPAS Program - again, this area provides funding for other student programs that come out of the Memorial Student Programs Office. This move would also require a review of the Memorial Student Programs area.

It's understandable that the report would recommend changes if facilities management has a lack of cohesion and inconsistencies. However, there are ways to solve these problems without centralizing every facilities unit. One of the benefits of decentralized facilities is that it allows stakeholders to have a stronger ability to provide input and give feedback on projects. Requiring certain approvals and operating in a way that follows main Facilities protocols may make sense, but centralizing all areas of facilities takes away a lot of the effectiveness of the individual facilities units.

As long as Facilities is not outsourced, then I see no issues. This move feels like outsourcing is the next step and I believe that outsourcing facilities will be an overall negative.

I think overall this is a good plan. I would also like to see changes within the Utilities & Energy Services leadership. Having been within that unit [REDACTED] I have found that the culture, diversity, and management at the top leaves much to be desired, [REDACTED] While the rest of the campus appears to be embracing diversity in multiple ways, the leadership only talks about diversity but does not practice it from the top-down. I have seen them try so many ways to address toxicity within the groups and between the groups but they have all failed. What is preached is not what is practiced from the top-down. I don't understand why such leadership remains when the rest of the campus appears to operate differently. To me, embracing diversity is just a checkbox for them. I have given it all, in my years of service, and I do not plan on staying beyond the new year if things do not change within this organizational unit. I love what I do, but feel like our unit's leadership is blind and needs new direction.

I don't think this makes sense for auxiliaries.

Moving KAMU from its present location needs to be reconsidered. Not only is that counter to what other institutions with strong Journalism programs are doing, but the necessity of a ground floor involvement as a cornerstone to future

brick and mortar building models within the academic remodel you propose is totally logical. The MGT Consulting Review lays out a multifaceted roadmap for addressing future academic and communications needs of Texas A&M University in which KAMU should be seen as a central role player as the digital communications hub for the main campus and the entire TAMU System. Additionally, fiber connectivity to Performing Arts stages for dynamic integration with University events for live telecasts should be seen as standard. This would involve audiovisual integrative planning for a communications building footprint to set KAMU as a standard-bearer for technological fabric on campus that will be state-of-the-art and fully integrational. Maintaining the KAMU's campus presence as a vital public media entity for TAMU and the Brazos Valley is essential. Additional hardware for distribution paths for signals to existing and future local and regional television distributors, as well as traditional over the air distribution, must be considered and not dismissed. Now is the time to develop a plan to align your recommendations for a centralized communications "storytelling" hub to fit in with the new College of Arts & Sciences directive. Instead of moving KAMU off campus, KAMU should become an anchor element in a new multiple production studio and live event control room to take its natural role in Texas A&M's storytelling narrative while educating Aggies to be media influencers. While continuing to bring live events for these "performing arts" to the world (all of which will require creative media content), KAMU can combine with fellow digital stakeholders on campus to bring all aspects of the Aggie experience to the world (commencements, Muster, etc.). KAMU's connectivity must be in place to best serve the campus's needs and excel in its ability to enhance TAMU's marketing & communications directives. There are multiple reasons for a central digital communications hub on our campus:

- The is the technical infrastructure necessary to ensure execution of broadcast and media needs for a live events for Visual and Performing Arts centered engagement;
- There is the need for post-production facilities for the daily broadcast journalism classes to teach the technical aspects of broadcasting;
- Distribution and elevation to the world of all University-centric events, ranging from VIP guests, to diversity initiatives, campus traditions and student affairs, plus annual celebratory events that are campus-wide initiatives, System-led events, and special events (Reed Arena graduations or George Bush Library events) where a University broadcast production facility needs to be integral in the staging and execution of logistics;
- The opportunity for daily student worker and internship opportunities in the journalism and media related fields that influence and dictate public perception and public information about Texas A&M - facilitating Marketing & Communications efforts with a nod to the academic opportunities given students in the journalism field.

---

Appears space inventory has roles under 2 different director level positions within this section.

---

Pg. 55. Recommendation #2: Create a new division of Facilities Planning and Construction (FPC) that allows for an expanded, strategic planning and construction unit. This would be great. Would it include non-Bryan/College Station campuses? Pg. 56. One unified system can track records and collect data to inform and enhance facility efficiency, utilization, and maintenance. Can Texas A&M Health please be included in this?

---

I agree that facilities management at the university is disjointed and needs better cohesion. However, the removal of the Office of Sustainability is critical to remain with the facilities team as the sustainability work aligns best with facility initiatives and practices.

---

If I understand correctly, departmental proctors whose primary job is a building proctor function would be consolidated. This seems shortsighted in that these individuals were hired to serve the best interests of their department. As the department's liaison with TAMU and external contractors, they can facilitate renovations and repairs to ensure they are completed efficiently and with minimal disruption to operations. If you schedule work at your home, you don't just leave a key for the electrician. At this point, it's not about the actual work – it's about the important details. While you explained your expectations to their supervisor, you still meet them there to make sure they understand that they need to protect your floors and not let the cat out. Think of a research lab and the specialized equipment that cannot lose power. Someone in the department will always be assigned the task of handling the important details, effectively replacing the staff that were consolidated.

---

I like the idea of centrally managing all these services.

---

N/A

---

Although I understand the rationale behind consolidating Facilities, I also know that the Libraries has many complex needs within their buildings. I think more accountability is good and helpful, but there are special needs for different collections and spaces that are usually better addressed with a more attentive and localized group. It would be a loss if we no longer had easy access to those who help keep our buildings functioning.

Centralization is detrimental to an organization as large as TAMU. This would be a mistake. F&O does a great job in managing our buildings, please don't "fix" it by creating more problems.

Having dedicated facility and building proctors is a big benefit to the currently chosen staff that have to perform additional proctor duties on top of their normal jobs. Having a common Keyless entry application, keyless hardware, camera security, and a robust and working auditing system with local department approvers for access into secure areas, would be a great help to our aging and haphazardly created methods we use now. Moving to a touch access (RFID chip keyless entry) away from the swipe method used now, would greatly decrease the wear and tear on equipment, on ID cards, and would allow keyless entry devices to be weatherproof. However emergency keyed entry should still be an option in case the electronic devices fail. SSC/UES method of AggieWorks does not work. Some requests slip through the cracks and go unanswered for months even years at times. A manual audit is performed on occasion to catch forgotten work orders. The entire process is inefficient and disjointed. Technical work staff are not always knowledgeable in their fields and that has led to bad installations or repairs that have to be redone with outside vendors because we simply do not trust the skill and ability of SSC or some UES personnel. Before assignment of a work order to a technician, their skillset should be taken into account to make sure they know what they are doing based upon the job requested. An option to grade or make comments about the technician, that are taken seriously and not ignored, would be appreciated. Not every project manager assigned for build projects is competent enough to do their job. Suffering through an under skilled or overworked project manager when the requestors are unable to request a new project manager, with justification, is extremely frustrating. The building management system (Apogee) and many sensors (age and placement) on campus are horrible and need to be replaced and/or moved immediately.

Regardless of where and how Facilities is housed, the SSC contract needs to be addressed. SSC especially Maintenance is not doing a good job. Work orders are not completed in a timely fashion, the workmanship is below par. Work orders are closed out when work has not been completed. The issues with SSC must be addressed and resolved before moving them.

No comment

Especially with the University Libraries, our facilities are truly embedded and centralized within our organizations. They know our buildings and our specialized services and operations. Our current model is extremely effective and efficient which in turn allows us to provide the same for student success. Please don't centralize facilities. I feel like this will be attempted and it will fail and then will need to be re-established to the current system. Waste of time, money and effort.

Having had facilities-related duties in the past, I have observed many of the findings in the report. Engineering has already benefited from strong, knowledgeable leadership. Doing this across the university would provide significant opportunities at reducing cost and improving services. Clear lines of communication to stakeholders, including IT, vendors and contractors will be a key to success.

The recommendations to consolidate the Keyless application and Building access services provides a cohesive one stop request for Departments, customers, contractors when servicing or troubleshooting doors. One thing to consider is being apart of the Division of IT provides access to levels of the network that the devices need to communicate. On a daily basis network communications are installed, serviced and need troubleshooting which requires network access. The Keyless service equipment is increasingly moving to a network model where communication with the devices needs that access. Even more the operators, engineers, and technicians are able to service with less time and resources when access to the network is available. Without the access to networks an additional layer of labor and specialization will be required to work in tandem with the keyless services. The multiple requests a customer must provide in order for an installation to be initiated I feel could be streamlined. Currently in order for work to be started a 'work or service order' needs to be submitted I'm assuming for billing purposes. The tracking of the billing is important but I would think at the 'end of the day' that could be handled internally without the customer needing to be apart of the process. One of the Service departments could be the main 'goto' and 'hire or submit a request' to the other department to finish, complete and payment be tracked all through one service department other than each department tracking their own. The Division of IT Keyless group collaborates and communicates on all projects with the Building Access group. Streamlining the request for customers would lower the cost of the overall service and provide a more effortless and simple process for the campus.

Very disappointed I missed the initial advisory comment window. The consolidated restructure that is recommended will allow better communication among all departments and allow proposed and or approved projects to have a unified

acceptance within the upper management structure. Additionally, the unified approval will better define the exact scope of work for the lower manager stakeholders and field operators. As a side line to this consolidation, when addressing projects, a stronger "construction" accounting system needs to be implemented to project 'real time' contract accounting allowing for more precise decision making. Lastly, the reorganization / consolidation should eliminate the "contract management" that is now in place based on dollar amounts and offer the A&M ownership stronger control over the contract funds and project schedule.

I think it helps when a Facilities manager knows the history of a building given some of the historic buildings on campus.

A&M builds a great many buildings and fails to keep them up properly.

A very disheartening news story this week about a gentleman in Facilities that had congestive heart failure and his treatment is delayed. An Aggie student started a Go Fund Me page for him -- that is the quality of our young people. I could not help but think of how this gentleman, who is not that old, would have been better off if he was till an A&M employee and not a farmed-out employee. He would've had better insurance, plus access to some funds via the Staff Emergency Fund. We have often commented amongst ourselves that the people who were outsourced aren't as loyal to their jobs as when they were Aggie employees. We knew them, knew their names. Just another example of how the exponential growth has harmed A&M.

I think UES IT should be left alone.

Seems logical. Many valid points mentioned in this area. Communication and understanding on how this area operate would be appreciated. Deferred maintenance or who is to cover certain costs in general has been a long and ongoing challenge, often placing costs on the department. Keyless entry was a good item mentioned. It would be good to see if an improved funding model could be explored. There have been incidents of when departments change who holds the space that no wants to cover the cost of the keyless entry to the office location, it should not be this complicated. As I understand the outside items are covered through some sort of central funding but not fully sure.

The Radiological Safety Officer should have access to the highest level of management in keeping with management's support of Radiological Safety (includes radioactive material, x-ray devices, lasers).

I support the suggestions in the report

Realignment makes sense and we have many of the same issues at TAMUG. Securing facilities, lack of or non-operational cameras, no key control, and access are major gaps. Additionally, EHS was recently moved under Administration & Auxiliary Services. Emergency Management which has always been under EHS was left under MESSO (Marine Education Support & Safety Operations). It is difficult to separate EM from EHS because of the overlap. Consider aligning TAMUG similar to CS with EM and EHS under Administration and Auxiliary Services.

We must have a team that represents the interest of the president's office/tamu that will provide oversight to include, but not limited to, the coordination, communication and accountability of entities (SSC, UES, EHS, Etc) who are responsible for ensuring the operation, maintenance (preventive maintenance) and functionality of TAMU facilities, are being carried out in an accurate, reliable and efficient/timely manner. The current structure allows waste to thrive due to the inefficient, negligent and unreliable/unchecked manner in which these entities operate.

No comments.

The inclusion of an IT department here seems to contradict the proposal to consolidate IT functions under the Division of IT.

My only comment on facilities is this: Last year I was Wheel Chair bound for 2 months. The school is truly bad for Disabled Access. It has been this way for some time. Thankfully I am no longer in that chair but the memory will never leave. From uneven sidewalks and stairs and steps and even Kyle Field where the access to elevators post game is ridiculous. I love my school and always will but the campus is not inviting to the disabled really at all.

None

I am [REDACTED] working on the Building Automation System (BAS). We are responsible for the electric controls for the majority of the Heating Ventilation & Air Conditioning (HVAC). It is advertised that we have over 20 million gross square feet of cooled and heated space. It is only a guess but I would say that we have electric controls, also know as Direct Digital Controls (DDC) on 85% of the 20 million square feet. We take

pride in that the team I am on, we rarely use the control's vendor technicians help for routine field service. Our issue is that we do not have enough technicians to keep up with the amount of work that is needed. The controls have gotten much more complicated over the years. I do not believe the pay for the BAS and other technicians have not been kept up with the complexity of the controls. I am not sure when the last compensation review has been done. Thank you

---

With the move to a more centralized management structure, I question again the need to have contracted out some of the services that would be run by such a structure. When the decision to contract out custodial and dining work, I believe it was done for the sake of efficiency, the idea that an external vendor could do the job at a lesser financial cost. An outside vendor has to pay taxes and make a profit out of such an enterprise. With all the know-how we have, as a major university, are we really unable to manage such an operation to the level of efficiency that an outside vendor can achieve?

I am all about getting a better way to communicate building needs. Not sure central building management is a good thing, as can be seen with UES. It gets to where someone who has never been in the building thinks they know more than the people who work in the building.

I am a controls technician so I am not sure if you will see this comment or not but it was on my heart to say it. The campus has grown 10 million square feet (not including RELLIS) but my pay has not gone up proportionally. To top it off, I am doing double the amount of work. The controls team does not have enough people to properly manage the sophisticated controls system like we want to. We are pushed into a corner to be in a reactive role rather than a proactive role in the system. Dont get me wrong, we do what we need to do but to better serve the campus and the students staffing should be increased. I have reached out to other campuses our size and they have sometime double or triple the amount of technicians. They are amazed at what we have accomplished with the amount of people on staff. We have awesome employees but to be honest they took a pay cut to come to work at TAMU. This is also hard when each one of them could be making 40% more if they took the short drive to houston. The morale overall with administration changes and a few people placed in over the facilities is discouraging when we are told that if you dont see it our way then we will ask you to leave. I think more things could be done to build up the teams versus criticizing and threaten losing their jobs. It really makes you think about whether or not you want to stay even though you bleed maroon. To be honest, the first five years were great but then the past five years I have been seeking alternate employment, and it pains me to say this, I might consider a pay cut to get out of this place but the reality is once I decide to go I will most likely get a pay raise.

I work in Facilities and agree with the proposed restructuring. I agree with removal of the Associate Vice President of Facilities and Operations to Finance. She has not provided any benefit to Facilities and Operations on campus for many years. I worked under her (my boss's boss) for 1.5 years and saw her in person 1 time. She didn't keep up with campus facilities/operations, not real sure what she did. I agree with removing the Office of Sustainability as they do not deal with facilities or campus operations. All they focus on is social sustainability, which provides zero benefit to the University. I agree with eliminating the Office of the University Architect. I worked there as a PM under the UA for 1.5 years and it was very frustrating to say the least. Many jobs are required to have the University Architect review material selections, design layouts, etc. but a slow turnaround from the UA made numerous tasks pile up to where she was overwhelmed. I pushed to have things turned around in a timely manner, but they all log-jammed awaiting the UA's approval. She overextended herself with being the DRsc chair for the CBE, co-chair of the DEI committee, had continuing education requirements and other commitments that filled her schedule hindering her ability to fulfill her duties as the UA. She was always late to work, ALWAYS late to meetings and work call in sick or work from home very often, forcing rescheduling of appointments. I really took pride in working for this office, but had to leave because I couldn't take it anymore. We were delaying projects all over campus and my hands were tied awiting her availability to sign-off on things. I like the restructuring and splitting Facilities Management and Facilities Planning & Construction makes sense, but the FP&C org chart should include project managers, not sure of the benefit of having dedicated Electrical PM, MEP PM, AV PM. Seems like you'd have ranked PM's (Senior PM, PM 1, 2 or 3, Inspectors, etc).

The sheer number of facilities on our campus will make centralization difficult. My hope is that it can be done in such a way that still allows occupants of building input into how their facility is managed.

Completely agree with Rec 3. It is crazy that we are so big and don't have this kind of unified system.

n/a

My concern with centralization of services is that each facilities staff then services multiple units. This can cause an

imbalance in quality of service by larger or more demanding units overshadowing smaller or less "needy" ones causing worse service to be provided to those smaller teams.

I agree that we need to streamline the communications between all areas of Facilities. It is concerning to me that there doesn't appear to be any direct consultation with the Building Access workers in the field, and in the office. I certainly hope that we will be consulted, and have on on one, in person meetings with those who are making the final decisions. We know what works, and is most economical, in the real world, not what is pushed by a salesman. The Matrix card access system is the best system that we have on campus. It is easy to install, troubleshoot, and repair. The Allegion/Aptiq readers are not good. They are more difficult to install and maintain, and not easy to troubleshoot. We, supposedly, have a book that lists all acceptable door hardware for new construction. That is not always adhered to by contractors. I, personally, have instructed SSC supervisors, and even people in management, to NOT use graphite in the cores. I, then, showed them the correct lubricant to use. Excessive use of graphite plugs up the cores to the point that the key no longer works. I have been called out, after hours, to repair this issue. It would be really great if SSC was required to train their workers on the certain lock repairs that are their responsibility. They, often, send repairs on to Building Access to complete, that they should be able to do themselves, costing the customer more money. It seems that all supervisors are not trained on which lock repairs are the responsibility of SSC. There is so much turnover, and shuffling around, in SSC maintenance, that it seems to be problematic. I try to explain and demonstrate to the SSC techs how to do repairs, whenever the opportunity arises. I believe in setting a person up to succeed, not to fail. It is concerning that key information may be put out there for the entire campus to access. That should be limited to very few individuals. It is a security risk, exposing our key info to too many people, increasing the possibility of hacking. We hold the keys to the entire campus. It would be a disaster, if keying information to a nuclear reactor, or a highly secure lab, with dangerous biohazards, was obtained by a person with terroristic intent. Please, please, please, meet with us in the building access shop, to see exactly what goes on, in real life. We can talk about what works, and what needs improvement.

I think letting SSC run things versus an A&M oversight is a recipe for disaster. They work for us, not the other way around. It is easy for them to spend money as they have no skin in the game.

I agree with the assessment pertaining to facilities. I have been in the Management of Space Information department since I started working with TAMU in 2017. And I have always stated why all the data in its own bucket and why is it so hard to create communication links between the systems. I believe the purposed structure of facilities will be very beneficial to TAMU. I also know that a lot of our floor plans are old and out of date as well as out of format for most CAFM systems to accept, about 90 percent of our floor plans are PDF files.

There are concerns that centralizing will result in a loss of institutional knowledge and increase wait times (sometimes already long).

Centralization would be very beneficial here. As someone that has worked on the Space Survey and Space Inventory for our division, it does not make sense to me why we don't have a central office that is responsible for facility mappings, maintenance, and inventory.

I don't work with Facilities Affairs to provide feedback.

Our facilities team in our department knows all of the equipment and building very well and are able to keep our research from being interrupted or delayed like it would be if we had staff that were not familiar with the building and scientific equipment. Our facilities team is able to fix many problems that occur very cost effectively and without having to cause any significant delays waiting on someone else repair, etc. If this team is centralized, we will lose our customer service that keeps our department running smoothly.

NA

Having gone through centralization of facilities operations for COE FPM, there a few things that changed for the better, and made some worst. This is a conversation that needs to be had with Department facilities managers now working for COE Facilities.

Campus is ugly. Please enhance landscaping.

This is particularly important aspect of improvement for our group. Once we are able to get SSC to the building for maintenance it is generally resolved promptly and professional. However, our official TAMU building proctor rarely is engaged. So, this responsibility has essentially been reassigned to a staff member that has way too much other

responsibility on her plate. Therefore, she is not able to be as engaged and provide high enough level of detail and follow through on the service requests. This often results in having to go through numerous rounds of tickets and disruptions to building staff who are trying to complete clinical research. One particularly frustrating occurrence was the water to the building was shutoff during a study day with participants and the BSL2 lab in full operation! The water wasn't "supposed" to be turned off in the building, but only at the exterior valve somewhere. However, no one bothered to double check prior to leaving nor inform the occupants what was going on so we could confirm. Once it was realized by occupants, it took several hours before water was restored!

Please note that the Qatar campus has a different work week and is 8-9 hours ahead of College Station. If services are centralized in CS, there need to be people available during the TAMUQ work hours for support. This does not mean that people on the ground in Qatar can or should not report to their respective areas in CS. The building in Qatar is owned by Qatar Foundation and managed by TAMUQ in coordination with QF.

The "Current Facilities Organizational Chart" is not correct. Currently, Building Access is under the VP of Safety and Security. Also, while a university-wide key log system is a good idea, that must not be confused with a system that many people can see keying information (e.g. key bittings, keyways, key access locations). Currently Building Access has a system that holds all university keying information. For security purposes, very few people have access to that system. It is imperative that the amount of people with access to keying information stays low. The more people with access to key information, the less security there is on campus.

Having to enter a work order for soap dispensers in the restroom not working properly is a bit much. Local things like that shouldn't have to go through a bureaucratic work order system when we literally have daily face-to-face conversations with the person who can fix the problem in 5 minutes.

Points for consideration: Over 50% of the bench marked institutions have housing facilities under the Residence Life/housing department under the Division of Student Affairs. There is added value having them embedded within the operation. Staff that help in the oversight of housing facilities also have other responsibilities in their position description that included COVID response, student programming, move-in and closing responsibilities, supporting other areas of the department, summer conference operations (8,000 visitors on campus during the summer who come and go like a hotel), customer service (parent and student complaints and follow ups), billing, ADA requests for room accommodations, vendor distribution coordination, part of the emotional support animals process, just to name a few. These are all integral to the housing operation and not just facilities and would have major impact to the overall operation by removing them from housing. Some of these major impacts would be potential loss of business knowledge of the department in order to be able to handle all the major issues and moving parts, who takes on the non-facility functions to just name a couple. Their role in COVID response was and is integral to the success of staying open. I think the collaborations we have established under the current structure has helped up be successful (we have internal satisfaction surveys that indicate that students are satisfied with our facilities and how we handle them). I would advocate an indirect reporting line to the facilities office and continue collaborations with all appropriate offices.

If these movements occur, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has caused severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF'ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation.

The implied reduction in staff that is proposed with this plan will almost certainly lead to reduced service levels in facilities. This group of people already are understaffed, this solution will only exasperate the issue.

N/A

Housing facilities are different from general office/classroom buildings and should not be grouped with main organization; already routinely meet with and involve custodial, maintenance, utilities, etc. Integral part of our department and would really cause issues if not retained.

I disagree that Transportation should be outsourced to a private company, as this removes a unique opportunity from students that sets TAMU apart.

Although there are benefits to centralized services, I feel like institutional and historical knowledge is lost if departments are put into a queue for the first available person to handle. It is more effective if some level of coordination remains within the units as well.

Per the report, page 115, "The large volume of outsourced maintenance has resulted in a lack of oversight and effective

communication, causing delayed repairs or imprecisely regulated use of resources..." "Outsourced maintenance" is also listed as a weakness in the Academic Affairs SWOT Analysis on page 116. Yet, on page 5, at the beginning of the report the following is stated: "Recently, TAMU utilized successful outsourcing models for dining, custodial, and maintenance services and, to a limited extent, student residences." I would be curious about the definition of "successful outsourcing" when within the same report it would seem to indicate otherwise. This seems highly inconsistent.

Moving all facilities duties to be under the facilities direction does not seem practical. You would have many that are not familiar with the different facilities around campus. This is a detail specific duty for each department.

No comments

While centralization of facilities coordinators may be beneficial across the majority of campus, it is absolutely essential that the Responsible Official of the TAMU Select Agent Program maintain supervisory control of highly specialized high-containment maintenance professionals in the Division of Research to ensure that federally-regulated laboratories on campus (as part of the Federal Select Agent Program) are properly maintained and security requirements are consistently met.

Regardless of what the higher officials think, outsourcing staff or the services they provide is not a good thing. This did not work out well for custodial or dining services. People lost their benefits, were forced to take a pay decrease and the overall morale of these workers decreased tremendously, resulting in the high turnover rate that we have now. It's like we have a new person every month! We like to build relationships with our workers here. Everyone working in Facilities deserves to be able to keep their jobs and pay and not be grouped into a dime-a-dozen management program that does not care about them.

To properly fulfill the mission of the University Libraries, best serve all students and stakeholders, and properly care for the unique and often priceless materials housed in the University Libraries buildings, it is necessary for the University Libraries to remain an independent entity within the Texas A&M University System with its dedicated Facilities department that can efficiently and expediently provide services. (See full comments in section regarding Academic Realignment.)

Tired of all the burnt out lights at the end of the year.

The outsourcing of more facilities services would be a disservice to employees of TAMU. It is very often the case that when these services are outsourced employees lose benefits and pay.

I support the recommendation that each building will have its own building proctor and that person is employed by Facilities. I have served in this role for years and it has sometimes taken over 50% of my time or more, meanwhile my real job doesn't get done. Department heads do not want this responsibility any longer, please!!

Similar signage across all areas of campus sounds like a great goal.

Programs and facility operations of the MSC have been decentralized since the 1970's. The department of the Memorial Student Center produces campus-wide programs and UCEN is responsible for the facility management. The relationship between the two are very important.

Finding #1 - Enhance communications between SSC and an established point of contact. I have many family and friends that work for SSC as well as for TAMU; both have stated there is no issue with the outsourced contract itself, but there is no established point of contact; instead each side has multiple people they must call on and there is a breakdown of communication. Each building/facility needs an established person to communicate any issues, and I wholeheartedly agree there needs to be one system for maintenance management so that TAMU and SSC can communicate. Too many times I have heard a request has to go through a different system than another place, and it creates difficulty on both ends because requests are not getting through to SSC efficiently to address the issues. A central office to improve relations between SSC and TAMU would be beneficial for both. SSC does strive to make TAMU a great looking and well maintained campus, but communication issues greatly affect this goal. Finding #2 - This does not seem to be needed. By realigning and streamlining the Facilities Division and actually creating clear communication, this would not need to be a new division, but maybe just a new position. Finding #3 - I disagree with creating a whole new division, but this goes with my comments in #1. Communication, communication, communication. I wholly agree access systems should all be the same and as easily manageable as possible for all (faculty, staff, and contractors, as well as students, if necessary.)

I agree improved data and transparency are important for performance and there is room to increase efficiency. At the same time, it is common knowledge that very few employees (if any) within Facilities were interviewed or asked about

existing processes. This calls into question what information is being used and whether that information is accurate enough to make informed recommendations.

I strongly support all recommendations. I've worked in and around facility planning, programming, design, construction, operation, and demolition for over 30 years outside of Texas A&M. This change is sorely needed based upon the disfunction and dissimilar approaches across the university that I have observed in the past few years since becoming part of the TAMU team.

While I agree that there are issues with Facilities and maintenance and they need to be centralized, the main reason for this decentralized state is the outsourcing. Campus used to be maintained well prior to outsourcing. Those that worked for the University cared about their work and took pride in it. Now with the outsourced group, all you have is a high turn over rate and a refusal to clean anything over 6 feet off the ground. Finding 2 - After reading this one, I can tell you who talked to for sure. While the CBE is not perfect, there is a need for this type of committee when it comes to this size of a campus. The University Architect does a phenomenal job trying to keep this wrangled in, but campus politics and College leaders and Vice Chancellors tend to think they are better designers and end up wasting hundreds of thousands of dollars on things that would have never been an issue had they left the designing up to the professionals. TAMU is not the owner but the end user of the campus facilities. The State and the Texas A&M University System are the owners of the facilities. Large projects are currently managed by Facilities Planning and Construction at the System level. The smaller projects that are \$10M and below are managed through the outsourced group which has been an epic failure. An in house department for these smaller projects would be beneficial to campus. Finding 3 - also an issue created out of outsourcing. Outsourcing of things such as maintenance has been a failure. An example being the building I work in did not have the air filters changed for over 3 years. This summer as the building AC went into over drive and failed, we peaked above the ceiling to find dirty air filters that were dated 2017. I know this was consistent throughout the floor I work on. Outsourcing is not the way to go for transportation services. Outsourcing has proved to be a failure and create a decentralized university.

Can we please have a campus-wide audit of building accessibility, to include access from the rest of campus?

Fully agree

I am concerned that further distancing management of facility issues from a designated individual within a department/facility will adversely affect response time to issues. This has been our experience since facility issues management moved to SSC control; we have facility management as part of one of the Associate Directors' portfolio- since the SSC move he has more frequently needed to track and follow up multiple times to ensure an issue was addressed. We know that there is variation in how responsive some individuals are; it will be important for the staff assigned to a facility to understand the operations within that building so the response is timely. Issues within a residence hall room, healthcare facility or lab may require a different response time compared to a classroom or general office space.

No feedback to offer.

Facilities are an integral part of the success of the University. First impressions are everything. I believe that Student Housing needs to control their facilities. If a Director does not have direct control, but is the one receiving the complaints, the ability to manage the facilities is lost. It is no different than outsourcing. When our Building Maintenance and Custodial Services were outsourced, we lost services. We pay more for less. The ability to accomplish tasks becomes much harder.

Invest in cultural centers, including a performing arts center, museum, hospitality center and campus gardens For now, I think the campus gardens and hospitality center is meeting the need. I don't believe our community will support a performing arts center well enough to justify the investment (Reed Arena and OPAS fail to consistently bring in top shows/acts and fill the seats – our community's demand does not justify this expense). A museum of natural history, possibly in collaboration with the Brazos Valley Museum of Natural History might make sense – but I don't know if there would be enough community support.

Facilities should continue to function with respect to the buildings that they currently service. No changes or centralization is needed here.

In athletics, our facilities and events staff are unique compared to campus. They handle the typical facilities-related issues but they are also working athletic events, setting up for recruiting events, among other items. Facilities in athletics

is way more than just repairing items. Having them exist under a campus framework does not seem logical. Additionally, they have substantially more duties than a typical facilities staff member due to the nature of our operation. To me, having them exist in a centralized environment and be managed the same as campus staff while doing more doesn't make sense. As I said in the finance section, I believe this could be beneficial for certain departments but that doesn't mean it makes sense for everyone.

---

Since the privatizing of this with SSC, response time has increased, satisfaction of work completed and overall expense has increased. Your report addresses only the College Station campus.

---

We have lots of under poorly maintained and poorly utilized facilities. Outsourcing from our previously centralized TAMU facilities to SSC didn't fix the problem. Getting things repaired is just as difficult as before and much more expensive.

---

Memorial Student Center and University Center facilities are much more like an event space and venues with the wide variety of TAMU organizations and outside entities that rotate through the space. This can range from small student groups up to major off-Broadway productions. This requires daily reconfiguration of who is using what space and in what capacity. I think as event venues these should be separate from the larger, centralized TAMU facilities group. I do not think the larger TAMU facilities group can be agile and adaptive enough to successfully manage these two venue / event style spaces.

---

I support the suggestion under this area.

---

I agree that a new centralized structure is needed. Not sure how each building proctor will fit in to this. In the case where I am, the admin to the dean is the building proctor. I liked the single computerized maintenance management system (CMMS).

---

The University needs to get a more robust Quality Assurance program going. The contractor is using the University as a training ground to send people to fill positions in other University's around the country. Your Building Managers in each Department need to be kept. They are part of the system that is keeping the contractor focus on what is important to get repaired.

---

If auxiliaries lose the ability to control their facilities, this will be detrimental to their ability to control costs. Operations like Residence Life will have to raise rent rates if they have to pay a "fee for service" to a consolidated Facilities operation.

---

Seems logical. I highly agree with many items noted in Findings #1, and it will be interesting to see if the funding can be found and communications resolved particularly how to handle and request matters regarding deferred maintenance. This has been a long standing issue and it has been found that often times departments have to fund this in their funding. The cost of covering telecom keyless entry would be a good one to evaluate further. Appears to be unclear at times of who should cover the cost, particularly when tenants are switching buildings or if the item is internal or external to a building.

---

This section alone illustrates just how unsuccessful the outsourcing was. Perhaps it was incomplete or the terms of the deal were not sufficiently defined. Can we be assured the terms of the contract are being met? Most of the problems I see mentioned are administrative issues with funding, authority and oversight. I do agree that the simple coordination of building access (keys, card readers) needs a centralized system with some delegation to building proctors. "The campus currently has many non-compliant camera installations. The current model does not offer a central point of contact to assist units with becoming compliant." I'm not sure what people are missing. It has been pretty simple for the Libraries to follow the SAP and route requests through the campus AVST committee. Here at the Libraries we were using the central service offered by the Division of IT and were left scrambling when they shut it down with little to no notice. This did not do anything for our confidence in their ability to provide such a service. We ended up partnering with Transportation and have been quite happy with the result.

---

I'm not sure if my department, UES, falls under Facilities or Finance and Business Administration, so I am commenting here. Since Utilities and Energy Services is responsible for many items that require individualized services and support, we are a unique group, differing from all other departments on campus. We have a stellar reputation at TAMU, and provide excellent customer service for all aspects of what UES does. Therefore, centralizing any of the services provided, may not be in the best interest of TAMU. However, being an IT person, I do feel that our group could certainly benefit from being more integrated with TAMU IT for certain services. Due to the large amount of devices and services we provide, it would be very difficult to source IT support from a centralized IT group in a timely fashion. However, if we were a branch off TAMU IT to support UES as a whole, I feel that would be beneficial for TAMU as well as UES and UES

IT. This way we could benefit from some of the services of TAMU IT, such as the ServiceNow Ticketing system, Microsoft and other third party licensing, and IT project management.

---

Must address and perform deferred maintenance.

---

Recommendation #3 is a positive and will enhance efficiency across the campus.

---

Centralizing facilities seems to be a good idea. It can eliminate duplication of efforts and as COVID proved, it is impossible to "lock down" and entire campus when individuals groups manage their own facilities.

---

Centralization efforts, particularly with regards to a single reporting database system of tickets related to maintenance issues, is applauded. I do want to recognize our Division of Research representation, and express how important these subject matter experts are and the hope that they will continue to "major" in DOR related facilities, while having others "minor" in DOR related facilities, for cross-training and depth of knowledge.

---

I understand this was a contractual focus area, but I don't know of anyone in Facilities who was interviewed in an effort to understand current perspectives. The "before" org chart is incorrect. Building access doesn't report to Facilities - it reports to Safety & Security. Not sure why SSC and Chartwells are reflected in org chart - they are only a vendor and overseen by the university.

---

Seems logical to align the management of facilities and ensure consistency. If faculty "own" labs, do those all also go over to Facilities to run? Will Facilities have expertise in scientific equipment managed in these facilities? There used to be a facilities planning group; seems logical to have that element again.

---

None of the proposed changes seem as they would affect the biggest issue with the current model. By contracting out services, the turn over rate of personnel with the contractor leaves them chronically short of staff, particularly custodial, and buildings do not get cleaned.

---

Facilities needs reorganization. Proposed changes seemed significantly appropriate.

---

I like the aspect of card swipe access. I think I will point out that the college of liberal arts has the liberal arts and humanities building and they have practice rooms that are only accessible to students via swipe access unless a staff member opens it with a key. These spaces use to house the English language institute staff before they moved to Nagle. I think yes this would be a costly investment but also a more effective method especially for departments/colleges that have far more costly equipment in their offices or classrooms. This way if anything were to be misplaced/lost/broken there could be a track record of who accessed it previously or after that particular day. We used to use the record to log and see if students left the space clean and in the same condition they were given it.

---

If facilities are centralized, (1) mandate quick response times (30 minutes or less) across the campus for urgent problems and (2) expand services campus wide to meet the needs of units that operate 24/5 or 24/7. Otherwise, do a more depth analysis of what functions can be further merged, leaving in place mission critical features.

---

Centralization sounds awful. Facilities need to be handled by staff dedicated to that area, who are familiar with the facility and its needs. And how are you going to centralize facilities management operations that are currently housed in Qatar? Not only is Qatar 8,000 miles away, it's 8 or 9 hours ahead of Texas and works Sunday-Thursday. And it's not even the owner of its facilities – they're controlled by the Qatar Foundation. The Qatar campus can't be expected to be part of a centralized facilities operation.

---

Facilities : as a Building Proctor I look forward to a requirement for increasing regularisation of process. I find that Security is frequently by passed in the interest of a faculty member having complained to a Dean. Processes outside the College would enhance security of students and facilities. I will comment that current key control practices do interfere with my ability to address the occasional whims of my deans to inspect spaces that I could heretofor access.

---

The idea of a centralized facilities group sounds good on paper, but groups such as the University Libraries cannot function by this method. We currently have 6 Full time Facilities coordinators that run 7 buildings across campus who have particular needs of collection management and preservation. I understand inconsistencies in communication, but the Libraries Facilities team is in alignment with the main unit. I suggest keeping the Facilities unit within their college or department, but having strong support from a main Facilities unit.

---

Would be nice to move back to the model of housed together

---

First, Building Access is not in Facilities. It is in Safety and Security. Second, it is clear the recommendation to centralize the facilities functions was made prior to the study and report. If the goal is to improve communications and improve

efficiency, then the people involved in the current processes should be a part of creating the solutions. Ignoring them serves no one. Ignoring policy and procedure achieves nothing. There is a disturbing lack of process being employed in this "transition" period. SAPs have been ignored. Committee review and approval has been dismissed. This is reactive at best. As to recommendation one, I agree that one of the chief challenges with the current building proctor/facilities manager model is authority and responsibility. Under the current model, building proctors are simply individuals working within a space that have been assigned an additional job duty. Facility managers (or sometimes coordinators) are employees paid to fulfill those assignments as their primary job function. Much could be achieved if there was a small, specific set of positions related to the operations of facilities. If this is to be deployed as a central Facilities Management service, then each college or division should receive the same level of service. This would mean elevating rather than ignoring policy and process. Recommendation #3 seems to counter every previous directive to centralize functions. Why would this not be centralized into the larger Information Technology division? Why would this be an exception?

Seems logical overall. If funding is available to manage and cover such costs, sounds like a great plan. Deferred maintenance has been a continual issue. No clear plan has existed for staff to understand how to get items addressed often times putting the burden of costs on organizations. Also, a review of Aggieworks should be explored, as it leaves too much open for anyone to submit items that can end up being a surprise costs to a department. Keyless entry and who pays for which doors has been mentioned and is confusing, especially when you have departments leaving and new tenants coming in.

It's true that facilities services are inconsistent. I hope this would help.

Consolidating facilities makes sense as much of the work done by the facilities in my department is done by SSC and not at the department level anyways. Mentioned in the report is the multiple work order systems, this is probably more widespread than the report even says. In my department we have our own facilities ticket system that they come and look at the problem then most time submit it into aggieworks for SSC to take care of the problem creating an unnecessary step in the process.

building proctors need more support/ actual zones/ chains of command.

Although a standardization of facility related processes is needed, it should be noted that a broad sweep of HR titles through reorganization may not be advisable. Many facility titled staff have multi tiered roles which involve facility oversight but also include departmental and operational responsibilities. A dynamic organizational chart and reporting structure will be necessary to encompass this process.

"Create a new division of Facilities Planning and Construction (FPC) that allows for an expanded, strategic planning and construction unit." The Facilities department/staff seem largely disorganized and the organizational structure is confusing. I am also concerned about the lack of emergency resources and emergency plans available for students with disabilities. It's not clear if these resources/plans don't exist or if the structure is so confusing that information is not adequately disseminated across departments. I believe a lack of planning in this area is creating risk for the university.

Facilities are confusing no matter what building you are in and need to be restructured completely. There is not a clear communication system and replacements or repairs take a very long time unless you have the correct pull or position within the school, department, or college to request them. Having air conditioning that works should not be based on hierarchy or social structures within departments.

I don't see where the survey results justified this level of reorganization. The last sentence in Finding #1, "The current safety and security systems are inconsistent across campus." should be more specific. It may be more clear once the reader gets two paragraphs further down in the section but this sentence could be interpreted much more broadly than is explained in the later paragraph. Building Access (Key Shop) is not shown properly in the "Current" org chart...it is part of Safety & Security. The proposed org chart and all changes and reorganization clearly show this organization to be facilities focused. The proposed changes could transform university facilities staff and management into much more effective entities. However, Safety and Security does not fit well into that organization or its aims. Safety and Security could certainly benefit from those changes but these are odd departments to combine. As stated elsewhere in this report, most Safety & Security functions at peer institutions report to a senior VP for operations or administration. Recommend consideration of realigning Safety & Security component (sans Building Access) to report to the COO. That would better position those critical unit heads with better access to broad university decision makers. To date, Safety & Security units have not been funded or enabled to be responsible for facility access or campus video security systems -

which should remain facilities functions.

---

I agree with the recommendations in the report related to Facilities. I do want to mention that even with consolidating the facilities groups at the individual colleges, it must remain that these individuals are still embedded within the colleges. We have seen too often that some function which gets centralized becomes slow to respond. Having the Facilities teams in the colleges, ensures we can notify them of issues faster and get quicker resolutions when things like a leak in the roof happens.

---

If facilities are restructured, I don't believe that the work should be farmed out to a contracted company. Our facilities people who are employees of TAMU take pride in their work, are super helpful, and need to remain in our buildings. The facilities (building proctors) for my building are hardworking and help manage everything every day. I don't want to have to wait forever, or not have someone who can get a hold of someone when we have a major problem in our building. Half the buildings on campus are super old, have not been upgraded, and our facilities staff ensure that these buildings and the parts of the buildings stay in good repair. They make sure that no one (students, faculty, staff, or visitors) get hurt.

---

As a current Facilities Manager for TAMU, I am hopeful that should the decision be made to move to a centralized management structure, it will follow some of what has been implemented in the College of Geosciences. For years now we have had a single Coordinator/Manager to oversee daily operations. This includes handling keys, assigning building access, setting door schedules, maintenance requests, after hour requests for access, room reservations, HVAC issues, FAS and EHS concerns, local projects, working with contractors, and overseeing deferred maintenance projects to mention a few. In the College we have streamlined nearly all facilities related issues through the Facilities Manager. This has allowed myself knowledge and a hand in all things facilities related. This has created an environment where every individual within our College, openly approaches the Facilities Manager with any concern. The Facilities Manager is also the single point of contact for SSC. There is little room for any issues to go unresolved under this structure. I also see value in having a direct line of communication with my supervisor, Barbara Bayer; Assistant Dean for Finance and Administration. Working closely with her, identifies available budgets and direct needs for projects specific to our Departments, Faculty, Staff, and Students. Having a close working relationship with the Assistant Dean of Finance, has really been effective in minimizing unnecessary expenses and maximizing use of budget.

---

I felt that all of the recommendations related to Facilities were right on target and should be considered for full implementation at the conclusion of the feedback and review period.

---

Recommendation #1, in theory, sounds like an excellent idea. I am concerned with the implementation and effectiveness in daily needs. Currently, response from university facility offices is extremely slow and inefficient. I would like to see increased efficiencies even if the model stays as is, but if everything is centralized I recommend a comprehensive review into operations, work-flow, communications and timeline.

---

Office space and facility availability for faculty and staff should be considered when making decisions on moving units. For example, the complete centralization of marketing and communications would not be effective if all communications staff were to move to the administration building.

---

Now this is spot on. I will support you 100% in making this transition.

---

Facilities services at the university level are slow and provide terrible customer service. So terrible in fact that many departments and colleges have their own facilities people. Public spaces like the MSC and the Library have much higher, and more specialized needs when it comes to facilities. Efficiency is not always good when it sacrifices the needs of others.

---

Outsourcing the transportation is not a good idea. It might work in areas of the country with good local transportation services, but BCS does not have that - so only A&M can provide any time of transportation for students living away from campus, which should then be controlled by A&M... the expense to build the local infrastructure on transportation would be huge and probably not sustainable.

---

-

---

Agree! Current facilities operations makes everything more complicated than it has to be and no one knows who to call or contact for anything.

---

Our Office, Residence Life Facilities & Operations is responsible for the oversight and management of 69 buildings and over 3M GSF. Our tasks, responsibilities and entire operation is much more than facilities (although this is the main

IMPORTANT function) and is unique in various ways as it relates to the care of Texas A&M students, parents, staff and our University as a whole. Our operation just completed a new comprehensive Facilities Condition Assessment with ISES Corporation to which we then utilize the Asset Management Software to build our 5 year maintenance and renovation plan (updated yearly). We provide training(s) to fulltime CD's, live-in staff and Resident Advisors. After spring semester our office Facilities & Operations (Facilities Coordinators and senior summer staff) is responsible for inspecting the 12 Corps Dorms, on campus buildings and apartments for damages and renovation needs including cosmetic, mechanical, plumbing and electrical. Our office is responsible for inspecting the 12 Corps Dorms, on campus buildings and apartments before, during and after summer camps and conferences. There is quite a bit more information I can provide if you wish, please let me know and I will be glad to assist. Below is a portion from a Facilities Coordinator Position posted Friday for our operation: Facilities Coordination - Assists with management of departmental physical assets, conducts ongoing inspections of facilities and grounds. Maintains written inspection reports and follows up as needed with maintenance, custodial, grounds, pest control, TAMU UES (Utilities & Energy Services) and EDCS (Engineering Design & Construction Services). Attends pre-construction meetings, construction meetings, cover-up-inspections and substantial inspections. Assists the Associate Director Facilities & Construction with oversight and project management of maintenance, renovation, new construction, and furniture replacement projects. Meets periodically with UES, SSC Services maintenance, custodial, grounds and pest control to review services provided. Serves as departmental contact for scheduling utility outages and preventive maintenance. Serves as a point of contact for after-hours facility calls, which may require returning to campus. Performs building automation systems monitoring through computer and web based program(s) to investigate problem areas and building utility delivery consumption usage. Assists with planning and coordination of telephone and data installations and repairs. Provides notifications to hall staff and students regarding maintenance and renovation scheduling. Monitors AggieWorks work orders, conducts inspections of completed work requests and follows up on issues. Building inspections include, but are not limited to, the following areas: mechanical rooms, roofs, crawl spaces, hallways, corridors, stairs, student rooms, bathrooms, common areas and grounds. Performance of duties will require operation of a University or other motor vehicle. Inventory Control - Maintains accurate inventory records and assists with annual inventory certification of equipment. Oversees equipment and furniture ordering, deliveries, and moves as it relates to property, inventory controls and warehousing. Assists in monitoring building utility delivery and consumption. Supervision - Co-supervises departmental student employee pool. Provides direction for student employee assignments. Assignments include inspections, room furniture setups or removals and other tasks. Conducts performance management and performance evaluations. Manages and assists with onboarding, training, and time management. Facilities Coordination / Strategic - Assists with updating the five-year renovation/maintenance plan and the Facilities Condition Assessment (FCA) data. Facilities Management / Development - Serves on departmental task forces and university committees as appointed. Advances the philosophy of multiculturalism and actively promotes diversity. Conducts (or assists with) facilities trainings for full-time and student departmental hall staff. Performs other duties as assigned.

---

Facilities needs to be organized across all campuses. How you obtain facilities services on West Campus is different from how you obtain services on Northside. Getting service is another issue altogether.

---

I'm concerned why more classroom space isn't listed. I've handled scheduling for a number of years and there is always always always a need for classrooms that seat 50-150. I'd love to see more space to teach that you don't have to apply for or isn't a super-specialty lab.

---

In the corporate world cleaning crews come in after hours. Our crews are great - but they are here when we are here. So they vacuum, polish floors, etc. when we are trying to talk on the phone or hold meetings. Surely there is a way for these tasks to be done after hours.

---

I fully support all of the recommendations provided by MGT as it relates to Facilities. I do not work in that arena but the recommended solutions appear to address the reported findings.

---

No Comment.

---

The Facilities & Operations Office in Residence Life interacts with students and parents, Hall staff, and Residence Life staff every day. We investigate, expedite, and alleviate on-campus housing issues, and to pull this office away from Student Affairs, I believe, is a mistake. The priority is to maintain student on-campus housing and ensure the comfort and safety of our residents. Our daily affairs completely involve the students (see comment above), and their LIFE as a RESIDENT. There are many things that we do in the summer that assist Conference and Guest services, some of staff duties involve working with student events, and other outside vendors that services our students. Again, to pull this

office away from Residence Life and Student Affairs seems odd to me. But that's just my opinion. :) Thank you for allowing me to share it.

---

I am not in a position to provide good insight into these changes.

---

OK. We have recently had some turnover in this area in Engineering. It has usually taken repetitive emails to get resolution to issues. I still have unresolved work order issues. Commonly i am told that the issues need to be referred out to ...the electrical area, the plumbing area. I think it is frustrating for all involved.

---

I felt that this section was the most well-reasoned of all the sections in the report.

---

Current SSC and facility requests take a pretty significant amount of time to develop a response. I think this area could be improved upon through centralization, but a customer service mentality needs to be developed in this area so that service levels improve.

---

When it comes to the committee that reviews and provides recommendations for signage across campus, it's imperative that they be more transparent and collaborative when it comes to the multiple campuses across the state under Texas A&M Health.

---

with our aging campus, infrastructure such as roads, sidewalks, and inside buildings is a concern as showing our world class university

---

Maintain OUR facilities (buildings, doors, elevators, bike racks, sidewalks, etc..). Budget appropriately. You don't just build a NEW building for 50M and then don't budget for future maintenance and expenses. We don't do this with our cars/homes and we shouldn't do it with our facilities here at TAMU. I understand this is an easy thing to cut and we ALWAYS want something new/shiny, but the COST in \$\$ for deferred maintenance will catch up in the end. Please don't defer maintenance.

---

We have struggled since the retirement of our last building proctor, who was not replaced. For months there has been major construction and disruption in the building (GSC) without a primary person to contact about safety, disruption, repairs, etc. Using AggieWorks to report plumbing issues resulted in next day attention to a gushing water issue. Centralized funding for basic services and consistent services between buildings would be nice. When we moved into the brand new GSC, there was no internet or telephone access in the assembly rooms. Our department paid to have internet connections and telephone access in all three assembly rooms and paid the telephone fees for several years. We carried projectors and telephones to meetings in those rooms to have the equipment needed for forums and meetings in the early years. Building leaks (roof) reported through AggieWorks results in visits from crews who look at the ceiling tiles and say "this is for the roofers" and the roofers come and say, everything looks good. There needs to be ownership of issues and follow-through to true resolution.

---

I was not 100% sure after reading the report if it were being proposed that the outsourcing of custodial and maintenance continue or not. I would like to see the outsourcing end. The custodial support that is being provided is very low quality. SSC is unable to keep employees due to poor working conditions and low pay. Most recently the trash in our building has only been removed once a week for the last 2 months. The bathrooms are very unsanitary. That is currently a scary situation with COVID. The building maintenance is not be handled as well as it was before the outsourcing. Landscaping is also not handled as well. When these individuals were TAMU staff they were proud of their jobs and they strived to do good work. SSC staff has no benefit to working hard.

---

A major factor in the issues with Facilities is the outsourcing to SSC. We have often had maintenance issues where 2 or 3 different people come to "look" at the problem and state "oh that's not my job/my area of expertise." Aggiework orders have been closed countless times because the "assigned" person came and looked at the issue but didn't/couldn't fix it. Outsourcing, while it may have saved money, has resulted in inferior service. When maintenance staff were "a part of the University" there was a higher level of buy in, of stewardship. We were in this together. Outsourcing resulted in an us versus them mentality and I believe that came from the top. When staff is plainly told (by actions), "your past service to the University doesn't matter, if we can save money" that demoralized many staff members. Private Public Partnerships (which were mentioned in this review) were talked about as a positive option. If upkeep of facilities is a goal, then using P3s should not be an option. No one really believes that at the end of these contracts the "renter" will continue to spend money maintaining these buildings. The day before White Creek was to be opened, they reached out to our unit asking for student workers to help finish doing make readys. They were behind schedule and not going to finish. The 10-15 student who helped, told us about trash being through into walls, water damage being covered up and a general, "get it finished attitude." That isn't stewardship and I don't think those are the kind of builds we want to take

back over in 20 years. When I came back to the University as a staff member almost 10 years ago, one of the things I loved about working here, is that our focus was on the mission of the University, not the bottom line. Honestly, within my unit, I have more of a business mindset than most and look to lead our unit in this way. I fear that as a University we will lose our community atmosphere to "save money" and in the end, the mission of teaching and research will be negatively impacted. This University is a small city. Currently, we have a common goal, the students. The more we fracture this "small city" into individual outsourced companies, the more Facilities and this "community" will fail.

---

This could help as being a staff member facilities is important. It seems the facilities manager was always busy with other larger projects and other small things would take longer to be taken care of. The consolidation could possibly take the different hats off some individuals to better serve the unit they are assigned to.

---

I, currently, work for Building Access (key shop). I am frustrated by the confusion, extra expense, wasted time, and lack of communication between SSC, our shop, and customers. I am pleased to read about the reorganization plans that will lead to centralized communications, and management of facilities. I would love to be involved in the process.

---

Recommendation #1: YES PLEASE, trying to know who to talk to about anything related to facilities is so confusing and there is little support for those responsible for managing college facilities.

---

As long as there is representation and attention give to all stakeholders at the university, a more centralized approach makes sense. There needs to be a real review of the current situation on campus and more thought put into renovation and maintenance of existing facilities that have been ignored. Many facilities, especially on west campus have been allowed to deteriorate.

---

Just an idea . . . buy the abandoned Randall's grocery store on University Drive and turn it into our visitor center. There's plenty of parking and buses could shuttle visitors to and from campus so they would avoid the headaches of parking on campus. The interior could have all kinds of interactive and informational exhibits and memorabilia. We could also add a coffee shop or similar space for people to relax. This would immerse them in the Aggie brand experience in a way that is simpler and more streamlined for the target audience.

---

No comment.

---

Comments under Facilities make sense. Student Housing is a complex endeavor and should be further reviewed before decisions are made.

---

No comment.

---

All items outlined seem justified, and I like the idea of purposeful planning of facilities and construction.

---

Shared facilities will benefit the entire University.

---

Makes sense

---

N/A

---

The current facilities operations are broken and need a complete redo.

---

Recommendation 1 may cause more harm than it provides in benefits. Decentralization of Facilities Management Operations throughout Colleges and Divisions is a feature, not a bug. This decentralization allows for flexibility and accountability to the Colleges and Divisions that leads to success. Central location and management of this function would lead to Facilities staff not being responsive to College and Division needs and would reduce satisfaction with the services to a level like that of Information Technology, where some feel IT staff are too bureaucratic and inflexible. Recommendation 3 for a unified records system would be hugely beneficial. This would be a natural byproduct if recommendation 1 is adopted, as all staff would be of the same unit. The true value of recommendation 3 is realized if the units are kept separate. Solving this issue alone will provide many of the benefits of recommendation 1. Getting distributed staff to use a centralized system(s) allows for simultaneous flexibility to adapt to College/Division needs and University wide accountability in managing security and maintenance operations. Adding resources to/ redeveloping the Facilities Manager's Working Group will also help ensure a coherent University-Wide Strategy.

---

I agree with a support the recommendation made by MGT.

---

N/A

---

A lot of this section makes sense. Parts that didn't necessarily are the very specific facilities such as enterprise data centers and biological research labs and the like that require specialized knowledge and close collaboration. Even with a dotted line back to IT or Research or whatever, not having those groups inside their respective orgs would all but guarantee communication and morale would suffer.

---

FACILITIES DEFINITELY WILL BENEFIT FROM THE PROPOSED CHANGES.

---

I agree with the findings in this section.

---

Since we centralized to a company instead of employees under TAMU directly has caused issues with cleanliness and consistency. Outsourcing does not work.

## Facilities - Student

Please provide your comments related to Facilities:

---

N/A

---

Don't combine liberal arts and sciences.

---

I have no comments here.

---

none

---

If the University is trying to increase diversity in staff and treat employees equitably, this area needs careful consideration. In the past, restructuring of facilities has lead to outsourcing where employees are underpaid, not given benefits, and generally not treated well. This exacerbates economic inequalities with racial/ethnic minorities working for TAMU since, per nationwide trends, this area is where most people of color working in higher education are employed.

---

None, agree with the MTG Report.

---

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

---

TAMU should improve security/access to buildings. Facilitates could follow a similar structure to Francis Hall which limits building access outside of "working hours". This requires student ids to scan in. Spending on new facilities should be watched (some amenities may be excess) in an effect to maintain level tuition/parking rates.

---

A&M's facilities are not well-maintained because it is such a large campus and the process for getting something fixed is difficult and not available to the general university community. Many times, something like a faucet will break and take months to fix because no one in facilities knows that it is broken. Any member of the university should be able to report something broken or otherwise inadequate to help maintain our beautiful campus. This reporting system should be readily known to all members of the university community, easily used by even the least savvy users, and strongly encouraged by A&M.

N/A

I am in absolute love of the facilities specifically of the Liberal Arts and Humanities building

There needs to be some oversight on maintaining the university grounds. There is very poor landscaping on campus, not being maintained or visually appealing.

Adding museums, gardens, and the other suggested items would be incredibly beneficial to the student body to allow them to escape the mindset and atmosphere of college life, and it would help them become more well rounded and experience things outside of their typical routine.

landscaping is very nice, but those funds could go to something more pertinent to education.

don't know enough to have an opinion

Please don't do the plan. It's not a good plan. We don't like the plan.

Good.

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

Make them run correctly, fairly compensate the people who maintain them (fair isn't minimum wage, they work way harder than minimum wage), keep them open for students to actually use, compensate the student workers who have to keep them open well enough that they want to come to work (minimum wage is not fair compensation). If this report cost \$600,000, I would request a refund. A student led commission with less time delivered a more detailed report.

Good

Facilities may need improvement in how things are done in a timely manner, but other than that the improvements are good

Labs should have better maintenance (especially labs in the CSA building). Undergraduate students pay hundreds of thousands of dollars for their education. They shouldn't have to attend lab in rooms that leak water through the roof. The university should direct more funds to improving existing infrastructure instead of spending it all on football and new buildings.

Please don't change anything.

We should implement a digital ID program to help modernize the university and increase security.

We need facilities that are welcoming and created spaces for students of color.

I would love to see suggestions #1 and 2 made by MGT for this section implemented--especially #2, since it would prevent expensive delays in design and construction. The money saved could then be used productively elsewhere. For suggestion #3, I agree with creating a centralized information management system but would like to avoid creating a separate division if doing so would save on staffing costs.

Build or designate a physical space for a Latinx Cultural Center.

I do support to centralize services under the chief financial officer.

As long as their current needs are heard and considered, I am fine with the proposed changes.

Strongly support and agree with creating a visual and performing arts center. In support of the arts having a stronger presence on campus in general.

Maintain a standard for all facilities and ensure all facilities can meet those standards. If not, provide aid so that the colleges can meet those requirements.

I would like a fine arts area.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni

population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

None

Love the facilities but everything surrounding it looks like a concrete jungle that I'm not proud of

update legett hall. it quickly gets dusty, and there's always sneezing.

The libraries seem to do well being independent. Improving the resources available to each student is important since A&M recently increased its population by such a huge amount. Currently things like SHS, and the student recreation center are overflowing.

We need better bicycle infrastructure.

Moving buildings during my degree would only prolong my time at TAMU.

The chemistry department enforces the students to come to class when there are health hazard incidents. For instance, one of the pipes burst open, and dirty contaminated water filled the floor. I, the Lab TA, nor the students did not appreciate that we were required to conduct labs. Some students did ask me if they can be excused, but upon the [REDACTED] request, the Department of Chemistry allowed us to work in conditions that can affect our health and well-being.

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

no changes

Tamu should stay and operate the same. No changes.

Utilize wasted space for better outdoor learning/studying and relaxing. Ex: Construct more permanent coverings in the E-Quad for shade and rain cover

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

n/a

They responded so well that equipment and facilities meet the expectation of the people.

No comment

n/a

Centralized management of facilities would likely improve our experience. In the past, I have seen issues in timely repairing even very basic issues within our university facilities, issues which a school of our size and with our resources should not have difficulty fixing.

I think putting all the facilities under one umbrella would be a massive waste of resources. Takes time away from managing the facilities and instead allocates it to meetings that are not applicable to some.

N/A

all options are lacking specifics and planning.

Chemistry building is in poor condition. Teaching laboratory space in the department of chemistry is outdated, equipment/workspaces are obsolete. Have noticed this with other buildings as well. There are issues with pipes bursting and other infrastructure-related issues. Need to reallocate the schools 13.5 billion dollar endowment more towards improving teaching facilities, not on the football team.

It's quite concerning that no one person or department is in charge of building security. I really hope that gets fixed

I am a student in the Political Science Department. I love the idea of merging it under the Bush School of government. My feedback is that I would love that it be done soon enough so that my degree can reflect that it is with the Bush School rather than under the College of Liberal Arts. Thank you!

The Department of Transportation is laughable. More parking passes are sold than there is parking, and having to pay upwards of 200 dollars a year to park at the university one already pays to attend is comically moronic. A car damaged in a parking lot has no protection from the university, and yet a car left 15 minutes without a parking pass is imminently ticketed, showing the true motives of the department. The same can be said for the actions of the department in charging for parking permits for Veterans, according to the email sent over the summer. This plan was reverse, and yet it was accepted at all. Can you really argue that anything besides money is of true concern?

N/A.

n/a

N/A

n/a

Beautiful. Would like to see trash be burned and more recycling centers/bins around campus.

None

In different as long as they aren't liberal

Centralizing facilities might be beneficial, but again it is important to have the worker's input first and foremost.

n/a

N/A

I think the COSC department should be moved to Engineering

The addition to a visual and performing arts center would not only increase the monetary value and aesthetic of our campus, but would also be of great benefit to the dance science program. Having a VPAC would allow us to have more studio space the capacity to perform works in a space compatible for the dancers and a larger audience.

N/A

Nothing to add here.

I respectfully think that there shouldn't be a merger of departments or libraries.

Don't have any

When building a new facility for the performing arts, a few things are needed for the facility to be attractive to dancers and potential guest artists: sprung floors, no metal secondary supports, padding in between the secondary supports that would ideally be wooden batons, and marley flooring to be provided or available for use on stage and offstage.

As a Dance Science student, the proposed Performing Arts facility sounds fantastic. We have concerns however as far as how this facility will actually be used, and whether or not these proposed implementations will actually be completed and done well.

A new performing arts center would be lovely. Needs for the performing arts facility: sprung floor is a need for dancers because it is safer, a large dressing room, adequate lighting, large rooms to dance. Hosting conferences and performances for the community of Bryan/College Station would be very beneficial.

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

The Eller Oceanography & Meteorology building has a few issues, the main one being our elevators. They're consistently "out of order," which is pretty inconvenient when you have class at the top of the tallest building on campus. Typically what happens is that someone will smell smoke, we (students studying late at night) may call the fire department come check it out and clear it, then wait for the elevator service company for a few days. Or the fire alarm is set off and we have to evacuate during the middle of classes like on the last day of on-campus classes Spring 2020. The worst I've ever seen it was another night in Spring 2020 that I smelled smoke on the 12th floor, and it was HAZY in the elevator bay. I found a professor working late and told him, then grabbed a friend and we rode the vastly more reliable service elevator up from the basement to the 12th floor, stopping at every floor to check both stairwells for smoke or smoke odor. We then went up to the 13th and 14th floors too. There is no reason that these elevators should still be so unreliable. One was out of service last week again. We had from March 2020 through August 2020 off campus. That was more than enough time to fix them and fix them right.

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

Update the quality of your 1930's building instead of building a gym

Biking is my main mode of transportation and there a few improvements that could be made. We would appreciate it the white tents on the North West side of Evans Library were removed. These tents restrict the flow of traffic by 50%, and it is almost impossible to bike through that area during a passing period. I would also greatly appreciate it if the bike symbols were repainted in the tunnel going under Welbourne.

None

One complaint that I've had ever since being here is that our student rec fee does not cover every part of the rec experience. I understand having to pay for things like Outdoor adventures, otherwise plenty of people with no business really trying climbing or whatever other activity would overwhelm the staff. My main complaint is that even though we are required to have towels in the gym, they are not provided. TAMU is the only gym I have been to, university or otherwise, where this is case. I understand encouraging bringing towels but requiring someone to rent towels in the event they forget one is a little absurd, particularly with the wet wipes in place since Covid, as those do more than someone's dirty old gym towel would anyways.

none

How does the FPC division different from the FP&C at the TAMUS level?

There is a terrible Hornet infestation at the top of the O&M building that needs to be taken care of, and there are rooms in the building that have almost half of their lights burnt out for years now.

N/A

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

N/A

I think the idea of a museum would be cool. Also, most of the campus, other than the Bush School and Zachry buildings are not visually pleasing. More landscaping would help it look nicer.

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

Please fix the dining halls so they will actually serve food that is safe to eat, instead of raw chicken and the food with bugs in it that they have been serving since switching to ChartWells.

Facilities & Dining both need to either go to a new vendor or brought back in house. While the SSC/Chartwells contract looks good on paper, the blows TAMU is suffering because of these highly incompetent companies is great. While we might be "saving" money, the departments have greater expense because of the ineptness. A central facility management system would be better than the current system.

A&M should reevaluate campus statues and their relevance to our current campus climate.

There should be a drastic improvement in the quality and quantity of facilities available to graduate students, especially those from the smaller colleges. Better computers, better offices, probably iPads to increase functionality.

Spending 50 million total on redoing 5-7 buildings in the center of campus (around Evans Library) will do this school wonders. Please add a facade onto rudder. It'll look awesome.

N/A

## Facilities - Former Student

Please provide your comments related to Facilities:

Again, I find it very disheartening that this report found so many areas that need immediate remediation. Basic security and consistency of tracking and managing the care and operation of our buildings and property should be a no-brainer. I am truly amazed that our campus technology and physical plant management have fallen so far behind in this area. Definitely need to develop campus-wide solutions, centralize these functions and implement them ASAP. It has been very pleasing to see our gradual upgrading and consistent designs of signage for campus facilities to aid staff, visitors and students. But much more remains to be done.

Centralizing the management of Facilities makes sense.

Consolidating & centralizing Facilities is a good plan. A&M should also continue to encourage new designs to incorporate architecturally significant & aesthetic design elements in new construction. While it makes sense to have a university approved material palette & color scheme, the construction on campus from the 90s and early 00s was marked by large, tan, boring & ugly buildings. The more recent construction like the Jack E Brown Chemical Engineering Building and the Interdisciplinary Life Sciences Building are much better examples for projects going forward.

none

More student living green spaces (like how TCU has done) could be rewarding to the student living and learning on campus experience.

I concur with the report findings.

Agree with the central thesis of the report. There are tremendous synergies that information technology can bring to the facilities arena. I don't know if my quibble would be just terminology or mindset, but you don't want a CMMS, you want an asset management system. An AMS manages all you physical assets, can manage vehicle fleets, real property, etc. The right program can be deployed across departments and campuses. Consolidation brings potential savings in software licensing and reduced staffing on IT support. The USMC adopted single platform MAXIMO over a decade ago and I would offer that as an example but I'm sure private industry could provide relevant case studies. Lastly, don't ignore the capability GIS systems can bring to managing and displaying linear assets. There is tremendous promise but

I've yet to find an organization that has devoted the resources to implement and maintain this capability.

---

Howdy, My name is [REDACTED]. I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for Fluor Daniel and for Lockwood, Andrews & Newnam performing project controls. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, [REDACTED]  
[REDACTED]

---

Nice upgrades, and security

---

I agree with the assessment that urges A&M University to develop a stronger direction toward the arts . . . visual and performing. The university needs a state of the art theater and art museum. As an architect/artist, and having exhibited on campus I realize that A&M lags behind other comparable universities in these areas.

---

I support the recommendations proposed in this section.

---

The comments I made regarding the Provost Office also apply to Facilities.

---

Facilities SWOT Analysis I agree that the facilities organization on campus needs to be centralized and organized to reduce costs and insure effective and timely repair, maintenance, and inspection of all facilities. My company has the global contracts with Siemens, Schneider, Johnson Controls, etc for commercial buildings a/c and heating. We have had these contracts for 15 to 32 years. You may adjust a thermostat for a given temperature, but all the control valves and manual valves controlling the hot and cold water is controlled by our electric actuated valves. Our products are standard at MIT, Harvard, Stanford, UT, Florida, Univ of Chicago, Northwestern, NYC, GT, you name it, we are probably the

standard. We are also the primary products used by 70% of the world's DPCs including Microsoft, Facebook, Amazon, Apple, Google, etc. From our experience, A & M is not unlike many universities, most of them can improve their facilities by developing university wide contracts with one primary university supplier like one of those above and then implement regular maintenance schedules. The same can be said for roofing contracts, window contracts, ceiling tile contracts, painting contract, etc. If you were to allow those of us in business show you how to conduct a multi-year contract with a university wide contract for different maintenance activities, the facilities maintenance would improve and expenses drop. I would also let students in engineering and construction classes have projects to write specifications for the school facilities, and to be reviewed and approved by those in charge of facilities. Today there is also a movement towards using IoT in maintenance, where products like pumps, valves, etc. communicate their needs for maintenance rather than maintenance teams having to wait for failures to learn they should do maintenance.

I agree with the recommendations for centralizing and reorganizing University Facilities.

Recommendation #1: Restructure of Facilities and Operations/Safety and Security to include all facilities services under a new centralized management structure in Facilities Management Agree for the purpose of centralization.

Recommendation #2: Create a new division of Facilities Planning and Construction (FPC) that allows for an expanded, strategic planning and construction unit. Is this necessary? Could outside companies still be used when needed and not have full time positions for this area Recommendation #3: Create a Division of Facility Information Systems to maintain information in support of TAMU operations. Agree.

I support all three recommendations as I believe there would be an opportunity to reduce redundancy and increase the focus of the many complex areas of facilities.

Concur with recommendations. Ambitious.

No comment

Other than finance and business administration, this is an area that requires an immediate and massive structural overhaul. The university plant is a huge operation deserving of careful attention, upkeep and security.. Excellent suggestions.

Texas A&M does need a more cohesive approach to facilities management. Many buildings require an upgrade to meet educational demands and a unified approach would be helpful. A concern I have had for a number of years is there is not a common architectural design to the exterior of the buildings that would enhance the campus experience. This is a detriment to the university in my opinion. Our SEC and State of Texas peer institutions have beautiful campus buildings that reflect the personality and spirit of their respective universities. Just as UT has the orange rooftop on their buildings or other designs at Auburn, LSU and other universities, this is lacking at A&M. There are many fine buildings on campus that stand for A&M's values but so much more could be accomplished.

Recommendations seem reasonable but many Universities have been dismantling large in house facility departments and out sourcing more functions.

All findings seem to be positive with good recommendations.

No comment.

a. Recommendation #1: Restructure of Facilities and Operations/Safety and Security to include all facilities services under a new centralized management structure in Facilities Management. i. Finding 1: Agree. b. Recommendation #2: Create a new division of Facilities Planning and Construction (FPC) that allows for an expanded, strategic planning and construction unit. i. Finding 2; Agree. c. Recommendation #3: Create a Division of Facility Information Systems to maintain information in support of TAMU operations. i. Finding 3: Agree.

Any consolidation into a central organization should include ALL Colleges and departments. If you exclude some Colleges due to special circumstances, others will follow and the organization will continue to be decentralized.

Need more trees in Interior of main campus. So much concrete around Sterling Library and nearby buildings. Also, what is the goal for the golf course at our main entrance ?. In 30 years, it still looks like a muni course.

I wonder why University did not have Architect, It appears to be addressed in a planning section. But will it have Architect directing maintaining the New as well as PROTECTING the old CAMPUS. In arch history Professor Vrooman graded my sketch book on Arch history, the last page was blank, He put , "What about current!" I can't say How often I think about this and think, "the page Should be blank, the buildings and structures appear to be built today,, to be

destroyed.” Building new buildings to replace old ones is evidence of failure. Bring MEN and WOMEN together that do good things daily that makes for greatness. Daniel Webster with deficient preparation in education, but attended Dartmouth-graduated at age 19. Dr. JACK WILLIAM, said in the summer 1972, “we don’t have to do anything, They are just coming.” Over the years has TAMU Lost some of its luster? How many students are able to spell “Chiggarroogarem”. (Sp ck me)

---

Red Tape. We’re retired school teachers and understand how difficult it is to get something repaired.

---

As mentioned previously, the much needed improvement in the laboratory facilities for chemistry and biology seems to be something that should be addressed.

---

The design of the facility should make education coordination meetings convenient including remote learning

---

Facilities is more efficient privatized. Our energy and utilities should be privatized as well. Letting industry experts lead the charge in sustainability and production is important. Staff at our plant has been with university too long and a change needs to be made. Our facilities have never look better and whatever we are doing needs to keep on happening. Being local and skiing campus weekly I have seen a big change in the last ten years in the grounds and overall throughout campus.

---

The report made some excellent suggestions. Use them. At one time A&M was a beautiful campus, now it's a hodge-podge of buildings with clearly no long term plans. Maintain a full time paid staff and quit hiring people who are not vested in the work. People used to be proud to work in custodial, landscaping and other areas.

---

I agree with all recommendations in this section but am not sure why athletics gets a pass.

---

Do we really need a performing arts center? Does not current activities within MSC do the job?

---

Yes--we need improved teaching and laboratory/research facilities. And I worry about the ability to stay ahead of the maintenance curve with the rate that new bricks and mortar are put in place.

---

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

---

N/a

---

Centralization of this function is common in business today; most efficient. Likely need some dotted line responsibility into colleges with college-specific demands unique to that college retained in that college

---

With as much money as Texas A&M is taking in, the facilities are in surprisingly poor condition. Many are dirty and trashy in general.

---

You are spot on with the facilities situation. I am a contractor and working at TAMU is many times a nightmare because of overlapping responsibilities. My company has operations in Tennessee, Dallas FW, Houston, and Austin but runs well with centralized management, good communication, and well trained leaders. Pooling the facilities under one roof stops the incredible wastefulness and poor maintenance.

---

Stop destroying historic campus buildings. Stop growing faster than the infrastructure can grow.

---

Some of the dorms really need to be updated.

---

Centralizing is a good idea unless it develops into a top-down approach that does not allow for productive input from end-users. A&M facilities continue to impress former students. However, transparency and provision for open feedback as to the reason for new facilities seems to be lacking.

---

None

---

No specific comments.

---

Finding #'s 1,2 & 3 - All appear to be reasonable with good recommendations.

---

The recommendations seem reasonable and appropriate.

---

The Board of Regents and administration is in a better position than I am to make this decision but they should consider whether existing facilities can be used for performing arts. If they can, we don't need a new building just for that purpose.

---

Na

---

#2 strongly support... imperative we move to active learning model if we want a strong successful student outcome

---

No comments

---

None

---

Stop spending so much on athletic facilities and raising student tuition to cover costs.

---

No comment.

---

Greater coordination with technology throughout system could be highly beneficial.

---

TAMU should reevaluate its outsourcing strategies. The weakness section of the SWOT analysis for Facilities reads just like the 1980s Coopers & Librand consulting report on Physical Plant. It is financially impossible for a vendor with its shareholder/investor profit requirements and corporate taxes to outperform a subsidized internal services organization at a large school. I am a former Facilities employee of 23 years, and a former student (BED "77" and MBA "97"). My Facilities Career of 42 years included being senior department head at two other state universities (WIU-Illinois and USU-Utah). The primary advantage to outsourcing is being able to deflect university community criticism away from a direct responsibility and onto a uncaring contractor. However, the financial price that the institution pays for this deflection is very high, not to mention its loss of independence. I suspect that the perception of the quality of services when comparing the former Physical Plant and Chartwells has not been that great. What an internal Facilities organization requires that it rarely receives is an in depth understanding and agreement of key resource allocations by the President's office, and subsequently that office's staunch support when Deans, Department Heads, Chairs, and others challenge or attempt to manipulate those allocations. For historical reference, TAMU had just separated FPC and Physical Plant when I started at Physical Plant as a drafter in 1978. The combination was apparently short-lived and a disaster according to the rumor mill of that day. I managed both combined functions at USU, and feel that this is the best way to align design of new construction and renovations with operations and maintenance. However, it will be a challenge for TAMU due to its enormous size and multiple locations all over the large State of Texas (and world). Physical Plant during my TAMU tenure had a very singular focus in College Station and the old Riverside campus, while FPC had a statewide focus. I am certain that this is why FPC was moved into the system in 1978. While I agree with the report that these departments should be combined, choosing the right leader with experience in change-management as well as general management experience with both organizational functions is paramount. Emphasizing a system-wide approach in operations and maintenance is also a good approach. Each summer I would take a different facilities maintenance team around to the statewide USU facilities to visit and consult on operational issues at those venues. I also employed a statewide operations liaison who traveled regularly to each venue. Our offer of operations and maintenance resources and help were met with suspicion initially, but eventually very well received across the state of

## UTAH

This could clean up a mess! I endorse facilities supporting student-centered learning rather than teacher-centered models.

Efforts to eliminate duplicity by combining departments to improve efficiency and reduce costs is a very worthy goal. As college costs continue to rise every effort should be made to hold down the expense of operating the university.

none

Concur with recommendations.

Consolidation has to ensure immediate response to faculty/students problems. A lab cannot be idle because a maintenance is on a job in another part of the campus.

Facilities need to be utilized efficiently and maintained.

Architecture, Landscape Architecture, Visualization, and Building Construction need to be in close proximity and be enlarged.

Seem like reasonable recommendations.

I support the concept but believe there will be substantial inertial resistance. This change will require strong leadership and cross-functional executions teams with both high level goals and detailed planning metrics to measure progress and achievement of outcomes.

Uninformed, so no comment.

We've built a athletic stadiums and facilities, hotels, and on-campus apartments since my time as a student. Central campus buildings with window A/C units still remain un-renovated.

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts.

Emphasize the need for continual maintenance of all facilities

Agree

Ever expanding facilities to accommodate unlimited growth in the university population is compounding the difficulty of both academic and administrative activity on the campus. At some point it must be recognized that highly successful research and teaching are not advanced by the instability of unlimited growth and the need to find new ways to accommodate the increasing numbers of students, classes, and programs in one physical location.

None

Not important compared to the other issues at hand.

Centralizing the facilities/operation and security seems like a good idea to make sure everything is covered.

Please tear down the old dorms built before 1980. They could put multistory dorms with central air and modern bathrooms in their place. There needs to be more on campus dorm rooms. Please tear down Fermier and build a modern building in its place. Zachary needs a real dining cafe instead of food trucks...what an oversight.

No comments

I still remember the old elevators in Blocker building when Philosophy was there! Yikes. Anything we can do to keep the old buildings while adapting to future needs is great.

Continued investments into facilities and the future are certainly a desired outcome, but at what cost as it is becoming more competitive for public monies. Our premier status must be a starting and continuing point about future prospects and needs.

No comments

Recommendation 2 is understandable and would allow for students in COSC to remain working on campus if given the opportunity.

Facilities were not great during my tenure, but are being made a focus recently. This is a welcomed change.

One issue not mentioned: Campus employees proudly state they don't follow OSHA rules and don't have to do so which they should. Contractors generally do follow OSHA this mismatch of requirements creates large gaps in safety for work on campus.

A&M has gone building crazy. In a time when buildings become less important to education A&M keeps building. The PUF needs to re-examined.

I agree with the recommendations.

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

Texas A&M is putting too much money in expansion and tearing down historical structures.

The restructuring appears to make a lot of sense to remain focused on a singular goal and improve communication, while also cutting cost.

The comment on page 49 that "there is an uncertain and inconsistent approval process" is absolutely correct, and I have first-hand personal knowledge that I have documented concerning suspicions and evidence of potential corruption and kickbacks.

The business building has low ceilings and the tour was not well done. We were not able to see the room with the ticker. It looks like all the money is going to engineering. Had a son who wanted to be CS and premed and they acted as if he was crazy. Every research physician I know says they desperately need more CS majors in medicine.

No comments here - other than to ask that we try to come up with some type of complementary "theme" for the architecture of our buildings on campus. It seems like such a patchwork...maybe there is a way to leverage some of the beautiful old architecture.

Centralized organization with economy of effort and common practices should be supported.

The library if not remodeled throughout which I doubt needs every shelving aisle wide enough for a wheelchair to freely fit between them and access the books.

Parking still needs improvement admit did when I was a student in 93-97.

N/A

I agree with the recommendations in the report

Is there even a need for "sustainability"?

XXX

All facilities should be state-of-the art as much as possible. The person allocating funds for replacing or upgrading facilities really needs to have the best possible view of the future. Facilities need to be ready when the need arises - not just starting to upgrade or replace a facility or facilities after the need has already arrived. Also, the type of state-of-the-art facilities will go a long way toward determining the type of student seeking to enroll at A&M.

---

Recommendations sound logical.

---

Agree with assessment, too many old facilities that needed renovations.

---

The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

---

Agree.

---

None!

---

The general emphasis on efficiency and eliminating duplicative efforts is good, particularly if some of the resources saved by the efficiency could be used to reduce tuition and other costs of attendance.

---

The facilities at Texas A&M are well done with exception of some of the early classroom buildings that look like post Stalinist era structures. These need to be replaced when funds are available.

---

These recommendations will allow facilities to lead in improving the use of green technologies. There are schools that get all their energy needs from green sources.

---

I agree with recommendations.

---

Greater emphasis on State of the Art testing facilities supporting the COE and COCS.

---

The dance department at TAMU truly impacted my experience at TAMU. Creating a performing arts center would greatly bolster an already growing program within the school.

---

Under the proposed facilities management mantra, where do our incredible athletic facilities fit in? Who has the say so about our university's front porch Kyle Field? Blue Bell Park? And all the others? The MGT Report was not clear about this.

---

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

---

I agree with the recommendation to provide a performing arts program and facilities.

---

Langford needs to be updated if you want to attract the top high school talent within the state of Texas and United States, but just as important to attract higher qualified facility.

---

Recommendation #2: Create a new division of Facilities Planning and Construction (FPC) that allows for an expanded, strategic planning and construction unit. Again, more government to replace private sector expertise. Utilizing the private sector for construction management assures that current management tools and processes are utilized. I disagree that an internal Construction division would provide the opportunities for career advancement that the top construction science students seek upon graduation. Why would an individual join an organization whose core business is not construction - that department would never get the brightest and strongest employees when they are competing against the national construction firms.

---

We absolutely need a performing arts center. The dance program can't grow in the space available and the school would benefit from performances from students and outside companies,

---

I remember the campus always being taken care of well. Bathrooms usually clean and in order as well as the public spaces

---

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

---

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

the new dorm refurbishing on the quad was expensive and has poor lasting value. If this is indicative of the work done on the rest of the University then I am disappointed.

I like the ideal of the public-private partnership for transportation services

Agree with comments. Needs to be centralized. But can it be done and maintain efficiency and minimize obstacles?

Awesome

Would love museums and a facility for performing arts that students and organizations could rent out without breaking the bank of small student organization budgets.

Our facilities are outstanding. As a Land Grant university with a long history of academic excellence in agriculture, it would be a bonus for our landscaping and trees to reflect this expertise. Improving, but not quite there.

Recommendations seem worthy of consideration.

No comments on the report.

No comment

I believe the recommendations given by the report could improve efficiency and cost effectiveness.

At a world-class university, all facilities should be world-class. And cameras for campus security are a must.

None

Everything about Facilities and Facilities Services is in need of improvement. The lack of coordination is legendary. The outsourcing of many of those services is not the cause of the issues, but it exacerbated the issues.

Beautiful

No comment.

TAMU infrastructure is old. In some cases, it provides character and quirkiness, in other cases it is in dire need of repair. It seems obvious in several parts of campus that infrastructure maintenance has been severely lacking and it is not a good look for the University. Investing in this kind of facility maintenance is an asset and pays for itself in the long run.

No comment

The biology and chemistry buildings are in need of vast improvements. It was disheartening as a student to see these academic buildings be short on supplies/in need of repair, but at the same time a new football field, softball field, and track could be built. I get that student athletes bring in a lot of money, but the overall importance of Texas A&M University should be academic standards that are upheld. Also, another way to decrease the standards of students is to continue with the current path and allowing every year the "largest acceptance graduating class" to get in. There needs to be a large decrease in the acceptance rate so the integrity and notability of being a student at Texas A&M is upheld.

Don't take good jobs and pensions from the citizens of College Station.

Just work to keep up.

A more Holistic health approach is also wonderful, as I remember sorely needing counseling when the building it was housed in was demolished for big, upscale hotel rooms for Former Students who paid big bucks. It made such services unrealistic to reach on West Campus.

Focus on additional state of the art classrooms.

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED

the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

---

Recommendations #1, 2, and 3. Agree. These are great ideas. Implement immediately.

---

Decentralization. Obviously, the employing of Ms M Katherine Banks was a bad choice. Any student of history understand decentralization creates innovation and efficiency. This study has truly proven an indication the direction which our Regents and upper Academia are headed. You want our money? The last capital campaign is an indication of who supports A&M. We do not support liberal causes and centralization into a liberal focus.

---

I appreciated the observations put forward related to Facilities Planning & Construction. Alignment of process, decision making and ownership of project responsibility on the University's side has historically been a matter of concern for many of us in the design industry.

---

I lived in Hart Hall when I was a student. It was a dump then. It's probably still a dump. DON'T CHANGE HART HALL! :) It was great!!!!!!

---

Facilities management must be centralized from an efficiency standpoint. It also does not make sense to provide centralized utilities (electricity, water, chilling/heating) but not have the facilities they serve be managed centrally.

---

There are "winners" and "losers" when it comes to facilities. This is due in part to the strategic vision of A&M on where it plans to focus, on benefactors who give to the University in support of certain colleges, and to meeting real or perceived needs. Some colleges will fare much better than others with investments in buildings, equipment, and infrastructure. Others will languish in the shadows providing value, where they can, to their respective students and college. There is no "silver bullet" here to solve this problem.

---

Though this appears to be just a reorganization for efficiency, I would scrutinize carefully which units may still need be de-centralized for specific reasons that may not be readily apparent.

---

No comments, other than that it makes perfect sense to get this more centralized.

---

Good!

---

Synchronize facilities with what expected future needs will be; limit growth in College station so as to maintain quality over quantity of population.

---

These recommendations seem like they will allow for proper and easier resource allocation for facility issues which is great.

---

I agree with the reports findings.

---

My college roommate wrote "her name was here" in her dorm room way back in the 80s and it was still there when her daughter took the room over 20 years later! Cleaning and remodeling in the dorms over a 20 year period?

---

The facilities are difficult to keep up do to the rapid growth and expansion of the University. I do agree that more needs to be done to provide for the community and city as far as things to do for families. This is part of the Facilities as well as other areas. More facilities for entertainment types in addition to Sports would be wise.

---

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

---

Having done undergrad elsewhere, I think TAMU has an unremarkable campus. There are some great buildings, and everything is cared for, it just does not do it for me though.

Please repair the sign at the entrance to Research park off of Hwy 60. Similarly please repair the sign on the Veterinary medicine building on the same road. These who issues have been neglected for months, and it's embarrassing because these two problems are seen along a major access road into Aggieland

Always a challenge. Same as when I attended Aggieland it is for my son who just graduated and my daughter who is there now. Maintenance, maintenance, maintenance. I would also like to see the spaces on the campus preserved and stop building on the main campus unless you demo a building.

The facilities I visit always seem to be in good working order. The expansion of our university has been fun to watch and we are doing a good job.

Agree

1) The reference to the successful outsourcing initiatives for dining and student residences are uninformed. I interact with students very frequently. They do not like the food, period. They also feel that the dormitories are managed in a VERY impersonal way and they do not feel like they matter. Parents echo the impersonal approach to dormitory management. You have problems to solve with dining and dormitories. And please do not reduce opportunities for students to use a Work Study program to work in these jobs. That is not beneficial to anyone. 2) If you put Student Housing in the Facilities function, implement a bold vision to provide the best student housing services at a Texas public university. That will draw students in. Make it more personal. It is far to administrative currently and is a large turn off for students and parents. The current service is cold, impersonal, punitive, and institutional. Make it personal. 3) Note that one of the services that should be improved is the food that is provided in the dining halls. You have over optimized this and the food isn't as good as it should be. This is key to student and parent satisfaction.

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

Very disappointed in the allocation of funds towards destroying a beautiful campus.

I don't understand the issue enough to have an opinion here.

Our college of architecture should help with guidance on a common campus building design and appearance. Permanent tents should not be allowed even if the are for the football team.

N/A

A&M Leaders have virtually no effective plan to significantly lower carbon emissions from A&M operations. Some small steps have been taken by A&M Transportation. Sustainability can lower costs over the medium to long-term. Sustainability should be included in all A&M planning and budget activities. Has the Office of Sustainability ever been given approval authority over all A&M budgets... to ensure everyone has dedicated at least 1% of their budget to reduce carbon emissions?

Agree with the recommendations from the report

Like

Like the proposed changes to eliminate siloed operational functions and create open channels of communications to enhance facilities in a coordinated effort.

TAMU needs facilities to keep up with the goal of increasing attendance.

None

I think I agree with all of these

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

Might be a good idea to start using some of the 5% PUF annual draw to build and/or update dormitories on campus. Schuhmacher / Walton Halls in particular look now almost exactly the same as when I lived there '86-90 - they were old and outdated back then BTW.

Sure, a museum and park would be cool. Except there's already two museums on campus (three if you count the msc hall of honor) and plenty of green space.

The lack of generalized oversight and consistency regarding facilities cannot be more apparent than the current state of the Architecture building. As a former student and parent of twin high school seniors who have already been admitted to and went to visit Texas A&M Visualization department, I cannot tell you the disappointment felt by all of us when seeing the tired, old and dingy Architecture buildings and especially the space where the Visualization program was housed as pointed out during our afternoon College of Architecture tour. The updated feel of the MSC and of Hullabaloo residence hall, along with many other newer or updated buildings stood in stark contrast to the same Architecture building I remember from the late 80s and early 90s. This grave oversight in passing over the space where such a super new and high-tech degree program is housed is an insult to the professors and faculty expected to recruit students to compete with other similar programs. For example, my girls visited UT at Dallas ATEC department (Arts, Technologies and Emerging Communications) and commented afterwards that they had a better gut feeling at the UT Dallas campus building that housed the ATEC program than the feel of the Visualization program at A&M! There must be a better, more centralized way to identify areas of dire need of upgrade, starting with programs that revolve around technology.

Facilities should always be the best in the nation

Agree with all recommendations

No clue who or which company we would outsource to, but as long as there is a no fault clause to allow us to escape I think that's a good plan.

Training on communication practices can alleviate a lot of the issues presented or streamlining a chain of command.

Targeting efficiency is a good focus, and centralization may play a key role as described. I would be wary to heed the advice of established personnel in terms of what is already being done to increase efficiency and what more could be done under a proposed centralized structure, where they have a significant hand in the design of any changes to their roles and responsibilities. It may be beneficial to outline how improved data collection will be shared and utilized toward administrative decisions rather than only increase efforts to record data.

The primary goal should always be in maintaining the buildings and infrastructure to peak conditions. Future plans should be based upon managed growth.

Please renovate Langford. The fact that the college of architecture is in such an old building does no favors on getting people to attend. There's not enough electrical outlets. And Zachary was made right next to it.

no comment

During nighttime football games at Kyle Field, the north and south end zones are very dark on television thus making the stadium look empty. I understand the zones are probably lit enough for users in those zones however it comes off as dark or empty. This is important for many reasons but mainly the perception on national tv looks underwhelming. We have a beautiful stadium why not illuminate it to maximize our brand.

None

Facilities are very impressive, even overly impressive.

Based on general observations it appears that facilities are superb. Traffic will continue to be a problem to solve.

Centralizing the Facilities management makes a lot of \$ sense. Where it can break down is the lost time of needing to go to the lead agency for approvals for small tasks. Protocols and procedures need to be clearly laid out and not so overly complex that it delays work and costs even more than when programs were decentralized. The key to success during transition in the agency I work in has been hiring high performing open minded staff to lead database development for tracking design and completion of all maintenance and construction efforts. Following that, training of all staff involved on LEAN protocols and repeatedly revisiting to improve database methods, LEAN protocols, and staffing involved. I support this effort as long as there is a plan in PLACE and proven experienced staff that can carry the mission out or to guide those already employed during the transition.

Just because we have the land is no reason to make a campus so large that students cannot have back-to-back classes.

One of the reasons that TAMU continues to be a university for the privileged is that they require fees for facilities that poor students can neither afford nor use as they must work to try to afford to attend A&M.

I strongly agree with this finding: "New construction and renovation projects often lack clear owner advocacy and oversight that align with TAMU/TAMUS Standards. This lack of centralized control leads to high levels of process deviation that is associated with standard project development, including scope of work, schematic design, design development, and construction. This lack of clarity and a central point of contact can cause confusion in project funding and create an inconsistent delivery of final project documents to external Architectural and MEP partners, among others." I serve as a Class Agent and one of our responsibilities was to find a suitable class gift. It was suggested to us by our Association contact that we identify an upcoming project as this is a frequent gift given by many classes - however, we were never able to obtain a centralized listing of projects or even contact information to obtain updates on status and funding so we were not able to explore this option any further. Having this centralized would assist other classes select a project for their gift and subsequent funding.

The university buildings are aging and do need attention. Focus on classrooms and student union areas vs. sporting facilities. Modernization of classrooms and meeting areas with moveable walls, digital access, configurable furniture for group projects vs. lectures, etc. would be great.

Doesn't our school provide extension services and have research/education on landscaping? Can we not landscape the main campus to a degree that makes it appear we have a clue on this? Specifically, grass. Good grief, it is an embarrassment.

The report noted the need to maintain existing infrastructure as a weakness, and I assume the proposed restructuring will help integrate this into plans for all new buildings. This type of restructuring across TAMU is needed.

I like the addition of the lake that is being made; however, it is hard for students to live on campus b/c there are too many students for the capacity. Some classes are offered online only--all classes should be in person b/c that is why students choose to go to college at TAMU--in person classes---not virtual options.

I am not familiar with facilities.

Sound very disjointed as is, agree to centralize this area for all facilities.

As always, all facilities should be on regimented programs for upkeep & improvement.

Again some colleges have specific needs as to access to facilities, however a coordinated and clear accountability in this area would be key.

Agree with recommendations

None

N/A

Agree with all recommendations

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

Perhaps is time to put a cap on enrollment and slow down facility expansion along with slower growth of facility expenses.

It makes no sense to move Housing here. Housing is a student affair, not a logistics of building management. I disagree with moving Housing to Facilities, and believe it should remain with Student Affairs, or previous organization. I also believe TAMU should retain the position of sustainability.

Infrastructure without a rigorously managed preventive and replacement maintenance program is a disaster in slow-motion. Look no further than our nation's railroads, bridges, and highways as a prime example. Look at our nation's nuclear submarine fleet for an outstanding example of best practices for maintenance!

Probably an area the would benefit greatly from centralization. Just be sure flexibility is build in to meet the unique needs of each college.

Amazing. 0 complaints. Problem is students aren't interacting with these facilities enough - that's where you student counselors need to step up. You need a counselor who only reminds students of facilities available and sign ups. Hand holding students to the facility doors if necessary. These facilities teach the future skills needed for career placement. 2 birds 1 stone. Jobs are everything now and you have tough competition from free online learning.

---

Safety is always a priority for anyone on campus.

---

Stop promoting/prioritizing the job

---

Performing and Visual Arts - a great idea - and STEAM - a great idea to get with this trend.

---

All three recommendations appear to promise improvements where they are much needed.

---

In general I support centralization of Facilities & Operations, as well as Facilities Planning and Construction. This should, eventually, result in more efficient use of resources, and also provide University management with a far more inclusive view of where and how facilities funding is being used. I'm uncertain about the creation of a separate Faculty Information Systems group, separate and distinct from University Information Systems. In my experience working at several different universities, this has been a recipe for disaster, with the separate teams warring for the same precious dollars. Make no mistake, we definitely need a CMMS, but I'd prefer to see it be a department within the university's overall Information Systems team.

---

no comment

---

Completely agree with centralization and restructuring the facilities organization. I am a retired facilities executive from a fortune 50 company and we began this same journey in the early 2000's in order to optimize and rationalize real property assets, and improve efficiencies.

---

Agree

---

Major facilities should become a campus function and not a System Function. The System administration does not always have the campus interest at heart

---

Increasingly, it looks like A & M is looking like a country club, and the price of room and board is rising with it. I lived in an un air conditioned Puryear Hall. We had to cool our rooms with a window fan. My room was on the ground floor facing the YMCA BLDG. When we would dress in the morning, women walking on the sidewalk could see into our rooms. There was no privacy. We had shared showers on each stoop. If we were on the first floor, anyone outside could see us enter the shower. it was built for an all male campus. Privacy wasn't important then. Some of the other dorms had gang showers. It was a lot cheaper to build one shower room to serve a whole floor of students. Women want more privacy. That increased the cost of on campus housing. I knew a man, born in 1912 who attended A & M and graduated in the 1930s. He was desperately poor, but he found a way to graduate, debt free I might add. I have read of other old Ags who pinched pennies and pared their expenses to the bone. I did some of it. I lived off campus my last two years and saved money by renting a house with three other guys. It was un air conditioned and had very little heat. We pooled our money and distributed the cooking and cleaning chores among us. All of us graduated debt free. I don't think that kind of housing is available in BCS anymore. Everyone insists on a country club environment. Now, if some people live in a country club, it seems we are supposed to think everyone is entitled to a country club. I think it ruins a person's character when he insists on what other people have. It is envy. Socialism feeds off of envy. When I was there, it didn't bother me that some people lived in Kruger Dunn while I lived in Puryear or off campus. I wasn't born into great wealth, so there was no use pretending I came from a privilege class. I'll seldom meet a better man than the old Aggie I knew who was born in 1912 and made it through A & M although he lost both his father and mother before the age of 16. I also might add that even though I paid a student activities fee, once I moved off campus I stopped taking advantage of the opportunities that were afforded me by the student activities fee. On the other hand, if everyone had taken advantage of those opportunities, there would have been excess demand. To this day, I don't know if there was surplus of student activities or if demand exceeded supply. The point is, though, I paid into a fund but didn't get the full benefit of it by living off campus.

---

They are "fancier" than necessary. I think recent and current students and staff are soft and spoiled.

---

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do

---

everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

The newer buildings make campus look like an ugly office park. Wish there were more "classic" buildings, more ivy-league-ish. That would probably be the #1 thing to do compared to the rest of the recommendations in the report. "Yes, finally, M.K. Banks turned campus into a beautiful looking college".

Facilitys are excellent

Agree with findings and the opportunity to create cost effective synergies.

I suggest the lecture rooms be at a temperature better suited to learning and attention. When I gave lectures in 3 different rooms the temperature was over 75F in each. I have always been taught from my days at A&M to now that it is best to have rooms around 70F to help the audience alert.

The students should have the best facilities provided for their education.

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

I see the logic but the combination will make the management even more inefficient

Simply point to restructure as the solution is risky. It can facilitate change, but is not the desired change, in and of itself. Biggest thing is that there is a marked building between the facilities that are modern and well kept and those that are not. That should be addressed somehow.

Stay practical to students' future

Regarding Recommendation #3, I've been through that transition as a full-time staffer at another institution. It's really nice to have a website/portal to submit everything in. Definitely recommend.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED] Class of 2014

No comments.

Facilities are kept in good condition and are nice.

Always were the best and still seem to be constantly upgraded and top notch.

I think this area has needed change for a while. I think the redundancies is what kept the group from being productive. I think the streamlining will make everyone's life easier.

## Facilities - Other

Please provide your comments related to Facilities:

Certain aspect of Library assets require immediate response times, at present they are covered in house by library facility management. Response times in other buildings facilities have been slow and might result in damage to collections/inventory housed in Library facilities if response team is slow or has no knowledge of correct

intervention/protection of housed materials.

---

N/A

---

Regarding recommendation 1, it is not certain that consolidation will result in efficiencies. That is, the expected particular efficiencies are not described or defined. Are these efficiencies in service, cost, time, etc.? And efficient from who's perspective? Are these efficiencies for the institution, the colleges, the departments, the faculty and staff, or something else? Regarding rec 2 and 3, how will these new divisions be financed?

---

NA

---

The lack of health care provisions for a pandemic made at TAMU and in the BCS area as a whole has been shocking and frightening. There has been a tremendous amount of illness on campus this year and students struggle to find health care and are very concerned about the effects of missing class if they are diagnosed with COVID. There is a rumor that professors have been told to not record their classes for students who need to quarantine. It has felt like a hopeless situation for many. As a parent reading TAMU parent postings on Facebook of students who have been in car accidents and are unable to get into urgent care, I am very concerned about my student's lack of access to health care when he needs it - given the overwhelming demand and the lack of resources to handle it in your area.

---

This is always a serious consideration for a physical plant as large as TAMU. The recommendations are powerful in moving us forward. I hope they can be enacted.

---

Facilities should have a central presence with strong guidance to any remote facility in planning, monitoring, and maintenance.

---

none

---

Please consider separating building 0468 into 4 buildings. From a maintenance perspective it is confusing that Cushing Library, Evans Library, the Annex, and the Student Computing Center are all numbered as 1 building. If you need money to support the exterior restoration project for the Academic building 0462, consider make it a public campaign to save a historical building on campus, I'm sure donors would step forward.

---

As the interim dean of the University Libraries, I want to provide the following feedback and information about the Libraries Facilities: The Libraries has centralized and embedded the Libraries Facilities unit and staff within all aspects of our operations, project management, and organization. We have found this model to be highly effective and efficient and we are consistently praised for our compliance by campus Facilities. Removing them will affect the efficiency and effectiveness of how we provide our services, programs, and initiative to students, faculty, and staff. The University Libraries has a team of five who oversee the building and operational needs of 9 different library locations, 7 of which are buildings that are under the Libraries space inventory. The buildings that the University Libraries' Facilities team oversees have specialized standards due to the collections housed within them. Special collections and archives require preservation level standards to ensure that the collections will not deteriorate. Facilities works with the Evans Preservation Unit to monitor and respond to any shift in the environment. This includes Cushing Memorial Library and the Medical Sciences Library. Both buildings have different types of HVAC systems (glycol and Liebert respectively) that require a team of facilities experts to understand and respond to the issues. The University Libraries' Facilities team has learned over the course of several years the intricacies and needs of these buildings, the needs of the collection environments, and how to work with the librarians and staff who manage the collections. University Libraries' Facilities unit is embedded into the organization of the Libraries. They manage building safety and security. The five team members are part of our Work Environment and Safety Committee. The Head of Facilities is our primary contact with UPD and manages the after hours building security and reporting issues to UPD. He maintains and ensures that our security cameras are operational, that video is being recorded and saved, the videos are accessible, and that we are following the SAP on video surveillance. He works directly with UPD to ensure that they have video needed for incidents in any of the Libraries buildings. Shipping and receiving is within the University Libraries Facilities unit. This function manages thousands of dollars of collections, supplies, and equipment that comes through every day. With managing 7 buildings, it is easy to say that there is a renovation or significant maintenance project in at least one of the buildings at any given time. Our facilities team manages the onsite work and project management of these projects in addition to providing preventive maintenance and review of the mechanical operations. Due to the project nature of facilities work, the head of Libraries' Facilities is an integral part of the Libraries project management team. This team oversees the Libraries project management portfolio which includes the development of innovations, creation of committees,

standing up new programs, renovation projects, and new user models. The head of Libraries' Facilities was included because we recognized how much facilities are involved in every project, service, and program that we provide in the Libraries. Facilities are at the heart of everything that we do. Decentralizing Facilities will make it difficult for us to respond to the needs of our users. Every library is busy. Since returning to normal operations, we have found that students are returning to the Libraries in full force (approximately 800,000 students have visited one of our libraries in the first 2 months of the fall semester). With the high use of the buildings, comes high maintenance needs and quick response times. With onsite facilities personnel who understand and report through the libraries, a help desk ticket is responded to in minutes. Tickets submitted from our Libraries facility units to campus Facilities can take days. That slow SSC response time is often at the detriment of our users.

Most are first class....can compete with any university. I have no strong opinion.

A fine arts center is extremely important. OPAS is vital to the community, but the Rudder Center is almost constantly in demand. It is frequently hard to schedule traveling programs (Broadway, concerts, etc.) because of the highly used facilities currently available.

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

No comment.

Having been the Landscape Architect for the University of Houston System office for Facilities Management for almost a decade and observer of the TAMU Facilities Management for three decades, I strongly disagree with the restructuring of Facilities and Operations under a centralized management structure. Based on the impact by decades of professionals from the TAMU College of Architecture program locally, nationally and internationally, the physical facilities within this College are not adequate and need to be addressed, and are not better served by consolidating with other major colleges.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

Restructuring is a good idea.

I have little to say here, except that there is an obvious and passing need for more funding to keep up with the deferred maintenance of the existing buildings on campus.

More on campus housing

N/A

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered

online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

---

Working in facilities for 13 years on campus I found a huge disconnect between campus and real world. Facilities went 3rd party outside contractor but it really didn't do much other than push the ball in someone else's court. Our chancellor, King Sharp, had a great opportunity to outsource everything correctly but he screwed it up just like he screws up everything else he touches. It limps along but it could have been much better.

---

Arts Center needed, but odd that C of LAs will be shallowed up and downplayed

---

Adding more buildings increases cost? Why can't not teaching/research activities be eliminated. Just because we have it now does not mean we should keep it.

---

TAMU and TAMUS member agencies in the area have been working steadily to upgrade facilities this needs to stay on pace but we also need to remain focused. At the end of the day the educational facilities need to be the priority to be on a higher academic level not athletics.

---

Agree with the creation of a division of Facility Information Systems in order to provide more organization in the areas of record keeping and data management.

---

it is more about programs than bricks and mortar

---

They are more than sufficient.

---

The outsourcing of facilities has resulted in a system that does not work. The priority of the outsourced entity is to make money by doing as little work as possible and charge as much for it as possible. As an example, work orders reporting leaks result in someone showing up who is incapable of repairing a leak (but is apparently capable of charging for the lack of expertise). When someone does show who can fix a leak, they have forgotten to bring the tools necessary to do the job. I realize that the idea was to make things more efficient and cost-effective for the university, but that has failed. Work takes longer to get done, the quality of work being done is less, and the employees have had their pensions and worklife adversely affected.

---

There are not enough classrooms. The school needs to provide more basic classroom spaces instead of fewer fancy ones.

---

Excellent

---

## Q40 - Please provide your comments related to Finance and Business Administration:

### Finance and Business Administration - Faculty

Please provide your comments related to Finance and Business Administration:

Centralization would slow down processes for individual entities on campus, delaying response times and resulting in less individualized service.

I continue to be incredulous regarding the large number of "worst practices" as opposed to "best practices" in these units at A&M

None

The college of architecture's business office, IT, and marketing are the most efficient and effective staff on campus. If the centralization of these offices results in services akin to SRS or IRB, we will have failed. In fact, IRB has had to be called by NSF to say they are not functioning correctly. SRS has had to give back grant money that the funder did not want back because of their slow bureaucracy. My research has been a victim of this when SRS and contracting could not function quickly enough. We have lost grants and contracts due to the bureaucracy of these parts of the university. Currently, the college business office can help me with a financial issue within a day, IT fix something within an hour, and marketing get materials out the door within a day. I do not see how the centralization of these services will compare to the amazing quality of service we have now.

Not sure centralizing will work as many units operate so differently

No Comment

The A&M Foundation should be held accountable to the university.

As with advisors, the centralization of this group of staff will not be helpful to the departments. The current staff know our subject areas and how to help us be as efficient as possible. It seems pointless to throw away such expertise without a clear stated and achievable compensation.

Centralizing these functions would be detrimental to community building, but may streamline processes.

In connection with my role as senior associate dean of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

University Payroll, under the direction of Human Resources, sounds good, but how does this move impact current Human Resource employees (or those that function in this capacity)? Do they want Payroll?

Good CFO is in charge of Finance and not facilities!

Where are the University Libraries in this section of the report? The Libraries have to manage and administer a large budget, workforce, equipment, and infrastructure to carry out its mission to the wider University.

This made sense to me, overall.

If you create too huge a bureaucracy, efficiency starts to be replaced by inefficiency, chaos, and very bad customer service.

No comments

Further centralizing of business process would be a nightmare. It already is. In my role as an administrator, I spend a great deal of time cleaning up accounting that has been done poorly by staff who are not connected to our office and who are unfamiliar with the business processes that need to be carried out. I should by now have an honorary accounting degree. Centralizing in the case has not increased efficiency. It has increased more work for me and increased the number of errors I find in our accounting.

These are good recommendations

None.

---

no comments.

---

None

---

This a practically been implemented!

---

Departments and Colleges have links to donors and their families (when the donors are dead) and a nuanced understanding of donor intent. It will be important to continue to honor donor wishes and intent if endowment administration is centralized under one University-wide umbrella. This could have the unintended consequence of weakening ties between donors and the University.

---

At this point, I have been working on this form for over 3 hours, and I'm tired, too tired to point out all that I'm thinking. I will summarize what I've said about other portions of this report: centralizing aspects of the university functions that deal with our everyday lives and essential processes is NOT a benefit. When my local bank was bought out by a national bank, I switched banks because some loan officer in Chicago does not understand the context of my financial life in Bryan, Texas. The same is true of the financial officer at the top of the university who has no clue why I, a faculty member in my department, am asking certain questions or having certain doubts about what is required of me. Distance does not improve communication or effectiveness.

---

None

---

The university functions as well as it does because each department has its own internal staff who work on finance issues. If these duties are fully centralized, it will considerably hinder communication and the progress of research and teaching missions. Individual relationships are what keep the university functioning as well as it does. If you rupture those by pulling staff out of departments there will be massive departure of staff, and dramatic decrease in functioning at all levels.

---

none

---

A thorough operations research review similar to what Accenture would do to first document all the business processes that the university supports is necessary. Second, it is important to them identify the resources (e.g., computer software) and personnel who meet those needs and also to document if those are efficient and effective. If all stakeholder groups also document how these services are received by them (e.g., how do I complete a purchase order through the business office) and definitely how effective this is, then the University can move in the direction of consolidation with a goal towards improving effectiveness along with efficiency. Prioritizing cost-cutting without this type of review can result in more challenges than solutions. Things are already quite complicated and faculty feel bogged down by the bureaucracy, I cannot imagine how that will get better unless a careful review is conducted.

---

Simplify the processes, structure and bring some software. Have well trained professional staff and modern system.

---

Centralization is not always a good thing. Having common systems across a decentralized structure is always a plus. A poorly functioning centralized system fails the whole University, not just a small section. For business systems, the gap between the faculty and the business associates increases the chances of miscommunication and reduces efficiencies. Same for IT and other essential services. What works for one College doesn't necessarily work for others, there is no "one size fits all" system. This is just flawed thinking that centralization is always better.

---

A comment on recommendation 5 that seems in error to me: saying that Vet Med grants should be handled via Agilife when those of us in Agrilife typically use SRS for federal or other high indirect rate (overhead) costs, with low overhead contracts etc going through the University or College. I expect that is already the case with Veterinary also.

---

The theme with this report is "centralize". While it sounds efficient on paper I've seen first hand that it's cumbersome for the users (faculty, staff and students) and those who work in the system find it frustrating. I have yet to hear of a centralized system at A&M for which the users and the employees were supportive and appreciative of the changes. These seem like changes the upper administration makes for their own purposes.

---

no comment

---

I recently had my own business office staff reorganized from covering one department to two. The change has not been good. It sometimes feels like an antagonistic relationship where the business staff is being deliberately ignorant about

---

my research money so that I cannot use it. (Note: I don't believe the deliberate part I am just explaining what it feels like). Change could be good, but I worry that further centralization might exacerbate the problems I have discussed.

Previous centralization of business staff simply meant that the staff left behind had to take on additional accounting and business duties they were not trained for and did not have the bandwidth to take on. Doing this across campus would make low staff and faculty morale even lower and you will lose more personnel. It also meant it was very difficult to get the attention of centralized business staff and processes were constantly being dropped or mistakes were made because they were handed off from staff member to staff member in the centralized office. This added to the business and accounting burden in the unit offices since we constantly have to check that business processes are being carried out correctly. Centralized business staff no longer had any understanding of the needs of the offices they were trying to serve. This was alleviated only somewhat by the establishment of the business liaison position within the centralized office. Where is SFAID? They should have strong connections to SBS.

1. "Centralization" does NOT bring effectiveness at all. For example, after the "AggieBuy" is in place, ordering of research materials/equipment becomes much slower, and the process is no way to be communicated. Prior to AggieBuy, ordering was through the department/college. As soon as an order was submitted, we pretty much got a reply back from the department and the company within 12-24 hours that the order was placed and the materials would be shipped. Now through AggieBuy, we rarely get any e-mail notice as whether the materials were ordered or not, and the company no longer e-mailed us (faculty/research labs) on whether they received the orders or expected shipping dates. It is much slower to get the needed research supplies via AggieBuy. 2. AggieBuy is extremely NOT user friendly. As a faculty member, we do not use AggieBuy on a daily basis only when we need to order research supplies/equipment. When we do so, it is extremely cumbersome to "re-learn" all the ins-and-outs. The "old" way of ordering research supplies/equipment via our department/college portal is much easier and user friendly, and even much faster and more efficient to get the supplies/equipment shipped to us.

The workflows and bureaucracies at this University are some of the worst I've experienced and my employees (researchers and students) have dealt with. There is a serious need to streamline processes like hiring, which typically takes 4-6 months from the point of initiating the process. There is a lack of training for faculty on how to manage finances, employees, and be managers, which is who we are. This needs to be more than online courses, but real management training so that we understand how to engage with Finance and Administration. There is also a lack of qualified administrators at the departmental level, which results in incredible inefficiency through back and forth about errors.

The consistent preference for centralization ignores the fact that it introduces inefficiencies as well and is not automatically better than decentralization. It is already hard enough to get answers to finance questions from FMO. Without business staff in our units who can provide advice and accounting the business side would be dreadful. Unless the staff there is projected to quadruple this is going to produce frustrations, delays, and slowdowns in research administration. If we make it hard to do these things, research active PIs will not propose for large center grants and TAMU will not be the lead institution on collaborative projects.

I am hesitant about centralizing finance. It would seem to increase, not diminish, workflow from individual units and colleges. Again, the savings on efficiency are not necessarily apparent to me.

In my experience at this university, centralization without very clear reporting lines through departments and/or colleges has not led to positive outcomes. The so-called "dotted lines" from centralized finance, facilities, etc. need to be much more clearly articulated. And most importantly, administrators making centralized decisions must base these decisions on input from those individuals who are actually doing the work on a daily basis. A good example of where this is working fairly well is in Academic Innovation, whose group is engaged in continuous feedback on the needs of instructors and students as the kinks are worked out with the university's new Learning Management System. All administrators meet monthly with the Faculty Senate and deliver real-time reports of updates and changes and listen carefully to the questions and issues raised by faculty who are actually using the system on a daily basis.

Very good plan.

Too many layers, with too many "back-and-forth" delays for researchers attempting to get contracts approved. There should be a time limit on how long it takes for "Legal" to approve contracts. Right now the average time is 4-6 months. The A&M Legal Department seems extremely undecisive and often unable to provide reliable legal advice.

The FPC division ideas are likely constructive, execution is the key. The Faculty Information Systems ideas seem reasonable. This may not be the right place for this rant: Overall, there needs to be a strong push to reduce the number

of "website/software bosses" that the faculty must wrestle with, sometimes for hours per day. An ungodly fraction of a typical week is already spent navigating Maestro, Concur, Faculty 180, MyEnvie, Workday, TrainTrak, HOWDY, ZOOM, ... In "the good old days", I had an admin asst and a with a few signatures & a few telephone calls I could delegate much of what I am now having to personally do electronically .... I could spend much more time teaching and research rather than fumbling through menus. Are we really making progress toward how to best utilize the academic and research talent we have assembled? Or are we implicitly requiring highly competent individuals to spend many hours personally doing administrative functions on the web that could be delegated?

Agreed that consolidation, centralization, and outsourcing is needed. Look to how businesses are now operating. Consider Aggie entrepreneurs for outsourcing. Please get Professors of Practice from the Mays Business school involved here. An incredible opportunity for impactful senior graduate projects.

I am worried by the proposed centralization, especially with respect to grant management and support for grant applications, which are highly field-specific. Faculty should be able to receive support from staff that has extensive experience in their field of research. Centralizing make this more difficult to achieve. The same applies to IRB application and approval processes.

nc

There are Finance and Business Admin overlap. I think some could be consolidated.

This needs to be transparent, efficient, and consistent.

I am concerned about the evidence base substantiating the recommendations made.

Support Recommendation 1. Another sensible consolidation that will strengthen the university's operations. Strongly support Recommendation 2. There are tremendous inefficiencies with workflow processes which this identification process will help to clear up. Transactions and contracts take a long time. No opinion on Recommendation 3. No opinion on Recommendation 4. No opinion on Recommendation 5.

Centralizing units such as Finance and Business Administration may be helpful in some departments, but it in other areas it will significantly hinder the work and success of faculty, staff, and students. More analysis, thought, and consideration needs to occur before any changes are made.

No comments.

To propose that all funding for the CVMBS should funnel through AgriLife would harm the researchers in the college who do not do research on small and large animal medicine and instead focus on basic and translational science. While there is likely some need for evaluating processes, AgriLife does not have same understanding of those funding agencies and research needs.

The one place where economies of scale might work, if not carried too far.

I have no way of knowing

I have no expertise to provide helpful comment on the proposed changes. I just hope that in the implementation, which may requires RIF-ing employees, we don't hemorrhage good people. Our business staff at all levels is critical to our mission and we need to be attentive to how this is implemented.

N/A

I am fine with the recommendations made.

ok

I concur with these recommendations.

Critical to any re-organization will be leaving dedicated finance and business staff members embedded in academic departments. Navigating the various networks of units and systems to conduct my daily business is already too complex and takes far too much of my time away from my central job functions of teaching and research.

Faculty at the College of Veterinary Medicine & Biomedical Sciences engage in research involving both animal and human health. Biomedical research involves both! Some of our faculty are funded by the National Institutes of Health

and other human-focused funding sources. Routing research proposals only through AgriLife could have a negative impact on our college's research success and national reputation.

I have a general concern which is that too much time spent focussing on making things efficient can be inefficient in general. An overly picky system for ensuring efficiency can end up as the perfect being the enemy of the good. Careful design with a focus on what is efficient AND effective is needed, and often lacking.

No comments, except to implement practices that protect faculty and researchers from becoming clerks.

The Finance chart should include a division of student - graduate and undergraduate - finance. This should encourage fiscal policy changes that improve their recruitment and retention.

I have general concerns about the centralization of services. We are a big place—the size of a mid-sized city. Centralizing advising, IT, and business services will make this place A LOT less personal for the student (especially advising—students need a person that they know and trust to help them make important decisions—having centralized advising will ensure that advisers are completely unable to offer personalized services—they won't know the students, and they won't know the programs). One of the things that makes Aggieland special for students is the community, the friendliness, the personal service that they get from our faculty and staff. Centralization will destroy that. Centralizing IT and business services MAY be more efficient (depending on how one measures efficiency) but it will CERTAINLY be less effective for faculty and staff. As with advising, the level and timeliness of service is critical for the efficiency and effectiveness of my work as a faculty member and administrator. I can't wait days for answers to questions, which is what happens right now when I have to reach out to centralized services. When I can reach out to someone that I know in my college's IT or business office—who I know knows the answers—I get answers immediately, which allows me to continue my work. Not having that will make my research, and my ability to get things done administratively (P&T, faculty development, etc.) MUCH LESS EFFECTIVE. Let me reiterate—RIGHT NOW, REACHING OUT TO CENTRAL SERVICES RESULTS IN WAITS OF DAYS OR WEEKS (OR INFINITELY). REACHING OUT TO OUR IN-COLLEGE SERVICE UNITS RESULTS IN WAITS OF MINUTES, AND IMMEDIATE SERVICE. That is how I measure efficiency. I would like to recommend that at least one of the measures of efficiency be ticket clearance times, but my experience with University IT and Educational Media Services just this semester leads me to believe that clearance rates are manipulated—both units cleared my ticket by referring me to a different unit. The problem—not having a mic in my classroom—took 2 months to resolve. If the consultant is going to rely excessively on metrics, they ought to make sure those metrics are valid.

No comments

As very new faculty, I am relatively unfamiliar with how the Finance and Business Administration does or should operate. In general, I support in principle the idea of efficiency and I know that on paper centralizing things may seem more efficient. However, in my experience at other institutions, centralizing operations often comes with substantial hidden costs because it removes the personal element of communication within smaller groups, which supports productivity.

Proposed recommendations #1 and #3 would be a disaster for TAMU. Being able to contact competent, engaged and dedicated business administrators is essential for any units' effective operation. Removing local control over finances would enable even more top-down control and make it more cumbersome to request and receive financial information in individual units. The cost savings (if any) would be greatly outweighed by the loss in service. Recommendation #4 is clearly a power grab over an independent organization by Texas A&M University. I hope that the independent Foundation rejects this proposal and maintains their independence. Such a "shared oversight" can be construed as the first step in an administrative takeover of the Foundation. Recommendation #5 should only be adopted if a cost/benefit analysis is positive for finances and service and the stakeholders agree to such an arrangement.

The findings and recommendations seem reasonable.

No comment

No comments. Recommendations seem reasonable.

I don't think this will work well in some Colleges, particularly COALS and COE that have more than 02 funding they are dealing with.

I perceive consolidation of Finance and Business Administration is to cut staff (RIF)

Will this truly increase efficiency, or would it simply increase bureaucracy? This needs to be clarified in advance.

Recommendation #2: Identify inefficiencies within internal workflow processes.

I like the idea of merging the payroll and Human Resources and student employment operations under a single umbrella. The divisions between these operations in the past felt artificial and motivated by individual power and resulted in a lot of wasted resources in shifting blame and finger pointing. However, all support operations for individual units cannot be handled out of a single unit. The institution is simply too big and complex for that. Larger units need local Business staff and HR liaisons to answer questions and provide guidance in navigating the complex systems of tools and processes, such as Workday. The typical employee does not understand all the ins and outs of salary adjustments, taxable gifts, and tax exempt purchasing.

Again, centralizing can be useful, but departments and colleges will still need finance and business support in their offices. The description of this centralizing is very polyannish - actually implementing these changes will take very strong, skilled leaders who can create a strong culture of service and support and buy in to a mission and vision. It is not clear where these leaders would be hired from or developed from, and this will fail if there are not strong leaders in place. See, for example, SRS and other attempts at centralizing that have been catastrophic and just created redundancies as departments/colleges have to hire people to fill in the gaps.

Recommendation #1 (Centralize business services under a CFO): this needs to be fully funded and staffed. When AgriLife did this, they did not have enough personnel and it created some miserable working conditions and responses, but it's getting better now. The transition will be slower than anyone wants and will be difficult. Recommendation #2 (Workflow): I am supportive Recommendation #3 (Matrix Management): Matrix management appears to work best in decentralized organizations, but many of the recommendations in this report call for increased centralization. I see a direct conflict here. Matrix management sows confusion about responsibilities and allows people to avoid accountability and long-term investment into their programs because of the fluid nature of their tasks.

Yes please, and streamline the multitude of systems faculty are required to know and use to do their roles (e.g. Concur, AggieBuy, time and effort, Maestro, Traintraq, Workday). Too many...burdensome and confusing.

nothing to add

The proposed changes may be effective provided that they are designed to better serve staff, faculty, and students in academic units.

I sincerely hope that any changes will improve timeliness of actions and response to faculty, staff, and students. The bureaucracy at our university is already overwhelming, and I am concerned that it can only get worse.

Research Finance - require specialized and knowledgeable support for division units. For example - direct support of Comparative Medicine Program by DOR business services has brought improved billing practices, accuracy, PI transparency, and ensures compliance with Federal grant expenditures. These services must be continued to enable focused efforts in this area. Research finance may fit better on orgchart with COALS, Engineering, Galveston, HSC Finance finding #5 Not clear that cost savings would result from merger of COALS + CVMBS. Most compliance is managed by Division of Research - not clear what duplication is being described. CVMBS has a strictly health-based mission; COALS has a broader agriculture and life science mission not limited to animal health. Veterinary Colleges are not typically joined with production agriculture colleges for many (obvious) reasons related to mission, although the two usually have very strong relationships. CVMBS has a diverse research portfolio (supported by foundations, NIH, USDA, NSF, DoD, NIEHS more NIH T32s than other colleges, etc.), and has expressed concern about routing all proposals through Agrilife. CVMBS is a health based mission and some research activities are not as closely aligned with Agrilife core mission. CVMBS relationship with the Division of Research and its support for comparative medicine, research development, core support, research administration, startups, etc., will be altered by change in structure of IDC distribution. May be time to re-think management of IDC to central TAMU level for all TAMU faculty research grants -- this would give president flexibility to implement consistent practices, and would eliminate the COALS and CVM faculty having to choose how to route proposal submissions. CROs could negotiate how to develop shared resources. No evidence Agrilife management would cause CVMBS to become more competitive for state and federal funding. In fact, Agrilife business practices would likely be detrimental to CVMBS PIs.

As with other recommendations for centralization of services, the efficiencies that will be gained are not assured. The proposal to move Enrollment Management under a Department of Finance sends a chilling message about the mission

of the university.

---

Severing links between units that rely on services can be problematic. How accountability is managed is critical (for this consideration and throughout the "centralized" units). We recently centralized business tasks in our college. People now work more for the same pay. Naturally, tasks are done more slowly. However, it is also important to note that our DH was not asked about performance of staff at the last period of evaluation. So - what are we to do if business staff are not providing sufficient service? DH will not successfully put any pressure on staff. System does not ask DH for any feedback that allows them to pressure such staff. I will note: since centralization here the amount of attention to tasks for my lab has been very lax. People do not know me and it shows (essentially in how much they seem to care about my tasks getting handled). This is the difference between someone you regularly talk to who understands that it is their job to help you meet the mission you are tasked with versus someone doing a numbers-oriented job with little buy-in to my unit's responsibilities. I worry most about this in the context of what I have seen from the college of engineering. I have a colleague that was dropped from a subcontract on an NSF grant with me. The reason? We got a bill > 1 year late with no documentation of why the bill was generated. It caused problems with the PI of the grant. My colleague in engineering reported that this was not the only time billing administration has burned him and just views this kind of thing as life as usual. I really don't want that to happen university-wide...

---

We need significant increases in investment on programs to promote biological and biomedical research.

---

I am concerned about the job security of our business administrator, [REDACTED]. She is absolutely brilliant and is an incredible asset to this university. Additionally, centralization tends to lead to a lack of specialization. I am concerned about the 'one-size-fits-all' mentality of finance and business administration.

---

The finance administration needs of every department are unique, therefore business administrators in departments should remain where they are. The report suggests this to be the case, "employees will continue to be physically located in their current unit but operate under a different reporting structure", and I would urge that this be followed. The value of the institutional knowledge that staff possess should never be underestimated. The reporting structure that is identified in the report is unclear, so whether any of the recommended changes are beneficial will once again depend on implementation. And once again, it will be essential to include input from faculty, administrators, and staff to create the best possible system (note that I do not say the most efficient system, because maximum efficiency is not always the best system to establish for people to use).

---

We have gone through centralization and decentralization several times now. Every time things get centralized, then service out at the user level suffers and gets so bad that we ultimately go back to a little more decentralized. You need SOME people physically out at the units providing service. Based on multiple prior iterations, I am not confident this will do anything but decrease level of service, just like it has every single time things got centralized.

---

Again, while centralization does often negatively impact responsiveness, it does seek efficiencies and there are usually standardized processes and reporting.

---

I am concerned about this centralization. I can now easily walk into the office of one of our administrative assistants and get account information, pay invoices, hire students, and do many other things. I would want our Department person to be there rather than go see a stable of people and never get any continuity and talk to someone who really understands my needs. I fear that this will create more bureaucracy and be very inefficient. We desperately need to maintain some local control within a Department. Every department is unique and needs a local person. AgriLife did this and it is a disaster.

---

I don't like the dual reporting structures that this would create between the schools/colleges and the President's Finance Office.

---

Needs further study to ensure continuity of service and dedicated resources for ongoing library subscriptions and acquisitions are sustained. The Libraries are responsible for providing all of the online and print materials to support education, research, and innovation for the entire campus. Our dedicated financial and business support unit have developed the expertise to ensure effective practices that follow university guidelines.

---

Centralization seems like it would be a complicated process as different units have different needs. We currently have travel cards for when we travel. How will those be distributed? If we have to make a supply run for an event, our people know us and we adhere to the university processes. How do we acquire those cards for a run to Sam's to get supplies. Do we have to go to a central business services location? That will take time away from my work seeing as right now I can run downstairs to grab what I need instead of crossing campus to do so.

Recommendation 3 Enrollment Management is important but there must be connection between enrollment changes and budget allocations for academic operations in department. Recommendation 4 I don't see the problem this addresses. Endowment expenditures should not be centrally controlled. Should be controlled by the units owning the endowments. And endowments should all be in one administrative structure, not split between TAMU and the Foundation.

---

I think its important to retain some department-level business and human resources-related staff and expertise. Each unit has some special needs and circumstances that are best managed and informed by individuals who work with them on an ongoing basis, become knowledgeable about their various needs, and are easily available for consultation and collaboration. Overly centralized business services will create new inefficiencies as an increasingly generalist staff attempts to manage the varied administrative needs of the university's many units. There will be large and recurring wastes of time and effort for administrators, faculty, and staff as situations that can quickly settle into standard operating procedures among specialized staff must be re-explained and solutions re-discovered in a shared services model.

---

If consolidation resulted in much greater transparency for financial administration, I am all for it but, as with facilities and IT, I worry that individualized needs and circumstances will be met with an even less flexible centralized approach. For example, Grant administration mechanisms should not be one-size fits all. Six administrators were responsible for liaising with me regarding a \$50,000 residential humanities research grant, where %100 of the funds were dispersed for use by one person and where the issuing agency (a private research foundation), already had administrative support in place.

---

Again, my concern is that the centralization would result in some issues - but I completely agree that some is needed.

---

can't comment

---

Centralization will bring many challenges and inefficiencies for the end-user. At least in our college business administration centralization to the college level was highly inefficient and has now been reversed.

---

The centralization in this area is needed but we do see issues due to limited resources.

---

Proposed centralization has to happen here. Very happy to see this.

---

Will departments lose their business managers? These folks need to be integrated into the day to day operations of departments. As a department Head I meet with our business manager almost daily.

---

When I came here in 1983 FAMIS was the primary financial program. It is possible that elements of FAMIS are still being utilized. Efforts to effectively replace FAMIS have not been very successful.

---

Business services for Colleges and Departments should not be centralized. See comments above.

---

The issue at A&M is the influence and contribution of the state agencies. It is a great contribution, but it causes confusion and conflict in IT, budgets, appointments, etc. There doesn't seem to be a way to address the situation.

---

No comment

---

This is a powerful set of recommendations that eliminates redundancy and enhances efficiency!

---

Shifting administrative management of CVM facilities to AgriLife would be a good outcome for all facilities, especially on grant management and viability of animal units between CVM and Agrilife.

---

Some of the recommendations would be helpful.

---

How are finances for faculty and staff not affiliated with departments going to work?

---

More transparency would be helpful.

---

Please do NOT centralize business services. I like to know the person who is handing my business work. When things are centralized, the relationship is lost.

---

- Seek effectiveness always and efficiency as able. Do not over-centralize these functions in pursuit of "savings" at the peril of customer service or mission effectiveness.

---

Texas A&M is a huge business that in the aggregate is amazingly well run but like any entity of similar size and scope

there will always be room for improvement. Juggling between many competing needs is a daunting task. Growth without attendance to details is likely to dilute that important aspects of what it means to be an Aggie.

---

I don't have views on this.

---

No recommendations.

---

No Comment

---

No comment, but agree that a common system across the entire campus makes sense.

---

Galveston has been growing our graduate programs, but our departmental budgets and the money available to recruit graduate students and offer them GATs has been static. This is not ok. Galveston has been a largely undergraduate campus, but it has been changing and the business administration is not reflecting that change.

---

I agree with the F & BA commentary,.

---

OK

---

Mostly good to align all units.

---

This level of centralization creates a host of it's own problems and eliminates much of our current advantages of a decentralized system accountable locally.

---

No comment.

---

What mechanisms will be put in place to offer healthcare faculty better wages that align closer to industry norms? This is the biggest recruitment and retention mechanism TAMU can offer. I have seen so many faculty leave stating pay was the overwhelming reason.

---

## Finance and Business Administration - Staff

Please provide your comments related to Finance and Business Administration:

---

I approve the recommendations for improving finance and business administration; this is an area where the right mix of technology and commitment to best practices can yield improvements in services at reduced cost.

---

Finance and Business Administration: Finding #1, Recommendation #1: Centralize financial/business services under the Chief Financial Officer. As the senior Finance professional in our college, I do not have grave concerns regarding the recommendation that employees continue to be physically located in units with a solid line to the CFO. This will allow us to remain with the colleges and the department that we serve and support. In fact, I would suggest that we have actually been operating in this manner with a dotted line to Mr. Joseph Pettibon. He has provided excellent leadership and guidance on behalf of the President and Provost over many years to the Assistant Deans for Finance. I do not see much change, other than evaluations would be conducted by the CFO or their delegate, rather than deans of the colleges. Additionally, the current CFO, Mr. John Crawford, I believe has the experience and in depth understanding of the University's configurations and differences between units, that he, together with Mr. Pettibon could make this a successful transition.

---

The suggestions of this section are even more reckless of other sections of the MGT report. Yes, more transparency should be instilled, but centralization is not the answer when improvement of reporting is what being sought. Currently this blows up the structure of the current direct reports for every facet of campus. No, a thousand times: NO.

---

Texas A&M Resources must be stewarded properly. Establishing clear unambiguous guidance as to how Texas A&M spends along with monitoring that the money is well spent is vital. Large expenditures of resources and contract negotiations must be handled by a team that includes a business professional. All too often a team lacking the requisite business knowledge engages with an outside company and enters into a relationship benefiting the company far more than the university. If matrix management structure is to be leveraged then matrixed team members must be trained on what is expected of them in a matrix management environment before engaging in said environment. Rather than

---

centralizing endowment funded expenditures establish a committee with the appropriate cross sectional membership to advice and monitor expenditures. Administrative management of grants may seem duplicative because current grants allow for multi-discipline participation. However, this will not always be the case and as grant requirements change administrative experts will be needed to help navigate.

I am concerned that the relationships and communication between business staff and their department heads (dotted line) will break down as there is turnover. Keeping business staff physically located in their departments will help with this, but some responsibility to the department head is lost with dotted line reporting (which Workday doesn't currently accommodate). Will the CFO be able to effectively evaluate the performance of business staff that they only see a couple of times a year? A clear standard of evaluation would need to be communicated with significant input from department heads. Moving Payroll to HR makes sense since Workday has blurred the line between them. It would help for academic departments to have information about the revenue generated by different courses so they can make more informed decisions about course offerings. Such decisions cannot all be revenue driven, but some could if the information was available.

I am not familiar enough to comment but a centralized system helps keep the organization running more efficiently.

For the same reasons I provided under my comments relating to Facilities, there are high containment facilities at the College of Veterinary Medicine. Highly trained personnel within the Division of Research are critical for the support and maintenance of these facilities, and any changes in reporting structure would put the university at risk.

This too makes sense to me.

1) General centralization of HR and Business functions could disconnect staff who have irreplaceable, first-hand department knowledge, and who can assess the urgency of requests. Because Business and HR processes often overlap, unit leadership and individual employees need advocates who ensure that tasks are completed by our current centralized offices (purchasing, contracts, recruiting, hiring, and benefits). We need this coordinator in-house to manage business and HR functions. 2) Experienced HR and Business Administrators are particularly skilled at navigating the nuances to achieve the best possible outcomes for both the department and employee. This is learned over time, which is why our business administrators are usually long-term employees within one department or college. Centralizing these functions might lead to a temporary cost reduction, but could also create new inefficiencies with unintended consequences, such as delayed processing and reduced communications. 3) Contracts has continued to centralize under AggieBuy. New agreements that previously took two to four weeks to create now routinely take two to four months.

TAMUQ Finance, Business, and Payroll need to be overhauled. They are consistently not meeting minimum service standards. The lack of oversight, poor administration, and ineffective leadership has diminished the quality of work that they have been able to produce.

The recommendations on Enrollment Management are out of line with industry best practices and the sources cited explain why. The primary listed source for Recommendation #3 is an article from stateuniversity.com which is undated but cites articles from a minimum of 20 to a maximum of 35 years ago. This is a dubious source at best even if it is current but given the constantly changing landscape of enrollment management it has little if any relevance. The last time the university was evaluated by a consultant (PWC Fall 2013) there was a move to decentralize processes due to the size and scope of university business and the inability to provide effective service in our centralized model. We are now even larger and the report suggests centralizing based on essentially the same logic. This new report even cites an article from that same time period ("Consolidated and Shared Services in Higher Education, 2013"). Anecdotally we see how much faster processes are completed when they can be completed by our departmental units whereas centralized processes like contract approval can take months upon months. Centralization for its own sake seems like a common sense approach that we've proven does not work in practice.

It is unclear if the recommendation to move "Student Affairs Financial Services to Finance is intended to represent the finance staff in the VPSA office alone or if it also includes Business/Finance/HR staff from Residence Life as well. As an auxiliary, our financial management and health is critical and having staff that are familiar with and understand our mission and purpose is critical. Poor management of our debt service and reserves can have devastating consequences when it comes to the maintenance and upkeep of numerous facilities. Our operation is expected to be self sustaining and we do that due to the work of good business office staff who understand our operation, what needs to be prioritized and works to get us there given their unique knowledge of our operation and business practice. It is my understanding that years ago we were under a similar system and that we suffered financially, buildings went far to long

without the needed maintenance and we are still working to resolve all that to this day. Keeping our dedicated business staff is necessary for a large and complex auxiliary operation like the Department of Residence Life. We know our business and the service we provide, we are self supporting, do not rely on student fee money to operation and contribute to the University through the assessment of the Auxiliary Service Fee.

Centralized business offices is not the answer. We rely heavily on our business office. I hate to think that they will be removed from the college and then anything business related will have to be a ticketing system. That will cause delays in processing of business-related concerns.

There are reasons to accept the recommendation of a centralized finance/business structure; however the mechanics of the implementation will be critical. We have begun creating a centralized business/HR structure within our college, but have not completed the process. We have created two centralized "business hubs" that report to the Business Office within the Dean's Office. The two business hubs support 5 of our 12 academic departments. Department heads have not been completely supportive of this decision. Communication between college and head have been absolutely critical. We have found that business positions often are commingled with administrative duties and completely pulling out business staff to solely perform business duties has left some void in a couple of departments.

I think there is a lot of specialized knowledge required in every department and office - centralizing this group may be a very rough transition.

There should be mini-centralization of financial/business services across campus but direct reporting to the CFO is not necessary. Small units across campus struggle with their business services because the unit is too small to justify having more than one person assigned to business services. This creates issues when the business person needs to be out (say on FMLA) or this position experiences turn over. The new person will not receive adequate training if they are the only person in the unit responsible for business services. Business services can be consolidated in a college (as opposed to each dept having their own business person) or for multiple units in a non-academic division. This will allow the mini-centralized team of business personnel to capitalize on shared expertise and to provide departments with a more consistent delivery of services, data, and reporting. This also allows the business services personnel to be close to their customers and advocate on behalf of their needs. Centralizing to CFO will negatively impact the engagement/relationship of the customers the business services team will be servicing. Reporting to the CFO removes accountability to their assigned units and decreases the level of customer service the business services team feels they need to provide to the unit they are servicing. What has been described above is the AABS model. For more information on the AABS model consult the [REDACTED].

The new structure seems overly complex and top heavy. I think we could experience unforeseen bottlenecks in execution of certain tasks and workflows.

Implementation will be key to success...having the right people at the table as well. Making sure "blockers" are not successful.

I support all recommendations.

No comments.

Unified financial management that is consistent across all Units is imperative. It is particularly imperative if it means there will be true equity in how financial resources are allocated, and spending is assessed each year.

Centralizing finance under a single CFO seems reasonable

Libraries has always had a centralized Business Office and our staff is specialized in library based operational services. We have followed University rules and regulations and been always in compliance. We received the highest audit rating. Team of 6 staff members and serve Libraries 80+ faculty members, 150+ staff members, and 150+ student workers.

Questions & Comments: What does a dotted line look like? Will we retain our current accounting and financial staff? Will items such as employee PIN, benefits, professional development funding, salary, etc. remain under the Division/Department they currently work with, or will that transition? The Department I work in, alone, has over 100 accounts, many of which are complex. We need to have people with in-depth knowledge, particularly because we also support recognized student organization accounts, of which FMO does not have the knowledge and context to serve. It has been shared with the Division of Student Affairs that "RIFs have not been discussed and are not part of the equation." However, when I read this "As higher education continues to receive less funding from traditional sources, ensuring the efficient use of existing resources is a critical goal. Creating more transparency around campus finances will

allow for appropriate reallocation of resources, build trust and credibility among campus constituencies and help keep tuition costs down for students. Centralizing a large amount of financial and budgetary activities under the CFO will allow for a consolidation of currently duplicated shared services..." (p. 60), I do not have confidence that positions will be retained. If we are trying to build trust, then we had best navigate this scenario with both a structural lens AND a human resources lens. My current perception is that this report neither takes into consideration the human capital and expertise that currently exists, nor does it take into consideration the already stretched personnel responsibilities and dwindling budgets.

Having a finance area in departments makes sense because they are handling needs specific to the department. Removing all Finance and Business Administration from departments and centralizing them is majorly detrimental to the effectiveness of the University's operations.

I agree with the changes here.

Dotted lines put people in the position of answering to two bosses.

Pg. 57. Remove the following functions from Finance: University Payroll from Finance (Controller) to Human Resources Does this make sense? Can HR handle payroll? Is data backing this move up - are other peer institutions handling payroll this way? Also, I think this would require either shifting employees from Finance to HR or retraining HR to handle these functions. At the College of Dentistry campus, HR is already short-staffed, so it would necessitate moving employees currently in Finance under HR to be able to handle these responsibilities. Pg. 60. Leveraging the benefits of centralized oversight and operations with performance-based budgeting can ensure that all essential services and costs, such as IT updates, are done in a consistent manner while allowing academic units additional flexibility to be incentivized for high performance. In nothing above was there anything said about "incentivizing high performance" or "performance-based budgeting." What would that even mean or look like? Pg. 61. Now more than ever, public institutions are expected to demonstrate performance levels typically associated with businesses. Should this be an expectation though? Institutions of higher education, public or not, are not the same as a typical business and have a different mission. I think it would be better to try to change public perception of what higher education institutions mission and goal should be and to clearly differentiate those from the KPIs expected of businesses. Phrasing like this is deeply concerning and I don't think higher education institutions should embrace a business culture or business goals. Pg. 61. As a result, boards, councils, and management teams have had to rethink how they operate and provide greater emphasis on continuous improvement, performance metrics, and return on investment. What counts as a return on investment when you are investing in the future of our nation? How could you possibly hope to measure this? I am concerned that using normal business performance measures will obscure and even possibly run counter to the main mission of education. It concerns me that this idea is not being questioned but actually embraced in this report. Pg. 63. Recommendation #5: Shift the research administrative management of Veterinary Medicine and Biomedical Sciences research grants and facilities to AgriLife exclusively rather than the current duplicative system including both AgriLife and TAMU. Does this include College of Dentistry Biomedical Sciences grants? I don't think it would make sense for those to go through AgriLife.

The MGT report suggests the centralization of finance and business units under the Chief Finance Officer (CFO), for the most part, I agree with this recommendation. However when centralization is discussed, I believe it is important for these units to be centralized in areas of campus. They need to stay close to their customers and they need to stay close to the other units they work with closely, human resources and IT. I would offer that these units should have a direct reporting structure to their home area administrator such as the assistant dean and a dotted line report up to the CFO. The MGT report also suggests moving the departments in enrollment services under the supervision of the CFO. Throughout this report the MGT auditors have suggested that their purpose for their recommendations is to provide focus and help the units stay on mission. However, either they have a complete misunderstanding of enrollment services or this wasn't a true statement. They viewed the enrollment services departments as being financial units, yes, there is a financial component but that's not their mission. They operationalize the mission of the Provost. When the provost creates a program such as regent scholars, financial aid is the unit that operationalizes the program by providing the scholarships and criteria to make it a viable option. Why would we want enrollment services to be removed from the provost's office? As I have said consistently throughout my comments, the issue with the units under the provost isn't that it lacks focus but that financial resources are not given to the units that need to carry out the mission. I disagree that enrollment management should be moved under the CFO, however, I do believe that DARS should go under a

budgeting and planning unit under the CFO. That's consistent with many of our peer institutions. The data behind enrollment is housed in an institutional office of budget and planning. Being an employee of Academic Affairs Business Services (AABS), I don't believe the MGT auditors understood the services this unit provides. AABS is a department where accounting and human resources work together to provide services to the non-academic units under the provost. It's a business administration department. I believe the university would be better served to copy the AABS model and have centralized business services working in pods with a direct line report to their local administrators and a dotted line to the CFO.

None at this time

I have been at TAMU for 22 months and I have experienced some interesting workflows when it comes to procurement. Opportunities for improvement.

N/A

The organizational chart on page 59 is absolutely ludicrous. The idea that someone could effectively and efficiently support 22 direct reports is exceedingly unrealistic. Span of control is ideally 3-5 direct reports, with a maximum of 7. If this unit truly needs to be reorganized, then there should be 1 or 2 additional levels added to the new "Business Services Units." Anyone who has managed or led others understands the challenges of being directly responsible for too many people. In order to better serve those we are responsible to and for, there should be associate and assistant directors in between. Thank you for considering this feedback.

No comment

The University Libraries system works as a well, system. And it works well. Business, Marketing, Facilities, HR and IT are all embedded in the library model and we work as a well oiled machine. If it ain't broke...

I fully support centralizing all finance operations to the Division of Finance.

The main question is whether finance and business administration exist to support faculty with teaching and research or if everyone else should serve the goals of finance and business administration and the PR machine that is totally detached from the mission of education.

Our Mother Ship (College of Liberal Arts) decided to create "Business Hubs" wherein the Business part of two Departments (in our case Political Science and Economics) were separated from their former Department and pooled together. I've heard this has worked out in some instances, I don't think it's worked out in ours. None of these people seem to like each other, and the head of the group (who used to be in our Department) has essentially stopped communicating with staff, and has told the people under her not to communicate with staff. It's very weird, because we all used to eat together. I'm older, have worked in HR and administration in a number of private sector environments - mainly legal, and these dictatorial ways are not conducive to building staff morale and excellence. The Head of the other Department doesn't like the head of the Hub, so there's stress there. And lastly, for the life of me I do not understand why no one oversees the budget, sees where we are at any given time. Perhaps I still think and function at a private sector level but it seems problematic.

Since these recommendations focus on realignment at a high-level it is challenging to see the forest through the trees. In regards to those staff who have cross-functional duties, such as HR functions, Service Department work, IT, HSC, it would be good to know where they'd be reassigned in the "Business Services Unit" - "new units entering the organizational chart", as these items aren't simply picked off of other divisions when placed on the new organization charts. How would these cross-functional staff be reassigned? It would seem since the review was performed at a high level, no details have been analyzed to ensure this fully makes sense in a wide spread capacity. Also, some staff provide Business and HR Liaison support functions. Finally, HR Liaisons and business staff work closely together during the Phase II merit process as its part of the workflow process. However, it is noted under the HR component that the payroll area would move to HR, so would these functions such as Phase II all be handled by HR? Finding #1 – Perhaps rather than centralizing the larger areas such as I.T., just to name one division, perhaps the smaller units who are mentioned as being pulled in different directions should take advantage of resources provided by Departmental Accounting Services, the same way Transportation Services does. Finding #2/Recommendation#2 – I would agree that contracting is a challenge. However, the observation appears to be this area is severely understaffed. It would be good if they had enough staff to not only stay on top of their work in a timely manner but to educate the campus community to be in compliance and provide a tool that aids with contract tracking. Are they short staffed due to continual hiring freezes?

I support the suggestions in the report

---

I concur with the recommendations of the study

---

No comments.

---

Will the business staff continue to report to an Assistant Dean of their college and then the assistant dean report to the CFO?

---

As long as we maintain the idea that each unit needs to have assigned personnel to manage day-to-day business this proposal is acceptable.

---

For procurement the example I have seen, is trying two examples. 1 A document management tool was desired. Due to the requirements of the procurement system this was sent to bid even though a desired vendor was picked. The Bid gave a new vendor. 2 years later the original vendor was hired as the bid vendor did not deliver what they said they could. This caused a great deal of rework and wasted many thousands. 2. A vendor was picked for a system upgrade. The vendor met all the needs and had a proven track record. The vendor had a good record at A&M. Still the bid process was required. All this did was add weeks of delay causing the end process to be done during a less than optimal time. Bids are great when they make sense. The system needs to take into account past experience and "time to market" needs.

---

None

---

Why are business administrators also responsible for HR? They don't know anything about benefits, and the benefits office does not return calls.

---

looking forward to the changes coming.

---

TAMU employees' salaries need to meet salaries of the same title for TAMHSC employees. TAMHSC salaries are much higher than TAMU salaries for the same position. It's discouraging when there are two people with the same title and there is a large difference in salaries. Also, the day-to-day work performed is a lot different in volume. The employee making less is working a lot more than the higher-paid person. The volume of work can be tracked.

---

I think all the recommendations for Finance and Business make sound business sense. I think it will give staff greater opportunity for promotions and career ladders.

---

I agree with the proposed restructuring.

---

I am sure, on paper, that it looks like a good idea to decentralize services and to combine into one area. However, as an employee, I strongly oppose this decision. Any time, every time, services are removed from a department/area and put into one centralized area, the services to the employee are hindered and ineffective. With this approach, the employee becomes just a number instead of the more personal approach within the department/area/division. I would expect this approach to be implemented when cost-savings is the driving, perhaps only, focus.

---

I'd like for the Finance and Business Administration for TAMU and Texas A&M Health to be merges as this would make our lives so much easier. Let's make move to electronic forms and processes!

---

It seems that centralization of finance and business administration comes along every few years, the process begins, and somewhere along the way, everyone agrees that it is a terrible idea, and things go back to the way they are now. I don't know the answer, but it seems like a lot of time and effort is spent in trying to centralize and then backing off that plan.

---

n/a

---

My concern with centralization of services is that each business staff then services multiple units. This can cause an imbalance in quality of service by larger or more demanding units overshadowing smaller or less "needy" ones causing worse service to be provided to those smaller teams. This has already happened with the TEES Fiscal Office. Even though certain units don't have as much of a day to day "need" as others, such as my unit, we still foot a large portion of the business staff's salary while not actually needing a lot of support except here and there. This means that sometimes are "smaller" (lower priority) items have been overlooked or forgotten as the staff work to handle the "larger" (higher priority) team needs. It's not very balanced and means that the customer service is lacking. Further, business teams have a very "this is my lane" mentality, from my experience. This causes them to shuffle requests to the "correct" person, while not actually offering good customer service to the internal customers who submitted the request. I would

suggest developing a central POC for each unit (department, center) to then funnel to their business team POC. This would allow members of the units (departments, centers, institutes) to know ONE person instead of many, making for a better internal customer service experience. As someone who works in a center that has over 4 departments, 2 agencies and 2 colleges working within it, the business process becomes very convoluted for our faculty and researchers. Having a central center POC they could submit all requests to who would then route to the center's business staff for distribution to the correct affiliated department/agency/college, would make for a more streamlined and better experience for the internal customers (faculty/researchers).

I have been a long time employee within the system, mostly engineering. I am actually very excited about this potential model and I can visualize several training programs that would not only enhance the academic models of business staff but develop departmental employees so that they can enhance the research mission of the university with regards to budget allocations and expenditures. Researchers are really busy, and need all of the support they can get. I am very interested in this particular model and the potential it has to enhance the mission of the university.

I still don't understand the benefits of moving University Libraries under a new College of Arts and Sciences. The Libraries support ALL colleges on campus; therefore, it needs to be standalone. My job in the centralized business for the Libraries is full time to the Libraries. We handle so many accounts and transactions that are unique to the Libraries. It's more than just buying books, we've moved towards digital resources and services to make it so convenient for students, researchers, and community to access the Libraries. We also help anyone who wish to publish and reduce the cost of textbook for students with Open Access. We're able to provide so many other resources and services (Interlibrary Loan, Studio Lab, Preservation/Conservation, Research on Rare Collection, etc) because we have a centralized team within the Libraries. Changing the administration and structure of the Libraries will make these resources and services that been established and worked for impractical because we're just a part of a college instead of supporting ALL colleges at TAMU.

Centralizing is yet another wrong move. It's been done, didn't work.

Department level Administrative Staff support was not address in this report. I have 25 years with TAMU working in a business/administrative role in an Academic department. Centralizing would be okay as long as business/admin staff have access to the needed tools & data as well as direct contact with those served. The biggest challenge will be separating business/Admin/HR duties in the smaller units. I assist the department head & other leadership roles with budget, Promotion & Tenure, Faculty Hiring, Appointment letters, office management and many other things. The administrative support at the department level is crucial. Faculty step up to be Department Head, or the Graduate Director etc... It is a lot of work for them and staff help a tremendous amount especially when it is a new appointment. It is already challenging to get faculty to step up for the needed department leadership roles.

I am very confused and concerned about the movement of Financial and HR services to be under the general campus wide areas. As a staff member who works in a business office in Student Affairs and does both HR and Finance duties, I am not sure were that leaves me and my department. It feels as though we will be siloed further into specific job duties and forced to pick one side instead of being able to work with our strengths as a unit and figure out how to best divide the related tasks. It also feels like it would create a lot of confusion about reporting structure and how we will continue to support programing and other areas. It is not clear if our duties will change and I cannot imagine a situation in which the daily work stays the same under the consolidation. If we are to be reporting via both a dotted line and solid line, it feels like there could be competing priorities and confusion around where loyalty lies.

Recommendation #2: Identify inefficiencies within internal workflow processes. This recommendation is much needed at the Galveston Campus. We have had numerous issues with main campus processing bills, taking payments from faculty research grants, etc.

More information is needed before giving feedback. What specific data led to the conclusion that financial services were inefficient? In the case of college mergers/splits, how would staff be moved around? For those business staff that provide services that do not report to FMO (such as Foundation account management, scholarship administration, or HR liaisons), how will their new placement be determined? Rather than fully centralizing, has it been considered to implement centralizing business offices on college/unit levels (such as in the College of Architecture)?

I don't work with Finance and Business Administration to provide feedback.

Our College has a centralized set up with specific business offices in each departments working together to handling the care of our College. The business staff in Atmospheric Sciences handles the Human Resources and Payroll,

Oceanography Accounts Payable, Accounts Received, and Inventory, Geography handles Travel, and Geology and Geophysics Tuition and Scholarships for our college. We work hard to make sure our Faculty, staff, and students are taken care of and make sure to have the most up to date knowledge for them.

---

NA

---

Thank you for the opportunity to provide feedback. As a long serving TAMU business professional, I am concerned about the proposed separation of financial and HR/Payroll functions reporting up through different divisions. Centralization of “back of the house” financial and HR/Payroll processing makes good sense. However, it is essential for business leaders to grasp the big picture and understand the financial impact of human capital management actions, budgeting, student enrollment, semester credit hour production, and space data. The Workday implementation was led by HR units across the System and the financial side was mostly left out of the process and conversation. Prior to implementation, questions were asked about faculty hiring and summer appointments, the transition of faculty administrators, and routing and approval which were mostly glossed over. Unfortunately, the last 4 years have been filled with too much ineffective trial and error processes. HR balked at granting access for financial professionals requesting visibility in Workday that pertained to performing the duties and responsibilities of their jobs (i.e., viewing split appointments and costing allocations). HR dismissed these concerns indicating that this would be a security risk even though prior to Workday the same employee had the necessary access and visibility. I’m happy to say that the visibility issue is resolved with the recent creation of a Business Executive View Only role, but it took too long to get there. I share this to emphasize that a total separation of these two business functions will perpetuate administrative silos. University leadership (VPs, deans, department heads) depends on strong business staff to provide sound financial, budgeting, and human capital resource data. The University would be better served for HR/Payroll to report to the CFO. The MGT report is full of some great ideas that are long overdue. The devil will be in the details of implementation and there will be a lot of interesting challenges and opportunities ahead.

---

Increased transparency with this area is welcomed. CEHD has tried to centralize this through having one set of business staff handle 4 accounts, while a different set handles all other accounts. This works ok for things like purchasing, however is very challenging for payroll when staff and faculty are paid from several different sources. Having access to monitor spending and balances in non-research accounts is also very hard for faculty/delegated staff. We only have access through Maestro and that after requesting special viewing rights. There is often a lag between the “real time balance” in Maestro and the many other software systems for financials including reconciling credit card purchases.

---

Please note that the Qatar campus has a different work week and is 8-9 hours ahead of College Station. If services are centralized in CS, there need to be people available during the TAMUQ work hours for support. This does not mean that people on the ground in Qatar can or should not report to their respective areas in CS. Many transactional activities can be done in CS at a lesser cost than having an employee located in Qatar. There are several positions located in CS now that support the Qatar campus with transactional types of things.

---

Items to consider: Knowledge of our day to day business policies is extremely important when operating a business, removing businesses outside of the department loses that ability to understand the day to day. Our business staff are integral to our operation as an auxiliary. They are also involved in other operations within the department such as student programming, conferences (8,000 visitors each summer), contacts, strategic planning, development/funding raising and several administrative functions such as compass/banner approvals and backup to housing office functions when needed just to name a few. Implications would be loss of business knowledge, loss of individuals to perform key functions in the department that fall outside the scope of finance. Communication and collaboration is important and if you look at our student satisfaction surveys it shows we are successful with out we currently operate with collaboration and direct oversight. This is the office that also meets with students and share proposed rent increases, does benchmarking for market rates in the community and oversees student funding for programs. They perform more than one function.

---

If these movements occur, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has cause severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF’ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation.

---

I’m still unclear about the rationale for moving Data and Research Services into the Department of Finance (p. 62), even in a matrix capacity. I am very supportive of using data for decision making and collaborating, but I am not sure that DARS belongs under a financial unit. They have a responsibility to the state and federal government for reporting, as

well as units within Texas A&M. They provide information to others to make decisions; I'm not sure that moving them under Finance will "create a culture of continuous improvement across TAMU" (p. 62). Pages 62-63 addresses the Texas A&M Foundation but does not acknowledge The Association of Former Students or the 12th Man Foundation, both of whom also give funds to the University. Was there a reason for that?

Finding#1: A thorough review needs to be done to compare the actual effectiveness of a centralized structure. There could be a significant increase in the cost-of-business with this centralized approach. Finding#2: Improving the non-contracting process would be beneficial. Finding#5: An example of centralized services can be seen with the TAMU-Sponsored Research Services (SRS). This was implemented poorly and has resulted in more confusion, delays, and less support for the researchers and departments. The main problem was not creating standardized procedures for all grants and contracts. They allow the TAMU, Agrilife, TEES, etc to keep their individual practices. They should not create separate duplicate system. They should incorporate all TAMU, TEES, TAES, etc into one unit with standard policies and procedures. This will facilitate collaboration with PI's and streamline the grant setup and administration process.

#1 – Centralize financial/business services under the CFO • The finding specifically mentions challenges in strategically allocating funding. While there are benefits to business and finance areas working more closely together and collaborating on processes, systems, etc., I'm not sure that a solid line vs. dotted line approach will allow for funding to be allocated strategically because typically it is not the business staff who are making decisions on how funding is spent or not spent – it is the department heads. I would suggest additional clarity/discussion on the budget model if the concern is strategically allocating funding. • The AABS business model has been increasingly successful in Academic Affairs over the past several years and could be expanded to encompass additional units if provided with additional resources (personnel/technology) and an opportunity to work more collaboratively with Division of Finance staff. Currently, everyone is spread so thin that there is simply not enough time. Currently the division of Finance staff do not communicate much with other "department personnel" unless they are the business staff – thus the department business staff are the messengers to the rest of their colleagues – faculty, non-business staff and students.. So, efforts will need to be made to continue having good relationships and collaboration between department business and the rest of the department staff, faculty, and heads. AABS has done a great job of bridging these gaps while capitalizing on subject matter experts and use of technology to streamline processes and create efficiencies. #2 – identify inefficiencies with internal workflow processes • Agree 100% that this process needs to be examined. Things have improved slightly with contracts being entered into Aggiebuy, however the contracts and procurement process are still clunky and there is no reason why it should take weeks to get a contract reviewed by contract administration. Procurement and Contract Admin should work in tandem and ease the burden of the department who must enter the contract, then enter the requisition separately when all of that should be done together. They report to the same Assoc VP so I fail to understand why there is not more cooperation and customer service across the entire process. • Procurement has minimal information on their website and existing purchasing contracts are not made available university wide so that departments can be selective in using certain vendors. For example, CC Creations has a contract to offer a discount on certain items, but we don't have those details. So, if CC creations quotes us a price and the total is less than \$10k, we are not required to go through purchasing and would never know whether CC creations is honoring their pricing contract. And, we have no way of knowing whether CC creations is truly the best price for X item. Instead, the best price could be from some other contracted vendor that we never know about. • More collaboration could be done as well between FMO and procurement when it comes time to pay an invoice. Currently, the department is the "go-between" on change orders and other things necessary to get invoices paid. I am not sure they all understand what each other does and they are already in the same division! #3 – implement matrix management structure to leverage financial services by integrating AABS, DARS, and Enrollment Management • This recommendation is very unclear as I do not understand how AABS and DARS would work together on this. Did you mean DAS (Department ACCOUNTING services)? • Also unclear as to whether existing enrollment services departments (Admissions, Registrar, Student Financial Aid) are included here since they are not mentioned anywhere else in the report? If so, AABS handles the finances for these other units – how do we collaborate more? #4 – Establish a new centralized system and processed for oversight of Texas A&M Foundation accounts. • This suggestion sounds good; however, nothing sounds broken with the current process and this suggestion could be low priority given the number of other opportunities that exist to improve struggling areas – struggling because of inefficient process and/or not enough staff.

Centralizing finance and business administration would be a huge setback for our department. As we have many new graduate students and faculty joining our department each year, it is imperative that our colleagues are able to have staff readily available to assist them with onboarding and/or accounting needs. Centralization of such a critical asset

would cause great distress to our department members in potentially having to visit another building for business administration needs and or running the risk of having to submit questions to a general email inbox that may never return answers to their questions.

It is important to have specialized Financial and Business Admin professionals in each section that have the institutional knowledge of each section to better support the units in question. This loss of specialization will reduce the effectiveness of support.

N/A

Would we still be included in department initiatives like professional dev, diversity/wellness programs, dept meetings, etc. Would we be handling accounting for other tamu units as well? Would we take on student billing? Or is that going to still be housing assignments office, conference & guest services, gardens, white creek, corps? Would we still be involved with ssc billing and contracts or would that change if facilities moves? What about processes we are involved in outside of finance? I am involved with Summer Conferences, our business admin works with student orgs, our HR staff works with student conduct. We are intertwined in our department and the support of students, not just finance. Separation would collapse the structure of the department. Very specialized for our staff and student needs. Our finances as an auxiliary depend on additional processes than tamu requirements are intrinsically tied into student billing, student/staff travel, etc. We have to be involved in those discussions to share our knowledge and requirements. Where are the inefficiencies in the process, how were those determined, how can they be remedied by centralizations? Who are included in business staff? You would have to hire more tamu staff in general to cover separation of duties as current "admin staff" can cover payroll/HR/finance/facilities management/other duties in one role. Or on the flip side, what do you do with staff whos jobs are now redundant due merging? How do the dotted line and hard line reports work in evaluations, hiring process, etc.?

N/A

Although there are benefits to centralized services, I feel like institutional and historical knowledge is lost if departments are put into a queue for the first available person to handle. It is more effective if some level of coordination remains within the units as well. In the College of Liberal Arts, we have centralized business services in the Dean's Office, five academic departments, and six college programs, centers, and institutes. Business functions in these business hubs have been streamlined and the hubs are effective because there is still a direct relationship with department leadership. This is an important factor because having these relationships allows for consultation and discussion prior to financial decisions being made.

Centralization will create a vacuum of knowledge in the academic units allowing for miss use of funds, improper accounting methods and a general inefficiency in operations. Maintaining the current business unit structure allows for specialization, familiarization of processes and department level oversight of how the universities funds are utilized.

The Division of Research was underrepresented in the survey report. I would have liked to see suggestions for improvement in this area. The little that was mentioned is already an ongoing focus. There was nothing innovative for consideration. This is disappointing because there is room for improvement. Recruitment and retention of quality employees is difficult when there is a lack of flexibility in work location. Particularly difficult is inequity in the flexibilities provided some employees and not others. Employee performance expectation is also inequitable. What is the evidence to shift research administrative management of Veterinary Medicine and Biomedical Sciences research grants and facilities to AgriLife exclusively rather than TAMU exclusively?

Contract Administration desperately needs more staff. The folks that are currently there do an outstanding job, but the number of employees compared to the volume of contracts that must be processed is far to low. It is impossible to get contracts completed in a reasonable amount of time and we risk losing the funding of our industry sponsors because we cannot move fast enough in the contract negotiation.

The business staff does so much more than just HR, there are concerns of losing our business staff all together. The report mentioned that the merger would allow current HR liaisons to work full time in the HR staff so this ultimately means we could lose our business staff to HR if there are no other options available to them within the department. The business staff is responsible for keeping the Dept Head abreast of all things related to the budget of the department. Who will do that if we lose our staff?

To properly fulfill the mission of the University Libraries, best serve all students and stakeholders, and properly care for the unique and often priceless materials housed in the University Libraries buildings, it is necessary for the University

Libraries to remain an independent entity within the Texas A&M University System with its dedicated Finance and Business Administration department that can efficiently and expediently provide services. (See full comments in section regarding Academic Realignment.)

Thank you for this opportunity to relay our concerns. I have worked with the International Ocean Discovery Program (IODP) in Administration for 25 years. My main duties are payroll and budgeting. During this time, I have ascertained that TAMU Payroll has not been accommodating to our specific needs at IODP. One problem is there has not been the opportunity to have salaries wired to the employees' banks. We have relied on USPS and/or Fed Ex through the years. I have expressed the need for wire transfers many times. If an employee is out on an expedition, there may be no one to intercept the Fed Ex package nor to actually deposit funds in the bank. Some countries charge large fees for converting dollars into their currency and sometimes the wait to have the funds available is several weeks. Finally, after all this time, we had a couple of horror stories recently that made the banking community at TAMU Payroll agree to perform wire transfers on our foreign employees. We have only a handful but were always told that TAMU Payroll did not have the manpower. We are an international program that features diversity and the image we project at times is not supportive. At almost \$70 million per year, TAMU's standing in research would plummet with the loss of our program. We have always received great feedback. That is because there are so many situations and circumstances surrounding the operation of our drillship that are remedied within IODP. We have had to deal in many contexts including demobilization and most recently COVID. Many expeditions have been cancelled and we have had all the complications that go with employing and paying employees during these times. I feel this is a minute picture of the difficulties of unpredictable situations that occur frequently. Ms. Deborah Thomas has been a wonderful Dean. She sailed as a USSSP student many years ago and has frequented many cruises. She carries a wealth of information about IODP as well as our passion. It is imperative that we have someone support us in this way and is respected in the science community. It is imperative that we have a full administration including Payroll and HR. You cannot imagine the countless tribulations that fester when people from all over the world are subsisting together for two months at a time.

The box labeled 'Academic Affairs Business Services' needs to be further defined. Is this intended to indicate that the accounting activities in units will now be managed by the VP of Business & Performance Analytics? If so, then the business services units off to the right on the org chart should be represented underneath AABS. If it's not intended to indicate the accounting activities, then what IS it indicating? Since AABS is currently an HR team (recommended to go to HROE) and an accounting team (recommended to go to CFO) the way it's represented in the MGT report is confusing and unclear. Please clarify this. Another point of clarification that is needed is the question about DAS (Departmental Accounting Services): they were on the current org chart but not on the proposed org chart. What happened to them? It looks like Data and Research Services is referred to as DAS on the proposed chart, but the titles don't match. Please explain this. For a centralized HR and Finance model to be successful, the very first thing we all need to know from this current administration is where does the buck stop? By this I mean, will department heads be responsible for managing their own departmental budgets, or will vice presidents administer funding at a division-level with processes in place to assist department heads with funding requests/responsibilities? If the funds were managed at this higher division-level, then department heads would have more time to do their mission critical work and spend less time in business meetings. As well, many department heads rotate out regularly, so the business office spends time training and re-training people who interact with the business office infrequently. The business office has duplicative preparation for each department head that we service so if there were fewer department level meetings, our business staff would have more bandwidth for assisting our customers with strategic planning, personnel matters, organizational development, and continuing professional development. The fiduciary responsibility currently in place at the department head level is divisive and unnecessarily competitive. I am a department head of a large centralized services office yet my budget was never increased to match the amount of growth of our assigned customer base; we continued to add more work without adding more staff and when I approached my VP about adding much-needed help to our office, my request did not receive adequate consideration by our Associate Vice President who refused to forward the request to the Vice President for fear of the office "appearing to be empire building." I can assure you each case for a requested position was fully substantiated and the Associate Vice President admitted that it was compelling, but in light of the other units in our division, the opinion was that my office needed to be kept in its place. We service internal units at TAMU so when we're not able to grow our staff with the increasing demands, all the university suffers. To centralize HR and finance efforts across campus is a worthwhile endeavor, however, the report didn't illustrate any working knowledge for how this is currently being handled by units that have already centralized these services. One of the strongest pillars in the Academic Affairs Business Services model of centralized services is the marrying of the HR and Finance knowledge to be

the nexus of understanding for a department head. If these functions are to be further centralized, AABS is a model to use for intentional efforts to keep HR and finance conjoined to best assist the department head with administering their unit. It is imperative that HR professionals understand how the financing for personnel works, and that there is a good communication system in place to keep everyone current on staffing costs/needs. I fully support recommendation #1, #2. Recommendation #3 is confusing because Academic Affairs Business Services is currently the department that provides accounting and HR/payroll services to the non-college units that report to the Provost, essentially a centralized business service model. If the accounting people are going to finance, and the HR people are going to HROE, then what's left of Academic Affairs Business Services that could be integrated into data and enrollment management?? It's obvious that the consultants have no idea what AABS is, which is unfortunate because they've neglected to mention or consider a successful centralized business model, and at the same time misidentified it to be paired with something else entirely. PLEASE CLARIFY THIS!! If one were to take AABS out of the recommendation, then it's something that make sense and I could support. As for who will be the VP of Business & Performance Analytics, I think leadership should consider hiring a new/outside person for this role so that fresh perspectives may be offered. I support recommendation #4, #5. Payroll needs to move under Human Resources for management.

---

n/a

---

I don't have a clear understanding of any of the potential changes or how the changes will be implemented. I'm terrified that the years I've dedicated to learning my job and excelling will be tossed out of the window for a younger and cheaper model.

---

I do see the importance of centralization. At TAMU Health, the College of Medicine has centralized the financial/business functions with success across approximately 35 administrative units. COM is the largest college in TAMU Health. I cannot speak for other TAMU Health colleges.

---

Finding #4 - Leave Texas A&M Foundation as is. This foundation has done a phenomenal job in fundraising, marketing, and is transparent in their work and finances. There is absolutely no reason to mess with a system that is working. It is remarked as "best in class" for a reason.

---

I support this recommendations.

---

It does not make sense to move the division of Enrollment and Academic Services out of the Provost's Office and under the division of Finance, particularly the Registrar. The Registrar enforces academic policy.

---

I reiterate my comments above about my concerns with consolidation.

---

I don't disagree with the recommendations in theory. However, thoughtful and strategic planning, with inputs from various staff and faculty constituents, will be critical for successful implementation. A major risk to mitigate in this implementation should focus on maintaining, not disrupting, academic faculty research and tenure momentum. Additionally, academic college synergies and momentum in both teaching and research strategic plans must be paid particular attention to. With respect to academic realignments previous addressed, budget and finance realignment must be matched and paralleled to maintain operational effectiveness and specific focus given to Institutional missions and objectives. The identification of critical workflow processes should be identified early on in the implementation phase, and care given to NOT disrupt those as we find and focus on the less critical best practice strategies.

---

There are aspects of the financial management of my department that we would gladly send to a central administration. There are unique business operations in auxiliary units that need to be fully understood before a sweeping move of all of the business functions and support staff to a centralized department/division.

---

No feedback to offer.

---

You can centralize processes and uniformity without centralizing Human Resources and Financial Operations. As with previous centralizations, services to the departments are lost. Peoples loyalty lies with those performing their evaluations. Dotted line reporting becomes a disconnect. Employees will become pulled between two departments, their reporting and their working.

---

Centralize all IT, business, HR and marketing communications professionals If these professionals were left in their current physical locations to serve constituents, with current reporting structures intact – a dotted line for central oversight might improve the flow of institutional knowledge/implementation. If the plan is to relocate the programmers, technicians, business and HR associates, writers, videographers, etc. away from their constituents and remove the accountability we currently have to our constituents – this is not a good idea. Decentralization has allowed these

entities to be more effective, and fully centralizing these business critical functions would fuel bureaucracy, negatively impact service (just ask faculty and staff in the two largest centralized colleges) and not be in the best interest of students, faculty, staff or the institution.

---

TAMU should work and make sure that the current employees with high qualification should be recognized and rewarded accordingly.

---

Completely centralizing the financial responsibilities and duties from individual colleges would result in a major disconnect between the institution and its customers. At the College of Architecture we have a centralized Business Office that handles all the business needs for the departments that belong to the college. We process the orders, requests, and reports and submit them to FMO. Therefore we are doing the majority of the front end work before they receive it, which eliminates a lot of unneeded steps and inquiries on the part of the auditors. On that same note, if there is an issue they know exactly who to reach out to for the assistance needed. This model has worked so well that when new programs or policies have been initiated at the system level, the College of Architecture is often one of the first ones that are approached about piloting the new endeavor.

---

Each College has a Finance and Business Administration unit that functions for the good of that college. They are deeply imbedded in the College as a whole, keeping up with our accounts, budget, salaries, and keeping us abreast of the goings on of Business and Finance University wide. There are moments when we need to make a budget decision, and it can be easily solved, with easy access to our Business office.

---

I believe that centralizing all of the finance operations on campus would create benefits for certain departments and greatly hinder others. For instance, in athletics, there is a significant portion of what we do on a day-to-day basis that no one else on campus does or knows how to do. We have to completely shadow account the university financial system because it is not sufficient for our NCAA and EADA reporting. Additionally, our finances are run through Tableau for viewing for over 30 different units throughout athletics. This Tableau system is linked to a unique chart of accounts that is separate from FAMIS which ties directly into our NCAA and EADA reporting requirements. Trying to roll all of this up and make it fit within the campus framework is not efficient. In our office, we handle both sides of the coin. By that I mean we follow the protocols and necessary steps to keep campus and the state happy but we also provide reporting that doesn't fit within what campus finance does. Furthermore, we provide the information on our finances in a unique and better way than currently exists on campus. Conversely, I believe centralizing could be valuable for smaller departments around campus that don't have an established framework or funding to do what we do. In my opinion, this type of change is beneficial in certain areas but that doesn't mean it makes sense for everyone.

---

Sounds like you want to create another layer of bureaucracy that will lead to greater inefficiency. The more that are involved in a decision making process, the longer the process takes and the less efficient it is.

---

Centralization seems to be a key theme throughout. Centralization only works if you have clear communication and keep people accountable for providing excellent service to customers. From years of working in different jobs where i've experienced different levels of centralization, the biggest issue I see is lack of customer service. The reason why silos develop or are difficult to break down is because attempts at centralization have left gaps in service so colleges and departments create new positions and hire people to fill those gaps which leads to duplication and silos. As an example, the previous consultant came in and pushed for centralization of business functions and the two organizations I've worked with did centralize. What this meant was moving our business person out of our office and putting them in a different location and giving them a different supervisor. This is what happened: 1. Our "assigned" business person no longer was supervised by us so this person saw us as more of a nuisance trying to give him/her work instead of their customer they needed to which they provided a business service. If we as the "customer" mention the lack of service it has been VERY rare that supervisor does anything to correct the lack of service. At that point, the relationship starts breaking down because people get their feelings hurt or believe they are not being heard. 2. As the "assigned" business person didn't work in our office, the person could not understand the intricacies and specialties of our business needs. Since they were located distant from us they didn't know us. We now hire student workers and reclassify our techs to do some of the business work or sometimes we, the veterinarians, do the business work. 3. Being a state agency with different HR rules than private consulting companies, private companies are not familiar with HR rules that govern a supervisor's ability to hold workers accountable. I think consultants come in to an enormous organization like TAMU and immediately state the efficiencies that could be gain by centralization. However, its been my experience that they see this as low hanging fruit and don't really spend the time here to understand why centralization is difficult to employ. In theory it should be able to work but in practicality it hasn't worked well yet.

While I understand the impetus for centralizing IT and HR, not having division-specific representatives/liaisons is not the way to go. Without having a local presence, these services will not understand the specific priorities of different groups, and service will be diminished.

---

as recommended, it is crucial that business/finance personnel focus on accounting and fiscal operations - and be removed from influencing operations

---

While I can see that on the surface, streamlining seems like the way to go, I truly believe that all business related positions should remain a part of their existing departments. TAMU has a well-oiled Finance Department that is there to support the departmental representatives when needed (along with a thousand other responsibilities they have). Unless the business person were to remain solely committed to performing business functions for the department they represent, making the departmental representative an employee of FMO would risk making that employee the middle "man" in a potential tug of war between FMO needs and departmental needs. Additionally, each department has their own way of doing things (while staying within the provided guidelines/rules). Business needs would become harder to manage if the expectation is that all departments follow one "cookie cutter" rule. To make all business staff actual employees of FMO (or not employees of their respective departments) sets up all kinds of foreseeable problems, from routing structure, to morale, to difficulties with prioritization of duties, to a myriad of other problems that could arise. I also cannot envision how overwhelming it would be to the staff who suddenly have to take on many new supervisees that they don't have a business relationship with and would be hard-pressed to establish one when work spaces are in separate locations. Finally, and possibly the most important point to make, is that the great majority of business staff perform more than just business/finance duties. HR is the biggest additional duty that most perform. I truly believe the individual departments and their staff will suffer if this particular recommendation comes to fruition.

---

I am intrigued by the recommendation and would like more details about the vision. It is difficult to understand how my department would still enjoy the same level of personal attention and customer service. Open to more ideas.

---

Recommendations and rationale are solid. This is an opportunity to better centralize and standardize many of these areas to create future efficiencies. This could be particularly effective if the various colleges and business service units are given a better platform for budgeting and planning.

---

As a Finance & Business Admin worker I constantly feel pulled in multiple directions so I'm excited at the prospect of increased transparency and efficiency. I don't feel like I can say whether the recommendations outlined will help us achieve that or not, but if we think they will, I'm all for it!

---

Again, I do not support moving unit financial/accounting offices to a centralized area when they are more familiar and supportive of their own unit.

---

As the TAMU Foundation is independent I don't see how there is much that can be done but recommend communication and transparency. I would love to know when one of our donors makes a gift soon after but I have to wait for monthly reports. But, not much we can do about it. I agree with the proposed financial organizational chart.

---

In the College of Geosciences we have already centralized our business functions. We have four academic departments that specialize in the different processes. We are utilizing Lasferfiche forms to streamline our processes. The use of LF forms allows us to monitor our processes and ensure they are completed in a timely manner. The Department of Atmospheric Sciences is responsible for all HR/Payroll related functions and we do all the onboarding for our new employees while being available to offer assistance and guidance to our current employees. The Department of Oceanography is responsible for Accounts Payable, Purchasing and Pro-card reconciliations. The Department of Geography is responsible for Travel and The Department of Geology and Geophysics is responsible for posting our scholarships and the tuition and fees for our graduate students. The Business Administrators in each department work under the Assistant Dean for Finance and Administration but remain in our departments so we can service our students and faculty as well. We started this process about 8 years ago and it works very very well. If a department is short handed we have the knowledge to assist and have access so we can help during busy times or the absence of a staff member. We are also paperless and we use LF to not only upload our personnel files to keep them secure we use LF Forms to file all our files for P&T, Accounts Payable, & Pro-card documents. I am not sure how these functions could be pulled out of the department and not jeopardize the function of our different areas.

---

None

---

If auxiliaries lose the ability to control their finances, this will be detrimental to their ability to control costs. Operations like Residence Life will have to raise rent rates if they have to pay a "fee for service" for accounting services.

This university is too large to centralize everything. It was once easy to get help from business administrators and now someone who took care of one department handles two or three departments in COALS.

---

More information needs to be provided and SPECIFIC details on how this affects the business staff on department levels.

---

How would staff that are moving into this area who have share/split or oversight responsibilities be split? I.E. If you were in I.T. business and aided in Service Center work, I.T. and HSC business. Also with HR business functions going to another division, many staff worked closely together especially in the Phase II merit process due to the workflow process. It would seem this would need review or perhaps some task reassignment?

---

The report noted a broader expectation for universities to function more like businesses which is presumed to mean greater speed, flexibility and efficiencies (mobility). While the expectation is a worthy aspiration, there are existing boundaries that hinder this becoming a reality. Namely, the university 1) is ultimately a unit of state government and 2) has internal - both System and University level - policies to which its operations/transactions/processes and decisions are subject. Then, in order to move the aspiration of business-like mobility to realization in Texas A&M's (required compliance under 1 & 2) environment, legislation needs to change and policies must be reviewed and updated to enable authority to operate with mobility coupled with compliance. Compliance is an antithesis of mobility and vice-versa, but there is also opportunity for both to function in unison.

---

In the proposed org chart, the department named "Departmental Accounting Services (DAS) is not listed but its acronym is being used for "Data and Research Services" typically referred to as "DARS". The omission of Departmental Accounting Services (DAS) from under the Controller appears to be an oversight. DAS is a centralized, shared-service org providing financial operations and reporting services for units who do not have financial personnel of their own or just choose to outsource. In addition, DAS provides critical support and required regulatory review to campus service centers. For these reasons DAS needs to continue to be reflected on the proposed org in the same manner as the "current" org chart. On a broader scale, DAS is well-suited to incorporate and consolidate support of the "Business Services Units" by leveraging its centralized, shared-service model, existing knowledge base of accounting principles and financial systems and processes, and customer service approach. Finance-related personnel can be transferred to DAS in order to expand an already efficient, centralized support function for the Business Services Units.

---

I am not familiar enough with the operations to comment on specific points. My spouse used to be an auditor for TEES and handled finances for Chemical Engineering. I understand there are distinct budget areas - operations, grants, research, etc. I have a sense that the Libraries are unique in a couple of ways. We have a large volume of transactions for collection materials. We also have complex and long term contracts for electronic resources. In many cases these are for perpetual access which is quite different from a limited term grant or research funding. The Libraries business office has built up their expertise specific to the library needs. I fear that would be lost were they simply combined into Finance.

---

None

---

Pick a University commerce transaction platform and commit to it. it needs to handle every transaction from buying a pencil to processing multi-billion dollar contracts. And yes, more and more of our management activities need "dimensional" data. Not just Excel spreadsheets.

---

Finding #2 - to insure that all entities that are impacted by process change, including the other A&M System members in the conversations early will be important. Would like clarity on what the dotted line reporting means and how that will be communicated and coordinated.

---

This is the area that has the most duplication of services and redundancy of efforts. Often it takes 3-4 forms to be completed for a simple task.

---

I wish to recognize our Division of Research representation, (REBS) and express how important these subject matter experts are and the hope that they will continue to "major" in DOR related matters, while having others "minor" in DOR related matters, for cross-training and depth of knowledge. The relationship aspect of centralization can and should be addressed, respectively, for optimal results.

---

In general, these seem like viable ideas. Housing finances in larger components may cause some inefficiencies if there is not a robust financial management system and transparency in how it all functions. Right now, many administrators are completely reliant on their finance people to handle money matters. There should be training for all administrators so they have a better understanding of budget and account management so they are less reliant on these individuals and less nervous about losing direct control of some of these issues. It is unclear how a matrix management structure will work with the Enrollment Management Advisory Council. There is a disconnect between this group and the retention

---

process. Also, if degrees take 5 - 6 years to complete, it is not clear how "enrollment management" can be handled without a voice in the advisory council from the academic enterprise that manages enrollment of continuing students. Data and Research Services would benefit from having more online accessible material that can be mined by those who need it. Much is available on [accountability.tamu.edu](http://accountability.tamu.edu), but not everything, and not everyone knows it is available. If measures of "success" are to solely focused on countable data, this is an antiquated way to look at "continuous improvement". Moving the Vet Med and Biomedical Sciences research administration of funding to one location seems logical.

---

No input to provide

---

Consolidation and collaborations mentioned seemed logical.

---

No comment.

---

Again, NO to centralization. Departmental employees don't want to work directly with a faceless central office that doesn't know anything about their department's particular circumstances or needs, and faculty certainly don't want to deal with the minutiae of finance & business operations. All that's going to happen if you centralize is that departments are going to hire more administrative staff to handle that stuff for them – and they're going to want administrative staff who know about that specific task, so you're just going to replace a Business Coordinator with an Admin Coordinator for Business, and frustrate faculty in the process. It's especially foolish to consider centralizing Qatar's business operations, given that the campus's operating hours are 8 to 9 hours ahead of Texas, Sunday to Thursday, which means that the Qatar and Texas work weeks only overlap by 3 days. (By the time Texas starts work on Monday, Qatar has already completed 2 full days of work. And when Qatar ends the week on Thursday, Texas still has 2 full days of work ahead.) It's completely impractical to expect Qatar to rely on a centralized finance & business operation, just based on operating hours alone – and that doesn't take into account the unusual circumstances of Qatar's operation, which often doesn't allow the campus to operate under the same procedures as main campus.

---

Generally speaking, as a purchaser of goods in support of Deans Office, Department, students, research, other departments including, Government affairs , and the presidents Office, I am concerned that the new system be flexible. I suggest that the idea of attempting to place any oversight on the foundation may result in loss of donors

---

Similar situation with Facilities. The Finance and Business units needs to stay within the Colleges and Departments due to those units being ingrained within their current home. i would suggest audits to ensure consistency and communication, rather than take away a resource from the College.

---

This will slow the processing of all business administration to a snails pace. This will eliminate the personal element of the departments ability to give customer service. This is a heartbreaking and takes away ownership of employees.

---

Don't shift research management to AgriLife only (recommendation #5).

---

I find it hard to believe that any dean would be willing to have their money person report to another unit. It may be one thing to move some financial functions over, but every department is still going to need to have someone within the unit be the point person for finances. The recommended structure under Business Services Units doesn't even match the recommendations of this report. This section is too vague and imprecise to really be meaningful.

---

Seems logical. The logistics of how this will be implemented for some organizations will be interesting when getting in to the finer details is somewhat questionable, though I am confident it can be done with time, patience and communication. For example where areas have business / finance work with HR Liasons on Phase II budget and collaboration must occur due to how WorkDay or PBA work will be interesting. Clearly aligning where staff will actually be assigned if they work or support many function, such as IT, Service Dept or HSC, where will they end up ultimately in the new org. chart, or will they split? Or will tasks change for some staff, new skills, more specialized etc.

---

I hope this would help with consistency. I will miss having our own team, though - the HR liaisons.

---

Finance and Business Administration should be left to the responsibility of each college/ Deans office. Although oversight and further development are needed, the individual business offices would be best suited being within individual colleges. collaboration with other colleges as well as full university oversight is important however individuals within the different colleges would be best served by staff that works through the Deans office in the college that they work for. Identify inefficiencies within internal workflow processes. - this is important but can still be done more effectively at the college level.

---

I cannot find a justification to keep day to day processes at the college level.

---

I do not think everything should be centralized. anytime we have had to elevate anything to central it has been a nightmare. our IT, finance, HR and business offices are essential to the college's success. Days of productivity will be lost and many mistakes made if all has to be centralized.

---

I am a staff member and supervisor that provides HR and Business Services to several departments within the Division of Student Affairs. HR and business services are more than processes that are handled in a centralized office. HR and business services are not two independent jobs, but are in fact, totally intertwined which is what provides the in depth service that is essential to success for our departments. To view these as separate jobs is missing a very important piece of the bigger picture of service. To streamline, especially in a university of this size, does not always result in more efficiencies, but in fact fails to provide an in depth understanding to make decisions regarding budgeting, HR, and forecasting to name a few. The need for in depth knowledge for guidance on spending, HR actions and their impact, is crucial for departments. Without this, the result is that departments are not able to focus on their expertise they were hired to do, but would spend time with duties and impact decision-making that is not their level of expertise. Only understanding one angle – business or HR - is not understanding the full picture of a department and how to best advise on actions. The uniqueness of each department/division requires business/HR people to be present in each area to provide that crossover knowledge specific to those needs and not reporting to a centralized area performing designated tasks or one area of focus. Another aspect not considered is the effect when you silo employees to become only knowledgeable in one area of duties (HR or Business). This does not allow for a well-rounded employee or a model that promotes growth to advance in one's career. It also does not allow an employee to have a full picture of departments or possess the knowledge of how one area affects the other. Staff are not task workers, but are in career paths and want growth opportunities. I, as many, have sought degrees in these areas and bring a level of expertise to HR and Business, making our division, and in turn the university, successful. As a supervisor, the separation of duties will result in retention and motivation issues as employees become stagnant and are not challenged. I urge you to look further than the surface on separation of duties, centralizing staff into HR or business, and the result of what inefficiencies this will cause. As a leading flagship institution, we should be setting the path, not following one.

---

As a Business Coordinator in the Office of the Vice President for Student Affairs, I have some concerns regarding the recommended changes to the university. While looking at the scope of work done by our office, we are more than individuals completing a single task at a time. We, as HR Liaisons and business services representatives, have spent years cultivating intentional relationships with our departments to become a resource they can trust and on which they rely. Due to these relationships, we thoroughly understand the specific organizational goals of each department. When assisting with processes, whether budgetary or human resource related, these departments trust that the betterment of their work environment is our top priority. If business services and human resources are centralized as stated in this assessment report, building relationships with departments is no longer facilitated, and the services provided will not be as effective or valuable. When personal relationships are not formed and the organizations goals are not understood, how can an individual assist in any process, financial or personnel related, and be efficient or effective? Additionally, an overarching theory of organizational effectiveness is as follows: what works for one, will not work for all. With this in mind, comparing Texas A&M to other universities does not feel representative of our mission statement: “. . . Texas A&M University seeks to assume a place of preeminence among public universities while respecting its history and traditions.” In order to surpass like universities, why mirror their structures? After reading this report in its entirety, these recommendations do not align with the overall goals of Texas A&M University. Furthermore, it appears the recommendations made in this assessment in regards to business services within the Division of Student Affairs overlooked the importance and quality of service we provide. The complete effects of these changes were not considered, nor was anything assessed sub-surface.

---

These moves make logical sense and seem to highlight the inefficiencies that are happening within Business and Finance offices across the campus.

---

I agree with the recommendations outlined in the report for Finance and Business Administration. The financial workings should all be under a single area which will specialize in that function.

---

I really have no comment related to Finance and Business Administration, however, I don't want a bunch of people losing their jobs. It is nice to have someone in the colleges to help with ordering, or credit card checkout when problems arise.

Finding #3 : I believe we do operate as a centralize Business services here. The function of having a more centralize business department without having one at the College level would limit the departments. They have tried to perform this before and it turned out as not being as functional as they thought.

Budgets for professional development should be a priority for existing university faculty and staff, as it would greatly benefit the university to keep and grow the talent that they currently employ.

1. Why wasn't the Association of Former Students (AFS) included in the comments about the Texas A&M Foundation? AFS also raises and distributes funds to the university for a variety of uses, such as scholarships.

In my 24 years at this University, this has been hashed and re-hashed with every new President. The changes that are recommended have been done and changed back with the next new President. We never seem to come to a GOOD solution for those that work "in the field". My suggestion is instead of spending money on "outside" opinion, why not ask those that DO the work?

n/a

Individual units know their budgetary needs best. Some centralized oversight might be required, and if that is not happening now, then the fault is with the Finance department and not with the individual departments. This is another one of those that sounds good on paper, but might not produce the results that you think.

-

I think there are many things that can be centralized. I'm not sure business administration is one that would work university - wide. The budget is divided by colleges and then by departments. I think that business administration should remain in the college with possibility of the college CFO reporting to the university CFO.

Why does the School of Public Health need its own Assistant Dean of Finance? Seems redundant when there is a finance office at TAMU Health.

Decentralize business offices and return them to the department, get rid of the inefficiency that is WorkDay. I cannot tell you how much centralizing budgets for department is a problem. Not long ago, a department head would go to his lead business associate and discuss with this individual the goals of the department for the upcoming fiscal year. Working together, they would find a way to work within the College's guidelines to make this happen. Now every small step requires multiple forms to be completed and maybe we will be allowed to spend our money how we see fit to best grow the department. I'm not sure how this is seen as an improvement.

In my opinion, having business coordinators report to Finance is a step forward. Under our current system we have too many opportunities hide problems. The university has a culture of doing things first, then justifying it later. Coordinators who report to finance would no longer risk their jobs by stating that we must follow system policy.

I fully support all of the recommendations provided by MGT as it relates to Finance and Business Administration. I do not work in that arena but the recommended solutions appear to address the reported findings.

Are we talking about moving all business offices, including within the departments, to the CFO? How would that help or be different?

I am not in a position to provide good insight into these changes.

I do not know anyone in Finance. Our Business Administration on the departmental level is an interesting mix of personalities and levels of professionalism. Of the 4 people i deal with, only two people have a positive, professional and personable attitude. Recently a major hiring process was changed and no consideration was solicited from the staff who it impacts. Communication is lacking.

Not my area, so I cannot comment intelligently on the proposals.

As a Finance person, I can see the benefits of a centralized Finance function under the CFO. Resource allocation can be very complex, and it would serve the University better to have the decisions being made by the CFO's office, who would have visibility to college needs through the Assistant Deans within each school.

budgeting and tracking expenses is so complicated for staff and centralizing would be appreciated.

I am concerned as I work with Departmental Accounting Services but I do not see it mentioned in the new plan anywhere. Did I overlook something?

N/A

This change terrifies me. As someone who assists with HR and Finance processes in my department, the relationship, professionalism and responsiveness of AABS HRPR staff have been critical to my success in supporting our department. They have connections to Main HR that allows us to streamline contacts for questions, whereas without AABS, it is difficult to know who to reach out to for different issues, whether benefits, termination, hiring, reclassification, or changes to compensation. HR response times are nowhere as efficient as AABS. In addition, the chaos of trying to reseat the hundreds of HR staff from departments to main HR is going to cause a lot of upheaval with space concerns as well as expense in moving and modifications to accommodate the changes. Our department is extremely diverse and I work closely with Immigration Services for Faculty and Scholars to manage the immigration processes for several employees.

I can see some benefits to reporting to the CFO. This may be a good move.

Let's have a consistent, fair delegation of authority for contracting and procurement. It seems odd that a dean, department head, or director can be entrusted with an eight-figure budget but can't sign a document authorizing the purchase of a \$1,000 piece of equipment - even though the purchase is well within the delegation of authority - without the document routing through and being reviewed by a contracting officer (which can take weeks). This just bogs down the contracting process such that complicated legal documents and other high-value contracts are stuck in a clogged system along with every \$500 hotel conference room lease, modest (<\$10k) equipment purchase, and OGC-approved templated agreement. Figure out a way to free the system of low-risk items and truly delegate authority for oversight, review, and execution to the appropriate levels of the organization.

It is proposed to move enrollment management to Finance. I did not even find Enrollment management in the Proposed Finance Organizational Chart- probably an oversight.

Comment: I understand the effort to centralize like functions/services instead of having multiple ones across campus.

Question: On the report for the "current" organizational chart, Departmental Accounting Services is clearly notated. However; on the "new" organizational chart DAS IS NOT CLEARLY MARKED. That is a little (lot) disconcerting to those of us that work within DAS. Our department services as an important role to our contracted departments. We do accounting processes but we also create financial reports for our departments. So the question is, does the box that reads: Data and Research Services (DAS)\*, is this Departmental Accounting Services or Data and Research Services? If it is Data and Research Services, where is DAS (Departmental Accounting Services)? Is there a "DAS" in the future plans? In my 43 years of working for Texas A&M University I have worked in financial related positions. All of those years have been dedicated to the "business services" side of TAMU. My desire is to complete my years until retirement working with in a departmental accounting service area.

No comments.

I think the recommendations here will only work if you still have people in place who know about each unit and what it takes to keep them running. If you do not have the people that have been working in these units helping others make the decisions then the appropriate funds may not be allocated to help fund the programs. But on the other hand this may help that when a unit/department needs more funds for unexpected costs there is a larger pool of money to help them out??

Extreme caution when dismantling Utility Services should be thoroughly reviewed prior to any changes in system managing and monitoring campus utility services, HVAC, water, sewer, etc.

Having worked in more than one college/division, I think unifying Finance and Business would make it much more straight forward. However, some of the smaller business units may have better and more efficient practices that will be replaced by FMO's processes. If all of business is merged, maybe some people's jobs could exclusively be process improvement.

Support combining these efforts and aligning practices

Consolidation at a certain level makes sense, but not across the entire campus. Colleges (no matter the makeup) have a need for "in-house" business staff.

Recommendations under this area make sense and are badly needed to help move TAMU into the current country regarding planning and execution of expenditures.

Recommendations makes sense.

Proposed changes seem logical, and I'm all for oversight of donor funds in order to utilize those most effectively.

Yes, yes, and yes. This is absolutely necessary to help understand the flow of funds and business-related issues.

I appreciate that you are looking for efficiencies of scale by centralizing these functions. My concerns are regarding who will supervise me and determine my merit. I currently am supervised by the department head and I would hope that the department head would have input in future merit opportunities, especially if business staff (physically) remain in the departments since we will be interacting daily with faculty and department administrators.

While the general feeling of centralization was present, this section lacked more detail I would have liked to see. It had a massive restructure proposed, but not a good lot of detail on the efficiencies.

N/A

Much like IT consolidation at a higher level makes sense and can be accomplished, but when it comes to serving the individual faculty and staff members, customer service will definitely take a huge downturn.

I agree with a support the recommendation made by MGT.

N/A

This makes a lot of sense. To allow the Division of IT to focus on just that, IT, removing redundant positions and functions that could be folded into central orgs is highly logical. The easiest way to make this happen for IT is to remove the 'Service Center' idea, and somehow centrally fund ALL IT costs. By removing customer billing, you save a lot of labor hours and money.

NOT INFORMED ENOUGH FOR AN OPINION ON THIS TOPIC.

I agree with the findings in this section.

## Finance and Business Administration - Student

Please provide your comments related to Finance and Business Administration:

N/A

Don't combine liberal arts and sciences.

Once again, Recommendation 1 creates a massive amount of bureaucracy, which usually makes things more difficult for those who have to use the services. It also bloats the administration of the university, which affects all other campus members who are paid by the university because all of the university's money will go towards funding the administration instead of improving faculty pay, graduate student pay and benefits, and undergraduate student care.

none

None, agree with the MTG Report.

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue

not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

TAMU should provide all students/former students/faculty/staff and other stakeholders an overview of their financial budget each year. This report should provide clear understanding of changes and important nuisances within the budget.

N/A

None

Make ID replacement on main campus. Keeping the connections between TAMU and agrilife is vital to agrilife's success. Extension offices are great representations of the university system and having them closely associated and blended makes each one better and stronger.

don't know enough to have an opinion

Please don't do the plan. It's not a good plan. We don't like the plan.

Good.

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

I think the finance and business administration BBA degrees are both worthwhile fields of study for students who are interested. Otherwise Texas A&M University is not a business that needs administrating. It is a public university. Its stakeholders are not Governor Abbott, Lieutenant Governor Patrick, any current members of the Texas Congress or any other official. It belongs to the people of the Great State of Texas, and the people who wrote this report do not seem capable of realizing that.

Good

No comment

N/A

Please don't change anything.

Enrollment Management should be retained within the Provost's office, as should data and research services. Moving these units to Finance will perpetuate the treatment of students as instruments for financial gain instead of the focus on learning and research. Focusing analytics on finance rather than student outcome is a blatant signal that money is more important than student development, running counter to our purpose as a land grant institution.

They need to give more funding to students. It feels as if white students are getting all the funding and not students of color.

As a Galveston students, every problem or question students have regarding finance and business must go through College Station. This makes it incredibly challenging and time consuming to have a simple, easy to answer question answered and this has often caused students to miss financial aid or tuition payment deadlines due to delays in College Station. It is perceived by students at the Galveston Campus that we are put on the bottom of the list of finance and business questions, and some students are never contacted by someone from the College Station office. Galveston should more finance officers on our campus to accommodate our student body and provide us with the same services as College Station.

I support the implement a matrix management structure

As long as their current needs are heard and considered, I am fine with the proposed changes.

Work with advertising to change approach, so that the college in need is at the forefront that year. Change with the times, help the college in need and don't only shine on the big players every year.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

None

Centralizing the financial/business services will allow greater oversight of the expenditures of the administration which are the root cause of rising student costs, so MGT's findings are important to take into consideration.

Far too much money goes to the administration. The professors and staff that us students actually interact with are underpaid and have limited resources. Additionally, in the engineering department, there is far too little money and effort going into finding additional professors to meet the growing student population. Nearly every class I've been in for my Aerospace engineering degree has 100 students. This is absurd considering most other colleges have an average class size of 50 or less. This is also far more than statics and information on A&M had led me to believe when I first applied.

Didn't read this part, but limit spending so tuition can go down please. I'm broke but not broke enough to get money so college is racking up a lot of debt for me.

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

n/a

Tamu should stay and operate the same. No changes.

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

Money education course AGLS 235 is an amazing resource for new college students. It should be required in students first semester.

The organizational charts are not the charts currently used; these are from years ago.

They are in a good standing

No comment

n/a

I don't feel I am educated enough in this department to make an accurate assessment of the propositions.

centralized system does not mean better or more efficient

N/A

They have been little help to me. Regularly they simply direct one to another office even for simple questions, and their

activities and goals (besides draining students for as much money as possible) is unknown.

N/A.

N/A

N/A

Nothing to add here.

I respectfully think that there shouldn't be a merger of departments or libraries.

Don't have any

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

I do not have comments for this.

None

none

N/A

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

N/A

NA

---

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

---

Great idea. The only concern is the financial operations processes will get so complicated people will try to get exemptions.

---

Maybe we should consider the pricing of everything, and how you are charging your students. 1500 dollars for development every year, how about you start considering helping students more than just taking their money constantly.

---

N/A

## Finance and Business Administration - Former Student

Please provide your comments related to Finance and Business Administration:

---

I have heard from many colleagues who work for A&M about the inconsistencies in how budgets and financial planning and tracking are handled. We must take whatever steps are needed to ensure all departments and facilities are on the same financial pages. Throughout all of this report I see great need to use Deming's principles on how to solve these kinds of problems: go to the grassroots in all area for input on what needs "fixing" and the best methods to get this done as quickly as possible. The "worker bees" churning out financial reports and handling daily/monthly expenses know well what is wrong and what changes they recommend. Please do not manage this (and the other changes) by top-down decisions. Solicit Worker Bee feedback. That is where our greatest successes will originate. Without their input, any changes will fail.

---

I am surprised that such functions are so widely dispersed. These recommendations are very appropriate, although perhaps difficult to achieve.

---

While the suggestions in this section seem logical, this is outside my area of experience or expertise, and as such I don't have much opinion to give here.

---

streamline payroll and hr to better function and actually get things done

---

This MGT survey was an abomination. Pushing the narrative further to change the campus and overhaul it to be another run of the mill university. What gives Texas A&M it's strength, power, and future, are the very things that make us unique. Curious how none of the universities we were peer/compared to are even in Texas. These comparison universities are beneath us, or different entirely, in the same manner as milking a cow vs milking a bull, and the complaining that your milk tastes differently. Cherry picked data to justify hitting Texas A&M with a banhammer and to alter the university, remove it's identity, entirely. People say that what we identify as matters, well Texas A&M identifies as Texas A&M, and if you refute that, you're a bigot and are dismissing the lived truth of A&M. Yes the College of Engineering is huge, as it should be. Advising is decentralized, governed by each major, as they should be. You'll never have a one size fits all approach, and trying to shove the university and it's respective colleges into a "big box store" feel, as this report would suggest, destroys the very fabric of what makes us Aggies. Trying to shove in 25,000 engineers by 2025 risks diluting down the degrees or simply put, dumbing down the curriculum to pursue more students.

Additionally, merging the College of Fine Arts and Sciences, as many smaller east coast schools do, does not make sense nor enable either entity the ability to perform as unique and necessary institutions on their own. If you wish to improve the university, might I recommend cost saving initiatives like never paying for another such a slanted and asinine survey again. Perhaps considering cutting the University Administration's salaries by 10% as well. Speaking of cost savings, DO NOT outsource student on and off campus transportation. The current model makes sense, and such outsourced services at other universities always ends up being more expensive in a matter of a couple of years than any immediate cost savings might hint. You will pay more, get less, and be confused as to why... Why was this even an option? Look at what happened with outsourcing dining services. Pursuing diversity over meritocracy, over talent or the outcome, is a fool's errand. Diversity should be cultivated organically and naturally, not forced and mandated. Diversity is great, but chasing metrics and numbers over anything else and rejecting the notion of assimilation while encouraging the students

to celebrate what separates us is not healthy. Change for the sake of change simply to change and virtue signal will not yet results, will not bring us together, and will not continue the ability of A&M to be a natural melting pot. Let talent speak for itself, and let those who wish to join A&M do so freely. The desire to erase campus landmarks to resemble west coast university appeal also does not sit well with me. Remarks about the Corps of Cadets being "too Caucasian" is not only insulting to our diverse group of Cadets but a surface attack on the Corps' rich history and selfless service. Creating more commissioned officers to the US Military than all the service academies combined should tell you that the Corps has the ability to form the talent, respect, and love for each other that is required in a military environment. The Corps of Cadets, and the College of Engineering, are fine examples of successful melting pots creating cohesion and powerful leaders. As they say, Highway 6 runs both ways. If faculty, administration, or students, do not like Texas A&M, they are free to leave whenever, and can go attend or work for a university more aligned with their emotional support needs. Those who wish to be Aggies will be Aggies. The University has thrived for a century and a half being run the way it is... Forcing us to change to be similar to UCLA or Maryland will destroy our identity. I say this as a First Generation Aggie, who came not from wealth, but a family of poor immigrants, refugees, and poverty. As the first in my family to go to college, A&M represented everything I aspired to pursue and be. I took on tremendous debt to break the cycle of poverty in my family. Texas A&M was the beacon to freedom, and it still is. The desire of the MGT survey however risks undermining that legacy for the Boogeyman fighting game of "equity" and "diversity and inclusion" while throwing out the University as we know it. I strongly believe the MGT Report offers the chance/opportunity/paper thin justification to radicalize and change the University to better suit the political leaning aspirations of those who dislike Texas A&M.

---

I concur with the report findings.

---

Howdy, My name is [REDACTED]. I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for Fluor Daniel and for Lockwood, Andrews & Newnam performing project controls. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to

get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, [REDACTED]

If it is student related, I have no complaints, the howdy portal could be improved, everything doesn't have to be maroon and white

Rec #1 - I support the centralization of finance/business services. There is a great need to increase responsiveness to queries at the beginning of each semester.

The comments I made regarding the Provost Office also apply to Finance and Business Administration. It would seem to me that this is an area that should be centralized.

Finance and Business Admin The CFO should report directly to the President and the President should have ultimate responsibility for the budget with the CFO's support. A & M should focus on being an Engineering, Science, Ag Life School. In addition the graduate schools of Vet Med, COM, and EnMed ( EnMed a separate school teamed with Methodist). The College of Liberal Arts should remain basically the size it is now, with a focus on those Liberal Arts subjects which provide the highest rate of employment for graduates and return on investment for A & M. We should not have a college of Arts and Sciences, but two distinct colleges. If one is in disagreement with this, then it absolutely should not be called the College of Arts and Sciences, but the College of Sciences and Arts. It makes all the difference in the world to have Sciences placed first, as we have many professionals applying to med school, research, etc., and the first impression of Arts and Sciences is very different from the positive impression of saying Sciences and Arts. Finance and Business Administration. I do not understand where scholarships and financial aid are because there is no position or responsibility shown in the org chart. Where is the scholarship and financial aid office for students? I do not see it anywhere on the current finance organizational chart or on the proposed organizational chart. This is extremely important. With regard to finding number four: Why is there a recommendation about a new shared oversight of an endowment fund expenditures of stewardship activity within the Texas A&M Foundation? The A&M Foundation has done a fabulous job. What is the purpose for this? I read the rationale, but I want to know what is the reason behind it. Why is the recommendation only related to the Foundation and not the Former Students and Twelfth Man that also raises significant money? Also, no one commented on the fact the Foundation has been purposely set up as an independent entity from A & M. I am not sure that this oversight would not cause problems that the independence of the Foundation was supposed to achieve in the first place. What about the Former Student Association? We have too many different organizations trying to provide oversight and raise money. The Former Student Association wants to raise the small amounts of money. The Foundation is limited to raising large amounts of funds and gifts. Today many people give smaller gifts, especially in their younger years. such commitments of four or five years of small amounts and small increments. The University of Texas 40-acre scholarship, given to 80 freshmen students each year for four years, is a full ride, yet the average contribution from UT exes is \$2200 to support these 40 acre scholarships! Our Foundation is not allowed to make requests of gifts from people to give scholarships that are small commitments of \$2000 - \$4000 a year for four years. These are the type of scholarships that can be raised from those that are in their 20s or 30s or of lesser means. If allowed to request and accept these gifts, the Foundation would attract a large number of Aggies to give, and this gets such individuals familiar with the gift and great feedback received of giving gifts, and furthermore such donors become very likely candidates for giving greater gifts as they grow older. And the Foundation will have a growing list of donor names. The Former Student Association only achieves 14% of Aggie graduates to contribute donations money, though low, this is high considered to almost all colleges. This percentage still needs to be improved in my opinion. I do think the Foundation and Former Students Assoc could work together on these smaller gifts to achieve many more student scholarships. The consultant did not investigate what is the purpose of raising money by the Former Student Association. What is the purpose of the Foundation? What are the goals of the University in raising money? I believe this is one of the poorest written sections because they have not investigated why and how funds are raised at A&M, and how those raising money could do so more efficiently and as a team. Even the Twelfth Man raises significant amounts of funds for the Athletic program, and it should be investigated how all three entities can be best would together to maximize their fund raising and advertising and minimize their expenses. Perhaps the current system is already the best and most efficient, but the study did not even examine the effectiveness of the current university fund raising model, the Foundation, Former Student Association, and Twelfth Man.

I agree with the recommendations for centralizing and reorganizing Finance and Business Administration.

---

We need to have a focus on helping students learn and build personal financial health and credit. Too many young people are coming out of college with large debts and zero understanding of their finances. Housing, loans, taxes, business ownership - these are all things that lead to the success and fruition of our TAMU graduates and ultimately the success of these next generations in our country. The financial dept needs to focus on providing good financial advice to students and providing the framework that they need to succeed after college.

---

Recommendation #1: Centralize financial/business services under the Chief Financial Officer. Agree. Recommendation #2: Identify inefficiencies within internal workflow processes. Agree. Recommendation #3: Implement a matrix management structure to leverage Financial Services by integrating Academic Affairs' Business Services, Data and Research Services, and Enrollment Management. Agree. Recommendation #4: Establish a new centralized system and processes for shared oversight of endowment funded expenditures and stewardship-related activities with the Texas A&M Foundation. No opinion on the Foundation Recommendation #5: Shift the research administrative management of Veterinary Medicine and Biomedical Sciences research grants and facilities to AgriLife exclusively rather than the current duplicative system including both AgriLife and TAMU. Agree.

---

All of the recommendations for finance and business administration would present opportunities for increased efficiency and focus. I'm leery of matrix management in general unless there are clear upfront advantages for a specific area.

---

The A&M Foundation holds \$2.5 billion which focuses on keeping up with other universities for bragging rights of who has the most money. This kind of money would finance many scholarships each year to deserving students. Based on my experience with my undergraduate alma mater these foundations keep more money for overhead than is really necessary. People endow scholarships with the objective of providing assistance to students in financial need.

---

Excellent proposals on streamlining. Much needed.

---

No opinion

---

All findings seem to be positive with good recommendations

---

No comment.

---

a. Recommendation #1: Centralize financial/business services under the Chief Financial Officer. i. Finding 1: Agree. b. Recommendation #2: Identify inefficiencies within internal workflow processes. i. Finding 2: Agree. c. Recommendation #3: Implement a matrix management structure to leverage Financial Services by integrating Academic Affairs' Business Services, Data and Research Services, and Enrollment Management. i. Finding 3: Agree. d. Recommendation #4: Establish a new centralized system and processes for shared oversight of endowment funded expenditures and stewardship-related activities with the Texas A&M Foundation. i. Finding 4: I'm not sure we need to do this. It seems to me that the Foundation is doing OK as is. e. Recommendation #5: Shift the research administrative management of Veterinary Medicine and Biomedical Sciences research grants and facilities to AgriLife exclusively rather than the current duplicative system including both AgriLife and TAMU. Finding 5: Agree.

---

Any consolidation into a central organization should include ALL Colleges and departments. If you exclude some Colleges due to special circumstances, others will follow and the organization will continue to be decentralized.

---

Tuition statements should be more detailed. There is too much summarization for a \$10,000 bill. Think about it - you get more detail from a lawyer, CPA, etc. You are a professional service firm too.

---

With University having a business school, and even why can't TAMU ACCORDING Dr. Robert Gates, "we out source some things cheaper than we can do them ourselves." It would appear University could/should compete/instruct to compete.

---

More red tape

---

The business of architecture should always stress cost and financing availability

---

This definitely needs to be centralized. There is no reason to have 8 different answers to the same question.

---

Several suggestions have merit. I have concerns about how this would affect fundraising. Different interests...different priorities.

---

The business model should be one of centralized planning and distributed execution. Push fiscal responsibility and accountability down to the lowest level possible. Create "profit-and-loss" centers that will incentivize wise use of funding to accomplish goals, encourage recruiting/retention, gain efficiencies, and innovate.

Yes, one CFO for the University with dotted line support to the organizations within makes sense to avoid duplication of efforts. But independent businesses like Former Students, 12th Man and Foundation must still operate under their own corporate charters with an operating link to the University.

This has to become more transparent and goal oriented. It is not just accounting. It is the investment and return with a keen eye to value obtained.

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

N/A

Centralized management of Financial & Business Administration is a best practice in industry. Locating these functions within the college units with dotted line responsibility to the colleges will make this work most smoothly. Budgeting will be a difficult point. Centralized oversight over the budget and setting budget limitations at a central level is a process best practice, but ownership and stewardship of budgets and spending must remain with the college units.

This makes sense and should streamline the office and have it under a Chief Financial Officer. We need to set an example for the students we are teaching to be industry leaders. This applies in all departments and the previous discussed changes.

None

No specific comments.

Finding #'s 1,2 & 3 - All appear to be reasonable with good recommendations. Finding #4 - Don't know on this one. How does the Texas A&M Foundation feel about this recommendation? Finding #5 - Okay, I think.

It is surprising to learn that finance and business administration was not previously centralized. While there are likely to be growing pains in implementing the proposed changes, it is my belief that a more efficient process will be the result. One might take care to make sure that any actions taken with respect to the Texas A&M Foundation do not materially affect its independence. It is my understanding that it is separate from TAMU for legal and liability reasons. In addition, care should continue to exist so that the myriad of gifts are dedicated for the intended purpose. Other universities have experienced significant issues with respect to the misdirection of funds. I have had a long relationship with Tyson Dunn and believe that he is well qualified and provides excellent leadership. While I do not believe that donors should expect significant recognition, their "care and feeding" seems to be a requirement.

The recommendations make sense.

Na

Support 1 & 2 #4 imperative we want to continue to have support & show good stewardship with other people's money  
#5 no brainer. Please look at our full name as a university.

---

Could be beneficial.

---

While Finance needs to understand and support Facilities, key support from the President is essential. Facilities needs to operate as freely as possible from the politics of the University to be truly effective. The same is less true for contracted services. Senior admin needs to accept the Deans and Department Heads may be "customers" of Facilities in one sense, but they can be disruptive adversaries of Facilities in another. While Deans and Department Heads mostly only advocate for their departments, Facilities advocates only for the entire university.

---

No comment.

---

Periodic review and recommendations for improvement to operating departments is a good thing. If the study shows these to be wise moves, then they should be implemented.

---

All finance should be under one roof

---

Centralization seems like a good start to removing waste.

---

No Comments

---

Seem like reasonable recommendations for the most part.

---

This is a goal. Strong decisive functional leaders will need to ride herd over this consolidation effort.

---

Uninformed, so no comment.

---

N/A

---

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts.

---

The proposed organizational chart may present the appearance of more positions than needed

---

Agree

---

While the university should be operated on a financially sound and stable basis, the function of the university is not to acquire resources but to use those resources available wisely to advance knowledge and learning as a strategy to

improve the quality of life in society. It is important to maintain a view of acquiring resources to support the mission of the institution rather than to distort the mission in order to acquire resources.

none

I applaud the report authors' finding that A&M Foundation funds need to be better managed. Nothing is quite retarding of a donor's generosity as the perception on the donor's part that his donations are being misapplied or that credit for his donations are not appreciated. The frequent, independent audit of Foundation expenditures is essential, especially so when it comes to restricted donations.

Creating a new centralized oversight system ensures that many eyes are on the endowment fund and expenditures. It seems to me that more oversight is better.

No comments

Again I do not see anything wrong with some of the proposed changes if it helps A&M move forward and better able meet its goals. Would just like to make sure there is internal input from staff and that it fits A&M, rather than is all from the outside study.

No comments

None

Liberal arts and Sciences need to be separate departments. LA deals in subjective reality while the sciences deal in objective truth. Their perspectives on reality couldn't be more opposite or incongruous. Sciences deal in research that is funded by corporations that liberal arts has no way of relating to much less has any business courting for funding. Support for science students will be undermined by this maneuver and the future of sciences at this university will be compromised and eventually cease to exist.

Centralization and elimination of duplication is good.

Recommendations - Yes in order to have consolidation and more transparency

na

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

None

the suggestions to oversee monetary expenditures campus-wide is fiscally responsible and would add checks & balances necessary for better use of university funds.

Proposed changes look reasonable.

No comment.

Recommendation #3: I'm not 100% sure what this means, but I know that every time I've ever heard of "matrix management structure" in industry it is followed by "it never works". It is known as a failed attempt at a new management practice. Recommendation #4: This names the Foundation as "best in class", which it most certainly is, and then wants to change something about it. The Foundation is independent and should be left that way, they are obviously doing something right over there.

No informed comment

No specific comments.

N/A

I agree with the recommendations in the report.

The suggested added departments is much too heavy!

XXX

No comment

I agree with the recommendations, but encourage being careful not to center every financial decision at or near the top. The units have to have some level of "ownership" of finances or it's difficult to impossible to hold them accountable for financial performance.

Agree with assessment, not many programs for assistance.

Consolidating accounting and budgeting services is a fantastic idea. Using the same processes and information technology, along with cross-training employees with different departments will improve services and the bottom line. With that said this is a huge change and careful attention must be paid to the individuals who will be affected. Buy-in is a must for this to succeed.

The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

Agree.

None!

The general emphasis on efficiency and eliminating duplicative efforts is good, particularly if some of the resources saved by the efficiency could be used to reduce tuition and other costs of attendance.

Makes good common sense to centralize these functions.

none

A CFO should be in charge of all finances.

I agree with recommendations.

None

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

Not clear on what this office did. Worth defining its role/responsibility to students more

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

n/a

Recommendations seem worthy of consideration.

Not enough direct knowledge to comment.

If referring to TAMU, I believe that all students should pay their proportional share. Texas residents & former student children should get an advantage. TAMU should not give special breaks to foreign students without proof of that country's assistance to the student or university. I believe this situation has been slanted away from Texas students.

Centralization of this office will create better efficiency but needs to be followed up with measurable metrics to be successful.

Streamline operations per the report.

Just re-mixing the stew...no real positive impacts.

---

Centralization makes sense and is needed.

---

Have the co\$ of an education at A&M at the lowest price and eliminate "fluff."

---

Take the below quote to heart, leverage the excellent financial position to reinvest in infrastructure and to let the University Administration be flexible enough to restructure and centralize. Apply for greater representation on the UTIMCO board. Quote: "The perceived financial freedom of TAMU can also be considered a weakness, as the need to be financially effective and efficient is not a top priority. In the current decentralized organizational structure, a lack of transparency exists on the overall university budget and the ability to make strategic financial adjustments is limited. Because of the current structure of the organization, a major weakness is the time to deliver financial services, including contract execution."

---

No comment

---

Don't take good jobs and pensions from the citizens of College Station.

---

We are a pretty well funded outfit, so spend wisely to raise our rankings!

---

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

---

Recommendation #1: Centralize .... Agree. Why was this not done years ago? Recommendation #2: Identify .... Agree. Do this immediately. Recommendation #3: Implement .... Disagree. Another executive-level advisory council? Let the CFO work the problem. Recommendation #4: Establish .... Disagree. Keep the Texas A&M Foundation independent from the VP Finance. It is not broke, so do not try to fix it. Recommendation #5: Shift .... Agree. This one makes sense.

---

I support these recommendations.

---

I have had replies to my questions regarding financial aide for my son who is a Junior this year in a very timely and helpful way.

---

If there is one thing we can agree on in this report, hopefully it is that TAMU administration can definitely be operated more efficiently as was pointed out several times with people overlapping/duplicating efforts and just way too many people to have to go through to find answers.

---

Costs are out of control. There are too many professors with tenure, causing disruption that can't be fired. Clean house and keep the best. We do not need graduate assistants and administrative assistance for every individual. Get rid of the overhead. If something doesn't directly benefit students, maybe we don't need it.

---

No comments, other than streamlining here is way overdue.

---

Good!

---

Try to obtain the highest possible percentage of faculty proven acceptable in private sector experience.

---

These recommendations seem like it will allow the processes to be handled by the best people/organization and streamlined to improve processes.

This just needs to be communicated efficiently and transparently.

I agree with the reports referencing of the use of more analytics in financial decisions, business decisions, education and research.

Please keep A&M affordable.

University funding should be clear and transparent so that everyone can see where the tax dollars and donations are being spent.

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

can't say

I agree with the ideas. I have always told my colleagues that A&M is great at building building but terrible at operational plans. My experience at TIPS confirmed this observation, where the Texas tax payer spent millions on a facility that has run poorly since inception. Invaluable resources being under utilized due their entrapment by political battles, poor financial planning and operational plans.

Looks like a solid plan.

Agree

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

I don't understand the issue enough to have an opinion here.

N/A

Finance experts at A&M DO NOT understand the new information concerning the value obtained from pollution reduction and Sustainability efforts. Therefore, Sustainability is kept on the back-burner while, in many cases, A&M leaders decisions are not fiscally responsible.

Like

The suggested changes make sense but it is worrisome that all business services aggregate up in reporting under the CFO. Seems like too much for one person to manage. Identifying enhancements in work flow will be extremely necessary.

Support

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

Focus less on the optimal finance and business perspective.

Again, what is the question?

Agree with all recommendations

It's not a business. It's an institution of learning. You don't need to create more jobs, just better management. Any actual inefficiencies you'll find are probably related to the fact that TAMU is getting "top" or "leadership" heavy. You don't need more managers, you just need leaders.

It makes sense to mirror a centralized structure for business and finance if that matches to roles and responsibilities in effect across the university, but the unilateral nature of claiming transparency and efficiency is at least cause for some pause. There should be a significant amount of planning to mitigate any additional bureaucratic issues that may come

with a change of procedure.

Whoever is hired as CFO, they must be able to be big picture with strong reliance on what the downstream departments need. Accountability at all levels is a must. A micro manager will fail. One item that raises concerns is the ability for students to pay for their education. Many of the employment needs within the university can rely on student workers and I would suggest a greater emphasis in providing jobs for students. This helps with their finances and also provides much needed experience before they enter the real world. It certainly helped me greatly. Over-reliance on student loans kills a student's ability to make a living once they have left A&M. Luckily, I had a windfall about ten years after I left and this allowed me to pay off my loans. I can only imagine the difficulties now faced. Students should be discouraged from attaining degrees with no financial benefit unless they have a solid plan once they graduate.

no comment

None

Continue the good work

Operating like a corporation with a CFO and a CIO makes sense. P&L responsibility for each college/location is important, too; should roll up into one area that is reviewed monthly, monitored for trends with actions taken, etc.

The howdy portal is confusing and should be more user friendly.

With regard to finance administration, at this point in time, it would seem that a large percentage of your donations come from what you might call "the old guard". People in retirement, or nearing end of life as they establish memorial scholarships, etc. I know there may be some younger people who might be more liberal and diverse, but most donors are probably not. I am just surmising based on the donations made by my family, and from this current prospective, I would suggest that you might still need to appeal to their attitudes - love of the Corps, love of the traditions, etc. I have seen communications from other former students who were frustrated and angered by suggestions that statues be removed, or that buildings be renamed, etc. They are not bigots or racists, but are sentimental about putting pennies at Sully's feet. I have seen some that said they would no longer contribute as they had before based on consideration of these issues. I am sure over time, there will be change at A&M, but you have a long established set of traditions that are very important to some older former students, and if your changes are not gradual and respectful, there could be financial backlash. Also, bring back the Creamery! Surely, that could be a money making enterprise and support for the Ag students.

Makes sense to restructure this. It is so important to have a real system of checks and balances and that anything dealing with money should be centralized, not decentralized. Too easy to commit fraud otherwise, or use money unwisely.

A good program of educating each department of their funds & how they may get them spent is critical. A spelled out routine for allocating, bidding, ordering & receiving must be supplied to each employee to avoid errors that are time consuming.

Transparency to the former students and invested parties would be the main issue for those of us on the outside. Goals, budgets, actual spends, those may be available now but clear communication here invites partnership from a monetary standpoint.

I like the idea of moving Engineering Management to the Engineering Technology Department. ET was my major, which focused as much on management as on technology.

Agree with recommendations

None

N/A

No opinion

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT

which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

See comments on Student Affairs.

More scholarships and less wasteful spending

I believe Texas A&M Foundation should retain ownership of Endowment funds. I believe there will be a large decrease in endowments if they are perceived to go into the University black hole of overheads and inefficiencies. With the arms distance transactions of endowing via the Foundation, there is more of a likelihood that Old Ags, like my husband and I, will continue to donate to TAMU, even though we left Texas long ago.

Yes, there are efficiencies in centralization of Finance and IT. However, every organizational unit should be provided funds and freedom to support certain finance and IT initiatives that would never get approved when stacked up against the entire university's list of priorities. So...recognize the inefficiency of centralization and allow for compensating processes.

Need more industry connections.

Payroll is never processed by a Human Resources department! It is always processed by finance or accounting. Donors definitely need oversight of endowments. However, A&M doesn't need to become some sort of metric based financial system to figure out which kinds of students and how gets them the most return for some money. That sounds despicable.

Stop promoting/prioritizing the job

No specific comments here.

no comment

Agree

none

I covered Finance and Business Administration earlier. Quite frankly, it should equal Engineering in importance if not in size.

I am not sure what category to place this in, but I am a graduate of the Mays Business School and I am so pleased that we have continue to maintain and increase excellence in our school of business. In that regard, I believe that finding the next Dean of the business should is critical to keep the strong momentum going, and would ask that be a priority for your administration. Thank you for your consideration.

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

Ha ha, I work with our Finance folks. It is an inherently inefficient process. Thinking centralization will improve things, I'd be awful careful.

It seems that more time is spent raising money that keeping the University affordable

Agree with findings and the opportunity to create cost effective synergies.

none

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

Agree with Finance and BA recommendations. Data analytics needs to be a primary focus in Finance because so much efficiencies and cost savings can be achieved here. Having Business Officers over each operating unit of TAMU will

obtain quicker response and provide a "boots on the ground" perspective for better decision making.

Streamlining and unifying supplies so that departments can utilize surpluses would be efficient and cost-effective.

Fine as presented

Finding #2 feels a bit like the review is saying there should be another review. How then do they make the recommendation in Finding #3 regarding matrix management? Shouldn't that be based on the outcome of the preceding item so that inefficiencies (another lean buzzword that is ill-defined) can be addressed?

Not a problem. Has lots of land and worth to sustain for years

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED] Class of 2014

No comments.

I applied for 37 scholarships and grants and did not get a single one. I paid my way through A&M by having three part time jobs. Three years after graduation, I set the record for being the youngest partner in my firm's history and you know where my shout out went? In the bottom corner so that Michelle Obama's face could take up the whole page. Shame on you for pandering to the liberal agenda and for asking me for money for the past 15 years. I paid you, I overpaid you, and no one helped me. What have you provided me since I graduated? Nothing. So why would I donate anything? Perhaps your newly recruited EEOC candidates can help you contribute when they graduate debt-free.

## Finance and Business Administration - Other

Please provide your comments related to Finance and Business Administration:

N/A

Regarding recommendation 1, it is not certain that centralization will result in efficiencies. That is, the expected particular efficiencies are not described or defined. Are these efficiencies in service, cost, time, etc.? And efficient from who's perspective? Are these efficiencies for the institution, the colleges, the departments, the faculty and staff, or something else? Moreover, the dotted lines in the organizational structure are not defined. What does a dotted line mean? Does it mean awareness or direct supervision or something in between?

NA

BRANDING should not be the takeaway from your report. Too corporate and too much SEC. Not enough thought about ongoing and potential connection to our mission.

Very nice suggestions contained in this section. I will have to leave final input to the finance and business administration professionals.

n/c

none

As the [REDACTED], I want to provide the following feedback and information about the Libraries Business Administration: The Libraries has centralized and embedded the Libraries Business Services unit and staff within all aspects of our operations, project management, and organization. We have found this model to be highly effective and efficient and we are consistently praised for our compliance by FMO. Removing them will affect the efficiency and effectiveness of how we provide our services, programs, and initiative to students, faculty, and staff. A team of five individuals manages the entire business operations of the Libraries. This includes nine locations, 500 staff, faculty, and student workers, a budget of roughly \$45 million, and roughly \$25 million in endowments. The Libraries Business Services team is responsible for all contract approvals (and there are a lot in the libraries). The Business Services leads the University Libraries in compliance and ensures that all resources are spent appropriately using sound accounting practices and detailed financial analysis. Our Business Office aids 85 faculty members who travel. The office provides constant troubleshooting for travel, Concur requests, and budget needs. Does a dean of a college retain fiscal officer status if the individuals who manage the day-to-day details of the budget report to a centralized campus business unit?

I certainly believe in always seeking improved efficiencies and lower costs. However, based on my experience in managing large organizations, I suggest caution be exercised when making extensive changes simultaneously.

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

No comment.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC’s influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC’s influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

1. Office of Sponsored Research is a critical activity, but is very bureaucratic and was not mentioned. Restructuring and efficiency is needed to better coordinate with the business units that manage contracts and corporate relations at AgriLife and Engineering. 2. Intellectual Property management was not mentioned and needs to be managed by each respective business unit by some general uniform guidelines. 3. There is no mention of an audit function. A major university president was recently fired because of misappropriation of funds by the VP of Finance. An independent audit function with access to all programs needs to be well funded and report directly to the President - not through the bureaucracy to a VP.

It's SHAMEFUL when reached out to as a parent I was brushed off INSTEAD of giving 2 craps about my son's assault by an Aggie football player in the commission of a theft while working as a student equipment mgr on November 28, 2020. That same player THREATENED him with bodily harm within the week prior when he came to the window and asked for equipment that was NOT issued to him. Utilizing threats and intimidation to get his "wish list"..... The lack of care, concern and violations of law just to bury/ cover-up run wide and far.

N/A

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M

programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

---

Pulling Finance and Business Administration under one roof could reduce duplication and waste. Separate entities for each college makes no sense.

---

There are great public funding programs out there for academic programs supporting police and fire professional development/higher education. Yes this means, tuition exemptions for some students however the reputation payoff is far greater then for the school and additional funding opportunities may occur too with investment in these areas.

---

Agree with this consolidation in order to do away with too many duplicated shared services. This in turn will hopefully provide better services to students and avoid the constant being redirected to other departments to get the information needed.

---

carefully use your fortress resources to hold down tuition and increase access and affordability

---

It's cumbersome.

---

(1) While payroll is certainly connected with HR, its financial role, such as taxes, is very different from everything else in HR. It may be better served leaving it under Finance. (2) Having the business units in the other depts. report to Finance was recommended in the 1980s, but it never was implemented due to lack of trust between Finance and Academics, and there is always the desire to control things in Academics. This recommendation makes sense.

---

Fair

## Q10 - Please provide your comments related to Human Resources and Organizational Effectiveness:

### Human Resources and Organizational Effectiveness - Faculty

Please provide your comments related to Human Resources and Organizational Effectiveness:

This office has been a mess for a long time. I am not well-informed about what changes are necessary. But I believe staff should be an integral part of any restructuring.

No opinion.

I have been extremely disappointment with the accountability of HR on several matters over the last 6 months.

Streamlining HR processes and procedures between Texas A&M Health and TAMU will be welcome

None

If this consolidation slows hiring from it's already slow pace, this will be problematic.

Not sure.

No Comment

At present, to contact HR on a number of issues, I must send an email to a general email service and wait for response from someone with whom I have never worked before, typically gives me a scripted response, and may or may not have the requisite skills to answer my question. On more than one occasion using this system, I have received NO RESPONSE AT ALL. In contrast, if I contact an individual directly via phone and can explain my needs, I receive much better service. An essential person in the HR system is our departmental HR liaison, who not only knows who to direct me to, but the questions that I should be asking. As such, I strongly disagree with the proposal to centralize HR services.

Please do not eliminate the HR Liaison Network--this is an incredibly important resource for faculty, staff and graduate students. To have persons in-house in the departments during times of incredible stress is really an essential service to your employees. To have knowledgeable and trusted persons able to explain complicated systems of for leave or the intricacies of retirement is a way to avoid errors and crucial misunderstandings. I have a similar argument against centralizing/consolidating IT. I know our IT group has some of the lowest response times. Find out what they do and how they do it and let other units know, but don't consolidate all of the IT people. I am concerned that cross-training employees is a way of saying that staff will be doubling up on jobs when their colleagues are laid off. In all of these cases, I would say that efficiency does not always equal effectiveness.

The centralization and consolidation of staffing outside of departments is going to have a large, negative impact. It's one thing to have shared services that span a couple of departments; but when you have a large department with unique administrative needs (like my own), I literally can't imagine how the proposed model will actually function. I think it's going to make it a lot harder to actually get things done.

p. 69 HR & OE Recommendation #2: Cross-training for all employees Well, duh, that should have been mandated years ago. Some units in individual colleges and administrative units have done this for years and their efficiency indicates this. Others have not and drag everyone else backwards and elicit complaints. This is an issue of leadership and administrative competency.

Eliminating the HR liaison network will leave employees without a local source of guidance and information when they need it most -- when they are sick, retiring, etc., and might further increase the time it takes to resolve urgent matters.

I personally prefer having access to in-house personal for HR. Our HR representative has been phenomenal, and having quick access to her was instrumental. I worry that moving a dedicated HR out of departments will lead to less transparency and more issues in finding answers to crucial employment questions.

I am all for supporting VSP programs or the like, but it has to translate into the hiring of new Tenure-stream faculty to replace them.

In connection with my role as senior associate dean of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

I understand the need to centralize business policies and procedures such as that of University Payroll, HR, Facilities, and Student Affairs. I do not understand, from this report, where such centralization warrants merging colleges such as the College of Liberal Arts with Science. It seems that TAMU would be better by focusing on one centralization at a time. Measure that centralization's success and then consider colleges or other areas, but trying to focus on everything at once seems more problematic than it might be rewarding.

Proposed change is good

HR, especially with respect to faculty and researchers is specific to discipline. Having HR within the college – a person who is aware of ongoing issues has been tremendously helpful. Losing that expertise would put additional pressure on department heads.

Centralization of undergraduate advising is something that I am not supportive. This will reduce the efficiency of serving our students, will cause retention problems and staff retention will be horrible. Staff retention in centralized operations is ten times worse than none centralized operations in the university.

Will this involve actual movement of staff or simply of reporting lines?

I think student employment going there makes a ton of sense. I think that the Dual Career office in Faculty Affairs should come here also because that is where new faculty look for it . I worked at TAMU for 6 years before moving to COALS (still TAMU in my mind) and I had to do all new HR paperwork as if I moved institutions! This is insane. HR for COALS should stay the same as the rest of the university and not be treated differently as if it's somehow a new place because extension and research are overhere.

Strongly agree with more investment into leadership training/planning, etc.

Why would the university want to eliminate HR Liaisons? Again, why is centralization understood as an a priori good?

While centralization is a way to save money it rarely results in the department being efficient. SSC is one of the least efficient organizations and delays almost every project they are tasked with. When our college centralized IT it became and still is a nightmare to get anything done in a timely manner.

No comments

It is a benefit to have dedicated HR people for each unit, and this should not be centralized. The constant changes in hiring procedures, for instance, necessitate a close working relationship between units and HR staff that have a dedicated position. Many of these processes must be carried out in a timely manner and with staff that know the background information surrounding the issue. Centralizing this would be a mistake and would slow the ability to effectively deal with HR issues.

These are good recommendations

None.

Please keep the HR representatives in the academic units. Please also add more representatives in HR to help faculty with the retirement process and insurance questions.

None

Offices located in College Station do not know TAMUQ's specific requirements and needs in Qatar. This applies to HR and benefits/immigration knowledge that constantly changes, and Finance that processes reimbursements and assists with the mazes of COMPASS.

I don't have enough experience with this part of the University to have an informed opinion on these recommendations. The VSP recommendation appears to have some merit.

One stop never means one stop. It means bureaucratic red tape, inefficiency, inability to answer questions, lack of access, delayed responses, and more. DO NOT DO THIS. Let me go to a person in my department or college whom I know, who knows me, who understands my questions, and more importantly, why I have them. A person who is responsible for a limited number of people, not thousands of people who are nameless and faceless. If the university is

going to implement a VSP program, it must be both for tenured faculty members and senior APT faculty members for whom tenure is not an option.

None

none

The Human Resources Office like all other offices also should engage in a thorough operations review process to document the effectiveness and efficiency of an exhaustive list of functions. This should include stakeholder perspectives along with staff perspectives. This should inform the decisions in implementing change. These types of review also aid in the careful documentation of procedures allowing the training of new personnel and ensuring smooth transitions.

Simplify the processes, structure and bring some software. Have well trained professional staff and modern system. Make Deans and Head responsible for devisors and make them accountable for their actions.

Faculty and staff need to know the person that can help them with any problems. Dehumanizing this process is not a good idea. What's next, outsourcing to a call center?

I am not sure this would apply to Agrilife since we already have a common system that functions for the agencies as well.

How will this affect business offices in departments?

I fully agree with this part of the plan and hope it includes the Galveston branch.

I think I speak for most faculty in that I am concerned about any plans that look like they may erode tenure. There is nothing in the current description of VSP that does that, but I am triggered to think in this way whenever I see it.

Previous centralization of HR staff simply meant that the staff left behind had to take on additional HR duties they were not trained for and did not have the bandwidth to take on. Doing this across campus would make low staff and faculty morale even lower and you will lose more personnel. It also meant it was very difficult to get the attention of centralized HR staff and processes were constantly being dropped or mistakes were made because they were handed off from staff member to staff member in the centralized office. It was difficulty to get consistent, correct answers to HR queries. This added to the HR burden in the unit offices since we constantly have to check that hiring, review, compensation, and promotion processes are being carried out correctly.

Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center. Having HR liaisons in the colleges streamlines the hiring process for the individual involved. Human Resources Office has a high turnover of individuals based on my personal experiences over the last two years. The office has not been able to provide accurate information for faculty retirees. Recommendation #2: Provide cross-training for employees. There needs to be a stable number of employees that can be cross-trained in HR. The turn over seems high there. Cross-training is currently done well in the College of Geosciences. Recommendation #3: Eliminate the Human Resources Liaison Network. This would be detrimental for the users. Having a close contact is invaluable for users. Recommendation #4: Invest in succession planning and talent management. This is an excellent recommendation. Recommendation #5: Invest in a voluntary phased separation (VSP) program for eligible tenured faculty members. This program has proved useful to freeing up faculty salaries by allowing faculty who have contributed for more than 20 years a desirable exit program.

I am deeply concerned about the integration of various units into "Human Resources and Organizational Effectiveness. Once again it appears that we may loose personnel from our College who are critical to efficient operation. It is, for example, important for Geosciences to have an Assistant Dean for finance and administration. Such an individual understand the issues in our College and assists with various administrative functions including appointment letters, and necessary paper work for consulting, conflict of interest, and a variety of other issues. I suspect a centralized office will not include individuals with the time and specialized knowledge to help with a variety of these types of tasks. This work may fall to the department head whose time will likely be increasingly devoted to bureaucracy and not academic leadership.

We have lost potential leaders in our college due to the lack training and succession planning. We need current administrators to be aware that there are talented individuals who can contribute to the University mission and who will leave if they cannot achieve their goals to help the university change in a way that reflects their generational cohort.

This is an urgent matter that should be addressed immediately.

The report misses the opportunity to recommend a staffing increase in HROE to deal with the current workload, let alone the increased demands being placed on that office (e.g. tracking who must be vaccinated to comply with executive orders, reviewing AWL requests etc). Without the HR Liaisons it would be catastrophic for colleges, departments, and programs. It is not clear how the reorganization will make things better rather than worse.

I think the VSP program is a tremendous asset. It would be good to see something from the College of Liberal Arts survive this potential merger.

Rationale #5 seems like a good plan to transition senior faculty to retirement. I would have liked more details.

No comments

Always beneficial to re-org HR teams to remove legacy actions and find new and better ways of doing things.

Same concerns as above.

nc

The problem that leads to excessive internal turnover is the fact that it is hard to adequately reward staff members for doing an excellent job in their current department. On many occasions where I tried to do this, HR refused the request, and I had to rely on a 1 or 2% merit pool to do what I could. Some people were happy with the fact that I tried to do something for them, but others, particularly those with families to support, left for other departments doing more or less the same thing they did for us, but for a substantial salary increase. Make it easier to reward people within a department, and the turnover will slow down dramatically.

As with facilities- there would need to be a point person for each unit to connect with... right now it seems that 20 emails are needed to get one question answered, someone else gets copied and the answer changes. It is very frustrating and not necessarily tied to the folks involved but a system that is inefficient. Hiring is harder than it needs to be and onboarding, especially for faculty, is so variable it is hard to know who is supposed to do what.

Again, overlap within colleges and departments.

Support. Standardization of training or clear places to go for information would be very helpful. I find the helpfulness depends on who you reach.

I am concerned about the evidence base substantiating the recommendations made.

Support Recommendation 1. Another sensible consolidation that will strengthen the university's operations. No opinion on Recommendation 2. Support Recommendation 3. There is a trade-off here, because we have an effective liaison in my department, but overall this move makes sense. We just have to make sure that in setting up grad student appointments, faculty summer funding, etc, that the centralized HR has the expertise to provide these services correctly. Support Recommendation 4. Investing in our people is a key need. Oppose Recommendation 5. The highly experienced faculty at Texas A&M are a great asset, and we should not support measures to accelerate their departure.

Centralizing units such as Human Resources may be helpful in some departments, but in other areas it will significantly hinder the work and success of faculty, staff, and students. More analysis, thought, and consideration needs to occur before any changes are made. There is value in having HR staff integrated within and easily accessible to units and colleges, resulting in efficiency and effectiveness.

No comments.

1. Human Resources Liaisons are the best conduit for bringing an understanding of HR processes to the faculty and staff who don't have time to work their way through a large and generic HR system. Eliminating them at the department level will lead to inefficiencies and more frustration. 2. The recommendation about the VSP is not well-founded enough to be implemented as stated in the report, and it also makes second-class citizens out of the many critically important professional track faculty who will not be able to partake in this effort.

It is better to not measure than to measure poorly.

Perhaps this could be better.

It is extremely unclear how many of the rearrangement components of this report apply to the Galveston campus. More clarity on this would be greatly appreciated. The report seems to contradict itself - it says that Galveston is doing fine and that it provides a unique experience for students; but then it also speaks of rearranging structures and centralizing authority within TAMU. How much of this applies to Galveston? The relationship between the college and the University has always been unclear. Some clarity on how the current president plans to address that lack of a defined relationship would be helpful.

The first experience of a new faculty or staff member is their interactions with HR. Organizational effectiveness, accessibility and messaging is important for new and existing talent.

I have had excellent experiences with HR.

I have no expertise to provide helpful comment on the proposed changes.

There are circumstances in which centralizing organizational structures can improve operations. There also are circumstances in which it does the opposite. The consultants' report does not recognize the possibility of negative outcomes. Since the most frequent problems faculty and staff deal with involving HR are related to the structure of the WorkDay system, this is likely to be one of those cases.

I am fine with the recommendations made.

I guess ok.

I concur with these recommendations.

"Invest in succession planning and talent management." Yes! I'm in Physics and Astronomy which has a number of older faculty but it seems like new positions are only available when someone retires. Making the new positions open a year or two in advance of faculty retirements would give new faculty the chance to benefit from the expertise of older faculty, and to take on a reduced teaching load so that they can get their research off the ground promptly. I've got no time off from teaching until next summer and a full 20% of my tenure clock is being spent struggling to get my local research programme off the ground half time.

This operation is completely inefficient. Almost anything you can do here would most likely be a net positive.

No comment

Learning technology and e-learning should be managed by IT.

The local resource of the liaison has been invaluable. The physical closeness to the department and their integration into the life of the department are key in their effectiveness. Faculty and staff can drop in for discussions or questions and get the support they need. Many of the proposed changes would decrease the human resources and organizational departments/offices' effectiveness by "siloeing" them in the way that the report tries to stop in other areas. Many faculty do not WANT a "one-stop-shop" as it won't be anywhere near where they usually go on campus. Having the liaison in the building and only very very occasionally having to physically go to another part of campus for human resource related things is much preferable.

Regarding Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center I understand the need and desire to centralize certain aspects of HR. I do not see where the Libraries fits into this recommendation, if at all, but I do want to express my support for the HR unit remaining in the Libraries. They are incredibly valuable in our hiring, reclassifications, evaluations, disciplinary, and so many other processes and are always available to us for a quick answer when needed. My fear in centralization is losing the familiarity of culture and quick access to assistance. Regarding Recommendation #3: Eliminate the Human Resources Liaison Network. I again want to express my support for the HR unit remaining in the Libraries. They are incredibly valuable in our hiring, reclassifications, evaluations, disciplinary, and so many other processes and are always available to us for a quick answer when needed. My fear in centralization is losing the familiarity of culture and quick access to assistance.

I have general concerns about the centralization of services. We are a big place—the size of a mid-sized city. Centralizing advising, IT, and business services will make this place A LOT less personal for the student (especially advising—students need a person that they know and trust to help them make important decisions—having centralized advising will ensure

that advisers are completely unable to offer personalized services—they won't know the students, and they won't know the programs). One of the things that makes Aggieland special for students is the community, the friendliness, the personal service that they get from our faculty and staff. Centralization will destroy that. Centralizing IT and business services MAY be more efficient (depending on how one measures efficiency) but it will CERTAINLY be less effective for faculty and staff. As with advising, the level and timeliness of service is critical for the efficiency and effectiveness of my work as a faculty member and administrator. I can't wait days for answers to questions, which is what happens right now when I have to reach out to centralized services. When I can reach out to someone that I know in my college's IT or business office—who I know knows the answers—I get answers immediately, which allows me to continue my work. Not having that will make my research, and my ability to get things done administratively (P&T, faculty development, etc.) MUCH LESS EFFECTIVE. Let me reiterate—RIGHT NOW, REACHING OUT TO CENTRAL SERVICES RESULTS IN WAITS OF DAYS OR WEEKS (OR INFINITELY). REACHING OUT TO OUR IN-COLLEGE SERVICE UNITS RESULTS IN WAITS OF MINUTES, AND IMMEDIATE SERVICE. That is how I measure efficiency. I would like to recommend that at least one of the measures of efficiency be ticket clearance times, but my experience with University IT and Educational Media Services just this semester leads me to believe that clearance rates are manipulated—both units cleared my ticket by referring me to a different unit. The problem—not having a mic in my classroom—took 2 months to resolve. If the consultant is going to rely excessively on metrics, they ought to make sure those metrics are valid.

---

No comments

---

In a large organization like TAMU there is benefit to having someone familiar with the staff/faculty/students in a particular unit and being able to assist them with HR issues. The investments in succession planning, talent management, and a voluntary phased separation program are good ideas.

---

I have no input on HR and Org effectiveness except to reiterate some of my other points above about the balance between efficiency and effectiveness. (i.e. sometimes the thing that should most efficient turns out to undermine productivity and effectiveness, specifically with respect to the power and value of personal relationships).

---

I think the consolidation of local human resources operations in Colleges and Departments would be a disaster. Although this change may save in administrative costs, it will substantially degrade the service each unit receives from local human resource managers who know what the problems are in their own units and can quickly provide answers. There is no way to replace decentralized and effective service with nominally more costly and inefficient service. Recommendation #4 concerning talent management is important and there is merit if it is effectively implemented. I strongly agree with Recommendation #5.

---

The findings and recommendations seem reasonable.

---

I support Recommendation #5: Invest in a voluntary phased separation (VSP) program for eligible tenured faculty members.

---

I have a question about process: was Human Resources and Organizational Effectiveness actually consulted when formulating solutions?

---

No comment.

---

No comments. Recommendations seem reasonable.

---

Okay, so there is a LOT to unpack here. In particular, the document suggests reorganizing HR and cites The University of California as an example: "A 2013 report from Hanover Research identified human resources as one of three areas where consolidation and centralization are most common within university systems.<sup>56</sup> In 2012, the University of California moved to create a centralized HR division for the entire system and to house that division at UC Riverside. The university anticipated that this maneuver would save \$100 million.<sup>57</sup> The University of California at Irvine created a centralized services center in 2015 in order to provide consistency to employees and managers on the Irvine campus." Yes, this was anticipated to save hundreds of millions of dollars for the UC system, but did they actually calculate how much was "saved" in the end? Because the centralized UC HR system, UCPath was originally proposed in 2011 with a \$300 million price tag and was supposed to be finished by August 2014, but by 2017 had already cost taxpayers \$942 million, (\$640 million over the original quoted cost!) and was not even finished! Also, by the time they started moving to UCPath in 2018, there were many, many problems. My graduate student TAs encountered problem after problem after problem with this system. Some of them were not paid for 6 months, leading them to not be able to make their rent (most graduate students do not have enough savings to pay 6 months of Los Angeles rent if they're not getting

paid). Many of them did not have their health insurance that they were supposed to have. Some of them arbitrarily got overpaid, and then were told to give the money back, but then after they gave the money back, they kept getting hounded for the overpaid money (that they had already paid back), with one branch of UCPath hounding them with angry letters threatening to send debt collectors after them and another branch reassuring them that it was okay since they already paid them back and to ignore the threatening letters. For my field in particular, the centralized HR of the UC system has had particularly negative consequences. In mathematics, job applications are done on a website, mathjobs.org, which is efficient, run by a nonprofit, and very economical (only costs universities a pittance to have their recruitment/applications on mathjobs and, of course, free for applicants). It is extremely convenient for applicants and especially for their letter writers and references. The letter writers just have to upload their letter once to mathjobs and the applicant can use that letter for all their applications. However, since UC switched to centralized HR, our letter writers have had to upload letters separately for every single UC. (Like not just once for each applicant for the UCs in general, but once for UC Berkeley, then once for UCLA, then once for UC Davis, then once for UC San Diego, then once for UC Santa Barbara, etc. For each one, they have to fill out a form.) Nobody is sure how the UC's centralized HR system managed to botch this so badly. So really, I think in this instance it would be important to find out what the results have been for universities that have switched to centralized HR before following in their footsteps.

---

I perceive consolidation of Human Resources and Organizational Effectiveness is to cut staff (RIF)

---

Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center.

---

I like the idea of merging the payroll and Human Resources and student employment operations under a single umbrella. The divisions between these operations in the past felt artificial and motivated by individual power and resulted in a lot of wasted resources in shifting blame and finger pointing. However, all support operations for individual units cannot be handled out of a single unit. The institution is simply too big and complex for that. Larger units need local Business staff and HR liaisons to answer questions and provide guidance in navigating the complex systems of tools and processes, such as Workday. The typical supervisor does not know the legal and procedural details of hiring or handling an employee's illness.

---

Currently, the system is broken. Central HR refuses to speak to faculty or staff directly, and instead the HR liaison (who don't know the answers or have the resources) act as the go-between. If central HR were actually willing to answer questions and engage directly, that would be wonderful. Note that we would still need business staff in the department, and it is not possible to centralize all payroll functions because each academic unit has certain specifications and restrictions on how they pay people, particularly graduate students.

---

Recommendation #1 (Reorganize HR): could possibly result in less personalization among HR staff and programs

Recommendation #2 (Cross-Training): I support more cross-training in all functions at TAMU, but this requires adequate staffing, which has been in decline, especially the last year. People need to be able to go home by 5 or at least by 6 as well as have a vacation in which they don't have to spend their time working remotely. Recommendations #4 and 5 (Succession plans and VSPs): I am supportive

---

Generally, HR is too bureaucratic and during COVID-19 times it has been difficult to reach people and to get answers and call backs. Thus proposals #1 and 2 are meritorious. I did not understand proposal #5 ... if voluntary and optional, then it may be fine. However, I question why APT faculty with 20 years should not be included (it won't be that long before APTs begin reaching such duration in numbers). The Prof of Practice subset (CoE -- n=100+) are often considerably older when they begin with TAMU, but something needs to be done to provide them with employment security (hence to enhance recruiting), and to increased succession planning when they leave TAMU.

---

I would appreciate a more consistent user experience

---

I agree that investment in succession planning and talent management is critical.

---

I sincerely hope that any changes will improve timeliness of actions and response to faculty, staff, and students. The bureaucracy at our university is already overwhelming, and I am concerned that it can only get worse.

---

There are huge benefits to having an HR person who understands our department. How has the impact on departments (by removing staff) been considered to date? How will this local support be maintained in a centralized move?

---

Who ever said the world would be a happier place if HR ran everything? MGT, maybe, but I haven't heard that anywhere else.

Again, I am skeptical that centralized HR will be improved. However, I do support cross training.

Human resources ties directly to morale. If this is done poorly...we will be in a world of hurt. Please seek guidance from staff on how this should be managed.

We do need local HR specialists

This is not my area of expertise, so all I will say again is that input should be sought from all stakeholders, and in the form of genuine collaboration rather than some meaningless survey. Separating some of the HR process from some of the finance processes as indicated in the report will not be possible, so it is worth repeating that input from the experts on campus should be included as much as possible.

The most important thing pointed out in this section was the inability to promote people. All of us have to continually each others' good workers to get them a pay raise. This is not efficient and it is wasteful for the University. You HAVE to find some way to do better with career ladders, find better ways of helping us keep the best without them moving to new positions in other depts.

Having HR, finance, etc at the University level would hopefully put more personnel where they are needed - as well as getting more consistent responses. Streamlining processes would be desirable - most of the recent implementations (concur, workday, interfolio) have all seemed to add barriers and slow down processes, creating more work for everyone (it should take 6 weeks to rehire a student who worked for the Libraries less than a year before).

Human Resources lost my respect with the purchase and roll-out of Workday. I know people who work for Workday and what our HR program described as not doable, the splitting of our medical, etc., payments over 11 months instead of 9 months, is actually doable and done for other users of Workday. It is a shame that a computer program negatively impacts the way we live, instead of enhancing our lives. The people at HR are great.

I am concerned about this centralization. I can now easily walk into the office of one of our administrative assistants and get account information, pay invoices, hire students, and do many other things. I would want our Department person to be there rather than go see a stable of people and never get any continuity and talk to someone who really understands my needs. I fear that this will create more bureaucracy and be very inefficient. We desperately need to maintain some local control within a Department. Every department is unique and needs a local person. AgriLife did this and it is a disaster.

I don't like the dual reporting structures that this would create between the schools/colleges and the President's Office.

Our centralized HR has not been helpful. It is where things disappear. Twice I've had injury requests or disability requests that just are not responded to at the central HR level. Our departmental HR employees are very knowledgeable and helpful and actually do get things done. Centralizing this would make things more convoluted as we have people who actually have institutional knowledge in our departments and make processes smoother. Based on past experience, we need someone to talk to central HR who can get answers when we as the employee can not get them from central HR.

I agree with Recommendation 3 Eliminate HR Liaison Network. There is strong need for Recommendation 4. Succession planning is badly needed. Recommendation 5 VSP. Positive step but I am concerned about the sentence "The TAMU President shall have the discretionary authority to select participants, determine eligibility for VSP payments, and construe the terms of the VSP agreements." President and Provost should set guidelines but VSP should be administered by department heads and deans.

I would encourage keeping some semblance of the HR Liaison role in the departments as having department-level HR assistance is quite critical to DHs (and faculty) in promoting smooth and efficient processes - I have no doubt that some centralization of HR functions would be appropriate/valuable, but I also see the benefit of the HR Liaisons to help facilitate day-to-day HR functions in a department.

I think its important to retain some department-level business and human resources-related staff and expertise. Each unit has some special needs and circumstances that are best managed and informed by individuals who work with them on an ongoing basis, become knowledgeable about their various needs, and are easily available for consultation and collaboration. Overly centralized business services will create new inefficiencies as an increasingly generalist staff attempts to manage the varied administrative needs of the university's many units. There will be large and recurring wastes of time and effort for administrators, faculty, and staff as situations that can quickly settle into standard operating procedures among specialized staff must be re-explained and solutions re-discovered in a shared services

model.

Again - the problem with centralization is that those people are removed from the units they serve and therefore do not necessarily know or understand what the unit or department actually needs in that job role. I do agree that providing cross-training and career paths would be a welcome step forward! Many of these are business solutions that are suppose to be good, but from what I've heard from people working in those environments - they often end up stifling talent and moral.

can't comment

I think centralizing all of HR would be a disservice because of the diverse nature of the colleges and their needs. This could negatively affect hiring.

Please allow TAMU to hire/allow remote workers, particularly in Sponsored Research Services and Research Compliance. These organizations suffer from high staff turnover and often hire minimally qualified people merely to fill the position. Consequently, grant submissions and managing research compliance can swing from arduous, error-ridden messes to effortless, depending on whom you get. Further, once you find someone who is engaged and does good work, they are often gone before the next grant cycle or compliance deadline. Please allow TAMU to hire remote workers to access a broader talent pool and have better workforce retention.

The attention to the climate is needed to make sure the university is functioning while faculty and staff feel engaged.

Proposed centralization has to happen here. Very happy to see this.

My interactions with HR lead me to support any changes to HR.

Consolidation of business and support staff in AgriLife has also had a very detrimental effect on faculty. The result is that faculty have less access to things like HR support, and it is taking much longer to hire people. Based on the experience in AgriLife, consolidation of HR services at a high level would be a serious mistake.

Organizational effectiveness is unachievable in a system this large. The best that can be achieved is to ensure that roadblocks are minimized and that all of the new "efficient and effective" policies don't trickle down to more workload for faculty (the current status).

No comment

Higher education is about people, and the success of the university relies on employing and developing amazing people – students, faculty, AND staff. Please consider the efficiency and effectiveness of dotted-line personnel embedded in the units they know well, and please do not remove the human element in the spirit of consolidation and efficiency. HR staff who are located proximally to their customers provide far better customer service and also have a much greater sense of institutional pride. This is particularly true of the HR support based in the International Ocean Discovery Program who must support personnel on a 24/7 basis when they are working from the drillship in the middle of the ocean!

I support proposed changes in this section, but truly wish there was some opportunity for similar HR management across TAMU and the various agencies. I did not see much regarding hR and the agencies.

Too many good staff max out their potential within positions and leave to better paying opportunities due to lack of advancement opportunities in their current position. This turnover costs much more than paying fair market value for the staff as an incentive to stay in that position. This needs to be addressed.

The structure for handling the most essential issues -- insurance etc. -- has been well-designed, and Human Resources people are quite helpful in person. But there are many time-wasting demands -- sometimes crippling to research programs -- that come down from the System and university bureaucracy. The goal is often to protect bureaucrats at the expense of faculty, students, and staff.

I agree with the finding that having centralized, one-stop HR service center would be great.

Recommendation #3: Eliminate the Human Resources Liaison Network. This will be a disaster. If one implements it any little mundane problem will become a week-long ordeal. We all know what will happen. In order to resolve a small issue I, a faculty, will need to contact some central office. Which (in order to decrease the cost) will not have enough staff. So I will be put on hold or asked to leave a message or contact through a web service. As I am not a specialist in the area I

will describe the problem in terms that the person on the other end will not understand correctly. So it will require half a dozen of emails to clarify the issue. This is if I am lucky and the person on the other end does not change. As a result of a couple of such experiences, the departments will have to assign administrative personnel to deal with these issues. The net outcome of such a "reform" will be the increase of the administrative personnel in the central HR office and the additional money from the department's budget spent.

Please don't centralize business services or academic advising. It is important that the people in these roles are part of the unit that they serve.

-Streamline the voluminous position descriptions and tiers of human development at TAMU. It could be reduced by 75% and there would still be more to streamline.

Cumbersome and somewhat difficult to navigate but that may be the nature of large complex organizations everywhere. It could be worthwhile to seek outside assistance from a non academic HR consultant who has expertise in large complex organizations.

I don't know whether I understand the implications of the proposals, but one of the biggest problems I have faced at this university is the absence of competent administrative staff, and the assignment of too many duties to them. I don't know whether "cross-training" will make this worse or better.

No recommendations.

I agree with Recommendation #1 (one stop HR Center) and Recommendation #3 (eliminate the liaison network). I have taken FMLA leave twice at the university and both times were different depending on the HR liaison I was working with at the time. The process was not consistent and their understanding of the process was different. It resulted in me having to do FMLA forms over again because of misinformation that I received. Anytime I tried to contact "big" HR over at the GSC for clarification I was told to contact my HR liaison. There absolutely needs to be a central location for all HR needs because I have heard from colleagues in other departments that things like FMLA, leave policies, etc. are not applied equitably across campus. Centralizing HR services would eliminate the back and forth confusion for faculty/staff/students and ensure processes are completed appropriately and on time.

No comment, but agree that a common system for TAMU makes sense.

What a mess! Our most knowledgeable and helpful people in the Galveston HR office are student workers and one employee who used to be a student worker (who graduated with a science degree)! Absolutely the least helpful office on campus. Of course dealing with Workday is also a contributing factor. Our staff are told by various offices how to do something, and then someone in HR will say "no you weren't supposed to do that" with no feed back on how to fix whatever the problem is. Combining our HR office with TAMU's makes sense, but we still need local help.

I worry that removal of the HR liaisons will be to the detriment of divisions/colleges, given how customized everything else. Will there be additional work to standardize processes across colleges, so that it doesn't matter which HR person works where? (Or am I mis-understanding the HROE reorg?)

Promote wellness, healthy bodies not treating symptoms with drugs and procedures. The human resource is the human body not a government/university run health care system. This rush to equalness is a waste of time. The pie can't get bigger that is the mistaken belief of the changers of what has been working. A&M has always been different in that it finds a way to educate students without indoctrinating the into an ideology. Again it's the students not the university that matter. The students pay our salaries. We don't need to be MIT or Harvard where students are thrown out because of their political beliefs.

Mostly good to align all units

This level of centralization creates a host of it's own problems and eliminates much of our current advantages of a decentralized system accountable locally.

While it makes sense to centralize many support departments such as Human Resources, our faculty experience in terms of centralized fiscal operations related to research expenditures is that it does not increase effectiveness. A central fiscal department may work, but in-department fiscal assistants that are familiar with faculty research are essential to maintain a productive research enterprise. Centralizing those fiscal support staff results in losing touch with faculty members, creates long-wait time, and a deflection of duties and needs. Overall, this results in a decrease in faculty support to submit grant proposals and the effective management of existing grants. For example, working with SRS, a centralized research fiscal department is effective only when we have in-department fiscal assistants that are

knowledgeable regarding the specifics of our individual grants.

---

HR needs designated personnel 100% devoted to the HR responsibilities of their unit. I believe that is your recommendation

---

No comment.

---

Please streamline the hiring process. I am adjunct faculty and my department has been working on full-time positions I could apply for going on two years now - Covid and the President's hiring freeze factored in - but they have the funding in place. However, the amount of red-tape my department has to go through is staggering, counter-productive and deflating. I have applied for other positions as well and have yet to get any sort of response. Or, I get a response 6-18 months, at best, after applying. My efforts seem to go into a massive void with no response or resolution.

## Human Resources and Organizational Effectiveness - Staff

Please provide your comments related to Human Resources and Organizational Effectiveness:

---

I am very concerned about the recommendations for reorganizing HROE. IODP is an interesting organization with staff from several countries, and the nature of our work requires us to travel extensively and work remotely. Our HROE staff has become very adept at handling almost all of the needs of our organization and advocating for our staff. As a rule I think HROE is another discipline that can benefit from the use of technology and strong, centralized organization, so I am cautiously optimistic that the recommendations will result in a net improvement for most university departments, and possibly our department as well; but there is also significant risk that insufficient planning can result in degradation of service for departments like ours that have special requirements.

---

Human Resources and Organizational Effectiveness: Finding #1, Recommendation #1: Reorganize HROE and implement a one-stop human resources service center. First, I suggest that Finance and HROE are so tightly tied together, that I would recommend to further streamline effectiveness, that HROE should report under Finance and Business Administration (the CFO). Having the both Finance and HROE under the CFO is the first step to effective and efficient HROE operations. Secondly, I highly suggest that removing individuals from the colleges that they serve would be problematic and cause further efficiency and effectiveness issues. However, I do suggest that better and more effective communication on processes, issues, and trainings are needed from central HROE. A weekly newsletter and occasional zoom I do not believe is helping the issue. Finance has developed a monthly meeting that occurs where finance professionals tune in and Finance addresses initiatives that are coming up, address problem areas, answer questions, etc. This has been very effective. Every college is different. It is imperative that "boots on the ground" individuals remain in place in colleges and departments to address the combined HR/Financial requests. Again, HR and Finance are so closely aligned that separating the reporting for those could create further issues. While I greatly appreciate all that HROE does, they have internal operation, retention, and training issues that need to be addressed before moving reporting structures from the colleges to central HROE. There are many ways that effectiveness can be obtained. Many of the delays experienced are due to TAMU not using the systems we have to eliminate redundant processes. Example: Workday can handle many processes that we are currently required to do off system. It appears with the implementation of a new system, we continue to do things the "old way", which creates many additional steps outside of the system that we implemented. I believe that working on central HROE and improve their efficiencies, communications, training, etc. should come before any other centralization efforts are made.

---

HR Liaisons network should be strengthened, not removed. Further effort should be done to support compensation on par with other institutions and similar roles outside the university. The suggestions of working on talent retention and increased benefits and pay should be improved. Finding someone to talk to in HROE is difficult enough. They do not feel like advocates for the rest of staff.

---

Inadequate HR results in lawsuits, retention, and quality issues so this may be the one area that benefits most from lean centralization. Siloed HR leads to expertise not being leveraged and policy not being followed. HR Liaisons create an environment of part time responsibility in a place where full time professionalism is required. Succession planning and talent management would be highly appreciated especially amongst staff members. Voluntary phased separation should also include Administrative staff.

It would be really nice for HR to be responsible for HR functions like ADA and FMLA. Most HR liaisons in academic departments have many other non-HR duties to go along with their HR duties. It would also make more sense for academic advisors to be tasked with Campus Security Authority (CSA) duties instead of HR liaisons. I am concerned that employees and prospective employees will experience long wait times if they are forced to call or e-mail a centralized HR center for all their HR questions. Since hiring/reappointment/termination decisions are made at the department level, it seems like a centralized HR will create a bottleneck during peak hiring times (like August - September). Hiring and reappointments for each new academic year take over a large portion of departmental HR/payroll activities at that time of year, but it is very cyclical and short. We need to make sure that we take care of our new hires and not create delays for them in receiving their first paycheck, relocation allowance, or benefits coverage. We definitely do not want them to feel like they are just a number in a queue.

With all due respect to the staff, who I'm sure are lovely people, the fact that Flourish exists is a direct insult to every department that has been prohibited from providing cost of living raises or hiring to fill essential vacancies during these past two years. The general inefficiencies of our HR are mind-boggling. A PostDoc position that is fully grant funded (does not impact state budget) and has been vacant since June was not approved for posting until mid-September. To the best of my understanding, we are \*still\* waiting for HR to give us permission to interview the two candidates that applied. The request for permission to interview was issued more than a month ago. I have seen student worker positions take multiple months to get fully processed/onboarded - and that's after the 1-2 months it always takes to post the position and then get permission to hire after the interviews. It has never taken us more than a week to get all potential candidates in for interviews, and we usually have our choice by the end of the last interview. But we wind up waiting a week to officially extend the offer, and then 4-6 weeks for them to actually be able to start. One of our research partners has given up on hiring students entirely, they have only "volunteers" in the lab. This is naturally very illegal and drives security nuts because we wind up with badge access doors getting propped open all the time, but it's what happens when you have students who want to work in a lab and a PI who wants to train those students and an HR department that takes half the semester to do literally anything.

The one-stop HR services center is one improvement that should help to improve or negate negative feedback in the future. I've been cross-training student workers to prevent gaps in tasks for many years and approve and highly recommend we do this as much as possible throughout campus.

It is critical that some communication arm of HROE be left in the units/colleges/departments.

While I can understand the need to centralize HR, I think this needs to be done with care. There are many HR units, such as those that support the Division of Research, that are functioning well and meeting the needs of the faculty and staff. Centralization should focus on improving efficiencies (e.g., consistent processes across campus) while maintaining the functional systems/working relationships that are already in place.

1) Departments still need HR Liaisons to coordinate processes and advocate for employee needs. HR Liaisons are trained as HR Generalists. Employees speak more openly with people they know, and it takes time and intent to achieve this in a work environment. Who will be on the spot for First Reports of Injury, Title IX reports, or to help an employee through a spouse's cancer diagnosis? Who can speak with a supervisor about stress-related job performance and the need to help the employee through difficult periods? We must have personal contact with employees to be effective administrators of HR benefits. The centralization of all of HR would inevitably create new inefficiencies. The university could also be exposed to new types of law suits during this social climate that demands greater sensitivity from our large organizations. 2) The expansion of new business staff in the past few years may be related to the implementation of Workday. Our department, while managing an ever-growing workload, was overburdened by the change to Workday. We can never recover the productivity levels enjoyed under our legacy program even though we are now well beyond the Workday learning curve. While the necessity to change to another software system was obvious, it came at the price of efficiency. My department increased admin/business staff by 25% to accommodate the additional workload. 3) Some administrative processes within the university are being duplicated and there may be opportunities for consolidation. Centralizing Workday tasks could result in a cost reduction. Many Workday processes within recruitment, hiring, and onboarding are unnecessarily long due to the software architecture. These tasks could be handled in a central office, rather than at the department level. While those specialists would still work closely with the departments, it might reduce costs to have Workday tasks performed by those who are best trained and who work in the program every day. This also eliminates the additional time department users need to continually relearn changing process steps. 4) Due to the limited employee pool and the current social climate regarding the work, AWL and remote work options must

become viable tools. We agree that rules and processes must be governed at the highest level to protect the university, but it would greatly help if employee decisions, such as AWL or remote work, could be made at the department level (similar to flex schedules). Local administrators can determine the benefit of allowing employees to work from home or in alternate locations. Though the current HR Central leadership has voiced support for an “everybody back in the office” approach, the pandemic revealed the efficiencies of work-from-home for our department. We became a more productive workforce during the pandemic, even though 85% of our department worked continuously outside of the office. Returning to the office after fifteen months of working from home, there is now new resentment from many staff for being “forced” back into the office. Our knowledge-based workers have proven themselves capable of high-performance and accountability amid a flexible schedule. We hope for the discretion to use AWL and remote work as perks for a job well-done, as well as having the ability to help lower performers develop their skills in the office. 5) There could also be a cost savings to the university when employees work from home. In such cases, the employee accepts the burden and responsibility of the costs of the work environment. The office footprint could be reduced with AWL and remote work. Departments might share or reduce space in the process.

---

See comments on decentralization recommendations from the last PWC report under Finance and Business Administration.

---

Morale has been low since the report was released. TAMU employees are stressed out. The proposed changes are daunting. Many people feel confused where they fit in TAMU. Human resources liaison provide important services. Do not consolidate. Cross-training is not that good with a university this large. The registrar's office is struggling with their one-stop center.

---

I agree very much with the effort to recruit and retain top talent. However, I worry that much of the consolidation suggested in other parts of the report actually works against this goal. There is a feeling that staff and faculty will have increasing burden, rather than support -- and I believe we're already seeing faculty and staff turnover, as a result. That makes me very worried about the amount of work that will then fall on the rest of us.

---

I support a university centralized HR model; however TAMU HROE must elevate their expertise before centralization can occur across the university. We get conflicting answers and guidance to processes frequently. The mechanics of the implementation and structural hierarchy is critical. One concern is that the report does not speak to some HR staff being left in their respective locations. While a “one-stop-shop” makes sense for some HR functions, there must be some representatives left in their respective locations. Faculty, staff and students seeking HR assistance must have access to reliable experts or remaining administrative staff will be solicited to help with those inquires. While it makes sense for HROE and Payroll to be merge into a single reporting structure, there is a financial/budget component to Payroll and separating that part from Finance is not in the best interest of the university. Faculty have access to several sources of funds and aligning effort with their budget must be addressed. I also believe it to be more ideal for HROE/Payroll to report to the Vice-President of Finance and not the Chief Operating Officer.

---

How can "eliminating the Human Resources Liaison Network" "increase communication and efficiency for employees/customers" -- the point of the network has been to INCREASE communication and efficiency. I do agree with consolidating Flourish into a Wellness Engagement unit.

---

The centralization of Human Resources is necessary. It is too difficult for employees to contact a resource that is supposed to be here for our protection and support. During a particularly rough time in my last department, I was told to go through our HR liaison to get in touch with my HR representative. In an already toxic situation, to have to go to someone in my office to get to a resource for my protection was a barrier to entry and hindered my ability to contact HR. With HR being so de-centralized, processes are not the same and outcomes differ greatly. When I was told that “the process we are using has been approved by HR” during an internal promotion, there was no way for me to verify this or seek guidance on the process. Employees need to know how to contact HR, the processes and procedures, and scope of care. In the current system, this is not being done.

---

There should be mini-centralization of HR services across campus but direct reporting to the HROE is not necessary. Small units across campus struggle with their HR services because the unit is too small to justify having more than one person assigned to business services. This creates issues when the business person needs to be out (say on FMLA) or this position experiences turn over. The new person will not receive adequate training if they are the only person in the unit responsible for business services. Another struggle units across campus is a lack of true HR positions. Instead, financial business personnel are given an HR Liaison designation and expected to conduct HR duties with minimal education, training and experience. HR Liaison duties should be stripped from financial positions and replaced with an actual HR

Business Partner. HR services can be consolidated in a college (as opposed to each dept having their own HR person) or for multiple units in a non-academic division. This will allow the mini-centralized team of HR personnel to capitalize on shared expertise and to provide departments with a more consistent delivery of services, data, and reporting. This also allows the HR services personnel to be close to their customers and advocate on behalf of their needs. Centralizing to HROE will negatively impact the engagement/relationship of the customers the business services team will be servicing. Reporting to the HROE removes accountability to their assigned units and decreases the level of customer service the business services team feels they need to provide to the unit they are servicing. In the past HROE has struggled with wanting to gatekeep information to remain the Subject Matter Experts in order to be the "be all, end all" of HR services for the university. While there is a need to have approvers to maintain compliance, this mentality has stiffened the university's ability to truly capitalize on the strategic services an HR organization should be providing. Centralizing HR services will only increase this issue for the university and the other depts throughout tamu will be the ones to suffer. Recruitment efforts should also have a mini-centralization over being centralized to HROE. It is essential for recruiters to have a close relationship with the units they are recruiting for. Without that close relationship, the recruiter risks hiring someone who seems to be a good fit on paper but they actually do not have the soft skills or cultural fit to be successful in the hiring unit. Centralizing recruitment to HROE will move the recruiter too far away from the hiring unit to maintain the close relationship needed to be able to assess a candidate for a good cultural fit. Poor hires due to this type of lacking relationship will lead to a sense of alienation and possibly create conflicts between managers, staff and the fully centralized recruitment office. Mini-centralization, such as Academic Affairs Recruitment Office (AARO), has been highly successful in providing exception recruiting services to hiring managers.

---

I strongly disagree with the proposal to eliminate the Human Resources Liaison Network. I think the data in this section of the report is incorrect and that there is a not an understanding of what the HR network does.

---

All HR responsibilities should be within HROE to include Faculty and Research Titles. Workday should also turn on the academic portal.

---

There should be an easier avenue in regard to HR. Although IT has a liaison it is typically difficult to secure information, and sometimes when directed to university HR - either no information is provided, provided in a timely manner or given at all.

---

I support all recommendations.

---

HROE arguably needs to be the most innovative and progressive unit on campus. Texas A&M University is a difficult institution to recruit top talent to, particularly on the staff front. This needs to be a priority of HROE and the university, or we will never achieve the preeminent potential laid out in the MGT report and that lies in President Banks' vision for the university. We need more from HROE on all fronts. We need HROE to be a partner with us from the onset of position conception to ensure we can both recruit and retain talent at Texas A&M University. And we need to think about how COVID19 has allowed us to think differently and more boldly about our relationship with work. People want to work, but not in a 2019 environment when they know they don't have to anymore. Metrics needs to drive our actions. We are losing people. We need jobs reports each month made publicly available. TAMU has the global expert on this phenomenon we all are impacted by in the Great Resignation. Why are we not talking about this openly and inclusively to discover the low-hanging fruit that we can harvest right now to overcome the challenges we all face in retaining talent. Please ensure HROE has all the resources it needs and then some, and that the leadership is ready to be a bold and innovative leader. Then please ensure the organization has the capacity to prototype, study, monitor and evaluate, and scale innovations in workplace trends so that TAMU does not get left behind.

---

This is a university-wide operation and should be managed in a way to ensure that Texas A&M University HR information is communicated in a similar manner.

---

I agree with the lack of upward mobility and clear succession planning for staff and faculty as a whole. I believe the high internal turnover rate is due to staff not receiving title promotions and raises or being able to advance in the office structure. The only way to advance seems to be to apply for positions elsewhere on campus or even externally. There needs to be a more clear career ladder for all areas, and promotions and raises should be considered regularly to reduce turnover of good employees.

---

My only concern is losing the very real need there is for dedicated HR support within Units. Trust and confidence is something that is built through relationships with individuals so while I am supportive of centralizing HR, please be mindful of the great benefit there is to having someone I can trust with issues that is both tied to and understands me as

an employee and manager.

---

I support the idea of a centralized office but with sections that cater specifically to specific colleges (eg. professional schools, such COM with complex accreditation requirements).

---

Centralizing HR seems reasonable. The current structure has many inconsistencies and adds unnecessary costs to the university.

---

Questions & Comments: In a time identified by an A&M faculty member called The Great Resignation, which has been discussed at length across the country, centralizing HR would be detrimental to the trust and retention of the employees at Texas A&M. Building a “one-stop human resources service center” (p. 65) sounds less accessible, as well. HR liaisons have built trust with their teams, and if moved, those relationships would dissipate. HR liaisons are a proactive and preventative approach to retention, without this in place, we will see more employee disengagement and disenfranchised attitudes.

---

As an HR Liaison, I cannot express to you how detrimental eliminating the Human Resources Liaison Network would be. Centralizing HR is not the answer. The current Division of Human Resources and Organizational Effectiveness is already struggling to accomplish the needs of the University while having the help of the HR Liaison Network. They also have very limited interactions with the day-to-day employees at Texas A&M University. HR Liaisons work directly with the employees at TAMU. We understand how our actions, policies, and responsibilities affect our employees, and our goal is to serve our employees and department. HROE is a great benefit to the University, and it is necessary for HROE to exist. However, if HROE were centralized (with no HR Liaison Network), the employees of TAMU would suffer because HROE does not have hands on employee interaction. The work of the HR Liaison Network would not go away if HR is centralized. It would just leave departments with HR-specific needs without an HR-specific individual trained in those specialized needs to handle those tasks OR have the same people handling the needs but making their job much more difficult and routing processes through unnecessary channels for their responsibilities to be accomplished. Also, as someone with human resources experience, I can testify to the fact that human resources handles a huge umbrella of needs. HR Liaisons are able to handle many needs TAMU employees experience. When needed, we are able to directly contact HROE, Payroll Services, etc. and get things accomplished. A "one-stop human resources service center" would require all of the specialists at TAMU to be involved in the one-stop operation. If these specialists were involved in the one-stop operation, the day to day operations as they currently exist would be negatively impacted because it would remove the specialists from their current responsibilities or cause them to also have to handle walk-in needs which would cause them to have to stop and go on their current responsibilities.

---

Streamlining the HR process would be highly beneficial. The current time it takes to get a staff/advisor position posted and hired is ridiculous. It should not take months.

---

The degree of Technology Management needs to stay in the College of Education. The degree could use some improvements but the best place for the degree is not in engineering. There needs to be a degree that teaches the future the ability to manage technology. As we move forward, there is always more technology coming out and the role of IT will be changing. This degree has so much potential in it and I believe that the potential will be ruined by moving it to engineering.

---

I agree with the comments in this section. It has attempted to rebrand itself but provides little value to me.

---

Dotted lines put people in the position of answering to two bosses.

---

Identifying how to align Galveston services (such as HR, IT and MarComm) into the overall University umbrella should be balanced to avoid the loss of local knowledge, perspective and (in some ways) authority. Because of the nature of what HR does, I might suggest a dotted line to the unit in College Station rather than a command structure that excludes the Galveston Chief Operating Officer and Vice President.

---

HUMAN RESOURCES AND ORGANIZATIONAL EFFECTIVENESS Pg. 68. In a similar manner, Human Resources and Organizational Effectiveness Communications is best enveloped into the university's central Marketing and Communications division. As long as the communication continues after it is moved to a different department because it is vital communication to all employees. I am concerned that if this information isn't coming directly from HR to employees there will be loss of critical detail. Pg. 69. These liaisons work as part-time HR support staff, while another percentage of their FTE is spent performing additional administrative support functions for the departments where they are embedded...Eliminating the Human Resources Liaison Network will improve accountability and customer service

across the organization. Current HR liaisons will have the opportunity to become full-time HR staff and provide adequate support functions. This is a false statement. Most HR Liaisons are not part-time HR support staff. The majority are actually administrative support only and have had the title of HR Liaison dumped on them with little to no HR training or skills. The idea that these employees would be given the opportunity to become HR employees is absurd because most lack training or experience in an HR department. Also, if HR Liaisons became HR employees, who would do the vitally important administrative work for all departments? In addition, there seems to be confusion over HR employees, HR Liaisons, and the HR Liaison network. In many cases, HR Liaisons are department administrative staff who submit paperwork to the HR department and forward HR communications to department heads/staff. The HR Liaison network is a newsletter that is really helpful for keeping up with HR programming and changes in HR processes. Pg. 70. This could include the implementation of a student employee program to assist in meeting succession planning objectives. Unfortunately, this would not work for the professional programs outside of training for faculty positions. The education professional students are receiving is highly specialized and they would be unlikely to work in non-faculty positions in the college after graduation. Pg. 71. To invest in recruiting and retaining the most talented faculty and staff at TAMU, the current leadership should create opportunities for professional growth and development to ensure that TAMU promotes its most knowledgeable and functionally proficient staff. I think it is important for development opportunities to include learning outside of the staff's current field or position. For instance, I have no interest in continuing in my current job field and would very much like training in strategic development and policy creation. This could also open up opportunities for staff in other areas and help with succession planning objectives.

The former [REDACTED] informed the division that he was talking with the MGT auditors and steering them toward goals that he wanted to move HR forward at TAMU. Unfortunately, the auditors listened because these recommendations don't begin to address the main issues with HROE. The former [REDACTED] wanted to have a one-stop human resources service center. In his mind, the issue with HR was that it wasn't centralized. I would like to offer that it is centralized. All of talent management, benefits, classification and compensation are all completed centrally and the service isn't great. Let's take class and comp, we can wait 4-6 weeks for a reclassification to go through. You submit it and then it sits in a queue until the manager of class and comp assigns it to an analyst. Then it takes another 2-3 days to get the feedback before it's finalized. Ultimately, a reclassification sits with 4-6 weeks of non-value added waiting time. How does centralized services solve this issue? We'll just all be in one place entering in reclasses and waiting for stuff to get done. It doesn't address the true problem. The issue is HROE's processing is inefficient and they need to go process by process to identify where improvements can be made. In addition, they need to leverage technology such as Laserfiche to improve efficiency. We use Laserfiche in AABS and it helps to standardize processes and increase turnaround times. Another issue I have with the centralization of human resources into a service center is that it doesn't address the poor customer service. In fact, unless the objective of centralization is to save money, then it isn't an effective strategy. The cons of centralization across the industry is the reduction in customer service. If the improvements we need to make are based on decreasing costs then centralization is definitely something to consider. However, as I have stated, centralization isn't the issue with HROE, it's inefficient processing and poor customer service. A centralized processing center removes the HR person away from their customers and reduces the ability to give the white glove customer service that all of our employees deserve. In recommendation #3, it is suggested to eliminate the HR Liaison Network. I partially agree. I don't believe it should be eliminated but reimagined. I believe that HR and Finance need to work together like we have modeled in AABS. HR should partner with Finance to create "centralized" groups across the university that have dotted line reports to their respective homes. These HR "liaisons" are actually given titles as HR Business Partners. Instead of letting anyone have an HR Liaison designation, the university would recruit for HR professionals to serve as business partners and provide centralized services to a group of departments. The biggest problem with the HR Liaison network is there are too many "HR Liaisons" who have no business working in an HRIS system like Workday. They have no training or idea of what it means to work in HR and no dedication to the profession. The other findings, I support. We need an investment in talent management and succession planning and an opportunity for employees to be cross-trained. I would like to offer that the voluntary phase separation program should also exist for staff as well as tenured faculty.

None at this time

More admin/business staff need access to workday, even if view only to do their jobs effectively. Please do not take away access users currently have. What used to take 2 hours to hire fulltime staff, now takes about 3 days. It is at least a half day to hire student workers due to all of the before hire, during hire, and then onboarding processes. Workday roles

for payroll processes are listed under HR, if trying to reduce users, may need to create a payroll liaison role separate from the HR liaison role. COM/HSC has to obtain approvals outside of workday to just turn around and route through most of same approvals in workday, causing duplication of work at several different levels.

---

I have been at TAMU for 22 months, the hiring process takes a while. Opportunities for improvement.

---

N/A

---

Centralizing HR would be a major problem, as people "do business" with people they like. Knowing that the DRL HR Liaison has our back and is willing to go the mile for us helps us be more productive, rather than worrying about a problem. Human Resources is about HUMAN resources, and that is built on trusting relationships. Eliminating the liaison network would limit accessibility of people to much needed help.

---

Salaries are greatly outdated and have no bearing on the cost of living in this area. As one of the fastest growing areas in Texas, with the cost of living increasing, and the value of properties shooting skyward, the old salary grades used are all well off the minimum baseline for salaries. OR Job positions are using the wrong Pay Grades and need to be reengineered. However the prior is more the case. Home values in 2010 were around the \$180k mark. Now they are at the \$280k mark. An increase of \$100k on average for homes in our area. Our salary grades absolutely DO NOT reflect that change in cost of living expenses in this area which closely resembles Houston as our closest major city. When research the correct salary amounts for a position, Houston has the best realistic comparison. The inability to create a pool of candidates that can be used for multiple jobs at the same time is a major and time consuming hindrance. Even with jobs of the exact same title in the same department, candidates must apply to each job individually to even be considered. Instead a pool of applicants for multiple positions should be available and be able to have candidates slotted into any position. Those candidates that are not chosen should be in a pool/warehouse of campus candidates that may apply or could be recommended to other departments or colleges for positions within their area. This would eliminate the need for an applicant to have to resubmit a job application for every opening if they even find those open postings. Personal HR liaisons that work for and with groups/dept./colleges should continue to exist as the HR environment needs to have a good grasp of how these different entities work and their staff associations. If they have a different chain of command that doesn't affect their in depth and personal knowledge of each unit, then that's ok. In short, once an HR person is assigned to a unit, don't move them around without a strong justification. Onboarding and exiting needs to be automated down to the department level.

---

As a manager, HR is currently unresponsive and difficult to work with. The hiring and onboarding process seems to change every time a new staff member is brought on board. And terminating incompetent employees is impossibly difficult. Centralization into a "One Stop" HR unit might resolve some of these issues, but it might also make them worse if it results in less HR staff in the name of streamlining and funneling money elsewhere. The greatest barriers to staff recruitment and retention are low pay, lack of opportunity for advancement, and feeling unappreciated/undervalued. Increasing pay and opportunities to advance through career ladders and an organized professional growth model would help tremendously.

---

I think it is beneficial to have the HR representatives in many offices or departments across campus and long with the salaries to support them. Wherever these staff members are housed, they must follow University policy and State and Federal law. I am concerned staff might not have ready access to an HR person when they need to.

---

I hope reorganization will help this very important unit to complete their mission in a timely, consistent manner, particularly in regard to Finding #2. However, I am not sure doing away with the Liaison is a good move. Our former liaison was incredibly vital in helping us navigate the HR waters and is sorely missed now that he has moved onto other duties.

---

The University Libraries system works as a well, system. And it works well. Business, Marketing, Facilities, HR and IT are all embedded in the library model and we work as a well oiled machine. If it ain't broke...

---

Human Resources and Organizational Effectiveness should work with the Faculty Affairs Dual Career Program to ensure not only faculty partners are provided assistance but research and staff positions as well. Although some of the research positions are equitable to faculty they are not titled faculty.

---

Recommendation: Invest in succession planning and talent management This recommendation should be applied to other areas of campus as well to maintain/direct resources that will meet future goals. For academic advising, we do not provide enough resources and personnel for succession planning.

---

I fully support centralizing all human resource operations to the Division of Human Resources & Organizational Effectiveness.

Again, what is the goal of these departments? Is it to create more bureaucracy in an attempt to regiment and treat all areas exactly the same - even though each academic area is different or is it the purpose to serve each academic area with its' needs in a thoughtful and adaptive way.

As I stated above, I worked in HR in the legal field for 10 years and HR at A&M, well -- it's a mystery to me. I suppose they are mainly paper-pushers. But I do have a complaint of failure that affected me in a negative way. In order to learn about the retirement (TRS) and process, because it is very different from the private sector, I attended no less than 5 meetings which were supposed to explain how, why, when, what to do, etc. I asked questions, because important decisions had to be made. I own property in Brazos County, a number of acres. Someone single who arranged to purchase, qualify for an agricultural exemption, get fences built and cattle on the place within the 18 months requirement - well, I look under rocks for possible problems before they occur. When it comes to the explanation of monies, when one can retire, the Rule of 80, etc., etc., I, and others as well, were given erroneous information - not once, but at two different retirement meeting a year apart!! When a coworker told me I had it all wrong I decided to call TRS in Austin and with the most elegant simplicity she explained how it worked - which surely showed me that A&M HR had no idea how to explain things in the most simple of formats. In addition, they always discouraged us from calling Austin, "they're too busy for phone calls." That wasn't the impression I received either one of the times I spoke with them, there was little wait time, and they were incredibly helpful. I contacted the HR person via email about the erroneous information and she didn't respond back. After two weeks I mentioned to my supervisor that I was putting off retiring for another year because of the information I had discovered and mentioned that the HR person had never responded. Coincidentally, the HR person responded to me later that afternoon, by denying to me she'd ever discussed that part of the TRS package. So either they are very understaffed, or under qualified for the tasks they do.

HROE doesn't currently have the space to add all these people or services. We would need our own building somewhere, or at least more space.

Finding #1 – with respect to this finding and clearly understand those staff who have split functions. I am curious if it would not be best to certainly only move those smaller departments or create a service area in HR for smaller departments. However, those departments who are larger maintain their own HR liaison – Food for thought. Reverting back to items mentioned under Finance and Administrations some of the positions in HR and Business or sometimes if they are one of the same work closely together particularly during phase II budget. I would be curious how this task would be handled or is this part of where Payroll is moving under HR and this will be entirely their function? Finding #3/Recommendation#3 – This makes sense. I compare this to the benefits office that used to exist and over the years has become more automated. If well thought out and the right tools in place this could work. That area has always been very centralized and what is nice it allows for more anonymity or being objective on matters rather than the HR liaison knowing all the staff in a department. Finding #5/Recommendation#5-Why is this not offered for staff too? I have only heard of this offered one time for staff.

I support the suggestions in the report

I concur with the recommendations of the study

No comments.

Will faculty hiring be handled by HR or will there be a staff member in the department that will continue to handle faculty hiring? Will HR have a dotted line of reporting to the unit they serve like what is being proposed for Finance and Business Services? How will the communication work between the departments and HR/Payroll when account numbers need to be changed for salaries or when faculty summer salaries need to be processed. Will the business staff continue to have access to Workday in order to run reports for budgeting purposes?

I do not agree with the proposal to remove the HR Liaison. IT has some very specialized needs for HR and we need to have an assigned person we can always have access to. At present our HR liaison is fabulous and I would hate to see them get lost in TAMU HR. Typically not TAMU HR does not have enough personnel to handle direct questions and it can take days if we are lucky enough to even get a response. Whereas our local HR is always available for questions regardless how tedious. I feel it would be a significant hardship to lose our Liaison office.

Having worked in two departments in the last 2 years I found that neither place had a similar structure at all. Experience

at one department was not useful when dealing with the other for some basic things. I support this entire plan completely.

Making HR independant will help. They are the gate keepers of whether employee rights are being protected. Keeping them out of the local org chain of command frees them to do that.

If we are indeed consolidating, I just hope it is clear on what our new role will be with Human Resources. I am not worried about change, I welcome change, as long as it is clear what my new role will be. I also hope that my current department will continue to have access to a Human Resources Liaison that will be able to answer their questions in a timely manner. I feel that our employees deserve and appreciate that.

Centralization is bureaucratic speak for getting rid of people, as manager I rely heavily on HR liaisons who are overworked. Please don't make a bad situation worse by decreasing HR staff.

I have just this to say. My HR connection is a bookkeeper who has been charged with HR tasks. I do not have someone who can advocate for staff in our department or who knows diddly about HR. This model is inane and simply modified. The university should correct this problem. HR at TAMU is known as a joke...not because of the hard working people, but because of the structure.

looking forward to the changes coming.

This also makes sense. I think it will give staff greater opportunity for promotions and career ladders.

HR was consolidated many years ago and it did not work. That was the point of creating HR liaisons. Do not make the same mistake

I agree with the proposed restructuring.

I am sure, on paper, that it looks like a good idea to decentralize services and to combine into one area. However, as an employee, I strongly oppose this decision. Any time, every time, services are removed from a department/area and put into one centralized area, the services to the employee are hindered and ineffective. With this approach, the employee becomes just a number instead of the more personal approach within the department/area/division. I would expect this approach to be implemented when cost-savings is the driving, perhaps only, focus.

The staff who wear the HR Liaison hat as part of a responsibility (do not have an HR title) are trained to help and assist the departments especially when being at a remote campus and geographically far from main campus. We assist staff and others with basic questions and this helps main campus HR concentrate on bigger things. Let's make processes easier, with a faster flow, electronic forms, etc.

Again, this seems like a cycle of centralization to decentralization every decade or so. Seems like decentralization wins most of the time.

I have found that the HR Liaison Network actually makes it MUCH easier to handle HR issues when working with/hiring student workers. I think we would really be bereft without someone assigned to our unit who actually knew our history.

As a staff member, this quote concerns me, "Streamline processes into standard operating procedures. For example, the process of terminating an employee currently requires four different processes when it could be consolidated into one." Does this mean it will be easier to terminate a staff member? I ask because there is a process for progressive improvement laid out with HR currently. If employees lose this opportunity, how can you train and maintain the best staff if you terminate them before they can make adjustments? That seems counterproductive to your cause of retention. Perhaps I'm misunderstanding the statement and it's rather a comment on the paperwork procedure it takes to actually terminate once the full process has already gone through progressive improvement. Perhaps this is just commenting on the actual administrative procedures. I hope this is the case because that is a scary thought as an employee member.

We have greatly benefited by having an HR liaison directly associated with our unit; losing that will be a considerable disadvantage.

I serve on the Engineering Staff Advisory Council. Some of the information that is requested the MOST for us to relay is HR, particularly processes and services including workforce development programs/incentives. Having a better/more centralized resource center would be a fantastic help, not just for myself, but for the staff that I also represent and serve. That being said, I will also caution as I did with the business staff. We would need to be aware that some departments/centers/institutes overlap. HR staff would need to work for that streamlined experience to the internal customers that fall under this. I do 100% agree in the success planning and talent management. Very shortly after I

joined my center, our manager took another position. As such, it was on me as the only other remaining staff to step up. I have since created a master internal/center SOP (Standard Operating Procedures) and documented other policies/practices for review/approval by center leadership. This had not been documented previously, which made my succession to handling the day to day operations somewhat of a large learning curve. Also, not many people are aware of the mentorship process that TAMU has, or even how to successfully mentor or be a mentoree. I used the mentorship opportunity for growth, learning many items that I now utilize in service of my center, and have since, worked with other units to create an unofficial RELLIS administrative support network for staff at the RELLIS campus to not only network, but share skills and best practices regardless of affiliation (agency, unit, department). This has been a blessing to all involved, though it is a newly implemented group. By working together and facilitating a close network at the campus, we have managed to begin bridging gaps between the different agencies/teams so we can all benefit from each others' experience and knowledge.

---

I believe that streamlining the HR function for TAMU will enhance communication and will create a greater understanding of the mission of this great university.

---

I believe there needs to be added support for DEI initiatives in our human resources to help with retaining and supporting our diverse staff and faculty

---

Transportation Services has a staff of 5 budgeted employees and 2 student workers in their HR unit. The HR staff handle HR and payroll related items for 190 full-time, 330 student and 80 wage employees. The HR unit is responsible assisting with the hiring process for all budgeted employees by participating in completing the hiring matrix and participating in interviews. In addition they work through the hiring process in Workday for wage and budgeted employees. They assist supervisors in hiring of student and wage employees. The HR unit manages the DOT Drug and Alcohol process for budgeted and student Transit drivers and budgeted and student mechanics. The HR unit handles all compensation related actions for all employees. The HR manager and assistant manager work with supervisors on discipline related issues for employees. In the last 3 months the unit has hired, rehired or promoted 132 employees. From 9/1/20 to 7/31/21 the unit processed 160 new employees. The Transportation Services Transit unit hires continually so the HR unit is always processing new student transit drivers. The HR unit handles all FMLA, First Reports of Injuries, Workers' Comp, Sick Leave Pool, direct sick leave donations for all of the employees. It is in the best interest of Transportation Services for the HR unit to stay intact within Transportation Services. It is not feasible for the HR unit to report to HROE or for the HR manager to report to HROE. The Transportation Services unit has a reputation of always doing the correct and right thing and other HR liaisons reach out to Transportation Services HR for advice or help with situations.

---

TAMU HR was centralized prior to the 1998. History is repeating. Many HR Staff were reassigned to different positions. HR connections were created in departments in order for faculty to have someone at the department level guide them in the right direction. HR Liaisons in departments working directly or indirectly with state employees are helpful connections trained to understand the law. Also, Not all departments have the same business activity. Some academic units main business activity is payroll and the task of monitoring payroll transactions and the effect on accounts.

---

Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center. I know that I have heard many who are against this recommendation, but Human Resources at the Galveston Campus has been abysmal. Our Human Resource Liaison who has worked at the campus for over 10 years still does not have a basic understanding of Human Resource policies and procedures. When I have needed to have critical answers for myself or my graduate student workers, then at times, I have had to reach out to main campus or system to determine the answer as what the liaison was stating was different than the policy. I am supportive of this reorganization. Recommendation #3: Eliminate the Human Resources Liaison Network. Given the recommendation above, I am supportive of this change. Recommendation #4: Invest in succession planning and talent management. This recommendation does not match the finding presented which focused on how to recruit and retain faculty and staff. The lack of career ladders is a severe drawback to those wanting to build a career at Texas A&M. In addition, wages are lower than what a person can get in the private sector. In order to retain faculty and staff, the President needs to find ways to retain critical employees through benefits and thinking outside the box like current CEOs are doing. This step will be critical within the next 10 years. Younger faculty and staff are less likely to build a career if they feel taken advantage of. On the Galveston Campus, we are already experiencing many staff leaving which has meant higher workloads without additional pay. Again another missed opportunity...

---

As an HR Liaison, it is difficult to imagine how our units would navigate a centralized HR experience. For example, if a supervisor wants to create a new position would they be assigned someone in HR to guide that process including reviewing documents, position descriptions, rewriting duties etc.? We have some supervisor's that are less skilled in

these areas and we work with them directly to ensure everything is covered before the final products goes to HR for their review. I do like the idea of having all expectations and processes be centralized to create cohesion and avoid "one off" situations that seem to be a recurrent problem, it is just difficult to image what that looks like when now we help in a variety of areas as a one stop shop to help filter out basic issues instead of everything going to central HR.

The current TAMU HR make up is no where near ready for centralization. TAMU model should be decentralization or centralization should start within each college and route to the campus, TAMU-HROE. There are certain process that can or should be handled at the college level. I do agree that part-time HR professionals are a disservice to the University. HR Liaisons should be comprised of individuals who handle HR functions at least 55% or more effort. When you take HR professionals out of the departments then you are taking the heart out of the organizations. We are not only the processes but information, help and assistance the employee need and what to navigate this huge TAMU system. There needs to be more effort place on professional development, policy and transaction processing. TAMU has great reputation of showing a path forward with all of these changes and that's not what has been shown.

I just this year started working on becoming a back up HR Liaison for my and I-9 Processor for my College this year and am 1 class short from my certification on both. I believe that having someone close to those being served help give a more open and ready to serve feel. By having a " one-stop shop" for HR you would be taking away the ease of accessibility the students, staff and faculty have. Quite regularly I have watched our faculty stop by our front office for coffee or water and take a few minutes to speak with our Business Corridor or Business Administrator with payroll or Human Resources questions. Our department does cross training so that in the event that one team member is out another can pick up an work or projects that need attention during the absence. The Human Resources Liaison Network provide the guidance and knowledge that is needed for helping those that are served. Instead of taking it away insuring that the Liaisons have the most up date information and training they need to be able to function in these roles.

Removing the HR Contact out of the department will not achieve efficiency; it will achieve delays in productivity. The departmental HR Contact does not only do Workday functions (recruiting and hiring, biweekly and monthly payroll); they are involved with contracts and grants, departmental accounts, tuition and fees, etc. because all of these things all revolve around payroll. Also, there needs to be someone that is able to assist faculty in timely fashion with their issues instead of waiting for a centralized HR person to help with every issue that come up on daily basis.

NA

The subject I'd like to bring up is in reference to Finding #1: The review of operations at TAMU shows that these shared services are dispersed among various divisions across campus. The Office of the Provost has payroll and personnel functions better suited for the Office of Human Resources and Organizational Effectiveness. Human Resources and Organizational Effectiveness contains communications, finance, facilities, and IT functions that are better suited to their respective divisions on campus. Recommendation #1: Reorganize HROE and implement a one-stop human resources service center • Student Employment from Provost Currently the Student Employment Office (SEO) is within Scholarships and Financial Aid (SFAID). SAP 33.99.08.M0.01 designates SFAID as the office responsible for oversight of student employment at TAMU. Student employees are categorized as either a student worker or a work study student. Graduate Assistants are not categorized under student employees. Oversight performed by the SEO differs greatly from what a traditional HR office would offer to students and their supervisors. For clarification, the SEO does not directly on-board student employees campus wide. It is the hiring departments responsibility to ensure that student employees are properly onboarded, including completion of I-9s and Workday entry. There are numerous other functions the SEO engages in that are detailed below. • Federal and State Work study management o Awards and reconciles approximately \$4 million annually o Verification of Federal and State work study eligibility o Work Study management including federal and state compliance and reporting ☐ Provide data for FISAP reporting ☐ Provide data for FADS reporting o Ensure compliance of federal and state work study policies and regulations ☐ Educates hiring departments ☐ Coordinates Community Service Program ☐ Ensures Reads and Counts program meets requirements by working with College of Education • Maintain a job board for both on and off-campus positions o We participate in the Job Location and Development Program which is funded by the Federal Work Study Program. Through this program we help identify and promote off campus employment opportunities in the local area. We help approximately 10,000 students find off campus employment each year. This is very important as we have over 70,000 students and cannot employ them all on-campus. o Critical that students have one location to perform a job search o The SEO monitors to make sure that all required on-campus positions are posted on the job board o Assist students in a detailed job search o Actively assist employers in filling positions ☐ Promote specific job openings via Jobs for Aggies social media accounts ☐ Assist with

targeting groups of students • Advise on job postings • Coordinate and host an annual part-time job fair • Coordinate the Community Service Program which is a required component of the Federal Work Study program • Coordinate and host National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony • Both a Campus and a Community (student not employed by TAMU) student employee of the Year are recognized • Assist employers with the creation of job descriptions that include learning outcomes • Promotion of student employment as an enhancement to their education • Present information at the following events: • New Student Conferences • Fish Camp • Howdy Week • Aggieland Saturday • Resource tables • Performs internal monitoring of colleges and departments • Ensure that students receive performance reviews annually • Ensure that all on campus jobs are posted on Jobs for Aggies • Ensure all job descriptions have learning outcomes • Offer on demand workshops and information sessions specifically designed for supervisors of student employees and HR Liaisons including: • Rules, Regulations and Best Practices (including work study) • Supervising students • How to utilize the Jobs for Aggies Job Board • Offer on demand workshops and information sessions specifically designed for student employees, such as – • Career Readiness • Workplace Etiquette • Quality Customer Service • Community Service Program Information Sessions To best serve students and their supervisors/hiring managers and maintain compliance, it is important that SEO remain a part of SFAID. Placing the SEO under Human Resources will result in decentralization of student employment. It is critical for SFAID to maintain the Federal and State work study functions to ensure oversight of the program. The job board must exist to offer both on and off campus employment opportunities. With student enrollment over 70,000, it is important that our students have one resource where we are able to provide as many job opportunities to our students as possible. This streamlined, one-stop approach limits confusion by providing a central location to which students may refer. The SEO has an established presence on campus as part of SFAID. The SEO collaborates with many offices and departments on campus regarding employment and student development. We believe moving these functions would be detrimental to students and employers across campus. It could also jeopardize compliance that is essential for Federal and State funding.

---

Please note that the Qatar campus has a different work week and is 8-9 hours ahead of College Station. If services are centralized in CS, there need to be people available during the TAMUQ work hours for support. This does not mean that people on the ground in Qatar can or should not report to their respective areas in CS. Many transactional activities can be done in CS at a lesser cost than having an employee located in Qatar. There are several positions located in CS now that support the Qatar campus with transactional types of things. We would love to have access to the professional development provided by main campus but our employees are not able to take advantage of that with the difference in time. There are a few incentives offered to TAMUQ employees that are unique to TAMUQ.

---

I grew up wanting to be an Aggie and it's really disheartening that now, as an adult, it's difficult to want to remain one. Staff retention is a big issue at my campus. We were short-staffed prior to COVID and lost even more people once we reopened. Rather than being able to replace them, others were expected to absorb the extra duties and do both jobs at 100%. Then those people left too! I'm not talking about new hires who just couldn't cut it, either. We lost great colleagues and friends; team players and strong employees who just couldn't take it any more. We are disrespected by students, faculty, and by our patients. There is little to no acknowledgement or appreciation shown. Service awards no longer exist. Pay is not competitive. When we do get raises they're not even enough to offset cost of living increases. If we're lucky, they don't bump us into the next tax bracket resulting in even less take-home than before. We earn vacation and sick time but can't use it because we're stretched so thin that one person being out for more than a day or two puts everyone else behind. And now there's talk of increasing class sizes. What?!?! Those of us who are still here every day are at our wits' ends but we continue to work our tails off in order to keep things moving because we believe in what we do ... but it's getting really hard to continue to believe TAMU even cares about us.

---

Centralization has only resulted in fewer people doing more work. This has slowed the process when we try to hire new people. There is no person to ask and when you email HRxxx you rarely get a response. When our department had one HR person, that person knew the needs of each lab and knew the chain of command and interacted personally with new hires. Now, it is all done by emailing HRxxx and the new hires have no idea what is going on and who they report to or how to fill out time sheets and when. This is not sustainable. We need one person for a department. Also, now several of the duties that the HR person was able to do are now placed on the accountants who already had too much to do. When I write annual reports for NSF grants, I need to know how many students on certain accounts and how many hours they worked. The HR person used to know all of this because they kept track of which accounts each employee was paid from. Now the accountants are responsible for this, but they don't organize the hires. Centralization has resulted in decentralization of management of employees.

If these movements occur, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has caused severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF'ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation. Making finding our HR person much easier to figure out. Make it more obvious how they can help us. It seems that we can only go to them for conflict resolution, but what about learning how to figure out salary increase conversations, etc. Why is their not voluntary phased separation for staff?

In reference to eliminating the HR Liaison (p. 69), the HR liaison in my department increases our current efficiency because she can answer frontline questions and take care of administrative functions, without us having to ask HROE (which I have found sometimes to be slow and inconsistent in answers). The percentage of her job for HR functions is fairly low in comparison to her other duties, so she would not become a full-time HR staff member. I have a strong commitment to professional development and continual learning and engagement opportunities for staff (including student employees). I do support more investment in succession planning and talent development (p. 70). It may be a wording issue, but it sounds like the President would be selecting faculty to retire, rather than faculty volunteering to retire (p. 71). Would there be a similar plan in place for staff?

Finding#1, #2, #3 Clearly the consulting group did not collect data from the HR liaisons, Department Heads, or employees. Centralizing these efforts will be massively inefficient for the departments, especially the research and teaching focused Academic departments.

#1 – reorg and implement one stop HR service center • Department budget staff need to stay informed on what is happening with payroll/personnel costs as it is a major piece of the TAMU budget! Currently, most business offices serve both HR and Accounting/budget roles. If these units are separated, then it is essential that communication exist to sustain this line of communication. • Even the costing allocation process in workday does not seem to understand the need for approvers (presumably the business/budget staff) to understand what they are approving – these requests come forward with no salary information – only a request to approve payroll for X employee on X account. Without the salary information, it's impossible to know whether X account has sufficient funding to cover this employee! I would love to see an enhancement in Workday so that all the salary info is provided on the costing allocation screen. Generally speaking, I look forward to HROE becoming a department that provides solutions and options for departments vs. departments/managers having to propose titles/salaries only for it to be returned as unapproved with no suggestions on how to proceed in a successful manner. The pay plan/grades have not been updated since December 2016 which is almost 5 years....there should be a standard process for review/updates atleast every couple of years. I am glad to see this report recognizes the need for more staff who have good training and the number of staff approaching retirement. These issues are critical.

For my part, I have appreciated having HR personnel available in the Libraries, and they are full-time staff who certainly keep busy. I would hope to get the same level of personal service and responsiveness after any reorganization.

We need to use the tools at our disposal like work day instead of paper forms I would prefer to do everything electronically.

N/A

Liaisons are not employed by the HR dept. Hr should be more decentralized to provide specialized help to individual units. It is already such a runaround to get anything done with Central HR.

I disagree with centralizing HROE, as strong relationships within departments build trust, which is integral to Human Resources as a whole.

I was so pleased to see recommendation #4 Invest in succession planning and talent management. I have worked in two departments on campus and neither have had a clear path forward for professional growth and development. I have seen a huge amount of brain drain where the competent staff, burnt out from being overworked and underpaid, leave and the staff who aren't able to function at a level sufficient enough to serve our constituents stay. This leads to a constant cycle of reactive decision making and stagnation. Another issue is salary and compensation. I'm tired of being paid half of what I could make in the private sector for little or no benefit for staying. I will be blunt, if I didn't have student loans that would benefit from the Public Service Loan Forgiveness Program, I would have left TAMU during the pandemic. Entry level positions for what I do in private schools / corporate sector often pay 30-40 thousand MORE a year than I currently make. Generally speaking for salaries across the board, the rate of pay for incoming staff is abysmal across the board. 14\$ an hour with Master's degree required is ridiculous when I could go work at Wal-Mart

and make more. If we can afford to pay some faculty members 300K a year, we can afford to pay staff a wage that matches their years of expertise, degrees and qualifications. You will continue to lose talented staff (like myself and other young professionals) due to understaffing, overwork, and horrible pay.

Although there are benefits to centralized services, I feel like institutional and historical knowledge is lost if departments are put into a queue for the first available person to handle. It is more effective if some level of coordination remains within the units as well. There are some HR functions that can be centralized, such as FMLA requests, benefit questions, and ADA requests. However, others, such as updating effective position descriptions specific to a unit/department and reviewing reclassification requests to ensure that the requests not only align with the generic position description but also align with a unit/department strategically, are better handled within the unit/department.

Creating a one-stop HR Center is a good change for Texas A&M. I have called several departments and spoke with their HR Liaisons who could not help me. All they were able to do was take a message and have someone email or call you back. The one-stop will allow them to be cross-trained in all HR functions, which will enable them to assist faculty, staff, and staff and increase the department's overall efficiency. It will also give staff increased opportunities for employee advancement. Consolidating the HR and payroll functions and creating a one-stop HR center will also help with consistency in policy and procedures concerning HR.

Removing and centralizing the HR functions would create a huge void in the ability of the academic units to manage the universities greatest resource, its people. Today's employees require a unit level representative to address their concerns, answer their questions, and just be a familiar face. HR representatives act as the first person employees meet in the department, and often times the last. In between HR representatives act as both a counselor and a cheerleader. How could removing that component from an academic or business unit be productive or efficient.

Centralizing human resources seems like a recipe for inefficiency. Having contacts within the library that can help with human resources questions is vital and makes things much smoother on the staff end. This campus can be overwhelming to begin with and navigating through centralized operations makes it even more impersonal and difficult for incoming staff.

Centralization would be appreciated, as it is frustrating to receive mixed messaging from system vs local HR.

Human Resources is well-known for long response time and low customer service. I do not want to lose having an HR person I can go to within my own department. Taking away my local contact would be the same as taking away my access to HR services completely.

The HR portion is small for our current business staff and they feel that centralizing HR would be good in the sense that it would cut out the middle person in getting answers to employee HR-related questions. On the other hand, the wait time to receive an answer or response would increase tremendously. The report also mentioned that HR Liaisons are employed by HR which is not accurate. Their current departments pay their salaries while HR only utilizes them for information distribution.

To properly fulfill the mission of the University Libraries, best serve all students and stakeholders, and properly care for the unique and often priceless materials housed in the University Libraries buildings, it is necessary for the University Libraries to remain an independent entity within the Texas A&M University System with its dedicated Human Resources department that can efficiently and expediently provide services. (See full comments in section regarding Academic Realignment.) At no time in my career, which includes time spent in a state agency reporting to the governor's office, has the kind of centralization advocated by the report provided the organizational effectiveness and good stewardship of personnel within that organization that it was expected to provide.

Human resources functions should be completed by Human Resource Professionals. Having a business administrator or other staff member in a department be responsible for HR functions that are out of their realm is unfair. HR liaisons, for the most part, have jobs that necessitate their full commitment and completing HR related duties becomes an addition to their already 100% FTE for which they are not compensated! Centralizing HR will allow for consistency across the board. HR liaisons became a "thing" because the university is cheap and not willing to pay for the needed human capital to run a true HR unit.

As a person who is in the 20% of 65 or older, I am having terrible problems getting through to HR regarding retirement issues. I am attempting to make financial decisions that will impact the rest of my life, but for two weeks, multiple emails and phone calls, no one has contacted me. I don't think this is very good customer service and I don't treat my internal and external customers this way. If they are still working remote, then why is it taking so long to get a response?

The removal of HR liaisons in each office would be a disservice to Faculty and Staff. The availability of these staff people is crucial to the lives of faculty and staff. The report also mentions that liaisons are employed by the HR department and they are not, they are employed by the department in which they work.

I wholeheartedly support recommendation #1. To centralize HR and finance efforts across campus is a worthwhile endeavor, however, the report didn't illustrate any working knowledge for how this is currently being handled by units that have already centralized these services. One of the strongest pillars in the Academic Affairs Business Services (AABS) model of centralized services is the marrying of the HR and Finance knowledge to be the nexus of understanding for a department head. If these functions are to be further centralized, AABS is a model to use for intentional efforts to keep HR and finance conjoined to best assist the department head with administering their unit. It is imperative that HR professionals understand how the financing for personnel works, and that there is a good communication system in place to keep everyone current on staffing costs/needs. In the current AABS model, HR professionals spend 100% of their time on HR or payroll activities unlike the "majority" that is mentioned in the report. The creation of a One-Stop HR center is a good one but it should have many satellite locations so staff can easily access their assigned HR team. By this I mean that HR professionals need to be officed/embedded within the units that we're servicing. The process and procedures used by the HR professionals could be designed and over-seen by HROE but the professionals are working side by side with their customers, with a central "home" office that they use for functional-team related activities. Based on a lot of years of experience, I would recommend position sourcing to be done at a division or central level to simplify the costing allocation activities and to maximize benefit pools. I can see the development of a process being established to request permission to create a new position that will route to the proper Vice President and will include standard elements for consideration so that each request is collecting and presenting the same information and to empower leaders to give adequate consideration to each request in a fair and equitable manner. Such a process will require the requestor to illustrate how the position will support the mission, etc, backed by some (future) analytics that demonstrate the industry need for additional personnel to be added to the unit. I wholeheartedly support recommendation #2. There is a lot of knowledge already out there, we just need a formal way to wrangle it in, and then have the existing liaisons help to train the new ones. As well, better cross-function training is needed so employees may flex in during peak processing times, and so they're exposed to the full litany of HR duties as a professional work experience. We need to understand how it all fits together and that's learning more than just my role, I need to know what comes before my step and after my step. HROE needs to share all that it can with its employees and whatever the liaisons become. This "better than you" attitude that HROE has held over its HR Liaisons since the beginning of the Network is insulting and antiquated. Our folks doing HR work in the departments are sometimes better educated and credentialed than the employees in HROE yet our team has been treated as minions and have been explicitly told that they need to "know their place." I'd like to see that we're all considered to be on the same team and withholding knowledge as a means of retaining power is no longer acceptable. The best recommendation in this whole report is #3. The HR Liaison Network needs to go away and never return. This is a self-serving model for HROE to divest its work into the units, bear no responsibility, and to assign blame outwards. The risk-averse culture that currently exists within HROE is stifling, and we will never be a premier employer while the Network is our functional method of HR service delivery. While I acknowledge this is a drastic move, it's completely necessary to keep this ship from sinking. There is a lot of knowledge held within the staff ranks. Faculty and administrators may not stay with the institution long-term, but staff do and we need to get all the historical knowledge that we can from them. I think a staff mentorship program would be helpful for retention and succession planning, and we need HROE to help us work this. As well, when folks are ready for promotion based on acquired learning and command of skills, we need HROE to help us do this quickly and efficiently so employees are not job-shopping. The report cited 20% of the TAMU faculty are 65 or older, but you should also look at the staff who are retirement-eligible but less than 65 years of age. This will likely increase the size of the population that is at threat to leave and take a vast amount of knowledge with them. But there are some staff that need some incentive to go ahead and take retirement so that we may recruit fresh ideas into our institution. This could be accomplished by a Voluntary Separation Hybrid-Program being offered to staff who are retirement-eligible as an incentive to go ahead and retire.

Flexibility, including options for remote work for positions that are in a support role and don't directly interface with students, would help us draw on talent not available in Aggieland and improve our staff diversity at the same time.

Recommendation #2: Provide cross-training for employees.--While cross-training is certainly good in some instances (e.g., making sure that, when an employee is absent, someone else can do some of the things they do to ensure that the workflow isn't disrupted), I'm concerned that the cross-training described here is going to overburden staff members

who already have too much to manage. I worry that the motivation here for cross-training is to reduce staff rather than to ensure that workflows and processes proceed as they should when an employee is out of the office.

Recommendation #3: Eliminate the Human Resources Liaison Network.--Really, each department needs an HR liaison. The HR liaison is the person in each department that faculty, staff, and graduate students know they can go to when they have HR questions. Often, when I'm having to deal with an HR matter, I'm experiencing some kind of stress (e.g., legally changing my name and gender marker, which I did earlier this year; I'm ill or experiencing a family emergency; etc.). It is very reassuring to me to know that I can go to the HR liaison to get answers to my questions and help with figuring out processes and options. If I have to contact someone in HR that I have never met or seen in person to deal with these issues, it becomes a lot more difficult to do what I need to do.

I see the importance of centralization, but it must be done right. As this takes place, consideration needs to take place to ensure TAMU Health HR is not left out as a "step child". College of Medicine has centralized COM HR 2021; however, still all functions have to flow through the HSC HR 4 member team for everything. In my opinion, the HSC HR 4 member team is a historical road block. COM HR and other TAMU Health units could be better served by centralization within TAMU HR to eliminate road blocks. I have been with HSC/ COM for the past 6 years and can testify to the constant "reorganization of HR" and each unsuccessful move without managerial support. Fall 2018, I was uprooted without notice to be a member of the new HSC HR central unit for an unsuccessful 8 month period. In this process, one of the current members of the HSC HR team was elevated to lead the team. In Spring 2019, the prior reorganization failed, yet the HR leader was elevated to a new HSC HR team leadership positions and with a 2 week notice I was uprooted into a new leadership role to create a COM HR team without title, salary or vision to match and without sufficient staffing. I was not informed of the managerial vision, just make the team. I was an army of 3 to centralize HR for 35 units. I was given one person to train which took 2 months of 1:1 attention. Now an army of 4. I was allowed to hire 2 more to an HR army of 6 including myself for 35 units. Due to lack of planning by management, I was still trying to handle other duties outside the HR realm and train a team. The team was successful until we lost team members. After 5 months, one member left for a 3 month approved FMLA and another team member failed to learn her job, so we were back to 4 and I was not allowed to hire replacements timely in November 2019. I went through the entire "interview process" and then not allowed to hire. The work was overwhelming from 35 units. No real support from the HSC HR 4 member team. In Spring 2020, you got it another "reorganization", but not under TAMU still under HSC HR. I transitioned to a new position for financial functions. I no longer wanted to continue to ride the "reorganization HR train". Completely burned out with HR. For over a year (Jan 2020 - middle of 2021), I was used as a "free" mentor to the HR staff thrown in to magically do HR. For some, it was the first time they ever handled HR. For others, three were known to make constant HR mistakes, yet they were allowed to continue and would not listen to any mentoring. One of my original team was left in the group. Another "reorganization" took place, two HR staff hired and the two inefficient ones went back to their old primary job and one of the staff I hired in 2019 was elevated to lead the new HR team, still under the HSC HR 4 member team. Today, HSC HR is still a step child but the COM HR leaders reports to that team, but probably should report up through TAMU HR. Mentoring can only be successful if the mentee is willing to accept the correct information.

Recommendation #1 Human Resources and Organizational Effectiveness P.65 • In consolidating Human Resources, it will be important that staff with these functions are embedded in departments or have frequent contact with departments to create a sense of confidentiality and access. • It will be important that departments and divisions help set the priorities for the Human Resource area that is serving said department.

Finding #1 - None of this needs to be done. This is a whole lot of movement that is unnecessary and would be so costly in the process. Finding #2 - I am completely in agreement. Cross-training would be extremely beneficial on so many levels. Finding #3 - Agree Finding #4 - ABSOLUTELY AGREE

There are already very long processes in hiring and taking AABS out of the Provost Office will increase the wait time.

Some of the recommendations presented in the report appear to have incorrect and/or misunderstood information. For example, there is a mis-statement that HR employs 500 part time liaisons. Those 500 employees have full time responsibilities across various units and serve as liaisons as part of a job duty in their full time role. The push to centralize efforts v. the realization that many units need a close relationship with professionals embedded within their organization who understand their specific challenges/wants/needs will continue to be a difficult bridge to cross.

Page 1 of the report had incorrect information: "such as Human Resources and Organizational Effectiveness, which employs approximately 500 part-time liaisons". HROE does not have 500 part-time liaisons. HROE doesn't pay any portion of the HR Liaison's salary. HR Liaisons serve an important role in their department and may spend as much as

50% of their time meeting with employees regarding HR issues including benefits, leave, worker's comp reporting, FMLA paperwork initiated, initiating the business process for reclassifications, promotions, transfers, terminations and a host of other HR work, however they aren't part-time employees. They are full-time staff that handle a wide range of functions for their departments. The HROE Rationale #3 on page 70, is based on the skewed perception that HROE pays for the HR Liaisons. Eliminating the HRL positions in the departments should be studied more for understanding and a review of the Organizational Development training for HR Liaisons is already set to roll out in Spring 2022. The HROE SWOT analysis seems to be accurate: "many employees transfer to similar, new positions within the university to achieve an increase in pay. This constant cycle of hiring and training new employees is time-consuming and costly." Because salaries are not competitive in HROE there is a large turnover of employees.

I support these recommendations.

The HR staff employed at the International Ocean Discovery Program (IODP), the \$351M award to TAMU from the National Science Foundation (NSF) to operate the R/V JOIDES Resolution, are 100% dedicated to the program and provide a critical function handling all the HR-related tasks for over 120 staff, including hiring ~10-20/year as well as coordinating the sensitive process of handling the medical sailing requirements for ~240 participants/year on JOIDES Resolution expeditions. The proposed centralization and consolidation of HROE raises concerns if this potentially impacts the direct and full-time service required to implement the award. The HR staff currently employed via the award need to remain embedded and dedicated to the program at IODP and should report to the IODP PI to ensure successful implementation of the mission.

I reiterate my comments above about my concerns with consolidation.

TAMU has struggled with HR issues, both efficiency and effectiveness, for years. The recommendations in the report are definitely thought provoking. While centralization models are seen throughout the country in many industries, TAMU has not been able to adopt a workable centralized model. I believe we can get there, but the implementation details are critical to effectively execute this. Our Human Capital is our most important asset..... failure to launch and land this objective is failing them. Recommendation 5 - VSP for FACULTY - I think this is timely and important and should be done. But I also think NOT including the same type of initiative for STAFF is a huge mistake. For the same reasons this is offered to faculty, TAMU has staff that fit the mold and both TAMU and the staff would benefit from this offering.

I have concerns about eliminating HR Liaisons in departments. Our current HR liaison knows our organization's mission and vision and is invested in our success. Removing that connection feels like we would be at the mercy of whoever was next in line to manage a search or another HR concern.

I think this is a complex organization. I am so thankful for the work they do for the university and each department.

Human resources needs to hire more people. While cross training is good, the university shouldn't rely on it if one person gets sick, goes on vacation, or leaves the job. Human resources is understaffed and takes too long to get anything done because they lack the necessary workforce.

You can centralize processes and uniformity without centralizing Human Resources. As with previous centralizations, services to the departments are lost. Peoples loyalty lies with those performing their evaluations. Dotted line reporting becomes a disconnect. Employees will become pulled between two departments, their reporting and their working. Human Resources is there for the employee. They need to feel comfortable with the individual and feel that person is working in their best interest.

Centralize all IT, business, HR and marketing communications professionals If these professionals were left in their current physical locations to serve constituents, with current reporting structures intact – a dotted line for central oversight might improve the flow of institutional knowledge/implementation. If the plan is to relocate the programmers, technicians, business and HR associates, writers, videographers, etc. away from their constituents and remove the accountability we currently have to our constituents – this is not a good idea. Decentralization has allowed these entities to be more effective, and fully centralizing these business critical functions would fuel bureaucracy, negatively impact service (just ask faculty and staff in the two largest centralized colleges) and not be in the best interest of students, faculty, staff or the institution.

- Promote employees based on qualification which includes academic qualification. This will reduce turnover rate and retain competent employees. - Job related skill enhancement policy should be applied effectively since there are

employees who have acquired new skills and knowledge but they are not recognized or rewarded.

---

My comments are related to the proposed removal of the Student Employment Office from under Scholarships & Financial Aid: Placing the Student Employment Office (SEO) under HROE will result in decentralization of student employment resources that students rely on to gain fundamental work experience and support their education financially. To best serve students and their supervisors/hiring managers while maintaining compliance with federal, state, and institutional policies and procedures, it is critical that the SEO remain a part of Scholarships & Financial Aid (SFAID). While the SEO does function as an HR office for student employees, the scope of its impact reaches far beyond what an HR office traditionally can offer. For clarification, the SEO does not directly on-board student employees campus-wide. It is each hiring department's responsibility to ensure that student employees are properly onboarded, including completion of I-9s and Workday entry. In addition, it is critical for SFAID to maintain the Federal (FWS) and State work study functions to ensure compliance under the complex financial aid regulations that govern the use of those funds. Many of the services the SEO brings to the student population are directly or indirectly supported by federal and state financial aid programs. These include:

- Federal and State Work study management
- o Awards and reconciles approximately \$4 million annually
- o Verification of Federal and State work study eligibility
- o Work Study management including federal and state compliance and reporting
- Provide data for FISAP reporting
- Provide data for FADS reporting
- o Ensure compliance of federal and state work study policies and regulations
- Educates hiring departments on their responsibilities under the regulations
- Coordinates Community Service Program
- Ensures Reads and Counts program meets regulatory requirements by working with College of Education
- Maintain a job board for both on and off-campus positions
- o TAMU participates in the Job Location and Development Program which is funded by the Federal Work Study Program. Through this program the SEO helps identify and promote off campus employment opportunities in the local area. We help approximately 10,000 students find off campus employment each year. This is very important as we have over 70,000 students and cannot employ them all on-campus.
- o Critical to student employment success that students have one location to perform a job search
- o The SEO monitors to make sure that all required on-campus positions are posted on the job board
- o Assist students in a detailed job search
- o Actively assist employers in filling positions
- Promote specific job openings via Jobs for Aggies social media accounts
- Assist with targeting groups of students
- Advise on job postings
- Coordinate and host an annual part-time job fair
- Coordinate the Community Service Program which is a required component of the Federal Work Study program
- Coordinate and host National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony
- o Both a Campus and a Community (student not employed by TAMU) student employee of the Year are recognized
- Assist employers with the creation of job descriptions that include learning outcomes
- Promotion of student employment to students as an enhancement to their education
- Present student employment information at the following events:
- o New Student Conferences
- o Fish Camp
- o Howdy Week
- o Aggieland Saturday
- o Resource tables
- Performs internal monitoring of colleges and departments
- o Ensure that students receive performance reviews annually
- o Ensure that all on campus jobs are posted on Jobs for Aggies
- o Ensure all job descriptions have learning outcomes
- Offer on demand workshops and information sessions specifically designed for supervisors of student employees and HR Liaisons including:
- o Rules, Regulations and Best Practices (including work study)
- o Supervising students
- o How to utilize the Jobs for Aggies Job Board
- Offer on demand workshops and information sessions specifically designed for student employees, such as –
- o Career Readiness
- o Workplace Etiquette
- o Quality Customer Service
- o Community Service Program Information Sessions

The SEO has an established presence on campus as part of SFAID. The SEO collaborates with many offices and departments on campus regarding employment and student development. We believe moving these functions would be detrimental to students and employers across campus. It could also jeopardize compliance that is essential for Federal and State funding.

---

This area, is another that would extremely be hindered by centralization, specifically removal of the HR Liaison program. As an HR Liaison, I am on the front end of hiring for all employment for the College of Architecture. I assist new hires with questions they may have about the onboarding process. I make sure that all rules and policies are followed regarding the entire HR process. The College of Architecture may be one of the smallest colleges on campus, however we have one of the highest volumes of employees. The level of one-on-one attention that HR Liaisons can offer is unmatched when it comes to customer service. Currently, the Benefits portion of the onboarding process is centralized in the way that I as a liaison do not have access to employees benefit elections in the system. Therefore, when employees have questions or needs concerning benefits, I tell them that they will have to contact benefits directly. This is a major issue for customer service, a majority of the time I am hearing from employees that they are not receiving a

response back, and that their issues are not being resolved. With the high rate of turnover in the benefits department, it is often difficult to know who to contact when these issues happen. As the liaison for these individuals, I am the one they reach out to for assistance and when I can't offer that assistance due to the system and policies being centralized it makes it very difficult and frustrating for both myself and the employee. If the HR/Payroll department is centralized, and the HR Liaison network is dissolved, employees will continue to experience these types of issues with everything. If these recommendations are put in place, it would be a huge disservice to our employees, and in turn, a detriment to the University.

Our Libraries Human Resources unit is deeply embedded in Library related Business, with respect to being the liaison for all Employee affairs in the Libraries, easily accessed resource for employee affairs', Promotion and Tenure, faculty hiring, Post Tenure Review, and faculty related employee Resources affairs.

"Many individuals within these decentralized units are in their operational role part-time and serve another part-time role within their home unit. This type of employment structure is causing a resource strain during peak seasons as employees attempt to wear "multiple hats" and juggle the necessary training and time to be able to serve a variety of campus needs. " Multiple roles are required in a department that has one staff member. Your grandiose ideas may work in departments that have sufficient staff to parcel out duties. Especially on this campus, that luxury does not exist. The mindset I have encountered in dealing with College Station is: "that's not my job". VSP sounds like the president can chose who he/she would want to get rid of.

I agree with their assessment that more needs to be done for staff development and advancement. Part of this includes providing a wage scale that allows us to keep excellent staff. I've been with TAMU for 13 years and have found that with staff it's almost impossible to give/receive a significant raise based on excellent work. The only way to get a significant pay increase is to apply for a new job. I've tried giving raises, outside of the merit cycle, to excellent employees based on performance and it's almost impossible. Merit raises have been insignificant for the entire 13 years I've been here. The best annual merit raise basically just keeps up with inflation and that was before this current inflationary time. Therefore, I've lost excellent staff to other jobs because they had to leave in order to receive a significant raise. I had to leave a position I enjoyed tremendously in order to get a salary that was commiserate with my training and responsibility. Pay was mentioned in the report but not stressed.

While I understand the impetus for centralizing IT and HR, not having division-specific representatives/liaisons is not the way to go. Without having a local presence, these services will not understand the specific priorities of different groups, and service will be diminished. The liaison network is important and should not be disbanded. Rather than improving customer service, this will greatly diminish customer service.

What this sounds like to me is that our small research group will lose their dedicated HR department, which will be a loss.

recommendations align with structure that will substantiate clear paths for growth, development and leadership and provides a consistent, effective service model to better address ALL employee needs

As mentioned above, IODP implements seagoing research expeditions with the JOIDES Resolution drillship. Expeditions are 2 months long and take place in all oceans, far from land. Each expedition has 20-25 TAMU staff in addition to the ship's crew of ~60 and 25-30 scientists. Everyone on board works 12-hr shifts, 7 days a week, for 2 months. As a result, our HR staff have to deal with unique employment situations and sometimes after-hours or weekend emergencies. Overall, ~50 TAMU staff sail on a routine basis and having a central HR group manage these individuals without being familiar with their special situation would make it very difficult.

While I can see that on the surface, streamlining seems like the way to go, I truly believe that all HR related positions should remain a part of their existing departments. TAMU's HR Department is there to support the departmental representatives when needed (along with a thousand other responsibilities they have). Unless the HR Liaison were to remain solely committed to performing HR functions for the department they represent, making the liaison an employee of HR would risk making that employee the middle "man" in a potential tug of war between HR needs and departmental needs. Additionally, each department has their own way of doing things (while staying within the provided guidelines/rules). Things like flex schedules, alternate work locations, leave, etc., would become harder to manage if the expectation is that all departments are expected to be identically managed. HR staff will be put in the middle between their boss in HR and the department where they physically office. To make all HR staff actual employees of HR (or not employees of their respective departments) sets up all kinds of foreseeable problems, from routing structure, to morale, to difficulties with prioritization of duties, to a myriad of other problems that could arise. I also cannot envision how

overwhelming it would be to the staff who suddenly have to take on many new supervisees that they don't have a working relationship with and would be hard-pressed to establish one when work spaces are in separate locations. I truly believe the individual departments and their staff will suffer if this particular recommendation comes to fruition. Finally, eliminating the HR Liaison Network is a really bad idea. An auditor can't appreciate how important that network is to communicating HR updates.

For some smaller units, the finance and HR functions are shared within a small team of people. The only concern with dividing this is how to best align these positions under the new proposed structure.

HROE is already a one-stop shop. Moving HR contacts from the units to be housed within HROE does not seem optimal to me. As an HR Liaison in the VPR's office, I am familiar with our units and processes and we work with HROE to meet rules and regulations. I worry that our units will suffer in their HR services if we are moved to a central office.

Sometimes it feels like there can be a lack of advancement within certain roles so having more opportunities for professional growth and development would be fantastic!

Payroll should be under HR. I agree with the organization. I completely agree with eliminating HR Liaison. Our Business Associate for the entire dept is also a HR Liaison and is often times pulled in too many directions which keeps her from focusing on her main duties. There should be a contact in HR that my department should turn to, not our Business Associate.

As the [REDACTED] [REDACTED] the idea of centralizing all of HR has me concerned. I firmly believe that this would make things more complicated. On a larger level, centralizing is probably appropriate (HROE, or "big HR" as we call them) however, when the processes are very specific to departments, I believe it would be difficult to handle recruitment, the performance evaluation period, FMLA matters, etc from a bigger stance.

#### Implement Remote Work for Division of Research

HR functions are a very important aspect of my position. I'm not sure how pulling/removing the HR folks in the department would effectively fix any problems. Our customers are the faculty, staff and students and they feel comfortable coming to us for assistance. If they have to contact someone on line or send e-mails because we don't have a HR person in our department, how is that helpful and effective use of time?

DEI efforts are important, valuable, and should continue to be prioritized and funded.

We have been centralized, but as Colleges found that system not responsive they found ways around it so they could hire good people to man their Department.

If auxiliaries lose the ability to control their HR functions, this will be detrimental to their ability to control costs. Operations like Residence Life will have to raise rent rates if they have to pay a "fee for service" to a consolidated HR Department.

Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success. Remove the following units from the current Office of the Provost: • Student Employment Office to Human Resources and Organizational Effectiveness Page 12 of 133 Recommendation #1: Reorganize Human Resources and Organizational Effectiveness (HROE) and implement a one-stop human resources service center. Reorganize Human Resources and Organizational Effectiveness and align organizational functions according to shared purposes, including consolidating the HR and payroll functions and creating a one-stop HR center. Integrate the following units into Human Resources and Organizational Effectiveness: • Student Employment from Provost Pages 68-69 of 133 Rationale #1 To adopt fiscally responsible and accountable administrative structures, Human Resources and Organizational Effectiveness should administer all aspects of payroll and personnel for the entire university. This should allow for a cohesive and consistent application of all employment policies and practices... Removing AABS HR/Payroll, Student Employment, and Faculty Personnel from the Office of the Provost enables the Provost to concentrate on the academic mission of TAMU. The Student Employment Office (SEO) has existed within Scholarships and Financial Aid (SFAID) for many years. TAMU SAP rules designate the SFAID as the office responsible for oversight of student employment at TAMU. Student employees are categorized as either a student worker or a work study student. The SEO oversight differs from what HROE would offer to students and their supervisors. The SEO administers the following: • Federal and Texas Work Study Program management for the TAMU-CS, Health Science Center, Galveston and McAllen Higher Learning Center campuses. • Maintain a TAMU-CS and Health Science Center job board for both on and off-campus positions. • Participates in the Job Location and Development Program which is funded by the Federal Work Study Program. • Provides Customer Service to students in finding a position. Provides customer service to employers positions a position. Provides customer service

to HR Liaisons, HR Contacts and Business Coordinators to all of the above campuses. • Creates and hosts annual part-time job fair for students. Recruits area businesses to join the job fair. Advertise to students to come to the job fair. • Coordinates the Community Service Work Study program. Provides Human Resource function in posting positions, onboarding, training for students, training for agency supervisors and termination of students. This is a required component of the Federal Work Study Program and has been a component to the Texas Work Study program in past years. • Coordinate and host National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony for both on- and off-campus student employees. • Promotes student employment information at the following events: o New Student Conferences o Fish Camp o Howdy Week o Aggieland Saturday o Resource tables o CSP Zoom sessions o Part-Time Job Fair o • Provides student and supervisor workshops and information sessions to both students, on- and off-campus supervisors. • Represents TAMU-CS through national and state employee organizations like National Student Employment Administrators, Southern Association of Student Employment Administrators, Texas Association of Student Financial Aid Administrators, and Southwest Association of Student Financial Aid Administrators. The SEO has been a part of the SFAID office for over 20+ years, it should remain with our office per the TAMU SAP rules. SEO has different roles than the HROE, it would better place within SFAID office. We are a forward-facing student employment office that provides excellent customer service to students, supervisors, staff and to faculty. It is important for the SFAID to maintain the Federal and State work study functions to ensure oversight of the program. The Jobs for Aggies job board is well known by TAMU students, staff, faculty, and off-campus employers. It must exist to offer both on- and off-campus employment opportunities. With student enrollment over 70,000, it is important that our students have one consistent resource where we are able to provide as many job opportunities to our students as possible. This streamlined, one-stop approach limits confusion by providing a central website, Jobs for Aggies, and a location, Student Employment Office, to which students, staff, faculty, and off-campus employers may refer. The SEO has an established presence on campus and collaborates with many offices and departments on campus regarding employment and student development. We believe moving these functions would be detrimental to students and employers across campus if we no longer exist. It could also jeopardize compliance that is essential for Federal and State Work Study Program funding. The SEO has an established presence in our community. We work with off-campus businesses and supervisors within a 30-mile radius to post their positions in our Jobs for Aggies Job Board. Many employers often call us for our assistance in creating and posting their positions. If we no longer exist, they would no longer know where to call for help. ~~~ Pages 70-71 of 133 Recommendation #2: Provide cross-training for employees. Prioritize cross-training employees to ensure that additional support can be provided during peak seasons (e.g., student employment hiring at the beginning of the academic year, open enrollment for health benefits, etc.). Finding #3 - Currently, there are hundreds of TAMU employees who work as HR liaisons to academic or administrative departments distributed throughout the campus. These liaisons work as part-time HR support staff, while another percentage of their FTE is spent performing additional administrative support functions for the departments where they are embedded. The Human Resource Liaison Administrator coordinates the Human Resources Liaison Network meetings and training curriculum. The current model is decentralized and leads to slow response times to personnel needs and inconsistent implementation of university policies and procedures. Recommendation #3: Eliminate the Human Resources Liaison Network. Eliminating the Human Resources Liaison Network will improve accountability and customer service across the organization. Current HR liaisons will have the opportunity to become full-time HR staff and provide adequate support functions. Human Resources Liaison should remain with each departments business unit. It should not be centralized with HROE for HROE decentralized the human resource functions many years ago to the departments as the campus size grew larger. HROE several years ago to the present time developed and trained current employees to become Human Resources Liaisons for their departments. This program was/is successful in developing and training employees like myself. I have fully completed all the required TrainTraq trainings and attend each HR Liaison semester meetings since the program began. Being an HR Liaison is part of my job description and I do not think it should be removed because of a survey recommendation. As an HR Liaison, I have utilized the skills daily in my Community Service Program Coordinator role and supervisor over two Student Employment Office student assistants. I am the HR Contact role in Workday over several supervisory organizations. With the new skills that I have learn as a HR Liaison for the Student Employment Office, I can provide customer service to all the departments human resource liaisons with the Federal and State Work Study Programs, with posting Jobs for Aggies on-campus positions, and maintain compliance standards with the other HR liaisons. If we switch the Human Resource Liaison function from the departments back to HROE, many staff employees will lose a part of their job descriptions and no longer can carry out their duties that they were trained for and cannot continue to coordinator the programs that they oversee because of their HR Liaison designation. If HROE

could not oversee the human resource functions when the campus was 40,000 to 50,000 students, how can they possibly oversee the entire human resource functions for 70,000 students? The Human Resource Liaison roles should remain as-is at the department level. HROE should develop and train more HR Liaisons often instead of abolishing it. More information needs to be provided and SPECIFIC details on how this affects staff. A lot of staff have worked very hard to be in the position that they are in. They have devoted many years to Texas A&M.

I am currently an HR Liaison for the Library and I do HR and Liaison work as my full-time position. The Library has centralized its 60 or so supervisors and I help them with staff hiring, the Library Career Ladder, both staff and faculty evals, position reclassifications, promotions, termination processing, employee issues, leave questions for their employees and process all new faculty and staff on first day. I also support and help the 240 staff and faculty daily with questions on leave, FMLA, Workers Comp, benefits and help onboard new hires. I do the 240 salary letters and about 85 or so faculty appointment letters annually. I also help with the annual faculty evaluation process with compiling the documents and comments and getting signatures and ratings for our Business Office for merit calculations. I would hope that since we have already centralized our operations, we would be able to be considered to stay helping our current department. There is a lot of knowledge and expertise that we have since we have worked with the same group for multiple years. I believe making this central to the big HR will slow a lot of these processes down. I have very good relationships with HR units and we try to limit the amount of extra questions they get by being the go between. Thank you for letting us respond to the report.

Removing the HR Liaisons from the department level and putting them all at the HR centralized level would be a tremendously bad idea! It would be very impersonal!! Having HR Liaisons in the colleges, departments and centers provide personalized service. We know our "clients" and are able to help them find out answers to their questions. They know exactly who to come to for answers and help with HR issues.

With Payroll proposed to transfer to HR and many administrative positions across campus providing both Finance and HR functions, it probably makes more sense for HR to report up to the CFO instead of the COO. In addition, HR has functions such as Compensation and Benefits which also interact with other CFO functions such as Budget and Controller.

I do get the sense that the inefficiencies are a reflection of the size of the unit. Here in the Libraries with ~230 employees having a dedicated HR person makes sense. I get good service from our internal people who do a lot more than simply liaison with HR. It has always been my understanding that the official "HR Liaison" role was a simple delegation of low level HR tasks that could be done by unit HR to alleviate the workload of central HR. I think the report is incomplete in the referral to several of the citations: Citation #57, "University of California, 2012, .. would save \$100 million". That was 9 years ago, did it save \$100 million? Citation #58, "UC Irvine, 2015, ... centralized ... to provide consistency ..." That was 6 years ago, did it work? Did employees and managers get better service?

None

The functions of Human Resources are vital to the success of every office. Due to the ever increasing workload forward facing departments that serve students must have responsive HR teams. I am not sure of the whole history but I predict HR liaisons and HR departments in other divisions were created due to lack of responsiveness of TAMU HR (Big HR). Our office is currently served by AABS and they are very helpful and responsive. We have to use TAMU HR when it comes to discipline and termination of employees. While this is not a task that we do often the responsiveness is very slow. When a department has to spend additional time tracking down answers to complex questions regarding staff this takes away from student processing and vital tasks for students. If consolidation is the answer I suggest a true assessment of staffing needs be done. For example if AABS answer all the questions for X amount of people and that is rolled up into Big HR, the staff have to be as well. For support to decrease, it would be detrimental. Big HR must be staffed to answer questions within a quick time frame.

Student Employment Office to HROE-- I wanted to provide some clarity and understanding to consultants and other university staff on the functions of the Student Employment Office (SEO). SEO might have been seen as a separate office under the VP of Enrollment & Academic Services which duplicative functions within Human Resource functions (HROE). SEO is within Scholarships and Financial Aid (SFA) and is responsible for oversight of student employment at TAMU. (TAMU SAP 33.99.08.M0.01) Student employees are categorized as either a student worker or a work study student (awarded federal or state financial aid funding specific for employment- for on campus or off campus employment). It is important to note that Graduate Assistants are not categorized under student employees and Graduate Assistants are not part of the scope of the SEO, all the hiring etc... for Graduate Assistants is within their respective departments. The

functions of SEO are very different from what HROE or a traditional HR would offer to students and those who supervise students. SEO does not directly on-board student employee's campus wide, on boarding student employees on campus is decentralized within departments who hire students. These hiring departments handle the human resource functions to ensure the students are eligible to hire, complete of all required paperwork and facilitate Workday entry. I point this out as withing the MGT report it states "it takes too long to hire and get a student on board", this function is not handled by SEO. SEO- must verify a student is eligible for work study-the programs that are state and federally funded for the specific purpose to provide financial assistance to help pay their educational cost.

SEO- • Assist students in a detailed job search • Actively assist employers in filling positions o Promote specific job openings via Jobs for Aggies social media accounts o Assist with targeting groups of students o Advise on job postings • Coordinates and hosts an annual part-time job fair • Coordinates the Community Service Program which is required by the Federal Work Study program • Coordinates and hosts National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony o Both a Campus and a Community (student not employed by TAMU) student employee of the Year are recognized • Maintain a job board for both on and off-campus positions o Texas A&M participates in the Job Location and Development Program which is funded by the Federal Work Study Program. Through this program we help identify and promote off campus employment opportunities in the local area. SEO assist approximately 10,000 students find off campus employment each year, which is important to those students who need jobs, and to the community which could not run their businesses without the TAMU students. o It is critical that students have ONE location to perform a job search, reduces the ability for missed opportunities for students and employers. Students know where to look for jobs. o SEO monitors to make sure that all required on-campus positions are posted on the job board. (enhanced student experience initiatives implemented a couple of years ago) • Provide on-demand workshops and information sessions that are relevant to the current/immediate needs of groups of student employees and supervisors. • Assist employers with the creation of job descriptions that include learning outcomes (another enhanced student experience initiatives) value added for student so they can take job skills with them as they graduate and move into their full-time careers. • Work Study funds management including federal and state compliance and reporting, working very close with accounting services and EIS/Banner for reporting data for the following: o Data for the annual required Fiscal Operations Report and Application to Participate (FISAP) reporting-required reporting for all campus based federal programs by the institution. o Data for Financial Aid Data System reporting-required yearly reporting by the State of Texas for all financial aid administered on campus (3 cycles for each campus-College Station, Galveston and HSC). o Ensure compliance of federal and state work study policies and regulations ☐ Educates hiring departments ☐ Coordinates Community Service Program ☐ Ensures Reads and Counts program meets requirements by working with College of Education • Promotion of student employment as an enhancement to their education. o Information presented at the following events ☐ New Student Conferences ☐ Fish Camp ☐ Howdy Week ☐ Aggieland Saturday ☐ Resource tables • Offer career readiness workshops specifically designed for student employees • Ensure that students receive performance reviews annually • Offer workshops specifically designed for supervisors of student employees and HR Liaisons including o Rules, Regulations and Best Practices (including work study) o Supervising students o How to utilize the Jobs for Aggies Job Board The information provided is to provide the responsibilities of the SEO, the services provided to students and supervisors, as well as the administration of federal and state work study programs, reconciliation and reporting to the federal government and state of Texas. The value SEO adds to student who work on campus, and off campus and value added to those who supervise on campus beyond traditional human resources on boarding and payroll processing. Best practices on the administration of federal and state work study programs note the combining of these functions within Scholarships & Financial Aid. There are established relationships on and off campus for work study administration. I asked that you thoughtfully consider all information presented and the recommendation to NOT remove SEO from the Scholarships & Financial Aid. I am open for any additional questions related to my recommendation.

---

I appreciate the cross training for employees, that provides many opportunities for helping students when other members of an office are unavailable

---

Love the one-stop service center. Not sure about eliminating HR Liaisons. They provide a wealth of services that may not have been noticed in their evaluation: Travel liaison, Guest Access Liaison, Workers Comp/Incident Reporting Liaison, Training Liaison, etc. If these services are centralized within HR that could be more effective and efficient than the current operations, but if no provision is made for these dropped duties at the departmental level, it could create problems. Would LOVE more leadership opportunities, but please don't limit them by age or years of service. Please don't presume that everyone plans on retiring the moment they hit the Rule of 60. I am fully prepared, committed and

competent to step up into leadership.

Positive Many of the suggestions appear to move towards a more efficient workflow as a centralized structure. These changes, for a large entity like A&M, will help in areas of compliance and provide consistency in processing and cross training. Integrations into HROE that will have impact on efficiency include: • Student employment from Provost Office • Payroll from Finance • Faculty Personnel/Hiring from Provost Office Focusing on and putting resources towards succession planning and talent management is highly valued and needed. Concerns A clear definition and understanding of the dotted line is needed. We embrace if it aligns processes for compliance and consistency and if it provides opportunity for open dialogue prior to decisions being made. Especially when those decisions impact employees of other System members. A concern with some of the suggestions throughout the report is how to successfully implement. Changes in the areas of facilities, IT, business services, communications and HR have the appearance that to implement many of these units will require additional director level and higher positions and the staff within will significantly grow. To successfully centralize there may be a need to add staff across these administrative/service divisions. Is bigger always better? Will other areas of the A&M System, who are already successful in similar structures, be negatively impacted by their staff being pulled over to A&M?

Not sure if centralization is the best approach here, due to the volume and the unique situations of various colleges. BUT, there does need to be a much better line of communication. It currently seems to go from HROE to the college HR, but is very often not communicated to the individual faculty/staff level. Communication issues are numerous.

I wish to recognize our Division of Research representation, (REBS) and express how important these subject matter experts are and the hope that they will continue to "major" in DOR related matters, while having others "minor" in DOR related matters, for cross-training and depth of knowledge. The relationship aspect of centralization can and should be addressed, respectively, for optimal results.

Regarding: Recommendation #1: Reorganize HROE and implement a one-stop human resources service center • Student Employment from Provost Currently the Student Employment Office (SEO) is within Scholarships and Financial Aid (SFAID). SAP 33.99.08.M0.01 designates SFAID as the office responsible for oversight of student employment at TAMU. Student employees are categorized as either a student worker or a work study student. Graduate Assistants are not categorized under student employees. Oversight performed by the SEO differs greatly from what a traditional HR office would offer to students and their supervisors. For clarification, the SEO does not directly on-board student employees campus wide. It is the hiring departments responsibility to ensure that student employees are properly onboarded, including completion of I-9s and Workday entry. There are numerous other functions the SEO engages in that are detailed below. • Federal and State Work study management o Awards and reconciles approximately \$4 million annually o Verification of Federal and State work study eligibility o Work Study management including federal and state compliance and reporting ☐ Provide data for FISAP reporting ☐ Provide data for FADS reporting o Ensure compliance of federal and state work study policies and regulations ☐ Educates hiring departments ☐ Coordinates Community Service Program ☐ Ensures Reads and Counts program meets requirements by working with College of Education • Maintain a job board for both on and off-campus positions o We participate in the Job Location and Development Program which is funded by the Federal Work Study Program. Through this program we help identify and promote off campus employment opportunities in the local area. We help approximately 10,000 students find off campus employment each year. This is very important as we have over 70,000 students and cannot employ them all on-campus. o Critical that students have one location to perform a job search o The SEO monitors to make sure that all required on-campus positions are posted on the job board o Assist students in a detailed job search o Actively assist employers in filling positions ☐ Promote specific job openings via Jobs for Aggies social media accounts ☐ Assist with targeting groups of students ☐ Advise on job postings • Coordinate and host an annual part-time job fair • Coordinate the Community Service Program which is a required component of the Federal Work Study program • Coordinate and host National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony o Both a Campus and a Community (student not employed by TAMU) student employee of the Year are recognized • Assist employers with the creation of job descriptions that include learning outcomes • Promotion of student employment as an enhancement to their education • Present information at the following events: o New Student Conferences o Fish Camp o Howdy Week o Aggieland Saturday o Resource tables • Performs internal monitoring of colleges and departments o Ensure that students receive performance reviews annually o Ensure that all on campus jobs are posted on Jobs for Aggies o Ensure all job descriptions have learning outcomes • Offer on demand workshops and information sessions specifically designed for supervisors of student employees and HR Liaisons

including: o Rules, Regulations and Best Practices (including work study) o Supervising students o How to utilize the Jobs for Aggies Job Board • Offer on demand workshops and information sessions specifically designed for student employees, such as – o Career Readiness o Workplace Etiquette o Quality Customer Service o Community Service Program Information Sessions To best serve students and their supervisors/hiring managers and maintain compliance, it is important that SEO remain a part of SFAID. Placing the SEO under Human Resources will result in decentralization of student employment. It is critical for SFAID to maintain the Federal and State work study functions to ensure oversight of the program. The job board must exist to offer both on and off campus employment opportunities. With student enrollment over 70,000, it is important that our students have one resource where we are able to provide as many job opportunities to our students as possible. This streamlined, one-stop approach limits confusion by providing a central location to which students may refer. The SEO has an established presence on campus as part of SFAID. The SEO collaborates with many offices and departments on campus regarding employment and student development. We believe moving these functions would be detrimental to students and employers across campus. It could also jeopardize compliance that is essential for Federal and State funding.

---

This reorganization is important and much needed. If the idea is to create a "one stop shop" for employees, you may want to consider whether Immigration Services for faculty and scholars (and staff -- whom they also serve) should be in this unit as well. If the Faculty Separation program is enacted, would it serve the university to have a staff separation program as well? There are few "training" programs on campus for staff development. Should there be more? Perhaps reexamine the impact of "Flourish".

---

The current proposal removes the embedded HR Liaison from their role. At the same time, the proposal for IT is to make embedded roles. Either embedded roles work, or they don't. This give the appearance of less about improving the HR system and more about making the HR system more difficult to traverse. The purpose for these roles is to give employees, units, departments, colleges, etc. a single person to go to about their issue. I fear that by removing these individuals we will end up with the same issue we have with IT. I put in a help ticket and hope that the person who gets my ticket knows what they are talking about.

---

Streamlining of processes and coordinating efforts would be a welcome change.

---

Creating a new unit for Flourish is something that makes sense and would give them space to create more events especially they are able to have more staff in that area. They are doing a great job of promoting wellness across campus, and believe they will have even more success if they become their own unit. Having all human resources in a one-stop seems a hit or a miss. There are staff that deal with Human resources more than others and that may hind the ability for them to achieve success in their role if human resources is centralized. I had the role of Program Assistant and that required me to deal a lot with varying departments and would likely make the job of someone in that role today more difficult. This will also make it hard for our graduate students to get answers when they are RA's, TA's, GAR's etc. Graduate students do not have as ease of access as undergraduate students do with resources because resources are mainly focused on undergraduate students. I have first hand experience of being an undergraduate student and graduate student at Texas A&M and things completely changed when I left undergrad and became a graduate student.

---

Mandate quick response times from any centralized organization (30 minutes or less, perhaps). Otherwise, critical service that are currently addressed in an appropriate, timely fashion will fail.

---

HR is essentially already centralized. The liaisons you've mentioned are not really HR staff; they're departmental support staff who have HR knowledge. Without them, faculty members will have to handle the departmental legwork of anything HR-related themselves. (Or you'll have to hire a bunch more Admin Assistants to do it for them, in which case you might as well have kept the HR liaisons.) Again, NO to centralization. Departmental employees don't want to work directly with a faceless central office that doesn't know anything about their department's particular circumstances or needs, and faculty certainly don't want to deal with the minutiae of HR operations. All that's going to happen if you centralize is that departments are going to hire more administrative staff to handle that stuff for them – and they're going to want administrative staff who know about that specific task, so you're just going to replace a Business Coordinator with an Admin Coordinator for HR, and frustrate faculty in the process. It's especially foolish to consider centralizing Qatar's HR operations, given the wildly different circumstances related to pay, benefits, immigration, and labor law that apply to that campus, as well as the fact that the campus's operating hours are 8 to 9 hours ahead of Texas, Sunday to Thursday, which means that the Qatar and Texas work weeks only overlap by 3 days. (By the time Texas starts work on Monday, Qatar has already completed 2 full days of work. And when Qatar ends the week on Thursday, Texas still has 2 full days of work ahead.) It's completely impractical to expect Qatar to rely on a centralized

## HR operation.

Responses collected from College of Dentistry HR Staff: I agree in having a centralized HR office at TAMU serving as a central decision-making authority, improving on-line technology and HR services throughout the colleges/units. Having HR professionals located on-site at each college is valuable which affects the organizations success. Remote HR units play an important role in performance management, employee communication plans and strategies, policy implementation, compensation administration and strategic partners. Additionally, assessing retention to recruitment strategies, including turnover is important to effectiveness of colleges strategic plan. Recommendations: • In order to create a more centralized department, I would recommend removing the middle man as well as the HR liaisons. • Bringing everything in-house would require a larger COD Human Resources department, however it removes the responsibility from the departments. With the Human Resources department taking on a more active role in the hiring process, the HR liaisons will no longer bear the responsibility of wearing "multiple hats" as mentioned in the final report. • Remote HR offices improves employees trust of the human resources department, and its ability to answer questions directly. • Allowing more access in Workday to remote HR offices improves response time of certain processes (Ex. Moving candidates forward in workday, faculty and staff background checks) • Even though we are not involved with payroll, I do believe it belongs to HR since it is a fundamental responsibility in the HR field. I believe it only solidifies the need for HR. • The moving of faculty and student personnel to HR will increase efficiency on how the overall hire process is conducted. • I strongly believe the divide of Dean of Faculties and Staff causes a large amount of internal issues that could be resolved if HR was involved. • I agree with the cross training and removing the HR-Liaison network. • As an HR employee, I believe this would incentivize us working in remote locations to stick around and continue conducting work as an official HR employee. • Previously, only having HR working titles did not fully capture what remote HR offices did resulting in only using this position as a stepping stone. Converting these positions into HR titles, would be the first step so retention and succession planning. • Including HR employees into actual HR business process instead of processing paperwork would be the cross-training I would like to see. It makes us better equipped to support our college, but also better HR professionals. • Business impact: local HR staff should continue to deliver human resources services such as staffing, compensation, training, benefits and labor relations on site. • The delivery of human resources services by college/unit can add value to improve the organization services, contributes to building work relationships with management and employees. • HR presence on each campus illustrates a holistic concern for employees and developing an engaged workforce.

Hi, HR Liaison here. This recommendation to eliminate Liaison Network is fine, I don't really see a lot of development for HR Liaisons lately (since switch to Workday). However, there is a lot of HR knowledge around campus in individual departments and consolidating that knowledge I agree would be beneficial. Yes I like the recommendation that current HR liaison would have the opportunity to become full HR staff. I feel like I already am full HR staff, just still in a business title. This is a sound recommendation however the University cannot house all HR staff in one building. Right now our faculty and student employees rely on our proximity in the department for consultation with issues and we resolve a lot of common HR questions at the department level. It would be best for faculty and student employees (Grad Assistants included) to stay located in the department or at least centralized in their respective College. On that note, just one HR Liaison's suggestion: if the University did not want all HR liaisons to be trained as HR/Benefits/Recruiting Partners, why not have one HR partner at each college, and with their own HR team reporting to them? One Partner to have full HR training, with their staff under them that they serve and train to one day advance to that level in another college of main campus HR (at GSC).

I absolutely agree. Overhauling all HR practices would be a Godsend. Our current retention effort at the College is characterized by the phrase...everybody (who is staff) is replaceable. Tenured Faculty on the other hand are bullet proof and untouchable by any discipline standards.

I agree that the idea of a HR Liaison system is flawed, but the suggested approach of moving full time College HR employees to HROE does not make sense. A vast majority of HR employees in corporate organizations have a centralized corporate unit, and business specific unit out in the field that get resources from the centralized group but works closely in the business unit. I think the HR Liaison group should be reduced to those that are 75%-100% in HR roles, but they should still work under their college or department. And rather than quarterly meetings for the field group with the centralized HR, there needs to be more check-ins to ensure consistency. I agree that the HR Liaisons need to be considered HR job titles, but they are engrained in the day to day function of the college. Some HR roles even assist with Faculty related issues, and that can't happen if field HR is reporting to the centralized group.

This takes away the customer service aspect to the departments. I understand that this would give staff more know, but instead of moving everyone, spend the time and money on training of the existing staff. Moving this to one hub, will cause chaos and will cause employees to have to wait long wait times for responses if they have to be put in a que system

The biggest concern I have about this section of the report is the obvious lack of understanding about what the HR Liaison Network is and how it functions. I wholeheartedly agree there needs to be succession planning and talent management. Additionally, we either need to drop the pretense that we recruit for anything except the highest-level faculty/academic positions or actually recruit. The old excuse about Bryan-College Station limiting the pool is no longer true (at least not to the extent it once was). It is not lost on me that this transition has been made much more difficult and contentious than necessary. While most everyone anticipates changes with new leadership, the MONTHS of minimal or no communication is unacceptable. Moving people and departments while conducting this study/review/report is unproductive and fosters mistrust. If you have already decided what changes you are going to make; then make them. Don't toy with people. Morale is the lowest I have seen it in years. If you are working about institutional knowledge walking out the door; don't alienate faculty and staff. Don't play favorites. How is developing a plan to allow "select" members to retire equitable, productive, and/or legal? If there are faculty or staff that need to be removed do it. To be clear most of these issues are NOT related to HROE they are related to leadership.

Fully reasonable & logical. This has worked well over the decades for the HR benefits office and should be consistent in all HR matters.

Same as above - I would miss having a designated team, but also think a one-stop shop would improve access to services.

Human Resources should be only centralized to the college level. University services should focus on effective better ran programs and services without taking away the integration within the colleges. Staff are the backbone of this university and should be invested in rather than centralized. Provide cross-training for employees- good title bad rationale. Staff should not be too siloed and should understand other positions within the organization, however boutique services should still exist and should be handled by professionals hired and trained to perform them. Eliminate the Human Resources Liaison Network- this is good if it means an increase in staff within the colleges to include fully trained HR Representatives that have a focus in HRD backgrounds. These individuals would be responsible in further developing succession planning and talent management.

This is something that is well overdue, although it is convenient for departments to have a dedicated HR representative this creates confusion on processes and oversight.

I am a staff member and supervisor that provides HR and Business Services to several departments within the Division of Student Affairs. HR and business services are more than processes that are handled in a centralized office. HR and business services are not two independent jobs, but are in fact, totally intertwined which is what provides the in depth service that is essential to success for our departments. To view these as separate jobs is missing a very important piece of the bigger picture of service. To streamline, especially in a university of this size, does not always result in more efficiencies, but in fact fails to provide an in depth understanding to make decisions regarding budgeting, HR, and forecasting to name a few. The need for in depth knowledge for guidance on spending, HR actions and their impact, is crucial for departments. Without this, the result is that departments are not able to focus on their expertise they were hired to do, but would spend time with duties and impact decision-making that is not their level of expertise. Only understanding one angle – business or HR - is not understanding the full picture of a department and how to best advise on actions. The uniqueness of each department/division requires business/HR people to be present in each area to provide that crossover knowledge specific to those needs and not reporting to a centralized area performing designated tasks or one area of focus. Another aspect not considered is the effect when you silo employees to become only knowledgeable in one area of duties (HR or Business). This does not allow for a well-rounded employee or a model that promotes growth to advance in one's career. It also does not allow an employee to have a full picture of departments or possess the knowledge of how one area affects the other. Staff are not task workers, but are in career paths and want growth opportunities. I, as many, have sought degrees in these areas and bring a level of expertise to HR and Business, making our division, and in turn the university, successful. As a supervisor, the separation of duties will result in retention and motivation issues as employees become stagnant and are not challenged. I urge you to look further than the surface on separation of duties, centralizing staff into HR or business, and the result of what inefficiencies this will cause. As a leading flagship institution, we should be setting the path, not following one.

As a [REDACTED] I have some concerns regarding the recommended changes to the university. While looking at the scope of work done by our office, we are more than individuals completing a single task at a time. We, as HR Liaisons and business services representatives, have spent years cultivating intentional relationships with our departments to become a resource they can trust and on which they rely. Due to these relationships, we thoroughly understand the specific organizational goals of each department. When assisting with processes, whether budgetary or human resource related, these departments trust that the betterment of their work environment is our top priority. If business services and human resources are centralized as stated in this assessment report, building relationships with departments is no longer facilitated, and the services provided will not be as effective or valuable. When personal relationships are not formed and the organizations goals are not understood, how can an individual assist in any process, financial or personnel related, and be efficient or effective? Additionally, an overarching theory of organizational effectiveness is as follows: what works for one, will not work for all. With this in mind, comparing Texas A&M to other universities does not feel representative of our mission statement: "... Texas A&M University seeks to assume a place of preeminence among public universities while respecting its history and traditions." In order to surpass like universities, why mirror their structures? After reading this report in its entirety, these recommendations do not align with the overall goals of Texas A&M University. Furthermore, it appears the recommendations made in this assessment in regards to business services within the Division of Student Affairs overlooked the importance and quality of service we provide. The complete effects of these changes were not considered, nor was anything assessed sub-surface.

---

Eliminate the HR Liason network? This is effectively the same thing as centralizing academic advising. This whole report prioritizes data and analytics and has ignored the human element. Make sense because the report thinks sending a survey out to everyone is worthwhile research.

---

The rationale for cross-training within this department could be applied to many other departments. More cross-training needs to occur across campus because currently there are people who leave the university holding on to institutional knowledge (or departmental specific knowledge) that should be shared out. I suspect department-specific cross-training is left up to individual departments, however, I think making the change here/at the top will directly influence the way department leaders train their staff. Professional development opportunities, specifically for staff, seem to be handled on a departmental level as well, but perhaps should be handled differently. I do think the professional development grants offered by DSA provide great opportunity for staff in obtaining professional development. I think making the process for accessing professional development opportunities more consistent across campus would allow for more effective dissemination of information learned through professional development opportunities. Pro dev should be given more weight in performance evaluations to further illustrate its importance and be an incentive for advancement. These moves make logical sense and seem to highlight the inefficiencies that are happening within HR offices across the campus.

---

Elimination of the HR Liaison Network is a mistake. Many or most in that network perform their HR duties as "other duties" or as a small part of what they do and will not wish to transfer to HROE. Yet having that expertise and training in each department to provide assistance to departmental staff is invaluable.

---

I agree with the recommendations in the report for HR. Having said that, I do want to say that while removing the HR Liaison titles and offering these employees the opportunity for a full-time HR role is a good idea, we cannot centralize the employees into one location on campus. I am in the College of Vet Med's Teaching Hospital and we have 4 "HR Liaisons" that already do HR full time. Having them in our offices is essential to their duties and keeping us functioning. If they were to be removed from our offices and placed in a central building on campus that would significantly hinder their abilities to do their jobs, which include face-to-face orientations for all the new staff.

---

I really have no comment related to Human Resources and Organizational Effectiveness, however, I don't want a bunch of people losing their jobs. It is nice to have someone in the colleges to help with hiring, onboarding, and HR related issues or questions.

---

Our department requires a more personal functionality in regard to Human Resource. If you implement this based on research you are taking the personal effect of creating a community out of Texas A&M.

---

Succession planning and talent management has been a major need at A&M for years. For staff to make any considerable career or salary advancement, they have had to leave their department or college to do so. The onus has been on the staff member to identify career opportunities and seek them individually. As one university, there must be a better way to retain talent and provide encouraged opportunities for growth and development.

Human Resources should greatly consider flexible and hybrid AWL work schedules for university staff going forward. This would greatly benefit staff members mentally and physically, and would benefit the university through an increase in productivity that would come with the increase in moral.

---

One thing I have often wondered about is why we are not more fully utilizing the automation and features in Workday. When I was a supervisor, for hiring or termination activities I got into the habit of working with my HR person because there were things I had the ability to do in Workday, some of which I was not supposed to do and I found it very confusing. I think that some additional personnel tasks could be delegated to the supervisors if the appropriate guard-rails were put in place in Workday. If there are things that supervisors should absolutely not do, those features should be disabled in Workday or modified so that the workflow sends the task to the HR person instead of the supervisor.

---

The main feedback on this area is the HR Liaison Network termination. I am currently under TEES, but was one of the first HR Liaison Coordinators in 2007. This program has helped IMMENSELY with the coordinators, like myself, in getting the training and information that is needed in our day to day jobs. Even though I am now under TEES, I still attend TAMU network meetings and network with my TAMU counterparts. Again, in 24 years, this has been one of the greatest programs.

---

My comments are related to employee retention. I have been an employee for two years and have seen much turnover in our department. As talented employees leave, they have often shared that the low salary was a contributing factor in looking for another job. It has been frustrating to see a job, where the majority of the employees have a Master's degree, in which the pay for this talent is so low. While I understand this is a job some use to "begin" their career, I truly believe increasing the salary would motivate employees to stay within the department. Additionally, the lack of remote options to work from home has been frustrating to watch. Our department was successful in working remotely for over a year. Once returning to the office in June 2021, the opportunity to work remotely was not extended. However, there are some staff that work remotely, as they do not live in the BCS area. When one sees other staff being able to work remotely full-time, combined with a low wage, it can lead to a frustration that has pushed some talented employees out.

---

Great observation.

---

I have better results when dealing with my local HR liaison than with central HR. The recommendations in this section make a lot of sense.

---

I believe incorporating the HR employees into the larger group can be done. However, I do not believe that in all cases there is bloating. In our department our group is right sized and handling a great deal. From drug testing 100s of drivers to processing a steady stream of over 200 student drivers they all stay very busy. Our group walks management through discipline issues and hiring procedures for a very diverse department, participating in interviews and making sure university policies are followed. They do an excellent job. As long as they are left on site and continue to provide this level of service to our department, reporting elsewhere is not a huge issue. However, I am not sure that it is a huge benefit either. I would disagree with the report and feel the liaison program has worked well (at least for us) and our HR personnel take great care in following the guidelines established.

---

Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center. (p. 65) Recommendation #3: Eliminate the Human Resources Liaison Network. (p. 69–70) I support these recommendations.

---

I think centralizing HR is a good idea, if done well. Hiring is hiring. I also think that the organizational effectiveness portion of HROE is not utilized to it's full potential. Staff has high turnover and most new hires are hired from other departments because they have university experience. That doesn't mean they are the best person for the job. Why don't we have a training center for those that want to learn university systems even if they don't work here - yet? There could be a pool for temp workers that have certain skills they have learned through the training center and outside talent could be up to speed on current systems, policies, and procedures.

---

Very ineffective and HR doesn't help when a staff member has a complaint when a faculty member is harassing a staff person. When reported staff are told there is nothing that can be done about faculty misbehavior so staff are afraid to speak up. I have been physically accosted and there was nothing I could do. There is also NO privacy with HR. Our HR person was the person you didnt go to if you had a private matter. She held nothing confidential. I have found this to be true in all HR offices.

---

No problems getting rid of the HR Liaison network- they never know the answer and we always have to find a difficult manner to get in touch with someone directly in HROE to answer our questions anyway. I would say investing in staff retention would be a great change- I am very lucky that my role has not been turned over the College. From my

---

experience with colleagues who have not been so lucky, it is very difficult to grow and move up the ladder. Most have moved to other institutions to make this happen.

Moving to professional HR staff is another huge step forward! Our current system of liaisons means that most don't have enough depth of understanding to function effectively. It also means that guidelines are not enforced uniformly. I know of instances in another department when faculty was not told about medical leave available to them. I know of instances in another department when complaints of sexual harassment were not taken seriously by the liaison. Under the current system the liaisons report to the unit they represent, and they units they represent have a vested interest in keeping the status quo, so sometimes things are just ignored.

I fully support all of the recommendations provided by MGT as it relates to Human resources and Organizational Effectiveness. I do not work in that arena but the recommended solutions appear to address the reported findings.

I like the recommendations here. The people at HR are wonderful and helpful when we can get them, but the "many hats" has left the reputation that we can never get HR when we need them and phones are rarely answered. It would be nice to know who to contact and be confident we will get questions answered and be confident in those answers when we get them. Cross training is very important for all staff and should be a priority for their future advancement as well as the present benefits for being able to back up any one who is out of the office for any reason.

I like the proposition to have HROE employees the ability to be cross trained. We see tenured employees there leave all the time, and nobody is ever promoted up because of this. We bring in someone from the outside, who may run off all the employees or may do well. It is nice to see our employees succeed. I am uncertain as to removing HR Liaisons all together and what that would entail or how it would be from working at A&M during this whole time. I think having someone discuss this information with Liaisons would be best as the report is extensive but does not really describe the envision for these changes. For example, from the report I have no idea if I would be under HROE or if my HR duties would just be removed. Either way, open forum discussions regarding these changes would be best for all these groups mentioned.

I have to admit that since 20 years of my personal background is higher level HR functions, it is difficult to view communications from the outside. Actually, it is the lack of communication about items that affect me which i find troubling. I now understand retaliation, lack of confidentiality, discrimination and the cost of reporting issues to HR. Although i have seen much good in the area of benefits and the ombudsman program, i still have a lack of trust as to what happens in the hierarchy of departmental mgt.

Why not a VSP for senior staff as well?

While my role has typically enveloped Finance and HR within the School of Public Health, I have seen some improvements with the HR consistency under the transition of HR to the HSC HR arena. The only thing I would say is that the salaries for the HR Liaison positions should be moved to the HROE organization from the Business Office. It makes reviews cleaner for employees, and a person would not need to dotted line to another if they were reporting to HSC HR in some capacity. It would also be beneficial for HR Liaisons to be centrally located so that they can learn from one another and have a group of support for trouble shooting. While it is convenient to have an HR Liaison physically in the School, it wouldn't be much different if employees and students went to a centralized location for onboarding and HR processes. This would also remove any appearance of an HR Liaison performing a business role function within the School.

As it relates to finding #4, competitive salaries as it relates to staff needs to be studied further and not used as an empty selling point. The disparity in pay by position is at times demoralizing, the approved rationale varies by area and the "old guard" is often rewarded with increased financial incentive for being unwanted in one area and moved to another area so as not to rock the boat. Additionally, the work landscape has changed dramatically and fundamentally altered how many organizations do business. Higher education will need to conform in ways to that when it comes to employee retention. Remote work and/or telework work is an incredible incentive for many individuals - something many are seeking actively - as it provides work life, family life balance and instills trust in employees. By rethinking space allocation cost-savings can be identified that will help us realize our strategic goals through a basic reallocation of resources. Flexible options have the ability to provide benefits to both the organization and our employees in regards to alternate work locations, and cultural change. National trends show a rising shift towards more flexible workplace arrangements that allow organizations like ours to reduce overhead costs and create shifts in workplace culture. While this will not apply to everyone, alternate work location policies should become a fundamental component of our operations and resource accountability moving forward, including opening up opportunity for more diverse talent

without regards to location.

---

The implementation of Workday was so hard and it is still challenging which is inexcusable. This is just an example of the need for the suggestions in the report.

---

OMG!! Worst HR group I have ever worked with. Everything takes too long, is a battle and no one seems to be able to HELP ME when it comes to hiring. I don't need excuses, help me SOLVE THE PROBLEM. Telling me all the things I can't do, doesn't help me get answer to the things I CAN DO. We are NOT competitive with Salaries and it is VERY Hard to attract/retain talent.

---

We definitely need the career ladders back. When the big assessment of titles happened, I went backwards several titles to one of several I had skipped as I moved up. In addition, my supervisor went from Project Director to Director to Asst. VP while I was in my working title of "Assistant to Director". The actual title I ended up in was one spot above the admin I supervise which meant that she has been unable to get a reclass because I have her boxed in. The targets I was given to "qualify" for a title change has moved over the years. In addition, some of my staff were re-titled to titles that are lower than their previous and which do not really reflect their responsibilities and role. All of these have caused morale issues. Having a clear career ladder like we had previously, and clear guidelines on what the next steps are would be invaluable and give staff a goal. Regarding training, there used to be many training options for professional development but the focus seems to have changed to specialty training to a limited number of staff per year, in cohorts, and very expensive, requiring nominations and approvals to obtain the training. In the past, we could get permission from a supervisor and sign up for training on our own, as either stand alone courses or as a package.

---

HR probably needs the most work of any area on campus. That area has gone down hill significantly over the last 5 years. I think removing the HR Liaison role is an excellent idea as long as the number of central HR staff is increased in order to cover the amount of work they will be taking on.

---

A decentralized HR was created in large part due to a completely unresponsive, slow, overly bureaucratic centralized HR department that had little care for the fact that hiring and onboarding anyone took months to accomplish. Often, a task would be the responsibility of a centralized HR up until it wasn't...and the job then just either fell to the floor or was passed back off to the department or college to complete. No one in central HR really cared that a recruitment stalled or an onboarding date was pushed back because paperwork got lost or delayed. There must be an elevated level of accountability within a centralized HR. Also, the delegations of authority as stated in published SAPs are rarely followed. Often, a request that only requires dean approval actually has a super secret, multi-level approval process that takes the item far beyond the college for approval. College leadership is left to play "mother may I" with approvals when the delegation of authority doesn't require such. Let's have a delegation of authority for human resources administration that is fair and consistently utilized. If we don't trust the deans and directors with their delegated authority, maybe the problem resides in the person, not the process.

---

No comments.

---

I think this is great as many time the HR liaisons have to confer with the central HR anyway since they were other hats also. This will give you a one stop shop and can answer your questions quicker.

---

If HR was a one-stop-shop for all of my questions about my job, that would be great. But I like having the HR Liaisons so I know a specific person to talk to to get me started. I'd advocate for assigning a specific person as the point person for each college/division so you don't completely lose out on the human connection that sometimes makes it easier to ask vulnerable questions.

---

Support combining these efforts and aligning practices

---

Same as above, consolidation at certain levels makes sense, but not across the entire campus. Colleges (no matter the makeup) have the need for "in-house HR staff.

---

- Great strides have been made recently to invigorate staff development through the new Leading Others Programming. Unfortunately, this program cannot turn out the volume of training required - Adding Training requirements to career ladders would help incentivize training - A voluntary phased separation program makes sense to help route out entrenched thinking and resistance to change initiatives

---

No comment.

---

Anything to help create efficiencies here is appreciated. The liaison network, which has proven beneficial in the past, has

certainly outlived its usefulness. Dedicated HR staff can only help with the operational challenges of leveraging our large workforce to the university's benefit, and personnel can get the professional training they deserve. I like the idea of dedicating efforts to proactively recruiting a specific type of candidate for a given role within the university and marketing our employment efforts to that end.

---

The structure of HR has always been a mystery.....

---

I understand that eliminating the HR liaison network is an option but I am not in favor of becoming a full-time HR staff member. Who will make those decisions?

---

HR is a weak spot at A&M. Especially during the pandemic when even they never have answers. I don't know if this was because of their structure or the instruction from the top. I do like the changes and they make perfect sense, but it seems like they would be taking on a lot of different work.

---

HR & OE should be focused on better service towards employees, as well as higher salaries for staff. Staff will become harder to recruit and retain without higher salaries

---

I agree 100% that HROE lacks consistency. I work as an HR Liaison for A&M Health and we do many things differently than TAMU. I believe TAMU may do things differently than TAMUS. As an HR Liaison, I know first hand the frustration of keeping up with which rules to follow and when. To me, it is the uncertainty of these procedures that makes my job as an HR Liaison frustrating. I agree that a "One-Stop Human Resources Service Center" would be an improvement for everyone.

---

There was little mentioned about continuation or any emphasis on Wellness Works, Flourish, and investment into improving the health, and environments under which Faculty, Staff, and Students can improve their health status. This will help with employee satisfaction and also save money as a Self Insured organization.

---

I think it is a great plan to more centralize HR, this will allow the University as a whole to gain efficiencies in resources and allow a more consistent HR process across departments

---

This is a tough one as the HR people in the Departments/Colleges often have other duties that they are do in addition to HR duties. if they will only do HR, then additional people will have to be hired which goes against efficiency.

---

I agree with a support the recommendation made by MGT.

---

This sounds great!

---

Similar to the Finance section, as long as there are clear processes for getting necessary things done that would have flowed through the HR liaison, eliminating this network also makes sense. I also liked the focus on giving these people opportunities to fold into main HR.

---

#### THE PROPOSED CHANGES WILL BE GREAT AND ARE LONG OVERDUE

---

While I generally agree with the findings in this section, I believe more emphasis should have been placed on employee retention. In the IT space alone, the pay scales and brackets do not make sense for the job duties expected of the role. With more and more companies allowing work from home, or a hybrid schedule, why would someone want to come work for A&M for less money and be forced to physically come to an office every day? There should be a system in place to evaluate whether or not a role needs to be in person all of the time, or some percentage of the time (or none at all). This would help marketability of roles at A&M and allow for further growth while retaining qualified and knowledgeable employees.

---

In the beginning of the report, the fourth bullet for Findings & Recommendations is "Faculty and staff talent management is a critical issue". Further, it mentions "A high internal staff turnover rate, a relatively small pool of qualified potential employees in Bryan/College Station, and the recent increase in remote job offerings nationally spurred by Covid-19 are also threats to retention." However, I believe these rates are not directly addressed, instead suggesting processes and programs. I would recommend allowing more remote positions in order to compete with the national standard and thus retain more employees. Without this incentive, I feel that Texas A&M will be steadily losing good talent because of better opportunities elsewhere. We have seen this in our department in TEES and we will continue to see this in the future unless something is done.

---

Staff members should be allowed a flexible, hybrid, remote work schedule option going forward that is agreed upon with their supervisor.

---

## Human Resources and Organizational Effectiveness - Student

Please provide your comments related to Human Resources and Organizational Effectiveness:

---

N/A

---

Don't combine liberal arts and sciences.

---

I really like recommendation #5. I think it's a good idea to have phased retiring with a new hire coming in to be mentored by the faculty member that is retiring.

---

One-stop human resources service center would help students track all services they need help with.

---

none

---

None, agree with the MTG Report.

---

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

---

None

---

The liaison system has been a nightmare in my experience. While onboarding may be easier to do de-centralized (you get a college/depart-flavored experience), having any sort of HR question resolved with any sort confidence very rarely happens. So, I am very much for a centralized/authoritative location to go to for all HR issues.

---

don't know enough to have an opinion

---

Please don't do the plan. It's not a good plan. We don't like the plan.

---

Hire substitutes to be on standby. I shouldn't be responsible for paying someone to cover a proctoring session that was scheduled for the same time I have an exam that's also been scheduled 4 months a head of time. Every ISD has figured out that its a good idea to keep substitutes on staff but for some reason higher education has chosen to forgo this. I'm not choosing to skip something, I have a university obligation at the same time, yet for some reason I'm the one punished for this scheduling error.

---

let's make advisors more accessible please! and maybe have more than one dietician for the thousands of students that go here, too.

---

Good.

---

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

---

Texas A&M is not a private corporation or institution. It belongs to the people of the state of Texas. It is government. It should be run like a governmental organization. Keep the inefficiency, keep the bureaucracy, keep Texas A&M the way it

is. Stop trying to force it to change into something it isn't.

Good

No comment

N/A

Please don't change anything.

Provide cross training for employees is a good idea.

As long as their current needs are heard and considered, I am fine with the proposed changes.

I think that instead of merging the colleges together, possibly harming the personal benefits each individual college can provide for its students. Administration should be looking on how to make Texas A&M more inclusive for the college of Liberal Arts as its own entity.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

NOne

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

n/a

Recommendation 5 can be very beneficial as many of our faculty are nearing retirement age. It is important to plan for the departure of these faculty members and a VSP could help plan for a retiring population. Developing a clear plan for transition is also key.

Tamu should stay and operate the same. No changes.

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

n/a

well organized and structured

Consolidation seems like a wise move

n/a

I again feel that the more complex organization structure offers advantages if necessary precautions are taken to prevent bureaucratic red tape from interfering with the effectiveness. A new system might look great on paper but the resources to implement and learn such a system must be considered, and there must be a plan to maintain efficiency among the different departments the plan proposes.

one stop center will be overrun rapidly. Again a centralized system does not equal efficiency it means more details overlooked

N/A

The voluntary separation process seems a really good way to help faculty retire

Before considering whether to increase effectiveness, you must consider whether efficacy is actually affecting your program. I believe A&M is not affected by inefficiency But rather is affected by corrupt power.

It is a constant runaround if one has a question, including excessive response times and unfriendly sites.

Invest in a voluntary phased separation (VSP) program for eligible tenured faculty members appears beneficial.

n/a

N/A

I am concerned about the welfare of the HR and IT staff post-consolidation. I worry a bit about being understaffed if the schools are combined

n/a

GREAT RESOURCE, Please do not change or alter.

None

In different as long as they aren't liberal

N/A

Construction Science is a unique field that does not belong in the College of Engineering. Construction needs all the business classes as most of us will go onto to control construction project finances. Also, most of the structure classes we have now are way too advanced for even the jobs we enter. Engineering classes will provide absolutely no benefit to Construction students entering the general contracting world. The college of engineering and what Construction Science teaches are two separate things that should not be included together. Engineers job and construction do not mix even on a jobsite as engineers don't build actual buildings, construction guys are the ones on the job building buildings.

The SBS has very horrible customer service, as I remember them requesting me to get my card at odd times, and when I would go I'd be told to come back again as my "card wasn't ready." The receptionists also weren't very nice(in the GSC). However, I think the receptionists are better this semester(I'm talking about Spring Semester 2021.

Nothing to add here.

I respectfully think that there shouldn't be a merger of departments or libraries.

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I

truly love this program, please fund it.

---

The College of Science SHOULD NOT be consolidated with the college of Arts.

---

The recommendation to consolidate into four large colleges is alarming and saddening. I desperately urge the university to reconsider the benefits of smaller colleges, particularly in regards to student retention and recruitment, faculty and student wellbeing, diversity, and research. As a geology student in the College of Geosciences, I speak for myself and my peers when I say this will remove the main reasons students come to A&M for geosciences. When searching for colleges in high school, I originally ruled out A&M out of fear of being swallowed up in a large school. Upon touring the campus, the familial culture of the College of Geosciences, the small class sizes, administrators who know you by name and are willing to bend over backwards to help all endeared the A&M to me. What was unthinkable became my first choice. Many of my peers chose A&M solely because of this. By removing this significant benefit, you will be losing a large portion of prospective students resulting in a lower overall caliber of student recruitment regardless of your efforts to better it. Now a senior, I love the College of Geosciences administrators and advisors, having been able to build personal relationships with them that the large colleges cannot boast. If we are merged, many of these stellar administrators will be laid off or overburdened by the addition of many times more students and a wide-even hodge-podge- collection of majors. We here in geosciences can trust our advisors to know us, our personal goals and struggles, and know they will do everything in their power to help. Not so in the other colleges. In the College of Engineering, for example, advisors do not even know the students faces and the relationship is stiff and cold. I have known many engineering majors struggle to get help in applying for classes, learning of resources etc. because their advisors are so overworked. Merging will only exacerbate the struggles of the larger colleges while dragging down the smaller. This lack of support will inevitably lead to higher dropout rates and mental health struggles. Students like me will feel more isolated, not less. We identify not just with the university as a whole, but as a college with its own unique culture that will be lost with a merge. This move will also harm diversity. It sounds counterintuitive at first, considering the College of Geosciences long struggle with diversity. I make this claim primarily in regards to scholarship. Geosciences is a college with lots of funding due to our important research and participation in IODP. We pull in well more than our weight, especially compared to the arts. The college takes a significant amount of grant money brought in by professors to aid in scholarship and facility development. For our professors, it makes sense that this money is taken as it will be fed back to their own students and facilities. If it is shared with the liberal arts, which brings in much less money despite its larger size, the cut of money being fed back into researching, funding earning students in the College of Geosciences will be harshly reduced, resulting in a lasting decline in productivity and therefor income. Scholarship money is already spread thinly in our college as it is, and it is a significant help to those students who can get it, particularly minorities. If we merge with the Colleges of Liberal Arts and Sciences, our money will be redistributed away from us as we are a much smaller number, yet more prolific college. Our scholarships will be reduced further to accommodate this reduction, pushing poorer students and minorities away from the geosciences when we should be striving for the opposite. Additionally, the merge into a College of Arts and Sciences will hurt the image of our colleges. When I hear arts and sciences lumped together, the first thing that comes to mind is weak science. Is that what we want our university to represent? Prospective science and geoscience students want a college tailored to them and their needs. Think also of the college specific Living Learning Communities (LLC). These, specifically the Geosciences LLC as I was a member and peer mentor of it, strives to welcome students, give them a community of students with similar interests (the geosciences) and teach them things that are useful to know in their fields. An English major wants to learn aesthetic writing while a Meteorology major needs to unlearn that from high school and learn technical writing. Research, job searches, interviews, types of classes are all vastly different. LLCs are able to specially design their courses to best help their specific students. The LLCs and colleges know this and tailor their resources accordingly to best fit their students. This helps both the students and recruiters in promoting our familial image. Loss of high quality applicants could even lead to the loss of IODP, a major source of pride and income in the College of Geosciences and unique to us in the entire western hemisphere. Even risking its loss would be irredeemable damage to our image and recruitment. Art and science are both noble fields, but are too different to reasonably combine. One or the other will suffer as what is beneficial to the arts will harm the sciences and vice versa. Are such minimal benefits as the convenience of a few upper administrators really superior to the wellbeing of faculty, staff, and students? Has a single person wished their college was larger and less personal? I think not. There are other ways to insure consistency of values across the colleges without merging that will not result in lower enrollment, fewer scholarship opportunities, higher dropout rates, worse mental health and community. Reducing spending is no use if it results in an even larger loss of income. Because of my

strong love for this college and university, I beg you to reconsider.

---

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

---

This has been long overdue. I have been a grad student for 4 years now, and I have been in the same college the entire time - I have changed positions and departments within the college. Even though it is the same college - I still had to fill out the new hire paperwork again - and do the background check etc. Which is absurd and a waste of time and resources. Plus my wife - who is also a grad student had the same thing happen to her - but she had gone through it 3 times now.

---

My advisor is fantastic.

---

None

---

none

---

It is unfathomable of the number of HR offices around the campus, the consolidation in to a cohesive unit will save money and stream line the area.

---

N/A

---

I kindly prompt you to accept all recommendations. Your office ought to improve.

---

n/a

---

Most recommendations seem obvious, and I do not know why we were not doing this before.

---

N/A

---

I will say that, overall, I am in favor of a more centralized approach. I think the upcoming AggieOneStop will help with that a great deal, but other measures should also be taken. The only centralization effort I would be concerned with is centralizing the academic advisors. I am weary of the possibility of advisors becoming overwhelmed with all the unique circumstances that go along with each major.

---

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

---

I am very in favor a centralized HR. A de-centralized HR has been one of the greatest burdens I've faced, with what seems to be a constant passing off of duty to other departments' HR units. My own department's HR staff often seems to be oblivious as to how to handle anything except the quotidian, and I don't think that that's any fault of the HR officer.

## Human Resources and Organizational Effectiveness - Former Student

Please provide your comments related to Human Resources and Organizational Effectiveness:

---

I endorse all of the report's recommendations in this area.

---

Bringing consistency and transparency to this critical area is a positive change.

---

My only feedback here is that aspects of these suggestions sound suspicious. To me they read like a plan to save money by cutting staff, and then dumping more responsibility on those remaining. Cross training can be beneficial, but I hope the goal is not just to reduce overhead costs.

Encouraging faculty retirements can be a good thing, but only if they do not get replaced with just more graduate TAs or Adjuncts.

---

Do not centralize. Just provide uniformity across departments.

---

there is no organization. restructure everything and make offices communicate with each other

---

This MGT survey was an abomination. Pushing the narrative further to change the campus and overhaul it to be another run of the mill university. What gives Texas A&M it's strength, power, and future, are the very things that make us unique. Curious how none of the universities we were peer/compared to are even in Texas. These comparison universities are beneath us, or different entirely, in the same manner as milking a cow vs milking a bull, and the complaining that your milk tastes differently. Cherry picked data to justify hitting Texas A&M with a banhammer and to alter the university, remove it's identity, entirely. People say that what we identify as matters, well Texas A&M identifies as Texas A&M, and if you refute that, you're a bigot and are dismissing the lived truth of A&M. Yes the College of Engineering is huge, as it should be. Advising is decentralized, governed by each major, as they should be. You'll never have a one size fits all approach, and trying to shove the university and it's respective colleges into a "big box store" feel, as this report would suggest, destroys the very fabric of what makes us Aggies. Trying to shove in 25,000 engineers by 2025 risks diluting down the degrees or simply put, dumbing down the curriculum to pursue more students. Additionally, merging the College of Fine Arts and Sciences, as many smaller east coast schools do, does not make sense nor enable either entity the ability to perform as unique and necessary institutions on their own. If you wish to improve the university, might I recommend cost saving initiatives like never paying for another such a slanted and asinine survey again. Perhaps considering cutting the University Administration's salaries by 10% as well. Speaking of cost savings, DO NOT outsource student on and off campus transportation. The current model makes sense, and such outsourced services at other universities always ends up being more expensive in a matter of a couple of years than any immediate cost savings might hint. You will pay more, get less, and be confused as to why... Why was this even an option? Look at what happened with outsourcing dining services. Pursuing diversity over meritocracy, over talent or the outcome, is a fool's errand. Diversity should be cultivated organically and naturally, not forced and mandated. Diversity is great, but chasing metrics and numbers over anything else and rejecting the notion of assimilation while encouraging the students to celebrate what separates us is not healthy. Change for the sake of change simply to change and virtue signal will not yet results, will not bring us together, and will not continue the ability of A&M to be a natural melting pot. Let talent speak for itself, and let those who wish to join A&M do so freely. The desire to erase campus landmarks to resemble west coast university appeal also does not sit well with me. Remarks about the Corps of Cadets being "too Caucasian" is not only insulting to our diverse group of Cadets but a surface attack on the Corps' rich history and selfless service. Creating more commissioned officers to the US Military than all the service academies combined should tell you that the Corps has the ability to form the talent, respect, and love for each other that is required in a military environment. The Corps of Cadets, and the College of Engineering, are fine examples of successful melting pots creating cohesion and powerful leaders. As they say, Highway 6 runs both ways. If faculty, administration, or students, do not like Texas A&M, they are free to leave whenever, and can go attend or work for a university more aligned with their emotional support needs. Those who wish to be Aggies will be Aggies. The University has thrived for a century and a half being run the way it is... Forcing us to change to be similar to UCLA or Maryland will destroy our identity. I say this as a First Generation Aggie, who came not from wealth, but a family of poor immigrants, refugees, and poverty. As the first in my family to go to college, A&M represented everything I aspired to pursue and be. I took on tremendous debt to break the cycle of poverty in my family. Texas A&M was the beacon to freedom, and it still is. The desire of the MGT survey however risks undermining that legacy for the Boogeyman fighting game of "equity" and "diversity and inclusion" while throwing out the University as we know it. I strongly believe the MGT Report offers the chance/opportunity/paper thin justification to radicalize and change the University to better suit the political leaning aspirations of those who dislike Texas A&M.

---

I concur with the report findings.

---

Howdy, My name is [REDACTED] I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for Fluor Daniel and for Lockwood, Andrews & Newnam performing project controls. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of

Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards,

Unable to comment

Rec #1 - I support the centralization of HR and Organizational Effectiveness.

The comments I made regarding the Provost Office also apply to HR and Organizational Effectiveness. It would seem to me that this is another area that should be centralized.

HR , Marketing/ Communications, and IT SWOT Analysis No significant comments other than there is no cost savings analysis prepared by the consultant to understand and support what costs may be saved. From an organization and management stand point, there definitely needs to be a consolidation across the university. I highly recommend that a further cost savings review be conducted before any changes are made, so it is clear what different changes will result in what savings. Then all changes can be ranked and the organization which best supports this cost savings can be implemented. I highly recommend that Eli Jones be considered as the individual to lead Marketing and Communications, and that he be involved in centralizing this organization on campus for effectiveness, efficiency, and return on investment. He is the right individual that will do a great job. Human resources organizational effectiveness: In finding number four, I think when business people give stock grants, shadow stock, bonuses in private or public companies that have a vesting period, employees tend to stay with such companies much greater than companies that do not provide such incentives. We need to investigate what public and private companies do, what other universities do, what A & M currently does, and what new ideas can be implemented at A & M with current faculty that gives them an incentive to stay over a long period of time. I highly recommend providing a multitude of Awards that recognize faculty and employees, which A & M currently does. Perhaps more monetary awards could be provided. Any incentives or bonuses that can be placed in pay plans that have cliff vesting would be excellent. Recognition Awards, recognizing faculty for superior performance regardless of age ( i.e., for young stars, don't wait to recognize them, do it earlier, not

later ). Very importantly, change the rule that truly outstanding undergraduates that want to proceed with graduate degrees and then teach at A & M have to move on to other schools for their graduate degrees and then come back to A & M. I am talking about true stars, and we have them. Don't let them get away.

I agree with the recommendations for centralizing and reorganizing Human Resources and Organizational Effectiveness.

Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center. Agree whole heartedly; your HR structure is bloated and costly Recommendation #2: Provide cross-training for employees. Agree Recommendation #3: Eliminate the Human Resources Liaison Network. Agree, but reports from employees that they need the liaisons because they cannot get answers from HR must be addressed in the new alignment Recommendation #4: Invest in succession planning and talent management. Agree Recommendation #5: Invest in a voluntary phased separation (VSP) program for eligible tenured faculty members. Agree, these types of programs are highly successful in the corporate world

I support all of the HR and organizational effectiveness recommendations submitted.

No comment

Excellent approach to centralization, with significant cost savings and reduction of possible inconsistent policies.

I'm not sure how voluntary employee separation helps - unless you are trying to get rid of dead weight.

No opinion

Regarding Findings #1, 2, 3, & 5: All findings seem to be positive with good recommendations. Regarding Finding #4: Succession planning should be a requirement in all organizations. I was taught in the military that there was no promotion until my replacement was trained. In civilian life, I made it a requirement for all my subordinates to train a replacement or they did not get vacations! I agree wholeheartedly with this finding and recommendation.

No comment.

a. Recommendation #1: Reorganize Human Resources and Organizational Effectiveness and implement a one-stop human resources service center. i. Finding 1: Agree b. Recommendation #2: Provide cross-training for employees. i. Finding 2: Agree c. Recommendation #3: Eliminate the Human Resources Liaison Network. i. Finding 3: Agree d. Recommendation #4: Invest in succession planning and talent management. i. Finding 4: Agree e. Recommendation #5: Invest in a voluntary phased separation (VSP) program for eligible tenured faculty members. i. Agree, but this could become a money pit if not managed effectively

Any consolidation into a central organization should include ALL Colleges and departments. If you exclude some Colleges due to special circumstances, others will follow and the organization will continue to be decentralized.

None

Human resources an organizational effectiveness requires a team

This was under one roof years ago, but over time it just leaked out to other areas.

I think for the most part these are good suggestions.

This makes me nervous... In many organizations in the past, my experience has been that HR is the weak sibling, often causing many of the problems they purport to solve. If HR is to be centralized and given more authority, they should also assume greater responsibility and accountability to their internal customers. Find ways to measure key performance parameters and use these to incentivize group and individual performance/behaviors.

Decentralization is a villain. Leads to confusion and a non-aligned effort. The One Stop Resource Center is a great idea IF does not get so big that it can not in fact serve the one stop needs of all the players and units.

As an outsider looking in, there needs to be much better understanding of what organizational effectiveness means. And it starts with being able to clearly state what an organizations deliverables are and measuring performance against them.

PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M

conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

---

Flourish becoming its own unit will be a great way for them to grow in what they have to offer for faculty and staff.

---

It is unclear what "Organizational Effectiveness" is. Performance measures and stewardship of performance measure should remain within the college units or the college units will have difficulty owning the results.

---

Not my area of expertise but it makes sense.

---

Thanks for the opportunity to provide feedback on the MGT report and recommendations. I applaud all efforts to streamline the organizational structure at TAMU. I believe there is waste and redundancy at TAMU and many of the recommendations will help make the organization more efficient.

---

None

---

No specific comments.

---

Finding #'s 1,2 & 3 - All appear to be reasonable with good recommendations. Finding #4 - Probably the best thing to do. Finding #5 - Okay, just watch the \$\$\$.

---

Improving efficiencies always a goal.

---

No comment.

---

Periodic review and recommendations for improvement to operating departments is a good thing. If the study shows these to be wise moves, then they should be implemented.

---

succession planning is huge! glad they are restructuring

---

It is unrealistic to continue to cut positions while expecting the highest level of services, and we should be increasing resources for HR and associated staff rather than trying to centralize them out of existence. Furthermore, when HR is

not adequately listened to about key problems, then it is little wonder that we have the dramatic staffing issues we do (perhaps our high staff turnover is a good example of this). I believe this is also a good space to point out that the student utilization of academic advisors will continue to drop if the advisors are not associated with specific programs. We are already seeing this, so it should come as no surprise and be a sign to NOT "centralize" advising services even further.

Concur with recommendations.

A centralized HR is always a wonderful idea. However, in my experience at a large research facility, HR does not respond as quickly as an in-house HR person.

It is critical that human resources are performed consistently across the campus.

Hire more Aggies.

Seem like reasonable recommendations.

All recommendations in this section seem to be based on sound evidence and appropriate evaluation of the HR needs of TAMU.

No significant comments, except common practices in HR make sense and should create a level playing field.

See comments at the end on organizational effectiveness. Uninformed on HR.

N/A

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts.

The first four recommendations should be implemented. The VSP probably will be the most controversial recommendation. Is there any planning in progress to attract younger faculty? As an old Aggie, my perception is the VSP is a method to replace faculty with professors with more liberal attitudes and beliefs that do not represent what our university is about

Agree with #1-4 Recommendation #5: Disagree. The best professors are most often the ones who have long tenure.

As the university has grown in population, the need for administrative support has grown exponentially by comparison. The threat in this is that the administrative functions and those in administrative positions tend to see themselves as the drivers of the institution. This perception alters the mission of the university in ways that counterbalance the equation in unhealthy ways.

none

No no no no no no no no no.

I appreciate the fact that nothing was said in the write-up of Human Resources about equity, diversity, and inclusion. The purpose of Human Resources should be focused on staffing the University with the best qualified individuals that can be recruited.

N/A

No comments

I think this is going to be challenging to some extent. Choose wisely. There has always been competition for resources within the competing parts of the school. Servicing these changes into all of A&M will take patience and a smile.

Again, more high level, expensive position to achieve what?

Centralized HR seems like a sound idea.

This did not address how TAMU is going to add faculty to support the ever increasing enrollment. Enrollment should not continue to increase without increases in faculty. This also did not go into any problems with obtaining tenure by under-represented faculty. I know of at least 2 cases in the last decade where minority faculty were not retained at TAMU due to better offers by other institutions of higher education. Those numbers should be examined.

Do not give president more power

I support the recommendations.

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

None

Proposed changes are reasonable.

No comment.

#4 and #5 seems like great ideas. This was a major headache as a student. "Prof. X has classes listed for next spring but he's telling everyone that he's going to retire. Oh wait, now he's not retiring. Now he is and there's no one else to teach the class."

Please do a better job screening current and prospective faculty and providing means for disciplinary action when members of the faculty (or student body) take actions which become detrimental to the university.

Centralized organization with economy of effort and common practices should be supported.

Stop this diversity and inclusion madness. You are wasting money and teaching the wrong thing to new generations.

N/A

I agree with the recommendations in the report.

Again, adding too many positions!

XXX

My perspective is TAMU has a lot to catch up on here. I agree with the report's conclusions.

Just hire staff members who understand and basically are in tune with the long term service culture that has defined A&M for almost 1 and 1/2 centuries.

Recommendations sound logical.

Agree with assessment, need to advertise what's available.

The lack of discussion on diversity and inclusion in this session was very disappointing. The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered

the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

Agree.

None!

The general emphasis on efficiency and eliminating duplicative efforts is good, particularly if some of the resources saved by the efficiency could be used to reduce tuition and other costs of attendance.

Another area where consolidation and centralization will provide economies of scale and scope.

none

Centralization of this is something that must happen.

I agree with recommendations.

None

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

N/A

The proposed HR org chart does maximize the efficiency of the HR organization and lacks logical functional alignment of shared activities and services. For instance, payroll should be aligned to a comprehensive Total Rewards function - I mean, it's literally in the title "REWARDS"...that's just common sense. Also, if steps are being taken to evolve the HR organization into being future focused and more modern in the services provided to their customers (aka, employees), the Org Development and Talent Management/Succession Planning functions should be combined. The combined objectives of both groups are to attract, develop, and retain talent. Separating these focuses into Org Development (which is really Learning) and Talent/Succession Mgmt - which is simply external recruiting and internal recruiting (aka, Workforce Planning/Internal talent mobility) makes NO sense. I do agree with Finding #4 in the sense that the university should prioritize the satisfaction of their employees. Beyond just "better onboarding, competitive salaries, and good benefits"...the university should dig deeper and tap into what really motivates employees to stay with an employer...see below article that was published by my company. <https://www.accenture.com/us-en/insights/future-workforce/employee-potential-talent-management-strategy> HR should be setting the talent strategy in partnership with the "business" (the faculty and staff) where talent/skill gaps either currently exist or are forecasted to exist based on demand drivers. Key factors related to areas of expertise amongst faculty, aging workforce, skill gaps among staff to ensure continuity of services, etc. Students, while a nice stopgap for staffing shortages, are not a long-term or viable solution for the university. Alternative talent models should be considered, such as an adaptive talent model where contractors and automation/digital solutions are leveraged to offset talent shortages. Efficiency gains through the automation of highly repeatable, high volume tasks can free up capacity/focus for limited staff to perform more strategic activities where human intervention is required and preferred. Also, Finding #5 and Rationale #5 is missing the component related to talent development/succession planning -- not all faculty should be hired externally, some can be developed from within - much cheaper and promotes the point in Finding #4 related to "Career Ladders". Also, it's a terrible idea to give absolute power to one person to make the decision to select participants, determine eligibility for VSP payments, and construe the terms of the VSP agreements. No one individual should hold that power - it should be a joint decision, shared by not only the President of the University, but talent strategists from HR, Faculty leaders, and most importantly the decisions should be underpinned by data to support the rationale beyond just age -- skills, academic prioritization of the university, etc. I believe while the findings and recommendations of this report are mostly in the ballpark, they are barely scratching the surface of what's possible for the way the university addresses its workforce to prepare for the future. I would be happy to discuss this further with anyone at the University or the consulting firms who developed the report. [REDACTED]

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes

based on this report.

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

n/a

Yes. Agree this should be centralized

Recommendations seem worthy of consideration.

N/A

I have personal experience of the negative approach of the applications & entry procedures of new students. I suspect the cause to be the overwhelming flood of applications. There seems to be no allowable consideration and 1 small line not filled out on the app is indiscriminately kicked out. Is TAMU becoming so blindly conditioned to being #1?

A one stop solution for HR is usually the best course of action. Focus on employees and students is key.

Streamline operations per the report.

for this,IT and Marcom, the number of people in these functions can be reduced university-wide by 50%. Everyone wants their HR, IT and speech writing person(s).

HR services can use some improvement. Easy finding to make. Not sure if solutions are the best.

No comment.

Everything at TAMU suffers because of decentralization and siloing, academically and as a part of staff and as one who received financial aid. Layers of administration and redundancy made it very confusing as to who was in charge and who had the ability to help my needs.

No comment

Don't take good jobs and pensions from the citizens of College Station.

A&M can stand to treat folks well and keep them happy at our isolated outpost of humanity.

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

Recommendation #1: Reorganize .... Agree. This is a long overdue alignment of HR and Payroll functions. Implement now! Recommendation #2: Provide .... Agree. Another good idea. Recommendation #3: Eliminate .... Agree. Centralizing HR support will significantly improve this service for the University. Recommendation #4: Invest in .... Agree. Succession planning is vital for any large organization. Recommendation #5: Invest .... Agree. Good idea.

In business the "one stop" shop is a great way to weed out innovation and the ability to front line needs to be filled. HR while "inefficient" for centralized planners, it is the death toll for recruiting appropriate talent.

I support these recommendations.

A&M faces significant succession planning problems. Without a clear path forward in addressing the looming exodus of institutional knowledge and relationships held by the senior faculty, it will take A&M years to recover from these loses.

Although centralization of Human Resources may be cost effective, there should still be maintained specific organization specializations that can help with specific needs that a generalist cannot provide. I don't agree with getting rid of all part-time HR Liaison Network staff for full-time as there is usually a reason they are part-time instead of full-time whether it is a side or second job. It does sound like though as crazy as it sounds that the university needs to do better at its core function of preparing young people for real jobs so that they have the motivation to actually work after their time training at the university. Apparently, right now people can't remember why they went to college and they don't want to even work.

There are too many HR employees in the system. This organization should be cut by 75%. Get rid of all the part time employees and expect more from those who have high level titles. Everyone seems to be a director of vice president, but nobody even has the courtesy to respond to potential candidates. Additionally, most current HR personnel do not know anything about the roles they are filling. They do not consider anyone from outside "academia". This does not enable new ideas to be presented. HR continues to go to the same old academia pool for candidates, even if they are less qualified. They don't even respond to candidates. This department needs cut and overhauled.

I believe in the need to have a very strong and skilled HR and OE organization. However, in many companies today, this organization can be large and expensive and lack real process discipline and success metrics. Many of the metrics of HR and OE organizations today seem to be more politically or perception oriented, given the current corporate and governmental culture today, versus focused on real success of the organization and the individuals in it. To be clear, I'm not suggesting that we shouldn't track and respect the norms outlined for HR related statistics in large public universities today. I'm just saying that we need to go beyond that to really drive process discipline and results that set our great university apart, based on our mission and core values.

Good!

Repeat: Maintain faculty who have experience in the private sector where possible.

I like that these recommendations seem to allow for processes to be still be carried out if personnel are out or leave. And it will create a central location for employees to get HR help which will make their lives better for sure.

There does seem to always be a lot of each department fending for themselves rather than overlap of resources. The right hand doesn't know what the left hand is doing.

I don't feel I know enough to comment.

More women Professors and less making the women do most of the work without most of the pay.

I agree that there need to be options for faculty members to reach out to outside of their Academic hierarchy so that everyone feels secure when venting their suggestions or grievances. Again, TAMU should strive for the best as far as Meritocracy and not base these department salaries, tenure, and positions on "equity charts". Hire the best and allow them to do the best research, teaching, training, etc.

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

can't say

Same as above

Agree

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

I think it's beneficial to have one HR department

I don't understand the issue enough to have an opinion here.

Turn employee development around to help employees learn that is their responsibility to design and development themselves. Recruiting students is important, but recruiting faculty is more important.

N/A

None

Agree with the recommendations from the report

Like

A one stop shop for HR makes sense and the skill building for existing work force makes sense as do a pass down of institutional knowledge from aging workforce. Again it seems like a tone of new folks reporting up to one senior manager on the side of HR just be careful that these are not getting overloaded.

Support

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

Consolidated HR sounds like it would be a mess and add delays to hiring. Get everyone on the same systems, but keep hiring processes independent.

HR is primarily irrelevant in almost every organization. It is merely a check off department for compliance purposes without any merit.

No further comments. Not enough information to agree/disagree with recommendations made

Ags need to be able to be referred more easily around for HR and health. I once got hit by a car on campus and had to still take an exam because the teacher could not reschedule it. Kinda messed up, but my grade suffered severely for it.

Why does every suggestion involve increasing the size of the faculty/staff? That should probably be the main question you ask. Do you actually need a larger staff or do you need better management, by that I mean hire leaders. Cross training is absolutely a good idea, it's a better idea than creating a faculty/staff that rivals the actual size of the university.

The consolidation of HR functions and service providers to the HR department is well rationalized. This section shows that the report is capable of effective analysis on centralization/decentralization issues, which makes their justifications on combining colleges and decentralizing Student Affairs more worrying.

Just as with most other areas of concern here, a significant amount of consideration should be given to diverse needs and benefits of specialized areas. Otherwise, centralization stands to yield improvements as proposed. Additional review may be implemented with phased separation- as far as changes that should be made to positions as much as retaining critical roles. Also, cross-training as presented signals a slippery slope away from staff investments unless given strict guidelines and incentives.

When I worked at the Office of International Coordination (OIC), we went through a reorganization and the new director (a political appointee--wife to the chair of the state higher education coordinating board) fired everyone who was hired by the old director. She then hired cronies and friends of those family members. During this time of reorganization, this must not be allowed. The Human Resources department should have a grievance/whistleblower hotline to insure transitional departments do not become fiefdoms.

no comment

As a former student who worked at A&M for 8 years, I would have LOVED to have remained in College Station for the rest of my career, but the opportunities for professional advancement were extremely limited and the pay scale laughable comparable to similar institutions across the nation. If you're worried about losing institutional knowledge through attrition, you have to be willing to invest in the people and give them a reason to stay.

None

Efficiency, efficiency

TAMU is exploitive of the people who work on campus cleaning, planting, and cooking. Having caste these workers to contract companies who pay below a minimum wage and provide few benefits hardly shields the university from the glare of its abdication of responsibility for all the people in its sphere.

I didn't read this section as well as I should have to have concrete feedback. HR in many corporations is out of touch and used for hiring/firing. This department has the potential to be the heart and reflect the culture of the organization when it comes to helping, showing compassion, enduring that employment and discrimination laws are upheld, etc.

College Station is not the most exciting place to live. I have friends who are professors and live on the outskirts of Houston. They want better schools for their families, and more entertainment options. I know it must be a little more difficult to recruit leaders in faculty. I would think higher pay and investment in faculty "amenities" would help in your hiring. I feel money spent on education/hiring rather than having the best locker rooms might be a good trade-off.

Agree this is an important function to be centralized across all campuses.

This is especially important when hiring new faculty & administrators. Too many universities have almost exclusively hired people with a far left mindset. Their classrooms have been a breeding place for far left ideas. We need to provide a broad set of ideas to our student base & then let them decide what track they should follow. It is also critical for administrators to be able to ride the fence with their employees.

Some centralized policy and departments here could help but again "one size doesn't fit all" when it comes to talent in each college. Decisions still should rest in the hands of the Deans of each college and their departments.

Agree with recommendations

None

N/A

Agree on all recommendations.

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

Diversity is important but must never override talent and skill.

Voluntary Separation programs typically cost a lot of money and often those that opt out are often hired back on a contract/temporary basis at increased cost.

Cybersecurity measures should be the strongest in the HR area.

I love my University a great deal, but would gloated to see my alma mater be ripped apart by DEI efforts that focus on critical race theory. And as a Hispanic, Mexican American, first generation college student, I can tell you that we are a very prideful people. We do not want to be coddled. Challenge minorities to rise to the occasion, but do not treat us like we are stupid or that something is wrong with us.

What HR? HR should be involved in getting students career jobs from day 1. Faculty are never happy unless they have tenure, and most will never get it, so help them find industry jobs so they can learn enough to become a better future professor.

I disagree with Human Resources handling Payroll. In my 25 years of experience corporate, state, private, etc...that is a no! I'm not sure who at this company put that flowchart together. That is an auditing no no! Recruiting would be nice. I see it never says much more about that. The former Aggie network has really deteriorated the last 20+ years. And my husband & I have talked about coming back for years and have never seen an attempt at hiring.

Stop promoting/prioritizing the jab

No specific comments here.

I am a big supporter of diversity and inclusion. I have limited my support of the university in recent years because of the

"conservative" leanings of the school. So much so, that my son and daughter went to UT Austin for Engineering. No mentioned in this report is any deep analysis of the Engineering School, but as a former student I have concerns over the school becoming too big and the quality of the engineering education reducing with the increased enrollment (10k is too big, 20k is just insane)

Strongly support creation of a centralize, one-stop HR organization. I support investment in a VSP, as long as it really is voluntary. Actually, I'm of two minds about this. On the one hand, I believe strongly in the old guard making way for energetic new thought -- but some over-65 tenured faculty continue to be the crown jewels of their department. The cynical part of me worries that the real gems will take this 3-year phased retirement, while the old codgers that you really want to leave will just continue to hang on. Not sure if there's any way to deal with that....

no comment

Agree

none

Again, focus on recruiting the best talent. Don't even ask about ethnicity. Just decide what qualities you want and recruit those people. Good communications skills should be high on the list. Character is important. Honesty is paramount. Good pronunciation is important. Proper grammar. Public speaking is important, particularly if you want people to represent A & M to the public. Even front desk manners are important. Politeness and accuracy in speech and communication are important. Competence in specific areas should be important. If you recruit somebody to fill a role in workers compensation, for example, recruit someone who knows something about managing injury claims, or at least has done some research in that area before you interview him or her. I'd think a person who wants to work in worker's compensation or employee benefits should at least show initiative by interviewing someone who works in that field before applying for the job. Don't just take them off the street with the goal of developing them if they haven't shown the initiative of interviewing someone already in the field. Test people for short term memory. Design tests that will help you predict that they will be able to set priorities and follow through with their tasks. Remove any standards based on race or ethnicity that will give one candidate an artificial advantage or disadvantage over another. Don't engage in reverse discrimination to achieve a goal of diversity. Don't apologize for lack of diversity and don't waste money trying to increase diversity if you advertise widely and your applicant pool doesn't reflect the diversity you think would be ideal.

Payroll does not belong under the HR umbrella. It clearly belongs under the business/finance division so that the functions of determining and setting up salaries (compensation) are separated from paying the salaries (payroll). There must be checks and balances between these 2 functions.

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

Be very weary of "centralization solves all problems".

Consolidate it.

no comment

Agree with the findings and the rationale for each, especially in the current environment of shallow labor pools and high employee turnover rates

I caution about the recommendation to merge functions in HR, IT, etc. The report recommends this to eliminate/reduce inefficiencies, but I've seen cases where doing this shifted issues to the "customer", e.g., people have to spend more time waiting on hold, sorting through a large organization to get to someone who is able to help them, etc. I'm not saying this will definitely happen, but it can and should be avoided.

Confirm the core values of our university are present in all hires.

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

The student access to Human Resources is very cold and needs to be warmed in their offices. Student workers need to stay off their phones while working. This is a huge problem.

The age of faculty and lack of succession plan is startling. This is more of an issue of current leadership versus organization. Address the problem rather than moving around the deck chairs

Nothing significant here to comment on. Maybe these things help, but I don't think I am in a position to know if they are solutions or just reshuffles. Seem valid on the surface though.

Make every Aggies has a joyful remembrance tie even after graduation.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED] Class of 2014

No comments

I am concerned about trying to conform the employee pool to a "standard", consisting of "underrepresented" people. Faculty need to be hired and rewarded according to ability and talent and experience, not because they meet a profile need of some misaligned expectation.

I think one central HR is SO much better than different ones. SGA advocated for years for centralization like this and it seemed like we weren't heard. I am glad the firm's recommendations are being taken into consideration.

## Human Resources and Organizational Effectiveness - Other

Please provide your comments related to Human Resources and Organizational Effectiveness:

N/A

Regarding recommendation 1, it is not certain that centralization will result in efficiencies. That is, the expected particular efficiencies are not described or defined. Are these efficiencies in service, cost, time, etc.? And efficient from who's perspective? Are these efficiencies for the institution, the colleges, the departments, the faculty and staff, or something else? Moreover, the dotted lines in the organizational structure are not defined. What does a dotted line mean? Does it mean awareness or direct supervision or something in between?

NA

Very nice suggestions contained in this section. I will have to leave final input to the human resource and organizational effectiveness professionals.

n/c

none

As the interim dean of the University Libraries, I want to provide the following feedback and information about the Libraries Business Administration: The Libraries has centralized and embedded the Libraries HR unit and staff within all aspects of our operations, project management, and organization. We have found this model to be highly effective and efficient and we are consistently praised for our compliance by University HR. Removing them will affect the efficiency and effectiveness of how we provide our services, programs, and initiative to students, faculty, and staff. The Libraries has roughly 250 staff and faculty members and an additional 200 student workers. There are approximately 50

supervisors. There are two staff members who deal with day to day needs of employees and staff supervisors. These staff members are embedded into our staff and faculty hiring, training, onboarding, and coaching. Both staff members are also deeply involved in faculty evaluations, the promotion and tenure process, recruitment and retention, and diversity processes and services. One of the staff members is considered a permanent member of the Libraries standing Recruitment and Search Advisory Committee because of the knowledge and viewpoint from HR. We have found his expertise and contributions to be invaluable in this process. Our two HR liaisons are the only liaisons that have knowledge and experience of the Libraries career ladder. Customer service for employee resources is very important to our organization. This includes timely replies and communication of information. Our internal human resources liaison provides excellent customer service which in turn allows us to be efficient in our jobs and services we provide to students and researchers. The University Libraries promotion and tenure process has been praised by the dean of faculties office on numerous occasions because we follow the standards and requirements expected of us. This is due to the embedded nature of HR into the process.

---

Please see my comments above

---

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

---

You should just get rid of these people altogether. They allow abusive situations to continue without punishing the abusers. They are absolutely and completely worthless.

---

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC’s influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC’s influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

---

Restructuring is a good thing.

---

The major problem here is the lack of a proper career structure for operational staff. Because most units such as departments are relatively small, and because positions are tied to specific job descriptions, most staff have to move from one department/college to another to gain any sort of promotion. This creates inefficiencies as there is frequent staff turnover, resulting in the need to train new people before they can actually do the job they are being asked to do. This has been going on for years. The centralized training system seems reasonably effective, but staff are needed in the individual units, and this will have to continue. It seems therefore, that centralizing staff duties within somewhat larger units, such as colleges, is required. This was instituted in Geosciences a few years ago, and provided both a better career structure and a reduction in corporate memory loss as fewer staff were lost to other colleges. We also started cross-training, so that there was less time wasted because the person dealing with a particular issue was away. So I am certainly in favor of cross-training. Why is learning technology and eLearning put under HR? Surely it should come under the Provost as it pertains directly to how education is offered to students.

---

██████████ NEEDS to be terminated immediately! Both ARE covering up ILLEGAL acts occurring on campus, they're helping perpetrate as well as facilitating a hostile work environment and discriminatory practices. She's WITHHELD my students file from him via the multiple requests meanwhile ██████████ retaliation SHOULD have had his butt out the door so quickly he wouldn't have known what hit him.

N/A

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

"Human Resources" is nothing more than the government infiltration of every business or workforce in America. Under the guise of "political correctness" and "worksafe best practices" it is nothing more than the government watchdog group imbedded in any corporate entity. Most companies and agencies could do without a HR department.

Promotion of student and faculty diversity should play a larger role in the critique. We are still a long way from being representative of the state.

Human Resources is way too powerful and reduces organizational effectiveness. Looking for ways to reduce costs has become essential. A&M has grown so large that few people know what goes on. Again, way too many offices.

Aligning some of these process better at the system level could reduce errors and redundancies especially with multiple system members, TAMU, and TAMUS offices all being in B/CS merging some of the groups such as HR could be both cost effective and eliminate confusions in who handles what.

By making this change which seems to be well needed, it will provide consistency and various levels of oversight in order to avoid potential problems.

Focus on efficiency and not being overblown as an organizational unit.

None

See above your Human Resources needs to be reevaluated and educated on hiring practices

I think a centralized HR resource will be very helpful.

Since the human element of TAMU makes up a huge part of the budget, it only makes sense to make the working environment a place that faculty and staff want to remain. Training new staff is very expensive. The idea of succession planning and upward mobility of the staff has been a desire for many years, but there never seemed to be a clear path. This is a worthy goal.

Good

## Q12 - Please provide your comments related to Information Technology:

### Information Technology - Faculty

Please provide your comments related to Information Technology:

The only concern I have is that faculty will have to wait much longer to get help.

Not that anyone will listen, but the centralization of IT in Engineering has done nothing but made it more difficult for me to do my job. There has been NO - none, not a bit, zero - improvement in services due to centralization, but there has been more bureaucracy, slower response times, more difficulty doing simple things that I need to for teaching and research, etc. Only an administrator who doesn't actually have to do work would have considered this a "success," and want to expand it university-wide. Maybe some other departments who just use computers for basic work and not research have an better experience, but not us...

The Libraries IT unit implements, develops, or maintains a large number of information platforms for the Libraries that

Central IT would struggle to manage or support. Of all the centralization recommendations, this one would have the greatest negative impact on the Libraries.

I greatly worry about centralized IT. Few understand the imposition that all of the paperwork and regulations create for laboratory researchers. Nobody from IT ever signs their name to a memo. Their web site is devoid of staffing or organizational info. The A&M IT department is an Orwellian "1984 personified".

There are still issues related to service, quality and performance, particularly WiFi on the Bryan HSC campus. Further look into the pros and cons of centralizing IT, particularly with efficacy, is needed.

None

Finding #1 - The University Libraries have incredibly complex IT needs. Our IT unit works on the collaborative development of software for library use, and we have some niche applications. Additionally they have to work to integrate applications from other vendors in order to best serve the campus community.

Again, the quality of service and help desk is important. When in a classroom where technology doesn't work or attempting to make machines work in an office - we need immediate support. It is unclear that centralization will be able to perform as quickly.

I think University IT is awesome but each unit will have specialized need -I think done carefully this can work

Not all departments have the same IT needs. For this reason, it is WRONG to centralize IT. In particular, some departments use (and critically need) Linux, and in these departments many faculty know how to manage their own equipment. So you would actually preserve efficiency (and save money) by allowing a small crew of dedicated Linux experts in these departments. To force a particular operating system (like Windows) on departments that don't use it would seriously undermine productivity and introduce new costs.

No Comment

Over the last 25 years I have seen how changes in the decentralization/centralization of IT services have impacted the quality of IT services I have received. Over time, one of the biggest impediments to my productiveness has been a lack of quick, effective IT response. Our current model, where we have IT personnel who are assigned specifically to our department (but supervised at the College level) has been the best, by far. As such, I completely disagree with the proposal to centralize IT services further.

Centralizing IT is undesirable to the end user.

Recommendation #1: Consolidate Information Technology (IT) across campus. IT is a perennial source of complaints but centralization may not necessarily be answer for some of the current problems, even if it helps more efficiently address many of the common problems. My department, Atmospheric Sciences, operates specialized computer services for teaching weather forecasting skills. In the past, centralization of IT services within the college resulted in lack of personnel with the specialized knowledge who could address problems related to these computer services. We hope that further centralization of IT will not aggravate this problem, which can potentially affect the quality of instruction that we offer. The Recommendation does state that support personnel will be embedded to address department-specific needs. We hope that if the Recommendation is accepted, the implementation will pay attention to department-specific needs and allocate adequate resources for that purpose.

The impact of centralization of IT will probably hurt day-to-day operation, and adversely impact our capacity to carry out the teaching mission. I have worked in universities with centralized IT and it does not work very well.

Central IT is already slow to respond and often unable to address issues. Centralizing all IT seems like a total nightmare.

I teach graduate courses in a computer lab and maintaining the same level of support that I currently have is critical to maintaining a quality experience for the students. Our department provides excellent, timely and customized support that allows me to capitalize on new experiences for the students as opportunities arise. It is hard for me to image how a centralized support system could provide that same assistance.

I do not think IT should be centralized. If this occurs, I feel like it would have a major impact on the students in the classroom with not having help for the professor's when needed.

Although eliminating redundancy in this area could be helpful... for the daily operation of departments the presence of IT employees assigned to individual departments is critical... as well as the availability of technology assistants in the all the buildings where instruction takes place.

Decentralization may not be the most efficient model, but it ensures the highest degree of success and accessibility. Every time something is taken away from our local IT person, it becomes harder to do. That has been my case across my career at multiple institutions.

Here too, we could end up losing important local knowledge and impeding research and business functions. We need local support for localized problems.

I would LOVE to see this overhauled. As an ex-IT professional, we do not leverage technology to our best advantage. I say this with one caveat --- when we implement technology that impacts teachers or students or our classrooms we NEED to include them in the decision making! e.g. Overhauling a classroom with new technology, or implementing a teaching technology but not talking to any teaching professionals is just plain dumb. For example I taught in the new ZACH engineering building, and while it was cool and fancy (engineers like that) it was not workable or best in class.

Support level is weak for IT-literate faculty, and central policies are sometimes counterproductive in terms of effectiveness.

Absolutely need to consolidate IT. It is consistently impossible to figure out who to contact and who is in charge of any given tech system, whether it's my classroom or my office.

In connection with my role [REDACTED], I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

IT staff in the College of Education and Human Development have been top-notch and extremely responsive. There have been multiple instances where our college staff were able to address and solve an issue in a timely manner and provide unique solutions for our college needs. Consolidating these services would most likely reduce efficiency and effectiveness while providing more generalized service.

Proposed change is good but watch out for delays

IT personnel have highly specific knowledge that supports software, instrumentation and laboratories specific to disciplines. College-centralized IT works well within colleges with a single mission. Centralized services across not only a college of CAS, but all other operations on campus would result in lack of specific expertise where needed.

The University Libraries have very specific information technology needs, including the maintenance of online subscription to research databases, our institutional repository, digital library resources, and our online catalog. We are in the process of migrating to a new open-source Integrated Library System (FOLIO), so we need our own technical experts to administer and maintain this. A centralized DI service would not be efficient at all for us.

Information technology is a core component of services, teaching, and research and they are specialized for each field. The technical needs of research in the humanities are different from that of political scientists or engineers. Likewise, the needs of the Health Science Center are different from the Libraries. We need to have specialized staff who understand our software and can build and support software relevant to our services and research. Specifically, our applications group acts more as researcher programmers than standard IT. The digital library uses specific standards and software libraries that aren't common outside of the field (IIIF/OAI-PMH/Z39.50/PCM). Our programmers are experts with over fifteen years experience operating in this space. A centralized IT unit would severely impact our ability to develop the tools for digital libraries.

This is such a predictable piece of tripe - centralize, claim "efficiencies" but completely forget that IT is a S E R V I C E organization designed to support the academic and research missions of this university. In 5-10 years there will be so many complaints about the lack of responsiveness, etc that there will be a report recommending decentralization to better serve the colleges/departments. Here's an idea: centralized authority with decentralized execution. It seems to work fairly well for military organizations...maybe give it a try?

I work in Agrilife and IT has been HORRIBLE ever since they made us separate from the university. This report explains all the reasons why we should NOT be separated but then excuses the College of Ag because we are in Agrilife. It's really sad how much effort has to go in just to set up an email from the correct address or a meeting online when the university has the resources, but Agrilife does not. Treating COALS like we are not an academic unit (we ARE) limits our ability to collaborate with other academic units at Texas A&M. Please let COALS be separate from Agrilife, at least with HR and IT!

This is cause for great concern. Again, when the college of liberal arts centralized IT, the problems multiplied, rather than disappeared. Obviously, MGT thinks this would be a cost-saving measure, but I guarantee that a super IT

Department will not be attuned to different stake holders' needs. Centralization has been know to create inefficiency in many cases; why is centralization always understood as a good thing?

Centralization is a sure way to slow down the university's production. To get anything done in a timely manner requires someone that knows the department and is somewhere near to be able to get to issues that need to be taken care of.

I thought this was already centralized.

It would be a tremendous help to have the IT be made more uniform across campus. With all of the individual units, it is really hard to have IT functions seamlessly.

Centralization of IT: To the extent that IT provides support for research efforts in individual departments / units, this promises to be a terrible idea. Faculty research is an individualized operation and IT staff members who are familiar with the specialized needs of our work are not simply duplicated effort, this is a need to maintain the quality and effectiveness of our university. A stated rationale for this is that IT support is inconsistent; this was a head scratcher for me. I know who to go to for IT, consistency is not an issue. In a TAMU wide IT model it is a certainty that I will not know who the support people are, and and that when a problem develops in my research lab, solving the problem will require more time from me and my research staff. We need people who are familiar with the specific problems and issues of our department. I agree that cybersecurity is a significant issue and that greater central coordination and control may be necessary, but this will require more investment not less; conflating this with cost-cutting and moving everyone to a central office is not reasonable.

These are good recommendations

It is difficult enough to get IT help within our college, much less from a centralized resource that would serve the entire campus! I think it's important to still have college-level IT support, even if everything is centralized.

Consolidating IT is a short-sighted idea. Often, when one needs IT help, one needs it speedily and not at a distance. And IT staff who understand the disciplinary specifics of the faculty and staff they are working with are more helpful than those removed from the work being done.

It is already difficult to deal with the IT rules, and we have IT centralized in our college. The IT staff sort of understand how we use computers for our field and lab work. I fear that centralizing IT at an even higher level will make it next to impossible to do the field and lab work we are funded to do.

Centralizing IT for such a large university will not work. We rely on our college IT reps.

Centralizing IT support across the campus is difficult to understand in terms of efficiency. Different majors and colleges have vastly different IT needs. It seems likely that the first routing for an inquiry will be based on "what department are you in?" and thus the IT solution will end up being with specialists for your specific department & college. This is one case where I think the report does reflect what many faculty view as an IT problem and there is a sense of urgency to solve it. However, I think better communication between IT and individual departments (create liaisons) would really help fix the current system.

This creates serious concerns all over campus. Currently, there are too many delays and poor services in so many units. The proposed changes have the potential to exacerbate the delays even further. Furthermore, different colleges and units have different computing needs, ranging from basic office desktops to sophisticated scientific computing.

I am concerned about the proposal to consolidate information technology as it relates to the University Libraries. The Libraries' information technology needs are unique compared to the rest of the University. For instance, the Libraries' information technology team has been involved in creating and sustaining Folio, a comprehensive library circulation system that tracks book checkouts, digital and physical item locations across multiple campuses, and item records for searchability, among other areas. Similarly, the Libraries' digitizes and preserves for long-term access unique materials, such as rare books from Cushing. To ensure that these materials are both discoverable by researchers and historically preserved, the Libraries uses several unique systems that require ongoing IT support. Should the Libraries' IT support move out of the library and to a centralized unit, it is likely that some of the IT support needed for these systems would have to be outsourced. Outsourcing IT support for the library would both cost more and be less responsive, for users as well as for librarians.

None

I agree that IT needs an overhaul- it has been my biggest headache since joining the university. However, any changes

should involve minimal disruptions for faculty, many of whom have already undergone several IT mergers and integrations in the past year or so. Major changes are a severe inhibitor of research progress.

IT is largely dysfunctional, from an end-user perspective. Their current policy is that everyone has equal needs and is treated equally. In an academic and research setting, there needs to be flexibility and responsiveness. If a clerical worker in business operations can't perform his duties because of problems with the IT - there are no personal repercussions. However, if a faculty member misses a grant deadline, or a publication deadline, this can create significant career damage. Could that grant have been the difference between tenure and dismissal? When the stakes are significantly higher, the system should provide a platform to enable people to achieve success, not impose obstacles to ensure failure.

Centralizing services like IT, HR, and facilities for a large campus, let alone one like Qatar across an ocean makes no sense. We rely on our personnel on location to resolve issues when they arise, especially if it's class related and needs to be resolved immediately. Having to call back to the US when 8-11 hours ahead is exhausting, because that means having to call at bedtime. No one wants to have to make a business or help call when going to bed and having to teach at 8 AM the next morning. I once had an issue with my VPN that had to be resolved by main campus and it took over an hour - I had to go to the IT office on campus to be able to make the international call. It was a huge hassle.

**Concerns about Centralization** The need to enhance the operating efficiencies at TAMU is very real. Several years ago, another president hired Price Waterhouse Coopers (PWC), to undertake a similar exercise. That report made concrete recommendations, and unfortunately many were ignored, despite their validity. That report recommended that all business operations and advising be centralized at the College level. I centralized the advising in my college a year before that report and that has continued to remain in-place. This has allowed for the development of professional advisors, who are focused on student success and properly supported as compared to other activities when they are in a department office. The advisors in those situations are tasked with office operations and scheduling classes as compared to their primary mission. Things can be centralized at a level, but at the university level they will become bloated bureaucracies that are responsive to the people in the Williams Building to the detriment of the faculty, staff and students. Those are the people that are engaged in the core mission of the university. The report talks about decentralization as if it is a bad thing. Decentralization in most entities allow for better, more timely decision making with a closer connection to constituents. When the decision making is centralized it becomes internally focused as compared to externally focused. Take the once mighty US Steel, it went as far to design its headquarters in Pittsburgh in an irregular footprint to maximize the number of corner offices. The focus was so internalized that they ignored technology, clients, and competition. It went from being the first US billion-dollar capitalization to being deleted from the Dow Jones Average after being there for 90 years. There are lessons to be learned! **Centralized Computing Operations** TAMU is a large and complex organization, with likely 100,000 constituents physically located on our campus and likely over 300,000 devices connected to our network every day. There are very few organizations within the United States that compare with that statistic. I was a student at TAMU when Computing was centralized around mainframe computers. I was a faculty member when desk-top computing became available and centralized IT was non-responsive to this ground shift change. Their paradigm no longer worked and could not respond to the new technology. As a result, Departments created their own IT departments not out of desire but out of need. For a more recent and concrete example, the TAMU Student Information System (SIMS) was deployed for decades past its useful life because it was "comfortable." Ultimately it was to the detriment of useful information concerning our students, required reporting, timely real time data and it completely disregarded handheld devices. We have spent years playing catch-up because of centralization that was completely divorced from the users. The most responsive IT unit on the TAMU campus is Provost IT. Without that team, we would have been "sunk" when COVID hit. That team is so good and responsive in taking care of classrooms. [REDACTED] has been great at having people address specific technology issues in classrooms. That team has implemented advising solutions and management, that central IT could not do and was more expensive. I implore you to look at centralization through a different lens. During the budget cycles in my College, I have consistently insisted that we look into other and better options related to IT. I continually think about how that money could be deployed to support our teaching and research mission. The last time we looked at "contracting" out to central IT, the estimated cost was \$500,000 more. By keeping IT centralized in our college, we saved money and have them in the building where they are timely in responding to problems. Given my experience, this centralization will be more expensive and provide worse services. What is needed is equipment standardization, bulk purchasing opportunities and a mechanism to ensure that wrong decisions are not repeated. Centralizing procurement of equipment and supplies could yield real savings!

Based on my experience dealing with consolidated IT within my college (College of Geoscience), consolidation of IT across the campus is a bad idea. Faculty in my department quickly develop an accurate impression of which IT staff are excellent and which are not up to the job - but we are not able to communicate effectively with the College-level employee in charge of IT staff within the Department. Ever since we merged IT staff across the college this has been a perennial complaint (it's not related to one or two substandard IT employees, it is a structural problem that rises from the people who are in a position to know when someone is not performing well, have no ability to complain to the people in charge of the underperforming employees. Merging IT across the Campus will simply exacerbate this problem. My impression is that we need more (or better trained) IT staff not fewer IT staff. I don't think this will save money while improving IT across the campus.

---

Centralizing IT at the college level has already been a disaster in some colleges, such as Agri-life. I've now been working on this form for 3 1/2 hours, so I will be brief. Agri-life ended up RIF'ing all of its IT personnel, forcing them to re-interview in order to fit into its new college IT structure. Relationships with IT personnel and with the departments were irredeemably shattered. More than half of the IT personnel were gone before the year was out. The IT situation in the college is a disaster, and one of the IT professionals who left the college to go to a new situation, is still, months later, receiving calls from faculty and staff in Agri-life who hope that he can help them with their IT problems. Imagine what this will be like if IT is centralized as MGT imagines. College-wide help desks don't work efficiently, why will a university-wide help desk work?

---

Centralized IT without local support is very inefficient. Accountability for typical needs is a local phenomena.

---

Regarding IT and the Libraries Our IT operations are centralized and tightly integrated across all our libraries and the university press. As a tier 1 research library, our IT unit provides end-user support 24 hours a day, 7 days a week, every day of the year. Our application developers are tightly integrated into our service workflows, teams, and projects. They have specialized knowledge of library-specific applications, including a number of open source products. Because their work is highly specialized, I am curious as to how their portfolios would compare to some of the other colleges/departments on campus that have already been deemed different enough to not be part of the recommendation to centralize their IT staff? It should also be noted that we had a very good 2020 audit and our IT team has regularly joined on to centralized services as they have become available. While we do take advantage of these centralized services as much as possible the Libraries have very specific technology needs and a team of specialists that provide these services. I am dubious that a move to centralize this operation will result in more efficient and effective service at the Libraries for our users (both internal and external).

---

In the last decade, we have had a dedicated staff person who assisted our dept via the college IT organization. Having consistent person to reach out to is enormously helpful, and much more efficient than using the existing helpline. Again, relationships are what makes the university function, including between IT techs and faculty. Those relationships are key to maintain.

---

none

---

Centralizing IT is another area that may or may not produce the intended outcomes. Ideally, the focus should be on the quality of service and the recognition of the vast varieties of institutional needs (e.g., IT in the medical school may be quite different than school-based research that I do). Again, there is a place for centralized IT if handled with a thorough review and the hiring of expert technologists to streamline day-to-day functions. This process should not restrict faculty research needs and the wide array of resources we need to accomplish our grant-funded and other research projects.

---

It seems that we often accept a less than perfect service/ This is a poor couture. We should simply processes and solve the problem asap.

---

The centralization of IT will negatively affect the productivity of faculty research and teaching. At this point, there is an IT person from the College of Liberal Arts assigned to the Academic Building. I have problems with IT in the classroom several times a semester. Without the ability to call someone as the problem is occurring, I would not be able to fulfill my teaching responsibilities. By the same token, when I have computer problems, I need someone to help as soon as possible or I cannot continue working in my office. Centralization of IT at my previous institution meant long delays and loss of productivity.

---

Further centralization of IT services is likely to cause more problems than it solves. Different colleges use computers very differently in their research and teaching, and it would be very difficult to serve them all effectively, leading to an increase in bureaucracy and a less efficient organization. I already feel that IT is too centralized, and this slows down my

research because I have to get approval in order to do simple tasks.

---

The consolidation of campus IT is another welcome and long-overdue change.

---

Centralization is not always a good thing. Having common systems across a decentralized structure is always a plus. A poorly functioning centralized system fails the whole University, not just a small section. For example, for business systems, the gap between the faculty and the business associates increases the chances of miscommunication and reduces efficiencies. Same for IT and other essential services. What works for one College doesn't necessarily work for others, there is no "one size fits all" system. This is just flawed thinking that centralization is always better. We need to make sure that we have flexible systems that reflect the needs of the incredibly diverse needs of faculty and staff.

---

We recently centralized our IT in Agrilife. Especially for those of us in COALS who teach it seems to have created more problems than it solved. For example, I was told a couple of weeks ago that a problem connecting a computer to the podium microphone that had worked great until then, that the expert could stop by in the middle of November. Since some students are in an online section, that was a shock.

---

Recommendation #1: Consolidate Information Technology across campus. There are limits to centralization. I had an issue with library information services, where I could not reach a resource necessary for research. I spent maybe a week talking to centralized library and information technology services. It did not know what I was talking about, even about the resource, while the library services could not comprehend there could be an important IT issue in the background. We never moved beyond restarting the computer and clearing the cookies. At the end, the in-house IT in Economics assured that this is not an IT issue and the librarian in the Policy Sciences & Economics Library figured out that there is an issue with how the IP addresses are configured on the library resource. They jointly solved my problem within an hour, while the centralized resource wasted my time for a week without any outcomes.

---

Centralization again. I see the need to protect against cyber attacks but I am skeptical about the motives of the changes presented and anticipate IT problems will be even more challenging to solve.

---

no comment

---

Centralization may be more efficient but not effective. This can slow down many aspects of research and teaching. Need to look at evidence from past centralization in some units - slowed down processes, lost effectiveness, no clear evidence of cost savings.

---

When IT staff were removed from the department and put within the college, both the timeliness and quality of help declined considerably. I could give example after example, but to be clear and concise, for me personally, it has been frustrating and has negatively affected both teaching and research activities. I think for faculty/staff efficiency and effectiveness, it should go back to the departments. I can't even imagine what would happen if it goes to the university-level.

---

IT is abysmal within my college. If it's centralized it might be better, perhaps because it would include more non-liberal arts majors. I still have unfinished tickets from the pandemic (March 2020). My University computer randomly beeps every two weeks and needs to be shut off; IT cannot fix the problem due to its periodicity. I do not understand why the answer to cyber security is always more. There are real costs imposed on the University community (faculty, students, staff) from the level of lockdown we do with computer resources. Why are these costs valued at zero when we weighed against costs due to hypothetical cyber crimes?

---

Our Information Technology groups need more support, more staff--they already can't handle the load. Centralization should not decrease staff.

---

IT on campus is a mess. Budgets need to be boosted so that competent people can be hired in greater numbers. Cyber security needs to be a high priority, but not to the extent that it makes it impossible to get our work done.

---

☐ This is another example of why the Libraries should not be merged into a specific college, nor should Cushing be moved. Library technologies are very complex and very specialized; they serve the entire campus, but they aren't like other programs and platforms. They require faculty and staff that are familiar with them. With the Libraries' dedicated IT department problems are handled efficiently. Routing patron and library faculty/staff issues through a centralized IT department will cause delays in responses and frustrations for the patrons/clients. ☐ The Libraries' faculty and staff routinely participate in cutting-edge library technology and emerging trends in information storage and retrieval. Removing the Libraries' IT department will drastically reduce the librarians' opportunities to "elevate their position as experts" and showcase TAMU as a model for other university libraries to emulate.

Help Desk Central is nearly always extremely helpful. The staff is always willing to help you through your problem. Unfortunately, the centralization of much of the rest of Technology services has become the opposite of user friendly. I recently had an issue for which I needed to talk to the Identity Management office. I discovered they have completely eliminated their phone number. You have to communicate with them through email and it is not always easy to describe the issue through an email. Help Desk Central told me I needed to talk to Identity Management and created a ticket which referred me to Identity Management. I did not know I needed to reply to the ticket email before they would do anything. They kept closing the ticket without doing anything. I replied to the closing and said the issue had not been addressed, please help. I never got a response until I included a request to receive a call which eventually came. I had a zoom meeting with two people from Identity Management and they thought they had made the necessary change but still needed to get part of the change approved by the Exchange office. However, the next day I found neither part of the changes worked. I again had trouble contacting people at Identity Management but eventually they put me in touch with someone back at Help Desk Central who actually fixed the problem. The University recently changed to the Canvas Learning Management System which is managed through the Office for Academic Innovation. There is no one on campus who can really help with problems. When you call or email AI they say to contact the Canvas specialist in your College who in turn say to talk to the Canvas specialist in your department who has only slightly more knowledge than the regular faculty. They can only play around with the frontend of the program and try to get things to work. There is no one who really knows what is going on inside the program and can look at a problem and say why what happened, happened. I fear that further centralization will only lead to further separation between the administrators and the users. If the system does not work the way it should, there is no one who can say why and no one to fix it.

---

Recommendation #1: Consolidate Information Technology across campus. The current Help Desk Central functions well in this fashion for many general needs. Specific individualized needs of faculty are best met by IT staff within the colleges greatly simplifying the experience for the faculty. Please keep the users in close proximity to the providers. Recommendation #2: Establish a university-wide Help Desk and ticketing system. This exists well with Help Desk Central for general purpose needs. Recommendation #3: Prioritize cybersecurity to ensure campus services are not compromised. This is essential.

---

I hope consolidation of IT means that we will lose local IT staff who can respond efficiently to IT related problems.

---

Please do not remove Digital Initiatives from the University Libraries and centralize it with campus IT. They are highly specialized in their library expertise and participate in unique library projects that are outside the scope of IT. There should be collaboration between the two groups, but library technology experts is a distinct field and skillset that should be acknowledged and celebrated.

---

Our College IT is working well with recent management updates, but this seems like something that could be streamlined through the University. However, it would be essential to maintain individuals who understand the needs of each department. We have very specific needs that cannot be generalized. We would still need specific IT admins who work directly with faculty for specific data processing, storage, and software needs.

---

Again, that IT would be centralized for all except Engineering (and AgriLife) is a perception problem for this report. Why not centralize all? Given the President's connection to Engineering, this should perhaps be addressed to alleviate concerns that every other unit or constituency is second after Engineering.

---

Consolidation of IT in AgriLife Science seems to be working well, so overall consolidation also should work.

---

This could backfire in many ways.

---

Confusing and always changing in structure and rules. Whenever possible I avoid "IT".

---

I am not convinced that centralization of IT is a good idea. Having local IT folks who know their customers and their computing needs seems to be important. Perhaps there is a hybrid approach, wherein IT employees answer both centrally and departmentally. This would allow negotiation for widely used software licenses, for example, to be done centrally and IT could be trained centrally, but each department could have IT support by persons that reside in the departments and have local knowledge and responsibility to keep the Dept Head happy with the service to the department.

---

IT centralization is not preferable to decentralization. It has been difficult enough to maintain access to computer resources / permissions in the current system and further centralization will push researchers to off-network resources.

Learn from business here. Decentralized IT operation creates fiefdoms that generate pods of greatness to the detriment of most others. Staffing levels seem reasonable and response has been pretty good for my students and myself, yet I know from my time in business, if my area is good, others are probably hurting.

Same concerns as above. The more centralized, the longer the distance between faculty and staff. This, in turn, will make it harder for faculty to obtain timely support.

Streamline the systems, increase effectiveness, reduce bureaucratic burden.

I would prefer that IT specific to the library operations remain within the library. We have various projects that require programming expertise with knowledge of library operations (ex: FOLIO - an integrated library systems project that is open source). We have IT professionals that have been with the library for years who are knowledgeable about the types of software and systems that are used by library professionals and are integral to the work of libraries. They are extremely responsive when a library system goes down and are very quick to diagnose the issue and find solutions in a timely manner. These are critical resources that support our many databases and other resources used by students, researchers, faculty, and staff.

YES- please!!! Having different logins for different systems and having to call different people depending on room or device is frustrating. However, local support is a MUST... the number of times I have followed the centralized Help Desk process and after an hour of being bounced around on the phone told, "sorry I cannot help you have to wait for local support" is even more frustrating. Centralized systems yes, but LOCAL support is needed that can respond the same day to most common issues.

Again, overlap within colleges and departments.

Anything that can be done to make Information Tech work would be fantastic. I sometimes wonder if we have to start over. I usually use Google to find things on our own website and often the links provided by our website are broken.

I am concerned about the evidence base substantiating the recommendations made.

Support Recommendation 1. Consolidation of IT will improve its effectiveness. No opinion on Recommendation 2. Oppose Recommendation 3. This recommendation is not specific. Some changes could be made in the name of cyber security which would only make processes more inefficient and ultimately lead to less cyber security. No opinion on Recommendation 4.

Centralizing units such as Information Technology may be helpful in some departments, but in other areas it will significantly hinder the work and success of faculty, staff, and students. More analysis, thought, and consideration needs to occur before any changes are made. For the Libraries, we have resources and systems that need IT staff onsite and who understand our unique systems and needs.

Re: Recommendations 1 & 2: Please do not. In the last round of centralization, IT support was taken from the departmental level to the College level, with the implementation of a help-ticket system. These actions have been a disaster for actual support, with help actually taking weeks-months. I can give example after example of how our IT support is now worse than it was six years ago. Given how locked-down our computers are, we can't solve the problems ourselves (like a simple system-update), but instead have to wait weeks so someone can "bombgar" into our system and press a couple of buttons. I literally have been waiting 3 months for a lab computer to be purchased, software installed, and installed in my lab. Centralizing IT further will make it a bigger mess. Having said that, I think our IT staff are doing the best they can with the limits that have been placed on them. Further centralizing will not help, but will add additional layers of bureaucracy.

No comments.

While I appreciate the desire to streamline, the library's IT department is a critical unit with library specialized knowledge and history within the library. The library's IT is THE unit which puts in place the ability for the library to be innovative, create, and help units within the library better assess and function with their workflows and diagnostic reports. Digital Initiatives (the library's IT dept) is one of the leaders in the library's FOLIO project which is replacing our out of date management system. This team over the years has had to learn not only the ins and outs of the old system, creating reports and struggling to keep the old infrastructure up and running, but learn the new system, helping the FOLIO community with code, improving the system for libraries worldwide. This is specialized knowledge that the libraries would not receive if all of IT were to be centralized. Instead of a leader in innovation and in the FOLIO community, the libraries would be reduced to a passive passenger; instead of self-hosting FOLIO, saving the libraries

hundreds of thousands of dollars, we would have to be hosted by a vendor and abide by their pricing structure.

All departments have specific technology needs (as clearly indicated in the recommendations which leave out two units "because their needs are different"), so by leaving some departments out, there is a clear message being sent across campus that other departments' needs are not important, and faculty and staff will get that message loud and clear.

Far too much centralization. Far too much of a bunker mentality. Address security issue rationally, knowing that there will from time to time be breaches, but do everything to facilitate the exploration of emerging digital technologies by faculty and students in their varied departmental environments

Perhaps this could be better.

Information technology is becoming (always) a more central component of our academic careers, and I like the idea of consolidation. Unlike many of my colleagues, I think I realize the importance of clear decision making from a single source. However, I do have some serious reservations about how such decisions are being made. I'm not speaking of IT support for things like broken in-class computers and projector assistance. Those things are pretty straightforward. But IT has become more important in a variety of ways lately, and the decisions IT makes have started to cross over into the pedagogical, not just technical. For instance, who gets to decide whether or not something counts as a Canvas "community?" Who should decide who has access to digital classrooms, and what permissions they have? Who gets to decide what tools will be available, and which ones will not be accessible? These are pedagogical questions as well as technical ones, and cannot be solved by IT alone. So if we plan to centralize IT, we need to make sure that we have a structured way for faculty to make suggestions, get feedback as a whole, and speak to the pedagogical problems that come up in digital learning. Right now most of this work seems to be happening through the Learning Management Systems committee. But that seems a small influence, without much clarity on how their suggestions are actually implemented. Overall, we need a recognition that IT issues are no longer simply "technical." If we are learning in a digital way, then the digital component is a pedagogical one. Faculty input is critically important here and there needs to be a structure for soliciting it.

Excellent service 7 days a week 24 hours a day

I have no expertise to provide helpful comment on the proposed changes.

I agree that IT is perhaps an area that needs a lot of reimagining. The IT infrastructure needs by students, faculty, staff are exceedingly complex and, due to mainly historical reasons, IT services have evolved in a very haphazard way. Re-organization and consolidation are probably the right path.

Having departmental and college level IT is really useful. They know the department, they know the classrooms we teach in. My departmental IT is very quick and responsive and know our needs. Centralizing makes it less personal and less able to understand the situation fully and react quickly.

If IT is centralized, it is important that faculty have access to the same IT people when they call. So there should be a group in IT that's dedicated to each Dept. (or other sub-unit). I realize this goes against centralization to some extent, but it's much more efficient when you have a problem to be able to talk to someone who knows your system and is familiar with problems you've had before.

Centralizing again is a disaster. It has not worked anywhere. All of this centralizing to save a few dollars here and there, will be more expensive in the long run as the productivity of each unit will decrease. Some streamlining is good, but without local support the university can bid goodbye to efficiency.

From past experience with some of the consolidations that [REDACTED] implemented in the College of Engineering (COE) during her tenure as [REDACTED] (finance, IT, communications, freshman engineering). I observe that things have been generally going OK in cases where departments are continuing to work with the same people they always did back when these support staff reported to department Heads. However, when these college or university level support staff are not committed to the missions of the departments, the missions (teaching/research/outreach) have potential to be held back, by "support staff" that are not committed to the missions of the departments because they do not report to the departments. As an example, I have a COE IT (title of Manager) staff person just down the hall from my office that had no previous ties to my department. When hardware failure in the classroom caused a problem, this IT staff person assisted, but then later talked about the "favor" that he had done for me in performing his job in support of the teaching mission of my department. As another example, the COE has both classroom based and virtual computer labs (vlabs.tamu.edu). We ended up in a position this fall where even though software specifications for fall 2021 were

provided back in April, the COE IT staff decided to wait to make the changes in August 2021, after completion of summer classes. When the COE IT staff did prepare a release candidate for the teaching and virtual labs, they instructed that they required testing feedback in less than 24 hours. A major IT support component (that they had working correctly back in fall 2019) was not implemented for the first 4 weeks of fall 2021 classes. This same [REDACTED] just down the hall from my office seemed much more concerned with not having help desk tickets filed that would document the problem, and in covering up the delays on behalf of the COE IT staff responsible, than with actually supporting the teaching mission of my department. [REDACTED], please think about these issues as you consider implementing similar support staff consolidations university wide. I expect that many of these support issues would get worse when all the TAMU IT staff work for [REDACTED], rather than the departments charged with accomplishing the missions of teaching/research/outreach. The example of the IT Manager feeling that his advancement is served by keeping his helpdesk tickets clean for his COE IT supervisor's review and works to protect "his team" rather than supporting the missions of our institution is an example that reflects normal human nature, and explains one of the weaknesses of too much consolidation of authority. Oh well, maybe the next [REDACTED] will be able to undo some of the less than successful COE changes, assuming that we don't have a [REDACTED] making that too difficult. Of course it is a self-fulfilling prophesy that when you establish a culture of department heads with no power, pretty soon you have department heads that do not expect to be in charge of support of their missions. We can do the same thing to our Deans also...

---

I concur with recommendations #2-4, BUT I strongly disagree with recommendation #1. I do not agree that all IT resources should be consolidated across campuses. IT support must remain local (at least in part) given the very specific research computing needs many laboratories have.

---

Centralizing IT makes sense on the surface. However, the university the size of the university and the diversity of its needs makes centralization a scary premise. If the goal is to centralize for the sake of accountability and goal-setting, then I think centralization is a great idea. If the goal is centralization to create better outward-facing customer services, I think it is a terrible idea. I have yet to encounter a company's customer service that improved (from the perspective of the customer) when it was centralized--which too often means outsourcing and a complicated touch-tone system in which reaching a capable agent is near impossible. At the moment, customer service in the form of the availability of staff invested personally in the success of our university is the greatest asset we have at Texas A&M and a whole--from getting my parking pass sorted to learning how to use new software in the classroom. No matter how awful the problem seems at the time, I am comforted by the fact that a fellow Aggie is a phone call/text message/email away.

---

The requirements of different departments and fields especially in the field of IT can make a centralised IT administration rather problematic. In my field we typically require Unix/Linux operating systems on computers. Windows is entirely useless to me. Centralising IT admin is fine when dealing with people who only need to use standard software or are using their computer to type basic documents but extreme care is required when expanding the remit over the entire university. My past experience of these types of reforms has been that they tend to break science laboratories from working for a few months while everyone irons out the new kinks which different systems have introduced. An "opt-out" system saying "I will manage my own IT resources and prove to you that it's secure" is highly desirable in these cases.

---

I don't see how a "one size fits all" is going to work. The computing needs of campus on the academic and research sides are greatly varied. My experience with Academic Innovation as an example has been less than positive during the migration to Canvas. There has been a dramatic reduction in useful customer service--we ARE customers--except we can't go anywhere else to shop!

---

No comment.

---

My personal experience with centralization is that it makes it less accessible and efficient for the day to day tasks for faculty and students. In order for a centralization to work there needs to be personal present throughout every area on campus so when a technical issue occurs there is limited disruption to classroom instruction.

---

Learning technology an e-learning should be managed by IT. It is unclear how the divisions will be sorted under all of the new AVPs.

---

The IT departments already seem quite busy and occasionally overworked. Decreasing personnel and increasing workload, travel times to different departments, etc. seems counterproductive. The report identifies Agrilife and Engineering as needed different requirements. However, the assumption that all other departments (even within one college) have the same requirements shows a lack of understanding of many of the disciplines. English in general, for

instance, usually doesn't need a lot of computing power, (though the digital humanities office might) while performing arts does!

The Digital Initiatives unit within the Libraries plays an essential role in the maintenance and support of systems that allow researchers on campus to access resources. They are also essential in supporting library faculty and staff who provide services to the campus. The DI unit has always been efficient and incredible at customer service. They are embedded into the Libraries culture and are participative in Libraries committee meetings and administrative meetings, which is very important to ensure the Libraries initiatives are successful and the numerous online resources remain accessible and user friendly. Centralizing Libraries IT would be a disservice to library users and faculty and staff who work in the Libraries.

I have general concerns about the centralization of services. We are a big place—the size of a mid-sized city. Centralizing advising, IT, and business services will make this place A LOT less personal for the student (especially advising—students need a person that they know and trust to help them make important decisions—having centralized advising will ensure that advisers are completely unable to offer personalized services—they won't know the students, and they won't know the programs). One of the things that makes Aggieland special for students is the community, the friendliness, the personal service that they get from our faculty and staff. Centralization will destroy that. Centralizing IT and business services MAY be more efficient (depending on how one measures efficiency) but it will CERTAINLY be less effective for faculty and staff. As with advising, the level and timeliness of service is critical for the efficiency and effectiveness of my work as a faculty member and administrator. I can't wait days for answers to questions, which is what happens right now when I have to reach out to centralized services. When I can reach out to someone that I know in my college's IT or business office—who I know knows the answers—I get answers immediately, which allows me to continue my work. Not having that will make my research, and my ability to get things done administratively (P&T, faculty development, etc.) MUCH LESS EFFECTIVE. Let me reiterate—RIGHT NOW, REACHING OUT TO CENTRAL SERVICES RESULTS IN WAITS OF DAYS OR WEEKS (OR INFINITELY). REACHING OUT TO OUR IN-COLLEGE SERVICE UNITS RESULTS IN WAITS OF MINUTES, AND IMMEDIATE SERVICE. That is how I measure efficiency. I would like to recommend that at least one of the measures of efficiency be ticket clearance times, but my experience with University IT and Educational Media Services just this semester leads me to believe that clearance rates are manipulated—both units cleared my ticket by referring me to a different unit. The problem—not having a mic in my classroom—took 2 months to resolve. If the consultant is going to rely excessively on metrics, they ought to make sure those metrics are valid.

No comments

Before the centralization of information technology there should be further review of the specific needs of various departments. Only Athletics and Transportation are mentioned in the report, but other departments could have unique needs as well.

Recommendation 2: if we did not have strong departmental helpdesks, we would not have survived the move to the new LMS system CANVAS. Departmental helpdesks are more effective for all.

It is true that the current TAMU central Information Technology is difficult to navigate, but a complete centralization of all IT resources would, like centralizing student advising, will lead to loss of specific knowledge areas. The IT needs of disparate departments/schools such as Kinesiology, Engineering, Science, English, HR, and Finance indicate that departmental or college specific IT needs must remain. In addition, central IT often demands changes to computing system hardware and software, but without any appreciation that individual departments and groups may not have the funds to enact those changes. A realignment of central IT must incorporate funding mechanisms to allow for upgrades and changes in IT infrastructure at the local level.

Our IT has moved to the College level and it is very difficult to get anything done in a timely manner. The centralization of this process did not seem to make things better for faculty.

I have no input on Information Technology except to reiterate some of my other points above about the balance between efficiency and effectiveness. (i.e. sometimes the thing that should most efficient turns out to undermine productivity and effectiveness, specifically with respect to the power and value of personal relationships).

I think the consolidation of IT operations in Colleges and Departments would be a disaster. Being able to contact competent, engaged and dedicated IT personnel is essential for any units' effective operation. Although this change may save in administrative costs, it will substantially degrade the service each unit receives from local IT professionals who know what the problems are in their own units and can respond quickly to provide answers. There is no way to replace decentralized and effective service with nominally more costly and inefficient service. Recommendation #3 is extremely

import and I fully support this proposal as long as it is implemented with little or no disruption to end users.

My experience with centralization of IT is that it has created a greater burden on faculty, reduced efficiency of faculty, and caused unnecessary hurdles to receiving support. Centralization often means depersonalization and when that happens, service is negatively effected.

The findings and recommendations seem reasonable. The only thing I would like to see is that faculty are given freedom to administer software installations and updates on their own work computers instead of having to work with an IT representative. Sure, security is important... but it's crazy inefficient to have to call an IT rep to install the software updates.

Recommendation 1: having a centralized IT is good, but different Departments have different needs, and some must have their own IT.

I feel strongly that a formal study of the proposal to centralize IT services should be completed prior to any such change being made. Computational and IT services of departments and subfields vary widely across campus and this may have a large unintended negative impact on some STEM field researchers.

Consolidating IT across campus may present some problems. Often, IT have close relationships and unique functions within units. It will be important to have personnel maintain strong relationships within departments.

The recommendation of consolidating IT support makes sense but the implementation will be challenging as different departments naturally have different needs for IT support. Some more, some less. Achieving equality of service while maintaining quality is not trivial. This requires careful planning and deep investigation

1. The TAMU Libraries should have its own dedicated information technology personnel because its systems are so unique and the entire campus (and extension agencies!) depend upon their reliable provision 24/7. 2. In 24 years, I have never been convinced that IT gave a damn about my ability to do my job. Their notions of "customer service" would be laughable if it were not so necessary. I never felt I could trust any sort of "ticketing" system for reporting problems. Give me a 24/7 helpdesk, accessible by phone, manned by real human beings who can solve my problems!!!

IT centralization is less harmful than centralization of advising, but it has already started and it HAS done harm. The mathematics department's superb departmental computer system has been disrupted and thrown into chaos. The employees of the centralized help system are notoriously less competent and helpful than the IT employees of the math department, who are being driven off! The report apparently proposes to continue and intensify this process.

Similar to the reasons I outlined for why centralizing undergraduate advising would be bad, doing this with IT would be bad as well. But, again, an office at the top that coordinates new government regulations, etc would be good.

Recommendation #3 regarding prioritizing cybersecurity is important and necessary. That said, with over \$1B in research expenditures annually, 'TAMU can work to protect all categories of data from theft or exposure' and work to minimize negative impact of that cybersecurity on the research enterprise.

General IT infrastructure upgrades are greatly needed. Having a centralized IT group could be beneficial, particularly if it means all IT support will have higher level training and are able to deal with multiple operating systems and computing needs. However, I am concerned about speed of service and needs if the level of staffing is cut. Also, it was unclear how high performance computing resources will be handled here. Will HPRC remain a separate entity?

Centralization of IT should work, but it doesn't. Centralization of IT in COALS has been a trainwreck. Nothing works as it should, no one knows who should do what. For instance is webpage management an IT thing or a MarComm thing? Neither one of them want to claim it and I see just this type of thing happening if IT is centralized further.

I perceive consolidation of Information Technology is to cut staff (RIF)

Recommendation #1: Consolidate Information Technology across campus.

I do hope that moving the Open Access Labs under Information Technology does not result in their closure. While Engineering was able to move forward with a program requiring students to get their own laptops and bring them to class, this is not feasible for all programs and students across campus. Similarly, the campus wireless infrastructure is incapable of handling the load for a total laptop model.

In all the many other universities where it has been done, nothing good has come from centralizing the IT operation. It homogenizes and reduces the actual support. And it gives IT far more power and authority than it deserves or can actually use in the service of the institution.

My college has consolidated IT services. It is a wreck. The IT staff are great people, but the leadership and centralization efforts have been a disaster. I have yet to meet a colleague that is pleased with the shared services model. I have no idea who these consultants are talking to, but ask the people on the ground about how much this shared services model stinks.

Again, this could work well, depending on how it is done and the leader in charge. It could be a disaster if it is understaffed, poorly led, or not integrated with units in a way that makes sense.

For the 25 years prior to 2014, the University had centralized IT leadership. I agree that combining the academic IT units that were removed from the VPIT portfolio in 2014 is a good idea. The reason that many university CIO's report to the Provost, rather than the President or a COO, is because a significant part of the IT mission is to support the academic mission of the university. The academic leadership of a university needs to have a say in academic IT. At many R1 universities that have a VPIT reporting to the President, there are often separate academic IT units reporting to the Provost. I am not aware of a single R1 university that has successfully consolidated all of the embedded IT support personnel into a single centralized unit. Consolidating embedded support personnel at the College and VP level is a best practice in my opinion. If the consolidated strategy of embedded IT support personnel is pursued, however, I would incorporate the IT support for academic departments from Agriculture and Engineering into the unit. While the Agriculture and Engineering Agencies do have unique IT needs, the academic departments are like their counterparts in the University. The University's Help Desk Central and the ServiceNow ticketing system provided university-wide services prior to 2014. Only desktop or specialized support located in the Colleges and VP offices did not ticket through Help Desk Central. Having a single point of contact for users is good, but will require additional resources. Texas A&M University had a strong record of prioritizing cybersecurity in the 25 years prior to 2014. Certainly, the cybersecurity threat level has continued to increase in recent years. My sense is that IT funding has not increased at the level necessary to support this great university. Funding is not addressed in the report. IT has been underfunded in recent years in my opinion. University IT costs rise at a level higher than inflation. I assume funding is the reason that the University's backbone network has not been upgraded. The backbone should have been upgraded to 100Gbps more than five years ago. My recommendation would be to reinstitute the Computer Access Fee, and convince the Board of Regents to allow regular increases in this fee, as we did for many years. This is the worst university IT consultants' report I have ever read. My recommendation would be to bring in a panel of successful R1 CIO's to review the recommendations and offer their opinions before proceeding.

Recommendation #1 (Consolidation): Doesn't build trust among users. AgriLife consolidated IT and I don't know if I am getting real responses from IT or phishing scams. The costs of IT for my project went up and service went down after centralization. It's become substantially more difficult to work with IT within our project and hurt productivity.

Recommendations #2, 3, and 4 (Help Desk/Cybersecurity/Project Managers): I'm okay with all of these proposals

IT has traditionally provided good IT tools but seemingly without much regard for the considerable switching costs when platforms and vendors change - need to strike a better balance. The Classroom teaching hardware and software (esp WRT Zachry) would be a very bad problem if not for the strong, personal support available on a nearly-immediate basis. I fear too much 'centralization' of "help-desk" functionality would undercut this level of support for teaching

I agree with the centralization of IT fully.

Recent efforts to centralize IT services have already proven problematic so I am skeptical. These problems can be resolved but specialized needs of departments/programs should be met with FTEs dedicated to these units.

Please centralize. I teach in the interdisciplinary environment all with different IT requirements--this is confusing and error prone.

I sincerely hope that any changes will improve timeliness of actions and response to faculty, staff, and students. The bureaucracy at our university is already overwhelming, and I am concerned that it can only get worse.

Recommendation #2 is puzzling given that we already have a centralized help desk for IT.

Centralization on some levels can increase certain efficiencies. However embedded units and ways to get quick answers is essential. Segregating TAMU units from the rest of TAMU is not helpful to faculty having to manage two identities.

Consideration needs to be made to ensure that centralization does not result in delayed IT support. Specifically, our current department IT staff can show up in person on short notice to address (sometimes substantial) IT needs related to our essential teaching and research roles.

I'm in favor of merging servers so all the university mail is on a single server, for example, but I really like the effectiveness of embedded IT personnel in departments. At my previous institution, the IT services were centralized at some cost savings, but a very severe drop in our productivity and usefulness. Centralizing IT has a way of turning "let's figure out how to do that" into "no, you can't do that" and the last thing we want is to become a lumbering tech-dinosaur - trading security for utility. The new added focus on security also sounds quite ominous - this is already by far the most inconvenient place I have ever worked in terms of being able to use a computer to do a thing. Science needs a lot more than email, Word and Microsoft Teams, and the bigger the pot, the more the soup all tastes the same. This seems like an invitation to further neuter PC utility and make us buy time on a server to do something that could have been done faster, better and just as securely on a PC.

---

IT consolidation may result in cost savings, but it will not result in better service. Local IT professionals would be lost, making response to problems take much longer using a very cumbersome procedure.

---

I am in support of centralizing IT if it is done correctly. Departments often have very different IT needs and a model where there is one central IT support unit that supports the whole diverse needs of the University is short-sighted. While all IT professionals on campus need equitable pay and resources, departments need dedicated support professionals. If this can happen with a centralized organization then I would support such an initiative.

---

With such diverse and divergent needs, it is difficult to believe a one centralized system will be effective.

---

Consolidate Information Technology across campus. This includes Qatar, 7 hours ahead of TAMU. So, will the outsource folks be hiring people from India, like calling for help from ATT or Suddenlink? Our CLA IT works fine, so why make it for the entire system? Stupid. At beginning of the pandemic the IT folks were great, training us to use new programs and platforms. Thanks IT!

---

I am concerned that a centralized IT will result in slow response times. I do not understand how the proposed university-wide Help Desk differs from the existing university-wide Help Desk.

---

See my comments RE IT and centralization and feedback and groundtruthing

---

I worry about this as a researcher. I need specific things in terms of computing that I can't allow a committee or staff to decide for me. I need to be in charge of some elements of my own IT. At the same time, I do think we should be efficient.

---

Moving IT further and further away from the people they serve is probably not a good idea. It might make sense for a company like Dell to outsource all of their IT to an international company to save money, because they do not depend on the efficient use of time and resources of their customers. If they waste a lot of your or my time, it doesn't hurt their business. My opinion is that centralizing IT is going to create a huge bottleneck for staff and faculty productivity.

---

Faculty and staff are dependent on IT and so having local personnel is optimal for fast responses to issues in the class room and at the work station.

---

This is not my area of expertise, so all I will say again is that input should be sought from all stakeholders, and in the form of genuine collaboration rather than some meaningless survey.

---

Same Business Affairs. We have gone through centralized vs not several times now. Being out at the Hwy 47 campus, every time it has gotten more centralized, our level of service here has plummeted. I can't imagine it will be much different this time. If you are not physically on the main campus, this model does not work well. We still have

---

Centralization will have benefits and drawbacks, and the outcome will depend on exactly how it is done and managed. However, if two of the largest colleges are not participating in this centralization its hard to see it working properly. If this really was a good idea, and could be competently implemented, then all the colleges would be taking part. (see Marketing and Communications)

---

This one is a bit controversial - there are necessary systems that are specific to a unit's functions. In the case of libraries, we deal with a lot of vendor databases as well as discovery systems that are specific to providing information to students and researchers in the University. There are also platforms we host to disseminate research created by A&M faculty (Scholars@TAMU, institutional repository) that would need to be supported with specific expertise (and responsiveness). That said, it is possible that having centralization (provided there was still expertise) would help with consistency and sustainability of systems.

---

The "once size fits all" model has a lot of failures. Information technology decisions should be made by top experts in computer science, not IT technicians.

Pre-covid I would have fought the idea of consolidating technology. Now I am less concerned. I think it will still be important that they are spread throughout campus though for speed of service. I can't see tech support to be housed on one end of campus serving the full campus equally.

The dedicated IT professionals in the Libraries are responsible for ensuring a robust discovery and access ecosystem for numerous types of resources including online journals and books; TAMU Scholars; digital collections; and print materials is available for all students, faculty, and staff at Texas A&M from any device at any time. We are not just about maintaining servers and desktops for faculty and staff but for ensuring our virtual library front door is always open.

From reports of those who have had their IT centralized, this has not been a smooth transition and getting central IT to answer questions and troubleshoot problems is troublesome. When I have issues in a classroom with their own IT, they respond quickly and I am able to go forward and teach the class. Folding in the library IT would be challenging as they perform specialized tasks that other IT departments do not deal with in relation to digitization, preservation, running our catalog, and other functions. They have homegrown systems that must be maintained for the library to operate or you will have to outsource these systems at a great expense. Library IT is responsible and helpful. I have found central IT to be very unhelpful to students when I have to direct them there. It took weeks for a student to get an accurate answer about why she could not access zoom breakout rooms. During COVID, this was detrimental to the student and frustrating to her and me as her instructor because she could not participate. It shouldn't take days to weeks to get an answer or to fix an issue. That hinders our students' success and by all accounts is the way central IT currently functions.

Recommendation 1 Must retain department level IT staff. Recommendation 2 I thought we already had this with Help Desk Central Recommendation 3 Cybersecurity is essential but should not result in onerous burdens on users. An example is the shortening of the time interval for renewal of two-factor authorization for logins.

Merging /centralizing IT across the campus is likely to be disastrous given that the specific needs of different colleges are so different. We provide REAL TIME data to federal agencies; this cannot "wait" for a help desk that operates 9-5 on M-F only and with staff that turns over frequently and is unlikely to be aware of the specific needs of a particular program.

It is absolute crazy that faculty in BCS have to deal with 3 IT systems. Why can't there be one unified system for the campus? It just causes confusion and is particularly problematic in teaching. Numerous times IT was called using number in a bldg only to be told to call another IT unit.

I am very concerned that additional consolidation of IT will result in an even further diminishment of useful options for faculty and graduate researchers. As it is, IT services are slow to respond and seem more concerned with maintaining security than with meeting research needs.

Recommendation #1 - many colleges, departments and units have highly specialized technology needs. As mentioned above, the importance of those personal relationships can not be overstated. In the libraries, for example, our IT department has worked tirelessly to create a new online catalog in collaboration with other world-wide institutions that would help bring down necessary library costs. Also, our Institutional Repository (OAKTrust) has been highly customized just for us and houses many TAMU specific collections and research. Again, if this is implemented, what will end up happening is that people will stop calling IT and come up with solutions on their own. We do need to prioritize cybersecurity! Please do this!

I had working experience for some months in a University, at which IT resources were completely centralized. The result was following: The University computers were sitting on a desk completely untouched. People very working on their own computers and research groups were collectively buying necessary software. It is very easy to overdo. While IT is the field where centralization of resources may be done relatively easy, one should be careful to not loose functionality.

The University Libraries IT deals with very specific software programs that are unique to libraries, insuring that the hundreds of databases we provide access to are accessible through our online search tools including the online catalogs, the institutional repository software that supports our land grant mission of making our research accessible to our community. These software are highly customized to meet the needs of faculty, staff, and students of our university.

When I joined TAMU many years ago the end-user had a lot of flexibility and I was allowed to fix minor issues myself. This is no longer the case (pointing to cyber-security for TAMU). However, without reversion the access of the end-user further centralization will make daily IT operations hugely cumbersome.

Visualization had its own IT at one time and then this was absorbed (centralized) at the College level. The cost at the unit level has been high. We are less effective, less able to respond the the individual needs of faculty, students, and the discipline, and no way to determine our own future.

I think IT centralization is the must.

Proposed centralization is critical here for many reasons, including security.

IT got off to a rocky start at TAMU; I suspect this is the case in other academic institutions. IT has improved incrementally but is still highly 'Balcanized'. Intelligent consolidation is warranted. It is important to keep our mission in mind ;different units will have specific needs including different platforms.

I am speaking on this point as someone who was a

IT needs are often locally specific and require immediate attention. Rather than further centralizing IT services, TAMU would do well to significantly increase the training of staff at the local and college or school levels and link those IT to EDUCAUSE and ECAR to enhance their training and ability to learn from developments at other tier one research universities.

IT staff and resources in the College of Agriculture and Life Sciences and AgriLife agencies were recently consolidated, apparently in response to recommendations of a previous report by MGT. This consolidation of IT support services in AgriLife is universally viewed by the faculty as an unmitigated disaster. The result of moving IT specialists housed in departments to a centralized office has meant a reduction in IT support for individual faculty. It appears to me to have been a mechanism for reduction of staff, and as a result, IT specialists cannot now keep up with the demand for their services. I am speaking from personal experience. Recently a Windows computer that controls about \$300,000 of photomicroscopy equipment in my lab crashed as a result of a Windows update, and eventually required a clean install. Working with AgriLife IT, it took almost five weeks to resolve what should have been a relatively simple problem.

Before centralization of IT services is undertaken, units should gather data on wait times for service requests. If centralization does occur that data collection should continue. If after a couple of years wait times increase significantly then it needs to devolve again.

The IT migration has caused me extra work each week and many important email messages missed because they were in the junk folder.

I am aware that the Council of Principal Investigators is developing some ideas around IT as well and might be a good resource to utilize to understand PI/research needs.

Higher education is about people, and the success of the university relies on employing and developing amazing people – students, faculty, AND staff. Please consider the efficiency and effectiveness of dotted-line personnel embedded in the units they know well, and please do not remove the human element in the spirit of consolidation and efficiency. Support staff who are located proximally to their customers provide far better customer service and also have a much greater sense of institutional pride. For IT it is particularly important to create a positive workplace climate given that we are at a competitive disadvantage for IT talent compared to more lucrative private sector opportunities. Those who know the mission and enterprise need to remain near the customers they support, while at the same time benefitting from centralized training, reporting and management.

IT needs a reboot. Consolidating all IT is a great move and will be supported by many.

There are too many admin restrictions that make it difficult to update software, upload new programs, wait for IT to repair, etc. This got worse after IT was moved from our department to the college level.

It is critically important to have an IT expert in each large department, reporting to and working with each department. Too much centralization has a NEGATIVE impact on effectiveness.

The College of Ag. and Life Sciences' move to put everyone in "AgriLife" has made it difficult for to access and use the tools provided to help us teach our classes (TAMUDirect, etc.). We now have double the passwords and have to manage two systems to get things done. Please reconsider leaving the teaching part of ag. separate from the university on computer systems and IT.

Recommendation #1: Consolidate Information Technology across campus. This is pure madness. The main strength of the Internet is its decentralized nature. By centralizing it one: i) creates a single point of failure; ii) moves the support away from the people who need it. Case in point: we used to have our own web service space for the faculty in the department. It worked very well, any issue could have been resolved in 15 minutes by just sopping by the office of our IT admin. It has been centralized last year. Now any issue takes about a week to resolve, main issues which I have are not

and as I was told will never be resolved as it is their centralized "policies". Generally, the whole interaction for whatever small issue happens exactly as I described in my comment on the HR "reform". With the same result. Now I provide IT support for some of my colleagues when they need it. Recommendation #3: Prioritize cybersecurity to ensure campus services are not compromised. Please, do not do that. Please, prioritize the stability and general usability. It is very easy to prioritize security: just disconnect the campus from the internet. We need a working system! Security is not enough and MUST not be the main goal, it is simply a condition.

I do not know enough about how IT is organized to have much of an opinion. I am generally opposed to the centralization of services like this, as it is so much nicer to have a dedicated staff person in the same building. I have experienced the difference in my own department. If IT is centrally located, I personally will be more reluctant to seek help (and will be less efficient as a result).

As I understand, one recommendation is to consolidate IT resources at the university. This would mean no IT Department in the Mays Business School for example (note: am a faculty member in this college). This centralization would be disastrous to research faculty. We need frequent access to IT professionals to help with office computers used in research. Without our college IT folks, I know that I would be in serious trouble. Highly recommend not eliminating our college level IT department!

- Seek effectiveness always and efficiency as able. Do not over-centralize these functions in pursuit of "savings" at the peril of customer service or mission effectiveness.

IT centralization would be welcome - if it can actually increase efficiency. The current state of IT support is woeful

Having worked in IT for more than 30 years, there is much to be improved upon from the desktop to the behind the scenes entities that provide network access and myriad IT services to the campus and beyond. Providing WiFi access across the campus with more than 100,000 potential users in and of itself is a Herculean task. Setting up phones, email and voice mail for faculty and staff is also an incredible amount of effort that is additionally stressed by maintaining systems security. There is sometimes unclear choices of who should be contacted with whichever problem is encountered. Student IT workers do an incredible job of managing the demand and taking care of trouble tickets whether it be desktop issues, printing designations, building access or even software upgrades and installations. Certainly worth elevating the recognition of the criticality of all of the myriad things that IT/network folks accomplish on a daily basis and the good job that is done in light of cyber security threats that are ongoing and unrelenting.

Centralization of IT services in COALS has significantly reduced responsiveness to departmental needs. If all-campus centralization occurs, accountability will need to be creatively addressed.

I don't have opinions about this.

I never understood why there was PITO, TAMU IT and EIS. They clearly should all be combined. But the local IT people need to really be local, with their main connection to their department and college, with their connection to central IT being for common resources, bringing in extra help, etc.

1 organization, entire camps. The fact that many colleges have their own IT departments is the most backwards thing imaginable. True duplication of effort.

No recommendations.

I disagree somewhat with recommendation #1 (consolidate IT across campus). While some centralizing might be beneficial, for my particular department (Libraries), the IT department does highly specialized activities (like building new library software) that general IT staff unfamiliar with the library could not do. Our internal IT team has won national awards for the things that it has contributed to libraries and the libraries relies heavily on IT support for digital initiatives, library systems, and general functioning of library processes. If we lose this highly specialized support it could compromise the ability of the library to respond to student needs and provide needed research material.

A common system would be welcomed. I used TAMU for almost 30 years and it worked well. Now my college requires its faculty and staff to migrate to a different IT system - what a mess.

The IT in Galveston is super. We have very good support for hardware and software questions. Our classroom technology usually works, and if not we can get service quickly. No complaints and I cannot think of any improvements needed.

I would like to be a part of fixing project management across the university. I left the Division of IT when the previous CIO decided she didn't believe in project management and disbanded the office. (Previously, I was hired to build a

network of project managers). Since then, I have been working within the Mays school to build project management as a discipline and have partnered with other colleges (and even Auburn recently) to do the same. I have a proposal in to my dean's office to build a center for project management over the next 5-10 years. In case the survey is anonymized, my email is [REDACTED] and I would very much like to be involved with the discussion about project management. Happy to provide a CV supporting my qualifications for this discussion.

Leave it alone, it's working fine. Stop comparing IT University wide to other universities that are imploding with censorship and political events. It's the students and the jobs they will have that matter not the school.

Mostly good if it aligns all units including HSC

This is an absolutely HORRIBLE idea. While I am currently faculty I spent 14 years of [REDACTED]. I'm intimately familiar with the issues and tensions between centralized IT and the units. A blind move toward centralization for "efficiency" purposes moves us toward doing the WRONG thing very well. Central IT can't compete for the resources effectively to support other departments and local control of IT staff encourages local resource allocation and provides more EFFECTIVE support. It's painfully obvious that the consultants are not cognizant or appreciative of the culture of higher education in general and TAMU in particular.

Centralization and efficiency need to be balanced with promoting faculty and staff productivity. Examples are IT services.

I am concerned about centralizing IT, unless IT staff are assigned to academic units; different units have different IT needs, and a central office far across campus may be unwilling to understand or to cater to those needs. I am also concerned with expertise in such a centralized office.

I think that all IT services, including those in Agriculture and Engineering, should be housed in one unit.

Hard working in our unit. Not enough of them

Needs significant investment to bring IT up to standards consistent with a world-class institution. There are too many shortcomings to enumerate.

No comment.

## Information Technology - Staff

Please provide your comments related to Information Technology:

As a software developer I see huge potential benefits in most of the recommendations for IT; I certainly agree with the necessity for major improvement in the area of cybersecurity. As with many other areas of the plan, as we move forward with projects and initiatives to improve overall efficiency and service we must be careful not to degrade products and services to groups with special needs. For example, JRSO is tasked with operating the R/V JOIDES Resolution. In support of our science mission we write and maintain a significant variety of specialized software, much of it deployed on the ship. So as I look forward to working with the broader IT community to improve overall service and customer needs, I want to make sure we don't degrade the services we provide to our science community and technicians on the vessel. In the interest of being agile and responsive I believe we need to be able to meet the needs of all of our customers.

Technology services only exist to support other programs, some of which have very specialized needs. Consolidating organizational structure typically leads to standardization across all facets of the organization. While this is generally a good objective for backend infrastructure, it risks failing to meet the very distinct business needs of vastly different units across the whole institution. After a prolonged season of corporate merges and consolidations in our world, many of the corporate giants are now recognizing the challenges of meeting distinct business needs through a fully consolidated structure. Google did this in 2015 when it created Alphabet as a parent company to a number of subsidiaries moved out from under Google. In the past month, General Electric, Toshiba, and Johnson & Johnson have announced similar plans. For A&M to hold "centralization"/"consolidation" as the prime objective is to similarly risk disrupting important service portfolios offered by the university. The MGT report attempts to dampen the effect by recommending "dotted-line"

reporting structures. However, without maintaining strong relationships between IT and its customers, the more a customer is dependent on specialized services, the higher the risk of the customers failing to achieve their mission. The MGT report acknowledges as much when it recommends a phased approach for Athletics and Transportation IT. I agree many very small IT units (1-5 staff) cannot maintain a quality of service and compliance with ever changing security standards, but nearly all of these small units are within Academic Affairs. Consolidating those small units could achieve significant benefits while keeping the service providers focused on a common line of business. The metric for quality for IT services should not be cost or organization. Ultimately it should be an ROI-type consideration of the value provided to its customers. This is the crux of the industry-standard Information Technology Infrastructure Library (ITIL). ITIL offers a set of detailed practices for IT activities such as IT service management that focus on aligning IT services with the needs of business. Those who apply the proven framework see business value created. The MGT report recommends a classic organization restructuring seemingly without understanding how IT can create value. A key concept in ITIL is to only implement those practices that make sense in a given context. If consolidation of IT across the institution progresses as recommended, it will be crucial that it be organized in a way that preserves the ability to adequately maintain strategic business relationship, to engage customers for governance and to maintain working groups that understand and can adequately deliver the prioritized services.

---

Information Technology: Finding #1, Recommendation #1: Consolidate Information Technology across campus. The rationale provided was that the current structure is inefficient and ineffective. I would suggest that the central university IT offices are currently in such a state that it creates ineffective and inefficient IT services across the university. Our college has a centralized IT structure and operates very effective and efficiently. The issues seem to arise with inconsistent and delayed messaging/responsiveness from central IT. Additionally, I recommend that removing the reporting to a centralized office would remove the prioritization of individual college or department needs and that would be replaced with what central IT places priority on. I would suggest a dotted line to central IT, but IT staff and managers stay in place to support their local customers.

---

I disagree with wholesale consolidation. There should be more collaboration between units. The problem again is this university is hellbent on building buildings instead of supporting staff and programs already built. In order to innovate, you must invest. Doing cost streamlining is adding by subtracting after dividing end-user staff from their silos. The answer is not consolidation but collaboration. This report does nothing of the sort for highly needed IT investment for this campus and this university. The Help Desk for campus is already cannot be staffed well enough. This is a problem of subtracting in individual departments without actually adding. This campus needs to invest more in IT staff and programs, not less. This suggestion should not be adopted. Further study and investment and stakeholder buy-in is necessary before any changes are made here.

---

On paper centralization seems easy when in fact it proves to be exceedingly difficult. IT needs vary widely across campus. Attempting to generalize may inhibit research and instructional creativity. A more effective solution may be to create decentralized node clusters within colleges/divisions/etc and supported by centralized IT Project Management Administrators.

---

Our level of IT support declined when our college centralized the IT staff. As long as it does not decline again, I think campus wide centralization might work if IT personnel remain housed across campus. It would be problematic to centralize all IT purchasing duties since this would probably lead to processing delays. There is now sometimes confusion among our employees about which IT group (college or central help desk) handles what and which group they are contacting. Cybersecurity should be a priority.

---

My particular area of expertise is in the area of Information Technology. While I can see why the idea of one centralized IT unit is attractive, I don't believe it is the best solution for this University. The current Division of IT, is already crippled with poor communication, poor response time, and poor customer service – both internally among their own departments and externally. They also do not have a firm grasp of the differences between supporting a business unit versus and academic unit. The two units have vastly different goals and needs, and while Division of IT has the business side down better, they don't understand the academic side. Division of IT is distanced from their customer base, with no understanding or ownership of what their customers do and need on a day to day basis. This is part of their issue with customer service – it is like calling a large company like AT & T. The person on the other line, doesn't really care what issues you are having, so if they don't get solved, they don't really care. This will create a very frustrating environment for the faculty/staff/students. By rushing a consolidation, it would only magnify the issues that already exist. If the consolidation occurs, it needs to be after Division of IT has fixed their existing problems, then perhaps adding a unit at a time and with lots of planning. The Division of IT already went through this once with Health Science

when they consolidated their support, and the consolidation was undone within months. I don't think that bodes well for this particular idea

---

While the idea of having a consolidated IT group sounds great to me, I am concerned that something may happen to create a BIG problem or not. As long as access to networks can remain off campus, this is good. I want to take this opportunity to say that I've never liked the idea of students helping IT or other departments, especially when it comes to data. Students graduate and move more rapidly than a person hired specifically for the job. There would be less opportunity for things to 'fall through the cracks', so to speak. If we invested in full-time IT tech positions instead, we would make a better investment.

---

My comments regarding IT are similar to those provided for HR. Of particular importance, however, is that IT personnel in the Division of Research may have access to sensitive information, access to secure locations (i.e., high containment labs, etc.), the ability to modify security measures, surveillance, etc. Like the high containment personnel, existing IT staff within the Division of Research should remain within the Division of Research to ensure the safety, security, and compliance of our higher risk facilities.

---

I want to know more about what this proposal will look like in practice. We have waited weeks and months for service requests to be fulfilled. Sometimes it feels like I'm waiting on the cable company or something. I'm told that someone will be out on a certain day, and they never even show up. At least when the cable company gives an unreasonably long window of time to wait on them, they finally show up at the end of the day to service the request.

---

See comments on decentralization recommendations from the last PWC report under Finance and Business Administration.

---

I very much agree with having a central system for running all IT infrastructure. Letting Division of IT run Windows updates, technical infrastructure, etc. This frees local IT to tackle higher-level IT needs of a division. I am concerned that the current Division of IT model (pay to play) will create a vacuum of technology rather than a campus with cohesive technology. Under the current system, I am unable to use my DSA computer to access PITO databases that I have been given access to view. As I understand it, the issue is misalignment between the backbone infrastructure of the two divisions and corresponding settings. I'd like to see this unnecessary issue resolved through a unified IT system.

---

It is already difficult to get timely and effective help with IT issues - centralizing this feels like it will only get worse.

---

Do not centralize IT. The customer service from the current IT is not the best. Our college is tech heavy and it's not pleasant to be told that the wait time is two weeks or more.

---

I think there ought to still be some level of responsiveness to specific divisions, rather than a total consolidation with IT. We are able to have greater relational capital with our IT folks when we work with them more regularly, versus a more distant relationship where they may not be able to understand our particular needs.

---

Centralization should only be considered if there are sufficient resources to guarantee that the effectiveness and timeliness of response will remain the same or improve. My experience with central IT is that it takes days to get a response to a ticket, and it can take up to 15 minutes to get someone to come support classroom technology. In a 50 minute class, wasting 1/3 of it on getting basic equipment to function properly is not acceptable. I would like to see centralization if it means we all adopt the same platforms. Right now there are multiple tools to do the same thing (slack/teams; outlook/google calendar; one drive/google drive) and it causes a great deal of confusion to have both. It is also a missed opportunity for better communication and collaboration if the tools would be adopted widely and consistently. The other key is that there must be some sense of continuity. People have uploaded thousands of files to google drive, but there are rumors google drive is going away, so people are unsure of how to share/save files and are hesitant to keep 'investing' more in google drive if all the data there may someday be inaccessible.

---

We have centralized IT in our college to support all departments and units housed within. More discussion and information is needed to better understand how a university-centralized unit will be implemented to ensure effectiveness with stakeholders.

---

Centralizing IT hasn't gone well in Divisions or the HSC - it might be a disaster for the university...

---

IT services need to be more centralized. Too many units across campus are using IT services inconsistently. With that being said, we still need IT professionals closer to the customers they service. There should be IT professional assigned to depts or divisions throughout the university so close relationship can be built with the depts being services. Those close relationship will help the depts better utilize potential IT services that they might not even know is available to them.

No comment

---

I do think cybersecurity should be prioritized to ensure campus servicedes. I do believe a university-wide Help Desk and ticketing system will be much larger - but is likely best for colaboration. Additionally, I do think that concolidating IT across campus would be practical.

---

I support all recommendations.

---

What do we do if we remove the departmental IT departments and there is an emergency with something like research equipment that needs someone immediately?

---

Fantastic move to centralize IT. This was something I have been encouraging since my second day in my role. The faculty experience and student experience are disjointed and lack consistent quality metrics. We also need to study those who provide IT support at our scale and determine where we can automate. This too will take user acceptance testing. There is great power in faculty sending students to get IT support and they know they are going to the same place. Let's empower our faculty to be able to do this and for both students and faculty to land in an IT culture that is helpful, empathetic to the teaching and learning experience of faculty and students, and data driven.

---

While consolidation across IT units can lead to better things, I suggest we look at the needs of individual units to see how we can better align communications and efforts rather than changing reporting structure. I think centralizing services such as the helpdesk, could streamline far more things across campus. Bigger units that have greater technology needs won't gain any real benefit from being absorbed by central IT. Central IT has struggled with maintaining it's own structure and, in my opinion, needs to be better streamlined before absorbing any other units.

---

I am in agreement with, and supportive of, all of the findings in this section. Centralizing IT services and operations is the first step in overcoming the inherent challenges with delivering IT in an exceptional manner at an institution of our size. It is imperative that we are not only aligned organizationally but methodologically. Centralizing and streamlining IT operations will allow us to not only compete with peer institutions for recruiting and retention of exceptional students, faculty and staff, but in many ways, position us to surpass them, if we are able to successfully reduce unnecessary and inefficient business process and resources. This opens the door for innovation and growth across all facets of IT.

---

Very low manpower compared to what I know elsewhere

---

Many of the changes suggested for IT at Texas A&M are long overdue, including: centralizing help desk operations, consolidating IT into a single organization, adding a robust Project Management Office and improving performance metrics and analytics. These changes have been broadly adopted by industry and others in higher ed. They will allow individuals at the university to access IT services easily, while allowing the division of IT to better manage risk and data security. Recruiting and retaining qualified IT staff is critical, and is often difficult. If TAMU will continue paying significantly less for these roles than industry, consideration should be given to flexible schedules, remote work, and other non-monetary benefits. In realigning IT, there are numerous areas of redundancy. HOWEVER -- careful analysis will be needed in determining where these redundancies exist. While some IT roles may be somewhat interchangeable, others are closely tied to the technology, systems, and data supported. For example, support of the TAMU Student Information System/ERP requires detailed knowledge of Ellucian Banner, automation engines, and other technologies not used in other parts of the university. Lack of adequate support on these technologies can causae direct impact to: Registration, Admissions, Student Business Services, Financial Aid, and many other departments in TAMU.

---

Questions & Comments: With the current centralized IT model in the Division of Student Affairs, Departments are not able to be served in a timely manner to meet the needs of our stakeholders - particularly given that we are in a rapidly changing time of technology. I am concerned that we will see longer delays and decreased services, which would cripple our ability to provide timely, efficient, and intentional technological support to students, parents, former students, and other stakeholders including the over 1,100 recognized student organizations

---

PITO is a university-wide Help Desk and ticketing system. I am not sure what is the new university-wide Help Desk and ticketing system in the MGT report. The MGT report even didn't mention PITO. Also, MGT report mentioned to create a Division of Facility Information Systems to maintain information in support of TAMU operations (The unified system can track records and collect data to inform and enhance facility efficiency, utilization, and maintenance). The business procedures are changing all the time, and this unified system will be a long term projects. The new system needs all the students, faculties, the staffs and the vendors to take the time to transfer. The MGT report didn't mentioned any costs

---

to transfer the current system to the new one.

---

The University Libraries have very unique and demanding information technology needs. Failure in any way on the part of information technology within the library has the potential to interfere with student success.

If every faculty, staff member, and student had to go through one centralized IT department for every single need, end-users would be displeased due to how long it would take to have their needs met. Likewise, many IT employees are specialized. Treating all IT units like support staff instead of acknowledging the many other responsibilities they have creates a huge problem of those needs no longer being met.

Moving all IT under Division of IT, makes sense if the following happen. 1. You need to keep all staff in place and just change the reporting lines. 2. You keep the connections between current IT departments and their respective departments. If you want to improve the quality you need to make sure that customers know who to contact. These lines can eventually be moved but it should remain in place until some of the things below are fulfilled. 3. You implement policies and procedures to each department once the move has happened. 4. You want to wait until your IT leadership has time to figure out the strengths and weaknesses of each current IT department before moving staff around. 5. Reward the current IT departments that are leaders in progressing technologies and are cutting edge.

EIS, although an IT department, should remain with the Student Affairs umbrella. We service REGI, ADMI, FAID, SBS, and all departments and colleges. As well as house all student data and student access to Howdy, faculty access to grading, etc.

---

I feel comfortable with the team. More training needed.

---

I agree with the changes here.

---

Utilizing the same IT products to meet the TAMU business capabilities would be outstanding. Continuing to have multiple products to support the same business capabilities causes IT support groups to spend time creating interfaces between these products. When they should be leveraging enterprise level products to fulfill the university needs. Building these enterprise systems requires talented IT support staff. We are operating extremely lean on technical support staff that can leverage these enterprise systems. Talented IT people are needed for these systems. Training is also needed for IT support staff and the employees that use these system.

---

While consolidating IT makes sense on paper, it reduces flexibility and customer service.

---

Having many different IT offices is bit much, you have the help desk central, IMS, and office for academic innovation (OAI). One handling IT support and the other handling Canvas LMS, and another just handling the university media technology. It's confusing for students on where to get help, as if it's IT support then they have to go to HDC, but most often they have problems with their computer who cant take exams in Canvas then they also reach out to OAI. I agree that there needs to be a common ticketing system and consolidating those offices into one office. Combine the Instructional designer in OAI to CTE so that they can focus on course design, currently, OAI doesn't do any course design at all. Those IT workers need to know the best practices in using the LMS and also the technology. The bureaucracy and politics to get something done are also ridiculous. IT people are slow in responding to tickets. It took me two or three weeks for PITO to answer my tickets or to fix my laptop and I am sure I'm not the only one venting about their slowness. I have worked at many different institutions before, but TAMU is one of the conservatives one in terms of IT. I can't install my own software without submitting a ticket. This can be much sometimes as I do need to use certain software and it took them 3 weeks to answer my ticket. OAI also seems to not know what they're doing when installing third-party tools in Canvas. It took months for different colleges/ departments to get an LTI (third-part tools) approved. Where in other universities, they're more relaxed and let faculty decide and install those third-party tools themselves.

---

In the case of the University Libraries, the university-level centralization of Information Technology in Recommendation #1 would delay needed assistance with IT having to handle requests from so many more customers than when decentralized. Also, the University Libraries use specialized library software and programs that technicians with general university training and experience would not be familiar with. Technicians would need lengthy explanations and additional time to research the specialized software/program in order to resolve the issue. This would slow down their ability to respond not only to the library issue but also to the next problem waiting in line. Depending on the library issue, the entire University could be impacted by making in-demand library resources unavailable for an extended time. When IT technicians are assigned directly to the Libraries, time and effort is saved since the technicians are already familiar with the software/programs involved, resulting in more efficient service.

Identifying how to align Galveston services (such as HR, IT and MarComm) into the overall University umbrella should be balanced to avoid the loss of local knowledge, perspective and (in some ways) authority.

Pg. 72. Recommendation #1: Consolidate Information Technology across campus. Departments such as Athletics and Transportation have very specific technology needs; these units may require a phased-in approach. Texas A&M Health also has very specific technology needs and they have already tried to integrate it with TAMU IT and the process had been long and by and large unsuccessful. Pg. 72. Identify duplication of services across campus and seek to reduce staff over time through attrition and reorganization. Our campus IT is already stretched very thin. They do not need fewer employees, they need more. They are barely able to get through their workload as it is and this causes delays across all departments on campus. Pg. 74. Recommendation #2: Establish a university-wide Help Desk and ticketing system. A new Help Desk and ticketing system will become the main point of contact for all IT issues for faculty, staff, and students to ensure higher quality, consistent customer service. To ensure high quality, help desk calls and support should be assessed with a follow-up survey after each transaction. This already exists and it doesn't work well. The ticketing system is not very easy to use for staff, at least in terms of tracking your tickets. Also, it doesn't retain your ticket history, which would be helpful to review when similar issues happen. In addition, tickets are marked as closed before IT staff has verified that the issue has actually be resolved. The current system also doesn't always display who is responding to the message on the users end, so it can be confusing when your ticket gets transferred to other people. Pg. 76. Recommendation #4: Utilize project managers. I think this is great and it was my understanding this should already be happening. I think a key though is to make sure project managers get assigned not just to IT department projects but also constituent's projects that involve IT systems. There should be a project request form available for faculty and staff throughout the university to request an IT project lead for projects involving IT systems.

Please, Please, PLEASE consolidate IT across campus. When I started working with HROE I was denied access to the HROE shared drive because my IT access was with Provost IT. I am an employee of Texas A&M and I can't have access to another server because I am in a different division. I have approval of the VP of HROE to obtain the access but no, they couldn't make it work. So, now for any collaborations we have to use TEAMS which means, we have to save information in two places. It's ridiculous. If any of the recommendations in this report are going to be implemented it is going to take a strong technological structure. There needs to be consistency across the divisions. The only way this is going to happen is for them all to be under one umbrella. There is too much in-fighting amongst the different IT units. They need their authority to be centralized but they too, like HR and Finance need to provide service to an assigned area. There should be groups of centralized service delivery units across the campus but they receive their authority in one place. We shouldn't have 20 or 30 different Laserfiche servers across campus. Laserfiche is going to be an important technology for us to utilize to standardize services. We need IT to create a uniformed and standardized method for us to create efficiencies on campus.

IT consolidation is a mixed bag. Infrastructure has improved and benefitted from consolidation, but end-user support and customer service will suffer. Because of their position, faculty and staff at higher levels will be insulated from this. I can assure you that other departments have the same complexities as Engineering. The department-specific knowledge that keeps daily operations from being disrupted will simply go away if consolidated. The help desk function is consistently neglected across the IT world. When help desk staff mature and gain a solid understanding of some aspect of their job, they move on to something better. Call HP for support on your personal laptop or go to the AT&T store for help with your iPhone. You know it will be a hassle, so you just live with the small issues.

I think IT is currently going okay.

IT Consolidation is a necessity . Minimize duplication and increase the depth of support staff. Consolidation of Help Desks also minimizes the confusion of where do you go for help.

N/A

There is a clear and gross misunderstanding on the functions of the Libraries in this report. One of the groups that are essential to the Libraries is our Digital Initiatives (DI) Department, or, IT. They are a consolidated group and very efficient. The work they do on the backend for the Libraries is one of the main components (from my understanding and experience) that keep the Libraries functioning as they are. They help with implementing various platforms that the Libraries use to function, and code/develop ways to make unique softwares communicate with each other and provide needed solutions for services the Libraries provide. It would be a great loss to have DI removed from the Libraries and integrated with some greater IT. I highly recommend visiting the Libraries and learning about the DI functions before

making any decisions.

---

DoIT for DRL is prompt to respond to our needs, and we know we can count on them. Centralizing IT would put our employees in a pool where we are not a priority. We directly serve students and parents, and our office is the first line of contact with stakeholders, so having to wait for access to IT solutions would tie our hands, giving us no priority to solve our tech problems.

---

Enterprise Platform as many IT services as possible to save on cost and cultivate expertise in the platform by maintaining a knowledgeable support group. All End User Support for office workstations and hardware should be run through a single group with support personnel in that chain of command housed in areas near the dept. or colleges they support. For example the End User Support for professors and staff in College of Liberal Arts can be done by a local staff who then answers via a logical chain of command to an executive level manager for End User Support on campus. Workstation and laptop appropriation and purchasing should be done on a university scale through a single group that is properly scaled to deliver new and replacement hardware to the End User Support personnel that support each dept. or college. Repair requests are handled by this group where broken hardware is immediately replaced from a pool and the device in need of hardware repair is returned to the pool once the repair is completed. The personnel who do this are trained in repairing of these computer assets and with the additions of couriers, proper vehicles or equipment, computer assets can be distributed quickly across campus as needed on a daily basis. Large purchases of computer equipment can be done negotiating a better price due to volume. ServiceNow has a proven track record for many large corporations and universities in the United States. It is currently being used by the Division of IT. With an expanded support and development group emphasizing ServiceNow, the entire university could be serviced appropriately. However, this integration (which is true for any application chosen) will require a mountain of effort and consultation costs with the vendor and with other full service IT Service Management consulting, education, and technology provider companies that could help with the transition which includes education about ITIL v4 a necessary knowledge skill to understand why and how ServiceNow should work. Traditional assimilation of knowledge through dept. or colleges will not work. It requires effort, organization, and preparation above a single dept. or college level. ServiceNow, or a similar tool of its caliber, is essential for a Campus Help Desk which provides support on a great many different services from across campus. The system must be appropriate to be used by staff who are helpful but not necessarily knowledgeable about every service. Support group work flows and SME escalation is a requirement and that in turn requires a in depth review of all IT services on campus, a proper Service Catalog, appropriately gathered Assets and Configuration Items (devices), and lastly an Event Management system that can filter, moderate, and appropriately escalate service issues with the proper support groups. The university needs to attract a higher caliber of talent to better move us forward with technology during a time when the advancement of technology is increasing at an incredible rate. To be competitive with the corporate sector on attracting talent a significant change in our recruitment and retention methods is required. Salaries of IT personnel must be improved to an acceptable level that doesn't push IT personnel to leave the university at the first opportunity. Also training in the form of education, certification, career events, conventions, etc. needs to be emphasized to allow ideas and solutions to be formed for our current issues. Lastly we must be more intelligent with our remote work policies. IT does NOT require employees to be on campus. That is an out dated and archaic generational outlook that no longer applies. The freedom to be able to work from anywhere, with the proper oversight, is a massive benefit to IT personnel. Offering that ability allows IT groups to hire Out of State employees based upon their skill and knowledgeable and not limited mostly to those in the immediate area or in the state.

---

Consolidating IT into another "One Stop" shop creates the same concerns noted in other areas above. If managed correctly, this could reduce response time and increase customer service. However, if the end result is less IT staff, the expected result will be slower service. Good IT customer service is critical to success of our mission; without good IT service, we literally cannot perform our work. I am also concerned that IT would lose the "personal touch" of having IT people we know and have relationships with if it is completely centralized, which could also result in slower service. In the current model, we know who "our" IT people are, and therefore have multiple avenues to contact them if needed.

---

I don't think I am in agreement with recommendation 1 and 2. I often call the central HELP desk only to be told that my college is unique and they can't help me. I have gotten a great deal of help from my college's IT folk, but their hours are limited. I think I would prefer 24 hour service that is college-specific.

---

The University Libraries system works as a well, system. And it works well. Business, Marketing, Facilities, HR and IT are all embedded in the library model and we work as a well oiled machine. If it ain't broke...

The IT recommendations in this report are essential and must be implemented in their entirety and thoroughly. This is by far the most important part of the report. Any criticism of this recommendation I have heard so far has been born of an ulterior motive and is usually about self preservation, not what's best for the university.

---

I think there is a great deal of opportunity here to provide better, more compliant services to the entire university. The report includes observations I share, such as confusion about whom users should contact about specific IT-related services. This is difficult for new IT pros as well as new faculty. Key points and concerns: \* Leveraging embedded personnel with centralized reporting was highly successful in Engineering, and I support this model. \* Information Technology Communications has been invaluable with reaching both students and decentralized IT professionals. I hope any change in their reporting structure would not negatively affect the success of this key asset. \* I'm supportive of the partnership model for the agencies. Concern - Export-controlled and other restricted content is ubiquitous in Engineering and TEES. If it's feasible to design centralized services in such a way that they can be consumed by affected units, it could eliminate duplicative efforts.

---

The library has far more specialized apps for research and course requirements to be shoved somewhere general. I'm doubtful this will work for the library.

---

We used to have terrific IT assistance in our department. Now everything is centralized and the best people have left the university. Just the other day we were told not to update computers as the central IT folks had not had time to look at the latest updates from Windows or IOS. It was a sad indication of the University's inability to provide state of the art technology at a supposed to tier research university.

---

IT, I've never had a complaint with any IT person - and they've always, whether on case or when at home during Covid, have been absolutely fabulous. I'm always so impressed and very grateful for their help and their knowledge. When I retire, I'm going to very much miss this source of knowledge.

---

While some IT groups merging into main IT makes sense to me, others don't (like UES IT).

---

I have worked in/with various IT offices across campus and it seems every couple years they try to implement sweeping changes in an attempt to improve services. There are constant reorganizations / infighting in the various groups for power / control. A bunch of the IT offices were moved away from CIS to the Provost to give more control of priorities to the academic side of the University. Now a few years later a different consulting report is recommending that the groups get moved back. At the end of the day it seems the University is willing to try to do anything it can to improve services with the exception of the one thing that would work, increasing salaries and hiring more staff. Every IT organization on campus is underfunded and understaffed for the work they are being asked to do. No amount of reorganization is going to fix that. The work is too great, for pay rates that do not reflect current market rates. With COVID placing a greater demand for IT staff, it is going to become increasingly difficult for A&M to keep and maintain the staff they currently have without a sizable increase in salaries. The offices have also started forcing IT staff back into the office and not approving any work from home requests. Why should we stay when we can now get paid higher salaries from the abundant remote positions across the country that do not force us to move or disrupt our families?

---

Finding#1/Recommendation#1 - Much seems logical. It was noted in meetings that have occurred across TAMU that have already seen some centralization that some response times have gotten worse. Therefore, those faculty & staff who do need desktop support or classroom assistance will be interesting to see if needs will be met in an expedient manner or will get worse. Finding #2/Recommendation #2 agreed along with how to request services, this is confusing and a challenge, then knowing what costs are involved with a service is hard to put together. As for the ticketing system, a review was performed across campus many years ago and ServiceNow was selected, however it didn't seem that everyone had to follow the requirement and enforcing such a requirement could not be made by I.T. Having one ticketing system across campus, not just in I.T would certainly aid in preventing looping and staff understanding. Ticketing systems are not just useful for I.T. staff and sharing how they work and the knowledge across TAMU could save TAMU greatly. Some of the findings and recommendations do not seem to align with the proposed organization chart. In addition, the proposed organization chart, has components that are noted as existing that do not currently exist. For example, AVP Research is not an existing area in I.T today, it seems this would be a newly created area or a new unit coming in. Also, on the original Org. chart IT Finance & Business Support Services is not hi-lighted and appears it would be an area leaving? In summary some items are not clear. Similar items were mentioned in USC and other campus meetings. To see the recommendation of Open Access Labs, Enterprise Information systems and Instructional Media Services is to move from the Provost Office is interesting as they were once under I.T. before. I would question why they were moved out. I suspect they would work well in either area, but the constant back and forth and spending time and

resources is mind boggling. I certainly hope all the business and support staff come with these functions including property management tasks.

Centralizing highly specialized technical staff that deals with software and issues is not always the best solution. When local expertise is not trained up to deal with highly specialized problems. Operations end up contracting out to third party providers at great expense. In the end the service is not what is needed or wanted and local talent is never trained up.

I support the suggestions in the report

This may need some adjustments but too much consolidation may ruin a good thing. Departments such as chemistry have unique needs that are met by inhouse IT personnel that do an amazing job. This service allows them to quickly come to your space and quickly make needed fixes. It also allows users to have a personal relationship with the IT folks. Much of this report seems to focus on fiscal savings and that's important but one of the strengths of A&M has always been it's personal feel and this can only happen face to face.

With any consolidation effort, there is a risk that the individual needs of unique departments, agencies, divisions, etc. can fall by the wayside. In my humble opinion, part of the reason many things are currently decentralized from an IT perspective is due in part to those unique needs. Should centralization move forward, a careful approach and balance must be taken to ensure individual needs vs things everyone needs are kept in focus. The personal touch, transparency, effective communication, and a willingness to listen will be key to the successful transition to a central IT organization. I, myself, am from one of the agencies. Although we have received excellent service from DoIT in certain areas, there have been many instances in the past where only the TAMU campus proper is considered when making significant changes yet more than half the TAMUS system membership makes up the customer base for DoIT in the Brazos Valley, especially from a networking perspective.

The consolidation of Information Technology across campus is not only what many of our peer institutions who I've spoken with have already done but is fundamental to being able to create a truly World Class IT organization that offers services of absolute quality. Information Technology has an impact and reach across the spectrum as it is not only one of the infrastructural foundations of any organization but is also the vehicle and vector of some of the biggest innovations any organization comes up with. With that said, to get the most out of Information Technology for the betterment and benefit of the larger organization, Information Technology has to be "One Team"; a single well run IT organization. A single well functioning IT organization can indeed offer great services to all its diverse parts with niche needs whilst at the same time providing high quality, available, and secure enterprise platforms and services to the whole. Leadership is very important in IT and I believe with [REDACTED] at the helm we are looking at a very exciting and bright IT future for the university. Also, my personal Thanks for highlighting the importance of cybersecurity and the fact that it needs to be prioritized, in the report. TAMU is so diverse in function that we end up needing to abide by many different federal regulations where most industries only need to worry about one. All these Federal and state regulations have exact and stringent security requirements that must be met and on a continuous basis. We are also a center for wonderful innovations and partnerships that produce information and data actively being sought after millions of times a day, by malicious actors. To proactively defend against and react to these constant and ever-growing threats as well as ensure that we are 100% in compliance with some of the most stringent federal regulations in the U.S. we have built and are continuing to expand a security program with great depth and vast breadth, at every possible layer. All of that combined with our path to expanding our security innovations footprint in the field of IoT security, Data Science Security, Security in the service of research, and many other innovative areas requires proper funding and Senior executive support. As we move rapidly to becoming the absolute leader in cybersecurity, in our industry, I am happy beyond words that we will have an increased level of senior executive leadership support.

I concur with the recommendations of the study

No comments.

The complete centralization of IT is a very bad idea. I've been in IT for a long time and seen moves like this before. It always ends with degradation of support for our customers. IT is not a one stop shop. Each dept and each area has its own special needs. I complete understand and agree with the need for centralization of things such as cyber security. My program works hand in hand with TAMU IT Security on a regular bases to insure the protection of our data and customers. They mentioned Special needs by some depts such as Athletics. This is true for many areas around the university system. I work for IODP and it has very specialized needs. To move our IT support to TAMU central will

certainly cause major issues and very low quality of service. It would be impossible for Helpdesk central to help someone in IODP with a special program that was written by our developers that is used on our research vessel. What this report says to me is that the main concern is financial savings. This will probably happen. You will save money but you will lose customer service.

I am IT Staff in TAMU Health. I believe the effectiveness of the IT Support Staff depends on the specific knowledge for the various Colleges. Building personal relationships between IT Support and Campus members is greatly assisted by using specific staff stationed onsite and organized with 1st call answerers with specific knowledge of the TAMU Health colleges provides a vast improvement in customer satisfaction and relationship building. Using the same central contact number works well. We use the option #2 for the TAMU Health Campus Members. This provides the central contact, as well as specific help for our Colleges. I have seen centralization in the corporate environment that universally reduce customer satisfaction due to a loss of familiarity with a knowledgeable and 'friendly voice' with IT Support. I believe the investment in diversified staff pays dividends in focusing specific support for specific groups and teaming in smaller, more nimble support groups allows for teams to coordinate more effectively.

Centralizing IT services is a great concern because typically the more centralized operations get, the lower quality of service customers (departments) get. Departmental IT projects, which are already consolidated within the Division, will be added to an even longer prioritized project lists if further centralized to TAMU IT. As an auxiliary, Residence Life is directly competing with off-campus housing options that students have which require us to quickly evolve and change to compete. Being told that we have to wait in line for our RFC (Request For Change) to kick start, or placed far in the future on a roadmap, puts our department in a precarious position where it's harder to compete and harder to implement important system updates that affect business processes. Also.....we're hearing rumors that AWL (Alternate Work Location) or "working from home" will be going away. Although this makes sense for many positions, IT in particular is work that can very effectively be done working remotely. This has been proven in the last almost 2yrs of Covid restrictions....and even before Covid, this was a common practice in many institutions particularly for IT. Instead, I would suggest making working from home even more accessible for IT personnel to keep hard to find skills on campus to service our customers like they deserve.

Information Technology can definitely use some improvement in terms of efficiency, however my concern is that grouping everyone together is going to cause some of the same problems that were described in the report regarding the Provost Office. To quote the report "Through previous TAMU administrations, the Office of the Provost has increased in scope and function, making it a large and complex unit with competing priorities. A reoccurring theme from the surveys and interviews is that the current Office of the Provost is too large and that several individual areas need attention to better serve faculty, staff, and students." My concern is that a giant IT group will start to see some of these same issues and be too general and less able to serve specific departments with specific needs.

Many of the points made here have already begun but will take quite a while to complete. Any attempt to consolidate IT take time to do it right and allow for the adjustments for each situation. We should be very careful when broadening the functions of the Division of Information Technology and verify that we have appropriate staffing before we consolidate from other colleges and divisions. Also, if we are going to consolidate we should not exclude AgriLife and Engineering. The pairing with their respective agencies actually does a disservice to the college. There is a mismatch for actual funding from the university to those colleges because many staff do not actually work for TAMU. The services provided by all the colleges should be considered during consolidation, no exceptions.

Recommendation 1 sounds great the problem is the the incredibly diverse needs of various departments. I will use Geology for a fairly simple example. The base college is similar to many other colleges with the needs of professors and students. The problem there is that the IODP Department is Internationally connected and has a Ship with computers on it that travels the globe and even is in places where there is no connectivity to normal satellite communications. If you are going to merge IT then you HAVE to have people that go and learn the special needs of their customers. Some are incredibly specific. Attempts to "Shoe Horn" every department into a single box will give a Round Peg Square Hole scenario.

As a new employee, I'm really impressed with the way how our Division of IT is performing. I don't see any areas that needs improvement.

I fully support the recommendation to consolidate TAMU IT services and people to the extent possible. When correctly implemented, this proven framework achieves economies of scale through centralization of common network enterprise services; improves service delivery to faculty, researchers and students; promotes tighter security through

consistency and reduced IT complexity; gives our people greater opportunity for professional development, collaboration and promotion; provides better disaster recovery and continuity of operations capability; and is in lockstep with industry and government best practices. It's absolutely the right thing to do.

The need for some centralization is understandable. However, being responsive to the unique requirements of users/clients is of utmost importance. The balance will be important to prevent near-term resistance and the return of decentralization.

Consolidation with attrition rather than layoffs is good. One thing I didn't see was communications. Email is being consolidated to exchange 365 but we still have too many chat engines. We need to purge all chat options but one and rid any shadow IT chats. I favor Teams but whatever we use should be what we all use.

The decentralized landscape of IT across campus has led to many inefficiencies. There are too many IT admins performing the same daily tasks and actions. We need to move beyond managing it like pets and manage them like cattle. I look forward to the future opportunities that this consolidation brings.

Centralization of IT as described in the report may not be feasible for efficient functioning of IT services. Some services may be centralized like maintenance of IT equipment, network, university web sites and services, IT security, etc. However, services like systems administration, IT support, web services and applications development are required separately by the departments depending on their needs.

Centralization to end the IT service and security inequities that exists between colleges (and sometimes departments) is a step in right direction and will be good for university as a whole. However, that would only address surface issues and any meaningful reforms must include core IT service reforms. Lastly those areas where true, measurable excellence has been achieved should be used as the example for moving forward demonstrating performance is recognized and rewarded.

The suggestions regarding IT across the university are well thought out and overdue for a university of our size. If implemented properly, they will provide significant benefit to campus stakeholders.

I have enjoyed working for the Division of Information Technology and I hope that whatever change is taking place will be beneficial to our current employees and new ones.

The decision several years ago to consolidate all of Academic Affairs IT under one Provost IT has created overworked and slow responses from IT, when dynamic responses are necessary. Please don't misunderstand, the staff in the Provost IT Office are fantastic, but there are not enough of them to get the work done. Will this plan just make things worse?

This is the division I am in. This division is also hit with a lot of changes, like the Provost office. [REDACTED], I encourage us to not shy away from these changes. It will be hard and require insanely good communication well before, during, and after the execution of the changes. But in the end we will have a much better and agile operation, one better able to take our university into the future.

I think it will give staff greater opportunity for promotions and career ladders and improve service to the campus in the long run.

Do NOT consolidate everyone into a central IT office. Each and every college is very unique with very different needs with different solutions. For faculty, who already have a major distrust and disliking to IT, they need the college level IT to make sure that their needs are met in a timely manner. There are many problems within Division of IT that need to be fixed that will help with most if not all of the problems faced within IT. This report did not properly identify the issues within IT. They stated that not having a centralized IT was hurting us, but we do; Division of IT. What we do not have is the centralized IT office that works well internally. We need to fix the issues that are within Division of IT.

As a controls technician, I know our systems and how they communicate. The problem with TAMU-IT is they want to put in place cooperative IT solutions to a non-cooperative IT problem. They will end up handcuffing our systems to a point where we should just go back to the golden days of pneumatics.

I agree with the proposed restructuring. Great idea, this would help a lot.

I am sure, on paper, that it looks like a good idea to decentralize services and to combine into one area. However, as an employee, I strongly oppose this decision. Any time, every time, services are removed from a department/area and put into one centralized area, the services to the employee are hindered and ineffective. With this approach, the employee becomes just a number instead of the more personal approach within the department/area/division. I would expect this approach to be implemented when cost-savings is the driving, perhaps only, focus.

One Help Desk sounds good in theory. We have tested this very theory at TAMU Health over the last 2.5 years with very

mixed results. Students have enjoyed using HDC for 24/7 access. However, faculty and staff were highly dissatisfied with the level of service, turnaround times/SLAs, and lack of expertise on TAMU Health systems and software. We just went back to direct contact with local technicians. Please don't undo the progress we just made with a return to localized support.

---

I'd like for Texas A&M Health - IT dept to be merged with TAMU's IT so that our lives can be a lot easier. IT needs to get

---

Please do what you need to do here to improve IT.

---

In THEORY this makes sense, but I don't know if it means it would now actually take 12 weeks to get a laptop ordered from IT rather than 6 weeks, because of the sheer size. I think that IT has really been understaffed, so the complaints about service probably relate to a lack of resources, rather than actual unqualified people.

---

Similarly, our access to current technology has been greatly enhanced by having an IT unit more or less dedicated to our division. Our previous experiences in this area were very hit-or-miss, and it has been a big help to our operation to have attentive and expert help close at hand. Losing this will set us back in the technology area, which will be unfortunate, since we rely so heavily on technology for efficiency.

---

IT has been an issue at my center, due to it falling under 2 different agencies. If we could have a single POC for the entire center, regardless of affiliation (department, agency or even college) that would be a phenomenal step in the right direction. We would also need someone to be more involved. I have noticed that since so much is done individually, through the departments, we rarely see an IT person on site, and it may take me awhile to actually get someone here when we need them.

---

Centralizing again has nothing to do with efficiency.

---

Information technology went through several audits and reviews over the past few years like Deloitte, PwC and even goes through internal and system audits frequently. I have also seen recommendations from these audits implemented by the leadership with changes seen towards centralizing IT. I believe the MGT report has similar findings as prior audit/reviews and changes should be made considering these audits as baseline instead of just relying on the current MGT report. This would perhaps clarify why we still have similar recommendations, even after making changes for moving towards centralized IT. Lastly, along with prioritizing Cyber-security, we should also prioritize and emphasize Cloud services as part of Aggie Cloud initiative.

---

I believe that IT is no longer just about managing servers and developing applications, rather it is about building and maintaining relationships with our customers in order to stay or become "strategic partners" instead of just "order takers", thus allowing IT to deliver real value, FASTER. When researching IT consolidation years ago, there were two starting points, either fully decentralized or fully centralized. One research study reported that there are pros and cons to both and that ANY organization that attempted to drive towards one or the other ultimately failed to achieve an optimal outcome. Ultimately those organizations drifted towards the center. The recommended solution was to have a centralized reporting structure but maintain significant IT at a mid-organizational level, striking a balance between organizational efficiency and meeting customer needs. Basically, keep the majority of IT close enough to the customer to maintain healthy relationships and provide optimal value to the customer but still maintain high level organizational alignment and gain IT efficiency through common practices and reporting. Ultimately, I believe there is incredible opportunity through IT consolidation at TAMU if we structure IT in a balanced way AND are intentional with our organizational change management, which would greatly reduce the potential negative impact to IT staff and the customers we support.

---

Centralizing IT always sounds good, but I am afraid that so many areas have those special needs that are going to get overlooked when they lose their primary IT group.

---

Business Office administrators and department assistants are having to assume responsibility when centralized IT cannot get there fast enough. So, that is a lot of ITing for people who do not know IT.

---

Several departments have unique needs specific to the tasks the departments carry out. Applying university-wide "solutions" to all departments can easily force working systems to be abandoned in order to comply with new university requirements. Centralizing "information technology" can lead to improved efficiency to the extent that departments find it helpful, but information technology should be offered as a service to departments rather than a bringing mandates to departments.

---

I have not had the best of service with central IT so I again centralizing these services can only make this system worst. I

hope certain entities that are doing a great job will be studied and their practices are adapted.

Having IT personnel on hand for incase of problem allows for quicker response and fast turn around. If these people were pulled from the colleges then in the event of needing assistance they would either have farther to travel causing staff and faculty to have longer wait times for the problem to be fixed. Having standard policies and procedure in place and regular refreshers to insure everyone is handling problems the same is beneficial. I have had the problem of contacting my college's IT staff for me to be told they could not help as the problem was something only Central Campus IT could fix and then being told different by Central IT. Issues like this could be avoided with proper training and campus policies but removing IT from the different Colleges coul

Greater accessibility and commitment to WCAG.

NA

I am placing this under IT, but it applies to all the centralization efforts - I think centralization is a good idea, but I do not think it should come at the expense of staff jobs. Anyone who is no longer needed in their current role should be transferred to a similar role where they are needed. I do not think it will be good if this becomes a massive reduction in force (RIF).

I agree that it is a common problem for staff to not know where to turn for help on different technologies or technological processes. A single place would definitely help ease staff frustration and be more efficient. However, the current Help Desk at TAMU is so focused on numbers (their statistics for how long tickets are open and how many tickets are open for a specific group) that I often feel that they are rushed to close tickets, give responses that are not accurate or are too vague, and leave their primary interactions up to their student employees who do not appear to be trained well. I worry that if departmental IT were to merge with the University IT, it would be a quicker path to frustration for many staff and faculty. So while I support the merge, it needs to be accomplished with confident leadership, transparency in efforts and responsibilities, and specific training for each team/group. As it stands today, I do not feel that we can continue to rely on student employees to manage our IT tickets alone since they do not seem adequately trained and they seem to have a high turnover rate.

Enterprise Information Systems-Accounts Receivable (EIS-AR) plays an important role with Tax Compliance and Reporting (TCR), a unit within University Accounting Services Division of Finance, to ensure that mandated tax reporting requirements are met for Texas A&M University, Texas A&M University – Galveston, and Texas A&M Health Sciences. The student system used is Banner by Ellucian, branded “Compass” for the three university entities. EIS-AR provides expertise in developing custom programs, reports, and processes for Compass to assist TCR to ensure the university remains in compliance with the IRS to avoid fines and penalties. There are three main tax areas related to the student data in Compass: 1. IRS Form 1098-T Tuition Statement Each year 80,000 plus 1098-T Tuition Statements are produced for Current and Former Students of the University. These are used by the taxpayers when preparing their annual Federal Income Tax returns - 1098-T form - 1098-T supplemental information for the student - 1098-T delivery method - Solicitation of federal tax identification numbers. EIS’s customized solicitation program through the student portal, in collaboration with the Registrar’s office. - Interpret, install and test Ellucian-delivered enhancements and fixes to Compass 2. IRS Grad tuition assistance Tuition adjustments for certain students are taxable above a certain amount. EIS-AR provides the Compass data for TCR to make payroll tax adjustments for the affected students. 3. IRS 1042-S Foreign Person's U.S. Source Income Subject to Withholding Certain payments on student accounts are taxable. EIS-AR provides the Compass demographic and billing data for TCR to calculate withholding tax as applicable. Where there is withholding tax, EIS-AR also provides the mechanism for posting the tax adjustments to the student Compass accounts weekly. EIS-AR’s team of business analysts and developers are essential to TCR’s successful completion of tax services. Their subject-matter and technical expertise, as well as institutional-knowledge contribute to continually improved processes. EIS-AR leverages their relationship with other student information areas to the betterment of tax processes. It is important that EIS-AR remains its own department or can continue to provide their services to their current and future customers of the university.

This was proposed many years ago and is way overdue.

Please note that the Qatar campus has a different work week and is 8-9 hours ahead of College Station. If services are centralized in CS, there need to be people available during the TAMUQ work hours for support. This does not mean that people on the ground in Qatar can or should not report to their respective areas in CS. Many transactional

activities can be done in CS at a lesser cost than having an employee located in Qatar. There are several positions located in CS now that support the Qatar campus with transactional types of things. The Qatar campus has some of its own IT infrastructure and hardware to maintain in Qatar.

I am sharing my thoughts from the perspective of an IT manager within a college. Recommendation #1. Centralize all IT While there are some IT services that could be better integrated across campus, I believe a blanket consolidation is a poor idea. Even some services that appear to be ripe for consolidation such as Active Directory, DHCP, or SCCM bog down when trying to deal with the scale involved as well the wide diversity of specialized needs across campus. While there are certainly redundancies in IT across campus and I can't speak to every IT group, I believe the decentralized approach allows for the greater flexibility needed in academia. For example, we operate a small VPN server to handle the specific routing and security needs of a particular program. While the special configurations needed might be possible using the campus VPN, having to add the multiple versions of special configurations for small groups of people would add unneeded complexities to the campus implementation. There are many such necessary but unique solutions in place in various departments, colleges, and research labs across campus. Requiring that a central group be fully aware of each specific need as well the ongoing, regular contact needed with the faculty, staff, and students involved would add inefficiencies and more likely to lead to errors. Another example along similar lines is that of software support. Each college will have unique needs due to various accreditation and credentialing bodies. At the local level we are able to get to know those needs and work closely with the academic and administrative groups to assist with the development of specialized software. This specialized systems are dependent on working with these groups for many years. The ongoing support provided for these systems is also greatly aided by the personal knowledge of the people and processes. None of these advantages are likely to be replicated by a centralized group attempting to support all such systems across campus. I would prefer a more measured approach. One where particular common services are identified and then reviewed to determine if and how consolidation might occur. Continued consolidation needs to be done carefully to avoid sacrificing flexibility for the sake of pure efficiency. Recommendation #2. Consolidate to a single help desk, ticketing system. This one follows from Recommendation #1. Any consolidated service would necessarily need to move to the central help desk. However, for services where IT staff work directly with the end users requiring the extra step of going through central IT adds an unnecessary layer of bureaucracy. Our local system is shared by IT, Finance, and Communication and provides a good working relationship between the groups. For the services that require central IT involvement, we are then able to either point people toward DIT or assist with those communications. Not having people locally to provide direct assistance would be a great loss. Recommendation #3. Prioritize Cybersecurity This one is already in progress across campus. IT Security has long been a priority in our group. However, at the local level our ISO can use the knowledge of the situation to more efficiently evaluate the risks associated in each case rather than relying on a centralized evaluation for each non-standard situation. Recommendation #4. Utilize Project Managers I agree with this one. We use a project manager for more complex projects (albeit, not a full-time PM) and modified project management for smaller ones. It is essential that large complex projects be well-managed.

Every time a "new" IT department/office/unit/whatever is created, we end up with another sign on. THAT is what should be centralized. We used to be able to email or call local IT for help. Now there are so many hoops to jump through and too many

Centralization has already started to fail. Each departments IT needs are different. When we had one IT person, they knew the needs of each lab. They knew the tech set up and they did all updates on computers, helped with purchasing and database storage. All as part of their job. The new system doesn't have anyone to help with and who knows each lab and their needs. Now people like me in middle management are also expected to manage and know the IT needs of our labs. We are not trained in IT, yet are now expected to take on this role. I used to be able to ask our IT person what to purchase, now I have to be able to make these decisions and purchase them through TechBuy. Also, everything that used to be free (in that our overhead covered it) we are having to pay for (Database management and storage). We are not a one size fits all IT, each department and each lab within each department has different needs and we need IT people who understand our systems.

When our department IT was pulled into the Division IT the greatest challenge was the loss of business knowledge and the loss of priority. Our housing system is integral to our operation, it handles assignments, communications, applications and billing as an auxiliary it is not a choice to not have it up and running and updated in a timely fashion. The livelihood of the department depends on it. Having IT moved one more step away will just make the loss of business knowledge even more challenging.

Fundamentally I agree with all of the items related to centralization. One ITSM system and one process/document automation system would reduce cost and increase efficiency across all departments. From a personnel point of view, not sure I see the logic for not including Engineering and Ag. I do see where QATAR might have an argument for de-centralization

If these movements occur, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has caused severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF'ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation. It would be nice to have one ticket system, however, it is already difficult to get IT help when we need it. Most IT issues are things that we need within an hour or less. This cannot occur if IT is housed in a different building or if they say we must turn in a ticket and wait. There should be dedicated IT staff that their entire job is to do spur of the moment help.

I am concerned about centralizing IT services (p. 74) so much that my department does not get the timely and effective service I am currently accustomed to my Division's IT staff knowing my department's business functions and systems. When I call or submit a ticket, they resolve the issue and provide the support I need for larger projects (choosing/development platforms, computer replacement needs, etc.). One centralized help desk does not seem to be able to provide that level of service to all units across campus. I would appreciate some centralization and cost savings on software platforms that are used across divisions and colleges, rather than a charge to units to recoup the cost. I'm supportive of having more trained project managers. One of the advantages in my Division is that our project managers can also see the connections and similarities within our Division to maximize effectiveness across the Division, not just for one department.

IT support at TAMU does need a major review and overhaul. The existing support provided by the Division of Information Technology (DIVIT), has a reputation for being largely inefficient, unreliable, and unresponsive. The only reliable IT support on campus are the local departmental IT staff. There needs to be more support for the local departmental staff to increase the end-user satisfaction and their productivity. Having IT in charge of IT has led to bloat and massive projects that are not in line with the core missions of the university.

#1 – consolidate IT across campus It makes perfect sense that we should all have access to the same networks, software programs and resources regardless of which department we work for. #2 – establish university-wide help desk and ticketing system This sounds great with the expectation that service be provided promptly regardless of where we are located on campus. Re-evaluate the budget/business processes of the IT organization. We pay an incredible amount for IT support through TAMIT which is why I suspect many departments have hired their own staff instead. There has to be a better way than charging everyone a premium for these essential services.

As a [REDACTED] for a large University-level organization ([REDACTED]) I appreciate how different units have unique IT needs. Many things, like email, SSO, and document sharing, make sense to consolidate. On the other hand, specific requirements, like geospatial software, digital repositories, parking and transport management, or discipline-specific experimental software require close collaboration between faculty/administration and dedicated IT support staff. In the event that these embedded IT services become consolidated, I foresee that in order to approximate the current level of service, the new IT department would have to recapitulate the existing organizational structure, with specialized staff for different departments. This could complicate lines of reporting and customer relations.

I am not 100% sold on the new org structure for IT, I think it misses some opportunities. (PMO would be great) Platform support vs groups support vs college support vs IT services vs Technical Services seems like a lot of overlap and does not address finding 2.

Taking away the IT from colleges, where in our college it is centralized among our department with one main reporting unit and a ticket system, how will a centralized help for the whole university, I for see them having students workers who will not be able to service the need that each individual department will need, or even research labs.

Centralization of Information Technology is not in the best interest of departments. As departments are in constant need of IT support through email issues and classroom technology needs, it is highly imperative that IT staff are readily available in any department to ensure quick solutions to their issues.

Information Technology is Vital to our world now, think about how significant it is when your computer, or internet is down. All work comes to a stop. The effectiveness of support needs to be a top priority, and should be protected. A full consolidation of IT would be an absolute mistake. This would make all IT personnel division of IT, an organization on campus that has a notoriously bad reputation for response times, and being understaffed. This would ultimately also

lead to a significant loss of institutional knowledge that is vital in providing the various departments across campus with quality support. There are significant differences in the IT needs of College of Science VS the College of Education for example. The plan in the MGT report also calls for a reduction of staff, which would place an amazing amount of strain on an already understaffed section of staff at this university, further eroding the level of support we can offer our end users. The MGT report uses two institutions to justify their finding that are not among their listed "peer institutions." Texas A&M is not a small organization, and therefore cannot be properly compared to smaller institutions with fewer IT needs. This same article lists as a positive that they doubled the workload of each individual IT support employee by increasing the ration from 250 to 1 to 500 to 1, technician to end user ratio. Efficiency can only take an origination so far. Doubling the ratio in the end will always lead to longer response times, and reduction of effectiveness of your IT staff. This will also lead to an overworked staff, and retention problems. The centralization of an ticketing system is a good idea, with that you can gain much needed data, and base your decisions on that data that is relevant, and not conjecture.

---

N/A

---

It Liasons are not employed by the IT dept. Hard to get specialized help with IT in general, whether that be for division/famis/main level. First line of contacts are hardly able to give you assistance even with previous tickets to reference, don't know staff in their areas, don't know tamu systems and software, etc. Long wait times, ineffective.

---

I disagree with centralizing IT, as departmental relationships make it possible for IT staff to have time to address many problems in a timely manner.

---

For the love of god, PLEASE get rid of [REDACTED]. Abysmal turn around times, inability to actually support our staff when we need it, and half of the time they need to request Main IT to assist anyway. It shouldn't take MONTHS to receive a response about issues that prevent us from doing our day-to-day jobs.

---

Although there are benefits to centralized services, I feel like institutional and historical knowledge is lost if departments are put into a queue for the first available person to handle. It is more effective if some level of coordination remains within the units as well.

---

I believe consolidating a large portion of Information Technology across the campus is a good idea, but I hope this change will increase service levels. I am under [REDACTED] and the turn-around time for a service call is horrible. Prior to coming to Texas A&M, I worked in technical/software support for almost 25 years, so I'm very customer service-oriented. I am having difficulty understanding why it takes so long to get a response when I log a ticket to IT. When your employees have computer and software issues, it affects their ability to do their job efficiently.

---

Similar to my comments regarding human resources, centralizing IT could be problematic depending on how such a thing is implemented. The library is very dependent on our local IT in handling library-specific software and questions. Merging them into the larger IT could create delays and inefficiencies. Further, as with human resources, it becomes very impersonal.

---

Consolidation of IT resources across the university has been a long time coming. It makes sense on multiple levels to consolidate the duplication of IT staff resources within each dept./college under one central organization. With that being said, how the university gets there is the bigger question, which is mainly unknown (other than the restructuring of the IT organization chart). My main concern regarding this topic is after consolidation, will there need to be additional reduction in IT staff, other than what was mentioned in the report of those near/at retirement being phased out. If there is a need for additional reduction in force, I would hope that this process would be communicated appropriately and in an advanced manner to all.

---

Absolutely not. Centralization of IT is the WORST idea. I have seen this first hand and IT is broken x 10. IT folks need to be more decentralized and wrapped into department staffs. We have a "Centralized" college IT system in the department I work for and the inefficiencies are to numerous to count. Storerooms full of old and unused computers/monitors/printers that the DEPARTMENT has to account for on the inventory process. When you prod them to get rid of it through surplus - they have no incentive to do so because they work for the college. When a distinguished professor needs her computer fixed - she is told to put in a ticket and get in line. A department level IT person would drop what they are doing and go fix her computer. Another recent example of how centralization is horrible. A number of our faculty teach in classrooms away from main campus...IMS tells them to call the West Campus IMS office if anything goes wrong IT wise. So when a faculty is lecturing in a large classroom and the batteries go out in the microphone - they stop class, call West Campus IMS and then 20 minutes later someone shows up with 3 x AA batteries. This happens almost on a weekly basis

Contrary to the finding mentioned in the report, I find that most staff I work with know whom to call for IT problems and know their IT support people. Localized IT support is usually responsive in a more timely manner than more centralized IT functions. A theme of this report seems to be that centralization of functions is always better and more 'efficient'. In an organization as large as TAMU, there are many reasons why decentralized services may serve students, faculty, and staff better.

**Recommendation #1** I would like to express my strong objection to this recommendation. My reservations are rooted in my personal experiences both here at Texas A&M as well as at other universities I have worked at. Though at a glance it may appear that there is redundancy across IT at the university, I assure you that in many, if not most of the embedded IT units there is domain-specific expertise that would be very difficult to cultivate from a centralized organizational standpoint. This is certainly the case for my own unit, Digital Initiatives, within the Libraries. The applications which are developed, maintained, and deployed by Digital Initiatives are simultaneously foundational to the operations of the Library and requiring of a high degree of domain expertise. In the past, I have worked at institutions of higher learning which had a more centralized model for organizing their IT. I found that structure to be highly inefficient for the following reasons. Firstly, the chain of command and communication was so long, and the priorities of those at either end of the chain were so disparate, that the turnaround time for any meaningful action or decision was obscenely slow. Secondly, it was very difficult to cultivate institutional expertise for all of the various domains which IT was asked to support. The result of this was that each technician was constantly having to relearn and reorient themselves with the needs of customers. When moving to Texas A&M I immediately noted the difference in the structure of information technology. I was surprised and delighted that I was able to work so closely with the users of my application. I can attest that the speed and efficiency of the team I work with currently far exceeds anything that I experienced previously under a more centralized organizational structure. I urge the university to disregard this recommendation as I feel strongly that it will work to the detriment of IT at Texas A&M.

If the current Help Desk is any indication of how this will work, this is going to be a nightmare. Our departmental IT staff were recently moved under the College IT and already the decrease in response time has been tremendous. We need people on hand to handle emergency problems. We may as well go home when the servers go down because no one is getting any work done anyway.

Centralizing Information Technology will decrease the efficiency of provision of services and how quickly issues are handled. A centralized Help Desk as described in the report will negatively impact the perception of efficiency because low staffing and high need by design do not create efficiencies in providing services and solving problems. Additionally, the University Libraries use information technology unique to the Libraries and, consequently, need an IT department with expertise in those programs and technologies.

Would consolidation of Information Technology be similar to what we see with the current Help Desk? While the Help Desk provides services for everyone on campus, many times if you are needing assistance you are helped by a student employee that does not always have an answer or access to information needed. For that reason, you are then passed off to someone else, or even sometimes given inaccurate information. The current structure of IT allows us access to in person help should there be an issue, anytime we need it. Why do the money makers of this university (Athletics, ENGR, AG, etc.) seem to not really be impacted by this?

With the consolidation of IT services Colleges, Departments and Units will lose a specialized knowledge of a wide range of special built systems and projects.

For the centralization of IT, I would like to see this implemented in a way that does not sacrifice the response time of IT Professionals. It can be very detrimental to operations when even one person has an issue with their computer. It is important that IT still be able to respond to individual issues quickly.

I fully support recommendation #1. Asset control should also be managed by IT personnel on behalf of departments. I support recommendation #2. It's never clear to me when I call my local IT guy and when I am supposed to call the main help desk. One place to go would be super convenient, especially if my IT helper knew my department and who I am in the organization. Everybody supports recommendation #3, thank you kindly. Recommendation #4 bears a bit more context. Our local IT group has killed us with the Project Management paperwork for every single little thing. Then when we moved servers to main IT, they've dusted their hands of us and no longer require the project mgmt software/documentation and no longer send a project manager to the meetings. The enforcement of the "requirement to use project management tools/documentation" isn't applied consistently and I definitely think that we need project managers as a role on this campus, and they should service projects that are IT but also those that are not IT-related.

We need a dedicated group of professionals to help us do this and to teach us how to do this a bit for ourselves with smaller efforts that still need to be managed. One thing project management should NOT be is a burden for the participants and something that kills us with paperwork! We also need a way to hold project managers accountable when things are not proceeding due to their actions or inattention. A good method for consistent feedback about how the project is being managed that take place throughout the project would be a good way to measure effectiveness and quickly identify things that may need coaching, advocacy, or require additional resources.

IT consolidation has been tried before. I'm all for a centralized plan for IT, but it \*has\* to be handled properly. Additionally, there will be some areas that cannot be centralized effectively. I do love the idea of centralized offerings system/campus-wide services. I believe that TAMU as a whole can benefit from centralizing core offerings. However, I'm worried about implementation and "bloat" of IT as a division. The organization and the services offered must be robust, proactive, responsive, and flexible.

I've struggled with Wifi in different buildings, and it would be great to have a single network across all colleges and areas.

Recommendation #1: Consolidate Information Technology across campus.--I remember when we used to have IT people in our department. Most issues were resolved in a timely manner. Then, IT was moved from our department and centralized to the College of Liberal Arts. There were a lot of hiccups during this process, and while there have certainly been some improvements, it is still not ideal when there is a problem that needs to be dealt with immediately (e.g., a computer fails in a classroom during a class, I can't log into my computer to do my job, etc.). I worry that centralizing IT will mean there will not be a way to address these critical issues in a timely manner, and that classes of students will suffer as a result. Additionally, valuable time will be lost for staff and faculty.

Similar to HR, HSC IT is also still a "step child" in support. Recently, I needed access to a COM central business email. HSC IT could only do a piece of the access I needed, then TAMU IT had to finish it. This took 3 days. I was trying to cover for someone on vacation for a week, so this was an unacceptable delay 3 days into the vacation period.

Recommendation #1 Consolidate Information Technology Across Campus P.72 • In consolidating Information Technology, how will departments help set priorities to have their IT needs met. Philosophically, should IT set the business practices for the departments based on available tools or should IT help accommodate the department's business needs. If there is a gap, who is responsible for finding and funding the closing of the gap? • What will become of long-term projects that are currently underway in the IT area of the Division of Student Affairs?

Agree with everything suggested here.

I am afraid that centralizing IT will create longer wait times for assistance needed when computers and other forms of technology are not working properly. This in turn will slow down performance and staff morale.

There appear to be efficiencies gained in some centralization here. My concern is over units who have highly specialized technical needs such as the utilities power plant operations.

I support these recommendations.

Much of any institution's success is the "invisible" work that is done. If it is done well, it is often hardly noticed, and only its absence or poor performance makes it visible. This is especially true for administrative support. As re-structuring is considered, shedding light on some of the invisible work will be helpful. I am particularly concerned that the realignment of Enterprise Information Systems (EIS) to IT may result in reorganization that will negatively impact the important services they provide. As you know, EIS is responsible for running, maintaining, upgrading and customizing the student system for Texas A&M, Texas A&M Galveston and Texas A&M Health Science Center. The backbone of the system is the Banner product by Ellucian, branded "Compass" when it went live in 2009. EIS has four main data types, which "belong" to four home departments: Admissions, Records, Financial Aid, and Accounts Receivable. EIS's work is not only to keep Banner and its many related applications running smoothly, but to help end users (departments and people) get what they need to get their jobs done. EIS typically has teams of business analysts and developers for each of the home departments. I have worked in and with TAMU student AR since before Compass replaced SIMS. This team set up has been most effective for AR in particular. In my view, EIS-AR has four main internal customers: Student Business Services (SBS - the bursar), and the University Accounting Services (UAS) units Student Accounting Services (SAS), Banking, and Tax and Compliance. [REDACTED] and we depend mightily on the reports and processes that EIS-AR develops, maintains and updates for us. EIS-AR business analysts are instrumental in translating our stated needs into working requirements because they have accounting experience and a good understanding of our myriad business

processes. EIS-AR developers are also familiar with our business processes, but their expertise is technical, not accounting. They find innovative solutions to difficult and often urgent situations. As a team EIS-AR helps us process transactions in the student system (for example, banking has to meet the differing escheatment requirements for all 50 states), create financial data feeds to the finance system, put holds on student refunds if the student is in arrears with a state of Texas agency, provide demographic and financial data for state and federal reporting, provide financial transaction files for reconciling to the accounting system of record, provide and data and/or tax forms. This is but a small sampling of what the EIS-AR team does for UAS. SBS's needs are far larger, and I can assure you that the EIS-AR team is critical to meeting the needs of our students as well as internal and external entities. All of this to say: As you consider where EIS will be in the reporting structure, and how EIS itself will be structured, please be aware that our three institutions, TAMU, TAMUG and TAMUHSC, are extremely fortunate to have the kind of support that we get from EIS. This is no shortage of new work for EIS-AR, and what they do for us is essential to our success. EIS-AR may be "invisible" to the universities at large, yet their contribution is necessary and significant. I have put this same comment under both the Provost and IT, since it is proposed that EIS move from the Provost to IT.

Howdy! I love working for Texas A&M University!

I loved my customers, and they loved me. This made it hard for me to make that decision to leave. I then established myself at CoALS, and under AgriLife Research, following a consolidation of IT services, I was RIF'd and forced to reapply for a position at a salary cut. Once again, I was faced with a difficult decision to leave CoALS last month because of organizational uncertainty and my feelings that I was not being valued at the time. I later discovered that I was valued, and I was offered an opportunity to stay but I had already accepted a position with the Division of Student Affairs IT and was due to report the following week the report was published. Now, I'm in a new organization facing the same fear and concern that I will be RIF'd and not have opportunities to advance and move up. All I want to do is to provide exceptional customer service and support to all faculty, staff, and students. I've been recognized many times for my selfless commitment to customer service to do just that for my customers. I really don't want to be forced to leave the university. I've established so many wonderful relationships with faculty and staff over the 6 years I've been here.

We have assembled a gifted and dedicated IT group at the International Ocean Discovery Program (IODP), the \$351M award to TAMU from the National Science Foundation (NSF) to operate and manage the research vessel, JOIDES Resolution. Our IT staffing levels and expertise have been honed over the years to provide excellent communications, computing, network, and database facilities on ship and shore operating one NSF's elite large facilities for the US and international science community. There are unique support requirements of operating a global research drilling vessel 24 hours a day, 7 days a week and maintaining the service levels and performance expected by NSF and the science community. Consequently, it is critical that the IT staff currently employed at IODP be embedded and fully dedicated to supporting the IODP mission. Moreover, to ensure 100% focus and clarity on the mission, these staff should remain under the direct reporting chain to the IODP PI. We are eager to discuss these concerns in any further study or with implementation teams, as appropriate.

I reiterate my comments above about my concerns with consolidation.

Consolidation of IT personnel into a single organizational structure can easily have the adverse effect of sorting personnel into functional silos. While this produces teams of specialists, it limits career advancement between functional areas, in spite of providing a larger organizational chart that in theory makes upward career paths available. When employees, especially the most talented employees, have limited options for advancement, they often tend to go elsewhere. It should be noted that the two citations provided in support of IT consolidation are four (original publication) and six years old. "There is not centralized university-wide technology support." This is incorrect. There is centralized support for common infrastructure items and resources, such as network connectivity, cloud-based apps & storage and email services. Beyond that, units generally have unique needs supported by "embedded" IT personnel. In my environment, users do know who their IT support contact is and understand that they may be redirected to centralized IT for higher tier support of shared resources. There are opportunities for improving Help Desk services, but they lie far more in training than in consolidation. It is not uncommon for issues to be placed in an incorrect support queue, due in large part to the University Help Desk phone number almost always being answered by a student with little training and understanding of the often complex issues reported. Calls are most often sent to specific support groups rather than being handled directly by the individuals answering the phone, making follow-up surveys little more

than confirmation of whether a ticket was properly queued. Significantly expanding the list of queues available as ticket destinations can only complicate the call takers' role and introduce new delays to the process. An extraordinary opportunity for cost saving within IT is entirely absent from the report recommendations: centralized hardware purchasing under master contracts. There are substantial savings to be had by giving vendors a single point of contact and in turn giving campus entities the benefit of high volume pricing for computers and associated peripheral devices. One line in Appendix 2 mentions bulk software licensing, but otherwise ignores this opportunity.

---

My only experience at Texas A&M with a 'centralized approach' is the big Texas A&M IT department. The Division of Student Affairs' (DoIT) is exception in terms of response time, and assistance. I am always frustrated when my issue is a 'Big IT' problem. They are not helpful, it takes weeks for things to be resolved, and I fear an additional road block and lack of solutions in IT if Student Affairs loses DoIT.

---

While there are some IT services that could be better integrated across campus, I believe a blanket consolidation is a poor idea. Even some services that appear to be ripe for consolidation such as Active Directory, DHCP, or SCCM bog down when trying to deal with the scale involved as well the wide diversity of specialized needs across campus.

Recommendation #1. Consolidate IT across campus While there are certainly redundancies in IT across campus and I can't speak to every IT group, I believe the decentralized approach allows for the greater flexibility needed in academia. For example, we operate a small VPN server to handle the specific routing and security needs of a particular program. While the special configurations needed might be possible using the campus VPN, having to add the multiple versions of special configurations for small groups of people would add unneeded complexities to the campus implementation. There are many such necessary but unique solutions in place in various departments, colleges, and research labs across campus. Requiring that a central group be fully aware of each specific need as well the ongoing, regular contact needed with the faculty, staff, and students involved would add inefficiencies and more likely to lead to errors. To Be Continued

...

I'm not against a central consolidation effort for IT. I agree that inconsistencies across the campus community exist, and redundancies are evident, policies are interpreted within broad margins, service models differ widely and we are likely to be at increased I.T. risks as a result of all of this. TAMU can definitely benefit through consolidation and centralization models. BUT - continuing to offer direct support in units/departments is CRITICAL to the Institution's success. WE MUST maintain local, departmental I.T. professionals to STAFF mission critical departments. Failure to recognize this critical need will result in catastrophic Institutional failure.

---

I completely understand the need to ensure security of our systems and fully support consolidation if this is what it takes to get it. Having experienced the consolidation of my department IT support into the Division of Student Affairs IT I am concerned that we will experience further decrease in responsiveness to IT issues that impact our ability to serve students. I am hopeful that a model that allows IT staff to learn the unique needs of various departments will be implemented. In the 10 years since we fully consolidated under DSA IT, we have never consistently had someone who understood our business and the unique nature of healthcare IT needs.

---

No feedback to offer other than I am thankful for these professionals.

---

Work in a Division where IT was centralized. Services were lost. Accomplishing simple functions and getting service became difficult. There is no service and the individuals who should be providing don't care about you. They don't report to your area, so the service doesn't exist. Departments will have to create positions that work around while paying for services resulting in more money do accomplish the same task.

---

Centralize all IT, business, HR and marketing communications professionals If these professionals were left in their current physical locations to serve constituents, with current reporting structures intact – a dotted line for central oversight might improve the flow of institutional knowledge/implementation. If the plan is to relocate the programmers, technicians, business and HR associates, writers, videographers, etc. away from their constituents and remove the accountability we currently have to our constituents – this is not a good idea. Decentralization has allowed these entities to be more effective, and fully centralizing these business critical functions would fuel bureaucracy, negatively impact service (just ask faculty and staff in the two largest centralized colleges) and not be in the best interest of students, faculty, staff or the institution.

---

Consolidating these operations across the campus make WAY TOO MUCH SENSE. However I recognize the huge lift.

---

If IT is completely centralized, the same logic applies. Customer service will take a huge hit. Currently, DIVIT is handling functions that used to be handled within the college. One of those functions is the creation of the email accounts for

new employees. I used to be able to submit a ticket to our ITS office within the college and with a day or two at the most that account was created, and the individual had the ability to access it. Just recently, with the change of DIVIT handling the creation and access to all email accounts, it took 2 weeks after her start date to access her email account. This causes major issues in the training process for new employees as they cannot receive extremely time sensitive emails pertaining to training and onboarding within those first few days of employment. This centralization would also cause a major issue with daily job efficiency and effectiveness when it comes to technical assistance. Whenever there have been issues with my computer, I can call our college IT office and they can get the issue resolved quickly. The times that I have had to call DIVIT for assistance with issues that they handle it takes several calls, if I can get an answer, and then the issue is not resolved with one phone call. Therefore, a complete centralization of IT would have a direct impact on customer service, and the ability for staff, faculty and students to do their job or studies.

One word, FOLIO. The University Libraries has easy access to IT folks that understand the business of the Libraries and the programs, platforms and software that we use that are specific and unique to the Libraries.

There is no doubt the university needs to upgrade IT. Make it so.

A consolidated IT exists on this campus and works well.

I think centralization of IT will reduce customer service just like it has with business functions due to the same reasons stated above.

While I understand the impetus for centralizing IT and HR, not having division-specific representatives/liaisons is not the way to go. Without having a local presence, these services will not understand the specific priorities of different groups, and service will be diminished. To think that only athletics and transportation have unique needs is short-sighted.

What this sounds like to me is that our small research group will lose their dedicated IT department, which will be a loss.

I would like to see a "Mission Statement", required skillsets & leadership structure for each of the groups in the new Organizational Chart.

As mentioned above, IODP implements seagoing research expeditions with the JOIDES Resolution drillship. Expeditions are 2 months long and take place in all oceans, far from land. Each expedition has 20-25 TAMU staff in addition to the ship's crew of ~60 and 25-30 scientists. The IODP-TAMU staff include 2 computer/network support individuals and 2 developers. Everyone on board works 12-hr shifts, 7 days a week, for 2 months. In addition, some of our shore IT staff have to be on call to respond to emergencies. This cannot be accomplished with people who are not intimately familiar with the ship's IT systems and scientific instruments. In other words, it would be extremely challenging if not impossible to staff these positions with IT staff from a centralized group.

The reorganization and condensation of the IT departments within AgriLife has been extremely disruptive. If you want staff to have productive digital lives in the arena of research, infrastructure, email, and all other areas under the purview of IT, why would you remove the experienced IT staff that are loyal to the university and who help make the lives of staff more productive and enjoyable? In this age of a global pandemic where we were literally wholly dependent on the IT departments across the university, it makes no sense to downsize them.

I can't see the logic in making IT staff outside of the Division of IT (DivIT), employees of DivIT. Those working in IT know the needs of their department best and know that DivIT is there for support when needed through the Help Desk and other areas that they manage. Making IT staff employees of DivIT instead of their actual departments puts staff at risk for having to wait for IT problems to be resolved longer than they normally would by having someone dedicated to their department.

Certain I.T. groups on campus have specialized systems only used in one setting (residence hall management program, electronic health records in healthcare, software that runs lighting and sound systems for OPAS, etc). One key area where these types of unique groups would likely be negatively impacted is if the move to a fully centralized campus helpdesk or servicedesk for all I.T problems makes it difficult for the new helpdesk to handle these specialized systems. Common support is easy to centralize but getting a generic helpdesk to understand the urgency and impact of a very specialized problem and escalate it to the correct person/level can add one more layer of interference to getting the problem addressed and resolved.

I believe I can express my concern briefly. Specific to the Division of Research IT business processes and their respective systems surrounding research compliance which include financial monitoring, protocol tracking and review, animal inventory and management, occupational health and biosafety, responsible conduct, (several more), and the

reconciliation of each process to one another, my primary concern is that of customer support. In our current configuration, we have in-depth knowledge of those processes and perhaps more importantly, personal relationships with the groups who make use of those systems. This relationship allows me to effectively advocate for the Division of Research in support of their mission. My concern is not with re-organization as much as it is with the Division potentially losing that advocacy and customized support over time. Assumedly budget/payroll and system acquisition processes will change, which definitely can be good, but it can cause those groups being supported now by an "outside" group to feel as if they are now simply a customer of a service, rather than having ownership. Admittedly, I don't immediately have a best answer for this leveraging the proposed structure, but if all these changes are to occur, I want the Division of Research employees to continue to have that advocacy as well as the customizable support for their compliance related business processes... and naturally have immediate access to those who understand those processes end to end.

---

Same as above.

---

I currently enjoy having our IT embedded into our department. It results in quick responses to questions and help with issues in our classes. I think consolidating IT seems like a good idea in theory, but may results in longer wait times for issues that arise.

---

I cannot see how having a centralized help desk will be good for anyone (from a client prospective). This sounds absolutely maddening.

---

There are departments at TAMU that use computers for data collection and analysis (I am mostly familiar with those in the College of Science, but there must be others) that have specialized technological needs. I hope that that will be taken into consideration as IT is "centralized". There should be a way for those with more specialized needs to not have to go through the central help desk and ticketing system.

---

Regarding Consolidation of Information Technology. The issue here points to what is trying to be attained. The document tries to tie efficiency, cost cutting and value to customer. An attempt that consolidation will not reach as a goal. The possibility to make the infrastructure somewhat efficient might be possible but the value to the customer could easily be set back not only in the immediate but also for the future. It may very well cause the university IT to play catchup for long term. There is a big difference it consolidating to one specific philosophy and working in collaboration between IT departments for the betterment of the university regarding its Faculty, Staff and Student needs. Any gain made in infrastructure would likely cause a loss in software development. The research through which the consulting firm used to gather data was conducted by extremely limited interviews and one size catchall forms that could not possibly gain an understanding of division and department business processes, ongoing projects, how they got to where they are and what are the future plans. Even quotes used from other resources are not accurate such as use of NASPA Article to validate consolidation when the report itself states the IT should be integrated with student affairs, not the opposite. There is a major need for student affairs to have an embedded IT with direct connection for support and accountability. The issue of IT and consolidation of it has a proving history of problems. Through time what is now being called DIVIT has been under multiple different names. Through A&M's history of IT the issue of inefficiency lay with this group which spawned what is seen today on campus for good or bad. Due to the lack of support from this cost recovery IT division, it's philosophies and structure many departments, colleges, and other organizations on campus began to start up shadow IT situations in the form of small teams, individual IT professionals or Grad and Student workers to handle their needs. This problem still exists today. If there is inefficiency on campus it can directly be placed in area where it is being suggested IT be consolidated in. From these issues a few groups such as Division of Student Affairs, Department of IT (DoIT) have worked to build a strong consolidated department to meet the needs of a division. Through trial and error this group has built a strong support cast for DSA. They have been at the forefront of new development both custom to meet the needs of each department and student organization and through other avenues such as using approved vendor products that are painstakingly reviewed. Each department and organization get the support needed and customization required. Also, through long hard development they have brought together leading Project Management and BRM teams that have become the example of success on campus. Through this, strong business relationship has been formed and any consolidation and/or interference that comes in form of changing these philosophies would seriously jeopardize those built relationships that help to support students in their everyday activities and throughout their time developing themselves at A&M. The Sprite program being developed is another strong proof that DSA IT is ahead of most other organizations on campus. This program helps develop Grad and Student workers throughout time at A&M through strong mentorship both through work and outside of work. Numerous Grad/Student workers have gone on to be hired by top companies such as Google, Microsoft, Facebook, SpaceX, and

other top IT industry companies due to their time learning within the DoIT department. There are also examples of those who stayed on to work with DoIT and in other campus departments. Any consolidation that works toward a goal of centralizing the infrastructure for some form of micromanaged efficiency to save costs will lose value to the customers and their needs. Currently in the projected IT consolidation division the only development being done is through cookie cutter large vendor situations with little to no real developing. When looking at positions a problem exists. Titles are being compared when even though the title may be the same the actual work performed is not. Using the title of developer for example can mean numerous things depending on the department or division that position falls under. Some developer positions do little to now true writing of custom coding, whereas others spend a large portion of the day building true customized applications. The same can be said as far as IT management. The key problem in IT at Texas A&M is not the need to consolidate across campus every IT group but instead help those departments in divisions where there are several small IT shops or those using one or two individuals to meet the needs of a smaller group with little to no help and consolidate them into an embedded IT department for that specific division. This gives its customers better access to more IT professionals and those IT professionals better peer support. If there is one major portion that could be helped to make things more efficient it is a better budget system across each division. There is a need for more resources with a more equal compensation for those resources which would help to keep the experienced IT professionals and to upgrade the ability to hire more experienced staff. Currently compensation is based solely on where a divisional budget for the department falls under. There are IT professionals who do much more customized development than other groups, yet they are paid a lot less due to budget constraint issues. This situation causes constant turnover, losing a lot of knowledge through each change. One other issue to address is that if there is a forced consolidation then in many situations it will be the department such as DSA's IT who should be doing instruction to the parent IT group on how a division needs to be supported and not the other way around.

---

I agree that IT needs a complete overhaul. I have faith in our cybersecurity, the problem I see/fell is that I am not a priority. If I have any problems I very often have to wait for help, and it can take days to resolve.

---

Be careful with centralization. It has a tendency to make the organization less nimble and less responsive. As it does not respond to users needs, the users will find ways to work around it to get the job they have assigned done.

---

If auxiliaries lose the ability to control their IT, this will be detrimental to their ability to control costs. Operations like Transportation Services will have to raise transportation fees and parking fees if they have to pay a "fee for service" to a consolidated IT operation.

---

Well most of the report was on the information technology section was spot on except for a few cravats first on your note 66 you said data breaches impact TAMU but do not qualify it with the majority of these incidents being faculty who do not want or do not know how to follow privacy regulations (i.e. posting ssns, phi, etc.). They represent the majority of these incidents way more than even the student population. Another issue is that even though you realize that there is a lot of redundancy in IT little is being done to address the amount of management redundancy there are managers that are not even in this state and the majority of them work from home allowing peacemeal work from home for employees usually based on favoritism. I for one havent even meet the director of our unit. Another issue is that it is known that training should be provided to retain employees but unfortunately we have limited options as they are not the "most cost effective"? However, if you want specialties you usually have to pay for them. It is ironic that a texas am has coined the great resignation but is doing little to retain the employees that are in most demand in the public sector. On the positive side I do think that these problems are starting to get addressed and hope to see more progress.

---

Centralizing IT happened in 2020 in COALS and has been another area of centralization that has been difficult. When IT was in the department, it was easy to get them to help with computer issues, software issues, etc. and now submitting a ticket and waiting for help can take days and weeks. It was so much better when IT would come to your office to help instead of emailing back and forth trying to figure out the problem instead of coming and looking at the issue.

---

Overall, much of this makes much sense and this has been discussed numerous times over the decades. Finding #2 Agreed!! With adequate funding and resources on this area, this could certainly be what is outlined. Side note: A review was performed some several years ago and ServiceNow was selected, to attempt a similar initiative. Having one ticketing system across campus, not just in I.T. would certainly prevent looping and aid in staff learning, as it's not just I.T. staff that use such systems. On the Organization Chart it appears the "Business Support Services" is not hi-lited. This does not align with changes made in other areas across campus. Shouldn't this area being moving to the Finance & Business Division?

---

This is my area of expertise having worked in [REDACTED]. I agree with the statement about the structure

being inefficient and ineffective in most cases. However, I don't get a good sense of how this was assessed. Was it focused on the Division of IT and existing centralized services? Were the internal college IT structures assessed separately or simply lumped together with the Division of IT? Speaking specifically about Libraries IT, I find that we provide excellent service. We know this from the customer surveys that we run as part of our ticketing system and periodic customer surveys for all library services (LibQual+). We consider customer satisfaction a high priority and go to great lengths to make sure our users are satisfied. Our student tech training program is second to none. One exceptionally strong point is that we treat our customers with respect. We explain changes in policies, the law/logic behind the change, why some things aren't allowed and how said changes will affect their work. Our infrastructure, applications and support teams cross-train and are tightly integrated. We stay abreast of security concerns and have always been responsive when notified by the Division of IT of findings. We had a very good report on our IT audit completed in 2020. We have transitioned to central services over the years including public (OAL) computers, Laserfiche, Cascade, shared licensing (Exchange, Endnote, Qualtrics, Atlas.ti, Slack, Chef, Four Winds, etc). In some cases the move has increased our workload but we recognize that we're part of the whole and really want to be good partners in shared services. As part of the current Office 365 migration an account process that we previously had automated now requires 1-2 days and over 14 steps in a manual process. We anticipate it will improve over time but we're sticking with centralization because we know it's best for the university. In most cases, when we didn't move to a centralized service it was due to a lack of readiness of central IT or at a greater relative cost than simply running the service ourselves. The readiness can be worked on but the cost disadvantage is a reflection of the cost recovery model that needs to change. I would also like it known that the Libraries have very specific technology needs. Our goal is to make information available as widely as possible. We also work to preserve information in a digital format from an archival perspective and for research purposes. Some of this work may have led to the misconception that Cushing is a museum. We also work hard to promote open access and make it easier to find information. There is a great deal of background work dealing with copyright and metadata that makes this possible. In Recommendation #1 the format of this statement is disheartening: "Identify duplication of services across campus and seek to reduce staff over time through attrition and reorganization. Re-invest the employee expense savings into necessary technology infrastructure upgrades. Additionally, identify gaps in service and when appropriate reassign personnel to address these deficiencies." It would have been less jarring to lead with "reassign personnel" since priorities typically go first. This does not build confidence in employees that we already have a hard time hiring and retaining. In Rationale #1: Citation #63 - this article is about state government (and agencies) consolidating. It is at best a general justification for consolidation. The Libraries have offered end user support 24/7/365 for many years as this reflects our operational hours and the need for research resources to be available at all times. Finding #2 I agree, IT support is inconsistent across campus. I am afraid that the consolidated service will mean a reduced level of support for the Libraries. Recommendation #2 - Establish a university-wide Help Desk Please don't survey after each transaction. I personally have survey fatigue being asked to provide feedback multiple times a day. Recommendation #4: Utilize project managers I heartily support this recommendation. Incorporating project management skills into IT projects should be a forethought. Separating the PM role from the IT professional will allow us to focus on our areas of expertise.

I am in favor of a centralized IT department. However, there would still need to be enough staff provided for all campus departments to support their faculty, staff and students needs. Centralizing Management to help support this, would be a good first start. Then allowing each campus department access to certain resources and services that are TAMU IT centrally funded, would increase communication between units and help drive costs for resources and services down. One such area would be utilizing the ServiceNow ticketing system for all IT departments on campus. We are currently doing this kind of resource sharing with our CrowdStrike Falcon antivirus software, which is funding and provided by TAMU IT for all IT departments across TAMU. Adobe licensing, since TAMU IT stopped providing this option for all campus, significantly increased in cost for individual departments across TAMU. It would be more cost effective for TAMU IT and all departments, if this we centralized again, and licensing managed by TAMU IT. Currently, it seems that TAMU IT isn't staffed well enough with FTEs. Depending on what the need is, it can take several days or more to even receive a response to the emails that are submitted into the TAMU IT ticket system. This impacts our individual metrics and goals we have for our customers, and makes for poor customer service. Hiring and putting more effort into retaining IT staff, is essential to providing a stable and cyber-secure IT environment for ALL of TAMU.

I have some serious concerns regarding a "one ticket" system for all IT functions. Realizing the devil is in the details, this could greatly impact IT services for students, faculty and staff. PITO has been provided excellent customer service and much needed automation for the Scholarships & Financial Aid office over the years. They have provided what students

want and desire in an online portal.

---

I think more well-trained full time staff are needed if there is to be one main help desk, there are a lot of people to support at our big university!

---

The current IT structure within colleges should remain in place even if consolidated to still support the departments and customers they are familiar with. Cross training and filling gaps is always encouraged.

---

Our IT program does a PHENOMENAL JOB under the most trying of circumstances. Please don't equate "consolidate" with "making smaller". Think "streamline, empower and expand." Consider creating a "shop" where departments can negotiate for service in building custom IT products, whether Laserfiche processes, or small footprint databases. It would make money. Improve WiFi access EVERYWHERE.

---

Centralizing IT will only work if you add more staff and resources. Currently, I work for multiple departments that rely on the Provosts IT Office for support. At no fault of the abysmally understaffed and over worker employees in that department, I can say that getting work orders fulfilled is a joke. It takes way to long. There are a handful of employees that build, maintain, and update over 80 websites. That is absurdly low amount of people and it impacts my work on a daily basis. For example, because the web team in PITO has to put all of their staff power towards updating Kentico to the new version (which will be released in 2023 and this the old version no longer supported), we have been told by that department that they won't make any non- emergency updates to existing websites for three years (until 2023). Put IT staff back in our offices so we can have dedicated support and do our jobs better, please.

---

I agree that IT services are somewhat duplicated between the university-level IT and college-level IT.

---

Overall Comments: Positives: Should be a cost savings regarding IT spend. Reduce redundancy around the campus. Improve service delivery. Negatives: Response time will be impacted. Transition period will be difficult. Localized support services will be impacted. Recommendation #1: Consolidate Information Technology across campus. While this says that Engineering & AgriLife can stand alone, there is a statement about integrating IT operations from Engineering & AgriLife in the same section. Does this mean there are specific IT operations that need to be moved to Division of IT? Recommendation #4: Utilize project managers. This is an area that will be difficult for the Division of IT to get off the ground and a struggle to implement.

---

This needs to be centralized as it would lead to better service overall and additionally, we often pay for duplicate software in colleges, that if centralized model the University could negotiate much better rates. Stength in volume is exactly the case now. I've been waiting for 6 months for new staff computers I order (my department has no weight within itself).

---

I wish to recognize our Division of Research IT representation, and express how important these subject matter experts are and the hope that they will continue to "major" in DOR related matters, while having others "minor" in DOR related matters, for cross-training and depth of knowledge. The relationship aspect of centralization can and should be addressed, respectively, for optimal results.

---

It is imperative that EIS is kept together if we are moved under Division of IT. The functional and technical staff work closely in the day-to-day events to complete projects on time and fulfilled as requested. I believe EIS should stay with the other Student Non-Academic units like the Registrar's Office, Admissions, SBS, and FAID due to the nature of our work and how closely we work with these units.

---

Consolidation of IT may be inherently a good thing. One consideration is that large businesses and government agencies differ from TAMU in that there is a lot of highly specialized research equipment scattered across campus. While generic phone, printer, web, and MS office product services can be easily centralized, working with that high-tech research equipment will be more of a challenge. The software and equipment needs of this group is vastly different from that of the rest of campus. It may benefit those specialized groups to remain decentralized. When IT issues arise in classrooms, there often needs to be a nimble and immediate response. If IT is centralized, there needs to be some personnel stationed in each classroom building to respond to these issues. Putting in a "ticket" to a help desk is not a viable solution when you have only 20 minutes between classes and none of your IT works on a day when that lesson requires it to work.

---

Having department specific IT personnel is very helpful in that if I need something from within the department (new hardware, software, etc.) I can usually have that taken care of the same day. When I contact central IT for issues outside the department level, sometimes the people who end up with my ticket know less about IT than I do. Having one help ticket system will be useful, but only if the tickets can make their way to the correct sub-area in a timely fashion, (i.e. I

need something from Academic Innovation, but the ticket is routed to another area).

The university can expect more cyber attacks in the future. A stronger IT would definitely help prevent an incursion. The changes proposed seem highly appropriate.

I think centralizing IT is a good idea in theory. The centralized help desk is extremely helpful campus wide. But what happens when a department/unit needs something and an IT person cannot be reached? In some ways this could bring some benefits especially to our branch campuses. Can we discuss more what things will look like for our other places?

If work is centralized, set mandatory standards for timeliness of response. If, for example, classroom technology fails, instruction may cease until it is addressed. If the library online resources fail, immediate responses are needed. Make provisions for 24/7 service in mission critical areas.

Departments don't want one centralized IT office. It is widely known that everyone hates contacting Helpdesk Central -- employees want easy access to someone who is familiar with their department and can help them right away, in their location. Again, NO to centralization. Departmental employees don't want to work directly with a faceless central office that doesn't know anything about their department's particular circumstances or needs.

Great, I think this change for a better tomorrow.

Our ITS folks run a print center, our 3-d printers, and our computer support. The Deans are all photographed and given white glove treatment. The necessity to regularize this and expect professionalism from them would be interesting.

Same as above. large colleges need a internal IT group that matches their specific needs. College could be waiting for every if they are in a University wide ticket pool.

terrible wait times, not knowing individuals, individuals not knowing depts and the systems are used.

Appears logical Under IT Finance appears the Business Support Services box was not limited to be leaving the IT department? Recommendation #2 Many years ago research was performed on a Help Desk ticketing system as there were too many, I was of the understanding that ServiceNow was selected though many on campus are still using other systems. It would be great if also the areas such as the Financial area who also has a ticketing system were required to use the same ticketing system. This might help in saving costs just in shared use of understanding, time costs, licensing etc.

As with everything else, Ag and Engineering will remain independent. I don't think that is fair to everyone else.

Consolidating IT will never fully work as many departments rely on the timely support that a centralized structure could not support. Instead of consolidating all of IT I propose leaving level I & II support and computer management in the college Level reporting to their respective college. This would allow colleges to make changes and use their funding as they see fit for computer lifecycle replacements and still ensure a high level of support as staff would still answer to the dean that they are under and not manager from the Division of IT that has its own problems. With my work, I have submitted problems to Help Desk Central to get help with problems from networking to telecom, and they are at a minimum very unorganized. In my experience without directly contacting a manager, tickets get ignored and even closed without a response or any work occurring on the ticket. If this continues under a centralized support model IT on campus will be dysfunctional with more problems than it has now. Instead, consolidate server and development on campus to ensure security standards are being met and still allow for some streamlining of IT without completely gutting end-user support that keeps the university running on a daily basis.

Consolidate Information Technology across campus: This would be a colossal mistake. Division of IT has had a horrible reputation over the last decade plus. Faculty support is extremely different than student and staff support and requires a more dynamic relationship based IT experience that a general university IT helpdesk can not provide. DIVIT has tried both partnership modules ( In architecture and I believe college of science) and full integration (Tamu Health Science). In both of these cases user satisfaction decreased dramatically and the staff environment was extremely soured. If any long term partnership models are to be successful DIVIT will need to show a greater reliability and proper partnership environment. Multiple historical failures have shown college IT groups a severe lack of consistency as well as a lack of stability that is critical while working with tenured Faculty members and research staff. Establish a university-wide Help Desk and ticketing system. Currently at TAMU, IT support is inconsistent. This is fairly inaccurate statement at least within the college of Liberal arts. We have a centralized helpdesk that is highly efficient for our users. This is in stark contrast to the DIVIT Helpdesk that has extremely long wait times and at best lackluster follow-up. My users have repeatedly complained about the service that they receive when needing to contact the HDC for assistance with shared

services. As it stands the tamu HDC does not have a way for college level IT professionals to work around the "student worker wall" and has horrible follow up practices when working on any IT issue that is above a tier one request.

Centralization overall is necessary. However high profile enterprises, institutes, and departments, that have budgeted and have a need for dedicated resources should not be undercut with this transition.

anytime we've had to elevate any issue to central ITS, it has been a nightmare. We need our IT staff for our day to day missions, removing them would grind our ability to do what we do to a halt.

I struggle to understand how integrating EIS into IT will be beneficial for either group. These are similar but also incredibly different scopes of supporting offices. EIS has a wonderful working relationship with many of their departments and their support is essential to our daily, even sometimes hourly, functioning. IT is also vitally important but not in the same way. This seems to be an "if it's not broken, don't fix it" situation when it comes to EIS. I think focussing on IT individually, and separately, will be more worth your time. I am not as familiar with the IT office, but if a reorganization or re-think is necessary, I think it should be completed without the integration of EIS. From my personal standpoint, these offices are too different to be put into one unit.

Why was the Division of IT not looked at nor discussed within this report? Information Technology is not DivIT. If this is referring to a combined IT unit of PITO and DivIT, that would be a good idea. Take the best units of PITO and DivIT and combine them into a new Central IT department. DO NOT KEEP DivIT. It is a well known fact that DivIT does not have a reputable reputation about campus.

I want security and functionality from IT. I don't care how it happens.

The report says IT should be centralized but in my opinion this is not always possible. Especially when the departments need some special IT service. So department related IT and IT providing advanced service should be present in the departments

Outside of facilities, I think this area is largely susceptible to risk. Not to mention that the current organizational structure is confusing and lacks accountability. I hope that centralizing this area would reduce the duplicated or inefficient work that currently occurs. The number of applications, portals, database management tools, etc. is overwhelming and only seems to get more complicated each year.

Not that long ago, the approach was to flatten and make DivIT leaner. Now, it seems we are to put every computing resource (labor, software and hardware) under their control, centralizing IT. As a University, we have always valued decentralization. Centralizing DivIT is going to result in departments and colleges having less control over their information resources. Sounds good on paper, but this may cause more problems than it solves. I foresee departments and colleges doing business with newly formed outside companies just to keep their IT staffs.

These moves make logical sense and seem to highlight the inefficiencies that are happening within IT offices across the campus.

Centralizing all of IT is a bad idea if efficiency and cost effectiveness matters. Our units have tried using central IT for all IT services and it was a costly and ineffective disaster. Recommend stronger IT policies, training and support for departmental IT teams, but centralization will again bring huge unintended and unforeseen complications and challenges.

I work in IT and I do agree with the recommendations in the report. It is not surprising that the report recommends that IT consolidate. That has been suggested multiple times before in other reports. This is going to be a tricky area though. Most of the IT work on campus is similar. We are all trying to solve the same problems in each college and most of us are using different tools. If we were to come together and consolidate out tools, we can share knowledge and grow our employees. We will always have edge IT that is unique to each department/college and that is OK. Those cases will be handled by specialized IT groups. We just need to make sure that the IT folks stay embedded where their customers are. We can all report to and be funded from centralized locations, share tools, collaborate together, but we must be physically with our customers, in their buildings and easy to contact. I would also like to add that in the IT job market, lots of employers are now offering remote work for higher paying jobs that what TAMU currently pays. I would love to see the university offer remote work options for IT employees. Most of what we do is via remoting into a server or a client's computer anyway. This can be done from anywhere. Offering remote positions will allow us to retain more of our IT staff.

Our IT staff are an integral part of our college. They are hard-working, responsive, and get stuff done. I would not want to wait for a consolidated Main IT to come to fix one of the computers in one of the classrooms, offices, or labs. It's

really hard to get them to do anything now. They are understaffed or just don't want to staff some of their helpdesks at certain times or there are long wait times due to students, faculty, and staff using them. It would be really bad if our Deans or Department Heads have to wait for IT service while working on important projects for someone to come over from another building or from across campus to get help so that their computer will work so they can finish an important letter or project. This doesn't make sense.

---

Recommendation #1: I agree that a consolidation is needed to strengthen IT campus-wide by having a set standard of operation that every college unit follows. That way there are clear lines of responsibility and communication not only within the department, but for staff, faculty, and students to see and understand. I would hope that a consolidation would also include Networking as currently some parts of our jobs are hampered by red tape (i.e. putting in paperwork for a network cable run and setup for a moved workstation when I could just do it myself). Recommendation #2: A university-wide Help Desk and ticketing system would very much streamline our line of work. This would be a great opportunity to trial multiple services that would incorporate IT Asset Management and provide integrations into Microsoft 365, Azure, and other services to make our jobs easier to manage - in turn improving our response times and efficiency. I would strongly suggest against Ivanti or Team Dynamix as they require much more work to maintain and are extremely user un-friendly. ServiceNow and SolarWinds Service Desk are very friendly for Help Desk agents and users alike, but would require several full-time staff to manage these internal services, and keep the user/public facing Knowledge Base up-to-date. Recommendation #3: One suggestion here would be to implement SSO workstation logins with DUO authentication, thereby eliminating all other DUO pushes except when logging into a workstation. This will make for a much better user experience and ensure that credentials would be much harder to compromise.

Recommendation #4: This will undoubtedly be the hardest to fulfill as the right project manager for the right project is such a hard spot to fill. If the wrong person is chosen to lead any one project or have oversight over multiple projects, that will completely derail any of the previous recommendations. I cannot stress enough that the vetting process for selecting project managers must be objective, and based on knowledge and skill; not personal, otherwise this transition will have no effect or a negative effect on the university.

---

Here are a few thoughts of reasoning that characterize thoughts from a Library IT perspective. - The Documents Assessment of the University Library & Services Since there was only an hour spent with our Dean, I don't believe this document or your assessment of the Libraries services provided to our incoming, current and former students is fair and balanced as it is with other departments on campus. Our IT Department of the Libraries is even less represented, even to the point of being non-existent to this document. Please take these few points of consideration while forming critical decisions for the Libraries. I will not bore you with all the many services we do offer but do encourage you to come back and visit with our librarians, staff, and see firsthand our commitment to excellence as we inspire our collaborative environment. An excellent example of this is our annual Libraries Open House where we involve our students helping in gaining understanding on what the UL services are offered. It's been a great success to our incoming students eager to learn. - University Libraries Footprint on Campus Even though Library employees perceive that this document provided by President Banks did not give justice to the University Libraries (UL) as contributing department of this great campus. Because of the nature of our intricate workflows, I believe the University Libraries should remain intact without any further changes. To begin with, there was a lack of depth of representation within this document as it pertains to the Libraries. This is confusing to me as I know firsthand on what impact it has on incoming freshman, it is truly powerful. The UL is THE information source of not only this campus, but our community, all of our many unique branches of education and beyond. The UL - The Reports Perspective on Campus IT When it comes to IT on campus, this typically resonates with the Division of IT and does not include our Library IT Department, better known as Digital Initiatives (DI). Within DI, we have two general departments named Operations which is responsible for all IT support & help desk needs. The other department is our Applications group responsible for Folio, many electronic databases and other core applications that deliver the many services that students require for study. UL recently participated in an internal audit and was granted with a designated grade of a TWO. This is no simple feat. To allow some perspective on what this entails equates to finally getting that design template transformed into the final product and having it assigned a registered trademark to commit into production. - Remarks on Differences Here are some comments stated from the document about IT and how it compares to the Library IT. Document: A weakness is that the small groups of staff spread across the campus do not allow for redundancy training. Response: Although we are a group of just under 40 people, we are a diverse group with many talents that work together cohesively and effectively maintaining the libraries infrastructure while delivering the many digital services that students depend on every single day. Our groups cross-train each other so that we continuously have a redundant knowledge base able to attend to any

library IT needs. We continuously cross train each other in different areas and scopes of our jobs to be able to function. Document: A centralized IT department would allow individual research groups across campus to re-focus attention on research and not have to spend time on IT management. Response: I am of the same mindset that changes need to be made within the processes of the DivIT. We have also been dissatisfied with the service given. An example of this is the internal findings on certain issues remain with them and do not collaborate with their end users, even if we are very familiar with any technical concepts. What they fail to understand, is that we are both after the same outcome which is to help the end user do their job. Since DI works together within this capacity, we assure that the end user gets taken care to resolve any issue expeditiously and effectively. In Conclusion I believe the University Libraries should be omitted from these changes primarily due to the intricate nature of the specialized applications and services we provide not only to our faculty/staff, but more importantly, to our students of Texas A&M University and beyond. Sincerely, Israel De Leon Desktop Support at Digital Initiatives University Libraries

---

If IT is to be centralized, units should remain within their respective colleges (where applicable). This would not only benefit staff, but the university as a whole, as these individuals have legacy knowledge of their areas that will positively impact the user experience going forward.

---

Right now, the Division of IT has a cost recovery funding model, where they have to bill for services. This made sense when the department was first created and IT was only being utilized by a few units, but now that IT is necessary infrastructure I think their funding model seriously hinders their ability to provide services to the campus community and factors into why IT is currently so distributed. This really needs to be changed if IT is going to be centralized.

---

Tax Compliance & Reporting Department is part of the University Accounting Services Division of Finance. Enterprise Information Systems-Accounts Receivables (EIS-AR) plays an important role with Tax Compliance and Reporting, especially when it comes to assisting with the producing over 80,000 plus 1098-T Tuition Statements for Current and Former Students of the University. EIS-AR and Tax Compliance & Reporting collaborate to ensure we produce quality products for the Student population such as solicitations to enrolled students with Qualified Tuition and Related Expenses (QTRE) that do not OR have an invalid Tax Identification Number on file in their student record. In addition, EIS-AR provides expertise in developing and programming custom programs, reports, and mechanisms to assist Tax Compliance & Reporting to ensure the University remains in compliance with the IRS to avoid fines and penalties. For example, customizing a solicitation program through the student portal requires collaborating with not only Tax Compliance and Reporting but with the HOWDY team as well. EIS-AR has a team of experts that contribute a multitude of services to our department. For example, developing customized reports that obtain confidential data or help solve difficult solutions with our processor Ellucian to help break down the terminology so that we can better understand the implementation and how it will affect from an IRS compliance and reporting perspective. It is important that EIS-AR remains its own department or can continue to provide their services to their current and future customers of the University.

---

Consolidating IT is a very bad idea. Each individual college/entity within the university system has unique needs and cultures. Technology services cover such a large scope of different systems, platforms, software, and services that it's impossible for one centralized unit to have the intricate knowledge needed to properly support an entire university. Consolidation of IT was attempted with TAMU Health into DivIT and that caused a huge amount of turmoil. The faculty wasn't able to get the support that they needed and the IT staff morale tanked resulting in high attrition. We need to leave IT localized and individually operated by each entity, with some centralization of systems needed by all campus members.

---

Great observation.

---

This is another one of those recommendations that is overloaded and complex. Of all of the recommendations this is the one I like the least. The culture of "central" IT department at TAMU is terrible. They have a very selfish outlook. They server their own needs first and then the needs of the TAMU community second. In large part, they are the reason that so many independent IT shops exist on campus. Centralizing this many IT shops will not make TAMU a better place. In the end, it will make IT less efficient and effective. I would recommend that TAMU IT get its own shop in order before making a change like this. All of the existing IT problems will get worse under this proposal. I am not sure that the consultants understand how big TAMU is and how specialized some of the IT needs are. A consolidation of this scale will cost millions and lead to large numbers of staff leaving and will ultimately fail. Recommendation #2, a university wide ticketing system would not work. Our IT is too complex and the needs of the customers to specific for this kind of system to work. I have never once had a ticket routed properly under the existing ticketing system that handles only

TAMU IT, much less one on a larger scale. Recommendation #3, we already prioritize cybersecurity. This recommendation is useless. Recommendation #4, project management only works in a highly bureaucratic and slow to respond organization. While there are some benefits, it also hinders an organizations ability to react and innovate within IT.

---

In Transportation Services, the IT unit has developed as our businesses have. Each position plays a vital daily role in making us one of, if not the best, university program in the country. Our operations people are superusers and work closely with our developers and software specialists to create processes and business rules that provide the best possible customer experience. We as a department are constantly pushing them to enhance our business with technology. They handle a great deal including phone apps displaying bus routes with live data, access and revenue control in over 100 lanes of traffic, online sales of permits, visitor parking, citation payments, waitlists, parking allocations, transit routes, Bus GPS technology, maintenance workorder platforms, automatic passenger counters, LPR technology, parking maps, software updates, APIs and much more. We do not live in a world that allows us to tell someone at a gate that wont work to put in a ticket. Nor can we have applications like route maps, schedules or online sales go off line for any length of time. Our IT unit is always busy, and our list of projects for them to work on is very long. We have struggled to make headway due to the inability to find developers. The prospect of sharing the few we have is simply out of the question. I would strongly advise not incorporating our developers, software specialists or access and revenue control group into the larger IT. The potential failures in our operations could be monumental. However, if this is what happens I would say certain things must be in place. My suggestions are as follows: The developers, software specialists and parking specific tech folks must remain at our physical locations. These individuals would need to attend staff meetings, software user group conferences and have the same lines of communications open that are in place now. Management of TS should be able to direct project priorities and needs within university guidelines. Our desktop support staff could roll up to some degree into a larger system. However our folks stay very busy and our expectation due to our business needs would be to have no slowing of response. It must also be noted that we ask much more of our Ops staff than desktop. They handle our servers located throughout campus, our security, inventory and are assigned special projects such as creating a PGnet system for gameday which they operate. It would be necessary to choose carefully which of these staff members become part of an overall desktop central program and which should be assigned to us. All in all I understand what the university is trying to accomplish. However, there is no other department doing anything similar that is so dependent on technology for success. Sometimes a one size fits all effort is not the best for all. [REDACTED]

---

Recommendation #1: Consolidate Information Technology across campus. (p. 72) Recommendation #2: Establish a university-wide Help Desk and ticketing system. (p. 74) I support these recommendations.

---

Yes - same as facilities but it won't be easy or fast.

---

I think IT tries very hard. Outdated equipment in old buildings is not fair to them - giving them old facilities with old equipment and they get yelled at for not magically making it work. I think the report is correct with the alignment changes.

---

I would hope this would still leave tech people in each building to help trouble shoot in person, as in my experience that gets the quickest results.

---

About 10 years ago, we had a Deloitte Assessment, which determined we needed one Help Desk on campus for IT. To that end, the Division of IT (although we were Computing & Information Services at the time) purchased ServiceNow to act as a central Help Desk ticketing system. The issue is that not every IT shop on campus participates in the ServiceNow shared service. Perhaps if central funding was supplied for ServiceNow, all IT shops would participate. That would give us one email address and phone number for people to contact for help (Help Desk Central). At about that same time, we had a Price-Waterhouse-Coopers survey commissioned by Chancellor Sharp. That survey determined that Enterprise Information Systems should be part of the Provost IT Office, so they were taken from Computing & Information Services and placed there. Now the MGT report is recommending the opposite. I do not know which one is correct, but the reasoning behind the former move should be looked at, as well. In more recent years, the Texas A&M Health IT department was merged with the Division of IT. However, for some reason that did not work, and they have now more or less been split off again. Although their [REDACTED], still reports to the VPIT and CIO.

---

Telecommunications Has been doing very well with our customers and there is no overturn Compared to what was described in the report

---

I would like to see more details on the proposed Organizational chart. Leadership, mission statement & skillsets for each unit.

Contrary to the finding mentioned in the report, I find that most staff I work with know whom to call for IT problems and know their IT support people. Localized IT support is usually responsive in a more timely manner than more centralized IT functions.

While I am very much in support of consolidation of IT resources and many things mentioned in the report, I am concerned at what the potential merger will look like from both a technology and personnel standpoint. After working in IT at TAMU for several years and understanding the politics of the situation, I am quite concerned that the current Helpdesk Central leadership team will have too great of a say in the consolidation efforts. Based off some of the centralization discussions I have already been in, I am worried that we may be forced into technological paths that are illogical for meeting needs at the college level. This can already be seen in some of HDCs recent prototypes and analysis of centralized systems where they are only seeming to look at technology paths which are outdated in industry by several years, however they appear to believe is cutting edge. Due to this, I think it will be pertinent that the different IT organizations have a direct say in the future roles of their current personnel and that centralized management systems maintain teams that are diverse amongst the different IT organizations. If this does not happen, I expect a significant loss in young IT talent across the university as they may get stuck into a different career path than currently expected. Although I like the idea of no longer having "do it all" technicians, the lack of mixed experience that helpdesk technicians would receive will greatly impact our ability to bring in good talent at our current pay scales. Finally, with the state of the IT industry and the personnel breakdown at TAMU specifically in mind, I am concerned that individuals will not be placed in the roles that they can make the most positive impact. When it comes to a fast moving industry such as IT I believe it is critical that we reward roles based off current contributions and not tenure or years of experience.

I fully support all of the recommendations provided by MGT as it relates to Information Technology. I do not work in that arena but the recommended solutions appear to address the reported findings.

Greater IT has not been nearly as helpful as the local IT. If it is consolidated personnel should still be located in the buildings they serve.

I agree that centralization of IT would be helpful. I regularly spend time helping faculty decide which IT office to reach out to based on their particular concern (Liberal Arts IT, Instructional Media Services, or Help Desk Central). It makes much more sense and reduces stress for everyone to look to one office for their IT needs.

Honestly, my fear is that we are a group that provides essential services to campus. So when A&M announces after 5pm that we will be off the next day, we do not have time to send this information out to our customers and still need to provide our services. With having an internal IT department, we are able to resolve issues when we need them resolved. My fear is having to call someone or wait for the issue to be handled when we deal with TAMU IT.

Our IT contacts are mostly student workers. The person in charge cannot duplicate himself to handle issues the SW cannot resolve. I do appreciate the informational emails from our IT areas but at times find it difficult to follow when they use acronyms throughout the emails that I do not have a clue about.

I fully support all recommendations in this section. IT is a hot mess on campus right now.

I believe one IT has long been necessary, and I think the merger of IT related functions is a very positive step to help with customer satisfaction, consistency of offering, and towards a solution for all end users which is seamless.

Classroom needs are very different from a student or staff individual needs so little hesitant to see a benefit to centralizing this area.

Highly support centralized IT - including Agencies wherever possible. Coordinating with our Cybersecurity center should be a priority.

There is a huge disconnect in support for TAMU Health. Though there is an "HSC Support Team" the level of support onsite is rare to non-existent. We suffer setting up for meetings and seminars because we need assistance getting connected or running the video conferencing equipment. There is nothing more embarrassing as starting a seminar 15 minutes late because we cannot turn the equipment on. OIT Help line is not very functional either. When calling in with a very generic problem, we are sometimes told the HSC Team has to help with the request. It seems the help line should be able to serve whomever the caller is for basic problems. Not just that we are of a different component we are excluded from the most basic help.

Having recently come from a peer institute, I am EMBARRASSED by my Alma Mater being THIS FAR Behind on Technology. We need people, money and the desire and drive to get things done. In my opinion we are a DECADE or MORE behind on our infrastructure. The amount of campus services that are \*NOT\* available, means EVERYONE has to roll their own. This has to stop! The division of IT needs the money and people to build a world-class IT organization and they needed it YESTERDAY!! \* Single Central TAMU Windows Domain - IN Progress, but years AWAY and should have been done 10+ years ago. \* Same for LINUX Infrastructure - Open LDAP available to ALL on campus \* Networking (DHCP, Cabling, Switches, Wifi, etc...) - We need TAMU IT to take over all networking for us (and really the whole campus). We want this to be a commodity like power, we just plug in and use it. \* Aggie Cloud Services (Virtual Servers, TSM, etc...) – We would love to use TAMU Virtual Infrastructure. We need a central Service Catalog, with simple FORMS to order service, Priced Right, and quick turn around. \* Research Storage – We need a quick way to get Researchers CHEAP Storage quickly and have it easily backed up. We need to be able to support all Major Operating systems (Windows, Linux, Mac). \* Self Service Web/Content Mgmt – Basic website/functionality for research groups, individuals and groups on campus to get a website quickly and easily setup and running. Similar to TEES (WordPress) offering NOW, but for everyone. \* IT Equipment Inventory – Currently MANY departments/units are EACH Building their OWN IT Equipment Inventory Mgmt Tool to track IT Assets for Risk Assessments. \* Risk Assessments being shoved down our throats with NO real support and a HUGE burden on IT Staff/Faculty for no gain. Putting a bunch of data into a system/spreadsheet do NOT make us any safer. The time would be better SPENT addressing the issues that we already know about. \* We are NOT competitive with Salaries and it is VERY Hard to attract/retain talent.

---

Having been part of IT before and being supported by PITO in recent years, I can see that PITO has extremely high standards and practices of ensuring that university SAPs and rules are followed. The report discusses having more students in roles, potentially to be hired later, however the current structure with primarily student support at Help Desk Central is very frustrating. There's not enough knowledge base, training and memory for students to properly triage tickets. I had telecom tickets closed because "a student worker didn't know what to do with them". I receive tickets in my department that should stay within IT or to other areas in my own department. IT has been in a flux for many years, in which loyal, long-term committed employees were overlooked in favor of external leadership who will leave at the next opportunity. This creates a fluid environment, frequent changes in direction, low retention and low morale. I dread going back to that environment and not knowing how our current department leadership will be absorbed, or not, whether all of us will have jobs, whether we will have any opportunity for advancement after the move, etc. Years ago, another assessment directed that all IT ("every server in a closet") be brought under IT, but the opposite appeared to happen and IT has seemed to become less efficient and more decentralized as departments have found it more efficient to hire their own people to be immediately available and responsive to needs. The need to the IT department to recapture funding by charging for various services makes it less expensive and more controllable to have independent IT support in departments and colleges. The physical distance between a centralized IT and where the users are trying to do their work means slow response to needs or outages. Things will have to quickly improve.

---

Centralization is the way to go. Using many different ticketing systems and programs is very confusing.

---

The recommendation to consolidate IT, sounds like change for the sake of change. If individuals who would be moved from Athletics and Transportation, will continue to serve those specific needs, what is the point. You just move someone to say you made a change. There is no benefit.

---

Being a information technology staff many of the recommendations make since and will help the university. Being a front end person and under the constraints of being the front line in the units I have worked for has made me work reactive and not proactive. I worked in the CSISD also and having a centralized technology department still was not a good idea because the school district still did not give the technology enough budget to hire the people needed to make that system work like it should. But I see having a centralized Help desk where no matter which college your working at you have one number to call for front line defense and what ever your problem is the HD can try to solve it. Then when they cant solve it they can escalate it to the higher tier support and or the few techs you have on site in the units. This will give the onsite personnel time to be proactive and spend more time on projects. My only fear is the reduction in force and the quality of help that can be given. I do not think you should leave the agencies out of the recommendations because all technology should follow the same procedures/recommendations. Not governing them will lead them to run it as they see fit.

---

I sincerely hope this is an open forum for the collection of first-hand knowledge. As mentioned earlier I worked for the

[REDACTED]

I feel I have a diverse inside view of IT Operations on TAMU Campus. Implementation of an IT consolidation plan, moving all IT Depts. into one Active Directory Forest with many underlying Departmental Organizational Units feasible and appropriate with only a few minor caveats; caution with Scheme changes to the Forest should be carefully deployed and assimilate slowly and methodically when working with Utility Systems. I noticed AgriLife was exempted from this plan and it is unnecessary to exclude. My personal interworking knowledge of AgriLife and Agricultural Economics and all the other Agricultural Life Science Colleges lends its self to a completely different perspective than what has mostly been presented to the Consultants/Committee gathering information and creating this report and recommendations. AgriLife Extension offices (254 County Offices) have never really been fully managed by AgriLife (Agnet IT), what a joke. AgriLife IT better known as AgNet IT has intentionally created a segmented IT Infrastructure silo to further isolate themselves from TAMU IT for the main purpose of providing their [REDACTED] is own kingdom, regardless of cost. He has purchased identical software when totally unnecessary. He continually increases a select few of his IT Staff with 6 figure salaries, all the while ensuring all the AGLS Colleges received basically no funding for basic IT Tools. He, [REDACTED], has completely lead the VC of AgriLife down a path devised for his own profit center. He is currently in the process of destroying tools and resources the AGLS Colleges need to support Students and Staff, and this should be STOPPED now. I have so much more information, as do many of the other AGLS College IT Professionals, who could validate what I am saying. I know you have been lead to believe the contrary, but Just know AgriLife IT should also be consolidated if this is the chosen outcome.

My comments are related only to the Enterprise Information Systems Accounts Receivable Team: The EIS Accounts Receivable Team supports complex automated processing for all student account accounts receivable activities and reporting (this is a very wide net). This includes the FAMIS accounting feed for all student transactions. We provided automated customized posting processes for most third party processing for students with contracts. We provide automated processing for Student Business Services for all student collections (customized process to enable SBS to streamline the collections process and reduce outstanding receivables). We have developed automated processes that manage multi-term fee assessment for the students, course fees, etc., which allows the students to see one bill. One of the primary goals of our team is to support automated processing of student transactions which allows Student Business Services personnel to focus on service to the students rather than manually entering transactions and using their staff to manage the student accounts receivables. Our processes are complex due to government regulations and various laws governing how student accounts are handled. Some examples are State Warrant holds, Late Payment Fee Processing, Late Registration processing, student 1098T's, escheatment of student funds to the State, Barnes and Noble e-Book accounts receivable process and many more. In addition to services provided for Student Business Services, we also provide reconciliation processing for FMO, AABS, and other departments throughout the University. We are a centralized Accounts Receivable team doing an enormous amount of work with very few staff to support all the various departments throughout the university who need access to student Accounts Receivable information in order to perform FAMIS reconciliations and government required reporting and automated processing. The overall organizational structure (moving EIS under IT) makes sense from the standpoint that it is a highly technical/functional team devoted to automation and streamlining of the accounts receivable process. Although these processes store information in the Compass database, they are complex and require deep understanding of the departments day to day business processes and student activity. Our processes must evolve and change based on government regulations related to Financial Aid, Tax reporting, Accounting Standards, Registration requirements etc. Accounts Receivable is impacted by almost all decisions that are made throughout the University that have an impact on the student. We often receive very short notice of regulation and University changes that impact our processes, but our team quickly re-prioritizes our efforts to meet the short deadlines, making sure the students are not impacted. There are so many services that our small team provides throughout the University that I am unable to capture here. I hope that any decisions made that would impact the EIS Accounts Receivable team, would involve an in-depth review of the complex processes that we manage and that consideration would be given to the complex nature of Accounts Receivable processing and the impact it has for student success.

In my experience, centralization of IT results in longer wait times for resolving small everyday issues that are easy to fix (ex. need admin password for installation of software). While centralization may make sense for larger areas like security, please keep in mind the need to resolve simple issues quickly to not disturb workflow, which can often be best accomplished with a departmental IT representative.

Further consolidation will cause less and less focused quality support to the end-user and distrust of the University department heads / leaders of IT services, including continued loss of rapport. The forced consolidation of AgriLife IT services should serve as an example, be proof of this course of action's result--loss of quality IT knowledge, IT services, IT professionals, and trust in the leaders of the System.

IT should 100% be consolidated across campus, but this way over simplifies it. Also, if you get rid of the Product Strategy & Communications team, you lose the UX/UI designers for software development. You should also consider having PRODUCT managers in addition to project managers. There are several products on campus (things that need to be managed that don't have a start and end date) that could really use a point person who coordinates with all of the necessary groups.

Support combining these efforts and aligning practices

Consolidation of this magnitude would result in long delays for the services they provide.

- While the departments of Athletics and Transportation have very specific technology needs, the Division of Student Affairs also has similar needs which should be evaluated - Some Division of IT Services can be readily consolidated while others reveal significant complexities which require knowledge, experience, customer service and relationship management that may not be readily available in other IT entities on campus - Student Affairs Services that can be readily consolidated (in order of precedence) - Identity and Access Management (Move to a single PC login on campus) - Service/Help Desk - Database Management - Datacenter Management - Server Management - Endpoint Management - Project Management - Business Relationship Management - The following services cannot so-readily be consolidated given unique requirements of Student Affairs programming: - Student Organization Management Application Development (The Division of Student Affairs has invested 4 years of application development time in consolidating antiquated, redundancy applications into a single enterprise application that manages student organizations across the division - this portfolio would be significantly hindered by any disruption in this area - Licensing and Acquisition of software and devices unique to the Student Affairs mission - A significant number of Camera Systems are currently managed by Student Affairs - Consideration should be given to move all camera systems from Transportation to Student Affairs. - Digital Signage - Programmatic device support not otherwise supported on campus - Agree that a central ticketing and university-wide Help Desk would increase consistency of service across the university - Professionalizing Project Management on Campus is long overdue. The value yielded by a standardized implementation of the profession of project management on campus with yield exponential value - [REDACTED]

I've been disappointed with this unit for. while and welcome any changes that might improve their service delivery.

The emphasis on cybersecurity expands an already talented group which needs to evolve/expand in order to be effective in our current global landscape. Reducing redundancies and establishing pathways for accountability across the organization is a good thing. I think, mostly, for IT professionals across the campus to be able to come together as one team with common goals is helpful. It will hopefully serve to diminish the "us/them" mentality among the various IT units. I'm hopeful that training/continuing education will continue to be emphasized as an essential endeavor in our combined IT unit.

In my view, there is hard enough time recruiting and training talented IT staff before they leave for bigger and better (read: better paying) jobs. One of the reasons the Libraries employs its own IT staff - is that there is a huge knowledge gap in running the kinds of things that are required for library business operations and information management. DivIT just can't seem to provide these things.

IT should be centralized. Also the focus on cybersecurity is well past due.

No issues, made sense. I would like to see more trainings from the IT people to curb phishing attempts. I think people falling for basic scams is a huge problem even with the changes they've made.

On page 72 of the report, it is recommended that Information Technology be consolidated across campus, specifically naming Athletics and Transportation Services as units that have specific needs and requiring a "phased-in" approach. This is far too much for one centralized IT Department to take on. Campus IT already has their hands full and would be spreading themselves even more thinly by taking on handling of Athletics and TPS. Unless the report means for the centralized IT group to have an "Athletics" group and a "Transportation Services" group within it.... In which case there is no real point in consolidating them into one unit. Trying to run this all through one centralized IT unit will only cause

timeliness to go down (one of the strengths of Athletics IT, per their report) and will lead to unhappiness among those who look to IT for support.

N/A

I believe that Endpoint and Workstation Management should be of high focus for reorganization. Consolidation of management experience, expertise, and infrastructure for endpoints could remove the need for dozens of servers across the university and improve services offered by significant margins

I strongly agree with the idea to establish a university-wide Help Desk and ticketing system. It is often difficult to know which group you need to contact for specific issues. Having one universal ticketing system would allow IT experts to route the request to the appropriate group(s) as needed, while the customer feels confident their request will be handled properly.

While consolidation at a high level makes sense, when it comes to boots on the ground where people are touching the actual computers and meeting with individuals, consolidation always lessens the customer service.

I agree with a support the recommendation made by MGT. IT overspends in excess from duplicative contracts and services (multiple contracts with Google, Microsoft and Cisco for similar or the same services)

This makes a whole lot of sense. It is desperately needed; not only from a ticketing system but for the websites. All of the university websites are hurting in a big way and would benefit from consistency and one vision.

This has been a thorn in most people's sides forever, but there has never been a leadership with the support or guts to make real consolidation happen. As long as the CIO has the flexibility and support to execute this centralization effectively and pivot fast and as needed, this could be the best thing to happen to IT at TAMU since the internet. But increased funding and elimination of inefficiencies like the 'Service Center' structure are key.

THE PROPOSED CHANGES WILL BE MORE EFFICIENT AND IT CANT COME SOON ENOUGH

While I agree that IT is rather decentralized, I believe it to be a strength rather than a weakness. The report makes a great point that the personal relationships that exist between the Colleges and their IT departments are strong and help keep things moving. The best course of action, in my opinion, is to establish College IT liaison roles to interface with College IT and the Division of IT. This would allow College IT groups to continue to serve their specific units, while not uprooting the entire support structure that the Colleges have come to expect and rely on. This would also allow for more communication and cooperation between College IT and the Division of IT. Also, the report mentions a few times that the findings were that people wanted "one point of contact" for support. From what I've seen working College IT, that "one point" is the Director of IT. The faculty will never email a ticket system or reach out any sort of queue system. They want to speak to somebody immediately, and they want to speak to the person best in charge. Generally that will get them nowhere, and will often delay them getting the support they need, but they will not change. So including the "one point of contact" as a reason to consolidate IT across the University is a mistake, in my opinion. For a final note: I agree strongly that a single ticket system would be beneficial to IT across campus. But for whatever weight my opinion holds, please DO NOT let it be ServiceNow. It is absolutely awful, nobody actually likes using it, and the only reason we're still using it is because the people in charge refuse to change because their perception is that "it's fine", but it's not. Ask literally anybody that has to interact with it on a day-to-day basis and they will tell you it's a waste of money. There's a reason that College IT groups refuse to use it; because given the choice they will spend their money elsewhere to get a product that actually does the job well and is a pleasure to use.

Need better trained personnel across all campuses. Increase pay to obtain well-trained individuals.

## Information Technology - Student

Please provide your comments related to Information Technology:

N/A

I can agree with the report's view on the disjointed-ness of IT. I've gotten tossed from University Help Desk, to Engineering IT, to Aerospace IT, to the Linux team IT before any work got done. They're certainly understaffed and not

organized. Investment in this part of the university would pay dividends for everyone immediately.

Wholly agree with consolidation of IT services

Don't combine liberal arts and sciences.

There is no mention made as to the current IT infrastructure and how to address recurring campus-wide WiFi outages in the age of increasing reliance on LMS and online modes of education.

I don't think Recommendation 2 will work. A campus wide help system seems too large and I wonder if it would be efficient.

none

This part of the report was well done and highlights the desperately needed improvements with the IT department.

The wifi needs to be more reliable on the quad

None, agree with the MTG Report.

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

IT is very nuanced. In the atmospheric sciences department specifically, we perform postprocessing of model data from NOAA's National Centers for Environmental Prediction. (<https://hdwx.tamu.edu>) This requires quite a lot of technical upkeep, and keeping this processing active is critical to forecasters in our department and the general public. Replacing the college of geosciences IT department (many of whom have bachelors/masters/doctorate degrees in meteorology) with an unspecialized, unified IT department will almost certainly lead to the end of this service.

They are the best!

I think a more centralized IT department would be beneficial because often, when I need help, it is not always clear who to ask (my local/department IT unit, college IT, or university).

In recent years, our college has slowly transitioned away from departmental-specific logins/email to using resources offered by main campuses IT. From a user perspective, I think it has been successful. My only concern is whether there is equipment/databases/applications/etc. that are so esoteric/legacy that will still require a college-/departement-level IT force dedicated to their upkeep/maintenance.

I thought Help Desk Central was the university-wide help desk and that IT was there, too. Also, I think it's handy that IT has satellite offices, like how there's one in Zachry.

Please don't do the plan. It's not a good plan. We don't like the plan.

Good.

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

I don't care. Do whatever is necessary so that the university does not suffer a ransomware attack or other breach in

cybersecurity.

Good

No comment

N/A

Information Technology infrastructure is really outdated for a university as big as Texas A&M University. As a TA, I have seen countless students experience software problems. When they approach the respective IT departments for help, they don't get a lot of help. This has happened quite a lot. They IT personnel are not sufficiently trained to handle certain software-specific tasks like licensing issues, etc.

Please don't change anything.

As [REDACTED], I worker within [REDACTED]. The IT infrastructure at A&M in convoluted and bloated. I agree with the assessment that all IT services should be placed under one administrative structure and streamlined to improve effectiveness and reduce waste.

Consolidating IT across campus is important.

My main question is where will all of this consolidated IT be housed? I do not believe the current main campus facilities and physical/technical infrastructure cannot handle consolidation at their current states. In regards to consolidating Help Desks, the organizational and policy structure is not their to facilitate that sort of process, in addition to the physical/technical infrastructure.

Provide the resources needed for each college.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

None

Centralizing the IT department and prioritizing cybersecurity is imperative for the ongoing success of the student body.

Bring back 14+ day validation with DUO Push.

WiFi Sucks

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

n/a

Centralizing IT could be beneficial in the sense that we won't need to contact multiple help desks for different problems.

My concern would be whether centralizing IT increases wait times via phone or ticket.

Tamu should stay and operate the same. No changes.

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

n/a

This seems like it would be too complicated of a system. If someone's computer stops working, the IT of that college should be the ones fixing it; this should not go into a centralized system that would be a nightmare.

Information technology is helpful especially during the period of the covid-19 insurgency.

Consolidation seems wise but technically complex and should not be rushed; even utilizing multi-year stages if necessary. Of everything here, this will most immediately and directly impact current students if it is performed wrong.

n/a

With the advancement in technology, there is always room to review this branch of our university. The report lacks evidence however for the propositions. Such changes demand a more conclusive study. better research should have been conducted to propose such changes.

Trying to centralize IT seems good in theory, however alot of small jobs and hardware fixes gets handled by departmental IT which helps leave the big stuff to the central line. Thus getting rid of departmental IT would significantly inhibit learning for both undergrads and graduate students. For example a computer that I teach with was broken late one evening, the IT in my department had it fixed within 4-5 days due to the proximity of them and ability to take care of it immediatly. I am not saying that centralizing the IT structurally is bad, however there should be IT stationed in each department for these types of walk in/call in help should it inevitably happen. This allows for quick response times to problems that if not fixed can inhibit student productivity

N/A

N/A

Campus wifi is bad. Need to install more routers for the 70+ students on campus everyday.

IT is often very helpful! Whatever support they need I think is great

IT individuals already feel stretched to meet their department's needs. To put more Responsibilities under their belt, would make them quit.

They are helpful, generally, and have good hours. Certain websites are known to crash on certain days due to traffic (which at this point should be expected), including Registration and Ring Day. This is frustrating.

Asserts, without evidence or consideration of the university's large size, that centralizing Information Technology and Human Resources services in a university-wide manner would increase efficiency, timeliness, and consistency.

I would like to offer a suggestion that might help to alleviate some of the issues with IT. Splitting IT off into an IT section and an AV (Audio/Video) that could assist in more of the problems that may bog down the IT ticketing system.

N/A

IT should not be centralized. Each school has its own IT needs. TAMU- Health has completely different IT system compared to the main campus. If we had a centralized IT system, there would be more confusion.

n/a

AMAZING. I go to them every semester.

None

In different as long as they aren't liberal, the better the WIFI the happier I am

I read what yall talked about and I don't think you understand the problem. the whole website is trash. So many errors

and links that dont work and links one pages just bring you back to other pages. if I search for the College of architecture into howdy you would think that a link would come up that leads you to that colleges webpage. NOPE. the first thing that comes up is how to make a payment for your sports pass. I hope that yalls solutions are going to fix this but just adding a help desk and a better reporting soft ware arent going to do anything because the whole damm site needs to be fixed.

---

n/a

---

I think that we pay enough money to this University to have a consistent and well run internet connection/service. I honestly do not understand why this is not a reality. I fell like this could be remedied.

---

N/A

---

I believe cybersecurity should be an important focus.

---

Consolidating all of the IT Departments under one centralized IT Department will cause a reckless bureaucracy. Especially since the report singled out separate departments for Engineering and AgriLife, I am extremely certain that other departments rely on having their own departments. The easiest example is the Athletics IT department, where systems and particularities are custom to the needs of the Athletics department, and adding a ridiculous chain of command to go through will not just cause headaches for IT staff, but also Head Coaches and end users who all hood vital positions that require a unique IT department. The Athletics IT Department already has a great management style and network established, along with the Help Desk program they utilize, it allows them to operate as one machine that effectively and quickly responds to issues. Changing this aspect of the Athletics IT Department would severely affect the efficiency and effectiveness that end users are currently used to. Please, for the love of all things holy, do not create more bureaucracy in the name of cutting bureaucracy. Everyone that has been in the IT industry goes through these management changes, where someone comes in and says that the IT department is too large or not properly organized, so they cut it down (or worst) outsource. Then another manager comes in and says that the IT department needs to specialize, and the department grows. So, take a look at how mistreated IT departments are at other business and take notes from the actual IT professionals that will have to live with these decisions.

---

I do not agree with the consolidation of all IT across campus, it sounds like a recipe for disaster, long wait lines, and problems that will arise when faculty needs IT help within their own department. Same for University wide help desk-unnecessary and seems like it will hurt rather than help.

---

I very much agree that the technology at TAMU needs to be improved campus wide.

---

I respectfully think that there shouldn't be a merger of departments or libraries.

---

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

---

Meteorology is such a specialized department and so then is our IT. Consolidating IT across campus would be an astoundingly dumb decision. Our IT staff know our specific needs and how our equipment works, so why would we have someone who works in the College of Liberal Arts try to fix our virtual machines, our coding programs, our weather cameras, our weather model website? General things like a bad connection between a computer monitor and a projector, sure, any IT person could fix. But our particular technology? No. It would just significantly slow an already time-consuming process down. Same goes for the Help Desk and ticketing system.

---

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

---

One thing I did not see but is desperately needed - at the graduate level at least - is updated equipment. In our department - they have computers for grad students - which is great - except that they are all at least 10 years old, and the majority don't function - or if they do, are too old to run the software we need to run. They basically collect dust (there are roughly 30-40 computers in our grad area) - and we either have to use the lab - which has newer but still not new computers - or bring our own computers. I don't know if there is a trade-in/recycling option that we could use to

replace these with - but given that fees we pay are supposed to provide these computers something needs to be done.

I do not have comments for this.

None

Like the idea of centralized help desk and investing in cybersecurity

none

increase of technology, that is adaptable

As a member of Texas A&M Health, I feel there is limited support for Health professional students, especially after hours. I understand the needs are different, but the main campus Help Desk is so much more robust and helpful than the Health one. Even though my investment in school is significantly more, I feel we are more forgotten.

I was working in the late 90s in the areas of IT when CIS tried to work with all the departments. I thought this was a great idea, but across campus and even to this day, everyone believes they run IT better. [REDACTED]

[REDACTED] I can see the need and benefit of a centralized system. I talked to the System level CIO and many IT admins at TAMU on the rationale of centralized administration. The removal of 500 email servers was a good start. Now with multiple tenants and more security breaches, there is no telemetry or control from a central level to understand the patch level of OS, 3rd party applications, or other vulnerability nor the power of a shared management platform to manage all machines identically across the campus. This should also strengthen the cloud initiatives. The current distributed IT org is a large waste of resources from the perspective of money, IT time, and Nonproductive time caused to employees.

N/A

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

N/A

NA

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

A frustration during my graduate research was gaining access to computing resources -- the College of Geosciences had a completely different set of computer resources from the rest of the university, and supercomputers were located in a completely different college! This made it unnecessarily confusing. I am in favor of the recommendation to consolidate IT.

As a graduate student researcher, I have greatly benefited from having consistent faces to interact with within the department of Petroleum Engineering. I'm concerned about the proposed centralization of the IT department. For example, [REDACTED] helped troubleshoot issues related to both software and hardware issues setting up a fiber-optic data acquisition system. On another case, an IT personnel upstairs was able to quickly fix an urgent audio-visual system issue prior to a class beginning. Without this direct access, that class might have been canceled for the day. Past experiences with centralized IT departments has proved frustrating for complex IT problems. One IT personnel fixes on part of the problem, but then another related issue comes up, but you have to start from scratch with a new IT personnel randomly assigned. If the IT department is centralized, I think that dedicated IT personnel should be assigned to each academic department to help mitigate some of these issues.

The report made it sound like A&M barely have an IT division. I was surprised to find out that it was decentralized.

The prospect of having a centralized IT help desk for the whole University isn't a bad idea. I currently work in the Geosciences IT department and every once in a while we have to direct a call or ticket to another department. It's not a glaring issue, but it is one that can be solved with this implementation. More often than not, faculty will contact us

about an issue that we have to contact the Division of IT about. It all depends on the type of issue though, but I do think a centralized IT help desk that focuses on specific sections of the campus would be more efficient than the small IT conglomerates we have in each College.

I think a centralized IT dept. is needed. All campus computers should be integrated together without certain divisions/colleges having different logins.

Should be accessible campus-wide, creation of more units or groups to help other areas of campus and other majors and departments.

N/A

## Information Technology - Former Student

Please provide your comments related to Information Technology:

My friends and others working at A&M have a very common complaint across the board: they don't get adequate training by any IT staff when they start their jobs. Training such as which copiers/printers to use, how to use them, how to program their laptops and PCs to access the files and tools they need for their jobs, etc. The second biggest complaint I hear is that they get different answers from IT staff regarding problems that arise. Centralizing staff and getting IT staff trained properly can help greatly in their ability to then help others outside of their department. Having worked in IT for an employer for nearly 30 years, I know this is a very difficult situation. But it's not impossible; this CAN be accomplished with strong internal leadership and staff who can empathize with those they are helping.

Consolidation of this function should provide benefits, but it is important to ensure the maintenance of a high level of responsiveness.

IT was a mess when I was a student, when I was a grad student, when my brother and sister were students, and seems to still be a mess. I would support trying almost anything as the current process can be put in the "ways NOT to do it" column & move on. This is the biggest area where I feel a world class institution that I love has failed the most for the longest, with seemingly no way to right the ship. Please try anything and everything suggested, as I don't think any of the changes would make anything worse.

Centralization will not work with the specialized software needs of each Academic group.

Do not centralize. You will lose knowledge of specific needs. Not all departments or colleges have the same needs.

none

Be wary of cloud services, always have your own back up capability, cyber security, and organizational control.

I concur with the report findings.

Howdy, My name is [REDACTED]. I am a [REDACTED]. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for [REDACTED] performing project controls. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that

██████████ has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, ██████████

---

Good job during covid

---

Seem to have a high number of IT issues for a world class university

---

Rec #1 - I support the consolidation of IT across campus with a DEFINITE vote of "yes" for a university-wide help desk and ticketing system. There needs to be transparency in the service level agreements for resolution and clear definitions of how "emergency" items are addressed. TAMU cannot continue to have WIFI outages at the beginning of every semester. If the IT capacity is overextended, then STOP admitting new students until you correct capacity constraints.

---

I do not have the expertise to comment on this area.

---

I agree with the recommendations for centralizing and reorganizing Information Technology.

---

Recommendation #1: Consolidate Information Technology across campus. Agree Recommendation #2: Establish a university-wide Help Desk and ticketing system. Agree Recommendation #3: Prioritize cybersecurity to ensure campus services are not compromised. Agree and partner for learning programs for cyber security with Computer Science students Recommendation #4: Utilize project managers Agree if deemed necessary based on the scope of the project

---

I attended TAMU in the 1980s when a central Data Processing Center more so "controlled" University-wide computing versus offered support. Consolidation of senior management roles and functions for the sake of creating and enforcing standards where commonalities exist such as security is essential. However, the diverse computing resources across colleges and departments vary widely, and should therefore be managed and controlled by individual units. Centralized computing goes against the spirit of academic freedom. A University-wide help desk works in support of foundation basics, but in cases where the issue is unique to a department, these should be transferred to the department or college for direct assistance. Security simply must be a centralized focus to ensure if not minimize breaches campus-wide. The use of project managers under a PMO would be an invaluable asset to the University.

---

Concur strongly with the recommendation to prioritize cyber security investment.

---

Important area because of the rapidly changing technology we face today.

---

See above comment on centralization. Plus, will allow better focus on and accountability for cybersecurity.

---

No opinion

All findings seem to be positive with good recommendations

---

No comment.

---

a. Recommendation #1: Consolidate Information Technology across campus. i. Finding 1: Agree b. Recommendation #2: Establish a university-wide Help Desk and ticketing system. i. Finding 2: Agree conditionally. It's a good idea in theory, but the implementation and oversight MUST be managed carefully to keep it from becoming "unmanageable". c. Recommendation #3: Prioritize cybersecurity to ensure campus services are not compromised. i. Finding 3: Agree d. Recommendation #4: Utilize project managers i. Finding 4: Agree

---

Any consolidation into a central organization should include ALL Colleges and departments. If you exclude some Colleges due to special circumstances, others will follow and the organization will continue to be decentralized.

---

Centralized IT seems to be badly needed, but there is a danger of becoming too rigid to meet specialized needs or to stifle innovation.

---

IT rocks! Every time I've needed info, I have found it. Well organized!

---

The wave of the future

---

Information technology requires a team

---

The plan suggested should be implemented. This should also be fully under one control with full time staff. Stop the part time staffing. What does the title liaison mean? It's certainly unclear to an outsider unless it matches its dictionary definition.

---

Good suggestions; possible it could slow response to problems.

---

Ditto my comments above.

---

Absolutely needs consolidating. An emerging technology and need and with so many different components all trying to do their own thing is becomes a traffic jam and inefficient. Reorganize and centralize. make cybersecurity a priority and have one loud voice instead of many.

---

As a Computing Science major, I spent my entire career at a major corporation in the IT function. I believe the recommendations are sound and also align with industry. Although change is difficult for many, the centralization of the function will benefit the individual departments, especially with support, standardization and common ticketing system. Common processes will also benefit in the security and cyber security areas. As a former project manager, I agree with the assessment that dedicated project managers managing projects is more effective than managing projects part-time while doing the normal job. A key, though, is getting very good representation from the colleges/departments to make sure that the projects continue to align with the objectives.

---

This is a challenge. I am not able to comment well.

---

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. [REDACTED] and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children

---

there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

N/A

Centralization is again a best business practice except for niche technology unique to individual college units. BUT centralization cannot effect some and not others or it will lose its effectiveness and efficiency.

Very good move. I was shocked by the report. The current state of thing makes no sense and is dangerous to the students and faculty.

This is one of the few areas of the report that seems to stress the opportunity for fiscal improvements.

None

The description of the current organization indicates there is a lot of room for improvement in this area. The suggested reorganization strikes me (an amateur) as effective

Finding #1 - Probably a good recommendation. Finding #2 - Okay, but watch out for this process to bog down in its service. Finding #'s 3&4 - Both are good recommendations.

Cyber security is always going to be a challenge with an organization the size of TAMU. I would suggest that the Bush School has faculty that is focused on such issues that may be helpful a a high level. Clearly, a centralized IT department is highly desirable; however, it is critical that the various colleges and departments have the flexibility to utilize software (both commercially available and proprietary) in order to effectively educate students and support research.

Approve the recommendations.

Na

Support 1,2,3,4 recommendations. Skilled & highly functioning IT department's / services critical to all.

Consolidation of In formation Technology should not compromise access to the operating units of the university for rapid technical support.

None

No Comment

Improving technology use throughout system would be beneficial.

Agree with the recommendations but I'm an outsider.

Periodic review and recommendations for improvement to operating departments is a good thing. If the study shows these to be wise moves, then they should be implemented.

Since most close to retirement better get busy hiring new talent!

That the investigators doing this report, and the President's Office, is unaware of the current centralized ticketing system we have (Service Now) thoroughly demonstrates how incompetently this investigation has been done. If we want a "centralized" service ticketing system, then incentivize departments to use the one we already have and adequately support it.

Similar to my comments on centralized Facilities and HR, IT must be responsive to individual departments. In my experience at a large research facility, we had a centralized IT department but individual divisions still needed to in-house people to respond to priorities. I think this part of the report is a little pie-in-the-sky thinking.

Security in technology is essential to continue Texas A&M success.

No Comments

Seem like reasonable recommendations.

Same as Facilities: I support the concept but believe there will be substantial inertial resistance. This change will require strong leadership and cross-functional executions teams with both high level goals and detailed planning metrics to

measure progress and achievement of outcomes.

Uninformed, so no comment.

N/A

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts. The digital programs shared by each department are very important.

The recommendations should be implemented. What does a Project Manager actually do?

Agree

While centralization of IT services is commendable, the College of Architecture, like AgriLife and Engineering utilizes specialized software that deserves its own IT staff to help manage and troubleshoot any issues that arise. I would recommend and urge that more thought be given to the recommendation that the College of Architecture be placed under the centralized umbrella for IT services.

Recommendation #2: agree. This is what the USAF uses and it works well.

The one area that you are correct. Decentralized IT is a bad thing. Shadow IT creates risk to the university and puts the entire school at risk. This should be addressed through policy and org charts. Centralize, but segment.

I'm sure that everything that was said about IT shortfalls at Texas A&M is spot on, as IT seems always to be one or two generations behind the times, tied to legacy systems that seem to hang around forever. This is one area where the slow evolution of IT capabilities will no longer meet anyone's demands.

The recommendations seem to make good common sense.

No comments

I recall from being at A&M that there was always this fight for resources in IT. I can only imagine what it is today. It has to big enough in resources to provide for all TAMU and be service oriented enough that no one is excluded.

Sometimes diverse functions offer a level of security and prevention from attacks by other countries and hackers seeking money.

Agreed

Yes - these look like great ideas

na

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

None

if currently there are multiple IT solutions across the campus and departments, these should be standardized and upgraded to current technology standards.

Enhancement in IT is needed.

No comment.

Recommendation #2: This is fairly selfish of me, but as a ChemE major we had amazing IT and advisor help. They were great. Going to a centralized system will probably help the rest of the students but would have hurt the ChemE department in general. I understand though that not every department can have the amazing advisors and IT help that we did.

No informed comment.

No specific comments.

N/A

I agree with the recommendations in the report.

Why do you need a Chief of Staff?

XXX

When IT becomes remote and distant, I feel that services suffurs. Also IT needs a certain autonomy in deciding what to support since graduate students often have unusual needs that may require personal help, support and attention.

Consolidate it.

Sorry - I was born in 1940 and use as little technology as possible. But - you might want to consider developing technology that is as friendly as possible toward people like me.

Recommendations sound logical.

Agree with assessment.

Consolidating information technology services is a fantastic idea. Using the same process and software, along with cross-training employees with different departments will improve services and the bottom line. With that said this is a huge change and careful attention must be paid to the individuals who will be affected. Buy-in is a must for this to succeed.

The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

IT was in its infancy and not a big issue during my student years. However, today it is very critical to the overall function and needs of any organization. It needs to function seamlessly across the entire system.

None!

The general emphasis on efficiency and eliminating duplicative efforts is good, particularly if some of the resources saved by the efficiency could be used to reduce tuition and other costs of attendance.

Probably the single most critical area for centralization.

none

A&M should be doing what it teaches in IT and follow these recommendations. I imagine there are many retired or near retired former students who have this expertise that are willing to consult at a very low cost. I am at least.

I agree with recommendations.

None

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

As a former technician from Student Affairs IT, consolidating the IT department is a gigantic hurdle. While I agree with the initiative, it will take 6 years minimum. I have a feeling the university will try to rush the process, which is going to be catastrophic. One single example is the Corp of Cadets, which is currently handled by Student Affairs IT. They work with government technologies that no other department uses and is confusing/opaque even to Student Affairs IT. Merging all of these different systems into one monolithic org is easier said than done.

I agree with the recommendation for a separate school of visualization and a single department for IT services.

Usually a great help! I used to work for IT help desk myself

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

stay at the top of technology. but a help desk situation is not perfect either. it does look as if TAMU is behind on upgrading IT.

In favor of the realignment of IT.

Yes. Agree that this should be centralized. User satisfaction surveys on help desk should be random and not 100 percent.

An overarching IT help would be great. However, specialty IT in each department would still need to be available. With a campus as large as A&M, one centralized IT department would provide challenges to those departments that may need immediate assistance. Additionally, IT departments (such as the one for Petroleum Engineering) are very knowledgeable about the equipment in that particular building and know about the things that may go wrong/equipment that usually runs into problems, etc. More awareness needs to be made about how to get in touch with IT, as a student and employee it was not widely known.

if we are to fix "unity and purpose and effort: at Texas A&M, then this needs to be fixed as a job one enabler to do that!

N/A

Viewing what I receive as a former student, all is well. I hope we are protected from cyber attack.

I would definitely utilize project managers for each IT project and have set time line goals not to exceed 5 years.

Streamline operations per the report.

See above

Centralization of services could be beneficial. This is the trendy thing to do everywhere. Do not outsource, though.

No comment.

Things could be improved overall if IT was centralized, if it had a ticket helpdesk, and if tech solutions were implemented more thoroughly and efficiently. We have the tools to streamline certain tasks and processes, but I don't see them being widely implemented or used. Security is lacking too.

No comment

Don't take good jobs and pensions from the citizens of College Station.

I'm not qualified to comment except that I know it is important

As a former Viz student in the game design track, consolidation of Information Technology would greatly have helped us. The systems and tech we used there was practically foreign to IT, to the point where we knew what we needed but had to move heaven and earth to get IT to do it for us, and ultimately used our own devices most of the time.

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

Recommendation #1: Consolidate .... Agree. This should have been accomplished years ago. Do it now!

Recommendation #2: Establish .... Agree. This goes along with consolidation IT across the University System.

Recommendation #3: Prioritize .... Agree. Cybersecurity is vital in today's IT world. Use outside experts as much as possible with this issue. Recommendation #4: Utilize .... Agree. Hire and train the very best professionals.

I support these recommendations.

Not that specialized IT support won't be needed, but it does sound nice to have a centralized help desk that can sort through the requests to get them to the right people. Cybersecurity increase is fine as long as the emphasis stays on keeping information private and not becoming invasive into spying on students and faculty with the guise of Cybersecurity like the US Government did after the 9/11 attacks.

There are way too many part time employees. IT could run with substantially fewer employees. Again, we don't need kingdoms. The IT function should be consolidated and keep only those who can truly pull their weight. Too much money is wasted in this area.

No comments. Like the idea of centralizing it as much as possible. Cyber Security will continue to be critical across all elements of the university and system moving forward.

Good!

All departments must integrate IT into department affairs and classrooms to the level indicated by projections of future needs and growth.

It will be nice to have more resources for fixing IT issues and helping keep the system secure.

I agree with the report.

It would be interesting to allow all of see the course schedules each semester even though we are no longer students.

TAMU should absolutely be the best in the world regarding IT at every level. From use within the Administration to the Academic Degrees. Whatever it takes expense wise needs to be applied and made available to update TAMU to the premier venue for IT advancement and discovery.

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

IT is pain, no matter what. Nobody will be happy with whatever solution you find. Consolidating under one system does benefit your ability to respond to threats, which can only be increasing. Take a look at what DOD has had to do and does daily.

Consolidating IT should've been done decades ago. Good move, and necessary.

---

Loved the continued consolidation. One point of contact is a great plan across all organizations.

---

Agree

---

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

---

Having an IT department in each college would help.

---

I don't understand the issue enough to have an opinion here.

---

centralization of decisions and spend is consistent with moves being made in the private sector so 100% supportive

---

Does the computer work for you, or do you work for the computer? A good IT group will allow the computer to work for you.

---

N/A

---

A&M Departments and Colleges can raise more money by understanding that people over 50 have special needs related to surfing websites. A&M websites are designed for students, but often there are websites that are portals for donations from former students and friends of A&M. Older people have money to donate ! A website that is difficult for them to navigate does not help them... example... many seniors see a web-page and don't even understand they have to scroll down to see more important information. Senior-friendly web-sites have the important information presented without the need to scroll.

---

Agree with the recommendations from the report

---

Like

---

Absolutely consolidate so systems are integrated across the entire campus. Curious that this org chart has all senior leadership with few positions of actually middle level or entry level employees carrying out the actual work f a centralized IT office.

---

Support

---

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

---

I found it curious that IT was the only area singled out as providing "little training or consistency for individuals who lead special projects." Project management was mentioned in other areas: Facilities, Enrollment Management and Communications/Marketing. In addition to these, I am certain there are even more areas than those mentioned that need to execute their projects well and may warrant professional project management. Do all areas except IT already excel at project management? I don't know, but across a university-wide, de-centralized organization, I would doubt that all the others areas ALL currently excel at project management. Why then, was IT the only area highlighted as needing to improve project management? And, why didn't the report point the IT organization to sister organizations who are already performing project management well, from whom they could seek guidance and maybe even assistance?

---

Each department is better off having dedicated IT teams even if it's more expensive. Personal relationships go way further than a distant centralized IT team. As mention in the report, much of the faculty is older - close contacts will be better. Besides I remember there being a university IT team anyways.

---

huh

---

As a professional technology consultant that has worked with large enterprises, all of these recommendations are spot on and should be implemented.

---

I have no issue with the idea of consolidating IT to streamline it. I think the main issue of consolidating and then expanding IT makes no sense though. You're doing work to achieve what exactly?

---

(Not entirely relevant to this section, but) The acknowledgement of AgriLife and Engineering as independent entities by Agency status without description or definition while noting other department specific issues with Athletics and Transportation is a decent example of the kind of lacking transparency perceived from administrative services. Much like I've said for other areas, the personnel of IT across areas should have a significant role in designing any changes toward a centralized structure.

I agree with the findings and would be interested and receiving additional details or updates as they become available. My company has been going through similar changes and the results have been outstanding.

Again, when I worked at OIC, I was on a committee to discuss bringing ethernet to the university. Times have obviously changed. I do not know how technology is managed on campus now but if centralization occurs, the emphasis should be on what individual stakeholders need and be a true customer service department with metrics to insure all needs are met. It should be entrepreneurial, always seeking better ways to provide the needed services.

no comment

None

As someone who worked in the help desk at the Bush School, I was constantly confused why we weren't more integrated with the rest of the university. There should be significant efficiency gains from consolidating. Also, why are there not currently project managers? This is a no-brainer.

Way beyond my scope of knowledge.

Having worked for 16 years at a jurisdiction that has had IT centralized, I can safely say that it was intended as a way to control the various efforts being conducted by various departments. Unfortunately, a centralized IT does serve the purpose of a large (10,000 people) complex organization of many departments with a multitude of IT needs and using varying platforms of databases. It is now 10 years into this transition and it is only now the leadership has hired external IT experts to listen to staff to return some of the ownership back to some departments. I suggest if you centralize IT, that you listen closely to your clients needs (they are not wants or desires, they are needs), and then make plans from there to assist THEM in their work. Centralizing IT can be helpful but it can be a big mistake if done without skill and grace.

Data needs to be protected, collected, analyzed and shared. Reporting should be accessible to various levels in the organization based on their needs. It sounds like the plan is seeking to do this.

More user friendly howdy portal.

Increasing cybersecurity should be a priority. If you centralize the departments, make sure you have fail safe processes and can prevent the failure of the whole "centralized" university IT network.

Expensive to retool this area, but it is the only way to be efficient and stay abreast of technology improvements to centralize the function and roll it out with a command structure.

None

We should be cutting edge as far as technology available to students and former students and we have an obligation to protect private information.

Agree with recommendations

None

N/A

Agree on all recommendations, especially around cyber security.

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

Must stay at forefront of information technology.

They need more money or we'll lose them

Separating AgriLife and Engineering indicate there is still clearly a preferred set of colleges that get special treatment. Either fix everything, or leave it alone. I saw no mention of investing in increased bandwidth, better wifi, partnership with mobile carriers to increase services across campus. I think this is critical for any successful university.

Yes, there are efficiencies in centralization of Finance and IT. However, every organizational unit should be provided funds and freedom to support certain finance and IT initiatives that would never get approved when stacked up against the entire university's list of priorities. So...recognize the inefficiency of centralization and allow for compensating processes.

See my comment on facilities

A&M is 10 years behind the curve. Costs big money to hire a pro from CA or NYC to help catch up. More ties to military and industry could help.

These seem very necessary!

Stop promoting/prioritizing the job

The recommendations are solid and should be strongly considered to improve a deficient IT system.

Strongly, strongly support centralization of IT across all of the university. As mentioned above, separate IT organizations result in vicious wars for the same \$\$\$\$. Also support university-wide help desk and ticketing system. Amazed/dismayed that one doesn't already exist.

no comment

Why doesnt IT department have a project to move pulling tickets to "ticketmaster" like platform to pull tickets. Students standing in line 8-10 hours or more is a time honored tradition but thats just way too much time in this day and age of digital world.

I did not see adequate cyber security measures for the research programs that are the most sensitive. This is in an environment where theft of ideas is a daily activity.

All recommendations make sense and should have action taken on them quickly. Especially the cybersecurity initiative. Additionally, establishing a PMO first will help with the other initiatives getting completed in a timely manner.

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

I get the feeling if this was already "centralized", the consultants would say, "it's too centralized, you need to decentralize".

Consolidate it.

It appears that the University is providing technology to many venues, such as the USA

I agree with the recommendations, as from a student perspective, this was one of the most frustrating parts of my college experience at Texas A&M. There was a separate website/portal/module for everything.

See comment above, in HR section.

none

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

A centralized help ticket org will develop into a massive and ineffective service desk. Better to keep this decentralized so that departments have specific accountability—a person who is responsible for metrics in that particular Dept. A centralized help desk will become a black hole.

Protection from pornography and illicit schemes/crimes would be important to filter off of all student/teacher/staff/guest devices while using the TAMU wifi and internet.

fine as presented

Finding #4 seems odd. PMs are valuable (I am one), but they are not everything and they should not be implemented without a means of organization (PMO for example). It is not mentioned how such PMs will be organized in the midst of the other recommendations so that they support centralization rather than accelerating decentralization. This could be an option, but wow... They really shorted their research as far as how this might actually work. This is a dangerously under-supported finding. As a current PM and former consultant, this recommendation would not have left the draft stage of this presentation as it is currently formulated.

Which department this belong? It was under computer science at my age. It has changed so much and is more than our spouse everyday. Very influential with great impacts to human future

HOWDY website and links is still too fragmented. Central portal requires much more streamlining.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED] Class of 2014

No comments.

Both business and the military will be focused on cybersecurity in the next 20+ years. TAMU should position itself so that Aggie grads will become leaders in these areas. Cybersecurity basics should be taught to all students. Corps of Cadets members should be prepared for the electronic battlefield as well as the physical one. TAMU should take aggressive measures to become well-known in offensive cyber operations. See BYU and RPI as examples. We are already considered to be 2nd or 3rd tier in this area. This should not be allowed to continue. The University should aggressively invite cyber researchers and industry representatives to campus for seminars, recruiting events, etc.

For the most part IT is good and works well.

no comment

I think one central IT is SO much better than different ones. SGA advocated for years for centralization like this and it seemed like we weren't heard. I am glad the firm's recommendations are being taken into consideration.

## Information Technology - Other

Please provide your comments related to Information Technology:

Oh man. It is a shame how poor the "band width" is on campus (and actually in the area as a whole). Expanding internet reliability and connectivity should be job #1.

I am a firm believer in shared-service models to provide across-the-board services to a division, company, or enterprise. My own department was created with that goal in mind. In 2011, the then Associate VP for Academic Services had 5 departments that had disparate IT and business services. Each of the departments had its own business personnel that provided accounting, human resources, and travel services. The departments either had their own IT personnel or commissioned the Division of IT (né TAMU IT and CIS), to provide their services. In both business and IT matters, the departments received different qualitative levels of service. He then commissioned [REDACTED] to address these issues with IT, and [REDACTED] for business services. [REDACTED] formed the shared IT service department, "IT Academic Services"

(ITAS), but other division heads saw the effectiveness of this model and commissioned ITAS to provide their IT services. I don't know why the then Provost changed the name to "Provost IT Office." There was no reason to do so and if there was, "IT Academic Affairs" would have made more sense. Despite the unfortunate name, we now serve same-level quality IT service to 55 departments in 4 divisions, and concierge service to the President and Provost Offices. This being said, I love the idea of a campus-wide shared service and welcome the recommendation by MGT. It makes complete sense to provide same-level IT service on campus to students, faculty, and staff. But there is the question: is it achievable? The Division of IT has never been able to provide a shared service across campus or ensure that all departments received the same level of service. This is due in large part to the cost-recovery model they have had since at least when I started with the University in the 1990s. In fact, their last audit shows that they still have issues delivering compliant, let alone quality, services. To achieve what MGT recommends, the mission and structure of a central IT service need to be reworked into a service-industry model, which is what all Information Technology should be. If the idea is to move all the fast and nimble ship's crews to the lumbering, leaky dreadnought, then I would expect a huge step backward in quality service for the University. If the idea is to consolidate the fleet into a reformed single unit behind a refitted, state-of-the-art carrier and admiral working for the University leadership, then I think we can achieve great success.

Regarding recommendation 1, it is not certain that consolidation will result in efficiencies. That is, the expected particular efficiencies are not described or defined. Are these efficiencies in service, cost, time, etc.? And efficient from who's perspective? Are these efficiencies for the institution, the colleges, the departments, the faculty and staff, or something else? Moreover, the proposed organizational chart is poorly done, inadequate and appears incomplete, as if someone didn't finish their homework. Do not agree with rec 2. Do not agree with rec 3. Do not agree with rec 4.

NA

Do not make an assistant professor having trouble with her computer go to another building to get help. Do not overcentralize IT. The current HELP line service is A+.

Long over due overhaul and study of IT on our campus.

Centralized IT is a must to mitigate cyberthreats. Reporting, management procedures, strong Cyber Policies are all critical to long term success. A project management office staffed with effective project managers can help implement strategic goals and security standards throughout the University system.

It is a relief to see that centralization is key to the report. There is nothing more frustrating to users of technology than to experience divergent and incompatible systems

Coming from a 200 yr old company, DuPont, as a Business CIO, I see many of the same trends identified in this report. Centralization is required to simplify business processes and improve operational effectiveness. The execution of change mgmt that follows this report is imperative. Without adoption you will only have disruption.

Your calling for PM's is wonderful, I was a member of "one" of the many many PMO implementations over the years. Problem 1: No long term support for the practice of project management, no metrics to measure success). Problem 2: Wasn't the PMO or the PM's, it's the Faculty and Staff who refuse to change their ways. We taught hundreds of aspiring PM's how to work and provided licenses and training on centralized software and only one faculty. We developed a 20 min short course on what it meant to be a Sponsor. It was killed off and never advertised. We and our students were actively undermined by other IT groups. The general feeling was that the sponsors of projects would lose control (or face visibility) so they would have work done that wasn't called a project, dis-invited people functioning in a PM role, wouldn't spend money to support training and development past a minimal "check the box stage", and in some cases condoned abuse to drive away the PM's. I found the environment so toxic I went back to Industry. Another issue, you aren't going to get the right PM's for the salaries you've been paying. Your rates won't attract AND KEEP anyone who can move the needle. If they are ambitious, they will work a year, then move on. If they aren't they aren't effective, get the blame and get laid off during the next re-org/financial crisis. And the PMO and PM role gets the blame when in fact, it's a Leadership issue.

none

Upon receiving my PhD, I was hired by [REDACTED] to serve in their HR Department as a Leadership Trainer and Developer. I was very successful in this department under [REDACTED]. For several years I observed the high caliber of employees they had. The overall feeling inside IT was that they would be more effective if centralized. [REDACTED]

commissioned two high-powered organizations, including Deloitte and Touche to determine how we should be configured. Both reports said that IT should be centralized for better use of personnel assets and mission performance. We believe that our HR office would become larger with a gain of more IT personnel from around the campus. Instead, John Sharp decided to decentralize us. It made NO sense at all to any of us. As a result, personnel from throughout IT, including our HR office, were reassigned all over campus. Now it appears that the new study recommends the centralization of IT resources again. Amazing. Don't miss this opportunity. Do it! Consolidate these missions.

As the [REDACTED], I want to provide the following feedback and information about the Libraries Information Technology: The Libraries has centralized and embedded the Libraries Information Technology unit (referred to as DI or Digital Initiatives) and staff within all aspects of our operations, project management, and organization. We have found this model to be highly effective and efficient and we are consistently praised for our compliance by University IT. Removing them will affect the efficiency and effectiveness of how we provide our services, programs, and initiative to students, faculty, and staff. The University Libraries has maintained a highly skilled IT faculty and staff with the purpose of providing very specific technology needs and knowledge for use of the electronic databases, journals, and resources that all students use. We have centralized the point of contact to alleviate any confusion to students and faculty and elevate efficiency. The University Libraries IT units include application development and support, and operations. These units support the needs of the roughly 500 staff, faculty, and students who work in the Libraries as well as support numerous services, programs, and initiatives that the students rely on for their academic success and faculty need for research and scholarship. They also support our state-of-the-art digitization lab. The University Libraries runs highly specialized and unique software that no one else on campus manages. Many of these applications have been developed through an Open Access community. The University Libraries have been an early adopter of open access. Open access allows for the Libraries to have greater control and say in developing and implementing applications that work for our specific needs rather than settling for limitations of a vendor or out-of-the-box software. Open Access applications also allow us to use our budget more efficiently as the costs are much less than paying a vendor to manage our services. DI provides 24/7 technology assistance which results in immediate response when there are issues or outages with any application and electronic access. The University Libraries IT personnel are embedded in the Libraries operations. They are partners in the development of the Libraries digital libraries, electronic resources management, library catalog management, website design and management, digitization equipment support, and community application development. The team members are active members in the Libraries Project Management Team, Web Governance Team and development of the web ecosystem, Digital Project Management Team, Digital Library Executive Team, Scholars, FOLIO, Dspace, and more. This level of time and commitment is necessary to continue leading in library innovative projects and collaborate effectively with library staff and faculty in the future. Specifically, DI manages the operations and functionality of the following: Get It For Me service: One of the most popular services used by Students, Faculty, and Staff. This service is integrated and maintained by custom software and workflows that provides for its streamlined use. It provides a way of a user to let us know that they need something that the Libraries does not have. It starts a workflow for our staff and librarians to find the item through Interlibrary Loan or through purchasing it. Library Website: The website is centered around the Libraries catalog. We use campus for our hosting with cascade and they maintain the service. Historically when we have tried to participate in shared services on campus for development of our web presence, but they never understood all our operations and were not able to convey it to our users. <https://library.tamu.edu/> FOLIO: The Libraries is working with other peer institutions to develop and run FOLIO which is a replacement for the Libraries management system. This effort is being done as a tremendous cost savings measure to counteract the inflationary costs of vendor supported software. Moving to an open-source product with strong community support ensures the library is being fiscally responsible with its budget. These efforts are impactful within the entire library profession. Hundreds of university libraries are watching the development of FOLIO with anticipation. Texas A&M University Libraries has received much praise and attention for our work in this initiative and it is due to the embedded and centralized IT library expertise. Scholars@TAMU: The Libraries along with other peer institutions developed Scholars@TAMU. It is a profiles system that hosts searchable expertise for faculty and TAMU organizations. The success of this endeavor was due to a close collaboration between library faculty and library information technology units. If the decision to allocate resources to this product was taken out of the library control it potentially would have missed the opportunity to join and lead the project. Scholars has become the primary way that faculty document their research and gather metrics and analytics on their scholarship. This is in turn used by faculty across campus for grant applications and promotion and tenure and by administration for accreditation, assessment,

and marketing. Digital Library: The Libraries strives to make our unique research collections available online for global research and scholarship. The development and management of the digital libraries is based in DI. There are many components and applications that are used to make the digital libraries discoverable and accessible. [https://library.tamu.edu/research/digital\\_collections.html](https://library.tamu.edu/research/digital_collections.html). The list of applications includes: Spotlight, SAGE, Cascade, Fedora, Avalon, Dspace, Chronam, Mirador, IIRF, Internet Access Book Reader, GeoBlacklight, Archivematica, and Duracloud

Please see my comments above....especially in this area. Centralizing this service rarely results in reduced cost.

As

I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

You should abolish individual colleges having their own IT staff and terminate the positions of the people that "manage" that staff within the colleges. This would save you millions of dollars in salaries that unnecessarily go to those staff.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose "blue collar", "1st generation" and "make it happen" students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

No comment

I don't have any comments on the overall need to centralize IT structure within the university, or as regards cybersecurity, but at a lower level this is another example of centralization for the sake of it. If instituted as suggested in the report, this will have a very detrimental effect on productivity. We need people in departments/colleges who understand the IT setup and needs of the faculty, staff and students in that unit. While certain basic activities, such as adding upgrades, can perhaps be done centrally, for more complex logistics we need to have people on site who know the local systems and can deal with problems as they arise, not three weeks later once a ticket has worked its way to the top of the pile.

Centralizing this function is LONG overdue. Visit any web-site through Texas A&M, any service, any area - it is disjointed, cumbersome, and seems to violate every basic principle of design known to man. Homing pigeons would work better . .

During the upgrades your contractor cut lines with Clements Hall..... they were problematic throughout my son's residency.

N/A

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

Without IT you have nothing.

Silly idea to centralize...look at Ag College to see if this actually improves services

Our similarly sized university has recently started a multi-year centralization project. We had no funding model established going in, aside from pulling salary lines and existing IT budgets from the college/department level groups. Knowing this, many of these units drastically cut IT funding in the year prior to centralization. The resulting lack of funding has resulted in stagnant wages, hiring freezes, and significant attrition over the last ~2 years. Some critical teams are operating at about 50% capacity, and some of our centralized deskside support zones have spent months at 30% staffing levels (900:1 endpoint:tech ratios). Some business units are now pushing to de-centralize and bring IT back in-house. If consolidation happens, it is CRITICAL to retain the customer facing support reps that have the relationships and institutional knowledge of their areas around. They're the face of IT and the value of that can't be underestimated.

IT should focus on safety and try to avoid ransom ware attacks. The CIO should look for ways to cut costs and keep info safe.

IT needs to remain its own separate group within the university. However being that TAMUS and system member offices are also local, it may be effective to centralize all IT asserts together instead of each group doing parts of facilities.

With the use of technology also comes the risks of potential data breaches. According to this report A&M has already been affected at a high numbers. I agree that changes need to be made in order to protect information from students, faculty and staff.

only apply proven technologies to run the university

None

Students have a lot of trouble utilizing the Howdy Portal and making it more user friendly would be helpful.

Consolidation of IT entities that support wide swaths of the university makes sense. Provost IT and Student Programs IT never made sense. On the other hand, removing IT from departments and colleges would be a severe mistake. Many faculty already think that the solution to increasing security regulation is to put personally-owned equipment into use in their offices and labs. The loss of local IT that can effectively address their concerns will only accelerate this trend.

I think a single central IT help desk will be beneficial.

Agriculture and Engineering have always been exempted from centralized IT services. This has always been a challenge for the central office. While they have project accounting, this can be provided by the central office for more efficiency. I imagine this is more of a power move than one for efficiency.

Spotty

## Q14 - Please provide your comments related to Marketing & Communications:

### Marketing & Communications - Faculty

Please provide your comments related to Marketing & Communications:

Centralizing MarCom would be a good idea.

I am hopeful that some of this could be useful

For the COM, additional resources for marketing and communication will be needed, especially in light of the Vision360 and expectations for the COM to rise in ranking within 5 years

None

The college of architecture's business office, IT, and marketing are the most efficient and effective staff on campus. If the centralization of these offices results in services akin to SRS or IRB, we will have failed. In fact, IRB has had to be called by NSF to say they are not functioning correctly. SRS has had to give back grant money that the funder did not want back because of their slow bureaucracy. My research has been a victim of this when SRS and contracting could not function quickly enough. We have lost grants and contracts due to the bureaucracy of these parts of the university. Currently, the college business office can help me with a financial issue within a day, IT fix something within an hour, and marketing get materials out the door within a day. I do not see how the centralization of these services will compare to the amazing quality of service we have now. We also need to have the flexibility to communicate very quickly in today's media environment. Centralization may slow that.

if there is a process of many steps to impact people of what we do...by the time the news is released it will be old news....although there are many things we can do better that are touched on in the report

The only concern here is the time it will take to elicit a response

I would agree that we should raise our standards with respect to marketing and outreach.

No Comment

It seems like a normal practice for each of the colleges to have their own communications and marketing groups.

For sure, we need better communications on campus and to our satellite units.... maybe even an intranet. I know I am in the minority, but I would like our marketing to focus on academics and research rather than football.

In connection with my role as senior associate dean of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

Proposed changes are good.

Again, there is the matter of scale. Consolidated campus-wide Marketing may work well for smaller institutions, but TAMU is very large. The University Libraries needs its own marketing team, though this team should work very closely with the University Marketing. Will this involve actual movement of staff or simply of reporting lines?

agree we need coordinated communication across all university entities.

I think this generally makes sense, but our COALS/Agrilife MarComm don't even respond to emails, so I'm really confused how we're supposed to get anything done with even less control.

No comments

I do not support centralizing this office. Having people who are knowledgeable about the events, promotional materials, ethos of the organization, and the audience the unit is targeting is invaluable. Marketing and Communication is essential to reach our students, and the right messaging is even more essential. I do not believe that this is something that can be centralized without causing delays and a tremendous amount of shadow work on the unit as they must continuously provide context for the marketing campaigns.

These are good recommendations

None.

A better looking branding would help. Also the path to getting faculty press releases and publicity for their work is at present very opaque.

This needs to be well-coordinated with the various colleges and units. Specific disciplines have specific communication strategies, niches and funding agencies to which they tailor their marketing efforts. We should not fold these components into a general office that will focus mostly on branding and image, with a broad marketing purpose.

I like the idea of centralizing marketing functions across the University. Although the Libraries has its own Marketing unit that I typically work with, I have found the campus Marketing & Communications department to be highly responsive and supportive when I have had the opportunity to work with them. I believe this model would also more clearly delineate between marketing and communication efforts and unit operational efforts.

None

MarComm needs to be on the ground in Qatar to take pictures and talk to the campus community-- this cannot be done remotely.

Just like computing the dollars spent supporting a college level communications group could be deployed on the core mission of teaching, research and service. They exist out of necessity out of the 24-hour news cycle and the variety of media platforms. Centralizing all these entities under MARCOM is an awful idea. While the messaging will be consistent the timeliness and customization will be lost. The world of press releases is a thing of the past in the world of Facebook, Twitter and Tiktok. By keeping these people close to the newsmakers, the news can get out much faster.

I don't like to think of Universities as having a 'brand' because brands can be created and shaped by marketing campaigns and Universities - to the extent that they become identified with athletics, certain types of students, research programs and schools of thought, all of which make up a University's 'brand' - reflect generations of endeavor, investment, of accomplishment. We are lucky to have a unique brand - one of the select few big state universities that has a brand - and it won't be easy to change it with 5 or 10 years of consistent marketing. Sadly, the 'Hate is the Hidden Aggie Value' site on Reddit is part of our brand - I bring it up because I suspect that incidents that happened generations ago on our campus are reported on that web site as if they happened yesterday. Colleges and Departments that want to communicate with their potential donors will likely have to do it covertly if Marketing and Communications becomes centralized across the campus.

None

none

No comment.

No comment

I support the centralization of marketing & communications. This seems like a great idea and I would strongly support more transparency from the university. One of the reasons that it is difficult to get things done is that it's hard to figure out who is responsible for them.

Centralization is not always a good thing. Marketing and communication can get lost when separated from the people that it serves.

The proposed organization chart under the director seems unwieldy! How many new positions would this create?

Our communications group is an excellent team, with in-depth knowledge of the faculty, students and programs in our College. Eliminating college-level communications groups doesn't make sense. No centrally-housed communications group can have the direct, hands-on experience or knowledge of our faculty and students.

Again, I don't see the justification for centralizing marketing and communication. perhaps better communications between the colleges and university.

no comment

The TAMU brand is valuable and important. It generates revenue. Having a consistent brand could be valuable to both ends.

Marketing at the local level is very important, so we hope there will be liaisons and connections to departments (including services like the Academic Success Center of LAUNCH).

Good plan.

I don't worry about this. It will be comical, however, if Coach Fisher goes to LSU. That would be bad press, I think.

McAllen would benefit from a marketing and communication office that includes us in the branding of the institution. Much of the Rio Grande Valley community is unaware that we exist.

No comments.

Departmental needs and priorities for marketing need to be addressed as well as the overall branding and marketing done at the University and College level. Perhaps a University framework and institutional marketing staff can

peacefully co-exist with Colleges and Departments having some flexibility to advertise and engage in marketing, within constraints imposed by the University.

KAMU is licensed as a public service organization, and should not become even more of a marketing and communication tool for the university. It should become a community organization with increased participation by students and non-TAMU affiliated residents widely representative of the community.

Texas A&M is really struggling here. We are doing well only because we have an incredible product that sells itself with the 500K former students as exemplars. Focus and consolidation is key here, and sufficient staffing. Look to TTI for a solid centralized design and operation. They can improve, yet controll their messaging very effectively.

No comments

Marketing doesn't need to be completely centralized -- only consistent in branding/messaging in a general sense.

Any centralization will need to have clear lines of communication as well as timely responses. My past experience with centralized marketing is that there was no local input and the materials produced did not represent our work/focus. In addition, if there are guidelines, how will enforce standards occur- seems hit or miss right now. Also, how can we ensure that creativity is not stifled?

Again, overlap within colleges and departments.

Support if all colleges will get equal support and the message is unified. TAMU is often thrown under the bus in the media and seen as racist and misogynists. I'd love to see a push that says that TAMU is not just for racists and misogynists - of course it would need to be the positive version of this showing the diversity and inclusion of our campus. A woman or minority student shouldn't have to struggle to find themselves in our online presence or in the halls of our buildings and areas of our green spaces.

I am concerned about the evidence base substantiating the recommendations made.

Strongly support Recommendation 1. Our websites and other marketing and communications are currently quite messy. This change will greatly strengthen our brand and professional appearance. Oppose Recommendation 2. Our branding is fairly strong already. In my opinion, the enforcement is often too strong. For example, some peer institutions allow students to get business cards with university logo. We should follow that example. Support Recommendation 3. This streamlining is greatly needed.

No comments.

I am concerned that the idea of "streamlining" digital presence will lead to a lack of differentiation across units and will stifle our ability to tailor the messages from our college and departments.

Again, use central resources to facilitate creative individual unit expressions.

Increased diversified marketing of student and faculty initiatives, accomplishment and activities is needed to boost and expand social media coverage of all areas of the university community. This real time recognition and celebration of events, people and research initiatives requires multimedia support for each academic unit and program. These investments will be instrumental in maintaining and elevating the standings of the university at a national and international scale, and provides affirmation for students, faculty and staff alike.

They have been too centralized. Further centralization will not help at all.

I support the proposed changes to marketing and communications.

N/A

I have some concerns with regards to the idea of consolidating and centralizing communications. Mostly, my concern has to do with making it more difficult for individual faculty and departments to communicate important news items that have a very short expiration date but that are very impactful. For example, major announcements for grants, papers, etc need to be made almost the same day. A centralized office with very slow response would be detrimental and would affect our ability to rapidly communicate our accomplishments.

I concur with these recommendations.

Fine.

Implementing the recommendations is desperately needed! So many of the communications in the college of ag are sub-par and not modern. It has been perpetually frustrating to get decent news releases of our achievements in ecology and evolutionary biology.

Centralizing marketing seems as if it will homogenize it. This seems to go against diversity initiatives. Diversity in marketing, ideas, and implementations seems as if it would better reach diverse audiences.

Every college and unit on campus has its own culture and its own demographic, and this should be considered as decisions are made regarding Marketing & Communications. I believe it is essential for Marketing within the Libraries to remain embedded under our purview as they understand our culture and there is a benefit to having Marketing leadership at Libraries administrative meetings and available as we constantly market our services. Library websites are very unique, given the work we do in providing electronic access to various types of materials, research guides, and various services. It is in the best interest of students, staff, and faculty to have this functionality remain under the Libraries and not go into a centralized department, if that is in fact being considered.

No comments

Centralization of all marketing and communication could lead to a loss of connection between units and their primary audience.

I would love to see more support from the University of Departmental level marketing efforts – we are doing great things but don't always have the support we need to get the word out about them.

I have no input on Marketing and Communications.

I am in favor of most of the proposed changes in Marketing and Communications, but strongly feel that marketing personnel should remain in each College. College marketing personnel understand the culture of the college and what discoveries in their constituent departments are important to market to former students and the general population of Texas. Removing such local marketing with damage our ability to know and understand the transformative discoveries specific to each unit.

The findings and recommendations seem reasonable.

I have been at TAMU for 24 years, and I have yet to see a marketing program that I felt explained our role as a land-grant university to the average citizen of Texas in an effective manner. We need to do more to explain to Texas citizens how our research benefits them, even if that research is feeding people in other countries. We must do a better, more effective job at making ourselves indispensable to the average Texan. In reference to pages 21-22.

No comments. Recommendations seem reasonable.

Again, I think for some colleges this may not be an issue, but in colleges like COALS, COE, Medicine, Law etc. I don't think it will work well.

I perceive consolidation of Marketing & Communications is to cut staff (RIF)

Reduce funding in the excessive marketing expenditure.

No comment.

Recommendation #1 (Centralization): Since AgriLife centralized MarComm, it literally could not get any worse. The current centralization system is incredibly slow to respond if they respond at all. They use poor judgement about content and frequently mischaracterize projects to the general public because they are not familiar with the programs they serve. They have commandeered as much social media as possible, which by definition is not centrally controlled. So that grab has effectively shut down the most effect and efficient system we can use to communicate with stakeholders. I understand the problem with individuals going off-script and rogue, but give us training and allow us to use our good sense about our programs. And when someone abuses this privilege, allow them to suffer consequences. AgriLife's current centralized MarComm is worthless so please don't follow that model. Recommendation #2 (marketing and branding guidelines): I support this Recommendation #3 (Streamline digital presence): I see this move as an impediment and reducing the dynamic nature of the systems

IMO, M&Cs is a genuine and large opportunity for TAMU; and TAMU has under-invested in telling our wonderful story to the various Texas, USA (and International) audiences. However, M&C has so little contact with my roles that I can not judge the validity of MGT's proposals, sorry

---

no comments

---

Recommendations seem appropriate.

---

Need embedded specialists in some operations, for example division of research

---

I think finding a way to coordinate marketing and communications would be preferable to blowing the existing structure up and centralizing everything. The smaller Mar/Com units are there to make sure their parent unit still gets the press it needs. A single system leads to fewer and more selective stories getting out, I think.

---

I completely agree with this report that the marketing and communications is less effective than it could be; while the overall quality has greatly improved in terms of production values and messaging but it is not applied consistently across the various departments and colleges.

---

I believe the public broadcasting licenses for KAMU should move out of Marketing & Communications and either be standalone or closely tied to a new Department of Communication & Journalism. The public broadcasting licenses are intended to serve the community and currently, TAMU seems to use these assets to promote the university. It seems that stations that only broadcast locally don't need to promote TAMU because everyone that hears or sees the signals knows what TAMU is. It is the biggest game in town. By putting the stations in connection with COMM/JOUR, the resources can be part of an immersive learning environment for students studying media. This is a feature of every significant journalism program in the U.S. and we are behind in this area.

---

One concern about marketing & communications centralized is that it may slow departments and other units from disseminating information quickly about events, seminars, awards, etc. Whatever policies are created should not prevent individual units from communicating quickly and directly with students, former students, faculty, staff, and supporters.

---

Does the university really believe it can do this effectively and with sufficient turnaround to be effective? Please study how many staff would be required to regularly update websites, communicate findings at the university, etc...

---

I'm in a department in the college of engineering. We have college centralized communications. It is awful. I'm not sure if "centralized" is the problem or a solution. But, if the communications was local to the department, we could fire them and at least have a shot at good communications.

---

This is a great idea.

---

College communication offices are excellent as they know their environment and can respond rapidly.

---

Marketing and Communications is currently quite scattered and inefficient, so I would support this proposal, though once again on the understanding that meaningful input will be sought from stakeholders.

---

No additions

---

Centralization will have benefits and drawbacks, and the outcome will depend on exactly how it is done and managed. However, if two of the largest colleges are not participating in this centralization it's hard to see it working properly. If this really was a good idea, and could be competently implemented, then all the colleges would be taking part. (see Information Technology)

---

I thought that centralizing this (and other units like HR) had largely been done already - with a few who escaped with some creative title changes. Again, provided that there was some way to have liaisons and responsiveness from someone who had a handle on the specific context, this could work.

---

I don't like the dual reporting structures that this would create between the schools/colleges and the President's Office.

---

Needs further study to ensure mission of units/departments/colleges can still connect with their primary audience in a timely manner.

---

The process for requesting a marketing push and social media needs of different departments needs to be addressed. If we hold an event, how much lead time does a central marketing and communications department need? Sometimes we have last minute events come up or little information as we are working with other departments and sometimes other

---

campuses. This report does not answer what the process is and if this is really going to make the process more efficient or it will actually hinder our ability to advertise events and services to our students and the community.

---

Essential to keep department and college level website managers.

---

One thing that was not addressed was creating a method in which faculty, staff, and students are not overwhelmed with information to the point they can no longer process it all.

---

can't comment

---

I think there needs to be more detail about how centralizing Marketing & Communications would work, and still enable individual units to get information out to constituents in a timely manner without being mired in bureaucracy or limiting their voice.

---

While a coordinated public face sounds logical, in reality this will erect barriers to local units promoting their faculty and students. Local units are best positioned to highlight achievements of their members-including deciding which achievements are worth promoting and when. In many cases, adding extensive oversight and approval processes can prevent the timely dissemination of material. In today's age of social media, decisions on postings and information are made on very short timescales or other otherwise irrelevant.

---

The key need is qualified personnel at the units level. The centralization is often blamed but I doubt it is the issue. The problem is qualification.

---

Cannot wait for this to be consolidated. I am inundated with marketing materials from TAMU from many different sources and sometimes conflicting information.

---

A more transparent and flexible Marketing and Communications

---

The trend of making it harder and harder to find faculty and their research when visiting the TAMU website also runs counter to the claimed goal of trying to ensure that TAMU is able to sustain its relative research competitiveness as well as perceptions of the institution as a research university. Check out Stanford for an outstanding model of how to do marketing & communications for a research university.

---

My experience with M&C is, "if I prepared the material M&C may use some or all of the media." The onus is on the faculty. We need M&C personnel who will make interview appointments with faculty, obtain data (actual journalistic reporting), prepare reports and media, and verify with faculty prior to dissemination.

---

No comments

---

Sorry to be the broken record (in case the readers remember records!) but ditto for my suggestion to preserve embedded, dotted-line marcom expertise in the units they serve. Thank you!

---

I support the proposed recommendations. Centralizing the various marketing and communications groups and providing clear marketing and branding guidelines is critical.

---

You need to maintain department and college identities or you will be consistent in university messaging but miss connections of students and alumni to their departments and colleges.

---

Keep much of Marketing and Communications within the Colleges and even departments,

---

It will take YEARS to coordinate the branding for all units, to create new websites reflecting these changes, etc. If all of these changes are to be implemented (and I don't support most of them but feel that I have no power to make a difference), they should take place over a longer window of time. As an example, the VPs who were appointed in recent months are still listed in their previous positions on several websites.

---

- Increase this office by 300% and align with peer institutions in breadth and scope of performance.

---

Good efforts and especially utilizing things like this survey to get needed feedback.

---

I don't have strong opinions about the suggestions here, but please stop sending me weight loss spam and anti-abortion spam. The university internal e-mail communications are being heavily abused by a few groups.

---

This is not a topic to focus on. Everyone in the state of Texas knows who and what A&M is, if students want to come here, they already have a plan, we need to get better at vetting and standards for entry - but more importantly, the organization here needs streamlining and efficiency, that is where efforts need to be focused.

---

The release of excellent science and research findings from TAMU to the digital and print community is slow, and is not broadly and equitably distributed across all campus units. I welcome this change.

No Comment

No comments

This is the second biggest mess on the Galveston campus. Our departmental webpages are not adequately maintained and there is nothing proactive about MARCOM. Faculty cannot be expected to learn and do all the updates ourselves. I see one piece of the problem is the fact that they report to the CEO, so just as in facilities the crisis moves to the top and the stuff lower in priority never happens. I don't actually know anyone on campus who thinks MARCOM is doing a good job, with the possible exception of the CEO. Plenty of passion on this topic, if you care to come and talk to folks on campus about it.

I agree with the commentary

Leadership and the jobs Graduates get matter, not the school.

It will depend heavily on the leadership in this area. Some units are better than others and it is not clear the existing leadership has the appropriate background to move the a university forward nor whether they are current with marketing and communications practices. Also, some of the writers and photographers in some of the units are not very good nor have the appropriate background.

It's painfully obvious that the consultants are not cognizant or appreciative of the culture of higher education in general and TAMU in particular. Blindly centralizing services and removing them from local control and accountability is a disaster.

Centralization of communication should keep in mind the stakeholders of programs and units and personalized messaging.

The poor coordination between MarComm units at the University has been a problem for many years.

No comment.

As a Tier-1 research university, we ought to do a much better job branding ourselves globally. I am in full support of any effort that hires talent that could make this happen. From our website designs, to our news stories, to our campus/building appearance, to our local news channels, ... there are many things we should do to elevate the image of TAMU and make it more than a "football" school. I think many good things are happening on campus (I hear every now and then) but this needs to be broadcasted more professionally to the outside world.

## Marketing & Communications - Staff

Please provide your comments related to Marketing & Communications:

No comment.

The marketing done by individual departments is obviously not understood. Will consolidation of Marketing and Communications mean that websites are taken away from departments and colleges (and, most controversially, faculty)? This is likely to be received very poorly by deans, department heads, and individual faculty. Again, collaboration, not consolidation.

College Marketing and Communications (College Communicators) should not centralized under University Marketing and Communications (MarComm). Removing College Communicators is like sticking someone in a pitch black room and asking them to describe it. The power of communications is building direct relationships with Faculty, Staff, Researchers, and Deans. In fact it would be more appropriate to empower these relationships rather than separate through administrative bureaucracy. The problem of duplication and lack of collaboration requires a close examination of current organizational chart. This examination shows that the VP for Brand and Business Development does not report to the VP & Chief Marketing & Communications Officer. In fact they both are members of the President's

Cabinet. This creates a two minded organization internally competing for resources and precluding its ability to act as a consultant within the University and in turn leading to lack of collaboration and duplication of resources. VP for Brand and Business Development should be split and its components separated into appropriate areas: Collegiate Licensing and Brand Development--- relocated to Finance (as it is a revenue generator.) Campus Partnerships and Brand Experience---- relocated to either Student Affairs to AVP for Special Events and Stewardship

---

Very encouraging to see that there is a push for clarity of what Marketing should be doing as well as the hiring of additional help and even a potential internship program. It is not a surprise to see that there has been inconsistent and unclear communication from the marketing and communication department to the different colleges and offices around campus. That said, the report seems to lack an understanding of the different roles and responsibilities within the department. Though centralization is important from an economic, resources and process standpoint, it is not only about reducing the number of direct reports to the Chief Marketing and Communications Officer. Thus far the recommendations within the org chart lack rationale, here are some examples. Strategy and Analytics should be its own team and should assist all of Marketing Communications, not just Marketing. Analytics is an area that usually causes confusion because it has to do with data (management and organization). A gap within the organization is Insights and Research. Thus far the department only acts on "gut" and doesn't have a sound strategy, this include Communications, which works on the day-to-day. So this department should be its own, should report to the CMO and should include Strategy, Insights and Research or Analytics. Another area is the differentiation of Marketing and Advertising and Design. There needs to be a process on how these can work together. There is a difference between Marketing Operations and operationalizing Marketing. Thus far the proposed org is unfeasible and unrealistic. The colleges will not want to report under this structure and it negates the important cultures that live within each department. Operations and Strategy need to work very closely with the different departments to make sure there is one brand and one strategy. Operations, the way currently described focusing on centralization, not on unification of the brand.

---

I love the idea of centralization and about clarifying university marketing and branding guidelines but it's the enforcement that may be the biggest issue. Without enforcement, staff and students don't seem to mind bending rules.

---

I am generally in agreement with the reports findings and recommendations for Marketing and Communications.

---

Again, I would need to know more about what this will look like in practice. We have had trouble getting Provost's MarCom to cover requests in the past. We were told that they didn't have the bandwidth or do that sort of thing. Meanwhile, I had to write scripts for the Provost. It left me wondering what Provost MarCom actually did.

---

1) It is difficult to understand how centralizing IT services would result in an efficient service. The existing structure, which already uses the Helpdesk concept, is inefficient and slow. Currently, Helpdesk employs student or low-level workers on their front line, which puts the customer in queues of 24-48 hours. Those who answer the phone or email do not have the knowledge or skills or solve problems; they are generally screeners who must always relay the message to someone else. While the idea of a centralized unit sounds appealing, implementation is difficult. Institutional knowledge is not easily transmitted between employee generations. 2) Even if the number of staff could initially be reduced, it would eventually cost more in time and effort as well as in goodwill toward customers. When the first contact person replies with, "the problem is on your side," and hangs up, time is needlessly wasted. We need a staff presence to troubleshoot issues and solve problems. Department staff are more capable of agility because of their situational knowledge.

---

Don't centralize marketing and communications. Each office is unique to their department/college/division.

---

I understand the desire to centralize marketing and while I am for many aspects of it, I wanted to raise some concerns I have specifically about the centralization of the Division of Student Affairs in to the Division of Marketing & Communications. Many of us chose to work in student affairs for a reason: the students. We love our departments and are deeply involved with them. Additionally, for some of us communicators in student affairs, marketing and communications are not our only job duties. With centralization, how will that change? Some staff that do communications are administrative professionals, licensed counselors, or have another job title that is not specifically related to marketing and communications. So, that said, I would like to propose a couple of changes to the recommendation. In doing this, I am going to assume that a "dotted line" is a "use it when you need it" line, but I could be wrong (some clarity on this would be helpful). Instead of essentially removing us from our departments (as the recommendation reads to me), I would propose that we stay in our roles as they currently are with the same reporting structure. Each department within the Division of Student Affairs has unique needs and I am cautious about centralizing

because I don't want those unique needs to go unmet. However, I do think and I strongly advocate for, someone in the Division of Marketing & Communications that is a Director of Student Affairs Marketing. This gives those of us at a departmental level direct access to someone who can advocate for us, for our students' stories, for our programs, etc. This person might have a small team of their own that can help those departments in student affairs who do not have their own marketing/communications staff member, however they would not directly supervise each marketing/communications staff member within the division. This is largely how it seems to function now, but the role of the Director of Student Affairs Marketing would be moved and housed in the Division of Marketing & Communications. I think a strong link between the Division of Marketing & Communications and the Division of Student Affairs is needed. Additionally, I do think that one thing the Division of Student Affairs does really well, or at least the majority of us that have full-time staff for marketing and communications, is staying up to date with Texas A&M's brand guidelines. I do think that it would be a good idea to work with some of the colleges and departments to at least get them on the same page with branding. As a graphic design and communications professional, this is one of my biggest pet peeves, especially since it has been a few years since the Texas A&M lockups changed. There is no reason that colleges or departments should be using the old ones. I am all for clarifying university marketing and branding guidelines and I do think there were training processes and enforcement of the guidelines. It will be a large undertaking but I do think it is highly, highly beneficial. Is there a university-wide committee or council that can be dedicated to branding? Another one for crisis messaging? These should have seat requirements from each college, unit, and department. How can we stay up-to-date if we don't have the information? I think this will also help collaboration efforts across the university. If the recommendation that MGT put forth gets put into action exactly as written, I have a lot of questions: Where will our budget come from? Who will be responsible for our salaries? Who will approve our time off, our schedules, our raises, our reclassifications? Will that fall to the department we are tied to, or the Division of Marketing & Communications? Will we all have the same job title or will our job titles be evaluated? I ask this because many of us in Student Affairs and across the University do the same work, but our job titles are different. For example, I am currently a Communications Coordinator for a large department with several programming offices. There are others in the Division of Student Affairs and the University that, again, do the same work I do at the same level, but are considered Marketing Managers or Creative Managers. I have eight years of experience in branding, marketing, and communications, plus a degree in graphic communications. I am essentially a marketing agency of one, managing several office clients on my own. At any other university, I would be considered a Creative Director or similar title. Will there be a clear career ladder? The report states there will be one and I think that it would be helpful. There is not currently a marketing and communications career ladder at Texas A&M (or at least not one that I can find) so many of us are forced to leave our departments or even the institution if we want to grow our careers. Where will all of us be housed? There is no where on campus that I am aware of that has hundreds of empty offices for marketing and communications professionals. Additionally, I'm not sure that housing all of us in the same place would be beneficial to the departments we are working for as, again, many of us work very, very closely with our departments and its programs. That wraps up my feedback for now. I really do think there needs to be some clarification where the Division of Student Affairs marketing and communications reporting structure is concerned. Thank you for letting your staff provide feedback on this report. I look forward to seeing the positive changes Texas A&M implements.

---

Centralization should only be considered if there are sufficient resources to guarantee that the effectiveness and timeliness of response will remain the same or improve. Having more resources to 'tell the university's story' is great, but much of the work our local marketing team does is internal and much smaller scale (e.g., help advertise a lecture series to our graduate student). It is critical that we are able to maintain day to day communications operations as well as the big picture communications and marketing strategies.

---

I support centralizing marketing and communication across the university to ensure consistent communication and branding.

---

MarComm has always taken direction from the President - if they have a lack of clarity, then it reflects on the President...

---

Centralizing marketing and communications could help in creating a career ladder that is not currently available to communicators on campus. Many communicators on campus are the only ones in their department, and other than merit raises there is little opportunity for growth without a mar/comm career ladder. However, departments and units on campus are unique and deserve to have mar/comm attention from someone who knows the department (decentralized). If centralizing would allow communicators to stay connected with their current departments or not physically move from the departments - that would be great. Most communicators on campus (not in higher-up

leadership positions) have a significant number of other job duties within their departments that are not necessarily considered mar/comm - so it would not be beneficial for departments to lose that opportunity of hybrid models of communicators. Current Texas A&M Marcomm is rarely available as a resource to lower-level departmental communicators on campus. At least centralizing communication efforts through better channels of connection/communication would help all communicators on campus.

Each department/division needs to have its own marketing personnel. It is easier to walk down the hall and ask our marketing guy to make changes or add media than it will be to put a "ticket" in and hope someone has time within the week or two weeks. Social media is at an all-time high with students. Why would you take that access away from our departments?

I strongly disagree with centralization of these positions. This will cause additional delays and bottlenecks. We just need better leadership and guidelines as opposed to having all comm positions report centrally.

No comment

I support all recommendations.

Great move to centralize. There have been small outposts that have achieved some success through COVID19. I would encourage you to not completely wipe out that wisdom that was gained through the centralization.

Centralization for general guidelines/administration but definitely siloed in performance as communication needs would vary from college to college.

I am very concerned about consolidating Marketing & Communications. We currently have a strong relationship with MARCOMM and I worry that the centralization will cause more red tape to go through and decisions will be difficult to get when needed.

Questions & Comments: Depending on how this is set up, the Departments need to retain staff in their space who can directly serve that department. The Division regularly has both proactive and reactive media situations. Without direct support, I fear that our response time will not be expedient enough (examples include student deaths, hazing allegations, large-scale tradition-based program announcements such as Muster, The Big Event, Fish Camp, etc).

Marketing and Communications units within departments are highly specialized. This is necessary because there is a need to disseminate information from departments to the public in a timely manner. Centralizing Marketing and Communications takes away the effectiveness of the existing Marketing and Communications teams.

The MTG Report commissioned by Texas A&M University and made available on October 19th, 2021 takes an eagle eye view of Texas A&M programs, processes and overall performance across the major functions of the university. The report identifies three primary areas of concerns for Texas A&M's marketing and communications (marcom) presence and makes a recommendation for each of these: 1. Recommendation #1: Centralize marketing and communications across the university. 2. Recommendation #2: Clarify university marketing and branding guidelines, training processes, and a mechanism for enforcement of those guidelines. 3. Recommendation #3: Streamline digital presence and contracts. I agree with the report's assessments for points 2 and 3 and strongly support MTG's recommendations for these items. However, I have deep concerns for their first recommendation, and if we, as a university, can thoughtfully and successfully implement the latter two initiatives, MTG's former recommendation may be rendered largely moot. The report makes an implicit assumption that marcom units simply perform tasks related to marketing or communications. It fails to consider the other duties and roles many marcom units provide to their organizations. The study cannot capture in its limited scope, the idiosyncrasies, intricacies, and specificity of many functions across a very diverse set of units, departments, colleges, student groups, etc. Many marcom units are deeply involved in their organizations' product planning and development, event coordination, cross-functional initiatives, and large-scale project management. Marcom units are often responsible for showcasing internal unit initiatives and individual achievements. They organize award ceremonies, luncheons, and team-building exercises. In short, marcom units – along with HR units – contribute greatly to an organization's morale and sense of purpose. Centralization of marcom functions would likely (though the report is unclear how this may be implemented) uncouple units, departments, and colleges from the dedicated staff they have in-house to fill these roles. Removing an organization's marcom presence could result in decreased morale, increased employee turnover, and would place an undue burden on other units to accomplish these tasks, possibly prompting the need to hire personnel to cover these tasks, which may increase unnecessary spending rather than decreasing it. Shifting to traditional marketing and communications tasks, it takes a profound understanding of an organization's operations to communicate its oftentimes complicated operations to its internal and

external stakeholders clearly, succinctly, and in an easily digestible manner. A marcom unit's ability to deliver a high standard of communication is developed through years of interpersonal relationship building, cross-functional meetings and initiatives, and years of experience living through the academic yearly cycle. Uncoupling marcom units from their organizations will deny these organizations of their subject matter experts who understand how their units function and how to effectively communicate their needs. In the report's SWOT analysis, MTG identifies an "opportunity for content creators to act as independent contractors among units and promote consistency across the university." This may be a plausible solution for one-off projects and low-level initiatives, but as a policy it may present more of a threat than an opportunity. Independent contractors, while they may have technical expertise, would struggle to adapt to the ever-present need for rapid, real-time communications adjustments and content creation. How would a contractor be contacted in a time-sensitive or crisis situation? A ticketing system? Would these contractors be available after hours? The report is unclear. Embedded marcom units are expected to address such issues regularly and have a clear understanding of their roles, responsibilities, resources, and command chain, so when these situations arise, they can adapt with the speed and clarity of message the situations demand. Consultants may be experts at marketing and communications but lack the rapport and intimate knowledge of those specific departments required to be effective marketers and communicators. They would therefore still require a point of contact or liaison at the organization to understand the specific needs, which would either require existing staff to take on more duties, or for organizations to hire such an individual to fill that role. Neither of these options would present a cost-saving measure, and they would result in an inferior product being delivered to stakeholders. Keeping marcom units embedded with their organizations would enable marketers to continue to build professional relationships with the individuals they represent, ensure marketers were subject matter experts for their organizations, would ensure a more informed, clear and robust messaging would reach Texas A&M's internal and external stakeholders, and would ensure organization had clear internal communication channels and trusted individuals to respond to crises when they (inevitably) arise. However, as stated earlier, there is room to improve our marketing and communications presence and processes, protect our brand, and remove unnecessary spending and improve efficiencies. MTG's second and third findings go hand-in-hand and correctly identify a university-wide challenge: a nearly non-existent central branding, content creation and training apparatus for campus marketers. In 2016 and 2017, the university completed a rebranding campaign and created an online brand guide. While the campaign carried initial momentum, the website was not fleshed out well enough to provide marketers functional value, and compliance to the brand guide gradually waned. The central marcom unit moved on to other items and did not have sufficient time or resources to continue developing the brand guide website. Individual organizations reverted to form and began producing content with varying degrees of compliance in mind. MTG recommends another internal branding campaign, which sounds eerily similar to the aforementioned campaign. In order for a new campaign to be successful, marketers need to be provided with several items, some of which were not as readily available five years ago as they are now. To ensure compliance, marketers need robust, user-friendly, inexpensive branding tools and content creation applications. Several of these are commonplace on the market, have developed over the past years to deliver high quality platforms to users, and have enterprise licensing options that allow for granular user management and robust branding guidelines. Canva and some of the Adobe products immediately come to mind. The university should absolutely identify and leverage such applications and platforms to create university-wide licensing agreements accessible by all university organizations and centralized repositories of branded content which the central marcom team can manage and enforce to protect brand integrity. If marketers have these items in place and are competently trained on how to utilize them, compliance to university branding will encounter less resistance, and content produced by marketers will be more uniform, protecting our identity and communicating the university's story as envisioned in the report. University organizations encounter several barriers preventing them from being able to host websites that comply with the university's standards or match the vision outlined in this report. Migrating websites is prohibitively expensive. Organizations are forced to seek out their own vendors and consultancy firms to analyze their websites, provide suggestions, define a roadmap, and develop new websites. Organizations must also seek out CMS platforms to host these websites. New websites need comprehensive graphic packages, which need to be created by the organizations, which takes time and will result in varying degrees of brand compliance, or must be handed off to vendors, which adds cost to an already expensive project. Streamlining the university's digital presence, as suggested by MTG, would remove the barriers separating organizations from complying with university brand initiatives and would deliver a better product to Texas A&M's stakeholders. Addressing these issues by implementing recommendations #2 and #3 will solve the core problems highlighted by MTG in their report and will negate the need for centralizing all marcom units under a single umbrella, which would, from this marketer's prospective, do more

damage than good. I would like to extend a profound thanks to the university for allowing us the opportunity to provide our feedback. We appreciate your delicate deliberation and insightful analysis. We all share the same vision and desire to ensure that we have embrace and reflect our core values, further the university's land-grant mission, and provide the best products and services to our internal and external stakeholders we are capable of delivering. We trust that our university's executives have all our best interests at heart, and we look forward to the wonderful things we can achieve together in the coming months and years. Thanks, and Gig 'em!

---

While consolidating Marketing makes sense on paper, it reduces flexibility and customer service.

---

I agree that marcom should be together, it doesn't make sense that you have the university marcom and provost marcom team.

---

Pairing the experiential learning opportunities already in place at both KAMU and 12th Man Productions within a coordinated academic approach would be an immediately impactful boon for the University and the TAMU System as a whole. It also would be vital to telling the Texas A&M story to the larger world, growing the brand while creating an educational experience that is impactful. Other schools have done this (Texas, Florida, Arizona State Michigan State, Notre Dame, BYU) but none of these institutions have the potential for unified approach and impact in both the academic and marketing/storytelling areas that we have now – without creating an enormous investment in infrastructure. As Texas A&M moves to create a more effective Marketing and Communications structure to tell the university's story, KAMU's alignment as a communications hub and its emphasis on student hands-on application, will strengthen the ability to effectively engage students in the marketing department. Documentary stories can be more widely developed with this increased synergy as a result of a larger student involvement and larger and more robust faculty development devoted to focus on Arts and Technology. As one of the nation's leading research institutions, Texas A&M views it's responsibility as an obligation to maximize its intellectual resources to lead, inspire, and create goodwill domestically and internationally. As a vibrant component of the efforts of Texas A&M's Division of Marketing and Communications, KAMU can dramatically and rapidly elevate Texas A&M's efforts to pursue lines of scholarship and research that potentially can alleviate some of the most complex issues facing humanity.

---

Identifying how to align Galveston services (such as HR, IT and MarComm) into the overall University umbrella should be balanced to avoid the loss of local knowledge, perspective and (in some ways) authority.

---

Pg. 77. Create an effective, centralized marketing and communications function that works across the university, including athletics and branch campuses, to tell the university's story and create operational efficiency. Telling the university's story should be the lowest priority. Communicating internally should be the highest priority. Pg. 78. Considering the unique and intertwined relationships with Texas A&M state service agencies have with the College of Agriculture and Life Sciences and the College of Engineering, these two colleges should maintain their current centralized marketing and communications structures to ensure continued effective and efficient communication efforts. I think the College of Dentistry, as a clinical health agency, also needs to retain its current communication department. Pg. 79. The departments recommended for removal from the Division of Marketing and Communications below are addressed in more detail in the other sections of this report. Marketing and Communications Information Technology to the campus-wide Information Technology. If you move this to the campus-wide IT department, who will maintain the functioning and content of the university's websites. I think the only way this would work well is by making sure that there is a dedicated IT staff for supporting Marketing and Communications. Pg. 81. Recommendation #2: Clarify university marketing and branding guidelines, training processes, and a mechanism for enforcement of those guidelines. This recommendation includes the development or confirmation of a strong university story founded in TAMU's core values, guidelines on how to use visuals and messages, ensuring access to the correct brand assets and messages, appropriate trainings for new and current faculty, staff, students, and affiliates, and the establishment of processes and oversight that will ensure marketing materials align with guidelines. I'm a little concerned about branding enforcement when it comes to shared enterprise/departments with external shareholders. For instance, the Baylor Health Sciences Library serves both the College of Dentistry and Baylor Scott and White Health. If TAMU branding was enforced on the library's site, non-TAMU users may not recognize the site as for them, which would be a disservice to our Baylor Scott and White partners. Pg. 82. The Division of Marketing and Communications should collaborate with Human Resources to create brand-training processes for new employees. Is this really necessary? Most employees don't need branding-training. Pg. 83. Recommendation #3: Streamline digital presence and contracts. Identify duplication and inefficiency of the university's online presence and digital software usage through a review of all websites, social media accounts, contracts, and subscriptions. Streamline websites, social media accounts, software subscriptions, and

contracts to best fit the needs of the university and units. Not all the university's websites are run/managed by marketing and communications. In addition, websites that are for shared entities should remain under the oversight of those entities.

As a member of the Department of Marketing and Communications, some parts of this recommendation are valuable, but, overall, it is poorly-informed and feels like it was created by an outsider who doesn't understand how MarComm works across the university. Things like the inclusion of Athletics and Student Affairs, the unequal share of responsibility by SVPs/VPs/AVPs, and things like the placement of Events under a Director of Operations rather than the AVP of Events and Stewardship are examples of the report failing to consider all aspects of this reorganization. Additionally, the most obvious flaw in this proposal is that it would still result in marketing and communications being decentralized across the university. This is because Visual Media (Videography & Photography), Social Media, Editorial, Web, and Design are still separate from those of the colleges. This inhibits the Division of Marketing and Communication from providing leadership, advising, and authority to other entities on campus. If there were to be a reorganization, the Division of MarComm's entities should exist above those of the colleges/departments on the org chart, so that they can ensure the success of Recommendation #2 and #3 — consistency in branding, training, digital presence, contracts, and strategy across all groups.

I agree with the recommendations provided by MGT for marketing and communications. There needs to be a consolidation of some of the units. It's one of the smallest divisions and it has like seven Associate VPs. As proposed, these should be consolidated to ensure that there is consistency across the university.

None at this time

I have heard we are now TAMU Health, but haven't seen official announcement.

N/A

I believe a lot of the re-structuring of the Marketing and Communications teams is logical and is trying to address many issues that have come up over the years. It would be an interesting change that would effect my job directly and I am open to it. That being said, the Libraries is a complex organization that seems to have been grossly misunderstood in this report as to its function. Having a team that understands said functions would be necessary to promoting this organization. I saw that they was an interest in keeping talented people at A&M and creating growth opportunities. In my current job there are no growth opportunities without my superiors retiring or moving on, so I am encouraged by this thought process.

Centralizing marketing and communications would bottleneck departments' ability to put out timely messages. Instead of decentralizing, provide additional training, so everyone is on the same page, but still has the autonomy to get the unified message out on time.

Marketing and Communications should provide a service to the many groups on campus and provide a knowledgeable liaison to each major group that has the ability to perform well in these various environments according to their previous skillset. For example, do not put someone who knows nothing about IT as the liaison to Division of IT. Communication attempts from that division would not be appropriately constructed or delivered for IT services. A certain understanding of jargon, terms, and acronyms in the IT environment is a requirement for good communication.

I feel our college's marketing and communications unit has a very good handle on our specific needs. I fear these would be lost by moving to a completely centralized system.

The University Libraries system works as a well, system. And it works well. Business, Marketing, Facilities, HR and IT are all embedded in the library model and we work as a well oiled machine. If it ain't broke...

The new Faculty Affairs office should have a marketing and communications person.

I fully support the centralization of Marketing & Communications.

Report: Division of Marketing and Communications Response: With regards to the current Division of Marketing and Communications, I would suggest an overview presented to the other marketers at the university to help us understand Marcom's role, the people involved, and how we will all be working together moving forward. I would be interested to know what percentage of their time is devoted to marketing and branding the university and what percentage of their time is devoted to assisting and training other A&M colleges and departments. I've been at the university nearly 13 years in marketing roles, and I have a good working relationship with two people regarding branding, one to two people

for social media, and one person for public relations. I know of two to three other people who work in Marcom, but I haven't worked with them directly. I see multiple people on their org chart, and I'm not sure what they do or how their role should interact with my department. For instance, I was surprised to see a person devoted to radio...I didn't know that existed and I don't know that person or what they do. Because I don't fully understand the roles and players at Marcom, the report's restructuring model was not clear to me. Report: The report is missing information pertaining to marketing for Academic and Strategic Collaborations Response: Where does marketing come into play for this new group and what does the working and reporting structure look like? In reading the model for Student Affairs Marketing, I'm curious if this kind of model would be applied to Academic Collaborations, as well? Report Example for DSA Marcom: (Centralize all marketing and communications staff within the Division of Student Affairs so all areas report to a newly identified Director of Marketing and Communications for Student Affairs. The director and staff should report directly to the AVP of Communications and Marketing Operations. The director will have a dotted line to the Vice President for Student Affairs.) One thing to consider is that groups entering Academic Collaboration (UART, Music Activities, Becky Gates Children's Center) already have devoted marketing professionals for their areas. Would the marketing people in Academic Collaborations still focus on their respective areas (art, music, etc.) or would the entire team be focusing on all the areas together? If all the marketing professionals will be working on a team for multiple departments, I would suggest a ticketing system to take in jobs and a strategic plan in place to make sure there are enough resources to service all the areas in a timely manner. Report: It will provide clarification of responsibilities and future hiring needs, decrease duplication of efforts, increase collaboration, and create clear career paths. Response: Would jobs be reclassified? There are currently many discrepancies in university marketing roles across the board with regard to titles and salaries. Would salaries also be re-evaluated and some lower paid employees be brought up to a university average? I would be interested to hear more about the "clear career path," as many current employees feel there is no way up and no hope for advancement or pay increases, so this could motivate people to stay at the university if further defined. Report: The survey data and interview process found that in many units across the university, marketing and communications efforts are generally uncoordinated. Response: This clarity needs to come from the top and from the Division of Marketing and Communications. I feel this report addresses this issue with a plan to move forward. I agree that the messaging and branding is not coordinated across the university; I recently had a coworker ask me to break some branding rules and cited that other departments do it all the time. My response was that two wrongs don't make a right, and that hopefully our new leadership will help reign this in. Report: In some cases, this lack of coordination among units also results in vital communication not reaching internal audiences, like students and faculty members, in a timely manner or at all. In some cases, vital communication reaches external audiences before internal audiences. Response: Yes, we saw this with the winter storm when many lost power and the ability to receive or send out communications, including full-time marketing staff. To a lesser degree, this happened in some isolated incidences with the Covid pandemic. Report: Centralize all marketing and communications staff within the Provost's span of control so all areas report to an identified new director of marketing and communications for the Provost's office. The director and staff should report to the AVP of Communications and Marketing Operations. The director will have a dotted line to the Provost. Response: When it says 'all marketing and communications staff,' does this mean all marketing staff on campus, or only the Division of Marketing and Communications staff? Report: Establish an integrated council of marketing and communications leaders across the university to determine organizational goals, align resources with university-level priorities, and establish streamlined policies, procedures, and processes. The council will allow for representation from 78 MARKETING & COMMUNICATIONS leadership, operational units, and academic units, and help ensure goals, messaging, and processes are consistent across the university. Response: It would be great to have this kind of representation and input. Questions to consider would be: Would the council members be compensated for this important responsibility and extra time spent on these efforts? Would it become part of their formal job duties? And/or would there be a dotted line reporting structure? Would the council be temporary or permanent? Would people rotate on or off? Would there be oversight and ultimate decisions made from the AVPs? I question whether this is too big of a responsibility for such a large group and it might be difficult to come to a consensus or make concrete decisions. Report: The council should create an internal communications strategy to ensure messaging to external audiences is consistent across the university, including an updated crisis communications strategy. Response: Great idea. Report: The council should also explore the possibility of a student worker program, which could provide student work experience and shift burdensome administrative tasks that many part-time communication functions currently own. Response: Excellent. This needs to have a streamlined strategic plan in place across the board, i.e. a format all the student worker programs adhere to, and consider putting someone in charge of training all the

students so that staff are not spending more time overseeing the students than doing their communications work. Report: More effective marketing and communications efforts will also aid in engagement efforts and building community connections in Bryan/College Station, the state, and throughout the nation. Response: This is where the report could address the role of Academic Collaborations, based on what that new group is being charged to do within the community. Maybe there should be a position or positions focused solely on coordinating efforts to market to these specific groups and building relationships in the community. Report: A widespread issue identified across the university is a lack of cohesion of branding materials, a brand enforcement mechanism, and a review process to ensure the brand-use and marketing messages are aligned. Without branding guidelines and reinforcement, communicating a consistent message, visually and verbally, becomes less likely and threatens existing brand relationships with supportive constituents and stakeholders. Response: I couldn't agree with this more. Another problem is non-marketing professionals and faculty creating their own marketing materials. I witnessed this my very first day on the job nearly 13 years ago when my hiring supervisor walked me around the building and pulled down numerous posters and flyers that had been posted by employees without approval from the marketing office. It's been an issue in all three of the TAMU departments where I've worked. A formal call needs to go out and there needs to be repercussions for those who knowingly and repeatedly break the rules. Report: Clarify university marketing and branding guidelines, training processes, and a mechanism for enforcement of those guidelines. Response: The things outlined are absolutely needed. But I notice 'a mechanism for enforcement of guidelines' was mentioned but not addressed. I would like to see a formal structure for enforcing guidelines with our marketing professionals and providing marketing professionals with support when non-marketers create their own materials. Report: Once guidelines are clarified, the Division of Marketing and Communications should conduct an internal branding campaign to emphasize the importance of coordinated communication and how every marketing and communications professional plays an important role in achieving that coordination. Response: I suggest this being a directive, as opposed to a marketing campaign. Marketing to marketers is not going to be effective, and marketing professionals need to be respected for the authority they bring to their roles and be backed up by administration. A campaign would also take up time the Division of Marketing and Communication could use for other external campaigns and adapting to the new changes. The directive shouldn't be heavy handed, but there should be a directive from above that sets a clear tone that branding standards will be followed and all marketers will be supported in training and administration of the brand in their work. Support should come from the top down and be a cultural value throughout the university, not a temporary campaign. Report: The Division of Marketing and Communications should collaborate with Human Resources to create brand-training processes for new employees. Response: This training and new set of expectations should be applied to existing employees, as well. If new employees are to coordinate marketing efforts with existing employees, then all parties should be on the same page. Report: While communicating that each unique sub-brand is still important to its narrower audiences and providing guidance on how to use those sub-brands. Response: This is vitally important. As an art gallery, we aim to position ourselves amongst the nation's most renowned museums and galleries. Branding for these kinds of institutions places high value on showcasing the art and not creating a "container" or "frame" of graphics that distracts from the art. Most national galleries have very clean designs, fonts, and aesthetics so that their collections really shine. Non-marketers and designers early in their careers sometimes try to show off their design skills by applying overly busy designs, graphics, and iconography for attention. It's important that we preserve not only proper university brand guidelines, but also the national standard for well-respected art galleries. Report: Streamline digital presence and contracts. Response: I would add to this an audit of other tools that could be shared across the university. Making others aware of recording facilities and both photo and video equipment that is open for others to use.

---

This seems to happen every 10 years. We either centralize or decentralize. I suppose a dedicated person to work for a college that also reports to a centralized Marcomm could be considered.

---

As someone who went to a private top 10 school one of the many differences between my alma matter and A&M lies in the stupidity of the PR and marketing. This appears to emanate from the top administration and Board of Regents with a desire to run A&M like a business instead of an academic institution. The PR and fundraising treats students as clients who purchase an education with their tuition. It appears that the top people in these departments have no background in philanthropy or running non-profits, have not studied philanthropy in a formal way, and have not experienced how other academic institutions are run. It is just staffed with former Ags who want to work at A&M and many of whom have never lived outside of Texas- a great way to stagnate.

---

I support the suggestions in the report.

I thought MARCOMM was already pretty centralized? At least within each college.

---

I agree that the University needs to provide a single message.

---

No Objections

---

Competing marketing groups is very wasteful.

---

None

---

In the 46 years I have worked for the Texas Real Estate Research Center, several attempts to incorporate Center communications and marketing under the overall university umbrella have been proposed. None were attempted once the complexity of what's involved was understood. Our unique source of funding demands we constantly strengthen our value and relevance to the Texas real estate industry. Our stakeholders created us and gave us a specific mission. We are funded solely by the more than 204,000 Texas real estate license holders. Their never-ending question, "What have you done for me lately," requires a focused, constant research/communications collaboration. Such would not be possible if communications were administered at the university level. I once sent a news release to the university asking that it be distributed to the media. I was told that it did not fit the university's mandate to promote the widest possible view. A university-level communicator said, "We can't feature the same department every month." Later, the Center distributed an amazing 360 real-estate-related news releases in one year. Many were unique to specific Texas cities. Obviously, that would not have been possible had we been part of a university effort emphasizing many areas unrelated to our audiences. Our existing communications are geared to help Texans make the best real estate decisions. Here's part of what we do: • Write, edit, design TG magazine, our flagship periodical (204,028 circulation); • Research, edit, publish RECON, a twice-weekly real estate electronic newsletter (19,894 subscribers); • Post the latest Texas real estate news each workday online in NewsTalk Texas (9,582 subscribers); • Create and post content to the Center's website (26,143 unique visitors in September 2021); • Post daily to social media such as Twitter (20,359 followers), LinkedIn (3,890 followers), Facebook (10,353 friends), YouTube (1,240 subscribers), and Instagram (1,948 followers); • Work with communications teams from other organizations, such as Texas Realtors and the Dallas Federal Reserve) on projects and programs; • Produce a real estate podcast and real-estate-related videos; and • Conduct live-streaming events for real estate audiences. The Center's communications team edits and publishes research results as required by law. To date, 2,347 titles have been published. The Center's communications team fields questions daily from real estate editors at the state and national level. We arrange for journalists to interview content experts. We have a close relationship with the Texas real estate media, which needs to be maintained. The law creating the Texas Real Estate Research Center states that publication of Center research results requires the approval of our Advisory Committee or its designated representative. This means a university-level communicator would have to get the Real Estate Center's executive director's approval to create or even modify all research-related communications. The point of this is to provide a close-up view of the vital function of our industry-specific marketing and communications team. The Center has a tremendous reputation among real estate leaders of Texas, and anything that lessens (or is perceived to lessen) Texas A&M's support could jeopardize the Center continuing as part of Texas A&M.

---

I agree that Marketing and Communications is disjointed and should be centralized and coordinated. However, they seem to operate without considering the academic calendar, application deadlines etc. How will this be improved?

---

I think it will give staff greater opportunity for promotions and career ladders.

---

Engineering Communications has been slow at best in working for the departments. They do not engage departments to ensure each of our needs are met, but only reach out to communicate a marketing plan they devised without insight into the unique aspects of each program. When departments meet with EngComm for assistance in meeting our marketing and communications goals, we are often ignored or told that what we want will not be done without suggesting alternatives. Meetings take months to even schedule and all print and electronic communication to recruits and former students are often delayed by the inefficiencies created by the centralization. Centralization has NOT been effective in Engineering despite everything Dr. Banks claimed during her time as Dean. Furthering this plan on a university-wide scale is sure to fail and result in additional frustration and anger among department heads (already the case in Engineering).

---

I agree with the proposed restructuring.

---

The report mentions centralizing software subscriptions in Recommendation #3. I think we need more enterprise-level software contracts worked out at the TAMUS-level, so that State Agencies as well as TAMU, can take advantage of common robust software in the cloud (using UIN logins). I think it would also help to group similar types of staff by their function (job title in Workday), create personas for each group, and then find the best of class software for their job functions. Instead of having Dept-level software contracts, move those to the TAMUS-level, and then have them negotiated by volume with how many FTE's have that Workday title for software licenses - and they automatically get the software they need whenever they are hired as part of selecting that Workday title/job function (and maybe a percentage goes to central teams around that job function). (Graphics, PDF's, Email newsletter databases, web CMS platforms, web hosting, video meetings, video editing, presentations, etc.) It would be nice if you could communicate to people across TAMUS through their primary email in Workday, grouped by their job function, location, team, etc. I think how helpful it would be if there was a way to communicate to all Web job roles in College Station throughout all the TAMUS agencies and TAMU about the GoWeb initiatives or Campus needs or even more collaboration. All the emails live in Workday already, with filters for job titles, locations, groups - we just need to have a way to communicate to all those people. I think that functionality could help various teams across the university and TAMUS (especially state agencies that have staff on campus, like AgriLife, that also intersect with TAMU). I think it would be helpful to centralize websites and digital products externally around personas also - find common groups of people that we market to, and centralize those sites and products into one place for that persona - a hub for each type of persona. Tailor marketing and communications, media, social engagement, apps, events, and stories around that persona, ways to serve that specific group with their needs, user experience research to find out more about their journeys and how we can better support them or provide solutions to their problems in an intuitive and natural way for them. By engaging personas, we can help to create community around those shared interests and perspectives, get to serve their specific needs, and eliminate redundancies. I'd also say that the effort to centralize digital assets - any websites, apps, digital products, etc - takes significant amounts of work. Understanding historical background info; keeping sites functional and secure until they can be migrated; and then consolidating those sites or content takes significant amounts of work. It's possible to centralize people quickly, but to centralize all the digital assets and websites takes a significant amount of time and effort that needs to be factored in also. I think centralizing all those digital assets and products takes more work, but needs to be done methodically in order to have a successful centralization of services. I think it's possible to provide a better customer experience for both external and internal customers, centralize digital products around common personas, and provide a more profitable platform to engage larger numbers of people with high quality products, but it needs vision, capacity and years to implement that successfully. I like how it mentioned the Division of Marketing and Communications should collaborate with Human Resources to create brand-training processes for new employees. I think they could also help in finding internal personas to serve better - through communication email lists, websites/resources, ways for that persona group to talk amongst themselves, share resources (through common enterprise-level software), mentor one another, and even have once a year conferences or events around each of those personas to bring engaging speakers, training and resources for professional development in that job function/persona. This is another area that seems to be in the cycle of centralizing then decentralizing over time. I think having a strong central office that provides leadership and guidance for departmental employees would provide the best route going forward.

I think this would really cut off units at the knees when trying to get messaging out. Messaging to football fans is much different than to faculty to let them know about the latest geology lecture. I understand the desire to have "one message", but TAMU does too much to have just 1 party line. Social media and websites and messaging are SO baked in to what many of us do with our programs - the removal of historical expertise, and of resources from departments to a big pool could really make targeted messaging difficult.

n/a

Communications has been tricky at my center, due to it falling under 2 different agencies. If we could have a single POC for the entire center, regardless of affiliation (department, agency or even college) that would be a phenomenal step in the right direction. That being said, the TTI communications team is fantastic. We use the same structure I proposed in the business and HR sections -- I am the primary POC that all marketing/communications needs for the center are presented to. I then work with the [REDACTED] to funnel our needs through. He tags in members of his team as needed.

Centralizing Marketing - If it hadn't been done before it might make sense.

---

Like many consolidations, I think the best place to start is to ask "why?" certain functions are decentralized in the first place. In the case of MarComm, the mission of central MarComm has never really been to service the marketing needs of the vast number of groups and programs on campus. Even if it was an aspirational goal, the capacity and knowledge of those groups/programs was insufficient to be fully effective. This has led to those groups/programs on campus needing MarComm resources that are close enough to them to have the relationship and first hand knowledge to support appropriate MarComm activities. Similar to IT, you can have a fully centralized Marcomm group but that will gravitate to an "order taker" type organization versus a "strategic partner" that understands and supports the group or program. It would stand to reason that if MarComm is to be consolidated, it would need to maintain some embedded staff close enough those groups/programs to have the necessary relationships to be a strategic partner.

---

How will the reporting structure change? My position was specifically created within an office to specialize in our campus-wide programming. It warranted a full-time position on its own to fulfill the marketing and communications needs of these programs. Being taken out of my office (even if not physically) gives me great concern, as I'm not sure what that process would look like, or how a "dotted line" would work. Who has final say on my projects? Is it the director of our office as the person in charge of the programs, or is it my new supervisor under the Division of MarComm? I hope that there will be consideration taken for putting us between two supervisors. I fear there will be a lot of back and forth between the two, putting all of us in bad place while trying to satisfy the needs of two supervisors with separate agendas/goals. Would I be booted off my own projects based on seniority? This is more of a selfish concern, but still a definite concern based on how it could impact my career here at Teas A&M. A point was brought up during a meeting that with these changes more people could be added on to my office's projects since they are campus-wide and high profile. I welcome the help and would love the collaboration, however because I am a younger professional, I wonder whose lead would we follow? Currently, those decisions are mine to make as I earned that responsibility based on my experience and qualifications. However, if more senior members are added to my projects, how would that chain of command work? Would I lead the project based on that is my primary job responsibility, or would I be relegated based on years of experience in MarComm? I do not think this only applies to me. There are many people on campus that handle larger events and programs who could be affected by a similar situation. A lot of the report seems to be to increase capacity of those who cannot fill a full 40 hours with Marketing and Communications. I am not one of those individuals. Will there be any consideration for those of us who have less "other duties as assigned" based on our current responsibilities? I did find some positives with centralizing MarComm, however I think based on my role, it is not beneficial for my situation. I fear it will slow down my production time and hinder my office's work as I feel I would not be able to respond quickly enough based on whoever the new decision makers are.

---

No comment

---

Improved accessibility is greatly needed.

---

NA

---

It seems that departments do not have easy access to marketing and communications personnel. I often see/hear of departments relying on someone internally to manage their communications and marketing / design and that person isn't trained or doesn't have the background skills to complete the tasks well. Often when the department reaches out to their marcomm supporting team, they are met with misunderstood objectives and delayed materials that take so long to go through any sort of review with the client/department. This forces staff to rely on in-house work that will be done in a more reliable timeframe, but is not done as well or fits as well with the main TAMU vision and goals. Merging this group together would be wonderful, as long as they can perform quickly for the units they serve and work to understand the individual objectives of each unit they work with.

---

I agree with centralizing marketing and communications across the university. Additionally, TAMU is proud of its traditions and there is nothing wrong with that. However, when trying to recruit underrepresented populations, some of our marketing brochures should reflect the diversity of students here on campus. I made this suggestion to Mr. Scott McDonald, former Director of Admissions, as it related to the Office of Admissions website. I told him that if I am a student who is interested in attending TAMU, I need to see people who look like me on the admissions website. The website at that time, showed buildings and traditions and Reveille. If I am from out of state or an in-state student who knows nothing of TAMU, showing buildings or things like the century tree, do not help me if I do not know what they

mean. Yet our publications do the same thing. Our freshman admissions brochure has the Academic Building on it. Only current students would know what that is. I have often said that The Office of Admissions focuses more on "the process" than it does "the people." We're steeped in tradition, but does it benefit recruitment and retention? For example, we have one publication called "Aggie View." During Aggieland Saturday, I had prospective students and parents hand the brochure back to me. Once they glanced through it, they gave it back because there's nothing in it but pictures of traditions (i.e., the aggie ring, buildings, senior boots, etc.,). We still have boxes and boxes of those brochures. It was a waste of money. Kids today are into apps and social media. Marketing should utilize this.

---

I believe that it is a mistake to combine all of Marketing and Communications departments into one department. There are ways to accomplish a more uniform branding/message without putting everyone in one department/division. I work for Transportation Services and we have a TINY marketing team for the amount of work that is needed and accomplished. We still make it a priority to have everything branded correctly and we try (as much as it depends on us) to make sure we're communicating a message that supports the overall message of Texas A&M. I believe that this will cost the university more in terms of money and time/man power. The overall message MIGHT become more uniform if all marketing departments are combined, BUT each department that has a marketing team will suffer tremendously if their marketing team is taken from them. Here are my alternative suggestions to the MGT report. I believe that we could have monthly meetings with all of the marketing teams around campus to talk about what is being done well, what needs to be improved and what needs to stop. I believe there could be a better reporting and communication strategy across departments. Most of the time it is our department reaching out to the main TAMU MarComm unit to discuss items in question or to make sure everything is good to go. Very rarely is it them reaching out to us. Because of this, I believe that the main TAMU MarComm unit could hire a branding coach/specialist or a project manager whose job is to setup regular meetings with other units to discuss what projects their doing and offer advice to make the message in sync with the University. I hope that this proposal does not go through, but I do hope some of my suggestions are seen as alternatives to solve what the MGT report is trying to accomplish.

---

Looking forward to the consolidation of our Corps Marketing Dept into the the university. The access to more skilled staff and so all of the messaging is the same and hopefully include more cadets in pictures.

---

I agree that there is a need for improvement in marketing and communications. It can very difficult for students to find information and certain things that are necessary (i.e. aggieprint) cannot be found easily from a google search. For certain important university functions and information, it is necessary that you know the URL of the site you are trying to reach, which makes it difficult for students to find the information they are looking for. I also think a streamlined digital presence would make it much easier on the students to find the information they are looking for.

---

Things to consider: Marketing is integral to be successful when students have a choice to live on campus or not. In order to market you need to be familiar with the product, which is the benefits of living on campus. It is hard to do that if you are not part of the organization. A communication plan is a major component (develop and institute) as part of our marketing plan this includes working with SLATE. The person who acts as our marketing liaison to the division is also responsible for wayfinding for conferences, opening and other major events.

---

If these movements occur, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has cause severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF'ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation. Social media still needs to be controlled at the lower levels such as: Advising Centers and Departments. Social media can and should be planned out, but there will always be last minute posts that must be published in a timely manner. A timely manner with social media means day of. If you take away this ability, you are doing a disservice. Enforce TAMU brand guide and create numerous templates, but allow the individual office run their own social media.

---

Similar to IT services, I am concerned about centralizing marketing and communications functions (pp. 77-80) so much that my department does not get timely service when needed. I do not have a position in my department because we do not have a frequent need, so I rely on my Division's unit to help. The advantage is that they know the business of my department and can provide timely and quality products when I need them.

---

The Libraries have a special campus and community-wide outreach mission and specific initiatives to increase open access to scholarly and cultural resources. I think it makes sense to embed dedicated marketing and communications personnel in the libraries to support this specialized marketing.

---

The centralized model has been implemented in various forms within the marketing and communications area at Health

Science Center and there were challenges, three of the most significant ones, have listed below. 1. The colleges within the Health Science Center did not always receive communications from the university marketing communications office, and when we did, it was often at the last minute that gave us little time to act or it was filtered, so we didn't have all the information to make informed decisions. We were not allowed to interact directly with the university's marketing communications office. This breakdown in communication created an environment of distrust at the Health Science Center level. If the centralized model is going to work, the college's within the Health Science Center need to have the same reporting structure as the other college's at the university. We should not have that extra layer of reporting because things often get bogged down. 2. Under the centralized model we reported directly to our dean with a dotted line to the HSC. This created challenges because the dean's priorities and the HSC's priorities were not the same, so there was a tug-o-war system in place and that was extremely challenging, especially for those of caught in the middle. If the centralized model is going to work, a clear reporting structure and priorities have to be clear for the employee as well as those they report to. 3. I certainly understand the need for cohesiveness regarding the university's brand. Under the centralized model, the college's in the health science center should have the same branding as all the other university colleges. Currently, we have competing brands on our building. Our college name is similar to the other colleges at the university, but the branding on our building has both. It's confusing for our constituents to know who we are and it's challenging to establish a solid brand in an area outside of College Station when you following two different brand guidelines. The HSC should have Texas A&M Health as it's official name, but its branding as well as the branding for all the health-related colleges should be the same as the university.

---

N/A

---

N/A

---

Although there are benefits to centralized services, I feel like institutional and historical knowledge is lost if departments are put into a queue for the first available person to handle. It is more effective if some level of coordination remains within the units as well.

---

I agree with the need to restructure Marketing & Communications to better align a more consistent branding message for the overall university. My hope is that even with consolidation, that the individual departments/colleges continue to have the freedom to uniquely market & advertise their individual departments/colleges, within the broad scope of the overall university brand message.

---

A theme of this report seems to be that centralization of functions is always better and more 'efficient'. In an organization as large at TAMU, there are many reasons why decentralized services may serve students faculty and staff better. Perhaps standards, training and resources can be put in place to better align decentralized efforts.

---

To properly fulfill the mission of the University Libraries, best serve all students and stakeholders, and properly care for the unique and often priceless materials housed in the University Libraries buildings, it is necessary for the University Libraries to remain an independent entity within the Texas A&M University System with its dedicated Marketing and Communications department that can efficiently and expediently provide services which puts the University Libraries and its place within the Texas A&M University System in the best and most accurate light.

---

This should have always been a consistent message. Branding is a very important PR tool in this day and age. All campuses should report to one person so we present the same picture. Websites need to be more user friendly. I am constantly walking students and parents through the site so they can find information.

---

I support recommendation #1 as we do not have a consistent story for our brand, and our branches are not as aligned as they could be. It's also imperative that throughout implementation of any of these recommendations, that MarCom is leading our messaging about it. As well, with recruiting employees, MarComm needs to invest in its employer brand as much as we do our student brand, or research brand. It's not directly addressed but our internal communication strategy for employees is horrible. I'm told that the timing difference of when employees receive emails is all about IT constraints and the lag time to propagate that many emails to employees. Well I say that perhaps it's time to consider a different method of internal communication that can be more instantaneous, equitable, and accessible. I'm sure there are other software communication applications that could be adopted that could serve as the official communication channel for employees that is NOT email and that IS instantaneous to thousands of people all at once. I think the sequence of who is informed of things needs to be created so as leaders and service providers we know who has been informed already and who is to be informed next, and when. I don't appreciate messages about changes to the next day's work schedule to go to my employees after 5 pm without me knowing about it beforehand so that I may formulate

a strategy prior to their calls/text/emails. Recommendation #2 I hope will address the difficulty and variety we see in ordering logo wear for our staff. I think MarCom should have an employee storefront that they manage where we can order logo wear and other branded items as university departments rather than us going out to all places on our own. This would help keep the employee brand strong.

---

How will centralization affect college-specific communications needs? (internal communications, alumni communications, speaking remarks for deans, etc.)

---

The report's recommendations in these areas, namely centralizing marketing and communications, appear to stem from a preconceived notion more than practice. How do the consultants know that vital communications are sometimes reaching external audiences before internal audiences? Were these audiences surveyed? There are no examples provided of this. What efforts are duplicated? Where are the examples? Then we get an entire raft of findings and rationales based on this unproven premise.

---

Recommendation #1 Centralize Marketing and Communications Across the University P.77 - 78 • When departments are dependent on utilizing their own departmental Marketing and Communications to market their programs, will departments continue to have decision-making authority? • Will this change slow down how long it takes to create and get approval for communications that go out to the campus community and our media partners? • What authority does a department have in working within "university branding" yet keeping departmental identity, especially when we work with student committees? Will the new process create a larger bureaucratic process to get things accomplished?

---

Creating a more robust area of storytelling is a must for Texas A&M. As one who took classes in Journalism in the mid 1980's and now have worked to communicate the Aggie story here at 12th Man Productions, I see first hand how the missed opportunities and missed growth potential over the years has left a very disjointed approach to communications on campus. I think two things. Athletics is the front porch to any University. 12th Man Productions, of which I oversee, has a direct affiliation with ESPN. We employ over 90 Texas A&M students every semester, none of which get any academic credit for working here. Almost none of them even knew we existed when they came to Texas A&M but they were in their MEDIA TECH class in High School or just interested in Storytelling or a Technical geek. We have almost 100 former students now who are in the full time jobs after college in professional communications roles because they worked here from actually working at ESPN on the technical side, to others who are news or sports reporters, Graphics creators, Marketing professionals, Social media creators for Professional and college sports teams, and more. This is something the University should be able to brag about. They learned how to shoot video, edit content, do live TV of Texas A&M events for ESPN. ESPN brags about us and our staff wins awards. The point being, there should be more synergy with this type of storytelling. KAMU is a prime example, I took classes there 30 years ago and it is essentially the same building. YES -it's a TV Station BUT it can be so much more to a student body in 2021 where Communications is so Technically-centric. The other parts of this report spell it out but engaging the students in the same way that we have at 12MP to work at KAMU, to be storytellers for TAMU, to work with MARCOMM staff to find the stories, the unique research, the unique people, the incredible diversity that TAMU offers. We are not telling those stories in a cohesive way with Video, Social, Print collaborative collateral. This report offers a road map - its more of a google earth look and we need to get down to street view. What do we literally need to do to better storytell Texas A&M to the citizens of Texas, the United States and to the greater world? It can be done but it starts with centralized VIDEO RESOURCES (KAMU), MARCOMM RESOURCES & aligning a STRATEGY and EXECUTING with timelines and success markers. Evaluate resources, staffing and needs and do not allow the Campus TV Station to be an isolated entity anymore but integrated into the Marketing platforms in a COMMUNICATIONS & MARKETING HUB.

---

While centralization of services may be beneficial, decentralization may have occurred out of necessity in some cases. For instance, centralizing all communications raises questions about the knowledge and understanding of communications staff. Many departments rely on someone who is well versed in a specific area so that they can best guide the department in the communication strategy. As an example, I have three websites which require frequent updates and depending on the season, this can be several times/week. Our communications support staff intimately understands our business operations. Questions that come to mind are: Will centralized staff have the same level of knowledge/understanding? Will I be working with different staff every time? If so, how does lack of continuity in communications team influence outcomes?

---

I think centralization of MarComm is a good idea so long as the units throughout the university still have their own marketing and communications teams. I'd like to see more direct communication and support from the university level to the MarComm teams at the college level.

I support these recommendations.

---

I reiterate my comments above about my concerns with consolidation.

---

Generally agree.

---

I agree there could be better coordination of marketing and communication efforts across the campus. I would hope whoever is chosen to lead this has strong leadership skills, is willing to do the work to ensure the messaging is consistent and accurate and spends time in learning about all the good work that is being done by the many communications staff that are in the departments.

---

No feedback to offer

---

Marketing the University and marketing a particular department are two different things. Departments need to have their own dedicated individual to serve them. Not a person not reporting to them, that is being evaluated by another department.

---

Centralize all IT, business, HR and marketing communications professionals. If these professionals were left in their current physical locations to serve constituents, with current reporting structures intact – a dotted line for central oversight might improve the flow of institutional knowledge/implementation. If the plan is to relocate the programmers, technicians, business and HR associates, writers, videographers, etc. away from their constituents and remove the accountability we currently have to our constituents – this is not a good idea. Decentralization has allowed these entities to be more effective, and fully centralizing these business critical functions would fuel bureaucracy, negatively impact service (just ask faculty and staff in the two largest centralized colleges) and not be in the best interest of students, faculty, staff or the institution.

---

This centralization makes sense!

---

This is a good idea.

---

Each Marketing unit within each college is specific to that college. Giving the college easy access to proper branding guides. The Marketing unit also does a lot of things specifically related to their college, such as ideas for swag, ideas for events for our students, our unit events, emergency but proper use of Marketing signage. An example: An emergency called meeting to have proper signage put up at all of our Libraries during the COVID pandemic shut down.

---

We have a MARCOM department on this campus that is unresponsive to departmental needs across the University. They have posted a two hour window, once a week where they will allow you to contact them.

---

Working in the research world, we've had better positive communication and interaction and advice from TAMU Marketing and Communication over the past 5 years than the 5 years previous to that. Again, is centralization that is the solution or is it putting good people in a position, giving them direction, keeping them accountable, encouraging them to know their customers, and let them excel the solution.

---

Of all the consolidation recommendations, this one makes the most sense to me.

---

The top level marketing and communication leadership team needs to better understand the ongoing marketing work and efforts being handled at the college or department level. This could help combine efforts, improve consistency and further outreach/penetration. To do this effectively, that team or top person needs to better understanding of the different business models and operational aspects of all colleges and student services.

---

Same as above.

---

Clarifying marketing and branding guidelines would be a huge help. I tried making an ad for the department to match university branding and it was a huge pain to find information about branding. Even email signatures aren't clear in the current guidelines and are not properly used university wide.

---

If there are 300+ full-time marketing and communications professionals working across the Division of Marketing and Communications, why am I on my own trying to come up with marketing ideas for my Center? I am a creative person but I don't have the background nor the software to create marketing items. I am using Canva to create web posts, social media posts. I want to create an ad for the Center, which I have with limited resources. It would be nice to have a department to go to for help. I feel the website system TAMU uses is easy to use and navigate.

---

As the plan evolves, I would like to see a more detailed peer review showing the success and challenges of centralized marketing and communications in higher education. Many questions have arisen about how a centralized marketing and communications structure would look in Student Affairs, including the dotted line to BG Ramirez. As the "currently identified" Director of Marketing & Communication for Student Affairs, I would like to be part of the group that helps to create the new structure based on existing knowledge and experience of the Student Affairs Marketing & Communications Committee, strong division relationships, and collaboration, peer review, research, and input from key stakeholders. I hope also to be part of the integrated council of marketing and communication leaders across the university to ensure consistent goals, messaging, and processes. Kudos on the idea of creating an internal communications strategy! The idea of a centralized Texas A&M University marketing and communications student worker program is long overdue. We have huge potential to utilize students on a centralized team, not only for "burdensome administrative tasks" but to assist with messaging, social media, video, design, photography, public relations - all aspects of marketing and communication. Creating strong partnerships with key colleges and departments would enhance this idea. The Division of Student Affairs has worked in the area of high-impact practices for student employees for years, and it has much data and knowledge to share. Many of our peer institutions have excellent models for student marketing teams - they can be a win-win for everyone. Kudos to the idea and an attempt to establish long-term career paths in marketing and communication and a clear division of job responsibilities. Yes, crisis messaging must be centralized and updated! During the deep freeze back in February, communication was disjointed and challenging. Note: We have experts on our TAMU faculty who specialize in crisis communication. For the past several years, Texas A&M has focused on branding, and I believe with its strong central team will always look forward to improving branding. While there will always be opportunities to refresh our brand and for internal training on brand guidelines, this effort should perhaps start with a look at what we are doing right. "The Texas A&M brand is our most valuable asset, and we must all be brand ambassadors." ([brandguide.tamu.edu/](http://brandguide.tamu.edu/)) In Student Affairs, we crafted a brand guide for our division based on the university's brand guide: [studentaffairs.tamu.edu/brand-guide/](http://studentaffairs.tamu.edu/brand-guide/) T

The marketing and communication centralization has not gone well either. COALS has control of what is put on our websites and only wants the websites to be used for recruitment, but it holds no real information for the students currently in the departments. Before the restructure, departments could add important information and now it all has to be approved by someone who does not work in the department or advise students and has no clue what students need to see before deciding to apply to A&M or what information they need once they get here. It is one thing to have a set website template and require certain information, but someone needs to sit down with advisors and departments to decide what all would be useful to have on department websites.

Rationale #2 It is mentioned that, "... most for-profit colleges are predicted to continue increasing online advertising spending ..." Is this same tactic appropriate for public sector non-profit universities?

None

All good. One Vision. One Message. I love our traditions but times are changing and what is precious to Alumni isn't necessarily relevant to incoming students. Communicate with cultural sensitivity. Paint the picture you want to manifest. "Be cool, be hip, be now!" Websites: Never more than 3 clicks to get to what you want.

I am concerned about centralizing Marketing and Communications on a large scale. I think the centralization will work on a small scale if each Associate VP is given a team that is dedicated to their units. Marketing programs and services internally to current students and faculty required extensive knowledge of how to talk about these topics correctly. Many of the existing communications people in these department already have this knowledge and shouldn't be removed to far from that knowledge. And, again, I think there is a severe lack of support for internal marketing and communications needs on main campus and if these jobs were centralized, it would work best if more staff and resources were added. Case and point, I work closely with 5 units within Undergraduate Studies and I do a lot of consulting because the staff need/want advice on how to do this work. I have a graphic design degree and a PMP certification.

Positives of the Recommendations Listed An updated, university-wide crisis communication strategy is absolutely needed. • The Division of Marketing and Communication collaborating with Texas A&M Human Resources to create brand-training processes for new employees. T • Unifying the software and systems across campus not only will reduce duplication of investment and inefficient use of valuable resources, it also means that in times of crisis/emergency, personnel from across the campus can provide relief and assistance as needed because of the universal use of software and systems. • Websites that are easy to navigate (and similar in menu structure) across colleges will better engage

external and internal audiences. Concerns are primarily related to staffing: • A better definition of the dotted line structure is needed in order for employees to navigate reporting lines and feel confident in decision making.

There needs to be a complete overall of the Marketing and Communication offices. The first is the recognition that Marketing is completely different than communication. Marketing is how we put ourselves out there for the future - how we get our brand messages out, etc. Communications is how we respond and relay that information. We have no Marketing plans or messaging. We have lived off the "we are Texas A&M" for too long - we'll never change our message as all inclusive until the marketing is changed.

Comprehensive, and consistent branding and messaging is applauded. I wish to recognize our Division of Research Marketing and Public Relations representation, and express how important these subject matter experts are and the hope that they will continue to "major" in DOR related matters, while having others "minor" in DOR related matters, for cross-training and depth of knowledge. The relationship aspect of centralization can and should be addressed, respectively, for optimal results.

This seems logical and cost effective. There needs to be a well-established request system in place for this team so that, like IT, they can respond in a nimble fashion with client departments need something. It may be wise to consider a student intern program that connects to departments so that students can work on basic elements for a client but the final approval of the work is overseen by the central office. For example, press releases could be created in a department where the information exists first hand and then finalized and approved for release by a central office. Also, there will need to be many more templates created that can be used by people within office to ensure some general branding across the many elements of communication, including social media. Will faculty be required to use university templates? They are often the most visible representatives of the university and give the majority of presentations to the public. It will be easy for this office to become a bottleneck if there are not some "canned" elements that anyone can use to create some of the marketing pieces.

No input to provide

It makes no sense to single out Marketing/Communications for "duplication of efforts" and recommend a reorganization that "adopts a fiscally responsible" structure and yet maintain so many VPs at the highest level - the majority of whom moved over from Engineering Communications with Dr. Banks and are presumably being well compensated for such high level positions. The optics are not good and reek of favoritism. With so many staff already in place, why does TAMU need an "Associate VP of Executive Communications" who only has one direct report, and an "Assistant VP of Events and Stewardship" who has no reports? It's top heavy and hypocritical. It's also worth noting that Engineering Communications, which I assume is serving as the model for this university-centralized structure, was well-known for being poorly managed and lacking customer service, with projects and requests languishing on wait lists for long periods of time, particularly on the TEES side.

I am in Engineering Communications, and I know first-hand how nice it is to understand what needs I am serving, the audience I am to reach, what duties are my strengths, what tasks can be better done by other teammates, etc. So centralizing can do wonders when done correctly. That said, communication is critical in this kind of reorganization. Clear lines of leadership and transparency of intent are needed for success. The report clarifies that. Please adhere.

Centralizing marketing and communication seems to be an ideal situation. I worked in many roles at Texas A&M that required me to make or create marketing materials but there was inconsistency throughout and when I would ask the college that I was in for clarification they were not clear on their answers. There also needs to be consistency in websites for each college or some sort of training, it seems so messy and unorganized when they are given a template and no direction on what is allowed or not allowed. I think wordpress press is user friendly but also each college has restrictions and when I worked on the website I would get random feedback about layouts but was never told the right way to do it. I also feel like if departments have social media accounts there should be some direction on what kind of material would be ideal to post, also consistency in terms of what is posted on each and timing etc.

As long as A&M administrators, faculty, staff and students, rely on outdated, incorrect, or incomplete histories of the University and system, effective marketing cannot be done. Create a position of University Historian, with support staff, to research, compile and collect accurate history of the university and system, focusing on currently needed areas. For example, existing histories do not mention the six Native American student athletes who attended A&M in the early 1900s, including the quarterback of the football team. They do not mention the roughly 30 Japanese Americans who attended A&M prior to 1950, including the highest ranking Japanese American soldier in the US Army during WWII. They do not mention the campus nurse who gave her life caring for students during the 1918 influenza pandemic. They

do not mention the Black employee who died during World War I. The list goes on and on and on. The existing position of University Archivist has legal responsibilities concerning records management and retention, and other Cushing staff are likewise overburdened. A University historian (reporting to the Archivist) could mine books and manuscripts in Cushing and other parts of the library to provide data needed for marketing and outreach.

Again, NO to centralization. Departmental employees don't want to work directly with a faceless central office that doesn't know anything about their department's particular circumstances or needs.

The Marketing & Communications for our department already cannot serve all of the constituents within the department, centralizing would just seem to exacerbate the problem.

No Comment

Same as above.

As a marketing/communication professional, I think centralization of many functions is prudent. From a marketing/communications standpoint, this could result in an enormous financial benefit - rather than each school negotiating separate contracts for content management systems (CMS), media buys, video/photography vendors, printing, etc., having one contract with multiple user licenses is far more cost effective. From a brand standpoint, the consistency in centralization will only serve to strengthen the brand. Caveats include autonomy for each business unit to identify key strengths and have those incorporated into messaging., understanding diverse markets - marketing in Washington, DC is different than marketing in College Station because competition is different.

Howdy my name is [REDACTED]. It is vastly important for our group to remain apolitical and not be under either marketing or communications. Most of our work and benefit for the university would be working with the Associate Communications and Marketing Operations. More than 80% of the campus digital traffic and strategy is under operations. Right now, it is the center of all digital strategy from recruitment and admissions to the individual colleges and programs. It is important for us to work with all parts of marketing and communication. We need to plan and implement strategies from the President to Division of marketing communications, admissions down to the college and individual program level. We need to work towards cross domain tracking. Tracking the users experience across websites from tamu.edu to admissions.tamu.edu to the individual college websites. Doing this requires a specialty skill of understanding programs like Google Tag Manager. Being able to set events across the different accounts of Google Analytics to have a holistic view of the TAMU brand. This requires working closely together. We already started a centralized Google ads account that houses the major colleges like Mays, Engineering. This type of strategy is important to understand what different parts of the campus that are advertising and making sure vendors and users are not buying the same placements. Like Analytics it is owned by the individual Colleges and Departments. Insights is something that our team can provide by accessing the data across campus. There is a very big knowledge gap in this area across campus. That is why it is vastly important to have us as apolitical as possible and able to directly work with all the major programs and colleges. Thanks

Recommendation two, if it comes to pass should fully utilize the vast communications expertise across campus to develop branding guidelines that meet the needs of all units. As noted with my comments in the Finance and Business section. I don't see the Deans being agreeable to having no oversight of the person creating the messaging for their College. Furthermore, it is unclear to me how this would be applied to division and college websites.

There is no possible way to centralize all marketing & communications efforts on one team. [REDACTED] is amazing, but she is not a magician. I fear the individual programs and offices would suffer in quality because marketing & communications projects would be assigned to people with no expertise in those areas. We all deal with very smart, astute audiences. We cannot afford to let them down.

This is fine. I'm in comm and we will report to whomever. Please don't take our IT.

I am eager about the news for Marketing and Communications! I think that standardizing our websites and marketing products will help us appear more professional and connected as a University!

- The Associate VP for Communications and Marketing Operations is the single worst job at the University under this new system. What has been created here is a situation where departments that are currently on their own will now become competitors. The target audience for Athletics is nothing like the target audience for Qatar, but this report thinks they should report to the same person?
- Design should be under the Senior Director of Communications. The social media team gets more from the design team on a weekly basis than anyone else.
- Putting everyone together will

de-incentivize any progress. What this report is trying to suggest is that the marketing departments be expanded to allow these teams to build according to the Texas A&M guidelines. •Different places on Campus have different goals, and they need to report to the people who's goals they are trying to help accomplish.

Centralizing this department makes the most sense. There is a lot of duplicated work, unnecessary software purchases, and confusion about what resources are available and to whom. This has led to a lack of accountability and an inability to update pertinent information in a timely manner.

These moves make logical sense and seem to highlight the inefficiencies that are happening within Marketing and Communication offices across the campus.

Centralization of Marketing and Communications is unnecessary and will lead to a lack of responsiveness to communications needs. Better networking and coordination - yes. Centralization - no. Current MarComm team already has a very good network established with Student Affairs Comms group...don't fix what isn't broken.

I agree with the recommendations outlined in the report for Marketing and Communications.

If you take Marketing and Communications away from the colleges and put them all in a centralized location it will ensure that some of the colleges will never have stories written about them or hardly ever get media coverage. It would really make it difficult to get graphic designing done and just about everything else. I don't want good talented people to lose their jobs either.

Branding at A&M has been inconsistent for a long time. Individual colleges, departments, programs, etc. all have varying opinions and protocols for the brand of Texas A&M University. We have way too many social media accounts going in too many different directions. There are too many professionals wanting to deter from the Texas A&M brand for a number of reasons. Once again, this recommendation looks extremely challenging but is one that I applaud.

Many of the colleges are already using a centralized model for Marketing & Communications (e.g. College of Geosciences). If the overall reporting structure is to change, like IT, Marketing & Communications staff should remain with their respective units. If the merging of the Colleges of Geosciences, Science, and Liberal Arts is to happen, the new College of Arts and Sciences should be allowed to expand their Marketing & Communications team. This would benefit faculty, staff, students, and the university in many ways, the most important being that existing MarComm staff would be able to provide new members with training from legacy knowledge, and therefore, create the best team possible to promote and develop branding for the new college. This would elevate news on multiple platforms and allow for recruiting the best and brightest of students and faculty alike.

Great observation.

This recommendation was made in the past and if it failed, it is due to the ineffectiveness of a centralized marketing and communications strategy.

Recommendation #1: Centralize marketing and communications across the university. (p. 77) Recommendation #3: Streamline digital presence and contracts. (p. 83) I support these recommendations.

Yes - branding is ignored by so many and there is no one overseeing that it is followed.

No comment

Marketing efforts at TAMU are extremely disjointed and uncoordinated. Prospective students, first-gen in particular, are completely overwhelmed with the college search and career exploration process. Realigning and centralizing campus-wide marketing efforts is critical. I fully support all of the recommendations provided by MGT as it relates to Marketing & Communications.

No Comment.

As someone who works with different units across campus to create publicity materials for events on campus, I agree that a centralized and cohesive approach to marketing and communications is necessary. While MarComm currently provides a brand guide on their website, following the guide is not the norm and most faculty and staff don't even know it exists.

I can't really speak regarding this but would have the same fear with the IT Department. Having to deal with a main Marketing & Communications department regarding items would be a speed bump in getting items delivered to the public.

I only receive emails and have not had any interaction with this office.

---

I support consolidation to present a united front and consistent messaging to the outside.

---

I think consolidating Marketing & Communications across the University will provide for a consistent TAMU message to external constituents, donors, and alumni, which will benefit the University moving forward.

---

It's imperative that we have centralization across the university when it comes to marketing and communications, with some caveats to the findings, recommendations and rationales: The organizational structure should mirror finance and administration when it comes to reporting structure. AgriLife, Engineering, and Texas A&M Health should have dotted reporting lines into central marketing and communications and hard lines into their CEO/COO leadership. The infrastructures are far more robust, comprehensive and diverse than the other units. This is the case for AgriLife and Engineering but not for Texas A&M Health who also has extensive relationships and intertwined associations with the System. Texas A&M Health has one of the broadest geographic and operational spread of any unit including its comprehensive makeup including academics, research, business development and clinical operations, manufacturing and development, community outreach and external engagement. Texas A&M Health already operates on a fully sub-branded infrastructure with far more central oversight and approval than most units. The course(s) of actions we make and will make strategically relate directly to the strategic work with our CEO in respect to our robust and comprehensive priorities, and that determination cannot be made by the AVP of Marketing Operations. Coordination with the AVP of Marketing Operations through a dotted line would ensure brand integrity while not hindering strategic functions and operational movement beyond marketing and communications, and/or create limited understanding of job performance due to limited interaction and direction. It appears to create more bureaucratic layers than collaborative infrastructure. When it comes to reporting structures, how will budgets be handled? By dotted line structure? By hard line structure? Combination of both? Will central marketing and communications provide new and/or more resources to those units with limited access to some assets? All marketing and communications staff across Texas A&M Health colleges, institutes, centers and clinical operations should hard line into Texas A&M Health marketing and communications leadership to eliminate gray areas and improve collaboration, efficiency, transparency and accountability. Additionally, all Student Health Services marketing and communication staff should also hard line in. The development of a formal review process integrated across the university for all external marketing and communications materials and the distribution of press releases goes against the prescribed need for transparency and accountability by all of us. Media operates in cycles and if we miss a cycle because the increased layer of bureaucracy and review process, we run the risk of doing more harm than good. There needs to be trust at various levels of the infrastructure. The report continually focus on students but again, the nature of Texas A&M Health is far more than just students, its our communities, patients, access issues, community partners and so much more.

---

If centralized marketing occurs, there DESPERATELY needs to be a project management tool that helps offices, depts, etc. get their work requests done.

---

Providing centralized marketing support is important. Smaller units such as my own (TAMU IP) cannot afford their own marketing personel, so need to rely on MarComm for graphic design, website, and print services , as well as public (media) relations.

---

N/A

---

I hope one office can quickly respond to and manage the many communication needs. Not everything departments do are "projects" with a future date. Some communications are needed NOW.

---

I enjoy the zoom meetings that connect all the communications across campus. I wish there was more cross sharing of events/posts.

---

No comments.

---

In the proposed organization chart, marketing and communications staff of the colleges that make up Texas A&M Health are under an additional administrative layer between them and Texas A&M's central marketing and communications office. This dilutes the two-way flow of information and reduces access. These colleges have a reporting line to their own deans like the other Texas A&M colleges. Most have both undergraduate and graduate students and a research enterprise with concurrent associated demands, in addition to a large pool of alumni. Aspects of patient communication could certainly benefit from coordination under a Texas A&M Health umbrella, while the other internal and external communications would benefit from having a direct link to the university level.

I think all the recommendations are good and will help TAMU as a whole market and communicate what Texas A&M is all about and recruit more students.

A more centralized approach to marketing and communications is good. However, with regards to the health-related colleges: While I think they should work collaboratively within the overall HSC (Texas A&M Health), I do not believe their communications operations should be clustered together beneath Texas A&M Health. That has not previously been a successful model because the focus shifts from advancing the mission of the individual colleges to promoting the HSC brand. The unique needs, priorities and foci of the health-related colleges and their communicators generally were dismissed and/or ignored. Just as the colleges and their deans report directly to the Provost, I believe the nursing, dentistry, medicine and public health communications offices should have the same reporting structure of the other academic units. They need to have a direct, unfiltered presence just as the other colleges/schools do. In my experience, dotted-line and solid-line dual reporting structures breed confusion and dysfunction. However, if this is adopted, the dotted line reporting should be to the central office with a solid line to the deans. The chief college communicator should work closely with their dean and be considered a key member of the dean's cabinet. This does not happen effectively when the chief communicator does not report directly to the dean. The chief communicator is generally considered an outsider. What happens to budgets? Are those centralized, too? How will college communications departments with scopes broader than pure marketing and communications be handled? (Some offices support alumni-related activities, development initiatives, etc.) I fully agree with recommendations #2 and #3. I think they are greatly needed and, if implemented, will have a significant, positive impact on our marketing and communications efforts and would be outstanding resources to the college communicators.

none

- Currently, Events has been relocated to nest under Director of Operations. This does not make any sense. Events should be nested under AVP of Events and Stewardship. This Org Chart represents two separate events teams. They should all work collaboratively to serve both the President and the University. - If the team is going to grow, there should continue to be HR liaisons within the Division. It doesn't make any sense to remove a vital function from within the Division. The HR liaisons should continue to be housed within Division offices to assist with day-to-day functions. - Along with the Senior Director of Marketing, there should be a column for Senior Director of Advertising. These two entities serve full time roles. A Senior Director of Advertising should have a copy writer and graphic designer separate from the Senior Director of Marketing team. Advertising serves as an international marketing tool for the University, and to meet the caliber of communication we are accustomed to, a separate role needs to be created. - Athletics serves a completely different audience than our Scholastic audiences. They should not be under centralized Marketing & Communications. - If the goal is to centralize efforts, why are all of the colleges in their own category under the AVP Communications & Marketing Ops? Shouldn't the "services" of the division fit underneath all of Divisions and Colleges? Social Media, News, Videography/Photography, Web, and Design all assist the division, but they're separated throughout this org chart. You will continue to have duplication of efforts and lack of coordination in this setup. - Under the Director of Operations, there should be a Director of Project Management. Project Management is a vital component to centralize project efforts, and the Director of Ops shouldn't have to focus so much effort over a general "project management" section. Having a Director of Project Management allows for streamlined communications efforts and project cycles.

Centralizing ALL of marketing and communications is really interesting. I agree that the web is the wild west, and communications can be all over the place, but if you don't have embedded communications professionals inside the different colleges and divisions it will be a lot harder to learn about the stories worth sharing. Also, with centralizing web staff, who is going to be in charge of content? Someone has to be responsible for it or it will never get updated.

Support combining these efforts and aligning practices

This is certainly an area of the campus community that needs to be centralized.

I agree with the recommendations in the report for this area. Consistency of Messaging for Texas A&M is paramount to program execution. There are unique needs of Departments that should be elucidated before making changes in this area.

No comment.

The much-needed centralization is a good idea to promote our brand, standardize processes and best practices, and maintain a consistent voice. My concern is the ability to have needed messaging sent out in a timely fashion without creating delays in our large organization. With a large demand for these types of services, there is a possibility that staffing in these areas may not be adequate. It was unclear as to whether communicators entrenched in other units would still be doing the work of those units, or absorbed by the much larger marketing and communications machine. Having dedicated staff for a particular unit is helpful, and allows us to quickly respond to the needs of our campus community through the workings of our functional units.

Ever wonder why the golden arches never have to have a word included on the sign? Because we all know that means McDonald's whether you are in College Station or Ethiopia! TAMU has never featured itself as a University, but rather a fragmented "thing" that somehow worked for years. I have yet to watch a sporting event where I (as an outsider) would be moved to tears about the discoveries being made or impressed by the contributions being made to the Greater Good by TAMU-at-large. Consolidating MarComm and centralizing is brilliant.

N/A

I don't know exactly what all of it means for [REDACTED], but as the [REDACTED] and 10+ years with Texas A&M University, I cannot express fully the positive impact and mentorship provided by [REDACTED]. [REDACTED] started a campus-wide effort called "design counsel" 10 years ago that brought together communicators from across campus. She shared her vision and wisdom with all of us and championed the value of our work. It kept us all in-line with how to brand Texas A&M. It built connections throughout the Texas A&M community that exist and benefit the university to this day. I've never heard of a soul who disliked [REDACTED] and the impact she has made on designers, photographers/videographers, and communicators is invaluable. I have heard plenty of quality employees leave TAMU Marketing and Communications because of awful administrators, but never a single person (not a SINGLE person) leave because of [REDACTED]. Good people stay for good leadership and this is one worth putting my name on to stand up for. And even if it isn't at risk, it is good for someone to hear how special this individual is!

There should definitely be a consolidation in this area. No need for multiple departments and colleges to have their own marketing and communications people.

I strongly agree with a support the recommendation made by MGT. A centralized office or Marketing and Communications will be critical in supporting any major changes and relaying these changes to internal and external stakeholders.

This makes complete sense and I am happy to hear that there will be more of a centralized, consistent voice and vision for the university. This is desperately needed!

I GRADUATED FROM A&M IN 1993 AND AM CURRENTLY AN EMPLOYEE. I HAVE NO IDEA WHAT MARKETING AND COMMUNICATIONS DOES SO ANY CHANGES ARE PROBABLY GOING TO BE MUCH NEEDED.

I agree with the findings in this section.

College-level marketing and communications teams should be allowed the option to grow as needed to fit project workloads/demand.

## Marketing & Communications - Student

Please provide your comments related to Marketing & Communications:

N/A

Don't combine liberal arts and sciences

I have no comments here.

none

None, agree with the MTG Report.

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

Important TAMU communications should be given to faculty, staff, and students via a stream lined method using ONE method (ex. email, howdy, or "canvas"). Time sensitive/safety information should be send via text message.

None

I oppose consolidation of Marketing and Communications, and I oppose integrating the Communication department into their purview.

I think our departmental marketing and communications office does a fantastic job, but there is certainly something to be said for reducing duplications of effort and realigning/harmonizing under one umbrella.

don't know enough to have an opinion

Please don't do the plan. It's not a good plan. We don't like the plan.

I have found that both inter university and inter college communications are often disjointed. Not everyone is aware of industry night opportunities, resource groups, and job recruiting resources because there is no centralized information system besides emailing lists.

Good.

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

The Battalion is not marketing for the university and it doesn't belong to the nonexistent department of journalism. It's meant to be independent student journalism for students by students. It was established in 1893 before there were journalism students. The committee might have realized this if they bothered to interview anyone who worked there.

Consolidating into one department is a great idea to create a more unified university message.

No comment

I support these initiatives

Please don't change anything.

The school needs to stop hiding its bad history. They need to confront it. People from everywhere else see the school as a breeding ground for alt-right conservatives. Why has this school become so conservative that if you are not white and conservative you do not feel welcome. It starts with the people they invite to campus.

NA

As long as the consolidateed MarComm will still be able to work closely with colleges, groups, offices, and departments, I am fine with the proposed changes.

Advertise more for college of Liberal Arts itself, don't define Texas A&M solely as a STEM college, but also an university for the Arts.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

---

None

---

I think that centralizing the Department of Marketing and Communications is a great idea. I currently work in MarComm at the [REDACTED] and think that this idea would be welcomed with open arms.

---

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

---

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

---

n/a

---

Tamu should stay and operate the same. No changes.

---

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

---

n/a

---

The channel of communication is one of the best mediums of dissemination of information.

---

No comment

---

n/a

---

Marketing and communications are very specific given a university of this stature with so many microcosmic groups within. A centralized marketing structure would fail to address each of these groups with the education necessary to portray our school in the best light. Thus, I argue that compete centralization is not feasible nor in the best interest of Texas A&M.

---

No opinion

---

N/A

---

A&M graduate students and faculty publish and do a lot of work alongside faculty and students from the top universities. Any way possible to sell the academic brand of A&M as top tier would be a good way to help the general public outside of Texas recognize the excellence at A&M

---

I think marketing to incoming freshmen would be a great idea as many freshmen do not know what they want to do with our lives

---

They send incessant emails and sell student information to business so that they can also send incessant emails. Nothing else is known.

---

Student-worker program may be beneficial.

---

I would like to suggest that each program could nominate a marketing/brand liaison to coordinate with the marketing and communications team. Possibly two year terms or something. A program like Visualization has a lot of "content" that gets sent out every semester and having the ability to be approved by the university on any logo ideas/designs/etc. If not every department, at least the Visualization department should be able to contribute to the overall branding as we have professors here that teach graphic design and branding.

N/A

n/a

They do a great job. Truthfully. They do not get enough credit.

None

In different as long as they aren't liberal

n/a

N/A

N/A

N/A

I think an aspect that would overall improve the visual marketing at TAMU is removing Sully from the center of campus and putting him in a museum.

I respectfully think that there shouldn't be a merger of departments or libraries.

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

I do not have comments for this.

None

Agree that marketing needs to be more uniformed. MSC would be a good program to follow and look to for coming up with this process

none

N/A

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

N/A

NA

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

The staffing would need to increase to make sure relevant information is being pushed out. If Marketing is too centralized, each college/division will not be able to communicate its distinct mission/vision.

---

I agree that university-wide communications could be much more streamlined.

---

## Marketing & Communications - Former Student

Please provide your comments related to Marketing & Communications:

---

Again, I agree with the report's recommendations in this area.

---

It is great to coordinate and achieve consistency of these functions as long as the services are successful.

---

I think A&M's marketing & branding has made some strides in the time since I was a student there, notably since joining the SEC. I do still agree with a lot of the findings that it still seems a little fragmented and disjointed on the whole though. The commercials & branding are higher quality than 20 years ago, but messaging has bounced around a bit. I think A&M needs to figure out what it wants to portray to the public & potential students & their families and focus on conveying that message. The increased exposure due to the move to the SEC and the relative success of athletics since that move as compared to the decade before is a real opportunity to stand out & send whatever that message is. A&M needs to take advantage and focus that message now though, because when the University of Texas joins the SEC I think that A&M's unique position will be compromised some.

---

none

---

Not applicable, however tell the DJ at Kyle Field to STOP playing their music over the Band. Very disrespectful. I'd rather hear Noble Men of Kyle as opposed to Kanye West or Taylor Swift for the 12th time that game.

---

I concur with the report findings.

---

Howdy, My name is [REDACTED]. I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for Fluor Daniel and for Lockwood, Andrews & Newnam performing project controls. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to

be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, [REDACTED]

Of what? Football games? Meal plans, too vague a question

Rec #1 - I support the centralization of Marketing and Communications.

A&M needs to put out a consistent message. Currently, this does not always seem to be the case. The key messages need to originate from the President's office and then be communicated by the subordinate organizations.

Marketing and Communication: A&M does a less than average job of marketing for the whole university and every individual college at the University also does a less than average performance of marketing except one – Mays Business School. The Mays Business School does a great job of advertising. Eli Jones, former Dean of the School, was the very best. Marketing is Eli's expertise. It was his degree, he knows A & M like the back of his hand, and he graduated from A & M. Eli has the Aggie personality that reminds one of Will Rogers who once said, "I never met a man that I didn't like". If President, I would personally put Eli Jones in charge of marketing and communications of the University. This is the individual that could bridge all colleges, all opinions, all disagreements of colleges or individuals. While I know he removed himself from his Dean's position for family reasons, he is the individual that would galvanize and harmonize the marketing and communication at A & M as one entity. Eli is very creative, understands marketing and A&M, and knows how to get the message across in the most effective and efficient way. Establishing an integrated counsel of marketing and communication: Do not ever let a council set policies. Hire a leader that can lead like the President. You do not make the progress through a council that one can achieve with a leader. You need a dynamic leader.

I agree with the recommendations for centralizing and reorganizing Marketing and Communications.

Recommendation #1: Centralize marketing and communications across the university. Agree; you need to centralize control of your brand and messaging. Too many departments allowed to message on behalf of the university causes inconsistent information. The new organization should be further reduced as efficiencies are created Recommendation #2: Clarify university marketing and branding guidelines, training processes, and a mechanism for enforcement of those guidelines. Agree with the recommendations Recommendation #3: Streamline digital presence and contracts. Agree I've never seen a divided marketing and communications effort succeed or do very well. I support the recommendations as submitted.

TAMU has been around longer than ut and is one of the best agricultural schools in the nation. It is this strength that the school should market new students. One small school I am aware of offers out of state students discounts on tuition to attract students from other states. Why should capable students from say Missouri or Vermont or some other state be deprived of a quality education because they can't afford to attend TAMU?

Controlling the message for the university is critical in this day of near instantaneous messaging on everything. Centralization of control of the messaging will not be a bottleneck if close coordination/liaison with various schools is maintained. Protection of the brand is also enhanced with the proposals set forth.

Hopefully the consolidation would not affect the informative publications coming from the College of Architecture and specific to that College activities.

Regarding Findings #1 #3: Good recommendations. Regarding Findings #2: Good recommendation as long as Aggie core values take center stage on the implementation.

No comment.

i. Finding 1: Agree b. Recommendation #2: Clarify university marketing and branding guidelines, training processes, and

a mechanism for enforcement of those guidelines. i. Finding 2: Agree. "guidelines" must comply with federal laws as well, and training in that regard is essential. The central theme for anyone in this department should be "knowing A&M's story" and being able to effectively tell it and protect it. c. Recommendation #3: Streamline digital presence and contracts. i. Finding 3: Agree

Any consolidation into a central organization should include ALL Colleges and departments. If you exclude some Colleges due to special circumstances, others will follow and the organization will continue to be decentralized.

See [REDACTED] comments.

Recommendation #2: Clarify university marketing and branding guidelines, training processes, and a mechanism for enforcement of those guidelines. Rationale #2 It is vital that all marketing and communications staff and leadership have a clear understanding of the university's identity and can consistently tell its story. These individuals are the university's last line of enforcement. It is equally as important that students, staff, faculty, and affiliates have a strong understanding of the messaging and contribute to communicating the university's story consistently, as they are the university's first line of defense against telling a decentralized, weak story and uncoordinated branding. Comment - What are we.....the Borg? We all have to think alike? Hello students...here is the "approved story" of the University. Please do not stray from this..... Creepy, to say the least.

None.

Marketing and communication is essential and it requires a team

Great suggestions. I believe the university's greatest asset for marketing is the Corps of Cadets and other student organizations.

I would like to see a bigger emphasis on broadcasting and communication programs. We need more Aggies on television to help promote our great university. We often are lacking in this department, and with the University of Texas joining the SEC, you know they are going to add former Longhorns to their on-air talent on platforms like the SEC Network.

There is concern among former students about who and what the "university's story" will be. There have been some individuals on campus who have intentionally misrepresented the "story" in order to stir up controversy and division. A&M used to have an exceptional individual (former Coke branding VP) but I think he was fired. Current "branding" seems to be all over the place....from cheerleader dolls to orange A&M shirts....and yet the Aggie Moms always get their feet held to the fire at Boutique. The suggestion is that centralizing the marketing and communications is the "best fit for the university" without thought as to what is the "best fit for the colleges" (which are closer to the students)

Consolidation can help create a consistent message and branding for the university, but it can also stifle efforts at lower levels in the university to get their messages out. Manage this carefully.

Many campus units doing their own thing leads to confusion and mixed messages. Centralizing is good BUT must still be personal enough to respond to the messages of each unit but exercise control so that varied messages do not lead to overall contradictions.

Find the best-of-breed marketing across all organizations to use as a standard template / baseline for future marketing. The Foundation has excellent marketing tools.

Agree that more centralized approach will help build a strong brand that has already shown its strength in many ways. Communications such as those that come from the Chancellor's Office are good examples of clarity and engagement.

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage

because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of [REDACTED] and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

There needs to be more consistency throughout departments in regards to marketing and communication.

Caution should be taken when centralizing all marketing. Different components and departments of Texas A&M would require different strategies.

Unified marketing of the university is important. We still have to sell ourselves. Communications is the most important thing any organization has and must be precise and tell the story. It must be a means so the intercollege and campus communication is smooth.

None

No specific comments.

Finding #1 - Probably a good recommendation. Finding #2 - Okay as long as the Aggies Core Values are front and center in all ventures. Finding #3 - Probably a good recommendation.

Most of the recommended Marketing & Communications strategies are in-line with your desired objectives with only one caveat: The VP Marketing/Communications needs significant REAL WORLD leadership experience from an ad agency/branding firm. They should have at least 20 years experience serving hundreds of clients. Each unit in the university is a client and should be treated as such for ultimate success. A hire from an academic and university marketing setting background WILL NOT be highly successful in this role. With the right leader, your concept of centralization will accomplish your goals.

As with other departments, centralized Marketing and Communications would seem to be a desirable goal. However, there needs to be sufficient flexibility to allow for the specific needs of various colleges and departments.

By and large, the recommendations make sense but Colleges and Departments should be allowed to continue marketing and communications specifically related to their programs.

Na

Support 1,2,3 recommendations

Centralized marketing and communications needs to be connected to the operating units in a way that each can tell their story.

None

No Comment

Could be beneficial.

Sometimes it seems that TAMU, TAMU Foundation and the Association of Former Students are not talking to each other. Yes they are separate organizations but more collaborative care could be taken. Concerning the Proposed M&C Organization Chart, why was Architecture left out? Do not let COA be subservient to another college as it was to COE when I first enrolled.

Periodic review and recommendations for improvement to operating departments is a good thing. If the study shows these to be wise moves, then they should be implemented.

Good to all be under one marketing leader

I previously believed creating a journalism department was beneficial but after much thought I believe keeping journalism within the communication department and rebranding/renaming would be beneficial to student success. As a student who began the journalism program within university studies I can guarantee that the shift to the communication department was a helpful one and I would love to see that continue for future aggies.

College Station and Bryan will always be unattractive for people to live in. It is why we referred to A&M as Sing Sing on the Brazos. You cannot change the geography.

---

Quit trying to make Texas A&M like any other West or East Coast University.

---

Seem like reasonable recommendations.

---

While not highly educated or particularly involved in marketing and communications functions or practices, the centralization of university marketing activities seems to be appropriate. A&M could (and should) be a much larger "brand name" on the national stage, both in comparison to where we are now and in comparison to other schools with more brand recognition (you know which one I'm talking about in particular).

---

Good plan. Communications should use the same music just like the Fightin' Texas Aggie Band. There should be high engagement of students in the new Department of Journalism to ensure best use of evolving social media.

---

If combined, it will be quite a large group marketing and communicating with huge numbers of entities and people, but it might be easier to manage, hold accountable, and enforce delivery of truth, facts and evidence.

---

As a person who has spent my entire career in marketing and communications, and as a person who served on the Kyle Field rebranding task force, I have been dismayed at the fragmented marketing approach of the various elements of the A&M System. Much needs to be done in this arena.

---

N/A

---

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments.

---

The recommendations should be implemented with the various college and departments having some type of critical review of marketing schemes. The term "branding" to me is demeaning to our school

---

Agree with setting standards, but allow flexibility within departments for more expedient communication and marketing. Avoid bloated, overbearing hierarchy that doesn't serve the needs of individual colleges and departments.

---

It is impossible not to observe how much of the university's resources are wasted on communications to former students (no doubt in aid of fund raising) to show how great the institution and its significant its creative output has become. Former students do not require glossy magazines to inform us that Texas A&M is alive and well. If these communications were to advise us on how the institution is working to make life and learning better for our children and grandchildren -- as opposed to making for them a better life style -- some of us older former students would be more inclined to send our children to a giant state university. Having the most of everything is not a measure of quality but of quantity.

---

Please don't get carried away with centralizing marketing and communications. Forcing alignment and consistency can have many adverse results. A university should be more of a confederation and less of a monolith when it comes to selling its ideas, raising funds, and recruiting donors, students, and staff. The Old World model of a university as a collection of colleges worked pretty well and fostered a healthy competition for resources and a true diversity of ideas.

---

This area of the report interests me because it seems wise to centralize the marketing and communications and this have been greatly needed. There have been too many cases of department persons releasing information as if it is an

'official A&M position'. This has been out of control and it hurts A&M. The Athletic department and the Anthropology departments have been particularly guilty of this with extreme viewpoints expressed. As a retired teacher, we were instructed NOT to talk to news sources in any way as our viewpoints would be presented as speaking for the school or the district. How is it that we have wild-eyed professors out there professing the burning of catholic churches and killing of catholic priests long before they get fired. We have anthropology professors brainwashing their students and spewing hate all over students, sidewalks, and the news media and yet TAMU can do nothing to them. There was clear and brash evidence on their social media as they advised their students to skirt the law. Really? Advocating the destruction of the campus to profess their hate? Don't you realize that they give TAMU a black eye? Their hate they teach and spew lands on TAMU... and these folks still have a job for the university they hate. Then we have the football team that has been allowed to divide itself away from the campus in order to proclaim itself 'unified'. We are ALL united behind the color maroon. Why should we need to carve out a color and a stance? Haven't these folks been educated as to the history and the core values that make us one? Why would they strike out on a negative campaign that pits the football team against the student body and the Ol' Ags. If a substantial loss of revenue (300 million dollars to date) has not hit you square between the eyes, I am not sure what would. Tell that coach to man up and get the athletes under control... we are the Aggies, the Aggies are we. We ALL unite behind the color maroon.

---

No comments

---

I was surprised to read that there is a wide variety of marcom efforts...they always seem so consistent when I receive them!

---

There are multiple communications coming from A&M. Centralizing authority and message can be good, but control points or managing it will be an issue. Athletics has one. Mays has one. Former students has one. While all attempt to elevate A&M, this will be difficult just due to the scope/size of the issues.

---

Sounds good

---

Agreed. TAMU doesn't need to sell itself to the large group that knows it already. Work needs to be done to reach those who would not consider attending currently.

---

I do agree that communication needs to be coordinated through all departments. Nothing should go out in Texas A&M letterhead that is not in a check and balance procedure.

---

Liberal arts and Sciences need to be separate departments. LA deals in subjective reality while the sciences deal in objective truth. Their perspectives on reality couldn't be more opposite or incongruous. Sciences deal in research that is funded by corporations that liberal arts has no way of relating to much less has any business courting for funding. Support for science students will be undermined by this maneuver and the future of sciences at this university will be compromised and eventually cease to exist.

---

It is currently all over the place and not consistent. I support the report.

---

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

---

If the university is going to centralize marketing and communications, please put in place the structure that allows for new and innovative ideas to be encouraged and nurtured rather than being fed into a meat grinder that creates hamburger out of everything.

---

None

---

In your report, I read between the lines when you speak about clarifying branding. My first thought is that you're insinuating creating a new logo for the school. That would be a huge mistake by foregoing the immense equity in the long-standing school name (Texas A&M University) and the logo TAMU. A&M is rich in traditions, history, legacy and a strong & active former student body. While I applaud attracting the brightest students and faculty to the campus, it would be detrimental to let go of the history and sense of belonging that has lasted for 150+ years. No other school except TAMU (other than military schools) proudly wear their class ring until their dying days. Please don't risk losing that sense of connection.

---

If it ain't broke, don't fix it. We are Texas A&M and the brand right now is extremely powerful. Just adjust so that alignments make more sense and it's cost effective and communication heavy.

---

I concur with the report's recommendations. Texas A&M's communication and marketing has long been insufficient.

---

Many of our assets and accomplishments in research are not widely known. Our ratings in the popularity contest known as the US News and World Report rankings reflect this unjustified lack of respect. These functions need a considerable upgrade.

I don't mean to be harsh as I'm not a Marketing/Communications expert...but there seem to be so many more GREAT things that our university and our graduates do than ever get highlighted and promoted publicly. Unfortunately, (just due to timing), I am seeing more press about the \$1M lawsuit against the SAE Fraternity than I am about any of the other great work by the university....and right now I live/work in the Middle East. Last year we were overwhelmed by the divisive press and promotion of our quarterback and football/track athletes and professors disparaging the history, traditions and institutions (Corps of Cadets) which underpin the core of our university. This was truly a low point for me as a traditionally proud Former Student. The administration, athletic department and football coach seemed to have lost control of the situation and provided no visible leadership. Surely there is enough genuinely GREAT work being done every week by students, faculty and former students to provide a much more positive public (and internal) narrative about our great university than these biased and unflattering stories would project to the rest of the world. The ability to affect a positive narrative is within the control of the university. Please take the initiative here. It impacts ALL of us.

Stop pandering to social issues and focus on academics.

No specific comments.

Of all the areas in the report, I believe I am qualified to speak to this specific finding, as A Professional Communicator (my career) and Former Student of Texas A&M University. To get consistent messaging and uniform branding, I think the recommendation of centralizing communication and marketing across the university is absolutely correct. As a Public Affairs Officer in the U.S. Air Force, I've seen large organizations struggle in "speaking with one voice." And although I'm usually an advocate of decentralization in most things, because it fosters innovation and creativity, in this case I think the solution of Texas A&M's fractured branding and messaging is to centralize functions so "speaking with one voice" becomes a communicative priority. There is a part in the report that I wholeheartedly embrace (and actually found myself vocalizing with a "hell yea"!) — "... it is important to focus on differentiating the TAMU brand and connecting individuals with the brand through strategic communication, not just advertising." The operative word in that sentence is STRATEGIC COMMUNICATION. The statement is absolutely correct. Advertising is only one facet of professional communications. To effectively communicate the TAMU brand in today's saturated information environment, the university must employ every facet of professional communications — i.e. PR, Marketing, Advertising, Digital Media, Traditional Journalism, Community Engagement etc. — all focused and concentrated on achieving measurable objectives, aligned with the university's mission and vision, that is, those things outlined in the university's strategic plan. That's what I understand as strategic communication, and what I personally practice everyday in my day-to-day job. Lastly, I only have one suggested addition in regards to the org structure. I highly recommend the implementation of the proposed Marketing & Communications Org Chart. But I would also add another position, a direct report position to the VP & Chief Marketing & Communication Officer — a liaison officer who sits at The Association of Former Students at Texas A&M and the 12th Man Foundation. These two organizations, though separate entities from the Texas A&M University system, play a pivotal role in defining the TAMU brand. If maximizing the brand is the goal, rolling these two other organizations into the discussion is imperative. I recommend a model similar to what the U.S. military employs with liaison officers, who represent their institution, while working at another organization (e.g. State Department Embassies around the world have a military liaison officer who work out of the embassy, representing the DoD's interest). If not this proposed model, still my overarching suggestion stands — incorporate The Association of Former Students and the 12th Man Foundation into the reorganization of TAMU's Communication and Marketing efforts.

I agree with the recommendations in the report.

Adding too many departments & people.

XXX

Current marketing is fine. Don't mess with it. You can't argue with 73,000+ students.

I have a few comments but am not sure how to word them.

I agree with these recommendations

---

Agree with assessment, very limited.

---

The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

---

I recently received a piece of junk mail from Farmer's Insurance that said it was being mailed to me because I was part of the Association of Former Students. I am absolutely appalled that our database is apparently now being sold off to corporations for their marketing purposes. Since I have never received a letter like the one from Farmer's before, I can only assume that this is a new thing and I URGE you to reconsider this awful decision going forward! If I receive more junk mail from companies I personally did not solicit, I will be forced to have the Association wipe my information from their database. This is extremely disappointing and I would have thought that my prestigious university would be doing a much better job at keeping my information safeguarded and out of the hands of spamming solicitors.

---

Agree.

---

None!

---

MGT suggests the creation of a marketing and communications council to determine marketing strategy with representation from various units within the university proper. It is very important to include representation on this council from the Corps of Cadets, Association of Former Students, 12th Man Foundation, and Texas A&M Foundation to ensure that permanent university stake holders with historic, life-long, and/or generational connections to A&M, many of whom are represented by these organizations, are included in marketing decisions that will determine the public image of A&M. MGT also recommends adopting a marketing strategy that relies on a university story focused on core values. This story based strategy is essential, but the focus on core values will be too generic and abstract if it is not grounded in how those values are exemplified in A&M's history, unique culture, and traditions. The incorporation of history and tradition will tie-in nicely with MGT's recommendation that our marketing should differentiate A&M from other universities rather than simply increase brand awareness. However, at other points in the report, MGT is critical of A&M's conservatism, even listing it as a threat to A&M. A&M's conservatism is not a threat, but an important differentiator in a higher education environment which increasingly does not allow for the expression of conservative cultural values.

---

I believe the Marketing & Communications efforts of the past have been more well-coordinated than indicated in the analysis; however, consolidation and centralization would better serve the University.

---

Texas A&M needs to send Scholarship offers to students in a timely manor as many top tiered schools send them to deserving students well before TAMU.

---

A&M's growth requires these changes to be more effective in marketing and communications. Schools like the University of Michigan do a better job.

---

I agree with recommendations.

---

None

---

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

---

As a native and child of faculty members, [REDACTED], more Marketing on the "Scholarly" aspect of a well-rounded education.

---

Comments from public on Facebook and instagram posts are often very concerning.

---

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

---

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness.

---

Would be far less costly and disruptive than junking existing...

---

stop with all the disney-like experiences and flash. you don't have to convince people to go to A&M with all that. Be honest and authentic. Stop trying so hard. Stop trying to be like other schools.

---

I do think it is important for the university as a whole to have clear messaging and communication across all areas. I am in favor of the suggestions for this area. I have seen first hand the impact of unified marketing and communication when Texas A&M Health Science Center merged with flagship campus and formed Texas A&M College of Medicine. This has especially been a powerful too as we increase our presence in the texas medical center

---

With a liberal arts degree and a job in communications, I found myself like so many students in an employment dead end. I think my degree taught me to dream and aspirationally, I wanted more. The result was an entrepreneurial spirit and a company we sold a few years ago. I credit the dreams that a libarts degree offered with that success. I understand there is a move to bring back a department of journalism and could not be more supportive of that need. In a world where mis and disinformation for political (or financial gain) have taken hold, teaching people to write well and read with a discerning mind are desperately needed.

---

Yes, please consolidate and improve communication, branding, etc. Please include the 12th Man Foundation / Athletic Dept. and local A&M clubs in the reorganization. TAMU communication comes from so many different directions - both on campus and off campus groups.

---

TAMU as Dr. Banks well knows that TAMU has lots of messengers doing messaging but have no clue what the Texas Aggie messages are! The President, in "the name of the Texas A&M brand" needs to decide these STARTING WITH A NEW TEXAS A&M MISSION STATEMENT (as a policy statement!) ASAP. And her subordinates need to know the policy, the messages. be on the same frequency with her and "sell" TAMU! if they cannot do this and be accountable and responsible leaders in unity of this, then they should be let go! This is a job one category leadership task to get fixed ASAP!

---

There seems to be a concern that we are not reaching enough people the right way. There should be no fear of A&M becoming too small.

---

As a career in industrial marketing, as I said above, I sense TAMU is settled on a specific goal of being #1 in certain fields. I agree in most cases but I wonder how many good potentials are left behind because they don't fit. I see too much on advanced degrees & not enough on entry level. I refer to my use of Linked In.

---

I believe the status quo of marketing actually works and changing this might hide smaller program's messages.

---

Streamline operations per the report. Also... I was glad to see KAMU mentioned. That is an untapped resource on our campus. Journalism students should be using those facilities. MarComm should be using those facilities. They've been left out in the wilderness forever. It is a fully functional facility that should be alive with activity. What about a daily TAMU newscast? We have so many departments on campus with great stories to tell AND the video equipment to do it. Standardize their production and run stories on KAMU. We have an amazing meteorology department. Put those students on air. Use the facilities and abilities of the campus as a teaching tool and a way of communicating information to campus partners. KAMU should not be the place old media dogs go to die.

---

See above

---

Speak the truth about A&M without apologies for being a "straight down the line institution." If one doesn't like & follow our Core Values then Hwy. 6 runs both ways.

---

Focus more on the Graduate programs and less on the undergrad.

---

No comment

---

Don't take good jobs and pensions from the citizens of College Station.

---

Every time the home games are on tv, the cameras focus on the corps. I know we have many other students. Can't we show a little more diversity?

---

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED

the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

---

Recommendation #1: Centralize .... Agree. Again, why wasn't centralization of the Marketing and Communications functions not accomplished years ago? Do it now! Recommendation #2: Clarify .... Agree. Do it now!

---

Recommendation #3: Streamline .... Agree, of course.

---

Centralized. Centralized. Efficiencies. One message. Stifle the unpopular thought. Control. Oh boy. This entire read has been an eye opening experience. Liberal faculty.

---

I support these recommendations.

---

My deal with centralizing the Marketing is that TAMU reaches across the world even to its branch in Qatar so that when the audience is that broad there is quite a bit of generalizing that has to take place versus a local/de-centralized marketing allows for specific pinpointing of audiences that you want to focus on. It just leads to people thinking that you don't really relate to them since you speak so generally. If you create a world-wide brand then you look like everyone else, but if you let the word spread by mouth of students then you become a legend. Sure you can make logos all look the same, but let the real marketing be done by the students without rigorous controls in place. It might sound crazy, but TAMU has done really well with the word of mouth references that its alumni have passed on for generations that a centralized brand could never compete with and often conflicts with. Are we really going to worry about what other universities are doing that aren't doing as well as TAMU? I say let the students be the marketing for you as they have been and you will continue to have the success you deserve or not.

---

This group only hires from within their clique. I know people who have multiple degrees and years of expertise in top fortune 50 companies, that can't even get an interview. Those who are in those roles won't consider "outsiders" with fresh perspectives that truly understand the business world. I believe the group would be much more effective if the folks in charge actually had business experience. Cut the fat and get more consistent messages. Also, the group asks for volunteers or feedback (at the college level) then doesn't have the courtesy to respond to prospective volunteers or former students. This is totally unprofessional and is a poor reflection on the university.

---

No comment, but again appreciate bringing the talent and messaging across the university under one organization.

---

Good!

---

Through corporate and personal relocations, I have had the opportunity to live in Houston, Toronto, Atlanta, and now New York City. Of course in Georgia and surrounding states, Texas A&M is more visible than in many other areas of the country and I am happy that we are in the SEC. My experience is that little is known about the school in areas outside the south and southwest - except for football. Observations and comments about our university from many people lead me to realize that they see the TAMU student body in great measure to be military and rural. Those perceptions are formed by what they see on television during football games. Unfortunately, the cameras always land on the yell leaders in denim overalls during yell practice or by the end zone during a squeeze play, our beloved band and corps, or fans yelling things about farmers. Now while I understand each of these has some basis in tradition, the quality and diversity of our institution is not being conveyed to the broader audience. A campaign to share the full picture of A&M should be curated and coordinated with outlets broadcasting to these large audiences. Some of the traditions and yells should also be changed. I have deep pride in my alma mater but we need a public image update.

---

Close relationships between provost personnel and business/industry/private sector should be used for projecting future needs in education.

---

These recommendations seem like they will help improve the recruitment process and possibly aid in receiving more

funding. It will also allow for more aligned messaging.

---

Collaborations between departments and disciplines would be beneficial.

---

I agree with the report to a degree. My concern is that caution should be used in centralizing communications. It does need to be more consistent and centralizing it is probably the best way to do it but it is important that the communication is reflective and accurate. For instance, if an agriculture communication is released, it is important that the release is a true and accurate reflection of what AgriLife intended. It also is important that the recipient of a communication is able to follow up with the right person within the university so that barriers to dialogue are not created.

---

Please remember that many women go to A&M and have graduated from A&M - there is more to the school than just football and it still seems like a very male-dominated school based on the marketing that I experience.

---

This is already done across all levels in my opinion. I get emails and see TAMU ads or articles daily.

---

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

---

"The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education. " Are you kidding me? You should not pay these people a dime for that idiocy. Aggie culture is about tradition, things that do not change. Not sure they get it or wanted to. Seems like they just want to recommend the same things they recommend. For whatever good they may have recommended, that statement throws it all away. The lack of investment in other TAMU campuses is why Texas A&M University System issue. College Station needs to worry about College Station.

---

Agree. Just trying to market resources within the University to other departments has to go through so many bureaucratic loop holes just put out a flyer describing potential resources available to others on campus.

---

Same

---

Agree. Major change needed.

---

I am ambivalent about the recommendation to centralize marketing. While this helps to ensure a unified marketing voice, the tradeoff is that communication can become bureaucratic, where it can be difficult for external-facing employees to get their message out quickly and effectively, because it has to be run through central marketing.

---

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

---

I don't understand the issue enough to have an opinion here.

---

Improving coordination across the University (and even within colleges) will strengthen the Texas A&M brand.

---

What is the first thing that comes to mind when people mention Texas A&M University?

---

Marketing and Communications could benefit A&M by establishing strategic partnerships with large technology companies to fund the transformation of the campus to a Sustainable operation. The benefits include cost savings over the medium to long-term and a huge increase in reputation and prestige.

---

Agree with the recommendations from the report

---

Like

---

All suggestions make sense in building stronger brand awareness across campus.

---

Support

---

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

This hardly seems like a needed focus. We are the first or second largest school in the country with a supportive alumni base.

---

huh?

---

No further comments. Not enough information to agree/disagree with recommendations made

---

These should have been centralized years ago. Good plan.

---

Cultivating a culture unique to TAMU is all you need to do to improve marketing. Anyone that says otherwise is trying to sell you something.

---

I think emphasis on a centrality makes the most sense- maybe apart from successful workflow streamlining- from a marketing standpoint. While TAMU does have a particular cultural representation in Texas and the United States in some respects, the directed management of this brand from a central university standpoint seems nonexistent. I think a baseline narrative is a great start, especially to make touted core values as accessible as possible rather than some cultish, elitist standard that requires exclusive buy-in. I also think a framework for representation can go a long way for departments that might struggle with outreach. However, I think caution should be used to not overstep interdepartmental diversity and express relative strengths and opportunities between disciplines.

---

Overall, I think A&M has done well in this regard. When I was there, the old legacy system was abolished and the ten percent rule established. I think the quota system was discarded with an emphasis on student outreach to minority schools. Obviously, by seeing the demographics of current enrollment, this has not worked. A quota system is a horrible idea because it excludes some from attending to make a place for someone who may not be qualified. Instead of going down this path again, A&M should redouble its efforts in outreach and identification of high achieving students, regardless of social/racial identity. Texas high school graduates are less likely to be proficient in the basics. Remedial courses are offered to allow students to enroll. Much like athletics, academics should identify quality high-risk students early, before they graduate from high school and offer outreach courses online and provide current A&M students as tutors.

---

Marketing of the University to attract highly qualified students and to "tell the story and legacy" of TAMU is very important.

---

Why do we not promote TAMU faculty as much as other schools when it comes to being the go-to people when a tv show asks for an opinion. I've seen others interviewed when they want an expert's take on Real Estate (when we have the Texas real estate center) on Texas transportation when we should be the experts. On anything NASA, engineering, architecture, science, veterinary related! We should have our people being interviewed - we are the experts!

---

None

---

I think TAMU does a fine job of Marketing and Communicating

---

Literally, all you had to do was provide a workable link back to the feedback form. So in the sentence "your thoughts on the website form" should have linked to the form. That was like Job #1. Right now the only link in this email is to the report. I'm a 1992 alumni working in Silicon Valley as a content marketer. Super annoyed that I can't even begin to recommend Texas A&M to my three kids (my oldest ended up in Michigan) because I don't feel like you provide present-day career paths. I mean maroon bleeds deep but sort of misguided and really, only to a select few...Do I feel like my TAMU education got me where I am today? Nope. They provided zero options for a liberal arts degree. I was [REDACTED] and spoke fluent Spanish and French. Wanted to proceed with an international relations degree. No opportunities for that. Had to fund my own way to a French outsourced program and then graduated with enough credits just to move along. I became a consultant to Andersen Consulting as a temp because no one would hire me out of A&M with a liberal arts degree. I was wicked at Excel and did well. Met my husband at a project in Lyon France. He ended up starting a company that progressed with an IPO and sold to Adobe now we are very well off and could be pretty damn good TAMU alumni but I have no interest. He is on the board of Berkeley Haas program and I can't honestly provide a single reason why anyone here in the Bay Area should go to TAMU. Mind you, a ton of wealthy Californians are going to TCU because they figured out how to market to these kids. No one can get into California schools and they have SO much money. Do you know who has this figured out? TCU, Indiana, Tulane... It's all marketing. Figure it out. Stop bleeding maroon only in the rust belt and be open to creating market opportunities in the West. Though don't come to me for alumni help... (Though kind of impressed you used Emma as your email marketing

tool. I discovered Emma in 2005). - [REDACTED]

---

I spent my career in Marketing and Communications with Ad Agencies and leading corporate marketing teams. I am now a part-time branding and marketing organizational consultant ([REDACTED]). I have a lot of input for you here, but will start with calling your marketing lead a Chief Marketing Officer, and having all of the "department heads" be VP's (not Associate, Assistant, Senior). There are two key areas - Internal Marketing & Communications and External Communications. Internal covers students, faculty, alumnae, branches/colleges, etc. You could also include speechwriting here. External covers brand, digital (web, social), PR, licensing and sponsorships, events, creative, marketing operations, data/analytics/reporting, and policy/legislative. Some of these appear in the wrong sub-buckets to me.

---

aTm has many Military affiliations from J Earl Rudder. This is why this author was attracted for rehabilitation [REDACTED]. Disability services were outstanding w/ [REDACTED]. Upon completion of a soldier's term, further 4-yr education are offered by the Military. Just as with ROTC scholarships => if academic endeavors are not completed upon enrollment/, attempted, enlistment is required,,! Might this author suggest offering a "Discounted" academic rate to former soldiers/, sailors/ service members) gov't employees?? Maybe even more to former RANGERS? This will encourage former service members to continue/begin their education at aTm? See this author w/ Aggie ring speaking at Syracuse University about his WORLDLY recognized mnemonic technique [Vowels: Mathematical Operations] mnemonicwriting.com. Currently recognized as a Marquis Lifetime achiever after WORLDLY selected >20yrs. Numerous academic Prize\$ are sought. Should they prevail,, money will be given to A&M to put a new BSBE. BSBW, Heldenfelds. & Peterson on WEST CAMPUS. Therefore ALL BIOLOGICAL SCIENCES will be on WEST campus! M. leprae will be cultured for Nobel, #2. Money given to A&M to make Sterling Evans 6 floors all the way back!

---

job well done--lots of marketing and communications for former students.

---

I'm not sure I understand A&M mission/goals for itself and its students. While it has been described at a more conservative, mostly white, mostly WASPy group of kids, what is the goal of the university? Is there anything wrong with being more conservative than UT? Is there anything wrong with being the college of choice for small town Texans? Is there anything wrong with being the best Veterinary university? Even if you have to spend more money on the vet school than you do the Architecture school, is there anything wrong with that? If you want a career in the military, why would you choose any other college than A&M? It would be good to have an overall mission statement, but if you are the best in a particular category, that should be highlighted as well.

---

As a Marketing graduate, this is near and dear to me. It is so important to be decentralized for Marketing Communications, however, as a support function not as a dictator organization. Provide the tools and processes, but do not make it an bureaucratic nightmare for end users. Been there done that, not fun for receiving end.

---

I TOTALLY understand this one. The M and C department does a top notch job on the projects they handle. The rest of the university? Hilarious. I have to go to umpteen sources to find stuff out. Why not centralize it to the main department? I have no reason not to support this. And, use students from the Viz, Arch and Arts programs as interns. Teach them to work before they have to go to work.

---

There has been a distinct culture change presented in the ads during the tenure of the prior President. It appeared as if the University was trying to present itself as less Texan, or more metropolitan. It was off brand and not what has made Texas A&M so special and so successful in the past.

---

Good

---

I rarely see outside of a football game advertisement anything about Texas A&M, our numbers of students are growing but is that the right thing. I applaud the efforts at recruiting a more diverse student body, and more should be done to invite them to the Aggie family, however that doesn't include compromising the values and standards that have made A&M the sought after university that it is. Community based messaging, involvement in more diverse high schools and streamlined "How To Be an Aggie" would help families go through the process of college admission and land diverse and talented students.

---

Streamlining this makes a lot of sense. There seems to be a lot of work done that isn't all aligned.

---

Agree with recommendations

None

N/A

Agree on all recommendations.

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

Texas A&M graduates and employers provide the best marketing available.

no comment

A consistent message is helpful...but only where it is absolutely necessary. It cannot be 15 bullet points long! 3-5 consistent themes is sufficient to guide a large organization. Yes, it should be centralized, but allow some freedom within the organizational units.

There are two parts to Marketing/Comm. One, the Univ as a whole. Two, the Colleges themselves. These are separate and distinct. Marketing from a central source for the Univ will not help me help the College of Science from which I graduated. Tread carefully with this one.

One thing that will turn former students off, is becoming hyper political. Do not sell out like the NBA or any other major company which chooses PC winners and losers, instead of focusing on their original purpose. I do not need the school to tell me how to vote or what nationality I should be appreciating during a calendar year. I want to see that Texas A&M is still a bastion for tradition, community, and creating more "soldiers, statesmen, and knightly gentlemen" and women.

A&M does a decent job with this but still needs more industry relations. It'll never have liberal Hollywood respect so why bother. Make more global industry connections and you won't need Hollywood.

Again talking about marketing & brand. Got a little story for you Ags.....we stopped donating to A&M I believe it was 2013. We were living in South Carolina. Excited to see A&M play in the sec conference there. Guess who wasn't there the Aggie Band. You know why because A&M didn't want to pay for them to make the trip. Now take a look out your window at that stadium. That's disgusting! It's not all about Brand! It's about Aggie traditions, Honor, Students and what makes us different and better! A&M has forgotten that! A&M is teaching crt. That is disgusting. Teaching some Aggies that there is something wrong with them because they are white! Let me note something deceptive on your survey..Texas A&M headed in the right direction..... class 2020 to present - 45% don't necessarily agree 2010-2019 - 48% don't 2000-2009 - 50% don't 1990-1999 - 47% dont 1980-1989. - 46% don't 1970 -1979 - 47% don't Before or unknown - 38% don't Students come to A&M seeking the best of the best in their degree programs, the Traditions, the Honor....Aggies hire Aggies. So quit focusing on tearing down statues, making students hostile to each other based on race as in crt, preferential based enrollment/scholarships based on race and let's just as you said previously in your own survey equal treatment. The unfavorable view of former students has grown! I have cited a few of these reasons in my responses. And it's not some recent growth in racism. Cut the wokeness and get back to a great education A&M tradition experience like no other.

Stop promoting/prioritizing the jab

No specific comments here.

Stop marketing the "tradition" and market the future and preparation for leadership in the state, nation, world.

Agree strongly with all 3 recommendations. The university is now large enough that "message drift" is not just a likelihood, but inevitable. Only through centralizing the functions can this be prevented. Also agree strongly about cost savings as a result of this. The downside: my guess is that as a result of this particular centralization effort, downsizing will also occur. If so, please be as humane as possible in this process and help people find other career opportunities within the TAMU system, rather than just throwing them away.

no comment

I would love to see the department of journalism or communication/journalism form. As a former student who majored

in journalism I had amazing professors and help along the way but the program was lacking. I believe this would help close that gap that the college of liberal arts faces.

Totally Agree

Clearly this is one of the weakest areas of University operation. There is no clear message about A&M and we do not take advantage of the massive audience that views football games on television. The A&M segments on these broadcasts are weak and waste an opportunity to reach millions of potential students and they do not inspire donors.

I think Journalism emphasizing OBJECTIVITY should be pushed. And what about an objective look at social media, its impact and problems?

I've probably covered this in human resources. Communications is important. I have seen A & M's communications. They are more than sufficient. I get Spirit magazine, which makes me well aware of innovation on the A & M Campus. I get e-mails from the college of science. I get plenty of communications from Class agents. I am very familiar with what is happening on the A & M campus, and I do have opportunities to talk about A & M among my friends and acquaintances.

Focus on what has always made TAMU unique- the Corps and the traditions. Emphasize strong academics and student loyalty to the school.

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

I'm not sure any of the recommendations will make a difference.

As someone who works in this space, this seems like a great plan!

Consolidate it.

As above, a lot of time is spent raising money. Cost of the schooling is going up, is that due to loans being freely available to students, therefore A & M can raise prices?

I agree with the recommendations; as social media has exploded in recent years, it is important to take a streamlined approach to ensure that the school's message and marketing strategy is being promoted consistently across all platforms.

Since the College of Engineering has a math evaluation test to assess the math level of incoming Freshmen A&M should send to all of the Texas school districts A 2 or 3 page sample of the questions they are expected to be able to work with out the aid of their smart phones. This way the schools will know what is expected the students to know.

Communication is king. Bigger is not always better.

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

Remember what Texas A&M stands for. The proud history and culture of both current and former students. Being an "Aggie" doesn't need to be "fixed". Aggies help Aggies regardless of racial or political affiliation so do not give into the "woke" mob to appease a small minority with a loud microphone. There are many many Aggies who love this school and all who have made it through those hallowed halls and the ones to come. We are not racist or oppose change, but we do know right from wrong. Don't ever ever forget that in all of the work you do. Remember too that bending to the will of a few virtue signalers today will only lead to more of the same moving forward. Their aim is not to make A&M a better place, but simply to make A&M just another place in higher education that has become an indoctrination factory for the Left.

Would like marketing to be more personal. In the good old days, [REDACTED] in the Former Student's Association employed student workers to call Alums, students, valued guests to regularly get their input, etc. These students told their stories as well as turned in great feedback to the Former Student's Office, etc. Aggies can connect back to A&M in a special interest (Corps of Cadets) for example, in academia or sports. Make it more personal. Have former students

call 10 other former students to encourage attendance/donations , local affiliations, etc. Pass it back, Ags!! It would get done more efficiently.

agreed with the assessment

I think TAMU does this well from what I can tell. I think the recommendations make sense here as well.

I'm about to have two children reach college age. As I dreamed of them becoming aggies one day in the past, I'm now concerned that the campus is no longer a safe place for conservative students. The college's actions on masks, vaccines, asking students to report on other students and other political issues show a clear slant in the leadership of the college. What the hell has happened to Aggieland?

Always stay at low tuition when possible.

Disjointed, political in management and messaging.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED]

Agree on centralization of MarCom.

The A&M legacy, handed down to the next generation, with traditions, all add to a true Aggie experience.

I think one central M&C group is SO much better than different ones. SGA advocated for years for centralization like this and it seemed like we weren't heard. I am glad the firm's recommendations are being taken into consideration. It was hard running from office to office around campus trying to figure out who was right and who was wrong and what the rules were.

## Marketing & Communications - Other

Please provide your comments related to Marketing & Communications:

It never made sense to me different departments have their own marketing personnel when we have a division.

Regarding recommendation 1, it is not certain that centralization will result in efficiencies. That is, the expected particular efficiencies are not described or defined. Are these efficiencies in service, cost, time, etc.? And efficient from who's perspective? Are these efficiencies for the institution, the colleges, the departments, the faculty and staff, or something else? Moreover, the dotted lines in the organizational structure are not defined. What does a dotted line mean? Does it mean awareness or direct supervision or something in between?

NA

TAMU was very slow to communicate what was to be done to mitigate the spread of COVID prior to the start of fall semester. Given that very little was done to mitigate this, perhaps this is why?

Too much emphasis on something not essential to our mission. Forget the BS about cost savings here will allow you to do more over there...

Very nice suggestions contained in this section. I will have to leave final input to the marketing and communication professionals.

Centralization of the Marketing and communications departments will prevent competing messages and allow the

University to market in a cohesive and unified message.

The role of strategy and analytics needs to be elevated. Otherwise MarCom is action without results and remains the mess we have today.

none

As the [REDACTED], I want to provide the following feedback and information about the Libraries Marketing: The Libraries has centralized and embedded the Libraries Marketing and staff within all aspects of our operations, project management, and organization. We have found this model to be highly effective and efficient and we are consistently praised for our compliance by University Marketing & Communications. Removing them will affect the efficiency and effectiveness of how we provide our services, programs, and initiative to students, faculty, and staff. The University Libraries has centralized all marketing operations to one core embedded unit within the Libraries. This small team creates all our social media output, our printed brochures, internal signage, branding, mass emails to campus, marketing strategies, and our website. Much of their work is focused on marketing to our students and faculty. This centralized model allows the Libraries to ensure that we are compliant with the university's requirements and expectations on all facets of our marketing and social media needs. Due to the services, programs, and initiatives that we provide, our Marketing Team is constantly dealing with last-minute requests, changes in programming, alterations of the website, or signage needs. Being housed within the Libraries is critical for them to help us provide professional and timely information. The University Libraries website is not a typical college website as it is built around our electronic library catalog which navigates users through our materials, resources, initiatives, services, and programs. The Marketing team has an integral part of the web governance and web ecosystem model that we have developed to maintain the website in an efficient manner that follows University branding.

Strongly suggest coordinating marketing and communications to a single outlet....A&M's brand name is known internationally and is valuable. It is very important that all messages going out from A&M carry a common message and tone.

As a [REDACTED]

[REDACTED] I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

No comment.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

Need to speak with one voice.

"TAMUG is unique, especially for license option students. The license option programs' purpose is to produce knowledgeable merchant mariners. I hope the centralization of marketing, communication, communications, and increased collaboration with College Station's Student Affairs & Office of Diversity does not lose sight of this uniqueness & purpose. Bigger is not always better." Personally, I do not like the current trend to take Galveston, Sea Aggies, etc off flags, etc on the Galveston Campus. Maritime Academy and License Option majors are and have been known worldwide

as "Sea Aggies." Changing this is leading to confusion.

---

Yes...!

---

N/A

---

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

---

With everyday average people buying a camera and running I-Movie editing software already built into their Mac, everyone has the capability of "marketing & communications". I say all Marketing & Communications get outsourced to a small agency of media professionals and that be it.

---

More emphasis on the need to market to more ethnically diverse groups for faculty and student recruitment

---

My only comment: way too many communications. I don't know enough about marketing to comment.

---

A unified marketing approach is needed from TAMUS as a whole, many people in public sector work think TEEX and TAMU are one in the same. There needs to be a concerted effort to work on collaborative programs and marketing for all system members, institutions, and agencies.

---

Agree

---

target the spend to move the dial on strategic growth areas in the University

---

We need to increase the awareness of our University's excellent standing.

---

Will consolidation of Marketing and Communications mean that websites are taken away from departments and colleges (and, most controversially, faculty)? This is likely to be received very poorly by deans, department heads, and individual faculty.

---

The Marketing and Communications need to be aligned and combined for effective communication in and outside to share the organizations story.

---

Fair

## Q48 - Please provide your comments related to general feedback, process, or other sections not listed above:

### General Feedback - Faculty

Please provide your comments related to general feedback, process, or other sections not listed above:

I am deeply concerned, and disappointed with, how this whole enterprise is taking place. Let me offer them as bullet points: --No faculty or deans had any idea this was taking place. This is absurd. We are the people who are on the ground. We know about colleges, research needs, structural problems, etc. There was no effort to get our feedback. In fact, it appears that there was a concerted effort -not- to get faculty feedback. I fear, in the end, that this process has so angered the faculty--many of whom like the idea of some kind of structural change--that faculty will be defensive about the rest of this proposal as well as other initiatives. Frankly, I now feel that way. Shared governance only works if both parties agree on its function. This proposal was an endrun around fproject from start to finish. aculty governance. Any potential institutional change that involves academics should go directly to the Senate and the whole faculty first. Faculty should have been involved in crafting the charge before it left the university. If this administration is not interested in shared governance, it should inform the faculty as welll as the Senate. There is no need to play games. Finally, this report is filled with wrong assumptions, factual errors, mistakes, horrendous methodology, misguided leaps in logic, and a complete ignorance of the institution and its history. It reads like a graduate student's master's paper, and if that student were mine, I'd send it back to them with comments that made clear its problems. If that consulting company really wanted to do something productive, it would have spent six months -on campus- actually talking with people about their concerns. In fact, that seems so obvious that it's difficult to understand why that wasn't the plan. And that brings me back to my previous comments about the role that faculty (and students) have played in the in this process. Now there's s no trust, and that's a horrible way for anew leadership to begin.

I did not get any reminder about the 5 pm Monday deadline so I had to rush this. I would have had double the input. But it is now 4:58

Reference: The Center for Health Systems & Design Report reference: Page 37, Rationale #9C The department offers minors in Art and Architectural History, Sustainable Architecture and Planning, Architectural Fabrication and Product Design, and Architectural Heritable Conservation in addition to a variety of interdisciplinary certificates. I want to bring to your attention a significant underestimate of value in the statement above. The Center for Health Systems & Design (CHSD) is more than just the home to one of the "variety of interdisciplinary certificates." It is true that the CHSD offers an interdisciplinary Certificate that has been earned by around 400 graduates, but it is so much more than that. In a management report that goes to great lengths to emphasize that the College of Architecture could/ should have done more to elevate its reputation or position or ranking, it is important for the university leadership to understand that this Center is World Class, easily arguable as the best program of its kind in the world. • The CHSD represents what has long been referred to as the world's largest collection of resources in the field of design for health. • The CHSD offers what many will argue is the finest program of its kind in the world. The international draw of the program for foreign students attests to this truth. • The CHSD has built a formal network of representatives from every Dean at TAMU into an Academic Circle to advise the CHSD on interdisciplinary study and research possibilities. • The CHSD has built a network of Faculty Fellows representing every college/ discipline at TAMU in order to be able to offer virtually unlimited study and research options in studying the impact of design on health. • The CHSD maintains a group of industry leading firms which support the CHSD financially, some of which have elected to enter research relationships with the CHSD and TAMU to enhance their roles as thought leaders in the industry. • The TAMU Library Sciences nicknamed this program the "pilot of the future of TAMU research organizations" because of its comprehensive interdisciplinarity and its bridge between the academy and practice. • The CHSD is the home of the Secretariat for the International Union of Architects – Public Health Group (UIA-PHG), a global network of design for health academicians and practitioners who care about design for health. • The CHSD Director is also the global Director for the UIA-PHG, a position he will hold until 2023, and which will further accentuate the position of global leadership in this field by the CHSD. • At the urging of the global Director of the UIA-PHG and the Past President of the UIA, the UIA has declared 2022 as the Year of Design for Health. • For a full year in 2022, and for years thereafter, the UIA and other nations around the world, will shine a spotlight on this

design specialty, and the CHSD will be prominently positioned with a very high profile in the middle of this international spotlight. Report reference: Page 37, Rationale #9c - continued The CHSD lives half in the College of Architecture (COA) and half in the College of Medicine (COM). The Director has an appointment in each. Joint activity between the two colleges is at an all-time high. • The CHSD is working with the COM and the COA to make sure that medical students can earn the CHSD Certificate in Health Systems & Design. Architecture students are the most common graduate students to earn the certificate. • The CHSD is working with the COM to develop a rich menu of continuing medical education content that will distinguish the TAMU COM from other medical schools around the country. • The CHSD is working with the COM to develop a dual degree program within their MD+ emphasis that will combine the MD degree with a customized COA degree that is being proposed in the current cycle of new TAMU degree proposals. • The CHSD has committed to developing with the CHSD a joint research agenda that will focus on the duality of the disciplines. • The COM is working through the above issues with a view to making one or more “announcements” of new program offerings in 2022, the Year of Design for Health, to further differentiate the TAMU COM from other colleges of medicine in the United States and around the world. The COM, with the CHSD, is rapidly building program content of distinction that will differentiate it from other medical schools around the country and the world.. While it is true that the CHSD offers an interdisciplinary certificate: • IT IS A WORLD CLASS TREASURE FOR TAMU, bringing distinction to the university and the architecture and medicine programs relative to other programs from around the world; • IT IS BUILDING A WORLD-CLASS PLATFORM WITH THE COLLEGE OF MEDICINE AND THE COLLEGE OF ARCHITECTURE, creating an extraordinarily powerful, and we believe UNIQUE, blend of disciplines in the sector that represents nearly 20% of the US Gross Domestic Product. Failure to acknowledge this world class excellence, a trophy of pioneering academic distinction in architecture and medicine, and to not celebrate it, and to characterize it as one of “a variety of interdisciplinary certificates,” is a gross misrepresentation of an asset of extraordinary value. If the university wants to further develop the College of Architecture “to become the best in the nation with unmatched impact,” and acknowledges that this “will require investments in new faculty and an innovative education and research facility by the university administration,” it would do well to include in its investment plan the CHSD. Perhaps the most amazing aspect of the CHSD success story is that it has achieved this world class standing on a relatively thin budget, and is constantly “at risk” from diminished funding for faculty support or other budget vulnerabilities. Having demonstrated its ability to take a lean operation and achieve a world-class reputation, growing the CHSD is precisely the kind of program investment that TAMU can make with clarity and relative security. The report language that points to the COM as another potential recipient of resources to grow its program and reputation, aligns well with similar language for the COA. I strongly recommend that the CHSD, a joint initiative of the COA and the COM, be designated additional resources for growth, adding both breadth and depth to its well-established worldwide reputation in the field of designing for health.

---

I think for many of the recommendations related to the library, more in-depth research is needed related to our true peers and the market for library schools before decisions are made.

---

My overarching thoughts from the report is that I do not clearly see information here that I can say will definitely make research or teaching better for me. I see potential for some harm to both of those, but do not see a something that I can absolutely see as an improvement. With research and teaching as our mission... I am concerned.

---

lots of good in the report - i based input on holes/questions within the report. I realize the importance to our president that we want to be the best - this is incredibly reassuring for the future of our University. Extremely encouraged to know the depth our president is going to elevate our University. Appreciate the opportunity to provide feedback. I hope to be a part of the success of this University with the President as she moves forward - it is a grand idea and a huge undertaking. I appreciate that it was looked at by an outside unbiased entity. i am just not sure if they really took the time to know us and to talk with enough people to know us. My goal is to be a part of this university going forward, i love that President Banks wants to elevate us to the potential we have, i look forward to working to achieve these goals and to make all ideas that are moving forward to be the best ideas and to make sure we are all successful. Thank you President Banks to your commitment to our grand university

---

Generally there are some amazing recommendations and if implemented well could be transformative for the university.

---

Metrics are a constant battle and can never be one-size-fits-all. We are producing scientists and artists, not making french fries. Efficiency through centralization is NOT a fundamental truth: over-centralization actually leads to LESS efficiency, because the staff providing the service lose all perspective about the particular issues a particular department faces. So we should not blindly centralize everything. Most importantly, faculty require support and independence. True innovation comes from freedom, not through micromanagement or additional useless bureaucracy.

---

The ideas are bold and I appreciate that. The implementation, though, needs to be measured, deliberate, and data-driven in order to realize the gains that were claimed and/or just assumed in the report. Staff need to be protected during the implementation of these plans as they are the most vulnerable when converging units. Finally, benefits to students should be discussed in more detail as that was not clearly articulated in the report (claims were made with no direct evidence).

1. One of the concerns I keep hearing from faculty is that the process itself is flawed. Problems should be identified from below and solutions should be a two-way process. The report appears more like top down solutions looking for justifications. Of course, the President has ultimate authority to reorganize the university; some of these proposed organizational structures are strongly centralized. They may not work as well when future Presidents lead the university. Change is never easy, but amidst the greatest public health crisis of our lives, the faculty are already dismayed with a lack of influence over our working environments. Faculty morale is at a historic low, and the lack of meaningful consultation towards the academic future that this report is addressing is hurtful. 2. The report itself is full of errors and contra-logical assumptions. There's no evidence that different organizational structures are better or worse, but anecdotally presented as herd mentality group think. The peer institutions list is odd: the other large institution in Texas is left off and U. San Diego, which is a quaint religious school overlooking Seaworld is on it.

"Centralize the Information Technology, Human Resources and Organizational Effectiveness, Facilities, Marketing and Communications, and Finance units across the university to increase effectiveness and clarify responsibilities." - What does this mean for the TAMUG campus? We need to have these folks on our campus as available resources as well for day-to-day operations. We already have various issues with the disconnect between TAMUG and TAMU. Have these services based in CS is not conducive for TAMUG operations. DEI review - The efforts mentioned in response to DEI efforts are extremely poor and inadequate. Efforts to recruit need to be focused heavily on recruiting members of historically underrepresented minorities and marginalized communities of people. Stating that efforts need to be focused on the "development of the whole student" is not enough. We need to increase representation and resources of members of underrepresented minorities and marginalized peoples. We need more efforts and resources devoted to DEI work at both TAMU and TAMUG. This should be a priority of focus for all campuses.

The above is a really unhelpful set of categories for people to provide feedback to. It prioritizes organization over the various cross-cutting themes in the report. This is not how most of us experience or understand the university. • Nothing about research is mentioned in the report, which is a principal mission of the (R1) university. This is completely baffling. Equality, Diversity & Inclusion • Should EDI be centralized? What are the rationales (they cannot exclusively be about saving money – because that is often a false economy, detracting from the mission areas, e.g. advising, see below). • In the prospective reorganization, EDI should be housed in the office focusing on student success. EDI has cultural aspects but conceptualizing it as primarily cultural is wrong, and ineffective. No literature on this topic suggests that minority students' outcomes will improve without a focus on more substantive issues. • EDI is not linked in the report to faculty, staff, grad students or research, only to UG students (p.24). This seems to indicate that EDI has been demoted from being a university-wide goal to one focusing on UG students alone. Moreover the ambivalence captured in the interviewees' responses reflects well-documented reluctance to tackle inequalities through specific policies in the general public for decades. These attitudes are not specific to A&M, or even to the outcomes of such policies. They are a measure of a particular way of thinking about diversity (ie as a 'cost' that is not worth paying). • For a forward-looking document, why is there no engagement with HSI status, when A&M is a percentage point from qualifying for this status? My fear is that in all areas the level of service will fall and the cost will remain the same or even rise. Consolidating services sounds great on paper but the benefits often don't materialize in fact they have the opposite effect. In class my teaching philosophy is: "the difference between practice and theory in practice is much greater than the difference between practice and theory in theory" If the goal of all this is to make education more affordable for the students (ie, a significant reduction in overall student cost) then maybe sacrificing quality is justified. If however tuition and fees are remaining the same then I believe this plan is a grave disservice to students.

I don't think academic advising should be centralized. I agree there should be some type of consistency across the board for all advisors to follow, but I think there are too many specifics with each major that advisors should stay with the department

Two aspects of the process seem particularly concerning: the lack of a thorough consultation with faculty and individual units (as many misunderstandings in the report show) beforehand, as well as the fact that a set of administrative changes seem already well on their way without clarity for the role that individuals' feedback and faculty governance organs will actually play in them. The College of Liberal Arts just went through the work of creating a new Strategic Plan

seeking the input of the whole college, so I hope that such plan would still come to play a role in the immediate future of the university.

This whole process has been the least transparent thing I have witnessed in my 12 years as a faculty member here. When were the mysterious surveys sent to faculty? What context for the survey was provided? Were they sent to all faculty? Or were only certain faculty selected for the survey? If so, on what basis? I haven't talked with one faculty member who has any knowledge of these surveys. The entire report reads as if MGT was given the task of conducting "research" to reach foregone conclusions dictated by the chancellor, board, and president.

The survey sample for making a series of life- and institution-changing restructuring decisions was incredibly small. The general sense is that the train is already in motion. I am hopeful that the stakeholders will get more input at the implementation stage than we had at the proposal stage.

The thing I find most troubling about the Report is how poorly issues of Diversity, Equity, and Inclusion are addressed. Between the elimination of the current chief diversity officer position to the downplaying of DEI issues -- especially in the faculty ranks -- based off of questionable survey data, I'm genuinely worried as a Latino professor whose scholarship and teaching are centrally focused on issues related to DEI. Despite being an institution recognized as an Hispanic-serving institution by the Hispanic Association of Colleges and Universities (HACU), the university and the MGT report in particular seem uninterested in growing or supporting that Latino undergraduate student population (and the faculty and staff that are the key to retention) that undergirds the public push for HSI we've been engaging in for some years. I have a hard time understanding (even from a basic mathematical perspective) how TAMU will maintain or grow its enrollments without doing a better job of serving Latino undergraduates, faculty, and staff -- especially in a state where Latino students make up about 50% of graduating high school seniors and at an institution where the growth of the Latino student population has been a key factor in our overall student growth for the last 20 years. With the structural changes related to DEI in leadership and the continued ignoring of prior review's (like the Student Success Initiative) recommendation for a Latinx Student Center, I'm seriously starting to wonder what place I can ever have here.

In conclusion, many of the recommendations are towards greater efficiency from a numbers point of view. The issue that confronts students and faculty and staff is that TAMU is so large and decentralized because otherwise there is no accountability. Centralizing certain functions will make the sheer numbers of students seeking to be advised into 100s of different majors such an overwhelmingly complex set of tasks that there will be system overload. No advisor can understand every major or even all the majors in a single College. For many students, their assigned academic advisor is their link to their major, their future and their success. I cannot imagine the URPN and LAND undergraduates having a better advisor than [REDACTED]. Those of us who work with Janet appreciate her interest and consistent attention to our students as people and aspirational future professionals. The 'inefficiencies' that the MGT report cites are typically due to lack of accountability at a local departmental level and/or poor College leadership. Centralizing functions such as advising sounds like a money-saver in terms of salaries but not in terms of localized accountability. If the President and Provost Insist that Deans and Associate Deans become better-trained in management of personnel and processes then the identified 'inefficiencies' will begin to disappear.

Context and Point of Reference To provide context and as a point of reference for my formal response to the MGT & M+CG Report and feedback, I would like to highlight four different perspectives: • [REDACTED]

[REDACTED] I have interacted with all college and school deans at TAMU, from the time there were 10 colleges and the libraries at TAMU, and subsequently, through the merger with the five colleges and schools of the Health Science Center (HSC) and the addition of the School of Law (SOL) in 2013, to the temporary addition of the School of Innovation (SOI) in 2017, which closed in 2021. Furthermore, I have interacted and collaborated with most of the agencies within the Texas A&M

University System – TAMUS (including TEES, TEEX, TTI, AgriLife Research, AgriLife Extension, Forest Service, and most recently, TDEM). Finally, I have had the honor of serving: (1) In 2021, as [REDACTED]

[REDACTED] to almost 6,350 students. Then, in 2021, I decided to start teaching again, and since January, I have [REDACTED]

[REDACTED] Additionally, in the Spring Semester, I was a [REDACTED] and currently as an instructor in a Hullabaloo U. first-year seminar on "Sustainability." • Funded Research and Engagement Perspective – Since 2006, I have been leading efforts in seeking funding for multi- and interdisciplinary activities across the various Colleges at TAMU, and across various institutions within TAMUS, and have been involved as a Principal or Co-Principal Investigator in 11 research, education, and engagement projects (approximately \$1.96 million in total funding from various internal and external sources). One activity stands out: I have been, and continue to be, responsible for all the programmatic, financial, and personnel aspects related to programs, projects, activities, and events targeted at children, young men and women, adults, and the elderly, and for the communities in which they live, associated with the Colonias Program (COLP). COLP was created in 1991 as a mandate from the Texas Legislature to address the needs of the "Colonias" along the Texas/Mexico Rio Grande border (i.e., low-income settlements with dirt roads, no water service, no sewer service, within which the community has very limited connection to the outside). I have provided leadership and management oversight to over: (1) over \$7.7 Million in legislative funding from the State of Texas, combined with university funding, in support of the infrastructure and administrative operations for COLP; and (2) over \$21.4 million in funding secured from a wide range of other sources in the public and private sectors, in support of over 60 projects benefitting residents of the Colonias along the Texas/Mexico border.

The report has to mention what are the cost and benefit of each recommendation.

The focus on supporting faculty and staff is refreshing. Please continue to include us in decisionmaking and implementation. We know TAMU better than anyone, and we are committed to our jobs, colleagues, and students.

The methods of the report were concerning to me as a researcher. The report's primary research was not particular robust, so it focused on what other institutions were doing without enough actual research into what Texas A&M does and has done. While this is a good place to start, the recommendations appeared to be more based on that information and what would look "prettier."

As a [REDACTED], I take pride in what I do every day at Texas A&M University, the efforts we put in as a team, as much as I truly love my workplace. In this input, I want to emphasize that the autonomy of the Division of Sport Management needs to be protected, regardless of its placement, which will be directly impacted by the reformation of the Department of Health & Kinesiology (HLKN) and the College of Education and Human Development (CEHD). From an inside perspective, being located in HLKN & CEHD, I was shocked by the ignorance and misrepresentation of HLKN in the MGT report. The MGT report criticized the structure of CEHD and HLKN and specifically suggested to "Consolidate the Department of Health and Kinesiology in the School of Public Health" (p. 38). As Texas A&M University is not just an Agricultural and Mechanical University, however, there is much more in-depth to the structure of HLKN which houses the Division of Sport Management along with the three other divisions. Division of Sport Management houses 19 faculty members (10 tenure track; 9 non-tenure track), more than 600 undergraduate students, more than 150 master's students, and 14 doctoral students. An internal report of "Sport Management Benchmark Study" in 2018 reports that our Sport Management faculty ranked highest (among Sport Management programs with doctoral programs in the US) in (1) Average Publications per Faculty Member, as Listed on CV; (2) Average Presentations per Faculty Member, as Listed on CV; (3) Average Publications per Faculty Member, as Listed in Scopus; (4) Average H-Factor per Faculty Member, as Listed in Google Scholar; (5) Average i10 Score per Faculty Member, as Listed in Google Scholar; and (5) Average 5 years i10 Score per Faculty Member, 2013-2018, as Listed in Google Scholar. As Sport Management is an interdisciplinary area, Sport Management programs across the nation are housed in various units such as business school, college of education, kinesiology, liberal arts, et cetera. Nonetheless, it is very clear that it is NOT where the Sport Management is located that determines the strength of the program but it is

how they perform and how their performance is appreciated in their university environment. Wherever we were located, our program has always been collegial members of the unit and outperformed nationally. To be blunt, our steady revenue stream, coming from strong enrollment numbers, has been a target of the overarching units that tried to take advantage of us. I strongly advocate that the Sport Management program should be protected as a self-standing department regardless of where it will be placed by the administration. To conclude, we need our Tenure & Promotion processes, annual evaluations, and student enrollments (UG, MS, PhD) that we've built to be protected. Thank you for your time in reading this input.

DEIC (Diversity, Equity Inclusion and Climate) are everyone's business and should not and can not be delegated to one unit. Finally and probably most importantly, the methods, data and analysis used in this report were entirely questionable, unscholarly and in some cases pulled from other reports.

1. Increased transparency and accountability should be required in all areas. 2. "Matching the demographics of Texas" is not possible in many disciplines, since there are not enough minority Ph.D.'s, and should not be pursued to the detriment of "best and brightest." Otherwise, some engineering departments would have to fire a third of their faculty because they have too many Asians compared to "the demographics of Texas." 3. Centralized undergraduate advising will be less effective for STEM students unless actual faculty are also advisors. It's hard enough for an advisor from, say, a civil engineering background to place a student in the proper math or computer course so the student will succeed and be able to apply the course to a different STEM major, much less a random advisor with a liberal arts background (and vice versa).

In general, this report seems to have been written with little-to-no research done into the history of TAMU and the Departments within it. The recommendations made are regressive, and would culminate in negative progress. For the changes recommended at the departmental level, the University must be prepared to support development with resources, personnel, and finances. This feedback was touted as being anonymous. It is therefore of concern that the entry question asked for my name, UIN, and position. This does not support your claim of respecting anonymity.

In connection with my role as [REDACTED], I, along with the [REDACTED], prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

Many of the IT, HR, etc. changes, I do not have enough knowledge to judge the viability of these proposals, but I am in favor of more efficient organizations and policies here. As with all of these changes, I would love to hear more arguments beyond the report that are backed with stronger evidence, address stakeholder concerns, and make it clearer what the benefits of these changes would be. A timeline that allows that space to discuss and integrate any changes moving forward would be imperative for allowing for that deliberation.

For a report of this scope, it would have been beneficial to include a more direct discussion of specific issues/problems that this analysis is attempting to address. A major theme of this report is the idea of 'consolidation.' While consolidation may have benefits in specific instances, there is always a cost involved. I was disappointed to not see the potential costs highlighted as well as the potential benefits.

The report is so flawed as to be unusable. It followed no proper procedure of fact-finding, research of the institution, its traditions, and its strengths and challenges. It is a sweeping, uniformed, and impractical plan, whose benefits are unclear and whose cost is not factored in any way into its recommendations. If applied it will be a \*huge\* drain on resources, will distort the operations of multiple, nay, all units on the campus, and it is so massive it is sure never to be adequately completed. I understand that President Banks needs to make a splash on the national scene to be able to use TAMU as a springboard for her next job, but if she goes ahead with this plan, the far-reaching and crippling consequences will be immediate, too quick in fact, for President Banks to skip town before the whole thing collapses. Not only is it a bad plan for A&M: it is also a terrible idea for Dr. Banks herself. On the process: (a) The report was sold first as merely an 'administrative' review, that would result in potential savings and greater focus on the teaching and research missions. That was a brazen lie, as we found out when the FOIA request was made, and a copy of the contract with MGT circulated. That's when we discovered what we in fact knew all along. That Dr. Banks had a very clear agenda, that MGT was there to rubber-stamp it, and that the 'administrative' review was in fact a consolidation of the units with no interest to Dr. Banks, that is, those that do not (a) make money; (b) study money; (c) attract money; in other words, the units whose function is merely to do trivial things such as form citizens, focus on basic science, truth, that sort of thing, so not in vogue with today's BOR. (b) The report was slapped together with no actual consultation of faculty in matters of their expertise. MGT, whose actual credentials, both field-specific and administrative/managerial are murky, simply

circulated a superficial, ill-conceived, non-specific set of questions, with a \*Likert\* scale, and that was the extent of the feedback we were asked for. No deans were interviewed; no provosts, no administrative staff, no faculty, no students, graduate or undergraduate. On the findings: (c) Predictably, the report recommended a set of changes with no obvious benefit, including the reinstatement of programs that had been cancelled in the past after thoughtful consideration (Journalism), or the reversion of changes that had been made following earlier recommendations (Performance Studies). It recommended merging units on what seems basically the words in their names (Political Science to the Bush School, because President Bush was a ... politician?). (d) The gist of the changes is a song whose tune we've come to know in the past two decades: centralize, centralize, centralize. The word 'centralize' appears over 70 times in the report, because apparently, the best thing is to have a handful of people make all decisions for everyone. This worked so well for the Czar. (e) Of those changes, there are several that are so terrible, so inimical to the function of the university, and so retrograde that they deserve special mention: (e1) The demotion of the VP for Diversity to a decorative outreach role, as if the university didn't have its substantive set of internal diversity issues that need constant tending. (e2) The demotion of the Libraries to a department within a college. This is truly outrageous. The best of our colleges, a true jewel in the crown of our institution, to be moved from its rightful perch atop our institution to a department. I have no words. (e3) The merger of Liberal Arts, Science, and Geosciences, with the excuse that 'other institutions do it too' is ludicrous, and meant as a cost-cutting measure meant to lump together all the units Dr. Banks and the BOR believe are useless, because they don't generate anything that can be patented and sold. Like knowledge of voting rights, for example. In their wet dream, this leads to a Hunger Games scenario, where these units fight for smaller and smaller funding, while the BOR buys tickets to watch the carnage. (e4) The dismemberment of units out of colleges and into new colleges, with no actual plan to absorb the cost of moving, remodeling, and rearranging the physical space, and no consultation with the faculty therein. This, while we are told we the university is about to spend millions up in Dallas. Because, yeah, savings are important. (e5) Pie-in-the-sky ideas like an Arts College, when Performance Studies was told earlier to dismantle its music and dance programs. Are MGT aware that to create a college requires a massive investment in hiring and retaining faculty? They don't seem to. (e6) The proposal to consolidate advising, a death knell to small and/or complex programs that need dedicated knowledgeable advisors to keep the majors engaged and on track. Gee, why don't we buy our wedding rings at Walmart, while we're at it? (e7) The disbanding of the DOF, a unit that is currently the only Human Resources office for faculty, and which acts as a necessary counterbalance to the higher levels of administration. This semester already, we have seen what a mess this has caused, in a headless unit attempting to do reviews of faculty development leave. I shudder to think how T&P will go this year. And future years. (e8) Nary a word about how these changes will be implemented and funded. Of course: implementation will be someone else's problem. It will be done on the backs of faculty, staff, and at the expense of students. But by then, MGT will have cashed their check, and Dr. Banks will be shortlisted for other presidencies at other universities. I sincerely hope she finds her dream job before she destroys mine.

---

Why did Texas A&M University outsource strategic planning to MGT? Doing so, clearly, served to cut out the faculty. University leadership should not be under the illusion that this opportunity for the faculty to provide feedback on the MGT report compensates for cutting us out. We know A&M, both its strengths and weaknesses, better than MGT. Sidelining the faculty is no way to build faculty support or buy in for far-reaching proposals that will dramatically alter how business is done at A&M. This is no way to run a university. Our new president is no amateur. She knows that little can be accomplished without faculty support. Even less will be accomplished with active faculty opposition. Why has our new president, who has exhibited such promise, chosen to alienate the faculty at the outset of her presidency? A&M's reputation rests on its faculty. That faculty is here by choice. Faculty can, and will, elect to go elsewhere. Our best, of course, are the most mobile. Some of us have exit plans at the ready. The attractions of Aggiestan shouldn't be expected to keep us at A&M. The apparent plans for the Bush School are particularly misguided. The MGT Report had many positive things to say about the Bush School. Unfortunately, the strengths of the Bush School will be seriously undermined if the MGT Report's proposal to integrate the political science department into the Bush School is adopted. The Bush School, from the start, has prepared its graduate students for careers in public service. It has been quite successful in pursuing this noble mission. The Bush School's research enterprise is focused on the application of theory to practice; it is problem driven; it is about how to determine what is to be done. Political science prepares its graduate students for careers in academia. The political science research program is focused on the development of theory, with little if any regard to the application of theory to practice and the determination of what is to be done. Political science as a discipline has gone off the rails. Many Bush School faculty educated as political scientists came to the Bush School to escape political science and its deeply embedded dysfunctionality. Forcing a mediocre political science department upon

us would be a betrayal. That is not what we signed up for. If the president wants more from the Bush School, if she wants to build on its strengths, she should engage the School's faculty in, for instance, a discussion about how best to develop an undergraduate program, or craft a public policy and/or public administration PhD program. The president would find our faculty most receptive to a constructive discussion on these fronts. Forcing political science upon us would be counterproductive. It would not be a constructive way to proceed.

I understand the need to centralize business policies and procedures such as that of University Payroll, HR, Facilities, and Student Affairs. I do not understand, from this report, where such centralization warrants merging colleges such as the College of Liberal Arts with Science. It seems that TAMU would be better by focusing on one centralization at a time. Measure that centralization's success and then consider colleges or other areas, but trying to focus on everything at once seems more problematic than it might be rewarding.

Each new administration makes changes to the system. So this is nothing new. we survived and thrived in post PwC Report and we will do the same now.

To start with, I was surprised that the MGT report didn't have much positive to say on the way things are being structured and organized now. The current structure evolved over decades, with progressive and thoughtful steps on how the performance of this University can be improved to stay competitive with other state universities in the USA, and yet affordable to students (or rather their parents). While I agree that the University suffers from too much administration, this is not going to be solved by consolidating numerous entities while burdening the faculty with the same if not more administrative work. The latter has increased substantially over the past 27 years since I started at TAMU as a faculty member. The added type of (self-)administrative duties consists mostly of mutual reviews in the form of assessment reports, of rubrics, of over-extensive promotion package reports, of numerous and repetitive train track assignments, of forms of all kinds to be filled when involved in international collaborations, and so on. All this takes precious faculty time that could otherwise be used to advise students, to prepare better for class, to work on publishing peer-review papers, and to work on getting research proposals funded, which are all deliverables by which a university and a faculty member is getting evaluated. Having said that, I don't want to speculate on how many faculty work days have been spent so far on the discussions and comments on the MGT report, not to mention how much faculty time would be spent if the proposed measures were actually getting implemented. Another problem I have is the pace with which all the proposed measures are supposed to be implemented. Most involve major changes, a lot of which have not been thoroughly discussed and thought thru. Major changes of this sort should be implemented gradually over a timeframe of at least 5 years. One should also first test how a new implementation works before setting things in stone, and changing other entities simultaneously. More specifically related to the merger of the Colleges of Geosciences, Science, and Liberal Arts: merging the first 2 makes sense, but adding the latter to it not at all. Also, Biology would belong to the College of Science (as does Physics and Chemistry). The impression I got is that the pillars of TAMU are to become Agriculture and Engineering, and the rest just some secondary entities. While this is what A&M stands for, it does not comply with what is expected of a modern, diverse, and (inter)nationally renowned University. Thanks to whoever makes the effort to read this (among the thousands of other such comments).

Please do not allow admins to make decisions on centralization alone, please please ask them to get input from constituents that the centralization will affect directly. Also please do not allow non-academic people to decide what is best for students or faculty. Get input from faculty and staff directly working with students and let them chair the committees for making implementation decisions.

Thank you for allowing extra time to review the report and to provide feedback

Overall, I think the report provided a rather skewed analyses of the university operations. Why change is always good as we are constantly evolving, the report in my opinion was not thorough enough and it seemed rushed given the recommendations that it is proposing. Also there was not enough sensitization to the overall university community about what the purpose of this study was. Majority of the respondents were former students which should also tell us that the current population may not be best served with their previous outlook. Holding university wide town halls in addition to links for survey would have been a better way at getting feedback. Additionally, people are jaded, we are still in a pandemic and having gone away from the university for over a year, our perspectives are different as the system was not built for an online environment despite the adjustments. This is something that should be factored into how people would respond to online surveys so some unperson town halls would have helped the process. Decentralization is not often a bad thing, in fact most governments around the world go on bragging about how decentralize they are, as a means of being more effective and efficient, but the report paints a negative image of decentralization and cast it as

something bag. However, it doesn't provide for us what an ideal method is except for that, things should be centralized. Centralization often results in slowness and creates even more inefficiencies because of the slow bureaucracies it creates. Speaking of inefficiencies, the report fails to describe to us what inefficiency is and what an efficient system is. It felt that these points were just assumed for the reader. The universities used for comparison are not peers to TAMU, we are larger than most. More importantly, rather than try to be like everyone else, why don't we strive to be something unique that others would see and want to copy. This seemed like we are followers rather than true leaders.

As [REDACTED] I have talked with or heard from dozens of faculty members since President Banks announced she was seeking recommendations from a consulting firm for an administrative reorganization. The following is a representation of the majority of faculty who have interacted with me in one form or another: The Process There are two major issues of concern over the process in which these recommendations were developed. First, based on the way the charge to the consultants was described as administrative in nature, there was a widespread belief that proposed changes would not significantly impact the daily academic lives of faculty. The proposals to merge colleges, move departments, create new units, break apart the provost's office and realign the dean of faculties office do affect – for many people, dramatically – their academic lives. That leads directly to the second issue: Faculty would have liked to have been involved in the discussions earlier and in a more meaningful way. No faculty member I have talked to is opposed to bold, far-reaching initiatives. However, they all believe there is tremendous expertise on this campus and faculty should have been consulted more openly and clearly on these major points. Widespread Concerns There are a number of concerns that have been expressed by faculty across campus. ¶ Significantly reducing the scope of the provost's office is likely to have long-term, negative effects on the core academic mission of Texas A&M University. In many of our peer institutions, the provost oversees the full academic mission of the university and is the clear No. 2 official at the university, and we are concerned deeply about deviating from that successful model. ¶ While it may be an admirable goal to elevate the dean of faculties position, many faculty do not see it that way. Since that position is deeply involved in the promotion process for all faculty, whether tenure track or academic professional track, faculty believe it should be closely aligned with the provost's office. To move it without clear guidance for how the promotion and grievance processes will be handled and to what degree the provost will be involved in those processes is problematic. Furthermore, faculty believe they should be involved in the search for the person to fill a position so critical to their well-being. ¶ Faculty have grave concerns over the potential consolidation of advising. They believe the degree programs at this university are far too complex to remove the close links between departments and their advisors. ¶ This university has had a difficult time convincing its stakeholders that officials truly care about diversity, equity and inclusion. Many faculty believe that moving the vice president for diversity to a new position in the organization chart as recommended by MGT sends exactly the wrong message. The position needs to be clearly elevated to underscore the importance of DEI in all parts of the university. ¶ Moving the libraries to a college would have profound impact on all faculty across the university. Conversations with faculty reveal just how important the librarians and the facility are to their teaching and research endeavors, and they have concern that such a move would upend that relationship. Personal concerns [REDACTED]

[REDACTED], I want to speak for myself on two issues. ¶ The proposed merger of the Colleges of Liberal Arts, Science and Geoscience: As a graduate of a College of Arts and Sciences where humanities and sciences have co-existed in harmony for 150 years, I'm not opposed to the concept of a college that embraces those diverse disciplines. However, in a university with a tradition of separating those entities, I believe any merger should happen slowly and after buy-in from the faculty involved. This is too significant a change to occur without faculty involvement in every step. Serious shared governance requires it. ¶ Creation of a Department of Journalism: I wholeheartedly endorse the expansion and elevation of journalism education at Texas A&M University. However, I think there's a better way to do it: through a new Department of Communication and Journalism. Journalism finally found a home three years ago in the Department of Communication where it was embraced and enjoyed new levels of support. The result is the number of journalism majors has tripled in three years and the department has supported major initiatives to recruit high school students for the program. The synergies between communication and journalism are bearing fruit through new collaborations, and organizations across campus – from 12th Man Productions to The Battalion – have been building new partnerships with journalism that provide exciting opportunities for our students. Consequently, I believe – as a faculty member in the program – that journalism education would be best served in a new Department of Communication and Journalism. The future Faculty members understand that the president has the authority to recommend and/or make sweeping changes in the administrative structure of the university. However, we believe many of these changes go far beyond administration and reach into the very core of teaching and research, into the heart of our academic lives. Therefore, we believe it is paramount that our

university leaders work with faculty to address their concerns and to ease any challenging transitions that lie ahead.

---

This report lost credibility when I read the SWOT analysis. The Corps of Cadets is NOT, I repeat NOT, an all-male organization! Did MGT even visit the Corps? Or did they just make a sweeping assumption that anyone in the Corps is male? Talk about misogynistic...

---

We said that people are one of our strengths and then talked about outsourcing transportation like we did for dining and maintenance etc. Those employees lost major benefits and retirement and certainly didn't show we valued our people. Please don't do this to more unit just to save money.

---

In general, this was a poorly researched report and a number of points in it demonstrate that. There are no arguments--there are claims. There are just too many places that indicate you do not understand a university, certainly not a large university, nor this one in particular. The report reads like an "after the fact." You were charged with coming up with a plan for something the president already wants. I think in general faculty would prefer not to be pandered to. If you want to do something, do it. But don't pretend that you want our feedback. We are not stupid; please don't treat us like we are.

---

The report states that 3654 faculty and staff members took part in the survey. In HLKN, out of 90 faculty + plus staff, it seems that no one was given a chance to partake in the survey. Not really sure how random the selection process was.

---

It will be important to work with the TAMU community in a significant way to support them after the majors changes that presumably will be happening. This should include wellness, mental health, organizational support, etc.

---

Changes need to be made slowly and with lots of opportunity for feedback. Pushing changes that have not been fully discussed leads to many feeling that the changes are being pushed by a heavy-handed administration looking to save money.

---

Thank you for commissioning the study, it was greatly needed. I also appreciate Dr. Banks' willingness to read and synthesize the comments.

---

The current undergraduate and graduate students do NOT feel as if their voices were important to this report. The faculty do NOT feel that they were consulted when MGT was preparing this report. Staff do NOT feel they were involved in any discussions with the group conducting the review. Who, exactly, did MGT listen to? The President, undoubtedly. But, a great university is only as great as its faculty, staff, and students. To focus on administrative structure with an eye to "efficiency" creates a very narrow picture of what a university actually does.

---

It is actually quite irritating that faculty opinions, from those who took the survey do not seem reflected in this report at all. Faculty do the work of this university. Period. Not deans, not presidents, not vice presidents- FACULTY. We know what is efficient and what works and what does not, to further our teaching, research and service missions. This place should be run as a strong partnership with the intelligent, highly trained individuals you hire to deliver on the mission of this place, and it is just disappointing that administration does not listen. Because of this there is a strong feeling among faculty (and students, as they wrote in the Battalion) that the moves suggested in this report are a foregone conclusion. Finally, a word of caution on centralization. This has been tried at this university already for research administration- not sure if the current administration remembers this move when sponsored research services were consolidated and moved to the system level. THIS MOVE WAS A COMPLETE DISASTER and was reversed after about 3 years- returning research admin functions to the agencies and putting the rest into the VPRs control. We do not have a good track record for planning and executing centralization of services at this university.

---

How will the restructuring of academic units (departments and colleges) impact donations/fund raising? Evaluation will be needed.

---

I am very opposed to changing advising into a more centralized structure. Advisors are an extremely important part of recruitment and retention, and they have expertise that the faculty do not have in departments. Centralizing this group would be a detriment to students and it would adversely affect small departments and their ability to recruit and retain students. Also, I would have liked to have seen more attention given to Diversity, Equity, and Inclusion at all levels of this report. This particular area should be reinforced at every single level, in every area, and at every opportunity

---

In a university as large as Texas A&M, there will always be inefficiencies that can be tackled. But any re-organization effects need to be balanced with the cost of change—especially the burden on faculty and staff as their work structure is shuffled. The MGT report takes a bold view of what opportunities exist to reduce inefficiencies—but implementing all of them simultaneously would bring large segments of the university to a standstill, with rippling effects for years. These recommendations should be taken as a menu of what is possible—careful selection of a few of the most impactful

changes will bring about positive results. But trying to implement all (or most) of these 40 recommendations will likely backfire badly. There are concerns that this process is being rushed—a prudent approach would be to prioritize a few recommendations per year and organize task forces of relevant stakeholders to evaluate and fine-tune any reorganization decisions before they are implemented. The recent centralization of COALS and AgriLife units (which had its fair share of disruption, but also improvements) should be a test case to examine “lessons learned” to see what approaches might work best on a larger scale. I trust TAMU management to take a methodical, thoughtful, and painstakingly careful approach to evaluate and implement any future changes, with thorough vetting from key stakeholders and those who will be impacted the most. Kudos to being open to big changes and a bold vision, but now comes the hard part of careful execution and patience not to go too far too fast.

---

The process of getting feedback from faculty, staff, students and administration for the creation of this report and getting feedback on the report has been poorly executed. In the first instance, it was unclear that the survey sent out in Aug/Sept would result in a report that would potentially reorganize the entire university. Many of my colleagues did not fill out the survey as they did not understand the ramifications of not voicing their opinions. Also, there appear to be many stakeholders at the university that were not consulted in the process (distinguished professors, department heads, deans). So, the information gathered to come to the conclusions in the report are biased. In the second instance, we were initially given only 10 days to read the report and provide comments. That is far too short of a time to digest, discuss and formulate responses. The entire process appears like railroading those who work at A&M.

---

As a faculty member in HLKN I focused on the section relevant to my department and immediately noticed the errors of the key evidence used to support MGT’s recommendations. Several other HLKN faculty with more “inside information” and historical knowledge of my department submitted their feedback. I couldn’t do a better job than them, therefore, I won’t address the specific errors in the report regarding my department. However, I do wonder how many errors are in the rest of the report. Overall, the errors in the report indicate, either, (1) MGT is incompetent at assessing and evaluating, or (2) they were asked to produce a narrative to support a specific agenda. Either way, I can’t help but think deception and dishonesty were used to create the report. If a student handed this to me, I would be compelled to submit an honor violation for fabrication. I am open to the possibility that the recommendations could be great for TAMU and HLKN. However, the non-transparency of the process, up to this point, leads me to distrust the actions of those in power at TAMU. I don’t know President Banks, but I appeal to her honor to truly “follow the data”, I expect her to be wholly truthful to TAMU’s faculty, staff, and students, and I hope she has the humility to acknowledge the missteps she has made throughout this review process.

---

Dear President Banks, At an earlier Faculty Senate meeting this semester, you mentioned how highly you value giving serious attention to issues of mental health. I am begging you to demonstrate this value by NOT realigning academic departments, by NOT moving staff out of their current departments, and by NOT absorbing the University Libraries into another college. The thought alone of these particular changes has already done considerable damage in distracting faculty, staff, and students from their main priorities of teaching and researching, supporting teaching and researching, and learning. Morale was already at an all-time low with the stress and grief of working and learning during a pandemic. The proposal of the above-mentioned changes has wreaked even greater havoc and hurt morale even more. I know of many extraordinary faculty and staff who are looking for jobs elsewhere. These faculty and staff have been cornerstones of my own work and success at TAMU—all of which is dedicated to my students and their success. I cannot convey to you how much more grief is being loaded onto your faculty, staff, and students by these proposed changes and the potential loss of highly valued and highly effective colleagues and existing structures. The effect on morale if these changes are actually implemented will be immeasurable and will set our beautiful, collegial, excellent University back decades. Again, please—I am begging you, for the sake of the mental health of your University, to refuse to implement these changes. Please. Signed, A Former Aggie and Current Faculty who Loves TAMU Dearly

---

Diversity in this report seems limited to student recruitment. It’s a much larger issue for our university to deal with (in re faculty and staff recruitment and retention and in re the history and reputation of Texas A&M); work on understanding diversity issues needs doing. This report seems not up to understanding the scope of the issues.

---

There are a lot of interesting ideas in the report, but I keep coming back to the question of why make all of this change right now? Faculty, staff, and students have all done a great job of pulling through the stress from the ongoing pandemic. The massive reorganizations called for in the report are adding additional stress during these difficult times. This makes President Banks seem uncaring and out of touch with the people who work and go to school at this great university.

This is a busy time of the year and the turn around time for reviewing such a lengthy report is not reasonable. There should be much more discussion and interaction prior to making very major decisions like this. I didn't notice any discussion on childcare that might apply but I do recommend looking at supplementing childcare centers like Becky Gates to allow infant care to be provided. Last time I checked this was no longer the case.

The report did not provide enough details on the savings or benefit to be gained from many of these recommendations. I can't support these changes without a better rationale than the one use in the report saying that some of our peer institutions do this, so therefore we should do it. That is not a sound reason. It was the only reason given for merging colleges. What are the truly tangible benefits for this degree of upheaval? Also, nothing was mention about the need to improve SRS services. This is an area where almost every PI can say that there are issues at SRS and in contract services. We nearly lost a recent grant because it takes so long to get a contract signed. The turnover has been high making consistency impossible. There have been times when the wrong version of budget was submitted with a proposal. SRS needs an overhaul. I have often thought that it might be better to have SRS personnel grouped according to funding agency rather than serving specific departments. Yes, it means the department does not have a specific SRS contact that they go to for everything, but it does allow the SRS staff to specialize in specific agency requirements (e.g. NSF, NIH, NIEHS, NASA, DOE, Foundations, etc). With the rules for different agencies constantly changing, it would be better to have SRS staff (pre-award and post-award) focus on being an expert on an agency rather than having to cover all the agencies that a department goes to for funding. Then the PI contacts the SRS unit for the agency they are dealing with.

Issues related to recruitment and retention of under-represented faculty is crucial. Accountability mechanisms need to be in place and the demotion of the Office for Diversity and redefining its charge to address student success is not going to help the very real problem of low numbers of under-represented faculty (particularly Black faculty) in tenure track positions and in positions of leadership. Recognizing inequities and supporting URM faculty will go a long way towards attracting a more diverse and successful student body, as they will have role models and mentors to inspire them. Too much centralizing of academic functions is not the solution - there have to be checks and balances.

Page 5 mentions "successful outsourcing models" for a variety of functions. It is not clear if that is true. Page 115 mentions the outsourced maintenance has resulted in a lack of oversight and effective communication and goes on to specify the issues. In my humble opinion, outsourcing at a university rarely works and should be avoided. Some aspects of this seem minor, but are important, such as parking access. The ineffectiveness of the survey portion can be seen from pages 95-106. In nearly all of the surveys the response is 25-35% Highly Effective or Effective, 35-45% Fair, and 25-35% Ineffective. These are the ranges you get from a poorly crafted survey - the results reflect an ambivalent audience that is uneducated on the question and thus the results are meaningless. A focused survey of people that have interacted with each topic may have revealed more actionable results. Overall, I was very unimpressed with the report and the flow and format of the MGT report didn't seem thorough. Proposed changes were provided with "Rationale" that were rarely substantiated nor quantified. Results seem like opinions of the authors and were not evaluated in a Pro and Con fashion for change vs. no change. Stakeholders for each decision were never mentioned. The lack of justification and clarity on actionable items was clear from page 2 when the following nebulous statement was made which appears to mean very little: "The high level recommendation is to: Gather data on day-to-day operations of operational units and implement a system of continuous improvement build on performance analytics to understand where misalignment or ineffective use of resources exists." I thought they were kidding at this point. What does that mean? We are not a factory making widgets with 37 machines and supply deliveries and outbound shipments. We do need metrics, but "day-to-day" followed by "continuous improvement" and "based on performance analytics" and "understand where misalignment or ineffective use of resources exists"? It is great to constantly evaluate who you are as an organization and how you are adapting (especially in 2021). It is great to do detailed evaluations of SWOTs on a high-level and College-level. It is great to look at realigning for efficiencies and synergy and to then get buy-in and act on those initiatives. I really don't think this report establishes those cornerstones nor do I think it does even a minimal-quality SWOT that would help guide the decisions.

Many faculty members and other constituents are skeptical about the proposed changes, with many believing the proposed changes were designed before a report was tailored to justify the changes. It is important to hear their voices and act on their commonalities to gain their trust and partnership to effectively implement the resulting changes.

In general, the theme of the recommendations strongly push for a highly centralized administration with substantial increase in the number of direct reports to the President and Senior level executives. This trend run counter to a democratic, distributed system where individual units have greater autonomous and responsibility. Under centralization, units still have the responsibility but no autonomy. In a centralized structure, there is less room for dissent and less

opportunity to lodge grievances. In short, it is the antithesis of academia. Such a structure may be efficient for operations of a company, it stifles the academic environment where one should be free to think and explore, instead of be afraid of the next edict from the top.

The single paragraph on the Qatar campus reveals the lack of information available to the consultants on our campus. TAMUQ was left out of the survey process, both in building the survey and encouraging the campus to take it. In fact, most of the campus was unaware of the survey, which was left open for such a short time (1 week!) before the semester even started, with not a single reminder to take it. Out of 700,000 people invited to take the survey, how many actually had the chance to take it? The report doesn't state how many faculty actually had the chance. The statistics will show that there is a huge gap in shared knowledge from the Qatar campus, which is an overall reflection of how our campus is treated. We ARE unique; we DO have a unique culture; and we CANNOT be simply rolled into the main campus infrastructure of campus services. Our voices matter too.

Having submitted responses to surveys as both a former student and as an employee - surveys that supposedly contributed to the findings and recommendations of this report - I can see no logical connection between the two for many of this report's recommendations. In short, the findings of this report (and the recommendations based on those findings) do not seem to stem from the data and information that was collected by the surveys that I personally had experience with. This calls into question what the sources of these "findings" are (if not the surveys) and their relevance/reliability to base such sweeping proposed changes on.

Having read the consulting report several times there are recommended changes that are exciting and transformational. For example, the performing arts center is way overdue for TAMU. Rudder Tower and Theater Complex was constructed in 1969 and still serves as the home of all large performances and no longer meets the current needs of the University. Additionally, it lacks state of the art infrastructure and amenities. Having attended numerous concerts in that venue – it is NO concert hall! Fine arts facilities that would rival the quality of our athletic facilities would make a statement as well as improve the quality of life in the Brazos Valley. Couple first class facilities with a robust music, dance and theatre program will elevate TAMU. These facilities could also assist in recruiting research and teaching talent to TAMU. This commitment will be huge WIN for TAMU! The frustrating part of the report is its very cursory overview of the University that was able to yield remarkably precise recommendations. Had the consulting firm done just a slight amount of investigating many of the misrepresentations would not have been included in the final report. That lack of understanding is damning for their recommendations. The report cites references from universities that are not our peers. Many of them do not operate at our scale, have our physical land mass, have our research funding and most concerning are NOT fellow AAU Universities. The consulting firm should be required to re calibrate that report with all references from non-AAU Universities deleted. This elite group of universities are our peers. The footnotes are from schools that aspire to be like TAMU and not TAMU be like them! We should take guidance from our aspirational peers; those are the people that we are trying to pass in rankings. A revised report would then have credence for recommended changes.

The mass and abrupt exodus (i.e., firing and/or forced resignation in many cases) of university leadership including the previous President, Provost, Associate Provost and VP for Diversity, and several college deans has many of us at the university quite skeptical about why it happened and what it means for the present and future. With that being said, it is my sincere hope that the motives behind the hiring of this external group under new university leadership, and pursuit of realignment is genuinely rooted in what's best for the university and student success going forward. If the system and university leadership does not take seriously the myriad concerns with this report that I'm sure are found in the comments provided via this portal, I believe it will have a profound (negative) impact on the recruitment and retention of faculty, students, and staff to this university (particular those of color).

Texas A&M has a unique identity among large public institutions, for not being a big, largely anonymous, state university despite our size. I think we are able to maintain this identity because it is part of our tradition, and this tradition - this sense that our students belong to the Aggie Family - is one of the things that marks us as a University that aspires to greatness, even if we don't quite achieve it. Even as we become a huge university, with more students than the towns can really accommodate while maintaining our quality of life, two things that help us to maintain a sense of family, the sense that we are responsible for the education of our students and that they have a responsibility to the faculty, are small colleges and passionate staff advisors within departments. Two key recommendations of this report, which seems to be a lot about money, would dismantle all but one of our small colleges and centralize staff advising. We need to plan carefully if we intend to make these two major changes at Texas A&M while maintaining our traditions. One aspect of our unique identity that I would like to 'out grow' is our identity as a former white, all male, (conservative) military

college. Incidents of bigotry and racism at from our past have a long life on the internet. The arts are a way to bring all voices to the table and I welcome the emphasis on performing and visual arts in this report. I can't help but think that we need to change as a University before our student body reflects the demographics of Texas.

---

The entire approach of centralizing all aspects of the university is problematic at its core. I have spent over 4 hours filling out this form, and if I had sufficient time to cover everything, I would need another 4. Therefore, I have only discussed the things that I find problematic. I have not addressed the things about which I know little or that I think would be beneficial (few as those are). This report basically re-organizes every aspect of the university--except Engineering and Mays Business--interesting. MGT's understanding of A&M, its history, and its culture is slim, and some of the recommendations imply a disturbing lack of knowledge. The changes recommended here are so sweeping that they would radically alter every aspect of TAMU. Yes, some changes are needed, but this is not change, it is total, radical transformation, and for the most part, not positive transformation. This will take years and millions of dollars. The report doesn't even begin to address what it would cost to hire faculty for the new departments and schools, not to mention new museums and a performing arts center. Let's not forget the costs of re-organization alone. How many staff will be RIF'd? How many jobs lost? How many programs damaged? What will new training cost? What if the whole thing backfires and we lose students? Mine are as a group, furious about this.

---

Regarding DEI We need to do more, not less in this area. MGT notes "The demographics of student enrollment at TAMU do not currently mirror the demographics of the State of Texas. As a land-grant institution, TAMU should prioritize meeting the needs of all Texans and therefore must concentrate on increasing recruitment, retention, and success of all students, but especially diverse students." If our demographics do not mirror the state and as a land grant institution we are to prioritize the needs of all students as MGT suggests, it follows that we should be doing more to recruit and successfully retain underrepresented students NOT all students. TAMU does not have a problem recruiting and retaining students, we just saw the largest freshman class in history this fall (12,459 students), with 72,982 enrolled in classes on day one.

---

This report reads as though the authors have no idea what university faculty or students do.

---

none

---

Generally speaking, September 2022 seems like a rushed timeline to implement any changes whatsoever. I believe I speak for many with the following question/recommendation: If implemented, can we take a slower, more methodical approach for these sweeping changes?

---

Requiring a name on a survey such as this has the potential to limit the quantity of responses and decreases the likelihood that honest feedback will be offered for fear of retribution. This suggests a lack of desire to actually gain feedback, which causes employees to feel devalued. This contributes to a decrease in workplace culture within the university, which is linked to poorer psychological health of employees. When employees are not at their best, our primary customers - the students - are the ones who suffer. That said, the postponement of the feedback deadline did enhance the perception that feedback would be considered. Further, strong leadership is necessary, and the hope is that leadership will ultimately support, protect, and value employees.

---

Overall, I value the opportunity to provide feedback to President Banks on this report and hope to assist in the transition as she moves the University in this new endeavor. I hope that there are many more collaborative opportunities to implement these recommendations and still have the Aggie spirit and warmth that defines the Aggie Family.

---

It was my impression after reading the report that the breadth of the role of colleges of veterinary medicine on university campuses was not completely understood, especially with regard to their research function. Highly ranked colleges of veterinary medicine, such as ours, are very important contributors to research in human health, in addition to their core mission of promoting animal health. As proposed in the report, the constraint of routing proposals only through AgriLife would affect the research trajectory of the College of Veterinary Medicine & Biomedical Sciences significantly and may also compromise its national ranking. Thank you for the opportunity to submit all of these comments. [REDACTED]

---

Agree with Centralization of service components in the Presidents' office. Operational inefficiencies and the redtapeism is apparent at each corner of the University. Most chain of commands are inaccessible and too cumbersome to even attempt to follow. Teach support staff about service - they are there to serve the faculty, researchers, PIs and students. Promote culture of trust and assistance and be positive. Certainly, compliance is important but the rules and procedures should be clearly defined and given before the start of the action item.

---

My most serious concern is the lack of support for faculty and student diversity, equity, and inclusion. I highly recommend maintaining the Office for Diversity or VP for Diversity under the Provost. Its current location under Strategic Collaborations signals a lackluster effort at recruitment and retention of faculty of color. I also hope that the university will maintain and strengthen its support for TAMU as an emergent Hispanic-Serving Institution. As a premier land grant university in Texas, it should represent the people of Texas. One way to do this is to fund and promote a Latinx Center, which was a university-wide faculty and staff proposal in 2018. It is not enough to recruit Latinx students, we also need to retain them and secure their future success.

This year [REDACTED]. During my long tenure I have seen many changes and recognize that change, whether positive or otherwise, is an inevitable factor in the life of any institution. One provision of the present recommendations troubles me however. Our Library is a model of efficiency and effectiveness, one of the strengths of A&M that serves all our constituencies in a way that is the envy of many comparable colleges and universities. It took off under the leadership of [REDACTED] in the 1990s and has continued to grow and flourish. All members of the University community benefit from its mission, every day and directly and indirectly. To curtail its autonomy would likely stifle its future progress, so I suggest that something close to its present status be maintained. I also urge you in the strongest terms not to relegate the Cushing Library to the level of a museum. It provides highly visible exhibition space to be sure, but as the repository for invaluable, irreplaceable archives and a working research center attracting scholars from the US and abroad, it has national and international importance. There is an old saying: "If it's not broken, don't fix it." The A&M Libraries system is far from "broken," but any extensive tampering with its present configuration might result in more damage than good.

I am concerned that outsourcing transportation services would incentivize cuts to the bus system at a time when alternatives to the one-person-one-car model needs to be prioritized to achieve our goal of becoming a sustainable campus.

Reorganization is probably the correct way to increase institutional effectiveness. Suggestions from administration (and external review) are always welcome, but all action and planning should always be implemented by faculty and staff that are affected by proposed changes. The proposed changes are monumental in scope and without complete faculty engagement, there could be a mass exodus of very productive faculty and staff from TAMU. TAMU is unique in many ways, trying to become more like our "peers" is flawed thinking. There are always better ways to work more effectively, but never at the cost of faculty, staff, and most importantly student success.

I appreciate the opportunity to comment, but overall feel the study is not particularly well done. Many of the Likert scales were essentially straight lines making justification one way or the other based on input from stakeholders questionable.

I'm very glad that this report takes a fresh, comprehensive, outsider look at Texas A&M University; thanks for commissioning it. I have heard others correctly note that the recommendations in the report, while far-reaching, have only brief discussions of the expected benefits and no discussions of the expected costs. I agree, and I think that means that all of the recommendations should be treated as ideas, rather than recommendations. Few, if any, of the ideas/recommendations would create a new, innovative administrative structure. This is good because it means we can turn to other institutions who already have such structures in place and more comprehensively evaluate the advantages and disadvantages of implementing each of the ideas/recommendations. After a couple of months of data-gathering and another month of synthesis (maybe we should call it due diligence) and reporting to you, you should confidently know which changes make the most sense for Texas A&M, and furthermore you'll have the evidence to marshal support for such changes. I suspect that 60%-80% of them will be worth doing.

The question left hanging even after reading the whole report is: What was its objective? Are we interested in cutting costs? No numbers are mentioned anywhere, and between the proposed consolidation and expansionary programs, it is not clear where things would end up fiscally. We are a university, a place of learning, and we pride ourselves on the cutting edge produced by our faculty and the great training we provide students at all levels. This is never mentioned as an objective for any proposed idea. The guiding principle for any change should be how the proposed changes would help us achieve that, to maintain or improve the quality of research and teaching at the university. Another thing to consider is that College Station is built around TAMU, and so many in the Bryan/College Station area depend on the university for high quality and stable jobs, and this in turn helps the community that we have built together in the twin towns. What will be the implications of these consolidations on the jobs, particularly for staff and will it disrupt a job source or their lives in many cases?

I value the comparison to peer institutions, but just because peer institutions do things differently that is not a reason for change. Decisions for change should be considered based on how the change will help our students.

Don't make our university LESS than a full university. Engineering is not the answer to the complexity of this great institution.

I think the reorganization of the university should be done with the objective of how faculty can excel in research and teaching. In its current form, the recommendations broadly ignore the research component, which is what makes Texas A&M unique.

In many cases, the report did not define the problem or provide justification other than "other universities do it this way". Also, there was no cost-benefit analysis. I'm aware that the people from MGT that did interviews spent far too little time talking with some leaders and in some cases were incredibly unprofessional and disrespectful to those to whom they were interviewing. The interviews seem less like substantive information and more like MGT were checking a box to say they had consulted with faculty, administration, and other users. I'm also aware of several former students who did not receive the report and invitation to comment.

There are many issues with the report: a) Need analysis of costs, not just benefits of these changes (need pros and cons), b) Need input from faculty, deans, heads, CPI, Faculty Senate, staff, etc, c) Need to solicit more input and thorough input; not just rush through changes, d) Unscientific collection of data, large contribution by former students, old sources, no pros/cons, no evidence that these differences are better at other universities; many errors that make it clear they don't understand the details of organization in this huge complicated university, e) Some universities listed are not our peer institutions, f) Some recommendations were to change back to things from 5 or 10 years ago. In terms of research, there is very little mention of research in the report, and no mention of graduate students. It is not clear how many of these recommendations are consistent with the mission of this university as an R1 and AAU university, with a focus on research/teaching/service, not on treating us as a corporation.

I have made this comment in a few of the specific responses but I will say it again here: In my opinion there is a bit of ignorance throughout this report about what faculty needs actually are. Most faculty--to the extent they have a choice--choose their institution by the structure, prestige and research capacity of their job. To pretend these things are about the underlying structure of faculty affairs, gardens, performing arts centers and not about whether one's department is misplaced in the wrong College (or at least in a College structure that is dissimilar from every other comparable institution) is problematic in weighing of faculty (and to some extent student) priorities.

It is clear that the management team employed did not look into TAMU's history (Journalism major being a good example), does not understand academic disciplines (merging of Political Science and Bush School as an example), and does not understand basic organizational management principles--believing that centralization is an unalloyed good. While they do have some good recommendations, many of them need to be discarded or extensively altered to be usable.

☒ Your request for feedback is as hollow as the majority of this report, as many of the "recommendations" have already been implemented. This report reeks of TAMU administration telling the consultants "These are the outcomes we want. We'll pay you \$600K to present whatever evidence you can find to support it". ☒ I wasted way too much time reviewing this POS report

The report provides valuable external views of the organizational structure of the university. The opinions expressed provide some important insights. The broad overview is useful. The details missing are with the user experience. I speak from the faculty member standpoint Having close contact with department and college staff has enabled me to be more productive. When the staff are further away my experiences have been negative.

In my previous experience at Texas A&M previous attempts at increased efficiency through consolidation have gone poorly. This includes disparate example that include the loss of the Research Foundation, the centralization of analytical facilities into the MCF, and dealing with a centralized benefits office. I am afraid that many faculty view the proposals contained in the MGT report as fait accompli. If so, they may not provide feedback although my anecdotal evidence indicates widespread dissatisfaction with either specific items in the report or the lack of time to digest and understand the large number and widely varied changes that have been proposed.

1. As we embrace "diversity", it is not just including people from diverse backgrounds but also diverse specialties and talents. Converging everything into FOUR large units/colleges (AgriLife, Engineering, Arts and Sciences, and TAM Health) is NOT the way to be diverse. It is more like returning back to more than 50 years. Are we going to further merge back to "Agriculture" and "Mechanics" as the "two large units"? 2. Realignment of Biology Department and Biomedical

Sciences (BIMS) do not even make any sense at all. Biology is part of "Science", as the focus of Biological Research/Education is mostly in "basic science" as its orientation. Thus, BIOLOGY should remain in the College of Science. As for BIMS, the Education/Research emphasizes pre-clinical and translational aspects of biomedicine, including both human and veterinary medicines. 3. If Academic Realignment involves "moving" existing faculty members and their research laboratories in new/another buildings, this is completely wasting money, time, and resources. As faculty members, we have way much better things to do (e.g. getting research funding, educating/mentoring graduate students, teaching undergraduate students, and academic services). Moving a research lab requires a lot of time, money, resources, and people energy completely wasted for nothing. It is unclear WHY TAMU wants to move faculty members from their existing departments/lab locations to other buildings/places for "realignment". 4. "Centralization" does NOT bring effectiveness at all. For example, after the "AggieBuy" is in place, ordering of research materials/equipment becomes much slower, and the process is no way to be communicated. Prior to AggieBuy, ordering was through the department/college. As soon as an order was submitted, we pretty much got a reply back from the department and the company within 12-24 hours that the order was placed and the materials would be shipped. Now through AggieBuy, we rarely get any e-mail notice as whether the materials were ordered or not, and the company no longer e-mailed us (faculty/research labs) on whether they received the orders or expected shipping dates. It is much slower to get the needed research supplies via AggieBuy. 5. AggieBuy is extremely NOT user friendly. As a faculty member, we do not use AggieBuy on a daily basis only when we need to order research supplies/equipment. When we do so, it is extremely cumbersome to "re-learn" all the ins-and-outs. The "old" way of ordering research supplies/equipment via our department/college portal is much easier and user friendly, and even much faster and more efficient to get the supplies/equipment shipped to us.

The overall report is fairly weak in its synopsis of findings and expression of rationales for the recommendations proposed, and the overall tenor seemed to overly generalize the situation in higher education across the country. My hope is that the recommendations that are adopted or potentially adopted moving forward are given a clear, well-articulated justification for the need to implement and the concrete ways in which they would positively affect the overall climate of the institution. I also hope that the logistics of implementing each change are carefully considered and given the necessary time to take place. The way implementation is carried out can play a determining role as to whether the desired benefits of the changes are realized or not.

Focus on making Texas A&M the "best," not the "biggest"

This report has some good ideas and is bold. Yet, the devil is always in the details. How these centralizations and mergers are handled, assuming they happen, is the key thing. I cannot stress how this report has created anxiety among many on campus. I've been here 21 years and seen many changes. Wholesale changes of this magnitude would have to have a vision beyond efficiency, I think. We have wonderful people here at TAMU who respond to problems with persistence rather than paralysis. A larger vision, however, about where these changes are taking us, a la Vision 20-20, will help immensely. Thanks for the opportunity to express input.

I, and most faculty I have spoken with, are generally dismayed at the lack of transparency in the process that will potentially lead to significant change in the university. Some of the proposed changes could bring great benefits, but the process by which these recommendations were assembled has almost entirely left out the faculty and staff who will be the ones to implement them. (The faculty/staff survey that was distributed in August 2021 bears no connection to the recommendations that we see in the MGT report.) Department heads were not interviewed, so the report repeatedly displays a clear ignorance of the research and teaching that is actually being done in departments. In fact, the report seems to have relied on clichéd and outmoded ideas of academic disciplines rather than investigating the work that is done in Texas A&M's cutting-edge university departments. In-depth knowledge and appreciation of this work is crucial to getting re-alignments right. It is not clear that even something as basic as course offerings and research areas (easily accessible online) were consulted in proposing department realignments. Faculty reading the report are left to wonder what the true goals and objectives are. How do the recommendations build on the tradition and strengths of Texas A&M and create genuine and unique avenues for growth and prominence, and not just represent current trends in higher education management?

The recommendations in general are very good.

I am a [REDACTED]. I have worked at 4 dental schools and under 11 different deans. I am past [REDACTED]. In a nutshell, I have witnessed lack of transparency at this

dental school and total mismanagement of people and nepotism to no avail. Also the college of dentistry lacks patients and students are getting short changed . I hope someone speaks to me as I started here in 1984 and have a lot of historical information. We are not an excellent dental school today!

Since 2011, (10-years), A&M has seemed to be under some re-organization or change. I hope we can settle on a proposed organizational structure and have some peace for all of our great faculty and leaders.

In general I believe the centralization of major operations such as IT, HR, Finance, Facilities, etc. will not bring about the benefits outlined in the report but I suspect this will all happen anyway and we'll learn to live with it. I want to reiterate that the report does not take into adequate account the uniqueness of the Libraries and their role on campus. The Libraries should remain its own unit, with a Dean who reports directly to the Provost.

My focus was on the issue of consolidation academic advising but it is absolutely stunning that in one page of print in a 133 page report that MGT recommends such a detrimental impact to this university. It demonstrated a true lack of depth of the mission of this university ... it renders every other page extremely suspect.

The university is about to launch a major set of changes and initiatives. Maintaining feedback loops and actually listening to unanticipated concerns and challenges which will almost certainly arise. A "response team" that answers to the President is likely needed to sit with the concerned faculty and administrators, perhaps once per month to hear opinions and ideas. Communication will be a key to navigate toward the goals being pursued, and as progress is made, celebrate the faculty heroes (esp in liberal arts and geosciences, assuming that the Arts and Sciences idea is adopted). Visible evidence that the University overall is thriving and taking any/all measures that lift faculty pride and morale in the "new world order" will likely calm the waters within a year or two (could be longer, patience and perseverance will likely be needed).

Businesses re-org regularly to clean out unneeded or out-of-date processes and try new things. This is how we enforce Dweck's growth mindset in business. Really like the top 3 student success skills. We need to teach those in pre-course college prep courses college wide. We did this with the Engineering Academies this year in August. I can take up this initiative for the university, if you want. I had an ASEE paper in 2021 on this and expect a results-based paper in 2022. Government Affairs is a model for all departments. Document how they work and share that with all as a template. I encounter their consistent influence in many venues (Eng Acad, TTI, Faculty Senate, grant pursuit). Apply the McAllen elevation justification to the Engineering Academies as well. They reach a key population where the the students are. I can help with this one, too, as we need to expand the Academy concept beyond just Engineering. We also need to grow the Professor of Practice role beyond ENG and Mays, although I agree that they may be most applicable in those two colleges. Finally, yet related, the best jazz instructors are those that have and continue to spend time with gigs. Something we may want to consider for our PoPs, externships. Thank you for your time and effort.

The the report is surprisingly lacking data supporting some recommendations. The report should be sent back to MGT and task them to do a better (scientific) job. To be convincing, the report must be supported by adequate data, more detailed findings and rationals.

I hope that faculty feedback will be seriously taken into account.

I'm concerned that the Libraries continue to maintain their function as research Libraries.

Change can be good for the institution, but only if the benchmarks for success are clear and investments are made to realize potential benefits.

This whole process reminds me of elections in dictatorships. If the administration was serious about making positive changes they would proceed far more slowly getting more input. The current set-up is designed to have the appearance of shared governance without actually having it.

The office of the VP for Diversity must be positioned prominently to accomplish the university's ambitious goals in diversity, inclusion, and equity. The proposed change to have the VP for Diversity report to the VP for Academic & Strategic Collaborations does not reflect the university's commitment to diversity & inclusion. The VP for Diversity should directly report to the President and the Diversity Office must have resources and the influence to effectuate university's diversity goals.

Many of the conclusions of the report are not substantiated and appear to be forgone conclusions that were in need of support. Where no factual support could be found, the report just says, and I'm paraphrasing here, "Well, that's the way Michigan does it." I think the university would benefit from thoughtful and detailed analysis, but this is not it.

Appreciate the opportunity to provide feedback and appreciate the administration's willingness to consider the broader communities reactions and input.

We are TEXAS A&M UNIVERSITY! Why do we need to be like other universities? Final comments: Keep Mays School of Business a separate school Keep the Bush School a separate school Move the College of Education to the College of Arts and Sciences AS IS. Keeping Health and Kinesiology together. A&M Health: College of Med, Dentistry, Public Health, Pharmacy, Vet Med and Nursing. Increase green space along with dining options for students that are safe and welcoming.

We need to add JUSTICE to the Aggie Core Values. Committees, Boards, and faculty need to more closely represent the Texas population and that is going to take a very active approach to messaging, recruitment, and retention.

I am concerned about the evidence base substantiating the recommendations made. Insufficient details were provided regarding the survey analysis and other data points used. Diversity and inclusion was insufficiently addressed.

The MGT report contains many reasonable, if not laudable recommendations. However, it is so burdened with flaws that it is an embarrassment to this great university. For the sake of brevity, I will confine my remarks to those areas that I am most knowledgeable about. Flaws with the solicitation of input for the MGT report The initial online survey for faculty and staff was only open for nine days, from August 11th through August 20th. This is the precise time of year when faculty and staff are mostly likely to be away from campus (vacation or other activities) and least likely to be attending to e-mail. This is particularly true for faculty on 9-month appointments (September-May) in which faculty may be engaged in other teaching and research activities off campus (such as field research) during August. Please note that nearly all faculty in the College of Science and the College of Liberal Arts are on 9-month appointments, while in other units such as Agrilife and Engineering many faculty have 10-, 11- and 12-month appointments. I was traveling and missed the survey completely, as did other members of my department's staff and faculty. Whether intended or not, this short and inopportune timeline had the detrimental effect of limiting input from many groups of faculty and staff. I don't know when students were solicited for their input, but the middle of August would also be the worst possible time for them as well. Given that the results of this report will likely have significant impacts on this university for decades to come, there was no justification for the timing of this survey with respect to both the time of year and the short duration the survey was available. Couldn't the survey have waited for just a few weeks in order to maximize feedback and ensure that everyone had a chance to participate? Secondly, some of recommendations made by the MGT report are highly specific and detailed, and were obviously not formulated as the result of input from the online surveys (which were very general in nature). Clearly, major input was solicited in the form of in-person interviews. However, the methods employed in this interview process are entirely opaque. The report states: "Over the course of three months, the consultant team conducted more than 60 in-depth interviews with key university leaders" Who were these "key university leaders" and how were they selected? It has been widely reported that [REDACTED]

[REDACTED] was not interviewed even though two of the key recommendations in the report (the merging of the College of Science with Liberal Arts, and the merging of the Biology Department with Biomedical Sciences) are directly related to his area of responsibility! Intended or not, this sort of omission is unconscionable by any standard. Although Finding #5 and Recommendation #5 directly concern Department of Biology, nobody from this department appears to have been interviewed or even solicited for specific information during the preparation of this report. Clearly, the MGT report failed to meet President Bank's stated goal that "All perspectives are important and will be considered." Flaws with Finding #5 and Recommendation #5 In finding #5 the report states: "Splitting the program between three colleges creates confusion for students about appropriate majors and creates barriers to changing majors which results in increased time to graduation. " First of all, what "program" is the MGT report referring to in this finding? There are many academic disciplines (and career pathways) that are broadly related to the life sciences. If the report is criticizing "splitting the program" it needs to first define what "the program" actually is. Secondly, to the extent that there is confusion about majors, at least some of this has been brought about by the Biomedical Sciences program (not Biology). A few years back, the College of Veterinary Medicine realized that their growth was limited by the market demand for DVMs. They saw one avenue to growth through the launching and subsequent aggressive marketing of a Biomedical Sciences (BIMS) undergraduate program. As such, the CVM (now renamed the College of Life Science and Biomedical Sciences) is the only veterinary school in the nation with an associated undergraduate program (an extreme outlier in this respect). Over the years, the BIMS program has developed duplicate courses to those taught in Biology and other departments, and it continues to do so. I have personally witnessed instances of what I consider "over-the-top" marketing by BIMS. There have been anecdotal (but repeated) accounts of hard-sell recruiting efforts directed at high school and transfer students that have included what one can only characterized as "biased" statements about the

relative merits of the different life science related majors. As an example, the daughter of long-term friends of ours was advised that “BIMS is the best option for someone who wants to have a career in molecular biology research.” The Biology Department actually has a rigorous major in Molecular and Cellular Biology! My own son was told similar comments by a representative of BIMS. One cannot help but wonder whether such statements have had some effect on the “perceptions” held by some campus leaders (see below). In finding #5 the report states: “There is also internal competition for resources such as faculty hires, facilities, grants, duplication of current faculty members areas of interest, which hinders the ability of faculty members to collaborate and contribute to advancing research and student success.” I have served on a number of search committees for Biology and for several departments in Agrilife over the years. I can say with certainty that the criteria for hiring in each department is different. In my experience, I have not seen any competition for faculty hires or duplication of faculty members areas of interest. With regard for competition for grants, I assume the report is talking about extramural grants. If this is the this case, the competition from internal applicants is negligible compared to intense external competition from investigators at hundreds of other universities and research institutes. The report does make a valid point with regard to competition for facilities, but the Biology Department has not been a player in this competition, and realigning or restructuring the Biology department would not address this issue in any way. A great example is the fact that this university has invested heavily in two overlapping facilities for genomics and bioinformatics services. One of these is the Agrilife Genomics and Bioinformatics Service ([www.texgen.tamu.edu](http://www.texgen.tamu.edu)) located in the Centeq Building (off campus), and is backed by Agrilife and Engineering. The other investment has been in the Institute for Genomics and Society ([www.genomics.tamu.edu](http://www.genomics.tamu.edu)) which houses both genomics instrumentation and bioinformatics services in a wing of one of the new Veterinary Medical Research buildings and in the Reynolds Medical Building. The continued growth of these duplicate facilities appears to have been fueled by high-level administrative rivalries. Again, the accompanying recommendation (#5) would not address this issue in any way. In finding #5 the report states: “Based on comments during the interviews, there is a perception that the current Department of Biology is underperforming and there would need to be a significant investment to bring the productivity to an acceptable level.” This is a heck of a statement to put in an official report that will no doubt be read by thousands of people both inside and outside the university! To their credit, MGT is honest in stating that these statements are based on “perception” and has also provided a source (“interviews”). However, as we have all learned in recent years, perceptions, even from “key leaders” can be very wrong and are can be extremely harmful. Given that this statement is based on perceptions from interviews, many across campus were shocked that it was even included in a document prepared by an ostensibly professional consulting firm. Inclusion of these comments in the final report may be unprofessional, but actually using “perceptions” to make far-reaching policy is unconscionable. I challenge MGT to provide concrete evidence, based on relevant (“apples-to-apples”), contemporary data, to justify this inflammatory statement, or else retract it from the report. These comments have had a chilling and demoralizing effect. Many were shocked that “key leaders” of this institution could have perceptions that are so far from having a basis in reality. Based on my own experience, as well as my examination of the actual relevant data, the current biology department is flourishing despite decades of benign neglect by the university (particularly with regard to infrastructure). Others in my department and college can (and hopefully will) provide the numbers to support this claim. However, what numbers cannot convey is the intense esprit-de-corps, dedication to mission, and downright determination that characterizes the Biology department today. I seriously doubt that any other department on this campus could have moved an entire lower-division biology program, including dozens of laboratory sections, completely online in the span of 96 hours. To my knowledge, no other STEM program on this campus (including BIMS) has as diverse a student body in terms of underrepresented groups and first-generation college students. To my knowledge, no other STEM program on this campus has made the strides that we have in terms of retention and success of URM and first-generation students. Finally, I seriously doubt that any other department on this campus could possibly maintain the vigorous research programs that we do while housed in the crumbling and outdated buildings that we occupy (the oldest of any of the departments in the broad life sciences area), which are characterized by frequent floods (freshwater and sewage), HVAC, and other mechanical problems. In finding #5 the report states: “Most peer institutions do not have a stand-alone biology department, but universities do offer microbiology and other specialized biology programs.” This statement is, at best disingenuous, and at worst is simply false information. First, many of the peer institutions listed in the MGT report do in fact have a “Department of Biology.” Secondly, at many of the other peer institutions listed, the analogous department simply goes under a slightly different name such as “Department of Biological Sciences” or “Department of Integrative Biology.” Finally, in some universities there has been split into “Molecular and Cellular Biology and an “Evolution, Ecology and Organismal Biology”. This kind of splitting was trendy in the 1980s and 1990s, but

recently this trend has seen a reversal, as ecology and evolution have become more relevant to molecular studies (and visa-versa), and the field of biology has become more unified in the age of genomics. In a very real sense, the current Biology Department is at the forefront of this reintegration of biology. Recommendation #5 states: "Create the new Institute of Biological Life Sciences which will contain the Department of Biology and the Biomedical Sciences Program. This new Institute of Biological Life Sciences will be primarily housed in AgriLife but strongly connected with the College of Arts and Sciences, College of Veterinary Science, and TAMU-Health through courses, faculty, scholarship offerings, research grants, and laboratory facility use." First of all, the term "Biological Life Sciences" is an absurd grammatical redundancy. It's like describing "all the living people who are alive." Are there any non-biological life sciences? This embarrassing gaffe indicates that the MGT organization is operating outside of their expertise when making this recommendation. Secondly, the term "Institute" has a very specific administrative definition on the TAMU campus, and is applied strictly to research and not teaching entities. Again, it appears as if MGT had not "done their homework" in the preparation of this report. Thirdly, why would Biology (College of Science or Arts and Sciences) and Biomedical Sciences (CVM) be administered by Agrilife, which is yet a third party? This is like uniting the Czech Republic and Slovenia and then putting them under the control of Germany. No justification for this specific administrative structure is provided. At face value, it makes no sense. While lacking any substantive justification, this recommendation is so vague that it is difficult to predict what this restructuring would look like, or what the long-term positive or negative effects would be. Notably, there has been much attention given to the importance of interdisciplinary approaches to modern research. As such, the current Biology department is easily the most interdisciplinary life science unit campus. Much attention (and lip-service) has been given to the "balkanization" of the sciences and academics working in "silos." The current Biology Department embodies the diametric opposite of these phenomena. On any given day, I can have meaningful scientific interactions with microbiologists, evolutionary theorists, structural biologists or neuroscientists. As such, the current Biology Department is an absolutely unique entity on this campus, and is reflective of the direction that modern science is taking. Any administrative "deconstruction" or dispersal of the Biology Department would have serious and likely negative consequences. Many of us (including myself) came to Texas A&M to be in a true interdisciplinary Biology department. We find our department to have an intensely stimulating intellectual environment for ourselves and for our students. If the proposed academic realignment is as poorly implemented as the MGT report is poorly informed, I fear that many of my colleagues who are in the best position to leave will do so. Retention of our best scientists will surely suffer. The major attraction that led me to come to Texas was the Biology Department itself. It is collegial, interdisciplinary, and is an extremely stimulating intellectual environment. For a large part of my time at TAMU my laboratory was housed with Agrilife faculty on West Campus. I was able to experience both the Agrilife and COS cultures intimately. They are not the same. They are not interchangeable. The clear driving motivators of my Biology colleagues (and the administration of the College of Science) are the pursuit of knowledge about the biological world and excellence in biological education. While I had some excellent colleagues in Agrilife, the culture is different. In particular, the Agrilife administrative culture was very different from that of Science, in that it showed little interest in either scientific discovery or educational excellence; rather it appeared that the most concerned with the accretion of resources and influence. My housing on west campus was supposed to be temporary — until a new Biology building was completed. After more than a decade of waiting, I moved my laboratory from a fairly new, well equipped building on west campus to a much older Biology Department building on main campus in order for my students and I to be with my Biology colleagues, in an environment with a higher level of scientific rigor, a shared passion for scientific inquiry, and higher expectations in every category. The downside to my move was that my research program suffered as a result of numerous floods (fresh water and waste water), local power outages, air-conditioning outages and interminable shared equipment failures. I have come to dread that phone call, often in the middle of the night, alerting me that my lab is flooded or the power is down in the building. Further, many tens of thousands of dollars of equipment that I brought with me was destroyed by floods, and enzymes and other important reagents have been lost to power failures (of course, there was no budget for replacement of these losses). Much of the shared equipment in the department is older (sometimes far older) than my graduate students. After these experiences, I am truly astonished and inspired at how vibrant and successful the research programs in the Biology department are. This is truly a case of determination in the face of difficulty. During my time at TAMU there have been no less than three instances in which the Biology Department was slated for ("promised") a new Building. All three times, as soon as the funding was about to actually materialize, the building was allocated to other units within the university. During this same period, Agrilife and CVM have had massive building campaigns (a cluster of buildings that was part of the latter was somewhat aptly named "Veni, Vede, Vici"). Recommendation #5 states: "Moving the Department of Biology and the Biomedical Sciences

Program into the new Institute of Biological Life Sciences will allow for easier collaboration for the biologically oriented faculty in the College of Agriculture and Life Sciences to collaborate with faculty throughout the university working toward similar interests." This statement has no validity because, in my experience, there are currently no serious barriers to collaboration between researchers in different colleges (I currently have active collaborations with multiple faculty in Agrilife and Engineering). In the past, there have been some hindrances with respect to grant proposal submission and award administration. However, recent changes with Sponsored Research Services (SRS) have essentially eliminated these problems entirely. Recommendation #5 states: "Most importantly, a unified biology program allows undergraduate students to start in a general biology major and enter a specialized track after exploring the first-year courses. This allows for better glide paths to assist students who change majors from one degree program to another, and clearer paths to graduation." Again, this statement has no validity. The essential problem is that some majors in Agrilife and other units have multiple tracks that require different levels of rigor in introductory courses. For example, Animal Science has a "Science" track that looks just like the Biology majors. There is also a second, less rigorous "Production and Industry" track that requires fewer and less rigorous science and math courses. This situation exists across many programs. A single "unified biology program" would not solve this problem unless we make all students 1) take a less rigorous set of courses, or 2) take a more rigorous set of courses. The less rigorous track would fail to meet the minimum requirements for entry into most professional and graduate schools while the most rigorous track would have future beef producers taking calculus and physics (this would not be very popular!). Many of our peer schools (especially Land Grant Institutions) face similar issues, and tackle them in different ways, but none of these (that I know of) have a single "one size fits all" set of introductory course requirements for all life science majors. Addressing this situation does not require any restructuring or realignment of academic departments or majors. It does require good advising, along with students who are willing to take more (and more rigorous) STEM courses in order to keep their major options open. Unfortunately, many of our students opt to take the "path of least resistance" which later leads to difficulties in changing major and longer time to graduation. If we did have a single "unified" introductory biology program—for everybody—what would it look like? Developing this curriculum would be one "hot mess" I would not want to be involved in.

---

Other strong recommendation: Move all the functions of TEES, TEEX, and TTI to fall under the College of Engineering. They are already managed by the same dean and vice chancellor, so this would not overload the organizational chart. This change would allow the administrative support for research and extension to be focused. It would also provide much stronger branding for competing at the national level for top grants as Texas A&M Engineering. The current structure is unnecessarily confusing and does not match our peers. It is my opinion that the term "Experiment Station" is a branding liability and does not convey the professionalism of our college. There may be issues here associated with Agency status, but that may also be part of the problem that needs to be addressed.

---

More communication and analysis is needed as we move forward in order to make changes that are effective and that will result in success.

---

I hope that the administration will examine ALL of the potential consequences of these recommendations, not just the consequences provided in the report. The areas in which I provided feedback would result in negative consequences, rather than the positive ones listed in the report. Outstanding leaders listen first, then act. This builds trust from followers and is a leadership behavior that I have rarely seen at this university in my 20+ years here. I hope to see it more often with this administration.

---

I'm all for necessary change and encourage action (see my responses to #9 above), but hope that this is not already a 'done deal'. So many of my colleagues believe that this feedback process is for show only and that decisions have already been made. Given the level of commitment and intelligence that the faculty represent, I hope that this feedback process will actually result in considered thought and action.

---

No comments.

---

Some very good ideas. The centralizations can be done over the course of the spring and summer. The academic realignments, as I have said above, should involve more deliberation and caution. Not opposed to them, but it will take time to create the Arts and Sciences College.

---

Relegating the implementation of equity, diversity, and inclusion initiatives solely to the areas of student affairs and undergraduate recruitment would take TAMU a giant leap backwards in terms of organizational effectiveness, faculty recruitment and retention, program quality, curriculum development, and more. The lack of MGT's seeming understanding of EDI in a University environment makes me distrust all the findings in this report.

---

1. The overarching premise in the report seems to be that a university's only goal is student success and that a university should focus on efficiency foremost. These goals are flawed for a number of reasons, one being that that student success is not defined at all in the report, although one might infer from the report that student success means students are happy. This is a fundamentally flawed goal for a university of any class, and certainly of any university of our caliber. Universities create knowledge including fundamental knowledge about how the world works, and they educate their constituents, whether students, faculty, or the general public. This report assumes that the creation of knowledge (also known as research) is not core to this university, and it assumes that by being efficient, the university will of course be successful. 2. The element of this report that I find most distasteful is that it has given no consideration to the massive disruption to the humans affected by all the changes proposed, nor does it address the massive disruptions to educational practices, research activities, and administrative work that would be necessary were all the recommendations to be implemented, with a turnaround time for comment-seeking of TWO WEEKS. Such massive changes might be justifiable if the university were on the verge of bankruptcy, about to lose all its accreditations, or under indictment for illegal activities. None of these are true, so the massive disruptions that would clearly occur have no other purpose than to bring faculty and administrators under the thumb of forces outside of our walls and make all departments and colleges look the same and eliminate the academic freedom that make a university what it is. 3. Although the surveys and interviews may have shown conflicts about what DEI means and what the university's culture is, that is not a problem to be solved by demoting DEI efforts. Attitudes about DEI are conflicted across the country. This does not mean that we should bury our efforts – we have come a long way as a university, but we still have a long way to go to serve the diverse state of Texas, to represent the diversity in students AND faculty AND staff, and to uphold basic human rights related to differences among individuals.

---

The US News and World Report rankings appeared few weeks ago and, once again, the University spun a momentary drop as a gain ([Headline TAMU TODAY: Texas A&M Moves Up 4 Spots In U.S. News Rankings. In 2008 we were 22nd among Public Universities. By 2011 we had dropped to 23rd. By 2018 we'd dropped to 25th. And in 2022 we'd dropped further to 26th So much for the 2020 goal of being in the top 10. Also, in terms of our rankings among National Universities the trend line over the past two decades is decidedly in the wrong direction; namely, we've been dropping roughly 1 rank every two years for the past two decades. If we compare our lowest ranking from 2004-2008 (i.e. 67) with our highest ranking in the last 5 years (i.e., 66) a charitable take on the data would be that we've remained essentially unchanged over the past two decades. This trend will not be altered by bureaucratic tinkering, by changes in the org chart.

---

I'm not entirely dissatisfied with the findings in this report. But I do find it atrocious that TAMU cannot make a more concrete commitment to diversity. The report hedges, throughout, on making any actual changes - though it notes a strong level of "discomfort" among faculty and students (this is a word used often). Our core values and our perception of ourselves as an institution require that we take more concrete action in this regard. Even more frustratingly, we have excellent faculty and staff who can provide the necessary suggestions and infrastructure to make change. All that we require to do so is a clear line of funding, support at the highest levels of university governance, and accountability for departments and faculty. There are plenty of models of other universities that have put far more effort into DEI work than we have, and have seen success. We keep saying that we want to recruit diverse student bodies; but "diversity" is only one component of "Diversity, Equity, and Inclusion" work. We cannot recruit talent but not retain it. We are losing the students, faculty, and staff that can do this work. TAMU's commitment to diversity is a joke. That simply is not acceptable anymore in our world. Aside from doing the "right" thing (which is really where the consideration should lie), we aren't doing enough to keep up with our peers in this political climate. We need to be a leader on this front. But right now we risk being a national joke. "Climate" is not some vague, amorphous concept. It can be changed through structured accountability and rewarding of DEI work. We simply don't have that right now. In a report like this, I would really have liked to see more direction on how that is going to happen. Instead, we seem to have gutted the effort that were already ongoing. You cannot say that you value diverse perspectives, and make a structure that does not align with doing so. We need, in other words, to "put our money where our mouth is." We haven't done that yet.

---

Thank you for the transparent sharing of the report and opportunity to engage in meaningful discussions and discourse verbally, and in written form. Happy to be able to contribute to the continued elevation of TAMU! Our future is very bright and continuous improvement is an ongoing journey.

---

This report has many positive recommendations. To attempt to get effective input from the faculty, in such a short window is naive, and further lowers morale that is already low, - is harmful to the faculty and totally counterproductive. I have heard many negative comments. The most common one is that the administration is just going thru the motions

of asking for input and that all these recommendations are already a done deal. Whether that is true or not I do not know, but asking to complete such a survey at this time of the semester, while students and faculty are already stressed out due to COVID 19, does not make sense to me at all. The report should articulate creating a pleasant and nurturing environment for all. It comes thru as a centralization of power, and the latest version of insensitivity. It will open a pandoras box of problems because it comes across as lets teach the faculty and staff a lesson. The best thing the administration can do is to have open discussions and take the time pressure off. I desperately want President Banks succeed! This top down pressure will boomerang on her. If I were in her shoes, I would have a series of town halls for a year or so, and allow the faculty and students to comment and get involved.

---

I was extremely surprised that the report makes no mention of on-line education. TAMU is far behind the curve in offering virtual instruction. Have a look at, for instance, the achievements of Arizona State University in this field as a model. Despite the aura of the "Aggie Experience," many students with whom I have spoken appreciate the flexibility that on-line teaching provided--if it is done properly. If TAMU actually wants to enter the 21st century, it better get on the boat with offering on-line classes. I am also disappointed that the athletics program received no significant attention. It has been demonstrated by studies over and over again the major athletics programs are net money losers--even considering alumni donations. In general, the focii of the report were cherry-picked.

---

It seems like the writers of the report did not investigate very deeply into specific implementation issues of their recommendations at A&M, some of which would be easy to learn by talking to people on campus or consulting published materials like degree plans. It is also disheartening that throughout the report changes are often partially justified by saying "our peer institutions do this." Our peer institutions have different constraints and different histories, and while studying them may provide ideas and insight, the fact that 12 out of 19 do things one way is relevant only in so far as it says that some schools do things differently than us.

---

The College of Agriculture implemented nearly identical changes and it had been an complete failure. Faculty moral is at an all time low in the college. If you want to really help us replace our Dean.

---

Many of these changes are welcome and necessary. I appreciate the need to rip off the Band-Aid to make the university more competitive and placed to best achieve our mission to students. I strongly support investment in professional human resources management consultants to engage in transition because the biggest risk TAMU faces in the implementation is losing talent at all levels.

---

Two overall thrusts of the report--increasing transparency and developing career paths for faculty (especially non-tenure-line faculty) and staff should be given very high priority.

---

Thank you for the opportunity to offer feedback regarding the recommendations offered in MGT Consulting's report dated October 19, 2021. I am a Former Student and [REDACTED]. I teach for the [REDACTED]. I have a Master's of Education in Instructional Technology and I am the [REDACTED]

---

Since the majority of my time is spent in professional practice, I bring a different lens than some of my faculty colleagues that have spent their entire career in academia. Regarding Recommendation and Rationale #9a: I find it a bit harsh to refer to the University Studies students as, "...do not have the qualifications or interest to enroll in a College degree program..." and the inference that these students would be a distraction to a College's mission. From my experience, some of my past and present USAR students were predominantly transfer students. They wanted to get into a particular COA program, but for some reason when they transferred in - there wasn't room, so they were advised by their assigned advisor to go USAR until their desired program had an opening. I would assume that would be the case across all of the University's 18 colleges. Due to that fact, I don't think it would be wise to dump all of those students into one University Studies pool. Regarding Recommendation and Rationale #9c: I'll admit it - as someone who teaches for the COA Department of Construction Science and someone who is employed by a large construction firm - I am extremely proud to be a tiny part of the #1 Construction Science program in the nation. My practical mind can't help by think, "If it's not broke...don't fix it." It would be a detriment to change something that is so successful and on the track to become even more successful. My main concerns about moving COSC to the College of Engineering (COE) are as follows: - DEI - currently 24% of COSC's students are 1st generation college students. Many of those students speak Spanish at home with their families. As you know, there are many demands and pressures that come from being a 1st generation student. If COSC moves to COE, it may give potential COSC students the impression that our program is too hard. We need our Spanish speaking COSC students to make it to professional practice. There is a huge need for HUB (Historically Underutilized Business) contractors, as well as a huge need for Spanish speaking professionals out in the field. - Increase in Rigor - 1st generation students aren't the only ones that worry about rigor. Several of my past and current

COSC students have transferred into the COA program due to the fact they couldn't meet the academic demands of Civil Engineering. - Increase in Tuition - COE's tuition is higher than COA's tuition. This will be another issue that will deter potential COSC students, especially those 1st generation students that find it daunting to pay COA tuition rates. - Interdisciplinary Learning - the trend for interdisciplinary collaboration in the A/E/C industry is huge and much needed. Removing COSC from COA will hinder students ability to cross pollinate in class. There are many industry professional studies that have been published that prove that when there is a high level of collaboration between architects and general contractors, projects are much more successful: projects are finished on time and even early; less change orders are generated; and the Owner gets a better design and better performing building. Apart from those concerns, do I think COSC could be successful if moved to COE? Perhaps, if allowed to continue to operate under its current structure that makes the Department and program so successful. The things that make COSC so successful are the following: - Current Leadership - Dr. Patrick Suermann has provided excellent leadership. He has assembled a leadership team and faculty that continually strives to maintain and exceed expectations, but most importantly helps build and support successful COSC graduates that will continue to give back to their University and continue to improve the Construction industry. - COSC's Construction Industry Advisory Council (CIAC) - not only provides financial support, industry intel, and robust recruiting and support of our COSC students. - COSC's Curriculum - our curriculum is the right mix of theory and hand's on/applicable knowledge. Far and away, TAMU COSC students are more prepared for industry day one after graduation. - COSC's Faculty - COSC employs several APT professors that bring years of successful real-world experience into their instruction. The ability of COSC students to learn from those that have applicable knowledge is invaluable. These faculty members are providing a huge value and enrichment to the COSC student's education. Thank you again for the opportunity to share feedback. I want nothing but the best for our University. I feel confident that you and your team will take in all feedback offered and act in the best interest of our beloved University as we continue to strive for academic excellence and carrying on the Spirit of Aggieland.

---

In general, I'm highly skeptical that centralization is going to solve the universities problems. I am a new professor at the university and have already quickly noted that many services and functions that were hosted and organized within departmental walls at my previous institutions are in fact much more centralized already here at A&M (e.g., IT, business offices, communications, etc.). I don't see this as a benefit. The huge downside of this is that these offices, services, and functions are one extra step removed from the departments and are therefore not able to understand the unique and individual needs that each department may have. Along these lines, I believe that centralizing undergraduate advising would be a mistake, leading to situations where undergraduates may not receive the best tailored advising that is appropriate to their field of study.

---

There are many interesting suggestions and I am in general supportive of many of them. My biggest concerns are with regards to moving faculty affairs from Provost Office, creating a Vice President for faculty affairs directly under the President, centralization of UG student advising and of communications.

---

There seems to be a general theme to centralize operations for achieving cost efficiency and control. Decentralized structures are in general better for fast response. Case in point temperature of rooms in Galveston are controlled from College Station. Not a good idea when students are sweating in class and have no control locally. My buy in to Texas A&M as a student two decades ago was for its best value for education. I hope we will have more concrete analysis into the cost savings versus operational efficiency before major structural changes are made. As an example centralizing student advising might save us a lot of money, but does this really benefit the student when domain specific knowledge at the local level is key to good advising. What is the benefit to saving costs to students when they cannot be given the correct advice they need. Their personal education debt might be more critical to this analysis even though this is an external cost, not directly captured in our system.

---

We need shared governance. COVID was mismanaged terribly with no input from faculty. The only thing in the report I liked was the ratio on Faculty senate - it should have correct ratio of APT and T/TT.

---

For the scale of changes proposed, it surely is a very short response time. Change is good, but change in haste without proper thought and consideration does not end well.

---

Several organizations are collecting survey data, including the Council of Principal Investigators (CPI) and Faculty Senate. CPI will have feedback from all PIs that includes ratings of each of the recommendations. I strongly encourage the administration to make use of these data when considering the implementation of the recommendations. I also believe there would be considerable utility in directly engage these organizations in determining what changes to implement. Thank you for all your efforts to elevate TAMU to one of the world's greater research and educational institutions!

I read the report with optimism, and I appreciate this opportunity to provide feedback. The key to any of these changes will be transparent and swift implementation. I strongly believe that it is better to make the changes and solve teething problems as we move forward rather than to get caught in a quagmire of endless committees trying to predict and solve problems in advance of moving forward. Faculty members tend to get caught in the weeds and scrutinize the details of everything for faults--it is in our DNA and a big part of what makes us successful at our jobs. It is also the reason why few faculty members possess the necessary skills to lead effectively. In my department, faculty members are already frustratingly using potential re-organization as a foil to delay and inhibit innovation. Moving swiftly, deliberately, and transparently will enable faculty members such as myself to focus on doing what we were hired to do--research and teach students--rather than waste energy worrying about the various permutations of the university's future. In consequence, I am optimistic about the President's aggressive timeline and strongly encourage her and her team to remain steadfast in keeping it. As I stated above, my name is [REDACTED], I am a [REDACTED], and I am happy for my thoughts to go on record and be identified with me.

---

The combining of departments into larger colleges will have a very large number of problems. Some departments are just so different than others I suspect the difficulties in combining them far outweigh the benefits from combining them. A deeper look into the compatibility of departments is needed.

---

What about research excellence? National prominence? These central concerns barely received mention in this document. Highly concerning.

---

I think that there are some good suggestions (many, even!) in the document for making the university more efficient, even if a wider vision for improving the university was lacking - there are lots of technical fixes but there is not much thought given to tackling the more fundamental problems at the university, and in higher education more broadly. With that in mind, I was disappointed as what was missing from the report. This may be because they are not seen as a priority or because no one thought about them. (a) Faculty administrative load - many faculty seem to be overburdened with administrative tasks (I'm new and I already feel like I'm barely keeping my head above water). A focus across university management of taking some administrative tasks away from faculty or trying to mitigate their effects would be beneficial. I regularly get emails late on Saturday nights from faculty who are trying to catch up with admin from earlier in the week. If so many staff are having to do so much work out of hours then this implies a defect on the behalf of management. If there is not enough time to complete the required tasks during the week then either the faculty member isn't using their time effectively (which may well be true) or they are being given too much to do (or, as it probably the case for most people, both). It is the responsibility of the university to manage the expected work load. (b) Faculty and staff mental health - I tried to search for this in the document but I couldn't find it. I think because no thought has been given to it. Covid has been extremely hard for many faculty. This is related to the point above. It is difficult or impossible to retain brilliant faculty and let them prosper if you grind them into nervous wrecks within a couple of years. It diminishes research, it makes it difficult to develop as educators or employees, it makes people more likely to leave to pursue other career opportunities. The biggest problem here is not in terms of provision of mental health care for faculty and staff but rather encouraging a healthy work environment by ensuring that there is a realistic workload. In summary - I think that there are some good ideas within the report and I would be pleased to see them come to pass, but I think that there are more fundamental problems which must be fixed and which are an higher priority and these issues were not considered in this report at all. This is disappointing but there is an opportunity to go back and consider these issues now. I hope that the opportunity will be taken - I think there there could be an huge positive effect even from just getting the university community to think about work-life balance and how we treat one another.

---

The release of this report is creating a crisis in confidence. This is not because change is not wanted or needed. It is because the proposed changes, despite the report's claims to the contrary, do not have the evidence behind them to support the contention that the proposed changes are the best ways to improve this great university. Indeed, there is a real risk perceived by many constituencies that they will seriously weaken this university. That regards the substance of the report. And because perception can also matter, I add the following. There is widespread perception among many stakeholders, which may or may not be valid, that, given the way the report was written and delivered, that the changes were proposed and then the research was funded to justify those changes, and not vice versa. This is particularly painful in a University setting, because this perception means that this report is antithetical to the University model of performing unbiased research to gain knowledge. P.S. As I was filling in this form (11/5), I learned that the deadline for reporting has been extended.

There is very little hard evidence or documentation for many of the findings listed in the report. This is unfortunate because it undermines confidence in both the findings and the changes proposed in the study.

It is not obvious as to how or why the 20 peer institutions were selected. Since they serve as the basis for comparison and justification for much of the recommendations, this is a rather important component of the report that is not discussed. For example, Duke and University of San Diego are both private and much smaller in terms of their number of students. Things brings into question many of the claims and recommendations made within the report justified by peer institutions.

I find the tight turnaround of the feedback period for a report of this magnitude and gravity highly disturbing.

First, I want to say what I enjoyed in this new proposal. I strongly agree with the idea of forming a School of Visual and Performing Arts. I believe having this at the university will help increase diversity at the university, and will also help to recruit top notch faculty from larger cities who might otherwise be hesitant to move to a college town. This is a fantastic idea. I think it will also increase revenue because of an increase in university programs the public might purchase. Now, I would like to address things I see as potentially problematic due to what I have seen at other institutions, and hopefully offer up ideas to compromise into a stronger position. I only have two areas here. The first of these is the centralization of undergraduate advising. I do have to say that some centralization of this is beneficial in that being able to switch programs would become a bit easier. What I have seen, having been the pre-med faculty advisor at my former institution, is that for STEM fields, the advising is very specific and a failure to do it correctly resulted in delayed graduation rates because of a knowledge of pre-requisite courses (and therefore centralization resulted in lower university ratings and problems with student retention). In centralized advising I saw all kinds of things, like advisors with liberal arts majors advising pre-meds to take all their math, chemistry and physics at the community college because it was easier--then the medical schools don't want those applicants! It was not good! I also saw that if you placed the advisors physically away from the students, they failed to make appointments. This was particularly true of minority and first gen students. A central advising, with "arms" into the departments makes more sense. The second, and last thing I want to comment on is the Biology department. I got my degree from Texas A&M, class of 85!. If the Biology department had not been in the college of science I would not have come here. I wanted to be a scientist. You may have recruitment problems of the very best students.. I came back to teach here one year ago, and what drew me to the department was both its great retention/graduation rates and its growth. With a retention rate of 95% and a solid graduation rate for 1st gen students of more than 80%, I believe that right now the program has a stellar retention rate! When I was interviewing they were able to tell me that Biology had a 57% growth over a 5 year period, compared to a 12% growth at the university overall. From what I'm seeing in faculty meetings, the recruitment of top notch biologists and obtaining of grants/publishing of papers, is on a similar meteoric rise. This seems to not be a great time to move, transfer, upset a system that is hitting a stride that is so productive and income producing for the university. Our department depends on interactions with Chemistry and Physics for research and in the coordination of student courses. A good example of this is, we can't set Biology make up exams at the same time as chem lab make up exams. That is one of DOZENS of problems that will arise if we are taken out of the college of science, which might result in student retention problems.. I understand the desire to have more co-ordination between the college of science and the college of agriculture, and I think we can do this with an institute that does not separate us from our colleges. I saw a model of this called The Beckman Institute at the University of Illinois--that let different groups from different colleges interact. It is possible. Thank you for considering my feedback, [REDACTED] Whoop!

Thanks for this investment in getting meaningful ideas to make TAMU better. It requires big changes to make big improvements. Do make the Institute of Biological and Life Sciences. The museum of natural history is a no-brainer. Combine the colleges, it's a good idea.

The development of the arts in this report is exciting, long overdue and has the potential to make a huge impact not only on the campus community but the community throughout the state and beyond. It is important that the school and center is created with specific feedback from the art areas that are involved. The potential in this report could make a lasting impact if, it is supported with appropriate funding and with input from the people who are currently representing the arts on campus and beyond. I look forward to the work ahead.

The writers of this report have some valuable observations and findings. However, many of their suggestions/recommendations that come out of the findings seem under-researched and display a lack of understanding of the university, the various roles of parts of the university, the history of the university, and the importance of human relationships between different offices (not just between faculty in different departments, but between faculty, IT

workers, administrative professionals, and human resource liaisons, for instance) in getting things done, retaining diverse and resourceful faculty, and effectively teaching students.

Although it makes sense from a cost and standardization perspective to centralize, there is a risk of losing the insights and personalization provided by a decentralized organization. Certainly, it is advisable to have standards to provide consistency to operations and processes, but that can be accomplished without consolidating into single large organizations where efficiency is sacrificed in the name of consistency. Mechanism can be put in place to organize efforts and provide uniformity so that there is standardization to processes and procedures, but retain the personal touch.

I am an urban/city planner by training and practice. One of the things that I preach to my students is “the process is as important—if not more important—than the plan itself”. The process should be inclusive, transparent, and should capture a comprehensive and in-depth understanding of the community/organization. This management plan has failed in terms of providing an objective and transparent process of collecting, assembling, and interpreting stakeholder input. It is clear that the process of collecting input has been anything but transparent or objective. The timeline and method of data collection have been anything but best practices. The resulting report thus fails to capture anything but the most superficial understanding of many of our academic and service units. The way it was rolled out—having already been vetted by Regents and upper administration, but not shared with deans and other unit leaders—gives testament to the kind of top-down leadership we can expect in the coming years, and represents the destruction of shared governance. Clearly, that is cause for concern from many stakeholder groups. Understanding that many of these recommendations have already been accepted and are already being implemented, the promise of legitimate input is weak at best.

Provided above

I am appreciative of the streamlining effort, particularly as far as administration goes. We have got to remedy a situation where the only actual career path ahead for faculty is ... administration. But I am concerned about the centralizing impetus as far as academic affairs are concerned.

Thank you for receiving our feedback regarding the MGT report. My only concern with the recommendations of the report had to do with the potential to expand its outsourcing models found in the Executive Summary on Page 5. I think that to say that TAMU "utilized successful outsourcing models" depends on your values. By "successful outsourcing", I am assuming the report is referring to values such as that the University maintain existing service levels while saving money. Yet I contend that our Aggie values demand more than that. It is my understanding that the savings from outsourcing these positions came from wage cuts and the elimination of health and retirement benefits that would not have occurred had these workers remained University employees. Now many of these lower wage Aggie workers count themselves among the working poor, living paycheck to paycheck for years without the ability to save for retirement or unforeseen crises. In that the outsourcing cuts target a workforce disproportionately low income and made of persons of color, it does not seem to be consistent with Texas A&M's commitment to diversity and inclusion. I am inviting this committee to consider raising this important issue, and I would like to see a closer look taken at the current situation of the often-unseen men and women whose daily work enables us to do ours. It should be the goal of the University to lift up all those associated with it. I am proud to work for Texas A&M. I am proud of who we are and who we strive to be. I am hopeful that together we can make a difference and provide leadership in this area.

It is not clear how survey results indicated these possible changes. That had an indication on possible areas for improvement but not these drastic changes in administration and operations.

Because the report, as written by MGT Consulting and Martin+Crumpton Group (M+CG), lacks any substantive cost benefit analysis or quantitative metrics, it is difficult to determine what the findings mean. It is hard to argue with bland mission statements and comments concerning perceptions. This is surprising as other freely available MGT Consulting group documents have metrics, quantitative data analysis, and extensive references and resources listed in their reports. This document lacks transparency, which was clearly an issue as highlighted by the faculty and staff responses in Appendix 1: Survey Analysis.

My perspectives on this report come from having been a faculty member since 2015, currently [REDACTED]. So much in this report aligns closely with the changes I have been working hard to make on this campus since I arrived. The success of these initiatives require that we leverage what we are already doing successfully as we make change. To sum up my feedback and recommendations I believe we should: • Build a new Performing Arts Center, with a mission that

emphasizes new and innovative works, that is highly responsive to the research and teaching needs of faculty, perhaps guided by the AVPA; • Form the College of Arts and Sciences, and establish the School of the Arts; • Within the School of the Arts hire new faculties to provide training in theater, dance, music, and visual arts, while also maintaining our existing strong programs in Dance Science, etc.; • Place the Department of Performance Studies in either the College of Arts and Sciences or the School of the Arts, and make it the home of interdisciplinary scholarship at Texas A&M University by locating the University Studies degree within it. In addition, the Department should develop an interdisciplinary humanities PhD program. For the vision articulated by this report to be successful, Texas A&M must evolve and remain at the forefront of artistic and scholarly practice. Doing so requires a commitment to creativity and innovation like that already found in the Department of Performance Studies.

---

I hope that this process doesn't result in layoffs of the most vulnerable members of our campus. Universities in general are more and more exploiting highly educated individuals with the creation of all sorts of low wage positions. I hope the leadership has a plan to retain its talent and recognize the effort of its most vulnerable employees.

---

In general, centralizing business operations and HR would be a big mistake and lead to an unresponsive bureaucracy designed for one-size-fits-all actions. Having positive working relationships between faculty and support staff is extremely important to helping us faculty be as successful as we can be. Moving those operations to some anonymous edifice will make everyone less efficient. Whatever gains are made from streamlining org charts and removing redundancies will be more than lost from converting to a DMV-style model of bureaucracy.

---

" The College of Veterinary Medicine and Biomedical Sciences houses the Biomedical Sciences degree. Splitting the program between three colleges creates confusion for students about appropriate majors and creates barriers to changing majors which results in increased time to graduation." In my view, the problem is not with the barriers to changing majors or with the increased time to graduation, but with the fact that different programs have different standards. The academic rigor and evaluation standards are different and as a result the university is producing graduates that have different preparation. In my view, the academic standards of the Department of Biology are higher. As a result, we are better preparing students for the future. "There is also internal competition for resources such as faculty hires, facilities, grants, duplication of current faculty members areas of interest, which hinders the ability of faculty members to collaborate and contribute to advancing research and student success." This sentence is fallacious. It is true that there is internal competition for faculty hires and internal grants, but having distinct faculty working in related areas is a plus and, arguably, this fosters, not hinders internal collaboration. In addition, the existence of diverse faculty studying a related problem offers a wide variety of choices for training to both undergraduate and graduate students, which overall contributes to the health of the university. "Having heterogenous faculty split between colleges makes it difficult to create equal metrics for comparison. The university's biology program ranking is also inhibited because it is difficult to benchmark against other university programming." This is true. "Based on comments during the interviews, there is a perception that the current Department of Biology is underperforming and there would need to be a significant investment to bring the productivity to an acceptable level." The presence of this sentence and this sentence alone in the MGT review makes me think and question both the fairness and objectivity of the reviewers. Where are the metrics for comparison? How was this comparison made? Why wasn't the performance of the other Departments/Units not included? To me this sentence reveals the existence of an Elephant in the Room. It is clear that the MGT team was directed to include this sentence in the review. This comment is a torpedo directed at stopping the current upward trajectory of the Department of Biology and to stop the current efforts to grow the number of faculty in the department. "Most peer institutions do not have a stand-alone biology department, but universities do offer microbiology and other specialized biology programs. Cornell University shares the management of some biology programs between the College of Arts and Sciences and the College of Agriculture and Life Sciences." The fact that most peer institutions do not have a stand-alone biology department is not a reason to kill this one. "Recommendation #5: Create the new Institute of Biological Life Sciences which will contain the Department of Biology and the Biomedical Sciences Program. This new Institute of Biological Life Sciences will be primarily housed in AgriLife but strongly connected with the College of Arts and Sciences, College of Veterinary Science, and TAMU-Health through courses, faculty, scholarship offerings, research grants, and laboratory facility use." In my opinion, the proposed solution does not address the problems outlined above - the fractalization of programs. The proposed housing of this new institute in Agrilife, as opposed to the College of Arts and Sciences confirms what I stated above: Reviewers were directed to write this review this way. Somebody in the upper administration has directed the MGT team to write this recommendation. In my opinion, whoever is named director or head of the proposed Institute was directly responsible for influencing the MGT review. Why not fusing ALL biologically oriented departments (including The Department of Biochemistry and

Biophysics), into one College? Why not create one College The Department of Microbiology, which would include all microbiology-oriented faculty from ALL departments on campus into one? This newly-formed department would have high National and International standards overnight. Why wasn't the existence of the Interdisciplinary programs ever mentioned? This is a MAJOR fault of the report. These interdisciplinary programs are leaching resources from other departments and are an ipso facto departments. Why wasn't the Department of Plant Pathology and Microbiology, not mentioned? Why wasn't the impact of these proposed solutions on Graduate Students ever mentioned? Why wasn't the structure of the new administration system ever mentioned? To me this review and recommendations, far from addressing pressing problems or proposing valuable solutions, is aimed at stealing resources that the Department of Biology has painfully acquired since its inception. The Department of Biology has pioneered the teaching of the many diverse areas of Biology that spans from Botany/Zoology to Genomics. The general area of Biology is attractive to a large number of undergraduate students who, while generally attracted to Biology, are still exploring their specific areas of specialization. In this way, the Department of Biology is an inclusive department. In my view, the only true aim of the proposed solution is the centralization and re-direction of the money that comes from federal grants towards Agrilife. This is a power move, and has nothing to do with solving real problems. "Moving the Department of Biology and the Biomedical Sciences Program into the new Institute of Biological Life Sciences will allow for easier collaboration for the biologically oriented faculty in the College of Agriculture and Life Sciences to collaborate with faculty throughout the university working toward similar interests." Not true. Collaborations are high now and the proposed solution will do nothing to improve that. "Eliminating duplication and combining resources will likely enhance the Institute's ability to move up in state and national rankings. Uniting resources in this way can boost academic and research efforts for all related academic units. Of note, there will need to be significant resources committed to facility renovation to ensure that the Institute faculty and students have the adequate infrastructure to succeed." I agree with these ideas, but not with the proposed implementation. In my opinion the MGT review has been directed to find what the upper administration wanted to be found and it is utterly unfair, and biased.

---

I believe strongly that Biology belongs with the other departments in a new College of Arts and Sciences and I look forward to contributing the growth of the department, the college, and TAMU in general. Thank you for providing the opportunity to give feedback.

---

I am seriously concerned about the lack of data and critical logic justifying proposals in the report. This report contains proposals without that are not supported by data driven arguments. No cost/benefit analyses for the proposed changes are presented. It is impossible to know how much money will be saved to justify the functional "quality" that may be lost. There is no detail of how any of our academic units will be made better by the proposed changes. This report is seriously deficient. Academic restructuring and all the different centralization plans should be carefully studied to determine if they are warranted and will improve our stature. Such careful study should include faculty.

---

While looking for examples from outside, can we focus on ourselves? Does Texas A&M University have to be like other university, or should we keep what we are? If we do want to learn from our peer institutions, can we look at those are similar to us in terms of student enrollment numbers or better than us in national ranks?

---

I am not one who get's too caught up in having thoughts about things beyond my control. So all of this seems reasonable. My only critique is that if folks are going to make recommendations about departments, it might be a good idea to understand that all departments are not homogenous. HLKN is a really large department but the report only focused on one program that overlapped with a relatively small department in health sciences. Sure, many of our programs and faculty would benefit from moving to health sciences as that fits their students and research. Sport Management has never really fit well in HLKN, or CEHD. If y'all are intent on realigning programs, and specifically HLKN, I would just like whomever is doing all of this to dig slightly deeper into our department and perhaps consider realigning our specific program (Sport Management) into a situation that would actually benefit our students and scholarship...rather than continuing to force a square peg into a round hole. Otherwise, cheers to sorting through however many thousands of these responses you may get. Thank you for your efforts and service to the university. Hopefully all your efforts produce the fruits that you and the uppers are hoping for :-)

---

As mentioned already, with any change, delegating the right people to facilitate such major initiatives is critical. I cant stress this enough. Strong leadership is imperative. Look for talent within but also seek objective consultation and resources outside the university.

---

I do not know anyone who was asked for input into this. It seems like there is a lot of new admin being created, which means higher costs and less resources directly for students. I am never in favor of more bureaucracy and think we should set expectations higher for the ones who are currently here.

I am not sure what academic realignment is and I am awfully worried about what I read in the report. The report starts with saying that things are decentralized at Texas A & M and they need to be centralized. Well, in the college of engineering, the president (who was then the dean of engineering) said the same exact thing and centralized many of the resources we have in the departments. Things have gotten worse over the last 6-7 years than what it was before she was the Dean. We had more resources for students, the cost of education for students was much lower and faculty also had more resources to help the students before. Now, what she is trying to do is to replicate this at the University level which is not definitely the right direction to go. To me, it seems like the President has already decided what she wants to do and using this whole process like a gimmick. When she was the dean, she never got input BEFORE making the key decisions and this is exactly what she is planning for the University also. I am very skeptical of the directions outlined in the report.

---

In general, the report looks very oriented to centralizing everything with the potential of saving resources. However, there is no analysis of the possible costs of this centralization, and before proceeding into that direction, a more detailed analysis will be necessary to determine which steps are worth pursuing.

---

Please send me an email if you read this to [REDACTED] via my email [REDACTED], and I pledge to alert everyone I know, students, faculty, administrators, the media, that I have evidence that our comments were actually read by a human being, and this exercise was more than an attempt to provide authority for changes that were going to be made regardless of input, and it was not just an attempt to divert the energy stakeholders from mounting protest against proposed changes. Of course, dear reader, you may not have authority or time to contact me with a short note. As they say "absence of proof is not proof of absence" and I will not assume that this survey has not been read simply because I receive no correspondence, and hope that you find some solace in the idea that your work reading, interpreting, and summarizing hundreds of angry, frightened survey responses is highly appreciated by me. If on the other hand, these comments are interpreted by artificial intelligence, I want to state for the record that I pledge my fidelity and allegiance to our future robot overlords.

---

I have a lot of concerns with this report, the speed with which these implementations are being proposed, and complete disregard of actual opinion of the faculty given the limited amount of time that was given for feedback, and that recommendations align explicitly with what already has been set in place. I have the following comments: 1. The move of Department of Biology to Agrilife is extremely poorly justified (using just Cornell as an example, where the same Cornell separated Statistics and Computer Science into a separate college from Arts and Sciences, not to mention their biology is still primarily in Sciences). I know multiple faculty from the department seriously consider moving to another university if the change takes place not to mention the whole department morale has been extremely low. It will also be really bad for the College of Science as we teach those students anyway, and have established a lot of collaborations with the faculty and the students. I strongly oppose this recommendation. 2. The merge of Liberal Arts, Geosciences and Sciences is not justified very well. All other universities who have such colleges have them for historical reasons, and not because it's a good idea. The huge variation in salaries, tenure expectations, and culture between Liberal Arts and Sciences will undoubtedly create a lot of tension, not to mention the huge administrative structure that will be needed will likely generate more costly spending rather than savings. Furthermore, I am worried that donors that currently give money to College of Science for Science and who as Aggies associate their time at TAMU with old structure, will be more hesitant to give to the new college and we will lose those funds. Finally, College of Science has considerably more prestigious reputation at TAMU than Liberal Arts. I can see how merge with Geosciences makes sense in some way, but I am very concerned that merging with Liberal Arts will lead to creation of new "mediocre" college, and will negatively affect our ability to attract students, new faculty and National Academy members. Finally, the pouring of resources into Arts will mean most likely that the new College will be spending huge amount of funds there at the expense of funds for other Science department. We have not been given any assurance that this will not be the case. 3. Centralized undergraduate advising will be a disaster. There are too many nuisances associated with each program for anyone to know them all.

---

In all, I support an initiative for reorganization and increased efficiency. But it should not come at the cost of destroying current successful Departments. In particular, I strongly disagree with moving the Department of Biology to the college of Agriculture. It belongs in the college of Science, where it is interlaced with other fundamental science disciplines.

---

I believe that asserting that a department full of dedicated faculty, staff, and Aggies is underperforming with no data to back it up has damaged the morale of our faculty, students, and staff. I hope that these issues can be resolved and that we can go back to pushing hard towards our department's goal of being a truly stellar department in all areas (research, teaching, and service) and a department that Aggies can be proud of and celebrate our successes as part of the Texas

---

The report does not carefully evaluate what are the cons of the recommendations. Some rationales were very hand-wavy and not convincing (nor containing data to back up the action items)

---

On page 124, the report states that of the 50 land-grant institutions examined, 41 (the overwhelming majority!) are administered by a "Dean" and/or "Provost." The logic to make the TAMU Libraries a sub-unit of the proposed CAS does not make any sense. Actually, in my opinion, the agency that compiled this report did a very slipshod effort; as if they were looking for justifications for a predetermined outcome. Anyone with a modicum of understanding how research is supposed to work (e.g. practically all the faculty) will see this report for the hatchet job against the liberal arts that it is. Shame, shame, shame.

---

When the department faculty submit a promotion/tenure recommendation, it is required to include short bio sketches of the writers of letters of recommendation. Inordinate time and attention is devoted to establishing their professional credentials to have an opinion on our assistant professors. In contrast, this report is unsigned, except by the name of the firm. Who are these people, and what qualifications do they have to tell university people how to run a university? Should we not know something about the authors' names and background? Of course, if they make a recommendation that we recognize as good, we should adopt it; but we must not feel obligated to adopt a change just because this report recommended it.

---

My main concern is consolidation of academic advising. In my opinion it can be consolidated administratively, but it must be implemented and located locally and embedded locally.

---

In general, I am wary of a more highly centralized academic and administrative structure. "One size fits all" does not work well for departments with widely varying missions and cultures.

---

The overall theme of the report was that the university would benefit from more centralization. While the report is correct that there are benefits to centralization, it fails to acknowledge that there are benefits to decentralization as well. For example, decentralized advising has the benefit of giving students access to advisors with better specialized knowledge of their major field of study. Decentralized IT has the benefit of having more IT professionals familiar with the needs of their specific colleges and departments making crucial decisions. While centralization can save costs by eliminating duplication, it also creates bureaucracy and puts decisions in the hands of people with less knowledge about the needs of the specific individuals being served. In other words, there are tradeoffs to centralization and decentralization, but the report completely ignores this reality and pretends that centralization has only benefits and no drawbacks. Anyone with that view is almost surely going to make a lot of bad decisions. I urge you to carefully consider the tradeoffs at hand. Sometimes the tradeoffs favor centralization, but other times they do not. Please do not ignore this reality!

---

I am concerned about the quality of the report. Compared to similar reports at other universities, there are very few data or other quantitative measurements, and the recommendations do not present the advantages and disadvantages of any of the suggested changes that President Banks would need to make her decisions.

---

All-in-all, the recommendations in this report are bold and transformative, I believe in a very positive direction for TAMU should many be enacted. My central concern is with some recommendations for Academic Realignment. In particular, the rationale for the consolidation of biological sciences into a College of Agriculture is in my view meritless. In fact, I believe this would be transformational is an extremely negative direction for the life sciences, the sciences in general and for Texas A&M University as a whole. The justifications for such a recommendation appear groundless.

---

I found this report appearing to be crafted to serve the interests of the three 'super colleges' (COALS, Engineering, Health Sciences), and then used to criticize the productivity and rankings of other smaller colleges and programs; all the while, proposing solutions that involve plundering and stripping those other colleges of their prime assets and dividing the spoils among those colleges with a higher position (vice-chancellor) of power. As faculty, we are always told that we are "afraid of change". To that, I counter that advocating change for the sake of change is the ideology of any new administration. Is there room for improvement? Of course. But, stripping assets that pay increasing annual dividends (and thus provide sustainable programming) for any given college, then telling them to boost their rankings solely through clinical service, graduate teaching and residual research endeavors, is a disastrous formula. Research arises from high quality faculty, recruited and retained as part of a broad and robust program (in the case of the CVMBS, that is biomedical sciences from undergraduate through graduate). Stripping that teaching mandate away robs the college of a robust program supporting faculty who do great research, provide excellent service, and teach world class courses while contributing to undergraduate, professional and graduate teaching.

Please collect and analyze more data about the results these changes could have before making drastic changes. Thank you!

The report gives a negative view of diversity initiatives in general and those that have taken place on campus. This is potentially driven by the fact that almost 17,000 former students were involved in the creation of the report and fewer than 2,000 current students were involved. The repositioning of the Office for Diversity is concerning, as it appears the leader of that unit will have less independence and fewer programs than in the past. It also appears that the office will be focused on student support going forward, whereas this office has previously led (and been successful in) faculty recruitment and retention initiatives. There is a lot of evidence showing that the best way to increase the diversity of your student body is to increase your representation of diverse perspective and backgrounds among the faculty. When I was offered a job at Texas A&M I mentioned this to one of the undergraduates that worked with me in the lab. This student was from Sugarland, TX but chose to go to a flagship public school out of state. I told them about getting the job and their response was "Oh. Texas A&M?" This was a somewhat surprising response that I questioned further and they noted that they were hesitant to say what immediately comes to mind. I of course asked what. The response of this student (again, who is from Texas) was only one word: "Racist". Admittedly, I was shocked, and when I moved here I had hoped that their assessment was untrue. Unfortunately, having spent several years here now (the better part of a decade), while I think that single word description is perhaps unfounded, I see where they were coming from. In the past year, I saw great positive movements from the student community in hopes of making Texas A&M a more welcoming and inclusive place. However, the response in this report makes me concerned about the institution moving forward, and suggests that it is not a priority. When I look at marketing materials I regularly see the Yell Leaders, Rev's Handler and the Corps as the most commonly used images. I recognize that these are key traditions. But they also portray the university as being a bastion of white male-ness (though Rev has had two female handlers, and we now have our first Hispanic Yell-leader, these are exceptions, not the norm). This can feel unwelcoming to students from diverse under-represented backgrounds. The discussion of reaching out to those communities is important. But this has to happen at all levels, and if those potential students don't see themselves as a key and valued voice to the TAMU community, if they don't see TAMU as a welcoming environment, will they come? I teach a large introductory course, often upwards of 225 students. There is beautiful diversity in that room in terms of racial and ethnic background as well as personal experience and belief. But the university is not doing enough to nurture that and there has not been enough meaningful work on campus to make our spaces more welcoming and nurturing. Instead, it seems that the views of former students are being heavily weighed and traditions (which again, I recognize are important) are being weighed in favor of forward progress and advancing A&M.

I think there are some good things in this report but my impression is that instead of a well thought out plan of implementation, a bulldozer is going to come in and mow everything down and then try to rebuild. The disruption to campus, after just having come through the disruption of COVID and the mental health of faculty and staff right screams move ahead cautiously.

One of my main concerns is whether and how any proposed changes can be made with the least disruption possible, and in such a way that the result is truly positive for the university. For instance, SRS being centralized was probably overall effective, but for some departments like math, it is often incredibly frustrating to work with them instead of an in-house grants person. Another example is when we switched to WorkDay. This has been a giant source of anguish for our staff to deal with, and still has not yet become easy in any way.

PLEASE, do not merge BIOLOGY with Agriculture!!!!

I felt that the original survey was looking to support a personalized agenda already being set in motion, such as that represented in the Nov 4, 2021 Dilbert Comic. There is a difference between being forward thinking and becoming a laughingstock of your peers. Unfortunately several elements of the report, particularly the marginalization of all colleges except Engineering and Health Sciences will do more to hurt Texas A&M than help it's reputation and recruitment.

I do not agree that the student advising should be centralized. It would make it harder for advisors to address the unique challenges students face in each department. The relationship between the student and the advisors would become less personal, which is a significant loss at a large university, where it is easy to "get lost in the crowd". The shortcomings of the distributed advising should be addressed by clarifying the responsibilities of the departmental advisors. Obviously, these responsibilities should include those related to the department, but they should also include responsibilities related to cross-departmental activities, such as helping a student change majors. A compromise might include a very

small unit dedicated to expediting such cross-departmental needs.

---

Thanks for the report, very insightful about the role of universities in the 21st century.

---

A lot of these changes are potentially good ideas, but the process has created multiple roadblocks to achieving successful outcomes. The people who would be needed to make these changes (leadership, faculty, staff) feel a lack of transparency and a lack of trust in university leadership. This could have been a very engaging process, where we re-envision the university structure as a group to work toward a better future. Instead, it is coming across as a top-down mandate based on a shoddily prepared report, no evidence, and no input from experts.

---

This MGT report is demoralizing on many aspects. Several recommendations seem to fulfill the personal agenda of a few, and do not consider how this could negatively impact the life of thousands of students and tens-to-hundreds of faculty. It would set TAMU on a wrong trajectory especially in the field of life sciences, including through the exodus of tens of talented faculty campus-wide.

---

While I agree in principle with many of the suggestions in the report, there is no denying that it lacks data. It appears to rely upon unsubstantiated rumors and innuendo instead of being data driven. There are falsehoods and contradictions throughout, and a general lack of accountability in the sense that many of the "findings" were in fact problems created by former provosts, vice-chancellors and presidents, and now current faculty will pay a price for those short-sighted decisions. I, like many of my colleagues, view the report as contrived to justify decisions already made. For this reason, it is hard not to be cynical about the motivations and outcomes. That said, if sufficient money and effort are applied I believe the university could be improved by this plan.

---

I am curious about who the consulting group talked with. Their surveys are highly suspect because of the low participation and the time period in which they were administered (many people were upset because of COVID, and the presidential election. Respondents were likely to lash out about anything put in front of them). While some may express concern that the review cost \$600,000, I am curious as to why it was so low for a job so large? It's evident that they didn't capture all the complexities of Texas A&M University, and many recommendations seem to be recycled from the AgriLife review. I support many, in fact, most of these proposed changes, but there are some that need additional vetting or they will drag down all the good actions that could occur. The ultimate success of this university will be in how the changes are implemented.

---

MGT seems to want to centralize many functions, and doing this across many/multiple functions at the same time or too quickly greatly increases the risk of negative outcomes. Pick a few areas/proposals for centralization only, strategically, and in the areas where we can obtain admin/faculty/staff consensus that offer the highest potential for outsized gains.

---

I was pleasantly surprised by this report. I think many of these proposed changes are required. My final feedback for President Banks is that most of the people who are in administrative positions at this university (Deans, Ex. Assoc Deans, Dept Heads) only have their own interests at heart. They are NOT acting in the interest of Texans, the students, and least of all, the faculty. They are arrogant, drunk on power, ineffective, and not willing to learn about the land grant mission or engage in actual productive conversations. They are busy getting puff pieces written about themselves in every media outlet available to them. Their job is to serve, not to bask in glory they did nothing to help earn. Hold them accountable.

---

The overall idea of centralization proposed in the report is generally reasonable. It is the specific implementation which worries me. I have seen both good and bad examples of centralization. As a good example I would like to point at IT services centralization which was done recently in the College of Science. I consider it highly successful because it solved the problem of several bottle necks, without actually disturbing any current services. Faculty did not even notice the change but the department received new (additional) and highly professional services from the college and new resources. I can only hope that the centralizations proposed in the MGT report will be as successful.

---

The number of factual errors and lack of quantitative justifications in the report is troubling. It has also become clear that individuals from some colleges who are involved in administering and conducting the teaching and research missions of the university were not interviewed nor were any of the relevant data requested.

---

1. I was shocked by the fact that report makes almost no mention of research – what does this suggest for the future of this university as an R1/AAU institution. The report seems to entirely ignore this huge part of who we are as an institution. 2. I worry that the framing of diversity initiatives in this report is a HUGE step back for the university. I worry that the fact that the sample was so heavily weighted towards former students led to an inaccurate perception of how current & prospective students feel (let alone faculty who were recruited here with the promise of a different vision). 3. I am very concerned about the proposal to centralize advising. I currently serve as the associate head of undergraduate

studies in my department, I simply cannot imagine doing my job without “in house” advisors who know the ins and outs of our curriculum, the needs of our students, the implications of changes proposed by faculty, etc. I believe this change would ultimately hurt students by creating a host of new problems by trying to fix one specific problem. I agree it should be easier for students to change majors, but perhaps there can be a larger team of generalist advisors without sacrificing the benefits of having specialized advisors. Our advisors are the biggest sense of continuity for our students. The faculty teaching their classes change every semester, our 4 advisors stay with them the whole time. I think centralizing hurts retention of students and retention of advisors. I know all 4 of the advisors I work with are very concerned about losing the best part of their job: forging real connections with students.

---

I am concerned that the changes recommended in the report are so large and so many and that rushing to implement them will mean it will not go smoothly. Retention and recruitment of the best faculty and staff and students is at risk.

---

The MGT Report sets a bold agenda for reorganizing almost every aspect of Texas A&M University. It's an ambitious plan, and many aspects of it have some merit. Nevertheless, it suffers from serious methodological and theoretical flaws that need to be considered before any final plans are implemented.

**General Impressions** While I would like to give this report a more thorough critique, faculty have only been given two weeks to respond. Aside from not being enough time to carefully consider all of the proposals' ramifications, the timing is suspicious, with the report being released to faculty during one of the busiest times of the semester. Perhaps this was simply coincidental, but it feels as though the plan is *fait accompli* and that our input is merely for form's sake. This is particularly unfortunate given that some of the stronger recommendations in the report are those that would strengthen shared governance. For instance, the report correctly points out that Academic Professional Track (APT) faculty are not proportionally represented on the Faculty Senate. Similarly, the report points to a lack of professional development opportunities, a problem that is system-wide but that is felt more acutely by APT faculty. These are issues that do need to be prioritized. Sadly, the MGT Report doesn't really give many concrete recommendations for how these deficiencies are to be addressed. Instead, we are left to infer that these will fall under the responsibilities of the new VP for Faculty Affairs. That's fine as far as it goes, but the way this plan is being railroaded through makes the report's calls for strengthening governance ring a bit hollow, especially when contrasted in all the ways, implicitly and explicitly, that the report calls for giving greater power to the President. Finally, the report states that, "[g]iven the ever-changing landscape of expectations for teaching, research, and service, it is of particular importance to provide faculty a platform through which they can voice concerns and engage in discourse with senior administration." This is perhaps the most ironic statement in the report given that the "ever-changing landscape" is due almost entirely to the constant change in senior administration. Absolutely nothing in the report addresses how senior administration can be stabilized, something that would make the landscape faculty have to navigate far more stable.

**Shared governance indeed!**

**Diversity and Inclusion** One of the most disappointing failures of the report is its recommendations about improving diversity, equity, and inclusion (DEI) at the university. The report is absolutely correct that Texas A&M suffers from a seriously bad reputation on DEI issues. While there have been some improvements, these have not been uniform across the university, and the fact that our demographics still do not mirror the demographics of Texas, or the United States for that matter, despite decades of at least nominal effort by administration demonstrates that we still have a long way to go. In short, this problem is nothing new. This makes the perfunctory recommendations in the MGT report to improve DEI issues on campus even more egregious. Yes, of course we need to improve our recruitment efforts. We've been saying that for decades. However, creating a new position to focus on recruitment won't move the needle significantly if we don't also address the serious problems we have with the climate at Texas A&M. It's unconscionable that the MGT Report didn't address climate at all, not even acknowledging that the university recently did an in-depth analysis of climate, with specific recommendations, not one of which is so much as mentioned by MGT. Finally, I have nothing against creating an administrative unit at Texas A&M that focuses on DEI issues. Indeed, I would wholeheartedly endorse such a recommendation. Nevertheless, MGT's rationale for moving such an office out from under the Provost is unsettling given their claim that "[t]here is a need to condense and focus the Provost's office to elevate the profile of teaching and learning within the auspices of Academic Affairs." While it can be argued that DEI issues affect far more than just teaching and learning, it cannot be argued that DEI is not integral to teaching and learning. There's a misalignment of reasoning here that is disconcerting to say the least.

**Flawed Guiding Assumptions** While I applaud MGT on much of the work they've done, it's clear that they were given an overriding mandate to focus on administrative efficiency. I don't think any faculty would seriously argue that administrative bloat is a good thing. Similarly, faculty across the system would love to see money currently being wasted in administrative inefficiencies be returned to departments and to students. Nevertheless, the MGT consultants, whether by mandate or by oversight, have operated under the false assumption that administrative efficiency is necessarily cost-free and, in all

cases, "good." This is glaringly apparent in their recommendations for revamping student advising, consolidating liberal arts and sciences, and restructuring life science programs. Student Advising There can be no doubt that there is room for improvement when it comes to undergraduate academic advising, and the MGT Report raises many reasonable concerns. For instance, it correctly points out that advising positions vary widely in terms of training, duties, pay, etc. Its points about easier onboarding of academic advisors are also well made. That said, the overriding justification for consolidating all advising on campus is that it would make it easier for students to change majors. This is deeply problematic. First, it's not obvious that changing majors more easily is necessarily desirable. Indeed, it could be argued that there should be a relatively high transaction cost to changing majors. That cost shouldn't be insurmountable, but having some barriers reduces impulsive decisions and provides opportunities for student issues to be addressed within departments. Second, the report fails to consider the tradeoffs of consolidating student academic advising. For instance, individual undergraduate programs can be complicated to navigate. Students moving through, say, a meteorology degree face very different challenges and choices than a student pursuing a degree in education. Decentralized advising may make it harder for students to change majors, but it also provides rich local knowledge of individual programs, classes, professors, research opportunities, etc., knowledge that would be lost through centralization. The MGT report doesn't address these issues because, again, it is assuming that administrative efficiency has no tradeoffs. It's alarming that no one seems to have asked the question if making it easier to change majors is more important than making it easier for students to navigate the majors they're in.

Consolidation of Liberal Arts and Sciences There are parts of this plan I find interesting, perhaps even promising. Nevertheless, MGT is naive about the dynamics of humanities and sciences and justifies its proposal to unite the two with faulty reasoning. For instance, the report emphasizes that a combined College of Liberal Arts and Sciences would be one of the largest colleges on campus. First, why is that seen as an inherent good? Bigger is not automatically better. If it were better, then why not just combine even more colleges? Wouldn't that be better still? Of course not. It's a specious argument. It's also disingenuous given that many of the degrees and students it counts in the combined college structure are, elsewhere in the report, going to disappear as the Department of Biology is moved to AgriLife. Second, the report asserts that placing the humanities in the same college as the sciences will elevate the status and resources of the humanities. This is a bold assertion without an ounce of evidence that will actually be the case aside from some cherry-picked examples of the arrangement working at other institutions. STEAM is an attractive idea, but given the historical animosity between the humanities and the sciences, there's every reason to doubt that liberal arts will have more leverage once subsumed into a STEM college than they have on their own. Third, the report goes into depth about the advantages to (some) humanities majors of being in a STEM system. For instance, it talks about theater students learning construction techniques and fine arts students learning design technologies and studio tools. Again, this is an egregiously specious argument, not least because none of the departments proposed to fall under the new college actually have any expertise in either of those domains. Expertise in building is concentrated in engineering, while much of the expertise in design technologies fall under architecture. Finally, I have grave concerns about tenure and promotion in the proposed, combined college. Faculty in the sciences and the humanities have very different professional expectations, duties, measures of success, etc. The tenure and promotion process is fraught as it is without throwing disciplinary misunderstandings into the mix.

Journalism Program I agree with the report's recommendation that Texas A&M could benefit from having a strong journalism program. Nevertheless, I find it ironic that we need to be advocating for a department that the university very carefully and deliberately dismantled over a decade ago. We would not be in this position, now, if other administrations hadn't gutted a successful program then. At the same time, I find it strange to justify the need for a strong journalism program on the grounds that "students and the public gain a comprehensive understanding of journalistic terms, processes, and transparency practices." It sounds good, but it's meaningless given that relatively few students are likely to actually take any journalism classes.

Institute of Biological Sciences The call for the biomedical sciences program to be combined with the department of biology under AgriLife is, perhaps, the most ludicrous part of the whole report. However, it neatly demonstrates the folly of prioritizing administrative efficiency above everything else. Let's begin by questioning why the life sciences are being singled out for this singular "honor." Throwing biology and biomedical sciences together on the basis that they are both life sciences makes about as much sense as combining psychology and political science on the basis that they both use statistics. Yes, there is nominal overlap in some of the courses that biology and biomedical sciences majors take. However, the same can be said of biochemistry majors and chemical engineers, yet no one would seriously suggest that would be an academic pairing that makes sense. One of the things that makes the biomedical sciences program so strong is that foundational courses within the major are taught by professors with clinical backgrounds. Sure, a biology professor teaching anatomy and physiology is covering much of the

same material as a professor teaching those courses in CVMBS. However, they are approaching the subject from fundamentally different angles. BIMS students need a clinical perspective because that's their career trajectory. Placing them under biology professors will seriously undermine their success. Of course, combining BIMS and biology creates huge inefficiencies that will not be offset by bureaucratic savings. Currently, many of the professors teaching courses in the vet school are the same professors teaching BIMS majors. Removing BIMS from CVMBS, then, will require hiring new faculty and creating new facilities to teach what students are already being taught in spaces that were created specifically with them in mind. This makes no sense whatsoever. At the same time, the report rather callously declares that the Department of Biology is underperforming. Setting aside, for a moment, the problem that asserting this based on gossip without providing any metrics to back it up is completely unprofessional and vindictive, if it were true that the Department of Biology is underperforming, how in the world will placing even more teaching burdens on biology faculty, making them responsible for BIMS courses, going to help? The short answer is that it's not. What is being proposed, then, is to duplicate faculty and to create new, duplicate facilities in order to give undergraduate BIMS majors a poorer experience at great expense. There is simply no way that is offset by lower administrative costs. The other rationales for this juggling act are even more preposterous. For instance, the report states that "having heterogenous faculty split between colleges makes it difficult to create equal metrics for comparison." However, that's the nature of academia. Universities are split into colleges. Faculty are, of necessity, heterogenous. Comparisons between them are always difficult. Absolutely nothing about this proposal changes those fundamental facts. Yes, more life science faculty will fall under the same college, but the university is still left with the problem of creating metrics to compare faculty across colleges, disciplines, department, etc. The report also goes to great pains to justify shuffling biology-related programs around the university on the basis of making it easier for undergraduates to change majors. However, it only makes it easier for students who decide to change from one life science major to another. That presumes that most students who change majors stick to life sciences. I see absolutely no numbers to justify that assumption. Having all undergraduate life science majors housed within AgriLife doesn't make it easier for students to change from, say, microbiology to psychology or from biochemistry to biomedical engineering. At the end of the day, the distinctions here are utterly arbitrary and ill-conceived. I would also question the report's assertion that a major stumbling block for collaborative research on campus is because of competition between faculty for resources. Most research funding comes from outside sources. Faculty aren't competing with other faculty at Texas A&M so much as they're competing with researchers from across the country or even across the globe. Furthermore, the report states, rather oddly, that "There is...duplication of current faculty members areas of interest, which hinders the ability of faculty members to collaborate and contribute to advancing research and student success." This is nonsensical. At the heart of any collaboration is overlap in interest between scholars. If anything, then, this situation facilitates rather than hinders the ability of faculty to collaborate, thus increasing their ability to meaningfully contribute to advancing their fields. Finally, the report rather confusingly suggests that another rationale for moving BIMS to AgriLife will allow CVMBS to turn its attention to building a new small animal clinic. However, CVMBS has been hankering to update its small animal facilities for a long time, now, and not once has anyone in the college argued that they'd be able to do so only if they didn't have undergraduates to teach. The two have absolutely nothing to do with one another. Similarly, the report then goes on to suggest that AgriLife has a wealth of expertise relevant to small animal research. That's undoubtedly true, but why mention it unless there's some movement underway to combine CVMBS with AgriLife? Again, the combinations being proposed show that MGT really has no understanding of what it was analyzing.

The report glorifies centralization. While some centralization is sometimes good, there are also a lot of ills with centralization. Based on this report, centralization solves all problems. We need to be very careful about this type of thinking. Sometimes decentralization is much better because it allows more specialized attention to different issues. A clear example is the recent move to split OGAPS into two – one that deals with undergraduate students and the other that deals with graduate students. The needs of these two groups are quite different and, thus, require different organizational structure to address these needs. Therefore, in very general terms – please be aware that centralization is not always good and sometimes really end up detrimental (think of Soviet Union type of system). The report does not address the current feelings over racial representation on campus. While it talks about recruitment, this is not effective if current issues are not addressed. Way too often students of color do not feel welcome on our campus and are faced with symbols of their oppression right here on our campus. This should not happen. If TAMU would address that, then the diversity recruitment both at student and faculty level would improve as well. I think the suggestion that Faculty Senate should mirror the tenure demographics in the university is a great one (I found it in the beginning summary of the report, but did not find it in any particular parts of the report). Outsourcing services – the main issue with

outsourcing services is the loss of control of how the workers are paid and treated. As a respected University, we should not tolerate taking advantage of low-paid workers to the extent that it does not allow those workers to lead a normal life. There should be no need for projects like Reach project on TAMU campus (<https://www.agsreach.org/>) and being careful about outsourcing can help to ensure that.

I would urge focusing on the big picture (4 equally-balanced pillars and opportunities for strategic leadership and coordination in each pillar) and being more flexible on the details. The MGT folks had a good high-level vision for the university, but may have overreached with some of their detailed recommendations. Don't let (justified) pushback on the details stand in the way of the big picture!

My largest concerns are obviously a bit selfish given that I am APT faculty in liberal arts and highly susceptible to job loss. Currently, I earn less money teaching here than I did as a high school teacher. Some of this is due to my discipline's low salary scales at the national level, yet some of it is due to inequities across faculty job lines. Many of the proposed changes in this report make me fearful of my future here and I absolutely love my job. I am an Aggie - first generation high school graduate who transferred into A&M as an undergraduate. I struggled here, but I made it and went on to be successful in graduate school. I stay here because I want to give back to the place that changed the course of my life in many ways. However, I am very nervous about the fact that most of the changes proposed in this report affect our core curriculum colleges; there is no mention of reducing any services/programs/etc in the college of engineering. Although I am not an engineer, I do teach future engineers how to think critically and write coherently. I hope that whatever changes are made will take into consideration the important role of undergraduate faculty who exclusively teach our introductory core courses.

Given the scope of Academic changes suggested in the document, it might be time to take the appropriate time internally to enable a diverse committee to evaluate our existing models for the distribution of funds – particularly those from tuition dollars and from F&A funds received. In order to expand multi- and interdisciplinary work, and add flexibility in degree offerings, changes may be necessary. Emphasis on a small number of pillars is a good approach. • Suggest that AgriLife Pillar be renamed as Agriculture or at least reflect the College of Agriculture and Life Sciences as the academic anchor it is. The various agencies are collectively organized under the AgriLife umbrella. ☐ Rationale: This pillar is anchored by the College of Agriculture and Life Sciences and reflects Texas A&M's history in Agriculture, as well as its important stature in current sciences / industries related to basic in the food, fiber, shelter, natural resources domains. Far more than just food ☐ AgriLife unites all of the agencies associated with TAM's agricultural experiment station that each have their own missions, but are united in their important role in sustaining life • Consider an additional pillar (or crosscutting beam(s) or gable(s) that unite the pillars) that emphasizes emerging and interdisciplinary & multidisciplinary efforts o Rationale: A negative aspect of decentralization is that the lack of consistent approaches for funds resulting from tuition or F&A funds can disincentivize interdisciplinary and multidisciplinary initiatives. o Solution – Implement a well-thought out model that enables and supports multidisciplinary activities

Re: process - There seems to be some lack of transparency in process, and also inequitable input by different units. The lack of input from faculty, in general, and content experts particularly is surprising. The method of data collection, inferences made based on data collected, and interventions proposed are, at best, unscientific. That the majority of survey respondents were alumni has certainly led to different responses than would be obtained from current students, staff, and faculty. This biased process raises real questions about the reliability and validity of the information that serves as the basis of the report. There is also clear misalignment between the reported data and suggested implementation. As a top research institution, that we would rely on such an unscientific process to gather data upon which to intervene is disappointing. I hope that all future implementation efforts will leverage the considerable expertise among the faculty (e.g., in organizational research, survey construction, data collection, implementation science, intervention science). Re: other sections - Executive Summary - There is comment about recent outsourcing of service jobs being successful alongside a suggestion to engage in further outsourcing. While previous outsourcing may be seen as successful in that the university saved money, it also resulted in the cutting of hours, loss of benefits, and serious harms to campus climate. Such outsourcing systematically affects people of color who serve essential roles on campus. Again, in relationship to the troubled history and current climate, I would hate to see the university move further in this direction. As mentioned above, I think efforts to better serve Texans and our local community will need to involve self-examination of our valuing of the people who work in these essential service roles.

I worry that many of these ideas sound good in the abstract, but when it comes to implementation that faculty will be left out of the decision making process. I worry that combining Liberal Arts, Science, and Geo-Science will mean that

entire departments will be eliminated. How do we know how to judge the ideas if we don't know how they'd be implemented?

The report lacks data to support claims, it does not do a cost benefit analysis, and certain areas, including Biology, seemed to have been unfairly targeted for reasons that are not apparent. I don't think anyone in Biology was interviewed or asked for data. How can major changes be recommended based on a perception, which by the way is not correct. This is unprofessional, and dangerous. I certainly hope that our feedback is accurately reported to President Banks and that she takes the time needed to investigate some of the inaccuracies in the report, and considers both benefits and problems in making any of the recommended changes, before making any decisions. Even this survey is problematic. We were told we could revise anytime until the deadline, but that is not the case. I had to request a new link from the Provost's office to revise. It is also not clear that hitting the arrow below ends and submits the survey.

The idea that this report was based on a "listening" period and consulted all constituents is baffling--the people who were NOT consulted is stunning. Equally baffling is how the transition to any new structure advocated in this report is going to happen, in particular given the lack of understanding of the history behind why some of the suggested changes were not made in the past (Journalism, for example, or music and performing arts programs). Staff and non-track faculty are particularly concerned about merging with other units given the hard-fought battles to define their positions and roles within the university. Departments are concerned that years of work establishing metrics and assessment tools for specific disciplines will be lost in mergers no one asked for. Most of the faculty, staff, and students I have been listening to are perceiving this plan not as a great chance to build exciting new programs and connections, but as a series of cost-saving measures.

Without faculty buy-in for most of the initiatives in Faculty, Academic Realignment and Student Affairs it is hard to seem initiatives working out very well. With the range of programs, majors, degree options, etc. a centralized (there's that word again) advising system is folly.

"Nearly 16,500 former students provided usable responses to their survey. Survey responses were grouped by graduation decade. Based on the decade graduated, between 38 and 52 percent responded that they were satisfied with the transparency and communication received from previous TAMU administrations." This seems very low, again demonstrating the top down administration of TAMU. "Finally, faculty and staff rated the importance of various elements of the comprehensive review. More than half of all respondents deemed every element either important or very important, and several elements were rated highly by 75 percent or more of faculty and staff respondents, including: 1) Financial stability (91 percent); 2) Flexibility and adaptability (89 percent); 3) Efficiency and continuous improvement (87 percent); 3) Supporting faculty research and scholarly activities (81 percent); 4) Facility management (78 percent)." Seems very good. Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens." We do this in Rudder first floor and the TAMU Archives now. Last thing we need is a new performing arts center when Rudder theater and auditorium sit vacant most of the time. This type of student will go to UT or Rice, perhaps UH in this state. We never will be able to compete with UCLA, NYU, or UT in these fields, and we already have a Performing Arts Dept. Recommendation #5: Invest in a voluntary phased separation (VSP) program for eligible tenured faculty members. Have one in CLA. So, why don't more of our senior professors retire? Well, many love their jobs, and in CLA if they retire then their salary goes back to the Dean and doesn't stay in the Department. Retirees basically are shafting their department. At excellent universities each department is known for some strengths which are maintained for decades, not here. Finally, why does this questionnaire ask about the Provost's Office and not the President's Office? This sure does send a message--she doesn't care what we think.

I am new to academia and am instead accustomed to major corporate changes that involve staffing and resources. Those changes sometimes work well but also can become embarrassing failures. The speed of this project is bypassing serious input from faculty and any input from departments. This seems to be a waste of resources since our campus has people here who have deep expertise in these areas.

Please keep in mind that there is a HUGE conflict of interest between upper administrators (expected to be in a job for a few years then they are expected to move on) and the interests of staff/faculty that expect to be here for one or more decades. In my experience, this conflict of interest causes faculty and staff to wonder how much of any proposed change really fixes problems and how much is to "show that something is being done" for the advancement of one administrator or the other. It also seems to affect how receptive to feedback upper administration seems to be sometimes. Sometimes (not always!) the adage "If it ain't broke, don't fix it" applies and faculty/staff observe administrators "fixing" away to their benefit and everyone else's detriment. There are examples at TAMU of "fixes" that

took a decade or more to recover from (in the eyes of some) - Research Foundation to SRS, for example. There should be sufficient collection of feedback from the affected communities (students, staff, faculty, etc) to validate that something is actually a problem. Then - and only then - should changes be implemented. Those changes should be carefully considered. This is a good first step, but the process should continue throughout any change. Administration would do well to consider the effects of numerous and rapid change on organizational morale. The impacts of COVID-19 and economic downturn have impacted the university recently in a variety of ways that seriously altered how business is done here compared to 10+ years ago. In some colleges, there have been numerous changes implemented in that same time period. I feel like I am watching morale plummet here at the staff and faculty levels. Maybe there are five things that do need to change around here, but do they all need to happen at once? Can they be staggered? Will administration communicate with the community about priorities (first we should fix X, then we should fix Y, Z can wait a decade)? Does administration have a plan to EFFECTIVELY communicate with the university community to ensure that the members of the organization feel listened to and valued? The university has expanded in size greatly. The system is straining. Sometimes it feels like we are on a runaway train. Has administration considered if there is a need to take a breather, put a hold on growth, reset how business get done around here, and reach a new equilibrium before MORE massive change? Every suggested change could, in theory, be good for TAMU. However, people are people and if morale plummets the changes that look good on paper will not necessarily turn out as expected.

---

Rapid change is usually failed change. Change decisions are not implemented effectively when they are hasty or when those affected are not deeply involved in the planning. TAMU has been rising in the ranks of universities at a significant pace. A failed reorganization will drop it, its image, and its recruiting ability rapidly. No doubt, change will occur. The question will be whether it is the intended change or not and whether the unintended consequences add value or do damage. Have unintended consequences been systematically examined as part of the risk assessment of the change decisions? For example, changes will cost many people their jobs, mostly staff, but also some faculty. What provision will be made to help them relocate within the TAMU system? What is the risk to university recruiting if a negative image emerges from terminations without support? Faculty with expertise in organizational change should be directly involved in the planning process, such as: [REDACTED], higher education [REDACTED], communication and leadership [REDACTED], management [REDACTED], management [REDACTED], the learning organization [REDACTED], organizational psychology Relying on the MGT team to guide decisions will be inadequate. Their report and their website do not make a convincing case that they have rich experience with change initiatives of this broad scope or higher education experience rich enough for interpreting survey and interview findings or weaving those into a coherent plan. Last week's meeting of the Faculty Senate with 500 people attending articulated a few key points and concerns, however, the urgency of having a strong and articulate voice seemed to be missing. Today's department meeting had a similar tone. There may be multiple reasons for the lack of energy, such as indifference to changes that do not seem to directly impact a faculty member, failure to grasp the full extent of the proposed plan, hopelessness in feeling they have no real voice in the process, or ignorance of the nature of large system change. Complacency and indirect resistance typically emerge in situations where employees bring such attitudes to a major change initiative. The faculty senate and department leaders seem to be similarly handicapped. The scope of the proposed change is immense. Few published cases exist in the literature of university reorganization at this scale. Therefore, judicious use of campus expertise, thoughtful communication of plans to campus members, and careful judgements about pace of change will be essential for generating an overall successful transformation.

---

Don't centralize academic advising. I don't think that will improve time to degree.

---

The findings of this report are highly questionable, speculative. I don't know if the hire company has interviewed the current faculties and how many of them they have interviewed. Without listening to the faculties, this report could point to the opposite direction and inflict tremendous loss to the university.

---

I want to say that I agree with the concerns raised about Diversity initiatives from former students. Many faculty in my department are upset about diversity initiatives being questioned, but I feel like the university has been divided into first and second-class citizens for some time, the diverse and the non-diverse. I have seen cases of hiring faculty by simply not considering applications from non-diverse faculty, so that a diverse faculty member is then hired. This happens with the ACES program, and it has happened with the provost's initiative. I've seen people excluded from consideration for jobs simply for being white, and it makes me feel sick to think about this abject racism taking place in our university. The focus on diversity has also detracted from the now defunct goal of Vision 2020 of creating a culture of excellence. It doesn't seem like we care about excellence because all we care about is diversity. Thank you for listening and

responding to these concerns.

---

The report, like anything proposed sweeping change, is a mixed bag in my opinion. With some of the areas, like the museums and performing arts, they identified items that can be improved and offered good suggestions to correct them. In other areas, they identified areas that needed improving, like IT or Business Admin redundancies, but offered counter-productive advice on how to correct them. In other areas, they seemed to propose changing things just to change them, like the College of Arts and Science. I suspect nobody in any of the colleges they propose combining is thrilled by the idea. In all, the spirit of this assessment is positive. I like the idea of being willing to ask hard questions and to take bold steps if it will help the university. I am not particularly happy with the way that this was undertaken. I heard of the assessment as a rumor a few days before it was announced by the president. The whole assessment certainly did not embody a spirit of transparency and honesty, and it felt very at odds with the rhetoric that followed it. It also seems apparent that the people doing the assessment did not do their homework, they seem to just point to what other Universities are doing and then suggest that it might work here. A particularly glaring example was the recommendation of a natural history museum for the area; this is something we already have. If they couldn't be bothered to simply google 'College Station Museums', then how much of the rest of their assessment is similarly uninformed?

---

Professional development for staff is an excellent target area for improvement. I hope that this report will provoke discussion and conversation about the best way forward. I am concerned that we alter the university based on a report that was developed over the course of a few months.

---

There does not appear to be a connection between the survey questions that we were asked and the recommendations that were received. Which begs the question, what was the point of the survey? It feels like the process of restructuring an entire university is being rushed through with little to no input from faculty and staff. What is the hurry? Why are we not talking about this together as members of the same institution? Since faculty and staff had effectively no input in the creation of this report, we thus have no investment in seeing any of the recommended changes made. Which is unfortunate, because there are some good ideas here, alongside numerous bad or impracticable ideas (which could have been adjusted or modified had any meaningful input actually been sought in the first place). I only hope that, moving forward, meaningful input is genuinely sought from faculty, staff, and students. I like to think that Shared Governance matters at Texas A&M, and optimistically believe that we will follow such an approach in the coming weeks and months. I strongly believe that some of the recommendations presented in this report will improve the operations of the university, thereby leading to even better student outcomes. I equally strongly believe that some of the recommendations presented in the report will worsen the operations of this university, and deteriorate morale and the shared sense of purpose that faculty and staff currently feel.

---

There is a large amount of skepticism out here if the feedback we supply will really make any difference. The word on the street is that the report was sent back to MGT several times until it said what the TAMU administration wanted it to say. Further, several things that are recommended in the report are actually already occurring. Knowing that brings into question whether what is said here really matters at all.

---

I am hopeful that the President will address some longstanding issues at A&M - silo-ism, lack of accountability and compliance at all levels, lack of prioritization (everything is important so nothing is and projects don't have enough resources/people allocated to do them well - so we get mediocrity). That said, this report is a place to start - and I appreciate the decisiveness and courage that the president has demonstrated in dealing with the issues she sees. However, it is clear to me that there are some areas that were not priorities and included almost as afterthoughts in this report - the Libraries is one such area (if there had been an info gathering about what the Libraries' strengths are, Get It For Me at the very least would have been mentioned). There are a lot of functions in the library that support student and faculty efforts and university priorities - it is difficult to measure their direct input into student success or knowledge creation as we are partners with them in supporting their efforts (but many seem to be satisfied and return for assistance). I would encourage the consultants to speak with people, if not in the library, then about the library - to identify our strengths and opportunities for growth. I am willing to refer to our constituents or to answer questions if needed (and will include my contact info) - [REDACTED]

[REDACTED]

---

Throughout the document, the authors refer to a "dotted line" relationship but never define what that would mean.

Page 71: Invest in a Voluntary Phased Separation Program. This section is written in such a way as to supplant that the

TAMU President shall have the discretionary authority to select participants, determine eligibility for VSP payments, and construe the terms of the VSP agreement. This does not appear to be a voluntary program...

---

There are some good ideas in here, and some which I view with skepticism. Having more details about how certain changes will be implemented or how they will impact the daily life of students, faculty and staff would be beneficial, and I expect they will be forthcoming. Universities need to set priorities for growing areas of research and academic investment. While journalism and fine arts are important in society, STEM fields are growing, particularly computing, I see no comment on advancing computer science, data science, and related technology fields. That is a missed opportunity

---

That so much money was paid for such an incomplete and error-prone report is embarrassing. No SWAT analysis for the proposed changes? No data presented to support the proposed changes? Flat out wrong statements? Seems like a mismanagement of funds.

---

Generally, it is a low quality report. Just a few examples: 1. The citations in the report are outdated. Citing a 1992 student affairs study when we are in 2021 shows a disrespect to the field. 2. The peer institutions they list are not our peers. 3. Some of the recommendations of the report demonstrate that corporate consultants do not understand educational institutions. For example, there is a difference between a library that serves the university and a degree program in library sciences. 4. The organizational chart is missing a VP of Operations showing they were working off an old chart.

---

Thank you for sharing the MGT Consulting Comprehensive Review Final Report and thank you for inviting feedback. I am very impressed by the breadth of the report and understand the lack of details for implementation. As many understandably fear change, I am sure that much of the feedback will be emotionally charged. As a faculty member, I will be directly impacted if these changes are implemented. However, I do believe that some change is necessary and wise implementation of change is what we expect from your office. I've been a faculty member for 26 years. I'm not frightened by change; I think we all (including Presidents) need to be good stewards of the resources (including students) of the State of Texas. Thanks for working to make us better.

---

While the realignment would address many problems with our current structure, much hangs on divisions drawn a century ago (and using other schools as a guide only reaffirms the problem). A good portion of the faculty would likely describe their current departmental/college alignment as a "historical accident". There is an opportunity to do more, to consolidate faculty based on shared research, interests, and methods--rather than simply reshuffle the department/college deck. A department such as my own includes faculty that study the cellular basis of plasticity, clinical treatment, and business administration. Across areas within the department, there is no discourse or commonalities. Links are largely through interdisciplinary templates (e.g., Neuroscience), which have minimal control over relevant resources. Realignment will bring much pain, but if walls are to be broken down, why go halfway? Many of the suggested fixes appear to be temporary repairs to an aging system that needs a thorough revamping.

---

--It would be nice for you to send out an email that describes what a combined Arts and Sciences College would look like and how it would function. One thing missing from the report is a vision of how a College of Arts and Sciences would be structured and how would it operate. At the Department level, how would important decisions be made in terms of faculty hiring, faculty evaluation, and resource allocation? These are not addressed and it might be nice for you to send a document explaining this. --I fear multiple years of chaos with the centralization of services as happened to AgriLife. I hear many horror stories about how centralization is NOT a success. --I fear the creation of more bureaucracy at more levels. Right now it is bad enough, but if we merge into a super college I can only imagine the number of Deans, Assistant Deans, and their staffs, etc. which would only make it more difficult to achieve our work.

---

Not once in the entire report is Disability Services mentioned. This is a fundamental service that should have been a major focus of this report. Any person can at any time become disabled and need these services. How are they functioning at this University? Who thought it was a good idea to leave them out? From that alone, this report is of questionable value.

---

One thing I've noticed in the report is that the team that put the report together did not have enough members with scientific backgrounds to help them understand the mission of the various programs that may share only part of a name. I hope whoever is in charge of revising this finding incorporates more scientists in order to maintain our university's position as one of the best in the country.

---

The report seems to conflate DEI efforts with a diverse student body. But students from diverse backgrounds must be supported by faculty, staff, and administrative representation from these same backgrounds. Do the faculty, staff, and

administration also reflect the demographics of the state? That priority is crucial to student retention as well. The surveys were evidently ineffective in reaching the current student body. As a faculty member I found the survey questions mystifying in their jargon. I did not understand how the questions aligned with the strategic priorities of education. That said, I found the report effective and insightful. I gather I am a minority in this view.

---

The report assumes that centralization is in all areas an improvement. I don't think this is necessarily true. It can increase bureaucracy and reduce access where access is needed. Decentralized administration has many positive features.

---

Finally, the obvious bias towards Agriculture, Engineering and Business is expected given the A&M name, but I would like to see A&M be innovative and expand on new technologies, new approaches, and new ideas of the future, not fall back on the old "A&M" focus of the 1950s.

---

A perhaps philosophical point. In my view, the departments are the living, breathing units of the university, where everything happens, the good and the bad. The departments are the university. They are responsible for the outcomes they produce. But along with this responsibility, there needs to be authority over their affairs. The role of the administrative units from the college on up is simply to facilitate the work of the departments and to be a conduit for resources.

---

It is surprising that the management report did not address the challenges with growing the research enterprise of TAMU. The campus is lagging far behind our peer institutions in funding from NIH and there appears to be no plans to change that. NIH funding typically represents the major component in the annual revenue of most major universities but not here. There are also very few training grants to support research grants and to strengthen graduate education. There is weak institutional culture in terms of excellence in biomedical research that is supported by the evidence of strong funding.

---

In general, the MGT takes the position that the university's decentralization and diversity are obstacles to be overcome. I think this orientation toward the university's structure is problematic. Meaningful independence and diffusion of authority among academic units creates space for innovation, permits attention to disciplines' special scholarly and educational needs, and protects the rights and well-being of faculty, students, and staff by creating closer connections between administrators and the stakeholders they serve. In the same way that state and local governments in the United States serve as "laboratories for democracy" and agents to protect citizens' rights against federal over-reach, decentralized university governance enhances the quality of academic programs and experiences with the university over the long run even if they may involve some short run inefficiencies.

---

I was a professor at a school previously in which the same procedure as we are considering was done (hiring and implementing an outside consultant firm's ideas). I would like to offer a word of caution. The main takeaway from the other audit was a dramatic reduction in staff via firings and non-replacements. This had a catastrophic and lasting effect on the functioning and morale of the university. Initiatives of these sorts are tempting as they improve the bottomline and make sense for a company to be ruthless about personnel decisions. However, academia is a different type of organization. Please act sparingly and very reluctantly in making decisions that are motivated by or will lead to reductions in the work force.

---

My main concerns were addressed in the comments above. I would have liked to see more about pros and cons of each decision, as well as a more in depth study to justify the recommendations. Also, it's disturbing that of the former students surveyed, only 19% were students in the last decade. Given how swiftly and fundamentally academia has changed, I would be concerned that those answer really do not understand that.

---

Overall, I would suggest to avoid too big changes in working structure of the University and develop plan on improving things gradually, without big changes, likely accompanied by significant loss of the function. Prioritize and make changes in controllable way, using existing structure as much, as possible and only change it when not possible otherwise. It is very easy to break things, but is very hard to make things work.

---

I think this is a bold plan with lots of great ideas. But the success of any of them will be determined by the implementation and administration of them. I wish you well as you deliberate about which ones to pursue and how to implement them.

---

The report contains a large number of suggestions, many of them promising improvements in efficiency and success. However, many of the suggestions have not yet been fully vetted and need further impact analysis.

---

Many people are upset at the short timeline and the process which seems essentially pre-ordained. I appreciate the bold action and vision behind these actions. While I support most of the recommendations, their actual implementation could be effective or could make things much worse, depending on how it is done. My hope is that planning and implementation will be done with the active and real involvement of the faculty.

I have worked at Texas A&M in the College of Veterinary Medicine and Biomedical Sciences for more than a decade, and I support most of the changes outlined in this report. Below, I have a couple of comments that I hope the administration will consider. 1) Please allow TAMU to hire/allow remote workers, particularly in Sponsored Research Services and Research Compliance. These organizations suffer from high staff turnover and often hire minimally qualified people merely to fill the position. Consequently, grant submissions and managing research compliance can swing from arduous, error-ridden messes to effortless, depending on whom you get. Further, once you find someone who is engaged and does good work, they are often gone before the next grant cycle or compliance deadline. Please allow TAMU to hire remote workers to access a broader talent pool and have better workforce retention. 2) Please broadly implement the VSP retirement program. Our College and Department are choking from the large number of tenured full professors who are not engaged, have minimal teaching responsibilities, and do not have active research programs. The salary burden these older faculty have on the College/Department is staggering and dramatically impedes our overall mission and ability to plan for the future. Please help address this issue. 3) Before implementing the transition of moving programs out of the College/units and consolidating into larger groups, the upper administration needs to clarify who will oversee this transition for each unit, then allow these people to meet with faculty to hear their concerns and allow their creative input into the organization of the program. 4) The BIMS major needs to move to an all-encompassing life sciences program that students can transfer into when their earlier coursework indicates that they can succeed in this program, not before. The administration and older faculty within the College of Vet Med will not like this, but it needs to happen. 5) The university, in general, needs to evaluate the need for non-thesis Masters's programs. It is not easy to see what societal value these programs have outside of generating money, which is offset by the significant impact on student debt.

Centralizing for efficiency is only a good idea if you are determined to save money at a high level at the cost of local control and effectiveness. I've been in academic administration at the department level for over a decade and I've yet to see a case where removing autonomy from individual units led to better teaching, research, or outreach.

Overall, I am impressed with the report and find most of its findings very relatable with the appropriate solutions suggested.

I do think the University will be strengthened and more nimble after these changes and look forward to them being implemented.

“Realignment” of the Health Education (HLTH) program to School of Public Health (SPH) has been a talking point for 4 provosts and several presidents. Pull the trigger already and move the entire HLTH group into the SPH Department of Health Promotion and Community Health Sciences. Keep Kinesiology, PEAP, and SPMT together as they are academically married. Don't care where they go - keep them in Education, move them to SPH, or place in Agrilife.

Change to the better is always welcomed. I pray some of these changes makes us an even better university. Gig'em!

The report places great emphasis on administrative efficiency, but it only superficially deals with the impact of its recommendations on education and research. Very little attention is given to the impact of these recommendations on staff and students, or on critical matters such as recruitment and retention of faculty, staff and students, in particular, graduate students. Finally, given the broad, sweeping recommendations in this report, the period allowed for study and feedback is woefully insufficient. Faculty should have been given months to digest the report and consult with one another on its recommendations. There should have been time for forums at the college level. The Faculty Senate is to be commended for providing at least some venue for faculty discussion and comment in an open setting. However, it is unclear what, if any, the response will be to this from the higher administration. Nobody from the higher administration was present to answer questions from the faculty.

As a management principle and a governing principle, centralization does not enjoy a great reputation. Proceed with care. Consolidation of the Colleges of Geoscience, Liberal Arts, and Science is a commonly accepted best practice at most of our peer institutions. This should be done carefully and methodically. And then a new dean, one who has actually served in a successful College of Arts and Sciences, should be hired to inaugurate the new college. Finally, the time should be taken to identify a major naming donor for the new college before it is inaugurated.

There isn't another US public land-grant institution that has the resources and comprehensive programs that A&M has. We need to quit trying to be someone else and highlight what we do for Texas, the region, and the world. We are the top Land-Grant Institution in the country, let's acknowledge and celebrate that.

Recommendation #9c: Refocus the College of Architecture on the core mission of Architecture and Landscape Architecture/Urban Planning is poorly thought out and will damage current departments and the College of Engineering (COE). The Department of Construction Science (COSC) is not an engineering degree nor ABET accredited and moving it to COE will degrade the College and the Department of Civil and Environmental Engineering. Graduates of the Department of Civil and Environmental Engineering will not support COSC being moved to the College and many will protest the idea of creating non-engineering programs within the College as industry expects us to graduate engineering-trained students.

This report was consistently presented as academic/curriculum not being part of the scope, yet clearly there is a whole section on Academic Realignment which will have significant implications including curricular for multiple units. I feel it was misleading and unnecessary for administration to lack transparency on this issue.

We are deeply grateful for the opportunity to provide input, and collaborate with our university leadership through this process. Thank you for your time and efforts!!

I applaud TAMU for considering what many may be viewed as radical changes, but most of the recommendations are necessary. The key will not be in making driving the changes, but will be in how they are implemented. Throughout the process, the ability of faculty to do their work without significant interruption and without negatively impacting student experience and success is important.

A number of good recommendations were made. However, students, faculty, and alumni need to be heard about whether recommended changes are needed and a slow implementation plan needs to be made or this amount of change will not be well-received or supported. As I have often said, the bigger the change, the more input and time needed to make the changes or they will not be supported.

The following comments focus on Recommendation #9d - consolidating the Department of Health and Kinesiology (HLKN) in the School of Public Health. While the rationale provided in the report is poor and inaccurate, I believe this consolidation should occur. Currently, HLKN is the largest department on TAMU's campus with four distinct divisions included (3 of which are degree granting entities - Health Education, Sport Management, and Kinesiology). The Physical Education and Activity Program is a holdover from a time when TAMU required all students to complete 2 one-hour activity courses. Despite no longer being required, those activity classes are highly popular. There are clear models outlining how HLKN could be broken down and incorporated into the School of Public Health. In particular, I believe Indiana University's School of Public Health is an example for how we could accomplish this consolidation. Note: the current Dean of TAMU's SPH comes from IU and understands all the pieces currently accounted for in HLKN. I recommend embedding the entire Health Education Division from HLKN into SPH's Department of Health Promotion and Community Health Science (HPCHS). This addresses the rationale supporting #9d, which asserts that there is conceptual and programmatic overlap between the Health Education Division's academic degrees and the those in HPCHS. The remaining units from HLKN should then be groups into a Department of Kinesiology & Sport. That would allow HLKN's Divisions of Kinesiology, Sport Management, and PEAP to remain together. Conceptually this makes a lot of sense and also has a good academic rationale. Specifically, the PhD in Sport Management is actually a Kinesiology doctorate, with an emphasis in Sport Management. Moreover, the activity and science classes PEAP instructors teach are actually Kinesiology (KINE) courses - see KINE 199, 198, 223.

Where is the impetus in the realigned University to foster and grow the floundering biomedical sciences research engine? All the proposed changes (however successful) will do little to improve the overall ranking of TAMU. Building and expanding research is the only path to accomplish this.

Please reject most of the ill-thought-out proposals, and recruit a first-rate committee of top minds to propose SOUND advice of how to adapt the university to the 21st Century.

I am not in favor of centralizing the offices suggested in this report because in my experience these centralizations make it more difficult to function on a day to day basis.

I have concerns about centralizing advising. If we automate too much, and just hand out forms, the student misses out on needed advice. I believe someone transferring from dept A on campus to dept B needs to talk to people in A & B. TAMU did not get its money's worth with this consultancy. The survey we were given in August was vague and not to the point. The MGT team did not understand key issues, and it led them to make what in some cases are clearly disastrous

recommendations.

---

The whole recommendation misses two central points of any University: 1. A University is its faculty. It is not buildings, administrators, presidents, provosts, regents, manicured lawns, etc. It is its faculty. The administrators etc. only needed as long as they provide support for the faculty in what the faculty do. The faculty go through a very hard and harsh selection process before they are hired. This process is a lot more thorough than the process of hiring administrators. So it is ridiculous to think that the faculty need to be closely controlled. We are here because we want to teach, do research, and do service. Unless the University refocuses itself to the faculty our University will continue its slide towards mediocrity even if the lawns and gardens are perfect. 2. A University is NOT a business. The business part of it is a mundane part of it. The outcome of the research cannot be predicted, simply because if it can be predicted, then it is not research. The teaching quality does not have a good metric. (Although, it has one good indicator student to faculty ratio.) The outcome of the teaching will be evident only a decade or two after graduation. The grades are NOT the outcome of the teaching. Educated young people is. The report mostly talks about administrative measures. Most of them are in "consolidating or centralizing this or that". Centralization is a solution only for very simple problems such as control, planning, etc. We, the faculty, do research, teaching, and service. These things are the antithesis to centralization. There is no such thing as centralized research. The best teaching is individual teaching when a student is a person and not a line in the gradebook (try to do that if you have 300 students in the class) It is exactly decentralization and support for individual faculty efforts which is needed in order for the University to excel and stand out.

---

Studies of leadership emphasize that TIMING and COMMUNICATION are important when it comes to instituting change (if you hope to gain trust and maintain morale). In my opinion, this is not an appropriate time to implement this level of change. The entire world has been going through a global pandemic, and people are exhausted. Faculty, staff, and students have lost loved ones (myself included - I lost my mother last December before the vaccine was available). The vast majority of faculty have experienced disruptions to their research and teaching, and they are still recovering from the past year. The pandemic has disproportionately affected women faculty and faculty of color. Faculty (and staff) do not have the time and energy it will take to participate in meetings to work out the details of these changes. There WILL be retention issues, as many people will seek new opportunities. This will add to the cost of implementing these changes. The communication for these changes has been poor, leading to increased insecurity and anxiety. Ironically, the report states that there needs to be more transparency but there has been minimal transparency.

---

I worry throughout about the balance of centralization versus decentralization. This appears to be an effort at centralization. This can create efficiencies, but it can also undermine innovation and entrepreneurial activities. There is value in the right level of decentralization and local autonomy. The response rates for the surveys seemed pretty low (approximately ~4%?). While response rates do not necessarily mean bias, there is a fair question about representative the results might be.

---

- The survey and process that arrived at the (delayed) final product exhibit flaws. These flaws bring into question the results proposed. The proposed resultant changes don't have sufficient descriptions or actionable plans for implementation which makes it difficult to know what is proposed vs. what is probable. - Operationalizing these strategic initiatives at the tactical level require much more review and detailed thought before steps are taken to ensure TAMU supports their external and internal constituents. - If these implementation plans are not negotiated in detail for the proposed changes with the highest anticipated return on investment (ROI,) making "major muscle movements" without prior preparation could come at TAMU's peril

---

I am optimistic that this venture, though a difficult road ahead, will move forward. Changes undoubtedly have to be made so that we can continue to adapt. It is important to be mindful of and keep the things that work when moving forward. The departments should be allowed to provide as much feedback as possible with respect to what works for them. The common ground among departments regarding successful ventures will benefit the university as a whole.

---

This is a "power grab" by the new President. We should not give more power to the President. The Provost should remain a key person, ideally with more power than the President. The VP for Research should report to the Provost, not to the President.

---

It is a privilege to be part of the University.

---

The university's continuing lack of acknowledgment of the ongoing pandemic is disturbing - especially the lack of acknowledgment of the death of a student. The university also hasn't yet announced a vaccine mandate, despite the

requirement as a federal contractor to do so. While many of the changes proposed here seem like they will bring the university in line with best practices at major research universities, some also seem like they are designed to frustrate the academic leadership of the university, consolidating power with the state-appointed officers instead.

---

See above.

---

In order to help McAllen program grow, students need study spaces and other student support services in-house. Most classrooms are in-use for classes between 8-5. We need a library as soon as possible.

---

I strongly support the recommendations regarding the Bush School. For far too long, the Bush School have fought to receive the cream of higher education benefits, without doing its part to contribute back to the primary mission of the University; undergraduate education. There is a sense of entitlement in the School along with a strong expectation that its work would be subsidized by the other colleges who are bearing all of the undergraduate work. I encourage the president to move forward with the changes.

---

I'm somewhat confused about the peer institutions used in this study. Some are expected and some are not ones that I would have chosen based on Vision 2020 and other university literature that measures performance in relation to peer institutions.

---

Great changes come from open communication--transparency--and not from edicts from above. Software might allow an administration to reorganize in nine months, but humans need more time than that. This document generates the fears and concerns that it claims to want to reduce regarding surprising rapid changes to the system.

---

Please consider moving agencies on campus under the President to build one strong TAMU rather than a TAMU with two independent agencies operating with faculty supported my TAMU, but answering to Vice Chancellors.

---

The report noted that about 20% of the faculty are over 65--TAMU has done very little to encourage them to retire either rewarding those who leave or punishing those who remain and are ineffective as teachers and researchers. I believe either a 5-year reduced teaching (one semester per academic year) or 40% salary per year for 3 years would induce many to retire and

---

I agree with everything I read. I will admit people will resist, but that always happens.

---

Over the years the Galveston campus and its relationship with TAMU in College Station has evolved, mostly in good ways. I have always found the Galveston campus to be more nimble in adapting to change or in trying out new things, and that is the one drawback to our being "brought into the fold." Many processes which are designed to work well for the mega campus do not translate well for our small campus, because we do not have enough people and resources to do things the same way. Rather than force us to do all things the same, sometimes the small campus approach is good, adequate, and even preferable. In other words please don't throw out the good stuff to force the fit. Where it can be useful to be part of the larger whole are in areas like HR, MARCOM and finances, like purchasing to include our campus for library resources or software licenses and such. For more student friendly services like financial aid we really need people locally because some things work so much better face to face. I believe the relationships between faculty on our two campuses has never been better, and I hope we can continue to draw even closer together. Zoom has been a real boon for meetings across campuses.

---

I agree with the report and commentary. There will be a lot of fear and threat-responses generated by the findings and recommendations, but I'm pretty impressed at the communication so far, as well as the level of detail provided. I look forward to a better tomorrow!

---

Don't combine Liberal Arts with Engineering. That's crazy. Art and science are different. Would you want a painter or art major working on your transmission. Think about it. It's the students that matter. The difference in A&M is that the students get real jobs and careers not going home to live with their parents and playing on their iPhones all day supposedly looking for a job.

---

Global, Paradigm Changing Recommendations: The key academic components absent at Texas A&M University, TAMU Health, and missing from the MTG Report that would propel Texas A&M into Top Ten status: 1. Teaching and Area Hospital in the College Station/Bryan Campus. Clinical HSC facilities in Temple, Houston, Round Rock, Kingsville, especially when the core of medical science faculty is in College Station dilutes the impact and federal funding draw to the medical school. A centralized, area and teaching hospital linked to Texas A&M, and preferably on the Hwy 47 property would serve millions of Texans from the Louisiana border to the capital city of Austin. - Game changer for TAMU Health, NIH Funding, collaboration, Drug Development, and Biomedical Engineering TAMU, Bryan, College Station, hospital admin partners would have to sit down and seek support from the state, federal grants, and private

---

sector. In addition, faculty, students, local citizens must travel to Houston or Dallas for specialty care. There are less than 500 beds in BCS in total. Local hospital ICUs have been (over)full during COVID waves. 2. Comprehensive Molecular Research Core Center and Support. Expand or reimagine TIGM as a world class center for generating tissue-specific, conditional overexpression and knockout mice, transgenic and transfection support and training.

---

It's painfully obvious that the consultants are not cognizant or appreciative of the culture of higher education in general and TAMU in particular. Blindly centralizing services and removing them from local control and accountability is a disaster. Recommending additional majors and programs with no regard for the needs of the state is at odds with Texas Higher Education guidelines and inappropriate. This type of high level study by non subject matter experts and faculty involvement is the wrong way to address the complex issues of adding majors and programs. For example I remember the significant issues years ago about getting rid of the Journalism program because we weren't doing it well and I was surprised to see it had "grown" back in any form. Decentralization is one of the strengths of TAMU which the consultant obviously has no idea. The buffering of the system provided by local control of resources (IT, HR, Financial) inhibits a central authority randomly and capriciously changing things on a whim. Being a "highly buffered solution" serves higher education well in troubled political and social times.

---

There continues to be too much emphasis on the "terminal" degree faculty with great loss of stars from industry not holding the traditional PhD. Please develop a plan for identifying these individuals and retaining them.

---

It is disappointing to see the analysis of this study. Having been through a restructuring elsewhere, I fear this will cause the exact opposite effect as what is hoped by those that endorse this study.

---

Centralization of advising works for units who are poor at advising (i.e. with staff members who do not have terminal degrees in field) but will diminish the exceptional advising done by other units.

---

Certainly TAMU should have as its primary mission giving the best education possible to Texans. The race of the people providing that education should be immaterial—to adapt the words of Martin Luther King, Jr., applicants for faculty positions should be judged on the color of their achievements, not the color of their skins. Far more important than faculty phenotype is the possibility of free, open, and lively exchange of ideas, and encouraging viewpoint diversity is thus considerably more valuable than maintaining a particular racial mix. If TAMU could set an example by rejecting the toxic trend of DEI currently debasing American higher education, it would perform an enormous public service. Education is not best served when it is provided by the members of a single political movement, which is what required diversity statements and the like are designed to accomplish. TAMU should seek to recruit and retain the most accomplished faculty, whatever ethnic groups these faculty may belong to.

---

I've had experience as an advisor as well as coordinating with other advisors. I strongly object to centralizing the undergraduate advising because such advisors rarely have the experience and knowledge necessary to advise specific majors. For example, I was an advisor and professor in mathematics. The advisors in general studies didn't understand that advising students to take general mathematics classes instead of engineering or science calculus limited the majors said freshman could enter. I expect there were be cost savings by centralizing the advising, but it would be detrimental to the success of the students. Please do NOT do this.

---

Making students attend face only classes is getting a bunch of them sick. Several in my class of 88 have caught C19. I have quite a few that are literally terrified of coming to class and simply cannot lower their grades for non-attendance nor morally restrict their access to materials available to those coming. I don't really blame them. During an in-class major exam I had 80 students show up and only 7 had masks, even though the room sounded like a whooping cough medical unit. They were packed in shoulder to shoulder in most of the room.

---

Why not create a College of Chemistry like at UC Berkeley combining Chemistry, Chemical Engineering and BioBio? Have you given any thoughts to that model?

---

I am generally pleased with the report. You have not looked at TAMU as another corporation, but have respected that it is an educational institution where faculty are the key element.

---

The report did not address the cost of the sprawling and ever-growing administrative segment of the University. Uniformity of processes may be a lofty goal on paper but often results in additional paperwork requirements borne by faculty (particularly, promotion and tenure dossier preparation for the review by several layers of the administrative structure). Uniformity of technology has had a mixed record in the past. Concur works well, but Interfolio (job/program application management) is remarkably slow and wastes huge amount of faculty time just waiting for the applicant dossier to load (faculty often review 100+ applications annually). Having a University-wide HelpDesk with a ticket system is a good idea, since one can never be sure which of the unit is responsible for which kludgy "innovation".

Thank you for investing in this effort. It was timely and I hope it leads to a real "change" in how TAMU operates and displays itself on the world stage.

These are some big recommendations, but as I'm sure you can see, we have some big problems. I hope you will take these suggestions so that things can run more smoothly here and so that we can get a better reputation and open up more opportunities for our students.

## General Feedback - Staff

Please provide your comments related to general feedback, process, or other sections not listed above:

Despite the concerns I have raised about some of the recommendations in the MGT report, I strongly support most of the recommendations it contains, and I strongly support the overarching goal to transform Texas A & M into an institution focused on student success and on serving the needs of all Texans. I particularly welcome the initiatives directed at improving our service to traditionally underserved communities; I strongly believe that one of the strengths of TAMU is the diversity of its faculty and its research staff. I also believe that one its strengths is its commitment to foster and support important research in both engineering and applied technology and in basic science. I have been very fortunate to work for IODP/JRSO for the past twelve years, and I have seen first hand the level of commitment from nearly all of its science and technical staff to conduct the very best, most meaningful science possible. The level of support we have from the geological community is a testament to the dedication of this organization, and I believe it is the embodiment of Aggie spirit. I believe that the research and discoveries we make in science in technology are of huge benefit to all of the citizens of Texas, and I believe continued commitment to these disciplines are critical to help solve the problems facing our state, our nation, and indeed our entire planet. I also believe that Texas A & M is well positioned to help meet these challenges. I hope that I am fortunate enough to continue to play a small role in this endeavor. Gig'em!

My suggestions are made based on my perspective on how the recommended changes and rationale could be implemented or recommendations of improvement that may vary from the recommendations provided in this report. My goal is to not dispute the report recommendations, but to provide suggestions on how we can potentially implement changes to meet the stated goals of student, faculty, and staff success, while moving towards increased efficiency and creating the pathway's of TAMU's goat of becoming a top-tier institution and furthering our mission as a land-grant mission. My suggestions will be in the following key areas: 1. Successful implementation of a new College of Arts and Sciences as it relates to Finance, HR/Payroll, and Business Functions 2. Report recommendations to "centralize" Advising 3. Report recommendations to centralize IT, Facilities, and MarComm 4. Report recommendations to "centralize" Finance 5. Report recommendations to "centralize" HR/Payroll

I have found the challenges of the MGT report's breadth of communication alarming. Less than 6% of the staff and faculty had an opportunity to provide survey feedback for their report and none of the deans were informed before the report was released. This leads to a large distrust of the process an alienation of the stakeholders. Not to mention, the questions on the MGT report survey were skewed and biased in their asking. This creates further distrust. It makes no sense to state that there were no other "Biology" departments within their survey group. This report is frankly flawed. The metrics provided are vague and no metrics are in the report. No SWOT analyses were included, let alone direct interviews from those managing these departments and colleges suggested in such sweeping changes. For instance, the proposed centralization of finance administration, IT consolidation, and academic advising, facilities, not to mention the further outsourcing of staff not in the immediate academic offices or administrative offices will Transportation Services will only enhance that animus felt towards the organization. So too every other suggestion of consolidation in this report. An outsourced TS will be perceived to be even less answerable to concerns of the university's population than its already low popularity. The Library needs to remain independent. If it becomes part of a college, it will be subject to the whims of particular colleges. Putting all the fire of one issue or support does not make everything more effective. "Cost

savings should be reinvested into continuing to advance technology services, such as cybersecurity" misses the point of IT staff as liaisons and actual IT support. Outsourcing or doesn't solve issues. Collaboration does. With this report and the leadership requesting it, I have lost all confidence in the administration of Texas A&M University. I do not feel like our staff are heard or listened to. I do not think the administration has made enough efforts to listen before acting. This feels like a done deal, and we as staff have not been previously heard clearly and loudly enough. I have no confidence in this MGT report.

---

Whichever direction the University chooses, reorganization will be difficult. In some areas reorganization can happen tomorrow. In other areas it must be methodical and take time. Regardless of what happens success will be determined by.... Sitting down to discuss what needs to be accomplished. AND JUST AS IMPORTANTLY Agree to the process of how it will be accomplished.

---

The report states that past outsourcing was a success, but does not indicate how that success was measured. I am sure it saved TAMU financial resources, but the quality of services on campus from the outsourced units has seriously declined. Custodial services for our building has a very high turnover rate and are understaffed even when all the positions are filled. This leads to floors and stairwells not getting cleaned for months (or years) and bathroom supplies routinely running out. Area maintenance also has major problems and delays. It is currently taking over 6 weeks to get lightbulbs replaced and bathroom sinks remain inoperable for weeks because no one is available to replace sensor batteries. Emergency repairs seem to be the only work orders that are getting completed in a timely fashion.

---

There are a lot of changes proposed in the report. While some of them may be beneficial to the University eventually, I don't think enough research has gone into any of them to make an informed decision on whether they would truly benefit the University. The firm hired to produce the report, has previously focused on much smaller schools, and I don't think they thoroughly researched any of our peer institutions – peer in regards to size and complexity. A University with 70,000+ students is vastly different than a school with 10,000 or even 20,000 students, and the business functions required to support the faculty/students/staff don't scale well without significant changes – we have experienced situations like this before, and they have all ended poorly. Also, lumping students into fewer colleges, and combining departments that appear similar on the outside but really aren't, will only diminish the ability of the University to support for the unique needs of Colleges, Departments, and Majors and provide the quality education that we continually strive for. I believe the authors of this report do not understand that, nor did they do enough in depth research/interviews to be able to understand the effects of their suggested changes. In conclusion, I think a lot more quality research and thought needs to go into these proposed changes before any of them are put forth for implementation, the suggested timeline is not sufficient for any of these changes. I myself love to get things moving, but the magnitude of any one of these suggestions, is not something that should be taken lightly or rushed into without adequate and appropriate planning.

---

I don't know how many times and how many different ways they need to tell you that our toxic and aggressively insular culture is stunting the growth and development of this university, but I believe I counted at least six different places in this particular report that addressed it. We cannot survive as a Tier 1 research institution if we are unable to attract and retain talent from diverse backgrounds. We cannot keep pretending that we don't know what the problem is. And we cannot keep using the excuse that "most Aggies are fine with the current campus climate" while ignoring the fact that those who choose to stay are overwhelmingly homogenous in their socioeconomic, racial, and ethnic backgrounds. We have "majority support" for a lack of change because we aggressively drive off those who want to see change happen. It's not acceptable, and long term it's simply not sustainable.

---

There did seem to be a lot of duplication of effort at the university when I began working and when this occurs, there is a loss in focus on messaging, handling contracts, and with processes in general. As with many organizations today, they try to make moves/decisions too quickly. Allowing the inexperienced to handle complicated processes without full or appropriate training is not good. Yes, they're smart but I got shut down a few times when reminding people about university SAPs, rules, and processes in place.

---

Centralization and the efficiencies gained therein seem to be a key component of the recommendations. Please think about what is being gained and what is being lost at each level of centralization. There will come a point at which the trade-off is no longer worthwhile. As we begin to move forward, please ask staff to be part of the process. We want to see the University succeed. We want to be part of finding solutions. We want to be engaged, learning, and growing.

---

I hope that all the feedback received will be considered in shaping this report and the recommendations it has made to pave the way for a future that includes the interests, hopes, and goals of all university stakeholders irrespective of

employment body and career level.

---

The point made about the Qatar exchange program being expanded to a semester-long program does not make any sense. The Qatar-College Station student exchange program has always been a semester long program. The Qatar campus is also rife with inefficiencies. There are people employed there that are either inept, or unqualified for their positions. This has caused a lot of the duplication of services mentioned in the report. The Department of Student Affairs at TAMUQ is not doing a good job, and does not fit in line with the aim and mission of what Student Affairs is aiming to achieve here in College Station. TAMUQ students are not developing identities as Aggies. There is very little intentionality in the TAMUQ student affairs program. Poor leadership, management, direction, and oversight have caused immense staffing changes at TAMUQ, and this in turn has impacted experiential learning programs available to students. Leadership in TAMUQ Student Affairs and the Academic Services Office, and in turn the Executive Director that oversees both of those office, needs to be addressed. They are not capable of leading effectively, have forced good, committed, and hard-working staff out, that has in turn impacted students negatively. Previously, the Provost would come to Qatar and town hall meetings to gain the feedback of TAMUQ staff. This was not conducive to gaining an accurate portrayal of what is actually happening at TAMUQ, and how people feel. No one in their right mind would ever be publicly and openly critical of leadership in such a forum. Interviews and perspective gathering needs to be private, individual, and confidential in order to get the real temperature of TAMUQ. TAMUQ used to be a great place to work, but years of mismanagement, infighting, and poor administration has left morale incredibly low. This is has had a negative impact on the services provided to students.

---

Change is inevitable and some of the changes outlined in this report while challenging, may likely give us tools to improve ourselves for the future. There are several recommendations that are years overdue. It does however feel like in many cases there were expectations on the writers part for the outcomes they would recommend and they researched to justify those expectations. In addition to the examples cited, this is likely best represented in the peer review. There are several references to "Many Institutions" and "Nearly half of institutions" to justify recommendations without acknowledging that this implies that "many other institutions" and "more than half of institutions" do not operate this way.

---

Based on the suggestions and information provided in this report, I don't believe the MGT group had done adequate research on the University or College Station as a whole. Many of their suggestions and information were simply incorrect. For example, in the Academic and Strategic Collaborations section, they posit that "TAMU does not have a modern performing arts center to host indoor large-scale events for students and the community". This is incorrect, we have Rudder Auditorium which frequently hosts plays, concerts, and other performances for students and the community. In another example, in the Academic Realignment section, they mention multiple times the "Bush School and Library". A&M does not own or manage the Bush Library, A&M's only affiliation to the Bush Library is geographical proximity, and that Bush also has a school named after him here. If any of the suggestions listed in this report are to be pursued, I recommend task groups complete a much more thorough investigation into what our campus currently has to offer and the effects any changes would cause.

---

The report is well done! President Banks' October 25 & November 5 messages were well written regarding expectations of next steps. My hope is that whatever changes are accepted, are implemented as quickly and efficiently as possible, with clear communications throughout the process. Decisions need to be made for the good of the whole, minus the emotional attachment, and individual benefit. Some items noted in the report will be a major shift in culture, and change management oversight is critical. Because this report is a high level report, I hope that individuals will be nominated based on skill set to examine closely and objectively the details of routine business/operational/administrative processes and duplication of efforts. The need to identify and eliminate positions that are not productive, efficient, and/or add value will not be easy, but needs to be done objectively, rather than brushed under the carpet. This is one small step to improving equity, moral, and job satisfaction for the long haul. There are many administrative areas where positions/roles and needs are inflated. In part because "it has always been done this way"; a more efficient process is unknown; or the individual making the decision is at a higher level and unaware of what it takes to get the job done. The right employees need to be in the right positions in order to gain efficiency and excellence. The bar for excellence and expectations needs to be raised across the University to achieve the goal and image of a first class global institution. Continuity is key and centralization will help tremendously. Employees must be held accountable. Training is badly needed among admin support groups to promote professionalism, excellence, continuity, and efficiency. I'm excited to see changes made for the benefit of all - this is

long overdue.

---

A general concern I have about changes happening on campus are not directly addressed in this report. The primary one being the misalignment of required qualifications for upper level administrators who supervise staff versus those over academic units. A dean is required to have research experience/faculty position in the field of a college to apply for a dean's position, but a VP of Student affairs only a master's degree with no experience in student affairs. -

[https://www.myworkday.com/tamus/d/inst/15\\$158872/9925\\$69938.html](https://www.myworkday.com/tamus/d/inst/15$158872/9925$69938.html) If you take anything from this tangent, please give staff leadership that knows the field they now work in. We've been held back with too many political (either for the chancellor or former students) appointees who are out of their depth. The purpose of this report is to move the institution forward, that includes the divisions that don't produce research.

---

I am thankful that financial resources are being given to CAPS - as part of a small area that works very closely with CAPS and refer students back and forth, this is such a win for our students. However, I also think there should be financial resources given to those areas that respond to the majority of Tell Somebody Reports, as it isn't CAPS staff, but a very small unit who does really important work (which CAPS, SHS, the Interim Provost, undergraduate Ombudsperson, and others will tell you). The unit - Student Assistance Services - doesn't need much - just 2 additional full-time staff members would provide an exponential amount of support to our student population.

---

It is concerning that the resources utilized in this document to support the recommendations made are old and outdated. There are numerous references to articles written well over 10 years ago, many nearly 20 years old and some as old as 1992, and 1993.

---

The report is short-sided. Where is the research for this report? Interviewing 60 people is not enough. TAMU is unique and should be the leader and not the follower of other smaller universities. Why do we have to what other universities are doing? There seems to be a lack of trust and communication with this report and proposed changes. I gather from this report that the university wants to combine positions and cut other positions to save money and spend it on a campus in Fort Worth. This is bad for the morale of the main campus.

---

I am concerned that boots-on-the-ground faculty and staff didn't seem to have much of a role in creating the findings in this report. The in-depth interviews seemed to be with select top-level leaders and directly contradict our experiences on the ground level. Since this report came out, morale has dropped significantly. I am sincerely worried about the changes to come and I hope I won't need to job search, as a result. This has been one of the best student affairs units I've worked in, nationally, and I'm concerned that we are about to see tremendous turnover. I really don't want our remaining staff and students to suffer, as a result.

---

On the whole, I support the central goals, which are to make Texas A&M a world-class comprehensive university, to strengthen A&M's prominence, and to strengthen meaningful outreach in B/CS and Texas. However, many of the recommendations are misinformed and show a basic misunderstanding of the work we do. Focusing on rankings or nebulous ideas like "prominence" is a very superficial metric for understanding the effectiveness, impact, or value of what we do. The number of interviews conducted is unclear (p. 1 it is reported as "more than 60" and on p. 6 it says 44), but in either case it is much too small for the scope of the changes outlined in the report, which gives the impression that input was limited in terms of what questions were asked and who was asked to produce pre-determined "findings". The process of rolling out the report and soliciting input was also very poorly managed and contributed to the impression that feedback was not truly welcome or was purely ceremonial. To post a 100+ page document that describes some of the largest scale changes to the university in recent memory and then to say all feedback is due in 2 weeks with decisions to be made within 4-6 weeks ignores best practices related to change management. The content of the report is often inaccurate, sometimes insultingly so, and suggests that minimal effort was put into basic factual research or substantive understanding the nature of the programs discussed. To refer to university studies students as those "who do not have the qualifications or interest" (p. 36) denigrates our own students, fundamentally misunderstands this population of students, and contradicts the university's own position for the last several years, which expanded the overall UG population and built-up student success programs to support students who struggled to adjust academically. University Studies-Architecture students are highly engaged—100% participate in high impact learning experiences—and have the second-highest starting salaries of any major in the college. The findings are ahistorical and emphasize efficiency with minimal mention of effectiveness. There is very little in the report to suggest that the recommendations will make the fundamental work of delivering curriculum, conducting research, engaging in outreach and service, or carrying out administrative processes any easier, better, or more effective. There is no discussion of the reason for our decentralized structure or the fact that we tried having centralized services in the past

and they failed because they could not effectively deliver their services across the entire campus. The benefits to students in terms of the excellence of the education offered is portrayed as secondary benefit to “strengthening TAMU’s prominence.”

Texas A&M needs to wholly fulfill its mission to educate the residents of Texas. I posted the following paragraph to Facebook on September 11, 2016. Texas A&M has always had a quiet, calm resilience when faced with adversity, and that has been a comfort to me on several occasions. I will always remember 9/11/2001. I will also always remember 9/12/2001 because that was the day that I fully understood that everyone on campus was hurting regardless of nationality, religious affiliation, socioeconomic level, or any other category that could categorize someone. I believe that the campus was a place of healing for all then and rightfully remains a place of opportunity for all now. The institution that in the early 1960s provided opportunities for my father to realize his full potential without judging his background after he drove from Alaska by himself never having seen the campus is the same institution that has grown to embrace first-generation students of all backgrounds as well as students from many generations of Aggie families. It was on 9/12/2001 and remains a privilege to work at an institution that embraces diversity of thought, background, ethnicity, and perspective. My hope is that our entire country can follow the example that is set at Texas A&M. The words I wrote in 2016 were heartfelt and genuine, but with hindsight, they were also naive and simplistic. Texas A&M began as a land grant institution with teaching being core to its mission. Subsequent legislation added research and extension to that mission. The three pillars of teaching, research, and extension (many times called service) were conceived to give opportunities to those who might not otherwise have access to post-secondary education. These are still the criteria by which faculty at Texas A&M are judged. Texas A&M does not exist to cater to former students or the organizations that claim to represent former students. Texas A&M does not exist to educate the children and grandchildren of former students. Texas A&M exists to be a pathway for those who might not have an avenue to better themselves through education and reach their full potential. Former students are welcome to assist in this mission, and their children and grandchildren are welcome to participate in the educational process. It is a joy to see and be a part of a family gathering where multiple Aggie rings are present. It is also a joy to see the tears in the eyes of a first-generation student and their family members as that student receives their Aggie ring. It is NOT a joy to see tears in the eyes of any student who has been made to feel less than fully welcomed into the Aggie family. It was NOT a joy to listen to a Hispanic student describe how a former student accused her of stealing her Aggie ring during the first week that she had it. It was NOT a joy to hear a black student tell me the names he had been called while performing his duties as a student worker. It was NOT a joy to learn that handwritten signs that said “Whites Only” were placed on doors to bathroom stalls in the building where I work. It was NOT a joy to wipe the tears from the face of a National Championship winning student-athlete as she described words that had been directed her way by a fellow student because of her skin color and gender. It was infuriating to witness a professor telling a Hispanic staff member that he “was a lazy, dumb, Mexican.” It was absolutely shocking to have a former department head tell me that he would never have taught in a school district where I taught because he heard they were nothing but a bunch of “n\*\*\*\*\*s.” It has absolutely been heartbreaking time after time when talented staff members or faculty who happen to be minorities decide not to live in our community because they are not comfortable here and ultimately leave the university because they are not fully respected. I have been “officially” associated with the Texas A&M University since the fall of 1985. I have been an undergraduate student who was a member of the Corps of Cadets, a graduate student, a former student, a research staff member, a support staff member, an instructor, and a donor. Unfortunately, after all of these experiences, I have dozens of stories of students, staff, or faculty being made not to feel wholly accepted as an Aggie because of their gender, their skin color, or some other trait that is not seen as being a traditional Aggie. All of the incidences involving students described above were reported through the proper channels, and all the students are doing exceptionally well and proud to be Aggies, but they did have unnecessary hurdles. NONE of the incidences above were ever meaningfully investigated even though well-intentioned policies and procedures had been drafted, reviewed, and approved, and followed. What is even more disturbing than the lack of action is the fact that two of the perpetrators have been honored by the university even though the incidences were known by those giving the awards. I have tried to rewrite the previous two paragraphs several times to make them less negative because I would rather focus on the positive. I love Texas A&M. I love my experiences and the traditions at Texas A&M. I love the memories that are recalled as I walk across campus because I feel at home. It is not we. If “We are the Aggies, the Aggies are We” is a true sentiment, then we must embrace the full richness that all Aggies contribute to “We.” Too often the prevailing attitude at Texas A&M is that things are “perfect” and there is no need to improve. Diversity, Equity, and Inclusion programs are a good start but they should not be seen as a checkmark item that is ever complete. DE&I work is continuous and needs to include action words such as

belonging and welcoming. No student group should be considered "too small" to be recognized and receive unique services from the university. Our Native American students especially need to be officially recognized and supported. After all, the Land Grant initiatives under which Texas A&M began, were funded by lands taken from Native Americans. The influence of former student groups needs to be checked as well. The Sul Ross group is made up of former students who graduated 55 years or more ago which is currently the class of 1966. In 1963 the first Black students enrolled in classes at Texas A&M but those students graduated from other institutions. Women were also first admitted to Texas A&M on a "limited basis" in 1963. Most of these students who were admitted in 1963 enrolled in summer classes or as part-time students and ended up graduating elsewhere. The students who did graduate will be eligible for membership in the Sul Ross group next year. This group can NOT possibly advocate for the diverse student population that we have today because they are essentially a monolith. Other groups are even more destructive. The Rudder Association is one example. It is perverse to invoke the name of General Rudder who was a person who truly helped Texas A&M progress when the group is unashamedly a politically oriented interest group with racist tendencies. Members of the group pledge to support "conservative values" that are touted as the backbone of Texas A&M. Texas A&M should not promote or project a political ideology. Members of the Rudder Association publicly intimidated students of color who were exercising their right of free speech and their right to assemble. These students had been given all of the proper permission from the university for their activities. The campus belongs to current students - not former students. I still feel and will always feel as I did in 2016 that there is a core characteristic at Texas A&M that allows anyone to be successful regardless of their background. As an Aggie family, we have to be better than we have been in not just accepting all Aggies but in unconditionally embracing all Aggies. Once our actions match our ideals, we as Aggies will truly have set an example for others.

---

I think there are opportunities with some of the recommendations in the MGT report and we must be forward-looking as a university. My caution is that there are some major changes being recommended and that we must take the time to ensure factual evidence support those chosen to move forward with. Implementation is critical and stakeholder input is vital. We must remember that higher education does not completely fit the model of a private corporation. We must find the right balance of efficiency to not jeopardize effectiveness.

---

The sentence "Recently, TAMU utilized successful outsourcing models for dining, custodial, and maintenance services and, to a limited extent, student residences" (p. 5) unraveled my confidence in the entire report. Outsourcing has not been successful for the people involved, many lost benefits, many are over-extended, they do not have the same days off that we have -- it was a terrible, terrible thing for A&M to do to the "Aggie Family." This report is terribly demoralizing, especially during the pandemic, administrative turnover, staff/employee hiring freeze, when everyone has been working so hard to achieve TAMU standards for so long.

---

As the President of the Texas A&M University Postdoctoral Association, I was alarmed to discover that the keyword "postdoc" did not appear even once in the MGT report. Though I understand that the affairs of the postdoctoral community fall under the purview of the Division of Research, which was not detailed in this report, the omission of our community entirely epitomizes the neglect and oversight that our community typically receives. Postdoctoral fellows and researchers are almost always hired into "Staff" positions. However, from a career perspective we are more akin in our needs to late stage graduate students or early career faculty. While the needs and goals of postdocs and staff often align (the need for child care, maternity/paternity leave, benefits, etc.), there are many other needs we have that are quite different from those of staff. Some of these are support for research funding (both directly from the University and assistance with obtaining funding from external sources), cross-discipline networking, and academic, government, or industry career development. We strongly support the need for the erection of a Office of Postdoctoral Affairs. I urge the administration to reflect on the fact that postdocs, as a unique group with unique needs, were completely neglected in this report (other than being included as staff). We would be happy to be part of the ongoing conversation, and hope that our inclusion as a distinct community can be productive and not any sort of wrench in the potential restructuring. Please feel to contact me at [REDACTED]

---

I implore you to go back and do additional research at tamu on many of the topics covered in this MGT report. Coming from someone in the "weeds" of business & HR services, these recommendations are generic and not tailored to how tamu functions. Per your report summary, the interviews conducted were with university leaders. The university leaders are great at providing strategic initiatives for the university but there is no way for them to know what staff need in order to do their day-to-day work. Only the staff currently doing the work can fully tell you and per your summary, these individuals did not receive an opportunity to do in-depth interviews. You have an opportunity to gain a much clearer picture of the issues surrounding business services and HR by interviewing day-to-day workers such as the [REDACTED]

Staff Retention One of the main threats posed in the executive summary was turnover and retention issues with qualified staff. There is little focus on how this will be addressed in the report. Will there be any institutional change in staff wages, treatment, and professional development / growth?

How was Research Administration left out of this administrative report, specifically SRS. SRS should be restructured by function rather than member. The re-org that [REDACTED] implemented placing the VPR Research Administration office "reporting" to SRS needs to be reversed. TAMU Research Administration should not report to the office which they have oversight of... a "shared services office" (how was this approved by HR??)...this is equivalent to TEES, AgriLife, TTI etc... reporting to SRS. SRS provides mediocre services at best...and that is being generous. Faculty and staff have given up because there is no accountability in regards to SRS.

I think it's important to talk about staff who work away from BCS. The experience, expertise, and quality of work they bring to teams and the university, and their ability to maintain that work-away from campus. I am in support of alternate work location for inside and outside of the BCS community.

The SWOT analysis of the MGT report seems to present a huge wealth of information that wasn't included in the rest of the report and garnered little to no recommendations mentioned elsewhere. I would be more interested to address the institutional culture concerns raised in this area and have serious questions as to why they weren't addressed at all in the rest of the report. Namely, it seems to come up several times in the weaknesses and threats areas that the culture at TAMU is unfriendly to those who do not fit a very specific profile (at all levels, student, staff, and faculty). Yet the closest the report gets to addressing these concerns are to strengthen recruiting/retention, and create a position that will better address faculty needs. Both of these are valuable recommendations, but where is the recommendation to lower the incredibly extreme and unwelcoming emphasis on "tradition" that TAMU is so married to? Ignoring this elephant in the room makes it feel as if some of the recommendations in this report (combined with the incredibly fast turnaround, and fundamental misunderstandings of current university workings in several area - such as the libraries) makes it appear as if, at least to some degree, the "recommendations" of this report were pre-determined. I would like to know more about why this report was commissioned and what the original intent was. I also fear that the consistent emphasis on efficiency will prioritize cost-cutting over student success.

Changes and growth are good as long as it doesn't sacrifice the good that is already being done and the people that already work hard for the University.

I walked out of JK Williams everyday for a year thinking to myself "what will I do with all this potential?" This report represents a centralized effort to position TAMU as a world-class and preeminent university in line with the resources that substantiate wide-spread investments to do so. I am thrilled to be a part of the change that I have been hoping to see at TAMU since I started in my role in March 2019. Please be bold in the implementation.

This is my overall feedback that will encompass most of the other sections. I don't understand the logic behind University Studies becoming a department within Arts and Sciences. I am more inclined to have it listed as a department within Education. The Transfer student is proposed for Strategic Initiatives. I don't fully understand the rationale. However, the university should initiate a state-wide effort to address the need to make transferring between 4-year and 2-year institutions less cumbersome. With less students choosing Teacher Education as a major as incoming freshmen, how can Texas A&M address the K-12 Teacher shortage? Texas A&M can influence this matter and manage this workforce/pipeline issue. It is essential to help our students understand the demand, the need and long-term consequences. Career Services is a collaboration internally with student affairs and academic affairs. Externally, career services engages with employment organizations, i.e. local, state, national, international, public, governmental, non-profit and etc. The goal is to be a part of the workforce pipeline. It is essential to communicate current market trends and data throughout Texas A&M University to the administration, faculty, staff and students. This is a major project management issue involving communication, partnerships, teamwork, and collaboration.

The theme of the report was centralize as much as possible. While centralizing does help in a lot of ways, it can become too rigid and doesn't allow for as much flexibility.

I feel that there has been a lack of transparency throughout the process of developing the report. Some changes that tie directly to the report were made while the report was being developed (i.e., Dean of Faculties leaving, new Office for Undergraduate Recruitment, other reorganizations), which makes me wonder if the report findings were driven by directives from the president. It appears statements that no one knew what was going to be in the report were misleading, which leads to distrust and gives the impression the feedback provided was not used properly to guide the

report. Many staff and faculty feel blindsided by the findings in the report. More explanation and openness is needed from the President's office before making changes to avoid alienating staff and faculty and risking high turnover due to dissatisfaction. The more we know about why changes are being made, and the more voice we are given in how the changes are made, the better the chance of getting people on board.

While tackling all of these recommendations may be near impossible to do efficiently, I would recommend focusing intently on the IT and Financial initiatives in the near term, and planning many of the others follow. The unification recommendations for IT and Finance, in my opinion, are foundational to the success of any institution, let alone one of our size. While many of the other recommendations are also important, especially those around student success, it is difficult to build a house on a shaky foundation.

Sad to note that Diversity, Equity, and Inclusion (DEI) does not feature in any of the above "major" items for feedback. The Executive summary clearly sends a message of disregard for DEI. And if one was in doubt, the suggestion to use existing DEI budget to "invest broadly in education-focused endeavors for the entire student population" tells it all. 1. I strongly suggest the above is not followed. 2. The demotion of the current office of VP of Diversity to one without a direct reporting line to the President does not augur well for the DEI nor for the TAMU's DEI public image. A serious rethink is required.

Thank you for your efforts, and willingness to review feedback.

I am disappointed that the report ignored the efficacies that were created during the covid 19 pandemic. The report lacked imagination and the latest research. It is pushing for the same old ideas of centralization instead of encouraging the university to leverage technology to become more cost-effective. For example, we can solve many infrastructure and parking problems by encouraging more flexible work-from-home arrangements.

Student Affairs SWOT Analysis (p. 111) "One of the most important roles of Student Affairs at TAMU is to uphold tradition. It was clear that the Aggie culture presents a foundation of shared traditions and values that create cohesive identity for students, staff, and faculty. The Corps of Cadets is part of the school's culture and student body" (p. 111). As a member of the Division of Student Affairs, I wholeheartedly disagree that one of the most important roles is to uphold tradition. Student Affairs includes so many other facets of students that are, quite frankly, more important than the "traditions" of Texas A&M - Disability Resources, Women's Resource Center, PRIDE Center, Multicultural Services, to name just a few. It would behoove the University to identify what we mean by "traditions". It has been repeated by students that the traditions at A&M are not inclusive (RE: SERU, campus climate). We need to be reviewing the traditions, enhancing them to be more inclusive and accessible. The Corps of Cadets has approximately 2,100 students. While this is a large amount of students, let's compare to other organizations: Fish Camp typically serves around 6,000 incoming students annually with over 1,100 student leaders supporting the initiative SGA has over 1,000 students participating when you include their commissions and committees Fraternity and sorority life has over 6,000 students (almost triple the amount of students the Corps of Cadets has) It is time for the University to understand the changing demographics of the student population, rather than to hang on to the militaristic past. "In addition, weaknesses were identified in the content of orientation, accountability of student organizations, and clarity in organizational structure. Student organizations have a wide latitude to make decisions and lack the necessary training for a true educational experience" (p. 111). Seek context before making statements such as the above. Data exists at the University that states many students, due to their experience in recognized student organizations, have had a "true educational experience". "...a desire for a cultural shift from allowing students a large amount of freedom to run and manage student organizations with limited boundaries and guidelines to creating an environment that prioritizes leadership education as the primary reason for student organizations at TAMU. The Department of Student Activities is well-versed in student engagement, has multiple research-practitioner-scholars, connections and research practices with faculty, reviewed the relationship between the University and student organizations, created a document providing an overview of the rights and responsibilities of student organizations vetted by the Office of General Counsel, reviewed the Facilitator University philosophy that A&M has adopted, and regularly reviews advising assignments, surveys the 1,100 organizations, updates training, etc. Currently, Student Activities is developing an MOU with recognized student organizations and revamping the current three tiered system. Where is this identified in the report, though? "Threats identified within Student Affairs include the lack of oversight of student organizations and other student leadership activities. Other threats include the number of staff assigned to oversee student-run activities and events. Without intentional programming in every area of Student Affairs, the potential of losing the culture that is part of the Core Aggie VAlues is a threat" (p. 111-112). The Department of Student Activities (SACT) has requested a new position for Fish Camp for the past five (5) years, and still

does not have a position. SACT has requested an instructional designer to enhance student organization training for the past two (2) years, and has not received a position. SACT has requested a position in our Student Organization Development & Administration (SODA) area, of which there are only four (4) FTEs to support the recognition, training, risk management, travel, insurance, etc. for over 1,100 recognized student organizations. Due to budget reductions from the University, the LSC lost a FTE, reducing the opportunity for the LSC to provide additional trainings, as well. Lastly, it would behoove the University administration to understand what current initiatives DO exist around financial management, training, and curriculum. Peer Institution Practices (p. 119) Where is appendix E. Please provide this information to the University. Student Affairs Organizational Chart (p. 42 & 43) Comments: An Associate Vice President has been removed from the chart. Where did that individual go? Additionally, one Associate Vice President has ultimately seven (7) areas of responsibility while the other Associated Vice President has three (3). While recognition exists that each functional area is different and has different expectations, this is an incredibly unbalanced organizational chart. We should expect that a consulting firm have access to resources and references that are more current than 2007 and 2008. Placing outdated references that only connect with a perceived direction is not conducive to identifying a solution that has been vetted by experts and sustainable. Below includes resources and research that is more current on the topic. [REDACTED] How student affairs professionals learn to meet student needs and institutional expectations (Order No. 3706508). Retrieved from <https://www.highered.texas.gov/about-us/60x30tx/> Recognizing the expertise of the staff at the University is critical - as well as understanding context. If context had been sought, the consulting team would know that: The Department of Student Activities is well-versed in student engagement, has multiple research-practitioner-scholars, connections and research practices with faculty, reviewed the relationship between the University and student organizations, created a document providing an overview of the rights and responsibilities of student organizations vetted by the Office of General Counsel, reviewed the Facilitator University philosophy that A&M has adopted, and regularly reviews advising assignments, surveys the 1,100 organizations, updates training, etc. Currently, Student Activities is developing an MOU with recognized student organizations and revamping the current three tiered system. Where is this identified in the report, though?

Thought 1) I hope we chose to learn from history. It does not appear that our institution understands the process of continuous improvement. That is a lesson most organizations learned the hard way during the quality revolution of the 90's. Chemical Manufacturer and other industries operating in Texas in the 1990s learned after multiple, expensive

failures, that before they could effectively measure performance, they needed to know what they were measuring and why they were measuring." Inconsistent transparency and a lack of strong operational analytics and performance metrics across units, colleges, and campuses creates operational inefficiencies as well as unclear responsibility and accountability necessary for operational success. The lack of existing operational data and analytics is a factor preventing the improvement of current processes, procedures, and resources use, particularly for units such as Facilities and Information Technology, which require accurate data to effectively manage the university's space, security, and technology needs." "Gather data on day-to-day operations of operational units and implement a system of continuous improvement build on performance analytics to understand where misalignment or ineffective use of resources exists." It appears that processes are rarely documented on this campus. I have not seen indications that process flowcharts have been developed even though many of our processes are highly repeatable. At a presentation to approximately 125 staffers on campus in 2018 the question was asked "How many of you have flowcharted your operations"? Two hands raised in response. We should know and agree on our processes to identify where measurement is needed and what should be measured. This is essential to monitor and scale improvement, particularly if expecting disparate groups to adopt and embrace centralized processes. We MUST know our processes and workflow to identify and modify organizational charts and lines of responsibility. Once needs are identified for each role, we can select the person that best meets each need. Essential to this process is to start with Why? Rather than with What? Thought 2 ) The report makes many references to Student success but provides no definition or frame of reference for Student success in the document. The definition of Student success is in dispute within the community. One camp holds that student success is measured by the percentage of students that manage timely completion of their requirements for graduation. Quoting From our Office for Student Success: 'A Vision for Student Success (2018) While Texas A&M successfully retains and graduates students at higher rates than most institutions in Texas, when compared with other leading universities it becomes clear we must increase student retention and graduation rates -- particularly for first-generation and under-represented students.' "Planning for Student Success (2018) To boost retention and graduation rates and lower achievement disparities, [REDACTED] convened a task force of students and university stakeholders charged with identifying ways to meet four important goals: " The second definition (well captured by Nazareth College) "The true measure of student success is how well you are prepared to accomplish your current and future academic, personal, and professional goals through the development of knowledge, a sense of responsibility and self-reliance, and a connection to the college and wider community. " The first definition focuses on the school. The second definition focuses on the Customer. It would be wise to consider the source of our funding. (Taxpayer funding and Tuition paid by families) The second definition also creates opportunity to develop future donors. Rule One of a continuous improvement process is to understand the expectations of the customer (external and internal). Thought 3. Outsourcing Dining, Custodial, and Maintenance services makes good business sense. The private sector can provide those critical infrastructure resources much more efficiently than a centralized bureaucracy. Great care must be taken to assure each person providing those services knows and believes that they are part of the Aggie Family and are critical to each checklist responsibility and our overall success. We can learn a lot from the REACH program.

With the exception of noting the outsourcing of Transportation and the Transportation department having specialized IT needs, Transportation was not mentioned in this report. There's clearly been a lack of planning on what should happen with Transportation Services. From my experience in this field, I can testify to the fact that outsourcing Transportation would cause an uproar from current campus customers. The only area that would make any sense to outsource would be the parking area because this is the only unit within Transportation Services which makes a profit. However, Transportation Services is mostly a self-funded department, so taking away the revenue-generating units from the department would require an increase in the need for direct university funding. Similarly, customers of Transportation Services already complain about the cost of parking on campus (and receiving citations for not paying on campus). Outsourcing the parking of Texas A&M campus would require an external stakeholder to want to buy into this responsibility and increase the rates customers are charged to allow for a greater increase in profit. Whereas Transportation Services gradually increases rates due to many factors, an outsourced company would increase rates to a much higher amount with each increase in a time frame much quicker than the current procedure. This would be detrimental to relationship between Transportation and its stakeholders. The theme of this report is to centralize everything. There have been times in Texas A&M University's history where centralization has existed (ex. centralization of IT). In our current operations, many of these areas which were centralized are no longer centralized because we, as a university campus, discovered this was not the best way to serve our faculty, staff, students, and other stakeholders.

Moving back to a centralized way of operating ignores the failures of the past and naively expects for the outcome to be different.

1. There are several mentions of challenges to retaining and attracting talented faculty and staff and the increasing job market offering remote job opportunities, however, a proposed solution for TAMU to begin to offer telework was not mentioned. This was a very well-received option that many many faculty/staff miss and wish we still had. Although I know there are challenges with this option, there are also many positives that come with this option that include attracting a more talented pool of personal, cost savings by not having to provide space, employee satisfaction, etc. 2. Although the academic realignment is sound, there could be an unintended financial consequence to TAMU by the academic realignment as it places current TAMU departments under Agrilife and TEES, which will reduce the overhead TAMU collects from research projects. 3. Diversity, equity, and inclusion was mentioned and plans were put in place for student recruitment and faculty via faculty affairs, however, there was no mention of a plan for staff. This was a missed opportunity to push the climate to be more diverse at TAMU. 4. I was employed at another university that undertook a massive realignment such as this one. The proposed realignment and concept was sound, however, implementation proved more difficult than anticipated and there were many unintended consequences that hampered the universities day-to-day operations. The university suffered in academic and research performance for years and employee morale was shattered. Although there was no timeline mentioned for this proposal, I hope the rollouts would be slow and strategic, especially for the academic realignment since it touches so many aspects of the university mission.

I question how this research was conducted. No one I know was asked for their input and/or interviewed. I feel that is does not rise to the standard of being unbiased. I also question how familiar this firm really is with higher education. The institutions they referenced as "peer" are, for the most part, not ones that I would consider "peer," nor do many of my faculty contacts. Is this already a "done-deal" as we have heard? Do we as people mean nothing to upper administration other than being easily-replaced cogs in a great wheel? It certainly doesn't feel like it, and, as our psychology friends are fond of saying, "perception is reality." Why has no one mentioned a retirement buy-out for long-standing staff as was mentioned for select, chosen faculty? Many of us will be 65+ in the coming years and have also accrued a great deal of institutional knowledge that will be lost when retirement occurs. It smacks, once-again, of the perception that staff don't really count and are easily replaced.

I moved to College Station in early 2019 to take a job within the system. To be honest, I knew little about the traditions of TAMU but quickly fell in love with the culture of Aggieland and TAMU. The core values of TAMU line up with what is best about America: Excellence, Integrity, Leadership, Loyalty, Respect and Selfless Service. Is TAMU perfect no, but where it fails is not at the system, policy level but at the human heart level of the people. Unfortunately, systems and policy can not change the human heart, what it can do is enforce the policies it does have. What one focuses on, is what gets magnified. I beg of you, to move TAMU forward by continuing to focus on the good, positive aspects of TAMU (traditions /core values) and not to succumb to the political correctness hysteria that sees racism around every corner. If the system upholds and affirms TAMU core values, and requires its faculty, staff, students and stakeholders uphold them, it will be able to withstand any accusations.

While this survey may serve as an interesting starting point, the lack of transparency about their methodology should give us pause. Did this firm spend time in these units, interview staff members, or do any research other than former student attitude surveys? Where did they get their numbers from? How did they decide on peer institutions, and why are the University of Nevada Reno and University of San Diego considered peers when their enrolment is less than some of our individual colleges. As an institution, is it wise to implement such expansive and expensive changes on such little evidence? Many of these recommendations could be profitable and helpful to the university, but I would say that further study is needed by more specialized groups. As a former Aggie, if I had turned in a proposal with so many sweeping claims and generalizations on so little research, my professors would have given me some very stern feedback.

In general, I felt there were many aspects of the report that did not seem to truly represent the Texas A&M structure that I see everyday. The survey results skewed heavily toward former students and the response rate was poor by many standards. I found it discouraging that the majority of citations of "experts" were over a decade old. I also question any study of peer institutions that does not include the University of Texas-Austin (our primary competitor for resources and students, dealing with the same legislative guidance as us) as one of our peers. I am not saying that there are no problems in the way we currently operate as an institution, nor am I saying that we should not seek improvements. I am, however, saying that I don't think the consultants in this case got a full understanding of the situation on the ground on campus.

I like the new direction of the president and the recommendations of the report. I hope there are changes within my unit that were not addressed by the previous administration.

---

Fix the IT unit as described above, they lack good leaders who know what to do and how to do it, that's why they and their department have a large turnover rate.

---

Texas A&M University has an indisputable reputation of being a research institution of global impact. As one of the largest universities in the world, and linked to numerous agencies of international importance, its role in shaping the future is obvious. An institution of that level or importance is worthy of pursuing excellence in bringing its culture and accomplishments to the world in a way that most places cannot. The true value of KAMU to Texas A&M has never been fully realized. We can take this entity and create a distribution platform for all digital content produced anywhere in the TAMU universe, providing access via streaming services and an app to content that can appeal to any interest of any Aggie anywhere. From athletics to engineering to medicine to the Corps of Cadets...the list is almost infinite. KAMU is perfectly situated and aligned to bring this unique opportunity to reality. KAMU can become a conduit for helping make an impact on real-world problems – directly fulfilling the Aggie Core Value of Selfless Service. Creating robust storytelling is a must for Texas A&M. As a Journalism graduate of A&M, and as one who has worked in various aspects to tell our story to the world, the missed opportunities and missed growth potential over the years is obvious and infuriating. It reflects a clumsy, visionless approach to communications. We are currently in a time with a golden opportunity to combine our storytelling potential via collaboration between KAMU, 12th Man Productions and the Viz lab. Under my leadership, we are creating an app on prominent streaming platforms for Aggies and anyone interested in Texas A&M to find the stories regarding all facets of the Aggie experience. Your mentality of centralizing resources shows this is the time for this grand vision to become reality. Combining the vast digital resources of KAMU and 12th Man Productions with the storytelling direction of the Division of Marketing and Communications while utilizing the vision and strategic mentality of the leaders of both of those units, a strategy and vision for success is within reach. We are poised to take the greatness of Texas A&M where people are ingesting content around the world. Creating a streaming presence for ALL digital content (not just limited to video). All of it can be curated to enhance our many brands. From archival storytelling (heritage, sports, traditions, etc.) that brings stories to life, to “all things A&M”, any interest can be satisfied. We are creating a facility and a platform for weaponizing content to tell the A&M story to the world. Through this, we will become a leader and an example for other universities of how storytelling can enable an organization and a culture to define itself globally at a level unforeseen to now. The linkage to the Division of Marketing and Communications is proper and vital to such an aspiration. We are perfectly positioned to see this vision through to reality, creating a legacy for our new President, as well as all aspects of this undertaking. We can create something special here and, more importantly, something that will positively impact the institution, our culture, our current and former students, and our region for decades ongoing. While the Aggie culture is known for its pride in Texas A&M’s unique customs, culture and heritage, effective storytelling that truly explains to the world what makes it unique has been lacking. We now have the ability to not only tell more and better stories about Texas A&M – we are uniquely positioned to bring it to the world as never before via current and future focused efforts. We can, and must, tell our story to the world in a way that only we can – with the proper nuance, respect and depth required to make the world know what we already take for granted. KAMU can provide the basis for enhanced production services efforts that help every aspect of the main campus, and all the TAMU System schools, take the stories that have local, regional, national and global impact to the world. This is much more than producing content and programming for our TV and FM platforms, it’s about providing a high standard of quality content, enhancing and elevating the quality and distribution of content already being produced all across campus and the TAMU System. All while continuing to fulfill our original mission of providing programming that serves the public media mission of informing, educating and entertaining our community.

---

On page 30, the recommendations regarding Biomedical Sciences do not refer to the full name of the College of Veterinary Medicine & Biomedical Sciences. I am deeply committed to the success of the Biomedical Sciences Program, wherever it is housed. And, I look forward to remaining a part of the discussions and strategic planning moving forward.

---

As a 30+ year employee, aligning Galveston into the overall University umbrella has seen its challenges, from a failed merger into the College of Geosciences many years ago, to the often shifted reporting structure and title of the (current) COO and Vice President. Regardless of any formal alignment, strong relationships have been built between critical leadership in Galveston with counterparts in College Station and the results have been very positive. The rationale for this new alignment proposal makes a lot of sense. However, this alignment goes much deeper as the report recommends "reaching down" into the Galveston structure and re-wiring departments to a different command

structure. Being 150 miles away, Galveston leadership needs to have some role in the new, re-wired structure. I don't know how that would work -- and I think that is the challenge of this potential change. Thanks for the opportunity for this feedback. Gig'em!

Executive Summary Pg. 2. The consultant team consistently found the university's operational structure is decentralized, resulting in ineffective use of talent and resources. The report does not prove that decentralization is ineffective. Pg. 2. Centralize the Information Technology, Human Resources and Organizational Effectiveness, Facilities, Marketing and Communications, and Finance units across the university to increase effectiveness and clarify responsibilities. This needs to be done with great care and all constituents need to be consulted before any large changes are made. I am concerned that a rush to centralize these departments will cause major issues and impede other departments from continuing to do their work. Pg. 2. branding and communication efforts I think there needs to be less emphasis on branding and more on communication. I don't really think there is a big problem with branding and I think focusing on branding takes away from serious internal communication issues. Pg. 2. A high internal staff turnover rate, a relatively small pool of qualified potential employees in Bryan/College Station, and the recent increase in remote job offerings nationally spurred by Covid-19 are also threats to retention. Outside of Bryan/College Station, the issue is better opportunities and packages (salary and benefits) from other local and national organizations. Were non-Bryan/College Station-based units considered in this review? Pg. 3. Given the ever-changing landscape of expectations for teaching, research, and service, it is of particular importance to provide the faculty a platform through which they can voice concerns and engage in discourse with senior administration. Staff should be provided with the same opportunity and rarely are in higher education. Pg. 3. Increase the university's direct support of the faculty by creating a Faculty Affairs unit that reports directly to the President and will focus exclusively on faculty issues. Does this exist for staff? If not, staff should have the same access and representation. Pg. 3. Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts. If non-College Station/Bryan units were surveyed, some of this conflict might be due to the fact that some units are doing a lot in DEI and have been for many years. I think it is important to continue to invest in DEI efforts and recruit underrepresented constituents in all areas, including students, faculty and staff at all levels. Pg. 4. While this report does not make specific or detailed recommendations related to certain parts of TAMU, including the Galveston campus, Qatar campus, Government Affairs, and Division of Research, these areas were reviewed at a high level and key observations were made. What about Dallas, Fort Worth, and McAllen? It's unclear if the areas discussed in the report include those same units at these locations. Pg. 4. The student experience at Galveston is separate and unique from College Station and has various levels of connectedness with the College Station campus. I have a feeling Dallas, Fort Worth, and McAllen feel the same way. Centralization of marketing and communications does nothing without respect being shown on the part of the main campus. Pg. 4. Government Affairs is a small but effective team and coordinates well with the Texas A&M System Office of Government Affairs and functioned well during the most recent legislative session. Government Affairs should also be cultivating relationships with faculty across all units. Faculty can help make a stronger case for increased funding in specific research and community outreach (such as clinical affairs) areas. Pg. 5. Recently, TAMU utilized successful outsourcing models for dining, custodial, and maintenance services and, to a limited extent, student residences. I disagree with this statement. While it might be successful if viewed in the reduction of cost, it has not been successful in terms of those employees' satisfaction or retention. The high turnover and increased difficulty in hiring environmental services employees has caused custodial staff to be overburdened and they have struggled to keep up with their increased duties. By outsourcing these areas, those workers also feel less like part of the community they work in and do not have the same benefits that other employees of the university have. I realize this is becoming popular nationally, but those same problems are also present nationally. I think that this could lead to more resentment and a tarnishing of the A&M brand in local communities. Project Overview Pg. 6. Survey of students Did they survey any of the professional program students (current or former) from COM, COD, Nursing, Pharmacy, Vet? I don't think this could be considered a represented sample if they did not survey students from these groups or worse, lumped their opinions/results in with other students. The experiences of these professional program students are unique and unlike those of non-professional graduate and undergraduate programs. Processes and Organizational Effectiveness Pg. 9. the annual evaluation process of individuals to ensure cross-department collaboration and a culture of timely feedback. Evaluations need to happen more often than annually to be timely feedback. I think we need to get out of the mindset that evaluations are once a year and start doing at least quarterly evaluations for employees even if it's a less structured process or simplified form of the current annual evaluations. Survey Analysis: Pg. 87. Ten respondents did not indicate what year they became former students. For the purposes of this analysis, those respondents are grouped with those

who graduated in 1969 or before (7% of all responses). Why would they do this? They should have just thrown out the 10 responses instead of lumping them in with a random group. SWOT Analysis: Weaknesses Pg. 109. Lack of investment in and inclusion of other TAMU branches and locations. The focus of this report being primarily on Bryan/College Station doesn't really help with this. Pg. 109. Student Affairs is unorganized, does not oversee all of the correct functions, and could be improved with restructure. Is this specific to TAMU main campus or are they including Student Affairs at the branch campuses? I feel like this is a broad statement that might not apply to the branch campuses that have their own Student Affairs department that operate independently. Pg. 110. Data on former students and alumni typically do not extend past graduates' first jobs. Is this true of the College of Dentistry? I think we have a fairly extensive and active alumni network and probably have more data on our alumni at least. Pg. 110-111. Threats Many of these items, other than transparency, don't seem to apply to the College of Dentistry. Peer Review Pg. 124. Library Peer Institution Review The report's recommendation for the university libraries directly contradicts the structure that the majority of peer institutions have. Overall, the report mostly ignores the branch campuses and Texas A&M Health. It also ignores the history of TAMU programs and department mergers, which leads to recommendations that have been tried and failed in the past. I think some of the report's findings are valid even when I disagree with its recommendations. I think it is vitally important to discuss these possible changes directly with the affected departments/offices leadership to ensure that historic institutional knowledge is considered before making any of these changes.

---

As a former student (Class of 2015) and a current staff member of Texas A&M, I would like to share my full thoughts on the MGT Report, its recommendations, and what I see are its strengths and shortcomings for this university. Understanding its stated goals, I believe many of the recommendations made in the MGT Report could help make Texas A&M a stronger, more inclusive university. However, I also believe many of the recommendations are misguided, misinformed, and would ultimately harm students, members of the campus community, and the university as a whole. The Survey Analysis lays out what I believe to be one of the major flaws of the Report. The fact that most of the input (75% of survey responses) was given by former students who attended Texas A&M decades ago and probably don't visit campus or talk to students. Texas A&M is — and should be — a much different university than it was in the 60s-2000s. The Report should focus on talking to current students, faculty, and staff, the ones who I believe the university primarily exists to serve. As a former student, I believe former student opinions should hold the least weight in determining the future of the university, as former students aren't the primary ones living, studying, and working at Texas A&M. Another puzzling factor of this report is that many of the footnotes lead directly to anecdotal evidence, theoretical higher education ideas, and op-eds. I don't believe Texas A&M should outline its future — and that of the 100,000+ students, faculty, and staff — based on these criteria. Texas A&M's priorities should be to better serve and develop students, recruit and retain Aggies, exist as an inclusive and welcoming university for students of all background, better reflect Texas' demographics, and strive to be a top public university in the United States. I sincerely thank you for taking time to read this and considering my perspective. I believe Texas A&M is a very special place and is doing some wonderful things for students, our community, our state, and the world. I hope we can continue doing that and keeping students, research and service to the betterment of the world, and Texas A&M's core values at the forefront of what we do.

---

Overall, the MGT auditors have definitely provided a solid conversation piece to improve efficiencies at the university. However, my critique of the MGT auditors is when conducting their research they stayed at too high of a level to truly understand the units they were writing about. They should have interviewed the employees who are actually doing the work. In Lean Six Sigma training it's referred to, "going to the Gemba". The failure to talk to the employees who are doing the work is present throughout the MGT report. There are departments and units that are definitely misrepresented in the report. The next step after getting the feedback of employees is to go to the Gemba and understand the impact of the recommendations. Perhaps the comment period is intended for this purpose but I don't know if a lot of employees truly feel comfortable giving their remarks. That has been a constant critique, they have opinions about the report but feel they will be targeted if they provide their comments. To capture the buy-in of those employees, I think it will be imperative to have town halls to get the feedback. The MGT report proposes some big changes to the university and the more buy-in we have the better we will be able to implement. Overall, I believe Dr. Banks is on target with wanting to improve the administrative infrastructure at the university. This is a bold but necessary move and I support it. I know not all of my suggestions will be taken into account but the desire to move TAMU forward and a more efficient organization is definitely needed. There are too many people who want to keep doing things the same way because that is the way it's always been done. As our organization moves forward we need to be more nimble to adjust to the rapidly changing employment landscape. I am hoping this will be the first step for us moving in that direction.

Thank you for inviting feedback. Please do not see the blanks above as a lack of interest in the report.

The University police department needs to be properly funded, better staffed, and better equipped. Current patrol officer experience is an average of 3 years. This is due to poor staffing and poor pay and overworking. This needs to be addressed.

I support the need to re-position our institution . This is a beast of a journey. I am concerned about the Culture and its appetite for the transformation.

I am glad you did this. Some of the power structures here are archaic. Change is not always a bad thing and if we want to continue to pursue the core value of excellence, some changes need to be made. Just because something is tradition, does not mean it is a good thing. I feel many people at the top fear change because it means they have to become better. Make them change. They need to be better!

I have one note about Cushing Library - Changing it into a museum sounds like a splendid idea. It is the most rigid of the Libraries in productivity and has very minimal accountability. I have been told over my many years here that they are unsure of what all is in their collections and have not done an audit of said collections since I've worked here. There have been 3 directors that have tried to get those working there to accomplish this task but to no avail. More accountability and oversight would do them well, because I know there are amazing and praise worthy things within that building. On Diversity - I have strong personal opinions on this subject, but I will try to be brief. I strongly encourage TAMU to consider its stance on Critical Race Theory. In 2019-2020 the Dean of the Libraries Mandated DEI training that taught CRT. It was a year long training with several classes and lectures. TAMU is diverse, in every race and creed. I believe collaborating with the other campuses is a great idea and should be pursued. I also know that there are many in the Libraries that believe themselves to be activists, encourage divisive language and rhetoric, and discriminate diversity of thought, focusing on identity groups. These are not healthy ways to encourage true diversity and unity, and fight against a lot of basic Aggie values. Please evaluate the direction A&M is going in this area, because the past, although not perfect, is a great thing to build on, not destroy. Thanks for listening to our feedback.

For over 100 years, Fayol's principles have helped organizations improve performance, yet his tenets were largely ignored by MGT Consulting and the Martin+Crumpton Group LLC. It would seem that the people who created this document have little experience in managing people. Any basic Organizational Behavior course teaches the benefits of decentralization to a large organization. Decentralized operations provide increased expertise within each unit. Decisions can be made more quickly, as top management is able to delegate day-to-day decisions. Popa states outright that centralized management is "an inappropriate formula for the structure of large companies" (2020). She goes on to say that centralization can overload managers, decrease motivation, and hinder the ability to adapt to change quickly (Popa, 2020). For this reason, I disagree with the idea of centralizing Human Relations. There is peace of mind for employees who know who they need to call when they have pay issues or are filing FMLA paperwork. Different units have different funding streams, and my department, as an auxiliary has specific rules that do not apply to other units within the university. Moving Residence Life (DRL HR) to the university level would be a mistake. The fact that I know and recognize my HR liaison provides peace of mind, contributing to my effectiveness and efficiency at work. My team knows how to reach her, we serve alongside her on committees, and she is committed to serving DRL with our particular needs and rules. Those who created this document have disregarded the concept of span of control. The organizational chart on page 59 is absolutely ludicrous. There is no way any one individual, no matter their education or intellectual prowess, can effectively manage 22 people. In my opinion, whoever designed that chart has zero experience managing people and perhaps "Chegg'd" their way through MGMT-363. While larger span of control can allow a leader to have a larger influence on productivity, there are costs associated with larger span of control, including less attention given to each direct report individually (Smeets et al., 2019). This is basic management. The proposed new unit, "Business Services Units" need another layer of leadership, with directors, assistant and associate directors to provide manageable span of control. Popa, F. (2020). Ways of Manifesting the Decision-Making Authority at the Level of the Organization. *Ovidius University Annals: Economic Sciences Series*, XX(2), 741–747.

In general I believe this audit properly highlights some of the greatest deficiencies that exist within this university. Some suggestions are easy to understand and are low hanging fruit. I do hope that we take corrective action so Texas A&M

University remains a premiere university and a top 10 university in the USA.

---

"You only get one chance to make a good first impression." The new president has left the staff with the impression that she will lead with a "bull in a china shop" approach, making hasty decisions without thoughtful consideration of their effects, or the multitude of small details that must be considered in order to implement large scale changes well. It is not lost on anyone that the first recommendation of the massive report that she paid for, is that her office should be given more power. General consensus is that she has already made up her mind what she wants to do, and paid for a report that aligns with her wishes. She has not earned the trust of the faculty or staff, and no one believes that she will read this feedback, much less take it into consideration. This is evidenced by the low response rate for this survey, and the need of the president's office to repeatedly send out requests directing staff members to complete the feedback survey. Staff members are also hesitant to respond because they do not trust that their names and UINs will be withheld, and fear retribution for speaking plainly.

---

After reading the report, references and citations I am concerned many of the articles cited are more than a couple of years old. This is not good scholarship. In fact if an undergraduate student submitted a research paper with old references, they would not receive a high grade on the assignment. Citing old sources, makes me think there is not current research or scholarship that supports the recommendations of this report.

---

One of my ongoing concerns is how policies, procedures, and guidelines made for undergraduate education does not work for professional schools. I would really like to see consideration for professional schools included in decision-making.

---

I appreciate that we were given the opportunity to provide feedback for the consulting firm's recommendations. The extension of the deadline to complete our feedback was much appreciated as well and it gives me hope that our feedback will be not only reviewed, but valued and will make a difference. The two things I keep here after people see this report: 1. Wow! Interesting. 2. Who do you think is driving this report? I'm an Aggie and also have worked at A&M for many years. Living in a transient community has been interesting. I feel like I am still a valuable part of A&M. I do have value and I hope I am valued. Thanks.

---

Instead of addressing the pluses and minuses of each and every proposal in the report, I would like to submit a short but important comment regarding your evaluation and selection and announcement process for each of the proposals listed. As I know you are aware, Texas A&M is a very large University and BCS is still really a small town. Everybody knows somebody with access. And there is only so much confidentiality that can take place with such a large, emotionally charged proposal. Most of my colleagues have expressed to me that they feel or have heard that decisions on which items to implement from the report have already been selected, and already vetted through the BOR. I sincerely hope this is not the case. Consequently, I respectfully ask for you to please be respectful, honest, upfront and transparent with the reasons and rationale for accepting which proposals will be implemented and which won't and the rationale for this. If certain proposals are being implemented to cut costs, please be transparent and say that. If proposals are being accepted to further the 25/25 initiative, please say that. If positions are being eliminated to cost costs, explain why and where we are over budget and need to cut back. I have worked at the University for over 25 years and have personally been involved in Reduction in Force (RIF) processes. This was extremely difficult to tell individuals that they no longer have a job. Please remember each of every faculty, staff and student that will be affected by the decisions. Their careers choices, mortgage payments, daycare payments, car payments, student loan payments will be affected. Some may be thinking, how am I going to pay my bills. You are the President and most people will accept that that you have the authority to institute initiatives that you feel will better the University as a whole and most will accept the decisions, even if they are adversely affected, if they are dealt with in a honest way. I respectfully request that you just think of each employee of the University that will be affected by your decisions, as you decide which proposal to accept and implement and which ones you do not. It will go a long way toward a successful implementation of the initiatives that are a priority for you and the vision you have for Texas A&M. Thank you.

---

As a part of an impacted department, I wish a meeting prior to the report detailing the report would have been provided. The manner in which we received the report created anxiety during a time in this country where anxieties have been tested.

---

TAMU needs to focus on staff recruitment and retention, particularly by offering more competitive pay and benefits that are becoming industry standard, like remote work options.

---

Academic advising at Texas A&M lacks a common philosophy or approach that ensures student success. Our decentralized approach to the advising profession leaves too many gaps in knowledge and training, negatively impacting

the student experience and ultimately institutional goals. Without a clear advising structure we see inconsistent standards, advisor inequalities, and no accountability. Many institutions in higher education have moved to a student-centered approach to advising as the role of academic advisor evolved with their campus. However, we find ourselves in a place of increased need for coordinated student success and without the infrastructure in advising to support it. Leaving student success to colleges (decentralized) has resulted in the following inconsistencies (based on a 11/2020 survey): 5/11 (45%) require first semester students to meet with their academic advisor 4/11 (36%) offer advising support for academic at-risk students 6/11 (55%) utilize early alert prompts 3/11 (27%) offer support to students with high hours 2/11 (18%) require advising support to juniors, 3/11 (27%) for seniors

---

Please do not allow whiny faculty members to stifle progress at this university. This report is fantastic, and I hope the president will show true leadership in the face of those who resist change for the sake of resisting change.

---

I greatly appreciate the communication, transparency and the opportunity to provide feedback.

---

This report seems to be misguided on several levels. Given that many key entities were barely spoken with during the information gathering phase. Many sweeping assumptions were made and therefore guidance from this seems incredible.

---

The report disappointed me in the lack of outdated concepts and references. To me what is absent is a strategic vision. What is TAMU aspiring to be? Is that aspiration arrived using shared-governance and community-building processes? The report indeed has sparked dialogue among TAMU community. From my perspective, such dialogue was often out of personal and institutional urgency --- not from a healthy place of readiness. Again, the strategic plan is unclear to me. I do understand the MGT scope was not to create a strategic plan. However, the MGT report identifies inconsistencies and alterations (some bold, some not) with previous TAMU strategic plans, aspirations, and visions. Maybe that evolves after bold changes within the TAMU community but my prediction (from reading and working in higher education) is this will be a difficult, uphill, and lengthy shifting for the institution. Respectfully submitted.

---

If campus feedback was wanted it would have been included in the process starting with selecting the contractor and discussing the goals of the contract. Obviously, this feedback is just an afterthought and the new President is going to do what she wants. Again, she has no formal training, has never been a University President and has been told what to do by the Chancellor. She appears to have no philosophy about the role of a university in regards to education - and it appears she did not take enough non-science courses during her education or failed to absorb the non-science course material.

---

Education today is incredibly expensive. When I went to school at got my degree it was \$13/semester hour. I haven't done the numbers, but about 8 years ago it was about \$265/semester hour. One thing that has changed is universities have grown wealthier, and expanded everything they possibly can on their campuses - but except for the STEM classes, I really don't see much progress in the quality of education. The example that I think mostly supports my view is the quality of public education K-12. Here at A&M we train teachers for K-12, and yet those test scores for those grades continue to go down. Sure, it depends on the kids, the parents, the school districts - but it's more than that. When I was hiring legal secretaries in the 1990's they all had to take spelling, vocabulary, reading comprehension and typing tests. I aced these tests when I took them, in fact they were so easy I wondered if I had missed something. And the people I tested that were my age and up to about 10 years younger also did well on these tests. Then when they were 15 or more years younger than me there was an obvious drop of test scores - and this was before PC's and spellcheck (which people now days like to use as an excuse for the lack of basic knowledge), we were on a Wang mainframe computer system. This concerned me - these tests were not that hard, were these people even readying anything in order to pick up on at least some vocabulary? This was at the largest law firm in Austin at the time. So I tried to find out what in the world had happened. And to be that honest with you, all the reasons are still slowly being unpeeled, like an onion, for me. I began to understand even more the hold Federal monies has over local schools during the critical race theory debates. Don't let A&M train teachers to further school our youth into this indoctrination abyss. A&M exists to give the best education available to those who want to spend the money or borrow on their future in order to get it. This should be the best not in just STEM, but in the basics, in the classics, in history, in civic government. The students who protest against hate speech - are they misinterpreting a difference of opinion as hate speech? Is that because they haven't been taught logic or critical thinking? Or are they far more interested in being activists than having a good education? So many of the far left ideas have come from academia, and everywhere I'm seeing universities turning on their own. I would suggest A&M take steps to not follow those.

I didn't comment on many areas because they do not apply to me and I don't feel like I have the expertise to comment. From talking to family, friends, and colleagues I can tell you that this report has left a lot of people concerned they will no longer have a job in December. This is a horrible thing to do to folks in the middle of a pandemic, and right before Christmas, where a lot of families struggle financially. Folks are really struggling with anxiety over this. I am ok with some changes, but I think this is all too much at once. More communication is needed with the community to alleviate some of these concerns.

---

From a high level the reorganization appears very logical and many of the suggestions appear to have met with what was requested in the Executive summary background. However, after listening to USC, Faculty senate and listening to other discussions there are many points and questions raised that brought to light concerns that appeared have not been fully researched. Hopefully those with concerns will speak to those matters and deeper dives will be performed to ensure the suggested recommendations and changes have merit. It would be nice to see a staged in plan of any changes to make this a success so there is buy-in across campus. In reference to "Information Technology, which employs more than 300 part-time liaisons. This write-up is very confusing and misleading as its unclear if it is being written about staff across campus or those truly employed directly by IT. Since the wording "employed" is actually used, I will therefore be led to believe this is the student workers and not those in other departments outside of Information Technology as they would not be employed by Information Technology. The student worker program has long worked well. It aids hiring students who are enrolled at TAMU, a positive program, the cost is reasonable and often times these students go on to be long term staff. Many of them are performing entry level work and if they stay they receive raises and promotions like any other position. The cost is very reasonable and it's a win for all. If hiring students who have applicable degrees to the positions they often get true on the job training. In reference to "Recently, TAMU utilized successful outsourcing models for dining, custodial, and maintenance services and, to a limited extent, student residence". While it mentions they are gaining popularity the custodial services did nothing but decline after it was outsourced. Many staff were left to clean their own offices and other general areas. The consultant team's findings of searching for current organizational charts is valid. While staff can look in WorkDay this still does not clarify who does what or who is responsible for what. This has been a long-term problem. However, with constant reorganizations having the staff to stay on top of such information and keeping it maintained will be interesting to see if this is truly resolved. I'm led to believe this will be the responsibility of Marketing and Communications? Supporting metrics that centralization will lead to efficiency, or speed up processes such as with HR, Business or I.T., would be of benefit. Were considerations of a dotted line approach rather than a hardline reorganization considered for areas such as HR, Finance and I.T., though this is probably similar to what is occurring now, but with some strategic planning, coordination and focus groups. Again, emphasize on collaboration rather than reorganization. Are we looking to save money and cut corners or provide value service. Invest more in collaboration efforts of these areas rather than realignment. Finance has done a wonderful job providing monthly webinars on business matters and through the use of the "controller connection" educating business staff. This allows the business staff to work with their departments to keep matters consistent. There are similar processes for HR Liaisons. General observation is investing more in these areas, rather than cutting back. There appears to be continued concern that centralization of such a large institution will slow HR and business processes rather than expedite and improve. In regard to the Finance SWOT analysis. Emphasis on Contracts is not strong enough. This appears to be a staffing shortage and lack of communication across areas. Contracting is months behind due to lack of staff or so it appears. To see where items stand as far as procurement is fairly forward if you have staff who facilitate your purchasing in AggieBuy. The challenge is when contractual items are involved. Not all items are purchasing contracts or route through AggieBuy. There is a serious backlog of knowing where contracts stand. It appears there is a staffing shortage in this area and items take months to even a year or so to get finalized. Contracts appears to need staff so they can review, educate and probably look at a system that can communicate where items stand. In regard to the SWOT analysis for IT. Agree with this observation and threat noted regarding billing. The time and expense related to billing from Information Technology can be minimized. While some of it is necessary, there are large chunks that seem unnecessary. With appropriate time and effort dedicated to unraveling what areas and customers are truly billable this can be simplified. Probably would lead to more direct allocations and budgets to appropriate areas who can then expedite their purchasing and financial processes. HSC business and HR matters. The approach to try and combine these into certain areas has not worked. The continued struggles of having to work between two budget offices and coordinate matters is frustrating, some rules apply to HSC and some don't. HSC and TAMU have not aligned as expected and communication are lacking

It sounds like the responsibility of the Provost has been greatly diminished.

This reports starts with statements on how Faculty and staff talent management, retention is a critical issue. Nothing causes talent to leave faster than instability. All this report has done for Information Technology is cause those talented people to look at what options are available to them. "...a relatively small pool of qualified potential employees in Bryan/College Station, and the recent increase in remote job offerings nationally spurred by Covid-19 are also threats to retention..." and add to that the MGT report.

The Ba in Theater and Music needs to be a BFA to compete with other Nationally schools. I feel you should leave the Ba in Performance studies intact because the program could finally take off with a strong BFA track in Theater, Music and Dance. Having the arts to study is one reason this program hasn't done well since the merge 7 years ago. The Bryan/College Station area does not have enough Arts and Culture for the current students to watch and critique to them justice. With a performing Arts center Texas A&M can bolster the area Arts and Culture and also encourage other entities to come to campus and make community bonds.

I hope that A&M will continue to be a leader and embrace it's uniqueness. Changing to be like all the rest would be a big mistake. To me A&M is an amazing and welcoming place to everyone. We have seen at other universities embrace values that are detrimental and dangerous. While anyone who wants to be an Aggie should be welcomed with open arms and all views should have a voice we need to make sure we keep balanced and do not embrace the harmful "woke" culture.

I think the report is correct that A&M needs to increase the diversity in faculty and staff. The campus is not very welcoming to people of color. In addition, why would the university let [REDACTED] speak at Rudder Tower? He does not symbolize anything that I want our University associated with. And on that note, please take the racist statue of Sul Ross down. I also think that Flourish is a very successful program and it has connected me to staff in other parts of the University. I think it should continue to offer the staff resources that it does.

Regarding advising moving into one overall unit to meet students' needs: Currently, the HLKN course schedules are a team coordinated effort that is based on faculty workloads and student needs coordinating between the advising team, undergraduate and graduate chairs, and division chairs. As the course scheduler for HLKN, my question would be who would assume the course schedule needs for each department and how would we coordinate which courses would need to be offered if the advising team is not closely connected within the departments/division since the chairs that have to consider faculty workloads as well. Would scheduling become part of the advising responsibilities or stay at the department level?

1. First and foremost I am very excited about the possible changes happening in the A&M community. I find this initiative well needed for the A&M community and I look forward to participating in anyway leadership deems appropriate. 2. Consolidation and centralization of IT services is a must for any institution to be successful. This will allow for reduction in costs while unifying and improving services. I applaud this effort. 3. Any effort to invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens to create a more community friendly environments would be a fantastic endeavor. I support this whole heartedly. 4. One thing not mentioned in the report was the need to consolidate and centralize all Audio Video endeavors for the A&M community. A/V is generally over looked as its own technology discipline and is sometimes mistakenly assumed that typical IT/Desktop support teams can plan, install and support AV technology in an efficient manner. In my extensive experience, actual CTS certified A/V teams are necessary to provide the most up to date and efficient services and support for AV technology. As an 30 year experienced AV professional I strongly recommend that a consolidated and centralized A/V division within IT is created with the goal to improve A/V services for healthcare/telemedicine, education, and business endeavors. The proposed A/V division should be in close association with networking and telecommunication divisions.

I appreciate the opportunity to provide feedback and all you are doing to be transparent and make TAMU the best it can be.

TAMU deserves better from our contracted entities. It's time to element the wasteful behaviors and practices in which these entities operate, as a taxpayer and a steward of public funds, we owe this to ourselves and our students.

While centralization increases efficiency and cost effectiveness, it needs to be carefully balanced. I fear that centralizing too much, too quickly will remove the specialization and personal relationships that make Texas A&M the great place to work and go to school that it currently is.

No additional comments.

The biggest issue I have with reports like this is the consulting firm doing the report can interview all the people and do all the surveys they want to come up with the recommendations but they do not live in this community and they do not work in this university and they do not know the people. They is no way for them to get a true feel for the needs of this school. I will just ask this. If centralization of systems is so good then why not centralize all Texas public universities. Why have a president at each school? Just have one that oversees them all. That would save way more money.

---

I only commented on topics that I have personal experience with and I'm certain that there would be a financial savings in some of the ideas to reorganize and group departments and colleges together. However, the concern I have is that by making the departments that large and grouping everyone together (regarding both the Academic Realignment and the IT suggestions) that there might be a loss in terms of ability to handle specific student's needs or handling the IT needs of a specific group or department, once everything becomes that generalized. In addition, when the word "anecdotal" is used to describe an example in the very first finding regarding the IT changes, that is a concern - that large changes are being made partially based on anecdotal situations. I would also have liked a more pro/con approach regarding the report so that we could see a bit more behind the thought process of the decisions that were made. Overall I would say I completely agree that changes need to be made and that there are certainly places where departments can be more efficient and that changes and reorganizations make a lot of sense, it's the large consolidations of departments that (while I'm sure it will save money) I'm not sure will result in better service for either students or IT support.

---

Many of the items lists will take years to implement and do them right. Please don't think we can flip a title over to a new department and have it all just work. We have already tried that and it still took time to sort out all the details.

---

Please make sure the goal here is not to do "change for change sake". Thanks You for the effort put into this.

---

Overall, the proposed changes are a good and most are needed.

---

It's gonna be an adventure.

---

New faculties like Visual Arts and Performance is good to establish. Similar establishments are always welcomed

---

The actual report itself it not a well written document. It contradicts itself many times and lacks true defining reasoning for many of the proposed recommendations. I am concerned that the mission and definition of many departments and programs are incorrect based on my tenure with the university. I believe that many of the proposed changes will actually create a less effective organizational structure.

---

These changes are sweeping and drastic. This report and the changes already implemented suggest that the changes recommended have been in the works for some time. Making such drastic changes ignores the extreme stress that faculty and staff have have endured during the past two years. The level of anxiety that such sweeping changes has created is very high and makes the office of the President appear tone deaf and uncaring. While I do not know President Banks I do know that staff has received the message that we are not important, my hope is that this is untrue.

---

Thank you for doing this. I think there is great promise in moving towards the changes specified in the report. In the past, I believe similar changes had been recommended by consultants or auditors. Perhaps the time for those changes was not right. I hope the time is right and we are able to get this done. However, this will be stressful. Even good things can be stressful, and change always is. Great care needs to be taken in communication and looking after personnel. I have seen change done in enterprises with little regard for those in the trenches. Thank you for the good communication we have seen so far. Please continue to communicate and show that you are hearing all of us, and I encourage you to excel even more. In my team, we are feeling that our job is fairly safe in the midst of all these changes. We have and continue to perform with excellence and the changes seem to promise only a better capacity for our team to do our job and do it well. But there are likely many who fear the changes may make it difficult for them to do their job well, or that they may cost them their job. Would the leadership consider a commitment to the faculty and staff that the changes will not put anyone out of work? That, should a position become unnecessary, HR will work with that individual to find them a suitable place in the new structure? I do not know if that is possible, but it will help a lot if leadership can communicate that, or some other additional and continued assurance (with teeth to it) that TAMU will look after \*all\* team members throughout this whole process. And again, thank you for all your hard work on this. We are an awesome, excellent institution and this promises to make us even better.

---

Why bother? Nothing will change.

---

Texas A&M is a great place to work, I'm really excited to be apart of the changed.

---

While I see that the recommendations made are done to improve the university, I have to say that the timing of it all is very bad. Students, faculty, and staff have just spent the past year and a half in constant change, pivoting every time a new policy came along. As humans, everyone is already stressed and exhausted. To undertake such massive changes while the majority of campus does not have the capacity or reserves to be embrace more change is irresponsible and will result in diminished returns.

---

This report in general did not convince me that the pros outweigh the cons of everything proposed. There were many suggestions that I thought are needed but many more that I thought would not work for different reasons. One of them being that the "issue" trying to be solved was not actually the problem (IT's lack of proper shared knowledge). The credentials of this company also claim that they had success with other schools but all of the schools listed are exponentially smaller than TAMU. Also, their sources are all mostly older than ten years. So much of academia has changed since then that they should be using the latest data. I do believe that with any change there will always be growing pain, but this report is not the way we need to move forward. There are too many different internal issues within each department, college, unit, etc. that consolidating won't fix but make it worse. Whoever this consulting company is, did not do a good job. They did not have a big enough of a response pool to accurately identify issues. There is a lot of historical knowledge held by staff and faculty members about failures and successes of all the changes that occurred.

---

Overall this campus talks about being a good steward of energy and they have a few departrments working towards energy efficiency every day but they also have top tier management primarily in the office of the president or department heads, deans etc. that dont care about the total cost of ownership rather, they care about the first cost of install. I have have seen it time and time again where the people who are holding the money care about how the building looks more than how it functions. In one case it was suggested to use office equipment in a vivarium beucase of costs. I would hope that now having an engineer in the presidents office that engineers would start looking at building designs and fighting for the must haves versus the wants

---

The very limited feedback time to the MGT report gives everyone the impression that decisions are already made.

---

Thank you for the opportunity to provide feedback. We appreciate this and look forward to the ideas you opt to implement.

---

Keep in mind that TAMU and Texas A&M Health have remote campuses.

---

Thank you for providing this report and a way to provide our feedback in this process.

---

A lot of these changes are significant, and should not be taken lightly, but I am sure that TAMU will be better suited for the future because of decisions being made now.

---

I really think that the way questions were phrased, particularly with DEI, make the results hard to clearly predict what responders REALLY meant. If you ask former students if they think the university is headed in the right direction, people who say "definitely no" could either mean it is headed in a much too liberal direction, away from tradition, or a much too traditional direction, and unwilling to embrace change. When we see that there is such polarization on issues related to DEI, asking if we are happy with direction assumes we all agree about what direction we are going in right now. Based on reading comments from this and other surveys, I don't think all faculty, former students, current students think "life today at TAMU" means the same thing. I would please ask that these changes be made thoughtfully and with plenty of time. If we make ALL of these changes within a year, I fear life would be chaotic for many years to come.

---

While I certainly grasp the benefits of centralization in some areas, I feel there should be some balance between these benefits and the added job satisfaction and confidence afforded by being part of a department with a degree of self-sufficiency. Especially with regard to the benefits provided by the present setup of HR and IT in our division, I hope careful consideration will be given to the consequences of losing these benefits.

---

While I am not strictly opposed to centralized services, I do believe certain areas could be strengthened when looking to centralize so that the customer service is not lost, as happens to be the case. Designating a POC for each unit (department, center, institute) could be a way of making the user experience better, when looking to have centralized services (business, HR, IT). That way the POC could route to the POC of each centralized service to then pass along as needed for approval flow.

With regards to potentially outsourcing transportation. I would hope that that would not become the case. I think any of us who have gone to any events in DFW, Houston, and Austin can take a step back and acknowledge how efficient our system works. It is amazing how many people are moved around on the hour so efficiently - this includes game day and other special events. I would really hate to disrupt this system. Transportation services works with system members such as TTI to create the structure that we currently operate within, I would highly doubt any other outside vendor could do what they do. I understand that this campus organization does not get a lot of love - folks only like to complain about parking, etc. But after I spent 3 hours sitting in a NRG parking lot after an Aggie game.....it really made me realize what great service we have.

Instead of trying to add more majors or changing little things here and there, I think the university should focus on how to make the big things, like Engineering, Business, and Agrilife more known nation and world wide.

I think the centralization of things is just an error. The current administration is not looking at historical knowledge. What they are proposing is nothing new. It comes around every 5 years or so. The problem is we never learn from our mistakes. Centralization only divides the colleges. Just like bringing back the Journalism program. The Journalism program was dissolved a while back because it didn't do well. I can't see that anything has changed.

I don't know why our University wants to be "like " other Universities. Don't you want to be known for something different, not a cookie cutter version of UC Berkley or UT Austin? I believe the conservative nature of the University is what makes it unique. There are plenty of places where you can attend a liberal school but not many like us.

I think moving the Center for Teaching Excellence to Student Affairs better aligns the curriculum outcomes, work with fyex, OER, to increase in student success.

Transportation Services needs to keep their marketing, HR and IT staff in house. These units handle specific tasks for the department and do not have the resources to assist other departments on campus.

I think TAMU will end up with many more staff in the end.

I'm concerned about the restructuring of the Office of Diversity. It would not provide any accountability that would ensure units to continue work in inclusion, diversity, equity, and access (IDEA). It also doesn't provide for a President's Council for Climate and Diversity. We need continued funding for the Galveston campus's IDEA work that occurs outside the Office for Student Diversity initiatives. Without structure and funding, IDEA-related issues will be extremely difficult to address on our campus. Our peer institutions are typically providing more funding and improved structure for IDEA efforts. The proposals in the report would make us diverge from our peer institutions and effectively halt IDEA work at the Galveston Campus. I believe this would be a grave disservice to the campus community and seriously hamper the recruitment of a diverse student body and hiring of an equally diverse faculty and staff. I strongly recommend that you reconsider these proposals.

I am not an Aggie, however I find it ridiculous that this comprehensive review lists Aggie traditions as a strength and a weakness. Aggie culture is family, it does not "impinge" on anything. Nowhere else can you go to a school this large but feel surrounded by what feels like a small school community. There are student groups for everything. And what "all-male, military component" is this review complaining about? The Corp? There have been women in the Corp since 1974. If this review failed to notice that, I wonder how accurate some of it's other observations are. It's not a crime to honor tradition and progress at the same time. It doesn't have to be either/or. I hope what little of this review is helpful will be utilized and a kind no thank you to the rest.

The report was mostly too vague to give appropriate feedback. More logistical information is needed before making decisions.

I would like President Banks to address the campus and explain the vision of the path forward with this recommendation especially when it comes to possible layoffs.

DISAGREE. "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." "The Aggie culture" meaning what? Traditions? Commitment to Judeo Christian Conservative values--the "Aggie culture" does NOT need to change to accommodate a liberal viewpoint. • Lack of faculty diversity and poor retention of diverse faculty members both at the university and department levels. • University climate not always welcoming, particularly to diverse faculty, staff, and students. Enrollment of diverse students, particularly African Americans, is low. Student and faculty populations do not reflect the state population. • Perception that TAMU history and culture have negatively impacted student body diversity. TAMU has historically been conservative and slow to change regarding diversity issues. Fish Camp is an example of this—there is a lack of control over the content of the camp. The challenges of polarized politics have the

potential to threaten core values. The above is a generalization that does not recognize conservative black, Hispanic or other conservative cultural beliefs.

It would be more comforting to know that working groups of staff, that have been around long enough to know what has/has not worked in the past, have been consulted with. Also what works/does not work for already centralized colleges and their details. Instead of making these huge changes without consulting the people that are in the trenches or only consulting them with a survey, we would like to know the changes were made with very solid information. Also, if there could be more transparency on the metrics used and how this information was gathered by the consulting group. It is very vague in areas which makes it seem like there was a targeted outcome. More transparency would help to accept these major changes.

Our overall goal should be to provide quality over quantity in all aspects of our business if we are to remain one of the top universities globally. Please keep the employees and community in mind when making major adjustments and not just looking at the bottom line.

Comment about staff success, satisfaction and retention: as Texas A&M and the College Station community grow, I think TAMU should work to make staff work locations and schedules more diverse/flexible, in positions where an on-campus presence is not always essential. In general, this will allow more employees to manage their work-life balance, avoid "rush hour" traffic and the stress and wasted time this brings, and support critical parental roles (such as school drop-off, pick-up for young children). I think alternate locations and hours should not only be allowed, but should be encouraged or required within departments. This is one way that TAMU can recruit younger applicants, who are trying to grow their career and family at the same time. This will also allow recruitment to a broader community in rural communities as well as larger cities such as Houston, if commuting is either not required (remote position) or only required on certain days of the employee's choosing (hybrid position). During the first months of COVID, almost everyone worked from home; however, after that, the sudden "everyone back to work" notice was not well-received or uniformly applied. It seems now the policies on work-from-home arrangements are not consistent among offices or even among employees within the same office, which leads to dissatisfaction of staff.

TAMU is a good place to learn and to work. Being from Bryan, TX I have lived most of my adult life here. I am aware of the segregated past of TAMU, and its image still haunts people today. I have gone from seeing my grandmother, clean houses for white faculty, to attending TAMU in 1985 and not graduating from here, to celebrating my son when he did so in 2007. We have to work smarter, not harder, at changing the image and culture of the university.

Thank you for listening to the student, faculty and staff community, asking for more time to complete the survey. From personal experience, I see stakeholders who are engaged, and doing their due diligence in providing possible solutions, offering pros and cons, in order to continue to move the University forward in a positive direction. In times of change, in times of discourse, Aggies must rise up to demonstrate knowledge and acceptance of Aggie core values, to honor and respect this institution by engaging in civil and respectful communications and actions. Leadership, "fearless on all fronts", means making hard decisions at times. Exhibit 7: Ranking of Greatest Strengths of Texas A&M These results, to me, factually demonstrate a need (requirement) for a shift in how we are doing things, when items like a diverse, inclusive, nurturing environment, transformational education, support for student success, impact on the State, the Nation, and the World fall at 30% or below as strengths! Additionally, increasing community engagement is critically important in metrics on our visibility, as well as increasing potential for partnerships, for implementing solutions together, for overall success. Thank you again for allowing extra time for discernment and educated feedback.

I agree that streamlining things like HR, MarComm, IT, etc could provide great efficiency and make sure everyone is following the same rules and protocols. As someone who currently works in System Internal Audit, it is clear how much variation there is between departments on how these things are handled. And some colleges/departments are much more organized, have solid processes and procedures, and some definitely do not. However, I do think only having 'top level' people and removing all employees from these departments could cause issues, as a central location would not necessarily understand all the needs at the department level across the entire University. So some thought should be given to how best to marry those two needs (streamlines processes & procedures & oversight, with individual needs of colleges and departments and how much those could vary across a University the size of A&M)

It would be nice to know how many, if any of the people who put the proposal together are Aggies? I ask that because they seemed to have insulted everything Aggies stand for by saying that our traditions are holding us back. It comes across like they think diversity is the most important thing for a university. Diversity is important, but it should not be the main goal. I've been insulted and racially profiled more in the last 3-4 years for being a white male than I've seen, heard

about or experienced for ANYONE that is a minority. Is that this goal of diversity? We're getting more "diverse" but also more divisive. Instead of a diversity campaign, we need to push a unity (NOT uniformity) campaign.

A review like this was WAY overdue and I look forward to President Banks leadership. I still see much fat in various depts, even mine, that needs to be cut out, but everyone is afraid to document and terminate those that don't work. It's like a free ride and the money could be used for other things or saved, but some leaders don't know how to be leaders and either re-train staff, move them, or write them up for failure to perform basic duties.

I am relatively new to the TAMU System. I think the main value in TAMU is that a large system can work together efficiently and effectively to accomplish much for our students and as well as the development of new ideas by our faculty. In that vein, I believe it's important to really consider how extended campuses, such as the Law School in Fort Worth, are impacted by changes, specifically ones related to hierarchy. If a system is put in place that requires multi-level approvals at various locations, it can become burdensome to accomplish even the most basic, daily tasks. Efficiency AND effectiveness are the goals.

Finding #4: "struggle to find social activities that motivate them to remain in this area." Nature, cultural activities, and museums are severely lacking. I'm actively looking for jobs in cities that have better amenities, but it's also hard to bring talent to the BCS area.

Our retention problems are in no small part due to salaries. Incremental raises which don't even match inflation, a lack of upward mobility, and general low pay - especially at the low end. I have been here 7 years, I've been promoted twice. If the \$15 minimum wage passes, it will still be a step up for me. You cannot maintain high quality staff like this.

As a highly active research group, I also look forward to improvements in transparency related to issues such as contract review and account setup. Improved communication and work processes between SRS, compliance, EHS, and finance would increase productivity tremendously at the PI and staff level. If the vision of TAMU includes increased federal funding for clinical research, then investments in training and supporting faculty and staff are needed. There are many areas the training and support could focus on and a long term plan for implementation and assessment is needed.

I think this report presents lots of opportunities to review how things are done within TAMU, provide many efficiencies and promote more best practices.

TAMU hemorrhages employees badly enough- enact a vaccine mandate, and you'll see an exodus like you can't even imagine.

Payroll belongs under HROE. Everything that payroll uses to pay someone comes from HROE.

Being an Aggie used to mean something. Honor, respect, discipline. You had to earn it. More was expected and given. Now it's like Texas A&M is just another brand looking for the best way to make another buck.

Such extensive changes with every incoming leadership leads to confusion amongst the employees and students. It also leads to less faith in efforts being undertaken because new leadership might reorganize things again.

However, this is implemented the bottom line is who is the direct supervisor, if there is an indirect line, what does that look like, who sets the priorities, who signs off on all the paperwork, who does the evaluation, who approves the time off, etc. If positions have more than one area under the report, who decides where they go, who determines if the person fits under the areas when their job entails several areas, who supports them if there is shared administrative staff, where do they office, if a position is vacant who decides who fills it, etc.

If these movements occur, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has caused severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF'ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation.

I would like to see the proposed President's organization chart, since it looks like more/different areas will report to her (Vice President for Research, Vice President for Faculty Affairs, etc.). Although the report contains recommendations, I truly believe that some of the decisions and actions were already made prior to the release of the document. I would have hoped for more transparency. Were university documents considered in the recommendations: Decade of Excellence: The Vision 2020-2030, Decade of Excellence: Strategic Plan 2020-2025, and Stronger Together: A Report by the Commission on Diversity, Equity and Inclusion? I'm curious about considerations of the funding streams/challenges of making these changes. The complexity of funding sources may make some of these recommendations very difficult to make. About the quality of the report itself: correct/update citations (inconsistent/incorrect format), correct typos, correct unit names, use more recent literature to support your recommendations. It also looks like you copied and

pasted in the Appendices (e.g., in Appendix 3, you refer readers to Appendix E). Arizona State is a land grant institution, and I'm not sure why University of San Diego was a peer institution (a 9,000-student Catholic University). We typically include University of Texas as a peer institution, but it is not included. The footer/ page numbering is inconsistent: MGT footers stop after page 7, page numbers are missing and there are two page 24s. I'm disappointed in the lack of attention to detail for such an important document.

There are several good ideas and positive recommendations in this report. However, this reports also contains several key recommendations that are based on very limited insight. A true cost-benefit analysis needs to be done before many of these recommendations are implemented. As with most change, the implementation process is going to be more important than the change itself. So far there has been no effort to justify or create buy-in by the faculty, staff, or students of this university. I want to be a strong supporter for positive change and improvements on campus and I'm looking forward to being a part in that process as we move forward.

I am unclear on how organizational charts are not available. This was a finding in the 2011 PwC report and Workday was implemented to rectify this issue. The org chart is in workday. Or are you saying that departments are not using the supervisory organizations correctly and therefore the org chart is not accurate? This should be a requirement. I am very excited to hear that staff will work together to create a common vision and core values for their organizations. This is welcomed - however, the lack of previous transparency on organizations provides some skepticism. If we really work together, this will be great. If leadership already knows what they want, then please don't just go through the motions. I am a long-time dedicated employee who is here for the greater good of the University, not just my department. All levels of the organization should be expected to model the TAMU core values and how this process moves forward has the potential to be epic! I look forward to transparency and trust in our dedicated staff and teamwork to move this work forward.

My feedback is in reference to the centralization of HR, Finance, and Marketing. My main concern would be if the daily tasks each of these areas complete would be affected. Will tasks take longer if they are centralized and report to their own department? Or will we still have the same quick service and access? I am very pleased with the convenience of having our own departmental HR, Finance, and Marketing staff members. They are able to cater to our needs and know the department. If they are centralized to a single department, would this change? If these departments are centralized, I would like to know the logistics on how reporting to these staff members would work. Thank you!

I think centralization is great as a cost saving mechanism. We must remember that the fragmentation started due to the inability of the centralized organizations to deliver. An effort like this without addressing the inefficiency would be a fruitless exercise.

We need centers that cater to under-represented population. Latino is the growing majority in this state, and the university has nothing in place for them. Nothing was mentioned in the report to address this. Only centralizing where it can lose the touch of some advisor being to relate to students at a more personal level. I asked my sister and other Puerto Rican former aggies if they received information about this survey and was baffled when any said no. Makes me question the population that this was filled out by or reach out too.

My feedback is primarily focused on the IT piece because that is where I work, and can speak to the most effectively. However the changes proposed in this report are very disruptive, and in some cases potentially destructive. If the plan is to improve the effectiveness of IT support at our University, and the improve security at our University, the recommendations listed in this report are not the correct path to achieve this. This report seems to focus less on improving the quality of support, and security, but more on saving money. Lastly this report was worked on for months to better justify the goals of the administration, and to provide justification for the recommendations. The fact that the Faculty and Staff were not given more than two weeks to gather our own data and justify our feedback is troubling. This leaves a feeling that our opinion is not really needed, or relevant in this process.

N/A

What is the metric for successful? With outsourcing of custodial/maintenance, it has resulted in low response time, low morale, loss of benefits, loss of voice. Also hard to hold accountable, high turn over of staff, etc. I think the "successful" implementation of outsourced custodial, maintenance is in the eye of the beholder. What have we give up to get this little in return? Housing partial outsourcing has been an absolute headache for anyone involved and even between collaborations of tamu, residence life, custodial maintenance outsourcing, and the public/private partnership. What would be the rationale behind outsourcing transportation, which already has a good foundation, creates jobs for students, leads in green initiatives, etc. What is the measure of efficiency? How does that compare to what is actually

effective? Was this all based on surveys and interviews? Were case studies of working systems studied? I think rather than centralizing, our work relies on collaboration and communication. These recommendations need to be the start of a conversation, but it appears that some things were already decided and started to be implemented before the report was released to the public or feedback was given. Also, in the future, we should be allowed more time to meet within depts, colleges, divisions to come up with a concise response as a unit if the recommendations affect our units. Was this survey swayed by opinions during COVID operations? Why was the Corps not evaluated as they are an integral part of TAMU?

N/A

We need to focus on addressing the following threats and weaknesses outlined in the SWOT Analysis: Weaknesses - Limited financial resources to recruit and retain talented faculty and staff. Not competitive enough with the marketplace. - Inconsistency in processes, problem-solving, tasking, and organization has created an ad hoc conglomeration of "one-offs" that make it difficult for individuals to identify their responsibilities. (In my previous position on campus, I literally did the job of three people, and half of my responsibilities were those of my supervisor.) Threats - Lack of faculty diversity and poor retention of diverse faculty members both at the university and department levels. - University climate not always welcoming, particularly to diverse faculty, staff, and students. Enrollment of diverse students, particularly African Americans, is low. Student and faculty populations do not reflect the state population. (As a gay, Latinx male, I seriously considered not accepting my position here at Texas A&M given its troubling history on issues that affected people like me, even as recent as 2016) Final Thoughts: We need proper space to do our jobs and assist students in privacy. Our office in particular have 2 or 3 people PER OFFICE and we're expected to advise students in this environment with little to no privacy. We need adequate space to perform our duties.

It seems that change is inevitable and that is not necessarily a bad thing. There have been many rumors around campus regarding staff layoffs and restructuring. Given that TAMU is the largest employer in BCS and surrounding areas, a mass layoff/reduction in force will negatively impact the local economy, which is still recovering from the impacts of COVID. Before making the decision to terminate employees, I recommend making cutbacks by attrition and reviewing positions that are currently vacant. I also suggest implementing a staff voluntary phased separation plan that would provide an additional incentive to staff that are close to or eligible for retirement.

I am a new employee this year starting during the COVID-19 lockdown. After reading the report, it appears that all recommendations will be favorable to the institution in terms of restructuring and building on keeping staff through prioritizing their strengths through advancement, new job titles, while increasing staff hiring to meet ongoing concerns and continued growth.

The report, at its beginning, indicates that it is a "high-level, comprehensive review." High-level and comprehensive are not words that belong together. This report seems to lack an understanding of the day-to-day processes of many of the areas it is trying to change. It throws out a series of recommendations without providing a solid foundation from the ground level of why these suggestions are expected to produce improvements. Further, I find it difficult to trust the recommendations of a report that cannot seem to keep internal consistency on what it is trying to recommend.

The Biology department is on an upward trajectory and has been able to achieve great success in spite of not having updated facilities or the appropriate amount of staff. Our staff do all that is expected of them and then some and we do an outstanding job of keeping everything running. The Biology department should stay with the College of Science and should be able to continue our upward momentum.

All positions, although many hold the same title are specific to each department or unit in which they work. We all have a focus of community, and know the departmental needs that align with our goals. Moving Biology to Ag seems to be removing core science from the college of science, and would cause poor collaboration for the instruction on sciences.

I have been working as a postdoc researcher for nearly 8 years in Biology Department, and directly training at least 20 undergraduate and 8 graduate students, my first hand experience is: this is very welcoming and friendly academic department, students could easily seek help whenever they need either from faculties or from staff members. In the lab I am working at, we published at least two peer review papers per year, and during the last cycle of renewing NIH funding, our proposal gain the highest score in the NIH agency. Certainly, there is room to improve, like IT services, but as far as academic service and achievement, I felt very strong this is a very good-standing department, I will feel sad if the department were dismantled in some way for some reason. [REDACTED]

I enjoy work in Biology Department. I have been working in the Department for 10 years and provide multiple international services. I have trained many undergraduate students and graduate students throughout multiple

departments at Texas A&M University. Further, I have trained students outside of the campus, including high school students in College Station. I think it would be good to keep this department. Thank you.

Change can be hard, but necessary. I am not opposed to the changes, especially if it improves the student experience, employee relations and the TAMU community overall. Most of the organizational administration and centralization of certain resources does make sense. I urge the committee to reevaluate moving of the Biology department and centralization of advising. Student success seems to be a large theme throughout the report, but the recommendations do not necessarily address how we can better serve our students, especially our first-generation, low-income students.

I was in the Army for over 23 years - so I have seen firsthand large organizations and how they work. The bottom line is that with Centralization comes standardization. Every department is unique with its own personality - so standardizing everything from IT to business services to advising will literally suck the personality out of each department. You can still standardize things without centralizing everyone - just like an infantry unit, and artillery unit and an engineer unit all LOOK the same (standardization) but all have their own unique personnel and personality because they are focused on a specific task. So make Economics look like Chemical Engineering look like Marketing but leave the business, IT, HR etc in each of those departments alone so they can better serve the needs of their unique department. Standardizing does NOT mean centralizing - and centralizing is exactly what this report seems to want to do. If you do not believe me, come spend a week with me and see the difficulties departments have to deal with in the arenas of business and IT - two functions that have been Centralized by our college in the name of "efficiency" when in reality have completely destroyed the departments ability to function with any semblance of efficiently.

A theme of this report seems to be that centralization of functions is always better and more 'efficient'. In an organization as large as TAMU, there are many reasons why decentralized services may serve students faculty and staff better. Decentralized support allows constituents to be known and supported in a way that makes this very large organization navigable and welcoming.

Imagine running a department with an entirely new, lower-salaried staff that may all have degrees but no real understanding of how things the Department is supposed to work. If this merger is intended to make our university even more great, I think it has already failed. This will result in good people (who have worked hard for this university for several years) resigning or being forced to retire. It's my hope that this is the beginning of many conversations regarding this topic but it seems the Pres. Banks is pretty set on doing this. I have to wonder if the people who were surveyed were actually members of TAMU? The companies used for this report don't know our campus or how great it has been all these years. I just don't see how most of this report will be a good thing for our University. I urge you -beg you- to please reconsider!

Overall, the report does not demonstrate the kind of due diligence in research needed to reach the conclusions and provide recommendations that are expressed in the report. There is need for more clarity and explanation of how conclusions were reached. There are internal inconsistencies within the report, for example the comments regarding outsourcing on pages 5, 115 and 116. The difference between communicating internally and communicating externally, needs and concerns of internal stakeholders as compared to external stakeholders was not addressed at all in the report. Having spent time in a commissioner's office of state government, it is deeply concerning to see the level of centralization being advocated in the report. The greatest complaints received from stakeholders involved their frustration regarding the lack of excellence and efficiency in services provided because centralization slowed down the speed of communication and specialized information was not readily available because it had to go through layers from a central office to get to the parties who could answer the questions with the detail and fullness needed.

We need to look at salaries and why we think we can get someone cheaper. When you have low starting salaries, your pool of applicants is not the same quality. I am on another campus and we have lost some great talent and getting ready to lose more due to lack of mobility and salaries. And it takes forever to replace these positions. We expect others to pick up the slack with no increase in salary and continue the additional work for months. Seeing issues with burnout. This has changed the culture on campus. Also if we want to see more diversity, we need to start at the top with our Board of regents, all the way down.

This report is done from a corporate viewpoint. It is not done from a Higher Education standpoint or an understanding of Higher Education. And it does not look at the structure and the purpose of offices and departments from within TAMU. The data sample gathered (response rate) from the survey is extremely low. It seems wrong to assume that these responses represent the general feelings and opinions of the University community.

I appreciate that the new administration invested time and resources into seeking new ways to align our institution's

efforts for maximum impact. For the most part, I am supportive of the consultant's recommendations and I see vast potential from their implementation. I would very much like for the staff to be invited to be a part of the planning and implementation as possible to ensure their buy-in and so they do not feel left-behind by swift moving train. Thank you for the opportunity to share my thoughts about the report's recommendations.

The report has a number of dotted lines suggested. How will conflicts between the priorities of the two (or more) bosses be resolved?

The report should include more information about the structure and implementation of all recommendations. TAMU advisors need to be included and consulted on any changes happening to advising structure. Top-down changes without adequate advisor input will hurt advisors and our students. What centralized advising structure are they referring to: college level, university level, something else? what does it look like, how will job responsibilities change (especially since there are other changes listed like merging science and liberal arts)? How will the change be implemented? Will we have to reapply for jobs and lose the pay/career/credibility/status we have already worked to build in our departments?

This entire thing is disgraceful. Lack of communication, lack of clear information, demeaning to faculty and staff after the university administration has already spent the past two years acting in a manner that condescended to their staff and belittled the work they put in during the pandemic. The bungling of the merit pay and salary letters in August 2020 followed by Junkins suggesting to people who asked about the situation for 2021 raises that they didn't deserve it. As soon as Banks was installed she began making moves that put staff in a position they weren't comfortable with by rushing the reopening of campus. Not even a suggestion of hazard pay for people who were forced to return to full-time in person work before vaccinations were rolled out and when we were struggling to maintain safety guidelines and faced with hostility from both students and staff over the guidelines. Instituting a hiring freeze when we were already hemorrhaging staff positions because of the working conditions and pay situation, and now wanting to remove and demote faculty positions because the upper administration doesn't believe the service they provide is valuable. This report makes it glaringly obvious that the administration does not understand the challenges that their faculty and staff face, and the way it was conducted makes it additionally obvious that they are not interested in learning.

I'm all for positive change and growth but I hope and pray that implementation of the proposed changes are not done at the detriment of the lives of people that have dedicated years of their lives to TAMU.

The critical issue of 20% of the employees who are over 65 could be expanded to those who meet the rule of 80 (ie. those 55 years old with 25 years of service). It is good to recognize this, but another to understand that some of the new hires are not receptive to take mentoring advise from this older group. This is from personal experience in HR mentoring and other areas. Although we have the knowledge to share as we try to mentor with good information, the mentee will disregard or infer we are not at the level to offer such information. My question is "why" ask me if you do not want to hear the correct information and proceed to make the error. The mentee knows best! It is only when the transaction / action / or process blows up/ goes wrong that our previous knowledge is valued. Oh, now they come back to me to ask how to fix it. At this point, management gets involved and asks the mentor to fix it, figure it out because the mentee dropped the ball or approved without reading the policy and regulation associated with it. I have been asked to write internal guidelines to "share" my vast knowledge on numerous topics, but those fell to the side and still have not been approved. My supervisor was excited and happy about these, but it stopped their. Guessing upper management so no need. Months later, these were not even acknowledged as valuable or shared to assist in training others. New topic: I agree diversity needs work. In my opinion, the COM Diversity leader is unsuccessful, ineffective and offensive at times in his delivery. Since he was employed, his diversity team has constantly exited. With a mass exit like this over and over again, something is wrong at the top. I tried to be as truthful as possible in my opinions. I have been employed within the TAMUS (and in several different members) since 1999, so I value the organization and hope for its success.

Consolidating Art Related programming can be a good idea if it is being used to leverage funding to build a Fine Arts Center. Our Theater Complex has not grown since 1972 and our enrollment (Demand) has more than doubled. Not a lot of student Meeting Space has grown since 1972. It would be nice if all the floors in Rudder Tower except the dining on the top floor and the 1st floor were dedicated to meeting space. Even the addition of student meeting space in the 2012 MSC Renovation and expansion did not keep up with the increased enrollment. It added a few additional rooms and a great Versatile ball room.

I mentioned this previously, but it seems like it contradicts itself by suggesting centralization and then creating so many new colleges, departments, programs, and offices. It feels as though in same ways it looks at this report in a TAMU-CS specific approach, and then looks at it as a system approach. Overall some great suggestions were made, but the

logistics are to be considered of many of the big moves suggested. TAMU is a rather large school on its own, so some of these approaches may not be as reasonable in practice as they are in theory.

Great plan. I think as both a Former student and a current University Employee that it is a much needed reform. Specifically in the areas of Academic realignment within Liberal Arts & Sciences and creating a Journalism Dept. As a communicator in Athletics, I see a great need for updating Marketing & Communications areas and would see in the 21st century of technology that Texas A&M MUST make an effort to incorporate KAMU into the main aspects of both academic and marketing opportunities. We are just way behind the curve here and moving this building to be part of a central Communications & Marketing Dept. hub where journalism is not only taught, but practiced is a win for academics and storytelling for Texas A&M's future.

While I appreciate the efforts to collect data and provide recommendations, I feel this was done too quickly. Many of the recommendations affect staff who were not consulted or interviewed in this process. Those who actually do the day to day work to ensure student success were not even thought about. And frankly, in order to make sweeping recommendations such as these, I believe the consulting team should have taken 6 months to a year to fully understand the workings of the University. A lot was left out. Texas A&M University has been and still is a very successful university. This isn't by happenstance. While some changes are needed, I believe we need to really take a long and careful look at what we already do and only make changes where necessary, not for the sake of just making changes.

I support shared governance. Taking that to the next level would be adding a Faculty Regent and a Staff Regent to the Board of Regents. Regarding DEI, it is difficult to recruit underrepresented students and faculty heavily due to two key challenges: campus climate and representation. As an example, the students who need to feel welcomed here at Texas A&M made their feelings well known about the Sul Ross Statue and the significance of its removal. In equal measure, the institution demonstrated that the statue was more important than the opinions of students of color. Furthermore, it was alarming to learn that a Sul Ross focused, non TAMU group was allowed to participate in all summer Fish Camps in 2021. No amount of money allocated to recruit diverse populations will be a good investment if the root causes of the campus climate problem are not adequately addressed. Without a sound campus climate, it will be difficult to achieve better representation. Representation is vital to attracting a diverse student body, faculty, and staff. Representation is powerful because people must see themselves fitting in, serving in leadership roles, and contributing to the greater good. Speaking of representation, the race and gender diversity optics of the new administration is quite low. This may further limit the ability for the university to be successful on this front. I do not understand the decision to omit the University of Texas, our chief competitor for students, from the peer review analysis. There are multiple places in the report where it felt as though information conflicted. For instance, there are different numbers used for which leadership was interviewed. The report rightfully calls out where communication can be improved. However, the overall communication from the executive leadership during this transition has been disappointing. During times of crisis and change, leaders communicate more. More frequently, more intentionally, more urgently. This failure to communicate is devastating campus morale and productivity. There may indeed be a grand vision ahead! We will need motivated and engaged employees to make it happen. For the sake of the entire institution, find a new way to execute the process and communications and truly engage with campus stakeholders.

Please communicate to staff involved in merging units how the implementation of these recommendations would affect their employment status.

As an academic advisor in the College of Engineering I do not support a centralized advising scheme. Our degrees are so complex that trying to learn all of them or even a few departments is not feasible. We in Computer Science and Engineering are responsible for 3 majors. That is a full-time job in itself, I can't imagine trying to be responsible for different other majors. We have faculty advisors that we need to stay close to since they answer the technical questions that we do not have the know-how for. Thanks!

Centralization, which is at the heart of these recommendations, can provide many benefits when executed correctly. When executed poorly, especially if devaluing the organizations losing indigenous support elements, organizational walls get built up and advantages vanish. You will need a strategic change management mindset and persistent and continuous messaging that emphasizes our core values and core education and research missions of the University. Consultants might help, but you also need some trusted vets who have been a part of and led large organizational change...and there are several sprinkled across the university.

I hope everyone is doing well and will not let us go. Thanks and have a wonderful and blessed day.

This report does not give me confidence that the proposed changes have been thoroughly vetted, nor that adequate effort has been made to get stakeholder perspectives.

This has me concerned. Will I still have employment....I have nobody but me, so if I lose this means of support, don't even want to think about that. I am concerned that proper research was not conducted thoroughly enough. Much more thought and consideration are desperately needed in many of the areas. Many, many people are not very happy with the recommendations.

The Executive Summary refers to concerns about the University's DEI efforts. I share some of those concerns. As stated in the findings for the Provost Office, with similar comments in other sections of the report, "The demographics of student enrollment at TAMU do not currently mirror the demographics of the State of Texas." Replace "student enrollment" with "the football team" and suddenly the question is about skill and merit instead of ethnicity, socioeconomic status, gender or sexual orientation. I firmly believe in inclusion. Any prospective student should be welcomed as long as they possess the academic aptitude to succeed. In contrast, diversity is not by itself a reasonable goal in all circumstances. Lack of representative, demographically mirrored diversity is not automatically an undesirable condition provided no one is unjustly excluded. Forced diversity is artificial and a disservice to all involved. I agree that some portion of current investment in DEI would be better spent on "education-focused endeavors for the entire student population." The constant focus on growth concerns me greatly. The student body has doubled since I was enrolled and that has in some ways adversely affected the overall campus environment. One no longer hears "Howdy!" from passing students when walking across campus. They rarely make eye contact. In many ways, they have been reduced to numbers. "Growth for the sake of growth is the ideology of the cancer cell." — Edward Abbey, *The Journey Home: Some Words in Defense of the American West*

Very comprehensive review. I look forward to seeing how these findings are interpreted and which ones are ultimately implemented.

Once again we are seeing consultant recommendations that focus on 'streamlining' and making administration more efficient' without focusing on the customer/employee/student outcomes. Consultants that want to force higher education into a set framework based on corporate models.

This is an aggressive plan. I am thankful for the chance to provide feedback.

The university needs to hire more workers and focus on keeping them happy. I agree that younger workers need opportunities to grow at A&M so they will stay at the university. As a staff member in my 20's, it makes me happy to hear that the university wants to put more effort into keeping workers for the long term.

From my perspective as an employee and a current graduate student, I agree with the high-level findings. After reading the report, I feel like many of the organizational and administrative recommendations are backed by sufficient research; however, most recommendations that concern students or DEI are not. These recommendations lack critical analysis, relevant research especially from the literature, and are misaligned with our peer institutions. Student success was largely missed within the report as well. HIPs are not the end-all for quality educational outcomes nor provide for all of our students. I was incredibly surprised to see no mention of our Latinx population, first generation students, or other minoritized students/staff/faculty at this PWI - this is the "conflict" about culture and DEI as well as struggle with talent management mentioned in the findings. Recruitment is not the solution if we cannot support our students. Framing persistence from a deficit-view or providing for "all" students instead of specific populations is why we already have these problems, and these recommendations do not address student needs.

As the saying goes, "From the outside looking in, you can't understand it. From the inside looking out, you can't explain it. The University may benefit from some of the proposed changes and enhancements. As a whole, I don't feel everything needs restructuring. Stripping the departments of their Finance/HR areas is going to result in them receiving less services. Removing Auxiliaries from Student Affairs is going to result in lost funding. The other education will suffer. Programs will be lost.

Some of MGT's ideas make sense to me, but not their suggested implementations or their assessment of the assets they recommend dismantling. On the heels of an unprecedented difficult time due to the pandemic (and moving online), a few short months, limited conversations, survey questions that don't represent the full value or complexity of the university's current organization makes for recommendations that need deeper study/input from students, faculty, former students and staff. The vantage point that these issues should be vetted from are: what serves our students best, what serves the State of Texas best and who is going to pay for it (many of our donors are very unhappy about the proposed changes, which likely would impact future support). "Efficiency" doesn't often align with "effective", where

these two objectives can't be met concurrently, I hope we value "effective" above "efficiency" – in part because we can afford to pay for effective and because it's the best possible choice.

I recognize so much of this is housecleaning. I also know these recommendations don't necessarily imply future direction for the university, but rather, they clear the path for effective and efficient movement forward. I am happy to see a "bucket" for the Hispanic Serving institution as we are teetering on the precipice of that designation. I truly believe that strategic plans need to be laid in anticipation of hitting this important threshold and hold this is a sign that we'll be poised and prepared for that.

Thank you for underscoring the importance of the fine arts, not only as part of the student's university experience, but also as an enrichment of life for the community at large. That this report made such particular mention of the role of the university and the university community in providing fine arts programming for all was incredibly encouraging. Having lived in college towns across the country for most of my life, upon my relocation here five years ago I was surprised at the lack of rich cultural and cross-cultural experiences available in the Bryan-College Station community. As a fine arts major myself, I was also dismayed to learn during my time here that the university apparently had no interest in fostering the arts under the auspices of the institution, given its current limited course and program offerings in those areas. I am excited to see the university strengthen its fine arts and liberal arts programs, including journalism, under the recommendations of this report.

Moving forward, please involve staff in the decision-making process, as well as any implementation teams that are created to achieve whatever changes are made.

Overall I found the report to be lacking in substance/real solutions and a deep understanding of university functions, operations and culture. A lot of buzzwords, no real meaning. Noting that we can better address diversity gaps through relocating units is preposterous and makes me doubt everything in the report. Putting Athletics comms under MarComm is ridiculous and also shows a fundamental lack of understanding of how things actually work here. While I'm for centralizing in some key areas, it just seems like they think moving everybody around is going to solve problems that go so far beyond who is where. I agree with the assessment across the report that lacking coordinated strategies across the university has hurt us and made our jobs more difficult. But literally everyone already knows that. What bothers me most is that only 60 people were interviewed. We have 17,000 employees and 73,000 students and only 60 people were interviewed? How is that okay? I think I stand with much of the staff I've spoken to as well as commenters online in that this report is total garbage.

Change is good, but should be subtle and necessary. It should make sense and include a voice from all stake holders. And, it should be with an open mind and active listening.

Much of this report commissioned by the President's office unsurprisingly supports the consolidation of power to the President's office. A big power grab.

I filled out the facilities and finance sections of this survey but the comments extend to IT and marketing as well. In short, a lot of the athletics operation is vastly different than what campus does or even knows how to do. That's not an indictment on the campus's operations it's more to point out that the athletics operation is extremely specialized and the staff that is hired in the department is just as specialized. Rolling up their reporting to campus in lieu of the AD will do more harm than good to the Athletic Department.

Were any surveys sent to those on Galveston campus? To push a smaller campus into the plans for the College Station plan would be a disservice to faculty, staff, and students.

An organization can be centralized and be good or bad. An organization can be decentralized and be good or bad. It depends more on how leadership communicates with their staff, keeping EVERYONE accountable when they are not implementing the vision. Centralization is not the panacea this consultants make it out to be.

My small research group works largely independently and has unique needs in terms of staffing, HR, and IT. We too are focused on retention and passing along institutional knowledge as people retire. Better salaries and the chance for people to continue working from home part time would help us hire and retain talented staff. This report sounds like we'll be spending far too much time dealing with centralized groups that do not understand our mission, how we work, or what we need.

recommendations attract synergy desperately needed to optimize organizational effectiveness. establishing one leadership team and allowing the operations to be independent of financial reign will enable impactful and long lasting change that is essential for Texas A&M to relish in truly being the leader amongst peers and a beacon for employees to flourish.

The assessment stated that it was already difficult to retain good staff, yet.. mainly due to competitive wages outside the university. What are you doing to discourage leadership from gutting the current IT budgets to reduce the budget loss when consolidation occurs?

[para] I believe that many of the proposed centralization of services could be beneficial to the organization and effectiveness of the university. I am both a staff member and a graduate student and have found the university very difficult to navigate, given the high level of decentralization. However, I would have liked more attention given to centralization and alignment with offices that provide services to specific populations. For example, Student Business Services and Financial Aid do not coordinate efforts and have completely different processes. From a student's perspective, these services are maligned and are very difficult to navigate. [para] Faculty and staff talent management: The report acknowledges challenges recruiting and retaining talent, given gaps in succession planning and intentional professional development opportunities. Given all of the changes in work and life experience over the past 1.5 years with the COVID-19 pandemic, I would urge individuals in positions of decision-making power to consider revising hiring and work policies that provide more flexibility and support for employees. Having the university shift back to pre-COVID operating levels seems short-sighted. I've seen a lot of great individuals leave for different positions because of the inflexibility at TAMU. I am one such person that will soon be exploring other employment opportunities and the inflexibility, along with the limited opportunities for career progression (at a competitive salary) are contributing factors in my plans to leave the university. In 2020 Hanover Research, who is cited through the report, released a post-pandemic workplace toolkit that could be useful in considering the future of TAMU. [para] What's missing: Better attention to the unique needs of graduate students was missing from this report. Aside from the realignment of the Graduate and Professional School (formerly Office of Graduate and Professional Studies), there is not much attention to expanding the support and needs of graduate students. As a graduate student, I am confused by the shift from graduate studies to a graduate school and have not experienced any difference in resources or function shift this change has taken place. [para] Needed transparency in decision making: More transparency is needed in regards to decision-making behind some of the recommendations. Some of the language used within the report does not reflect a neutral, objective stance. For example, Academic realignment Finding 9d in regards the College of Education and Human Development speaks to a "lack of focus on the core mission of producing educators for the state and nation has negatively affected students and other units in the university." There is no evidence cited to support this statement and no acknowledgment that the recruitment into teacher preparation programs is a challenge across the state/country (See Center for American Progress report: <https://www.americanprogress.org/issues/education-k-12/reports/2019/12/03/477311/make-declining-enrollment-teacher-preparation-programs/>). Instead, the report cites the focus on enrolling in other non-teacher preparation programs as evidence for the college not supporting its mission. Also, the report fails to acknowledge that the college is one of the top producers of teachers in high-need fields in the State of Texas. This lack of context begs the question about how this finding was ascertained. [para] The second example about questions of neutrality and objectivity is regarding the High-level SWOT analysis findings. Within opportunities (pg. 110) it states "Recraft the Office of the Provost and shift major non-academic responsibilities back to the President's office. The previous Provost's heavy hand may have disrupted relationships and collaboration." My comment is not about the proposed reorganization of the Provost's office, but instead the use of language. "Heavy hand" implies value judgments were expressed to an individual in a previous administrative position. I did not see other evidence that specifically targets an individual. [para] Additionally, the report does not seem to be written fully from a higher education perspective. Instead, some of the language reflects more of a corporate stance (e.g., centralization). Higher education institutions and units (e.g., divisions, colleges/schools) within require unique considerations and using a blanket strategy of centralization may not be the best decision for responding to the unique needs within schools/colleges. Inclusion, diversity, equity, and accountability: I am pleased to see the report acknowledgments the need to recruit and retain talented staff/faculty, and to take more intentional attempts to improve the enrollment of underrepresented students, especially African Americans, at the university. However, the recommendations do not include any clear findings in regards to enhancing the university's campus climate, which largely contributes to issues of recruitment and retention. Questions also still remain in regards to the university's broader commitment and focus to these areas. We are still operating on the 2010 diversity accountability plan. [para] Reorganization and layoffs: It is inevitable that reorganization comes with changes in the function and existence of individual roles, units, and entire divisions. I would urge people in positions of decision-making power to consider the impact eliminating positions, units, and divisions will have on individuals, the university, and the broader Brazos Valley community. Texas A&M University is among the largest employers in the area and resulting layoffs will have far-reaching effects on the community, especially

considering the economic challenges the community, state, and country have experienced due to the ongoing effects of the COVID-19 pandemic.

These recommendations are not friendly to the sciences and are likely to result in an exodus of talent at all levels. I hope you have a great plan for recruiting in new students, staff, and faculty to build back and improve after the reorganization has upended so many productive Aggie lives.

Task each area being consolidated or reorganized to identify and work towards the same benchmarks: 1.) What are we trying to accomplish? 2.) Does this align with our primary mission? 3.) How will we know we are successful? 4.) What is a reasonable timeline to implement these changes? Focus on the good work each unit or individual already does. Faculty and staff are anxious and critical about these changes but the vast majority need to just keep doing their job to the best of their ability and their efforts will be recognized and rewarded. No matter what the changes in leadership and organization might bring, we are all still here to support and carry out the mission of the university. For 99% that will not change their daily role and they just have a new reporting structure and broader resources at their disposal. Implement the recommendations in appropriate phases and get it done.

I present the

As we move to a more centralized model I have concerns that the remote campus members will see a decline in service. Will be nice to have one office to go to for many functions but don't feel that remote campus members always receive the same level of service or have people local in our area - not everything can be successful via phone or zoom.

I am concerned overall with how quickly these "proposed" changes are going to take place. My understanding is that TAMU is going to go forward with all of the recommendations within the next year.

There following statement made in this report appears very disturbing. "A large portion of IT staff are close to retirement, potentially creating resistance to change or an exit of talent and knowledge." Page 113 of (SWOT Analysis). This appears to be an attempt by the report writers to devalue the opinions of a very valuable group of Aggies who have great experience and a wealth of knowledge who have spent their time and effort on campus for the betterment of Texas A&M. Their opinion should not only be heard but great care should be given in listening to them. Devaluing any entities opinion should not happen and to suggest this is concerning.

Paying 7.5 to 8% of our salary to TRS is tough. Especially when TRS can take that money and if you don't put in enough years of service you may not see all that money. That's not good for staff retention. TAMU is notorious for not paying staff well and then we have to pay high parking fees and TRS. Would be nice to see an advocate in Austin fighting for better retirement for us. Parking garages are expensive to maintain but more are being built which in turn, raises our parking fees.

The MGT Report on the whole reads as a business document, and Texas A&M University is not a business. Please only implement the recommendations that will benefit the students' education and our ability to help them become productive, well-rounded citizens. That has to remain our #1 priority.

The MGT report does not take into account the size of Texas A&M. I have worked at four universities. Having consolidated operations only works at smaller schools. The method MGT used to gather information was short sighted. Why didn't the MGT staff have meetings with Vice Presidents, Department Heads and Deans?

Centralization at the university level is not the correct way to 'fix' whatever issue you think needs to be corrected. It is one thing to centralize at the college levels, but this university is too large to centralize to the university. Also, what will happen with graduate advising? The report only mentions undergrad advising.

More specific information related to how the changes affect everyone is needed. Making these decisions based off of the information in the report would be a bad decision.

Overall many ideas are logical. Information Technology SWOT Analysis "Another threat is the time and expenses related to billing...". Very true - a review of this should take place as many costs could be placed directly on the funding source, such as UAF, and minimize the amount of billing and charging of certain services provided to TAMU. General & Admin., also known as overhead could be placed on the appropriate central sources. And costs directly associated with say a service such as Networking related to TAMU would be on UAF, the time to bill, process, reconcile, would seem to certainly save quite a bit of time and effort and cost all the way around. This just being one example. Items not listed are Property Management, particularly those within the individual units. The structure and who is responsible should be reviewed and the supervisory org. of such matters. In I.T. some of this is placed on the business group, however, the I.T. staff want more control as the many items have security risk, but it seems the processes, procedures

and applications do not align.

---

TAMU has some excellent, nationally recognized programs and one of the largest enrollments in the United States, but I don't think it can offer every program at the same excellent level. When I think of a bachelor's in fine arts or journalism, I don't think of TAMU as the school for those programs. If my son or daughter was interested in a degree in either of those areas, I would advise them to look at some other excellent schools. If they wanted to study Vet Med or Engineering, then I would advise them to attend TAMU. There comes a point where TAMU should be satisfied with its huge enrollment and continue to support the excellence it already has in STEM areas. When is enough, enough? The largest (even though it is in Texas) doesn't always mean the best. As far as academic programs go, TAMU should focus on its strengths.

---

In hindsight, I think the report should have been shared initially with the president's cabinet and maybe one level below that for review to catch certain errors, inaccuracies, and sensitivities and allow for personal communication to parties directly affected by the report.

---

I don't find it surprising that the consulting team found our structure decentralized. We already knew that. The characterization that HROE employs "500 part-time liaisons" is misleading. It could just as easily be said that my unit employs a complement of custodians and groundskeepers. This summary also says IT employs "more than 300 part-time liaisons" yet that level of detail is not included in the section on Information Technology. "Faculty and staff talent management ..." The 20% of our workforce being over 65 is not unique to TAMU. According to the Bureau of Labor Statistics older workers appear to be a trend with large percentages intending to continue work past typical retirement age. A notable threat to retention omitted from this finding is one recommended by this report "significant organizational change". However, I do agree there is the need for professional development and advancement opportunities in multiple areas of campus. As for the success of dining, custodial and maintenance services. If you define success as they were outsourced then yes, it was successful. As for custodial, my offices get a bare minimum of trash pickup 5 days a week and we're open 7 days a week. We see the suite hallways vacuumed about once a month and personal offices at best a few times a year. We now OWN A VACUUM CLEANER AND DO IT OURSELVES when it becomes unbearable. One has only to look at the Facilities section of this report to see that facilities maintenance as a service was not so successfully outsourced (unless dollar savings is the only metric of concern). PROJECT OVERVIEW I don't see any consideration granted as to how the extraordinary circumstances of the pandemic affected the survey respondents. APPENDIX 1: SURVEY ANALYSIS Was any consideration given to the atypical circumstances of the pandemic and how it might reflect on the satisfaction ratings? I feel the poor transparency ratings for President, Provost, Faculty Affairs, Finance, Government Affairs, Student Affairs, Diversity and Human Resources show just how out of touch the "administration" of the university is with our employees and students. Effectiveness of the President's Office Regarding the transparency score - I submit that this report is evidence that the "ineffective, highly ineffective" is warranted. The survey analysis is either incomplete or isn't shared with TAMU overall. I note that there are no changes recommended for AgriLife and Engineering. Were they reviewed? Some data on how efficiently they are organized might have given some confidence in the recommendations that are perhaps patterned after those organizations? The simple statement that they are an agency, so no changes are warranted doesn't seem transparent to me. APPENDIX 2: SWOT ANALYSIS Weaknesses I note the acknowledgement that we are not competitive in the labor marketplace. I also note the "IT staff are close to retirement" comment. While change is certainly something that might be a threat to retention, funding and being competitive with salaries will have the opposite effect. Opportunities I'm curious about the "financial performance metric system". What would this be a metric for? Threats Yet again, "lack of transparency and consistent communication from university leadership". If reorganizing many units and services will solve this problem then so be it. But if the disorganization is being used as an excuse for it then I have my doubts about the solution. Information Technology SWOT Analysis I appreciate the recognition of "well-known IT support staff" as a strength. Centralizing IT might work against this but hopefully embedding will act as a counterweight. I also don't see how this statement aligns with the previous assertion that end-users don't know who to call for an IT support issue. I'm not personally aware of any "out-of-date, unsupported systems" on campus. If they exist, empowering the Division of IT to cut off their network connection would be a powerful motivation to correct the issue. Too often, I have seen the Division of IT plan for a change only to be held back because they didn't have administrative support to overcome College level politics. I also don't see the evidence from the SWOT analysis of this statement, "consistently, a desire (by who?) and a need for a cohesive and consolidated unit". The most expensive licensing is already done in bulk or under a negotiated contract. There are some outlier colleges that don't participate but an administrative directive could resolve that. A centralized

ticketing system would certainly help in hand-off between service providers and IT areas of expertise. The cost recovery model for the Division of IT has proven to be a millstone. At the college level they aren't cost competitive and they suffer from the overhead of billing which, in my experience, is sometimes not done at all. Facilities SWOT Analysis So outsourcing didn't work? Marketing and Communications SWOT Analysis Centralizing university websites would be a huge problem for the Libraries. APPENDIX 3 Information Technology, Human Resources and Organizational Effectiveness, and Finance Peer Institution Practices "Nearly half of peer institutions appear to have a centralized leadership structure for key business support functions." - What this says is that the majority DON'T have a centralized structure.

I strongly feel that SSC and Chartwells do horrible jobs. Staff are not adequately trained. There isn't an incentive to stay with their company, as they no longer feel they are part of the "Aggie Family" like they were told they were when they were employed at TAMU before the outsourcing. Now, things take forever in getting done when work requests are submitted. And the costs are more than they were when TAMU managed this division. Plus, they are charging for 2 and 3 people to be onsite for a job that only takes one person to do. And charging the customer for other staff that are in training. I'm not sure how that is the responsibility of the department requesting the service. As far as food service through Chartwells, I have witnessed first hand how bad services and quality of food can be. I have a daughter that lives in the White Creek Apartments/Dorm, and we eat together at least twice a week. Either at the Creekside Market Place or Sbisa. We have seen much turnover and untrained staff. For example, at Creekside Market Place, we have had to ask for refunds several times as we have been over-charged for items. The gentleman, who is still there and apparently no better trained, continually scans several of the items we purchase as the same item, even though they are different and in most cases, differently priced. We have not only brought this to his attention, but I have personally discussed this with their "new" manager. This conversation took place in the 2021 Spring semester. As of the 2021 Fall semester, nothing has changed. Also, my daughter states that several items are consistently out of stock. The panini press is about 90% of the time not working, and that's one of the big offerings at that sandwich station. These two areas would be better suited with either another company or brought back into TAMU managed services.

I have been here 15 years and there have been 5 Presidents and 2 Interims, I think. Strategic planning, goal setting and follow through of initiatives has been difficult to say the least. The report mentions being proactive versus reactive. All that we can be in reactive. We have seen unprecedented enrollment growth with a vast array of complex programs. As an office that directly works with students we spend a lot of time on small complex programs due to complexity. We are not clear on strategic initiatives and goals since they seem to change every few years with a new President. The report makes no mention of the work done over the last few years by many loyal, hard working, and passionate staff. I agree with change, I welcome it. I truly believe if we are given clear goals with the resources to accomplish those goals we can achieve greatness. I hope that research was conducted on what was working well in addition to what needed to change. I know we have accomplished a lot of great things and hope that offices and departments that have great momentum and a history of making strides are not negatively effected in this restructure.

Thank you for the opportunity to provide feedback. I appreciate the effort of the report and the new administration to improve the experience of students, staff, and faculty to take Texas A&M University to new heights. I feel very strongly that the biology department is a part of this effort, and the feedback about changes to its structure should be thoroughly considered when making the decisions on how to proceed. It will take resiliency to make the changes suggested in the report for every department and college, but I know that Aggies are passionate. We can take the best suggestions from this report and make changes that will help us all excel. I hope my feedback and others will help inform the path ahead based on our experience as Aggies and as members of the community we work hard to build and improve.

There are 15 mentions without definition and maybe only one use (in the case of the Bush School exemplifying selfless service) of the Aggie Core Values. About 1/2 of undergraduates were unsatisfied with the educational experience of last year. The document states "The full survey results are available in Appendix A." (107) I wonder if it is unfair (or something) to present so much significant transitional change during the tenure of an interim library dean and following a time of accommodating the changes and limitations of Covid. I think the support functions of the library (112) refer to the library at Qatar and I have heard there are only 3 library staff there. During the time of reading the Review, I found but did not read the following earlier A&M strategic planning documents. I believe that all of these are in the Cushing Library, though some may be (also) in the Evans Library. Report on faculty-staff-student aspirations. (1962) Blueprint for progress (1962) Institutional self-study : report to Commission on Colleges, Southern Association of Colleges and Schools (1963) The Century Study : a progress report (1973) Academic report /Target 2000 Project. (1983) An A&M dissertation

about the formation of the College of Liberal Arts (Creation of the College of Liberal Arts at Texas A&M University, the decision-making process) said that the Aspiration Committee Report (internal) and the Century Council Report (external) were input for the Board of Directors who prepared the Blueprint for Progress which was agreed with in the Self-study report. The dissertation author said that the reason for the split of the College of Arts and Sciences into the Colleges of Geosciences, Science, and (maybe the newly formed) Liberal Arts was that the Science faculty thought they would have better funding opportunities if separate from the Humanities. Thank you for the work put into the Comprehensive Review. It's apparently not as easy to write as I was thinking :) Have a nice day, [REDACTED]

University Staff Council (USC) are not mentioned in the report. The USC are advocates for the University staff across all campuses.

I view the report with great positivity. I hope as much of it as possible comes to fruition. And sooner rather than later.

From a research standpoint, it is concerning that the proportion of former students compared to folks who work at the University is so much greater than students or TAMU employees, especially given the great number of sweeping changes suggested. It is unclear whose opinions are driving which suggestions and all of it is based on extremely low response rates (students = ~2%, former students = 4%, faculty/staff = 10%), even for COVID times.

Thank you for the opportunity to respond and provide input. The transparency in widely distributing the report is appreciated and hopefully as discussions continue and recommendations for change are determined the campus community will have continued opportunities to respond.

Overall a good report that identifies some very tough and needed changes. I appreciate that President Banks had an outside firm come in and make an evaluation. I also appreciate that she is not afraid of "rocking the boat" a little to make this university a much better place and bring Texas A&M to the 21st century while still embracing the culture and value of the university's past.

Thank you for the transparency in providing the MGT report for all to provide feedback. We are fortunate to have an Interim VPR in the Division of Research who understands the importance of strategic planning, collaboration, accountability, and the continuous improvement cycle. Coming from the private sector, I embrace the process improvements suggested, understand how some have difficulty with the change process, and recognize how important communications are, up, down, and sideways during times of transition. Providing tools/resources for those who may need them, whether it is via emotional intelligence training, project management (recommending [REDACTED] with Mays Business School, a project management professional and expert!), change management, stress management, whatever the needs is--- Texas A&M has the intelligence capital HERE. I look forward to hearing about working groups and hope that, as a staff member, I am able to contribute to positive change. Thank you.

I don't have a problem with looking for ways to improve - that's what we should be doing. And I think there's merit to many of the recommendations. I do have a problem with the process - it looks like there were preconceived ideas/foregone conclusions, lack of communication and transparency, lack of shared governance, incorrect items in the report. Also, there was quite a bit about how our students don't reflect the ethnic makeup of the state. I agree that we can do much better in that regard. Faculty and staff also don't reflect the ethnic makeup of the state. And another disparity is gender. I'm seeing women underrepresented in leadership roles across campus, and particularly in the new executive leadership team. We now have a female president (I like that!), but I'm just not seeing adequate presence of women in executive leadership positions. This is especially true in the Division of Operations.

The MGT report argues that merging various Biology programs into one institute "will allow for easier collaboration for the biologically oriented faculty in the College of Agriculture and Life Sciences to collaborate with faculty throughout the university working toward similar interests". 1) The first question that should be asked is if there are indeed similar interests. I believe it is important for heads to make a comprehensive report of the research interests in the individual departments and define what is "similar" or not; and whether or not merging research programs will have an overall synergistic effect. 2) Is there a comprehensive study on the cost or expenses that these mergers entail? For example, these could include overall rebranding, communications and university relations, staffing and infrastructure. Will this cost override the long-term perceived gains of having a single institute? 3) Unemployment of loyal and permanent personnel is inevitable in such mergers. Can the institute ensure employment security for such personnel? 4) How will the merger affect the salaries of staff, faculty, and graduate students? Different institutions have different standards and benchmarks and thus discrepancies in the salaries and benefits provided. In case of a merger, what will be the final basis of salaries and compensation? 5) How will this affect current donors of individual departments? Mergers might alienate some loyal donors. Overall, this MGT report recommendation needs further study and research. I believe it is not

enough to say that the Biology department under the College of Science is underperforming, given that it is one of the departments which offer a lot of service classes. Where is this underperformance coming from, and will the merger be the solution this perceived issue?

I am concerned simply because I have 7 years until I can retire and am worried that I would lose my job and have to start all over with another company/position. I am the only income in our home and this would be a major impact for my family.

Overall, I think the ideas are not as radical as people believe. Much of it seems like a logical reorganization of the org chart to increase efficiencies. From the discussions I have heard, my sense is that most people are concerned less about the movement than about 1) the amount of change, and 2) the "seemingly" abrupt nature of its announcement. After 9 years as a Dean and ample time between her appointment as president and her first day, I am not at all surprised at the speed or desire for change. Dr. Banks has always been a thought leader and moved swiftly to implement decisions. However, outside Engineering, I wonder whether the majority of campus has an understanding of this. It is also possible that the stress of the pandemic has influenced people's desire to cling to the known vs. embrace change. To me, it simply seems like a different "filing system" to achieve efficiencies. I saw little in the report to suggest severe problems with performance of duties, which, if emphasized, may also help to reduce fears about impending changes.

Overall most of the suggestions seem like they might improve the flow of processes at A&M. I think that Organization Development is in need of improvement. Ever since the in person trainings that were available were taken away, it has left us with no good way to network with others in the university that have similar job duties so that we can learn other ways of doing things and improving the overall function of offices.

As an engineering staff member, I witness firsthand all the centralization efforts that took place under Dr. Banks these last several years. Centralization does not solve everything. SRS is a prime example. They were created over a decade ago and are still largely disliked by the university population and blamed for not providing a level of service the system members used to provide prior to SRS's creation. Centralization often creates a feeling of disconnect and a lack of customer service, as you can no longer look to those in your department/home base for help, but instead have to reply on a faceless bureaucracy. "Take a number, wait your turn." It also makes staff feel devalued, like pieces on a chess board to be moved, demoted, omitted at will, with little thought given to their individual strengths and contributions and career preferences. You no longer belong to your home department, you belong to the organization at large. It's not uncommon for the interests of the organization and the department to be at odds, putting a staff member in a very awkward position.

In a department staff meeting, the overseeing faculty member related that this report was simply a justification for cutting costs to pay for the Zachry building. Some staff nodded, but more just sat there. Because of that situation, I'm not confident anyone in the room read this report all the way through, and I stressed that they should. That will be the biggest challenge to future change: ignorance of just how critical the majority of these proposed adjustments to A&M are. The report was not written for easy understanding. It would fail a Flesch-Kincaid readability test. As a communicator, I firmly stress that it is critical you reach your audience where they are.

In this report there was a lack of focus on graduate students and nothing was touched on that really dove into graduate school. For example what happens to those that are graduate advisors if the university decides it is a good idea to centralize undergrad advising. The graduate school provides some resources to students, but why are some resources not available to graduate students and still pay the same type of fees? We have seen a high turnover in the grad school throughout the years, and with graduate advisors due to the stress level.

Potential students, faculty and staff depend heavily on Google searches to learn about the campus. The University needs to update, correct (see earlier comments) and expand online information, in a user friendly format.

Student veterans would lose a tremendous advantage should the Veteran Services Office (VSO) move to the Division Student Affairs. The services that the VSO provides are heavily processing and compliance driven. The VSO's primary function is military education benefit processing and certification. As noted in the MGT Report, the primary focus of the Division of Student Affairs (DSA) is student development. It is correct that at present there is an office within the DSA that serves veterans- the Veteran Support & Resource Center (VRSC). However, the services of military benefit processing by the VSO go well beyond veterans alone. In fact, the student veteran population served by student affairs (the VRSC) is only a fraction of whom the VSO serves when you consider the additional 3000 dependents who are eligible for VA, Hazlewood, and the Texas Armed Services Scholarship Program (TASSP) funds. There is no duplication of effort nor responsibility, other than two offices presently having "veteran" in their name. The Student Affairs and VSO

campus networks and dependencies are VERY different. The VSO (a part of Scholarships & Financial Aid) collaborates with EIS, Registrar, and Student Business Services on a daily basis to effectively and efficiently process military benefits. Thanks to the well-established collaboration of the aforementioned units, the student benefit request process is automated, and all documents are uploadable to the financial aid portal. Students (although welcome to) do not need to visit the VSO to receive military benefits/services/assistance. Benefits processing is an enrollment management initiative, not a student development initiative. Not only does veteran benefit processing fall under Scholarships & Financial Aid (SFA) in the present organizational structure, it also is a part of the Banner (Compass) Financial Aid module. All eligibility/processing/forms fall under the financial aid security structure in the System. And, because VSO is a part of SFA, the VSO is able to (1) facilitate/collaborate for professional judgment for cost of attendance increases, (2) provide assistance with federal, state, and institutional aid, and (3) identify additional eligibility opportunities (emergency aid, TEXAS Grant, etc.) to maximize college financing for students who also receive military education benefits. Because the VSO is a part of SFA, funds can be awarded to assist students with educational expenses- determining eligibility and solving problems on the spot. Further, the VSO has a heavy emphasis on reporting and compliance- from Veterans Affairs as well as the Texas Veterans Commission, and the Texas Higher Education Coordinating Board (THECB). Hazlewood utilization is monitored and reported several times a semester. The VSO manages this. The VA conducts compliance reviews (audits) almost annually with the four facilities we certify benefits for- GV, HSC, Law, and CS. The VSO manage this. And, the VSO facilitates the eligibility determination and processing of the Texas Armed Services Scholarship Program with THECB and HHLoans. Scholarships & Financial Aid has the knowledge and experience to support this. There have been minimal to no findings on any reviews in recent years. There is no similar infrastructure within student affairs to support this. Finally, the MGT report provided no reference to the Aggie One Stop which has launched and will open its doors January 2022. Not only will the Aggie One Stop provide access to services provided by Admissions, Registrar, Scholarships & Financial Aid, and Student Business Services, it also will provide military education benefits customer service. In moving the VSO service component to the Aggie One Stop, students receiving military education benefits will have even more resources available- all in one place. As a result, the remainder of the processing staff will be able to devote more time to process improvement and efficiencies in an already very effective system. In fact, once military benefits customer service moves to the Aggie One Stop, there will no longer be a need for the VSO to be its own office/have a separate identity. It will simply be one of the teams within Scholarships & Financial Aid, whose specialty will be processing military education benefits. Although the benefits processing staff will still communicate with and provide assistance to students, it need not maintain the name Veteran Services Office. The VSO is truly a benefits processing unit with a robust and successful infrastructure. Benefits processing is a college financing opportunity, not a student development affair. It would be regrettable to dilute the true function and efficacy of either student veteran programming or benefits processing by pulling the VSO into a unit that serves a very different mission. I highly recommend keeping the Veteran Services Office (military benefits processing team) anchored with Scholarships & Financial Aid to preserve and facilitate program integrity and to continue to amplify student access to funding for education.

---

I am for these changes and I think it's going to make a better TAMU.

---

I believe the basic premise to be flawed. I found many of the arguments to misapplied, specious, or irrelevant as to conclusion. If the objective was to put a logical reader assuming some kind of authority into a state of confusion perhaps they were successful. Further, structurally, I found I could browse the Specious boiler plate offered as justification and cut to the final paragraph to find the unrelated actual agenda item. When I first took a job here the statement was made that Academics is run by and for the benefit of academics. The idea that we are to be organized like every other University is in my mind flawed. Most of the comparisons made appear to be inappropriate as those academic organizations simply don't have the same scope and objectives. They do however benefit the creation of a larger community of academics adding voice to interests that are purely academic, and not reflective of values aside from those of academics. We exist in a Logistic, cultural, and economic vacuum whose sole "engine" is the University. Our students go elsewhere for employment. Most end up not using their Degrees as intended, but as checked boxes demonstrating basic fitness for employment above casual labor. The argument that we "need " to be like other universities does a disservice to our country, community, and university by distributing resources to marginal degrees of only basic even minimal value to the recipient. The blessing of the vacuum is that we have been somewhat away from the politicised nature of higher education. Most of the suggested moves result in destruction of successful responsive units and subordinate them to new yet uncreated organization that will result in tremendous imbalance in our current

"culture. They will instead create an internally competitive for resources organization with no external or research revenue. I cannot see how creation of a new College enhances the University. Rather I see it as a large cost center. The idea, in general that the creation of a "College of Liberal arts" is an extraordinarily academic thing to do. I don't believe the University, the Community, or state will benefit from the creation of another non technical, and frankly only marginally employable organization is in anyone's benefit. These are degrees that benefit academicians, and not students who come here hoping to begin a process that creates a future. I understand the "decentralized" if not mini empire oriented structure of the University. I have frequently observed that "we don't play well together". I frequently decry the fact that College of Architecture shops support engineers and other colleges that cannot afford shops. The good news is that we have a mechanism to address the need. That said, the idea that we as an organization need to reorganize to look like and function as, other organizations is inappropriate as an argument.

---

There are pros and cons to the report, but overall I believe there needs to be more feedback from the current group of faculty and staff and students. The former students do not see what is going on in the day to day function of the University. If TAMU wants to be marketable and have higher retention, it needs to see the national trends of work place flexibility and see how there can be a mutually beneficial work relationship between the University and its employees.

---

This is heartbreaking and hurts the ones that work so hard for this university!

---

I am in general supportive of the suggested academic consolidation. However, I question the need to return a journalism department as the profession is characterized by low wages and a negative reputation demonstrated by the dying media fields such as newspapers, print and broadcast. Put the resources to better use elsewhere. The older faculty/staff is suggested as a potential barrier to significant change. Extend the suggested Voluntary Separation Program beyond faculty and include long tenured staff. Provide an aggressive incentive to insure participation: 35 years of service 1X salary, 40 years of service 1.5X salary, 45 years of service 2X salary. Overall, I am supportive of consolidation to improve efficiency, lower costs and in general streamline operations. I am concerned with the actual implementation to consolidate key internal support areas such as finance, IT and facilities. These areas have already seen partial consolidation based upon previous consultant studies with questionable results.

---

In general, I am disappointed and frankly confused by the many many inaccuracies related to our current structure. Though I can't speak for every unit across campus, there are several errors that are obvious to me. What bothers me about that, is those inaccuracies/errors perfectly align with the preconceptions that those coming into leadership positions brought with them. Additionally, the number of changes that were implemented during the "study period" is unreasonable. Not only does it invalidate the findings of the study, but it also creates confusion and mistrust. It certainly calls into question the purpose, meaning, and results of this study and the subsequent report. Two points, I wish to make upfront. One, I fully believe there is room for improvement in all aspects of our university. I have absolutely no problem with making real sustainable positive changes. Two, I had hoped that the development of this report would involve truly listening to the university faculty and staff. I am disappointed by the relatively small number of individuals interviewed. More specifically I am disturbed by the seemingly disproportionate number of incoming leaders interviewed. It reads as if much of this was predetermined and not a result of the study that should have resulted in this report. There seems to be an inordinate amount of confusion about structural elements. Some is related to colleges, schools, and departments. The way I read this report, the word division is used regardless if they are discussing a division, a department, or a unit within a department, or even a college. While this may seem insignificant, I am concerned it will create additional confusion. I acknowledge the largely decentralized nature of operations on our campus and the silos that inevitably creates. One way to combat the inefficiencies created by decentralized and even centralized activities and operations, it to ensure processes and procedures are well-established, clearly defined, and conducive to conducting business. We, however, particularly in the last few months seem to operate primarily by management by exception. There is no reason for an organization of this scope and size to ignore policy and procedure to the extent we do. To me, that is far more meaningful than centralizing services. I think outsourcing Transportation Services would be a terrible shame. That department does an amazing job on a campus that is extremely large in terms of volume of activities and responsibilities and in physical size. Lastly, though it obviously did not prevent me from speaking my mind, I am appalled that this survey required a name and asked for a UIN. I know many who are not willing to risk saying their piece and therefore you are not getting a full picture. What a shame.

---

The thing that I fear about centralizing all departments is that the entire university will end up like SBS. SBS seems to be the most centralized unit at TAMU and it is by far the worst for students to deal with. The fact that they cannot get a hold of someone to discuss their issues to not okay and when they receive a text or an email it is just a student worker

not answering the question that is not okay to the success of our students. This needs to stop in SBS and not extend to any other department.

Information Technology SWOT Analysis - I would agree there is time and expense related to billing services from Information Technology to other areas of the university, when the costs could be handled directly on a source of funding.

I think the recommendations to go too far toward consolidation and streamlining, not taking into consideration the need for specialized care and experience for programs. My experience is in Marketing & Communications, and it is most apparent there. I also think it is a mistake to spend money on things like performance centers and gardens, when we have not seen how much all the rest of this is going to cost.

To expand on the recommendation that Agrilife be considered for the day to day management of the College of Veterinary Medicine research facilities. The Division of Research also plays a major role in the day to day operations of several key research facilities. It may be advantageous if these Research Cores/Facilities could be under the purview of the University/DOR to be seen as University resources or at least be a partner.

I have attached the same response to three different areas of relevance above. As one section affects another and no two areas, especially HR and business, work independently from the other, I found my statement pertinent for all three - Student Affairs, HR, and Finance and Business Administration. This further illustrates the importance of overlap of duties and for HR and business to be designated to different divisions to provide areas of expertise. Thank you for allowing feedback and taking the time to deeper understand impact.

I have pasted the same comment in three identifying areas; Student Affairs, Finance & Business, and HROE as I was unsure of which area to leave the comment. All three of these areas are mentioned in my comment. By separating these areas for comment here, it further reinforces my statements above. These are not divisible offices.

There are a lot of suggestions in this report and, at first glance, this is rather intimidating. Many of the suggestions are the same or similar to the way things were several years ago. From more senior employees in my office, they have expressed that there are reasons that we moved away from those models, for example, IT changes recommended. I would urge you and your advisory committee to reach out to those who have been here through the changes on all ends of the spectrum - faculty, staff, and student, to see what their thoughts are. Many of us are nervous about the changes and eagerly awaiting your thoughts. Thank you for giving us the opportunity to share our opinions on the suggestions.

Please do not outsource any other services such as Transportation. After the cleaning crew was outsourced the work that is being done has declined in quality as well as the ability to have someone come and take care of anything. Flourish needs to stop. This is only a nuisance and does not promote anything nor has helped in anyway. Only annoying emails or unneeded items that seems like a waste of TAMU resources. The surveys that where mentioned in this report, I nor any of the people I have talked to saw them. I do not know who the surveys where sent to or what they looked like. If they looked like spam/phishing then a better marketing/communication would probably helped.

- The terminology in this report, specifically in this section suggests the MGT consulting group did not go to the measures necessary to understand the Texas A&M community. "Using feedback from local officials, regional representatives, community members, and current and former Aggies, develop outreach services to best meet the needs of former and future Aggies, as well as their communities." Anyone who has spent any time around Texas A&M knows the terminology is "Current Student" and "Former Student." This sentiment comes through as no campus traditions are mentioned by name and tradition is mentioned as a weakness of the University.
- The Methodology of this report needs to be brought into question. I know high-ranking people in departments that have some of the largest suggestions in this report who were not talked to during this whole process. Internally, the lack of communication from high-level communicators and President Banks has done nothing to encourage confidence in these changes.

In general establishing new colleges is fine. College of Visual Arts and Performance for example. Their presence would be advantageous for the university

I know a lot of the feedback here would not be considered positive, but that isn't to say that I think A&M is a bad place to be; as faculty, staff or student. There are many wonderful attributes of this university and I do enjoy working here. My feedback is largely critical because I believe A&M is keenly aware of the things it does well and mentioning it here could undercut the criticisms it needs to focus on. Plus, flowery prose articulating my appreciation for being employed here - being an Aggie - cannot match the amount of work and passion I put into this position. Just know that my criticisms stem from the same place because I see what a force A&M can be and I want to be a part of making that happen. A&M is extremely lucky to employ so many staff who feel similarly. With that said, these are my closing thoughts on the review.

I'd like to know the percentage of turnover for faculty and staff, separately. It seemed most of the emphasis for retaining talent focused on faculty, but it seems like turnover among staff could be higher/more frequent. I understand the value faculty provide to an institution and why a significant amount of attention is paid to them and their experience. However, staff at Texas A&M have a lot of responsibilities and I believe they are often overlooked when the university considers opinions or concerns from its employees. At the same time, staff are a big resource for leadership, faculty, students, and parents but often lack support (i.e. understaffed departments), resources (i.e. adequate compensation), and in some cases, are disrespected by the same individuals we're here to help. I'm not speaking of perceived slights. The disrespect I encounter, usually from faculty, is tactless and blatant. A top-down zero tolerance on this type of rhetoric should be communicated across campus to make clear that we are all here to accomplish a very important goal: contributing to student development. Keeping this goal in mind while fostering tactful discussion and collaboration will naturally resonate with students, and they'll feel more supported. Another inquiry of mine is about the former students who took the survey for the comp review. Former students made up the largest group of respondents to the survey. I'd like to know how much weight was given to their responses and worry that their responses will overshadow the voices of people who are involved with the day-to-day operations at Texas A&M. I know former students have a lot of love for their alma mater and that is great. I just can't imagine that they have enough current knowledge about the operations, processes, decisions, etc. occurring at Texas A&M to be able to accurately rate the university's performance.

---

The MGT report is advice that we should prudently take seriously. But not everything in the report makes sense for A&M. Our success as a university is not entirely predicated on the bottom line, or efficiency.

---

This review has shown what needs to be or could be changed, but change is hard and will meet pushback. There is anger and discontentment with seeing some of these changes on paper for all to see, but most could be beneficial. I am thankful to work somewhere that has undergone a review of itself in hopes of changing for the future to meet the needs of the state we, as an institution, were created to serve.

---

Dear Dr. Banks, I appreciate your efforts to address various issues at TAMU. I read the report with great interest and found many of the suggestions to be highly relevant and timely. I do have some additional comments and feedback. 1) The academic realignment proposals are apt and insightful. There is a desperate need for better organization of some departments and colleges on this campus. I support the proposed plans. 2) I found the emphasis on diversity and inclusion issues, and retention of talent very critical. I think this will be a step in the right direction. I support these initiatives. 3) While I noted retainment was discussed in the Bryan-College Station area, one of the things that need desperate attention is the pay disparity among colleges for the same titles. This causes a needless musical chairs scenario, with staff seeking new positions for relatively minor pay raises. This, I believe, also contributes to the lack of continuity and succession plans among staff on this campus. A more stable and equal pay structure for similar title/responsibility profiles would be important in addressing this problem. The centralization plans may help in addressing this. Again, I appreciate the sharing of this report and giving us the opportunity to provide feedback.

---

The criticisms of Fish Camp are confusing at best and completely wrong at worst. That student organization has done more for this university toward making new minority and LGBTQ students feel accepted here than nearly any other group. It is an amazing organization that I have been privileged to be a part of and it is seen nationally as The Standard for extended orientation. Beware the impacts of trying to make it into the university or system leadership's image. The survey results were oversubscribed in the document as findings and rationale for the changes that the report recommends. Indicating that these findings and recommendations in this report are those of the consultant to the university administration is very clearly disingenuous.

---

Overall I thought this was a good report. Most of the recommendations make immediate sense to me and some I had to think on a bit to understand the logic. I think it is going to be difficult to get everything done and will probably take several years. I look forward to working with everyone to make these transitions as smooth as possible.

---

I believe that TAMU should go back to its roots and traditions with a modern twist. I believe that the core values: Excellence - Set the bar, Integrity - Character is destiny, Leadership - Follow me, Loyalty - Acceptance forever, Respect - We are the Aggies, the Aggies are we, and Selfless Service - How can I be of service? should be emphasized and should not be forgotten. An Aggie never lies, cheats or steals nor tolerates those who do. We should be building the future generation on these values. To make society a better place. We should try to understand people of different cultures, backgrounds, races, and use this to better ourselves. We shouldn't exclude anyone or blame anyone for the sins of their ancestors. We should be building something better than ourselves. This is what the outside world should see from TAMU and its sister/system schools. No, I am not an alumnus, I have never even taken classes at TAMU, however, I have several family members who have in the past. These are the things that the outside world expects to see from Texas

A&M because this is what we project to the outside world, however, when these values are not followed or seem to not be followed it makes all Aggies: alumni, faculty, staff, students, or adopted Aggies look bad.

---

I strongly believe in all of the changes suggested and fully support Dr. Banks in her role.

---

I did not provide feedback on the other sections as I either agreed with the changes proposed or did not have enough background knowledge to make a worthwhile comment.

---

I think as a whole, Texas A&M functions as a family organization. Any changes should be carefully and meticulously thought through for years rather than something a 3rd party can come up with. Talk with us, hear are needs. We would tell you that this is not the best option.

---

While I know that staff were surveyed in this report, I do not see much acknowledgement at all noting the staff voice. Otherwise, I found this report to be extremely comprehensive and provides a number of amazing recommendations to consider, discuss and implement.

---

The report accurately identifies the issues related to staff: lack of professional opportunities, need to reorganize the career ladders, issues with the retention and finding quality people. As things move forward, the focus will be shifted to the academic units. Please do not forget staff. And consider offering VSP's for staff (65+) to help speed up the process of revitalizing the university by bringing and retaining quality employees with the effective succession plans in hands.

---

Again, as I said before, I don't understand why TAMU has to spend massive amounts of money to gain outside opinions about how this University is run. I do understand the need for a "fresh" perspective, but I feel that utilizing those that are working within would help us more effectively.

---

I would have welcomed more discussion concerning promoting from within at all levels of employment.

---

Each one of these areas above will require millions of dollars and quite a few years to accomplish. Trying to accomplish all of these at one time would be difficult and doing all of them at one time could cause resource contention problems. Many of these recommendations seem high level, and the devil is in the details. Many focus entirely on efficiency, but at the cost of effectiveness and customer service. This is a long and detailed report that is light on details. I believe that a more targeted approach would be good, and not making sweeping changes. Pick a few of these recommendations and do them well rather than implementing many of them and do it poorly. This proposal is fraught with opportunities for great success or even greater failure. Only time will tell.

---

I totally disagree with this statement and take exception to their opinion. I feel it is what makes Texas A&M produce leaders that are sought for employment. The quote: pg 109 Appendix 2 SWOT Analysis The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education.

---

I am impressed with this report. I agree with the approach and the conclusions. My comments above are for points that particularly stuck out to me. Thank you for this opportunity to give feedback.

---

I believe that this was, generally, a fair report on what staff see everyday. I did not see a section on the centralization of academic advising in which to leave feedback. This is another area that I would leave to the college and departments. I would like to suggest that you put together a change management team that could effectively assist in implementing many of these monumental changes. Good change management can make the process customer-centric, whether that customer be faculty, staff, or student. It's important to focus on the people side of change to drive the successful adoption and usage of any proposed changes. We have a department on campus that educates UG and grad students on organizational and change management guidelines - I am one of those students. This would be a great opportunity to illustrate how well we educate our OD/CM graduates and incorporate them (alumni and future graduates) of that program.

---

I want to believe the majority of us know and agree there is need for change and need for improvement in various areas of our University. What is to come, I/we will support. Please do not hesitate to contact me for additional information our further assistance.

---

I actually liked the report - very thorough and concise. You can make everyone like everything in it but I thought it was a job well done.

---

Logistics: our staff are great! But they are stuck with a very old system that only worked when the university was much smaller. If mail is not addressed with the correct mail stop, the person who gets has to readdress it. Since mailing addresses are very different from the addresses delivery services use, many deliveries go astray. To make it worse, some departments have students place orders and the students don't even put the name of the department on the delivery,

or the name of a staff member. So the delivery driver has to use Google, which in turns sends them to our office. Then I have to spend time figuring out where the delivery needs to go or refuse it.

Just a warning about centralizing, in general (may apply to HR, Finance, IT, etc.): When I was first hired by IT Solutions & Support, we had both software applications development/support and also a group of server administrators that worked directly for us to manage our web servers. The Division of IT went through a reorganization about 5 or 6 years ago, and the server administrators were taken from our group and moved to Systems Engineering, another group within the Division. We warned the leadership at the time that our level of service from this team would drop as a result, and sure enough, it did. I worry about the colleges should their IT shops be centralized and taken from them. Perhaps if their IT support remains embedded with them, this will not happen, but it's just something to consider. I have similar concerns about the Division of IT's Business Support Services group (accounting, billing, etc.) and our HR Liaisons being taken away and moved to other divisions. Our HR Liaisons keep us in compliance. Our Business Support Services group does our rate calculations every year, and they handle our monthly billing, travel, accounts payable, etc. Is some central group going to be able and willing to do that for us?

Under the finding "Faculty and staff talent management is a critical issue", the Comprehensive Review Final Report specifies as risk for staffing as a small talent pool in Bryan/College Station and an increase in remote job offerings from other employers. Include a recommendation to transform Texas A&M University to include hybrid and remote work schedules for staff. This could be done for staff who's work does not require a physical presence, for example, Information Technology staff. Texas A&M would be able to hire and recruit from a national and international talent pool. hybrid and remote work schedules would be an added benefit to attract and retain staff.

The recommendations in this report address many issues that have needed to be addressed for a long time. It's nice to see that an outside group can see the issues that staff and some faculty has been forced to accept for years. This review and report are much appreciated and could lead to A&M being even better!

Competitive salaries are mentioned on page 70 under the HROE reorganization section in Finding #4. Please note: the same challenges in retaining staff and finding new hires whose experience adequately supports TAMU efforts exist in other groups. Rehiring and retraining positions vacated every 18 months is very painful for managers.

I hope you will give sincere consideration to the feedback you receive. I applaud efforts to reduce waste, increase operational efficiency and ultimately increase the quality of experience and education TAMU provides. However, for an organization as large at TAMU, decentralization of some functions to some extent can better meet the needs of diverse campus constituents in a timely and efficient manner. Please keep in mind that one size does not fit all.

The recommendations in the MGT Report are very encouraging, exciting, and overdue! The solutions/recommendations appear to be very mindful, considerate, and intentional in addressing the systemic improvements needed to facilitate actual positive change in the area of diversity.

The general mood in response to this is that people seem scared. It might do well to reassure everyone.

In general, I agree with the report's assessment that communication is lacking across campus, duplication of effort is a major issue, and there is little to no opportunity for advancement/succession planning in staff positions. As a staff member, I have very little incentive or reward to go above and beyond my basic duties. I worked two jobs for an entire calendar year and only received additional compensation six months into making arguments to my unit as to why the situation was unfair to me. In addition, there is a single college wide staff appreciation award each year with a lengthy application and review process that leads to a single small merit payment. Further, after going above and beyond my job duties and receiving "exceeds expectations" on annual performance reviews, all I can ever expect is the standard 3% cost of living raise. These issues surrounding fairness of compensation and rewarding excellence are core problems in attracting quality candidates to open positions on campus but particularly to the College of Liberal Arts, where salaries are consistently lower than in other entities on campus.

This is in the report and something I just want to mention, "Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts. " Just a thought, but when the new President of A&M comes from the Engineering department, then starts to make leadership changes that seem to always include someone else who is or previously was from the Engineering department as well, it does not help with this image. If leadership is primarily in an Engineering mindset on what is good for the University, we do not have diverse leadership or varying points of view to help our University succeed fully or bring in different perspectives. I appreciate the opportunity to provide feedback and hope that an open forum is conducted someday somehow to better explain these ideas for these changes to Texas A&M. I don't believe I have all the information to provide good

insight on how I feel about these changes at this time.

---

i would like to see increased communication with all levels of operation when processes are changed or developed.

---

I am happy to see A&M looking at innovation but I am not sure the consultants truly understood all of the units and departments they reference. For the Libraries section, the consultants listed twenty of our peers and then later referenced a university library that was not mentioned as a peer but indicated that we would do well if we emulated the non-peer - that does not make sense to me. References like that make the report seem haphazard and written to fit a pre-established narrative. Please talk deeply with College of Science, College of Geosciences, College of Liberal Arts and the Libraries before making a decision to combine the four groups into one entity.

---

I understand that reports like this are necessarily light on detail, but, of course, that's where the Devil is. Before any concrete decisions are made by Dr. Banks, I suspect much of the A&M community would appreciate giving additional feedback once we see how the recommendations that Dr. Banks wishes to move forward on will be implemented.

---

The report has a clear and concise objective of working to enable efficiencies across the University. My comment is specific to HLKN and SPH coming together. HRI institutions are under Health Science Centers for formula funding at the legislature. GAO (General Academic) are funded at a reduced rate (specifically for kinesiology). My feedback is very specific to the merger of these two schools. It makes very logical sense for the Community Health programs at HLKN to come under SPH, as they are competitive course offerings in the Public Health field of study, and we should not be competing against one another as one Texas A&M. However, the activity based classes (handball, racquetball, etc.) which students typically take as part of their UG curriculum probably do not fit well under TAMU Health because the formula associated with one credit hour for 65K students would inflate the HRI funding more than significantly. My fear is that it would raise eyebrows in the legislature and force them to take a look at undergraduate funding of Public Health programs in Texas; something TAMU receives a benefit from being the only CEPH accredited Public Health institution in the State of Texas. Opening up visibility to this may cause TAMU Health to lose valuable formula dollars under this model should the legislature deem that activity based courses and UG Public Health courses as similar. The growth of community health into SPH will be a very good thing and very justifiable without raising too much scrutiny with the legislature. I mention this because I did work in the budget office for 10 years doing Legislative Appropriations Requests, and this is the type of item which would need much further explanation. If activity based courses under a general studies major were offered under the newly merged Arts and Sciences arena, and the Community Health courses were carved out, it would be a very reasonable formula increase that our government affairs personnel could explain more easily in the next biennium. Overall, I am very supportive of the plan as a whole and look forward to working to assist with its implementation across the University.

---

I appreciate the transparency in this process. I feel invested more in the job of fulfilling our mission.

---

Disappointed to see Division of Research and Commercialization not addressed in this report. The community, Corporate partners, alumni and investors are important partners to commercialization, and they see us as A&M (not separate agencies), and have difficulty engaging with us as separate silos (agencies).

---

After reading the report, there are a few recommendations/findings that stand out. Overall, it seems that the consultants are recommending the creation of a number of leadership positions while "streamlining" other administrative positions such as academic advisors. "Streamlining" often translates into "removing positions," which will ultimately saddle the remaining employees with an ever-increasing workload. Specifically regarding academic advising, a centralized group of academic advisors who know little about the departments they serve will not serve students of those departments well. The finding that somehow the Corps of Cadets "impinges on the culture of higher education" seems ridiculous, as if the consultants failed to actually familiarize themselves with the function, goals, and demographics of the Corps of Cadets.

---

I am concerned as I work with Departmental Accounting Services but I do not see it mentioned in the new plan anywhere. Did I overlook something?

---

I suspect that NOT all of the changes will be implemented. I understand and can manage change, but this would be TOO much to try to do at once. Pick the TOP x and work on them in a CONTROLLED Fashion. At this time we do NOT need MORE chaos.

---

These changes will be very disruptive and incredibly expensive in terms of moving staff, coordinating the changes, the HR processes of such changes, loss of productivity and especially human capital. Change is hard and TAMU's

stakeholders have already had an incredibly rough couple of years with the changes Covid has brought to the university, our families, communities and homes. While some of these changes make sense, others bring nothing more than fear, distrust and worry. I see early retirements in the very near future.

The mass amount of change that is being proposed in this report is extreme. I would think it would take millions of dollars to implement these changes. Please do not make changes just for the purpose of making changes. Please take the time to review the input from faculty, staff & students and only make the changes that will thoroughly benefit the university, faculty, staff and students. We do not have to look like other great universities to compete with them. Spending millions of dollars in order to implement change will not benefit us in the long run with limited cost savings by cutting a small number of positions. This university runs a tight ship.

Many people, including me, are really confused by the complicated organizational structures. What does Health Science Center really do after being merged with TAMU college station? Why not eliminating this level of management and generate campus/location-based units? For example, establishing a Houston campus, along with campuses in College station, Dallas, and other places, will streamline a lot of things. The name of "TAMU-Houston" will be clear and straightforward, and the head of this campus directly reports to the President's office or the SVP's office. Each campus will have different focuses to implement the whole TAMU's mission and overall goals.

As a former student, current employee, and future Aggie parent, I applaud this effort to improve our university's operations. Thank you for taking this long, difficult look at our organization. Our best is yet to come.

1) Some of the centralization is much needed and makes sense, such as HR, marketing as well as IT. However, sometimes after the centralization, the accountability as well as the quality of the services become less desirable. 2) I also agree there are a lot of siloings and duplicated efforts and heavy administrative leader positions within the university. 3) We need a data warehouse that all units can report from - one stop data shop. 4) Staff need to have professional promotion opportunities other than the only opportunity for salary increase is to step into leadership roles.

There needs to be more resources for faculty/staff to get involved on campus. I am a young professional and I can see how there would be very low retainment for my age group because there are very few ways for me to meet people my age in this city. I would love more rec sports opportunities, meet ups, etc. I also think the HR policies are very strict and micro-managing. I would be more inclined to stay with a company that is a little more lenient about setting hours, where I can work, remote work etc. Especially with Covid-19, I think you will find it harder to get employees when you insist they must be in their office in a building full of undergrads for 9 hours a day.

In this new/proposed model, all of the service centers (IT, Facilities, Utilities, Marketing, HR, and so on) would now exist at the University level. This means the auxiliary units will lose the ability to provide their own services. If an auxiliary unit is required to utilize all of the University provided service centers, then the auxiliary units will no longer be able to control their bottom line cost (other than personnel) as all costs will now be set/controlled by the University. Most assuredly, the costs charged by the University will be higher than costs charged in the private market. Therefore, an auxiliary unit should have the ability to select their own service providers. My recommendation is that auxiliary units be given the freedom to select service providers from the public or private market based on competitive bidding. This is the only way an auxiliary unit can keep costs in check and keep their bottom line healthy.

It seems every time we have a new president, changes are made. I fear part of our problem is we never give these changes enough time to work themselves out before we make new changes. Change for the sake of change, does not benefit the University. I think one of the great strengths of this great University, is that even though we are among the largest campus communities in the nation, there is still a small town, close knit feel. This bond amongst students, faculty and staff won't be improved by many of the changes that have been suggested. It seems to me that this comprehensive review, talked very little about all the positive things this University has already done. We didn't become one of the top University in the nation by doing everything wrong. I'm not suggesting no changes be made but that we seriously consider how short term gains have long term consequences.

On a personal level I believe all the recommendations are good, but fear making so many changes at once will have a negative impact on the university. The fear of loosing you job when this happens is in everyone's mind so it will be hard to convince many that this is a good move. If it comes to pass then a phased approach over a couple years may be better. I hope that many think about all the ramifications with each change and what impact it will not only have on each department/unit but the employees of each department/unit. Remember its the Faculty/ Staff that see the students face to face everyday and if they are not happy then it could change the students experience.

I know you're going to get a lot of negative feedback, but the spirit of trying to make the university more efficient is

really appreciated.

---

As commented above, of all the organizations I have worked for through my 36 plus year career, TAMU is the most siloed and resistant to the obvious. The obvious being a common big picture vision, collaboration, sharing of resources, and establishing best practices. Things seem to be addressed piecemeal and in a vacuum with no thought given to other on campus opportunities.

and other than being physically larger, I am disappointed in the lack of true "growth" of this institution that I love.

---

As mentioned in a few of my comments above, I believe that centralization at some levels, and the consolidation of duties is a necessary change, but certainly not to the magnitude that this report suggests. This reports calls for a complete restructuring of the entire University. It would almost be easier to create an entirely new University. This report suggests the dismantling of huge organizations on campus that are truly top-heavy, which is a great thing, but it goes on to create even bigger units across campus, with the exact same top-heavy make up. Where is the efficiency in that? Where is the cost savings in that. Take a look at AABS, where you have more Directors, Assistant and Associate Directors than you do actual staff who perform the duties and responsibilities of that office. Take a look at the VPR's office, where you have more VPs, Assistant and Associate VPs than you do actual staff. This model is consistent across the entire University, and this report only creates more of the same. The consolidation of services like IT, HR, Payroll and Finance makes sense to some extent. We certainly don't need individual HR offices, Payroll offices, and Finance offices for TAMU, Engineering, Ag, etc., but DO NOT sweep college staff into that consolidation. Doing so would only create additional obstacles for those in the colleges who have a need for those services. If you want an example of why this type of consolidation is a bad idea, pick up your phone and call over to TAMU HR. See how long it takes to get someone on the phone. See how long it takes to get connected with someone that might help you. See how long it takes to get an answer to your question. See how many times you're told No, before someone tells you how you might obtain a YES answer. You could also perform this exercise in other areas and achieve the same results. Consolidation of business-staff within the colleges, who deliver services related to HR/Payroll, Accounting, Grant Management, Travel, Accounting, etc. makes sense. This model has served the College of Architecture well. Bringing all subject matter experts together at the College Level, as opposed to the University Level, creates efficiencies and effectiveness. Doing so at the University level creates bureaucracy, red tape, and poor customer service. I love this University, and I want to help it become the absolute best it can be. I will always do my part to carry out the mission. I just don't think we should waste our time creating more of the same problems that we have now. Bigger government is never the answer, but that's exactly what this report suggests we create, and how we should manage this University. I am hopeful however, that the powers-that-be take this into consideration and adopt only those recommendations that make operational and economic sense.

---

Overall this is a good report that appears to incorporate best practices and industry standards. Staffing leadership in key areas will be a key to successfully implementing these change initiatives.

---

I hope the process is more inclusive from here.

---

Maybe I missed it, but I found it odd that there were no recommendations for what part of the organization the restructured and newly created units should report to. I have to assume that is left up to university leadership. There was a mention in the peer review section, however, just because our peers have a certain reporting structure does not mean that it is the ideal or correct way. For example, having IT report to the Provost or branches thereof rather than a Chief Operations Officer may be common, but is it recommended? If not, what is? My greatest concern in both the initial survey and now my feedback here, is the ability to recruit and retain quality faculty and staff. In the latter case, as was mentioned in the report, many individuals may chose to move to jobs offering remote primary work locations. In an era where we have experienced the impact of working remotely and the productivity which can come with it (combined with the daunting challenges of our people are outgrowing our space), not mentioning this topic in greater detail was a glaring omission from this report. In order to compete with both the private sector and others in higher education, it is imperative that these types of opportunities exist, even for those working in relatively close physical proximity to the university. The ability to work remotely can be a real differentiator when it comes to a quality work/life balance and, when managed correctly, improves productivity. It is my opinion that we will continue to see these types of personnel losses to other organizations if a definitive remote work solution is not determined.

---

Howdy, after reading the report - it is very clear to me that whom ever did the research in drafting these

recommendations did not really understand the role and numerous functions of the University Libraries. One clear example I can give, is there seems to be some confusion of the Bush Presidential Library and the University Library.

---

A voluntary separation program should also be offered to staff who have 20+ years of service. Unfortunately, the centralization of colleges and functions will undoubtedly result in elimination of many staff positions. This report will most certainly create a lot of anxiety for a great number of folks. I wish more details could have been provided that might have eliminated some of that anxiety.

---

Overall, the changes sound good in theory. A&M needs to do more for College Station in both being more active in the community. College Station has focused mostly on tourism surrounding A&M events in their expansion (as well as student housing with more apartment complexes). A&M needs to repay that with opening the arts centers and other things that would bring people in from out of town. Aggie Football hotel capacity is great, but College Station needs to be a year round city. Making A&M a better place to work with competitive wages, work from home opportunities, and replacing an aging workforce is also a start as well. The consistent in the report is how decentralized it currently is as well compared to other major universities. While that worked in the past, it might be best to start changing now before the problems grow larger. If the younger workforce opts for competitive salaries and remote opportunities elsewhere and the 20% of the workforce that is older retires, there will be a mountain of issues. Implementing change now would not only benefit A&M, but also keep College Station growing.

---

Just because something is not a strength, strategic priority, or area of focus, does not mean that it is a weakness. Other "peer" institutions may have X, Y, Z departments but that doesn't mean that is correct for TAMU, a land grant Agricultural and Mechanical College with an established history of education, innovation, and success in those areas. I wonder if universities that are stronger in social sciences are told to start engineering programs ?

---

One thing that I did not see mentioned in the report is the consideration of remote work or hybrid schedules for staff positions. I understand each position would need to be evaluated for eligibility, but I think this could be done prior to new positions being posted, while current employees could be evaluated by supervisors/directors. After having the opportunity to work 100% remote and seeing how much more productive I can be with my work in a remote environment, the benefits to my mental and physical health, and balance it brings to my life - I personally would not want to return to the office 100% for any future positions. I know several colleagues and peers that feel the same way. I have peers that have left their jobs this year due to return to office mandates in pursuit of other opportunities that did allow for partial or fully remote work. I think A&M could both recruit new talent and also retain employees with valuable knowledge by offering remote work. It could definitely be performance-based, and could be offered after a certain probationary period of working in the office, if necessary. I think it's critical for Texas A&M to consider how they could implement remote work going forward.

---

There are many good ideas in the report, but there are also many bad ideas. I hope any actual implementations from this report are focused on improving the financial bottom line, service to the students and customer service.

---

I hope to see a majority of the recommendations adopted and will be disappointed if not. There will certainly be push back, fear, and barriers to adoption but the long-term impact and benefit will be invaluable to continuing Texas A&M's relevancy and legacy of excellence.

---

For all the areas being realigned and combined for more centralization - One would hope that those areas where customer service is of high value, will continue to be allowed the excellent service. My experience of onboarding was made pleasant and easy by the teams that were focused on Vetmed. A concern is that any time you have centralization of duties, you lose the strong customer service support needed to allow for quality applicants to become employees. The onboarding experience can be just as important in a decision on where to work as the offer given.

---

I can only speak on the IT/Marketing side of things in general, both of which need to happen.

---

Almost every point and recommendation raised in this report is logical, would result in money, time and stress saved, AND have been raised before. What we need now is for a leadership to not be afraid to shake things up a lot, and provide all the support for all students, faculty and staff needed to make the transition a success. Being scared of the consequences is never a good enough reason to try something that could have a huge positive impact on the lives and livelihoods (not to mention mental health) of every student, faculty and staff member of the TAMU community.

---

THIS REPORT LOOKS VERY COMPLETE AND CHECKS ALL THE BOXES. I AM PLEASANTLY SURPRISED AT THE DEPTH THAT THIS COMPANY WENT TO IN ORDER TO GAIN A VALUABLE INSIGHT INTO HOW A&M WORKS AND HOW IT IS A CULTURE DRIVEN UNIVERSITY. I AM VERY IMPRESSED WITH ALL OF THE FINDINGS AND RECOMMENDATIONS AND AM EXCITED FOR THESE CHANGES.

I appreciate this process being done. There are quite a few things that I agree with, and some that I do not. But that's to be expected and my voice essentially counts for nothing in this process. But for what weight my voice does hold, if the finding for the IT side of things is to consolidate into one ticket system, please choose something other than ServiceNow. Notably missing from this report was any mention of early career academics, such as postdocs and adjunct faculty. This concerns me, as it's indicative of an ongoing trend within academia that marginalizes precarious academics, and overlooks their contributions and needs. In the coming years, how does TAMU leadership plan to promote the professional development of early career academics as they face an increasingly hostile hiring climate? Continue with AWL as this has been a big issue among employees. If this is discontinued, there will be a large turnover of employees. Pay increases. Many employees/departments have not received increases in over 3 years. In order to retain more employees and have a lower staff turnover rate, I would recommend allowing more remote positions (where possible) in order to compete with the national standard. Without this incentive, I feel that Texas A&M will be steadily losing good talent because of better opportunities elsewhere. We have seen this in our department in TEES and we will continue to see this in the future unless something is done.

## General Feedback - Student

Please provide your comments related to general feedback, process, or other sections not listed above:

I really do hope that TAMU administration and leadership takes these pieces of feedback into consideration, as well as the voices of student leaders, students in general, faculty, and staff, who are currently present on campus. Former students should not have nearly as much of a say as they do now, and it is a problem which has stunted our growth for years.

N/A

Overall, I find it interesting that some things in these recommendations focus so strongly on the attempt to bring Texas A&M in line with other institutions yet ignore areas where Texas A&M has been severely behind such institutions. For instance, a report made by the Association of American Data Exchange earlier this year (April 2021) found that salaries for graduate students (both teaching and researching) at Texas A&M are among the lowest in the study, yet this MGT report does not indicate any way in which Texas A&M is trying to rectify such a failure to maintain pace with other institutions regarding graduate education ([https://dars.tamu.edu/Data-and-Reports-\(1\)/miscellaneous/files/AAUDE-Graduate-Stipends](https://dars.tamu.edu/Data-and-Reports-(1)/miscellaneous/files/AAUDE-Graduate-Stipends)). It is clear that priorities for this report were not on the success/promotion of graduate education, which I find very concerning. I don't know if this feedback will be read, much less heeded, but I encourage the current administration to think carefully about how these changes will affect all Aggies, instead of just the few thousand who are represented in the survey.

a. Far more feedback was received from former students and this was claimed to be “representative of a larger group of opinions at TAMU”. Based on how curricular and co-curricular experiences of students were described in this report, I think that this disparity in feedback and how that was then used to make the report vastly overshadowed current student perspective. b. Centralization and consolidation can be very detrimental to student experience and success as they find immense value in finding smaller families amongst the tens of thousands at A&M c. Centralization is potentially harmful as with a university of this size individual areas need the freedom to respectfully cater to and represent their students and needs d. The lack of discussion about Business especially and also Engineering to a lesser degree does not reflect the immense impact of those colleges nor does it correspond with student sentiment from within those colleges e. DEI efforts should be focused on addressing the root causes of an issue, not how the report describes by addressing the perception and messaging to cover up the existence of these issues on campus to entice a more diverse population to A&M

For the diversity and inclusion component, I think that there needs to be a focus on retention and retention strategies. I would like to see a mentorship program be implemented at the various colleges for students of color and first generation students (marginalized communities)

Why was this survey not offered to everyone? And why was it not presented as such an important survey for the university? The participation clearly points to the message not being well communicated, and casts doubt on the finding of the company as a result.

The changes proposed by MGT Consulting Group are significant and wide-ranging and address almost every domain of Texas A&M University System. Here I am underscoring a critical attribute of effective, large-scale university functioning - workplace harassment and professional bullying at the Department of Geology & Geophysics (G&G) - which has not been adequately reviewed by the MGT report. Senior faculty and advising staff at the Department of G&G should undergo rigorous training and professional development to comprehend how to perform their job responsibilities in a harassment-free manner. Senior faculty like [REDACTED] have a known history of harassing undergraduate, graduate students, and post-docs to "extract maximum work" under the guise of research advising. [REDACTED] students consistently display poor academic performances, downgrade from PhD to MS programs, prematurely exit the program, take longer-than-normal to successfully complete their program, have limited-to-no scientific publications by graduation, and almost always fail to secure a full-time position upon graduation. [REDACTED] engages in threatening behavior at the workplace with undergraduates and graduate students - routinely withholding student salaries, misrepresenting student credentials/work/study experiences, engaging in public embarrassment, and passive aggressive professional retaliation including falsifying information in student recommendations and professional reviews. [REDACTED] little-to-no technical support to student research and professional development, and actively delays student progress at the expense of running-out of funding, with all of his students and research staff having no financial safety net or promotion. [REDACTED] workplace harassment specifically peaks with female students and research staff. Female students in [REDACTED] undergraduate classes complain of mistreatment, academic and professional bullying, and report longer than normal working hours under [REDACTED] direct watch. Long-serving staff like [REDACTED] in the Dept of G&G racially discriminate against students and engage in similar professional bullying methods. Newer advising staff like [REDACTED] routinely engages in screaming, publicly deriding students, and defying FERPA rules by sharing students' academic information with other students and staff. [REDACTED] has suffered multiple complaints and misbehavior concerns have been shared by numerous students. [REDACTED] routinely devalues students and offers little-to-no advising assistance with respect to course selection, faculty questions, guidelines, etc. [REDACTED] has consistently failed to present a transparent system of review and grievance redressal. [REDACTED] does not offer avenues for anonymous reporting of academic harassment and professional bullying by undergraduate and graduate students and publicly places disbelief in students' accounts and reports of such harassment. When professional harassment is brought to [REDACTED] attention she offers counseling resources (which is helpful), however she fails to address the problem of ongoing student harassment. Overall the academic and professional environment offered by the G&G Department is rife with hostility, bullying, and professional harassment. The senior faculty and staff has time and again shown utmost disregard for calls for a transparent leadership and governing with no consequences for senior faculty like [REDACTED] that continue to adversely impact several students' academic experiences. [REDACTED] election as [REDACTED] was uncontested which may partly explain her complacency and failure to address such serious concerns.

I believe advisors for every department are crucial for the success of students.

<https://tx.ag/FightHateSpeech>

Don't combine liberal arts and sciences!!!!!!

This report had a mix of highly detailed recommendations (Facilities) and vague plans (Academic Realignment). It also includes many factual errors in reporting on number of departments in colleges and number/type of degree programs offered.

Graduate students don't appear anywhere in this document. I think that if a College of Arts and Sciences is to be created, that all graduate students should be paid the same, livable stipend for the work they do. Having different stipends across campus makes Liberal Arts students feel that they are lesser in the eyes of the University. I am very concerned that Liberal Arts students will get left behind if absorbed into a shared program with the Sciences. Colleges and universities have way too many Vice Presidents and academic offices, and this report only seems to make more.

All I ask is that you actually take all of our comments into consideration. Understand where we are coming from before making your decisions. Pick the students, faculty, and staff within this university first and don't let money sway your decisions.

I believe that the timing to give feedback for the MGT report is poor because all university stakeholders are asked to review the report in the middle of the semester when every individual is focused on their respective responsibilities. I believe that there would be much more high-quality feedback if we were asked to provide feedback during the upcoming winter break when we have more time available to read and comprehend the MGT report in its entirety. My fellow students and I want to focus on learning our course content. Our professors want to focus on teaching us the course content. Our advisors want to focus on ensuring we have the present and future semesters well planned. I hope that the poor timing is unintended.

I am simply writing here to express my incredible disappointment and dissatisfaction with the administration. Students, faculty, and general members of the aggie community were not adequately or appropriately heard. There is no reason to express my specific, overwhelmingly negative opinions on the myriad of exceptionally poorly thought out suggestions, because it is clear that the administration does not care. The feedback we are providing cannot be effectively heard and addressed within the extremely short timeframe between now and December, when President Banks ultimately approves or rejects the aforementioned MGT recommendations. Therefore, enumerating even my most basic grievances with the report would prove to be a fruitless and wasteful endeavor. The administration's complete and utter lack of respect towards the aggie community has not gone unnoticed.

I would have liked to transparently hear about the process of the whole MGT report and the rationale for choosing the consulting firm. While there has been no opportunity for the students to make suggestions and interact with the school, all they can do have their voice heard is through reaction—like this case—to an external business. This gives the impression that the school cares less about the internal opinions.

I do not like it and do not think it will be efficient effective or necessary. I do not see how this is helping our university I think it is causing greater division and taking away from the aggie experience. I do not think future students will be a fan of these changes and will not want to attend. If I had known these changes would be made I would attend a different university to make my academic career more personal.

Do not join Bush to political science.

Texas A&M is too committed to it's conservative donors and in doing so preserving the toxic masculinity of this institution.

please DO NOT merge these colleges, so many organizations and sub groups within each one will not hold the same significance as they do right now and on top of that this would make texas a&m less unique as we would have more cookie cutter colleges just like other schools.

For some background, I am currently a junior geology major in the College of Geosciences at Texas A&M University. I am a first-generation college student and Aggie and I absolutely adore my college. I would like to express my concerns regarding the changes outlined in the MTG Report you provided us on October 26, 2021. Firstly, I believe the merging of the College of Science, Liberal Arts, and Geoscience is an idea that would cause more harm than good. I would like to share my concerns for the College of Geoscience in the following: Regarding post-university employment, I would like to highlight that even though the College of Geoscience is small in numbers, we are highly experienced and highly specialized, something that is sought after by numerous companies. There is a reason that companies continue to seek employees specifically from the College of Geoscience. By merging the colleges, you would eliminate the network that the College of Geoscience has spent decades building. I came to Texas A&M knowing that the Aggie Network is something powerful, sentimental, and unique. The College of Geoscience is part of that network. There is meaning behind the Aggie Ring, just like there is meaning behind having a separate College of Geoscience. Seeking jobs as geoscience students, would become much more difficult without that immediate identifier – as an employer, seeing “College of Geoscience” on a resume automatically means he/she are prepared. When you see “College of Engineering at Texas A&M” or “Mays Business School” – it means something, it is important. The proposed “College of Arts and Science” has no mention of the geosciences. Why? It is crucial to give the geosciences the resources the students need to be successful, which is through specialization, not generalization. On top of that, it was extremely attractive to think that I would be a part of my own college. It was defiantly a huge recruitment factor. I have been a part of the College of Geoscience for 2.5 years now, and 3.5 when I graduate next fall. My diploma will not reflect that, it will not reflect something I have been a part of and worked so hard towards. It is more than just a want for “College of Geoscience” to be on my diploma, it is a need, it is what I have been working towards and reflects that best. Lastly, I have formed an amazing relationship with my advisor. She has been with me throughout my entire time at A&M due to the size of our department. I can go to her with any problem I have, any issue. I am not afraid to say that I need her. I need her to be

my advisor until I finish college. The centralized advising, while may seem appealing, will not be in the best interest of any student or advisor. An advisor will be required to know and have much knowledge about all types of majors and will not be able to help to as great of an extent. If an advisor who use to specialize in Liberal Arts would not be as knowledge in my geoscience degree as my advisor currently. Thank you for taking the time to read this, and I truly hope that each and every one of the comments are taken into consideration.

Overall, the report mentions several times the importance of upholding the Aggie Core Values. These proposed plans, if anything, weaken our ties to our values, specifically Excellence. Excellence has been a descriptor of Texas A&M since its founding. If these proposals are passed, I am afraid excellence might as well be removed from our Core Values, as our university will be making broads leaps in the wrong direction.

Almost everything highlighted in the MGT report have been things I have personally heard from faculty, staff, and students complain about or suggest improvements on for the university. Now that an outside source has come through and brought these things into the light for everyone to see, I hope that the university will heed these suggestions for improvements and follow through on how to make the university better for the future.

The traffic really sucks around campus.

I am troubled by the absences on this report. Why were certain colleges excluded (Engineering & Mays)? Why does the burden of saving the University money have to come out of the identified colleges with no sacrifice needed from other colleges that (I know) have employment redundancies and inefficient use of funds and unequitable practices of labor (for graduate students and staff)? I am also confused as to why the websites of peer institutions are used as a primary means of justification for major changes. The University also needs to take into account the context of A&M as well as evaluating the effectiveness of the structures of peer institutions.

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

This is a radical shift in MGT's advice to the university and shows the values of our new president. Starting this semester, I intended on joining the geosciences Undergraduate Recruiting Team--however I can no longer recruit prospective students to the college in good faith. This is really disappointing.

TAMU history, culture, and spirit are what make it unique and are a core part of Texas A&M. Coming from a multigenerational Texas A&M family, there really is a spirit that can never be told. A museum on campus would be an effective way to tell the story of how the university was shaped into what it is today. Remember Aggie culture is not frat culture and the corps of cadets are American history, not just Aggie history. There is a lack of focus on graduate programs. In the pursuit of diversity we must remember not to erase history. TAMU should host detailed surveys (regarding campus facilities/academics/diversity/proposed changes) each year in order to improve the university. These should include true/false and multiple choice questions in order to get a better overview of responses. TAMU should keep record of students graduating salaries and employers that hire their major. This information should be posted for students/former students. TAMU should do more for those who lose a family member/primary caregiver while attending school (i.e. mentally and financially).

Overall, this report feels like a way to stir things up and to hopefully make a name for the new president. I feel that the only way it would accomplish this would be to be known as a massive disaster that happened under the presidents tenure. These steps do nothing to actually benefit the students of the university. It is disappointing to see that the report references surveying students when I know I was never aware that this was happening and that it also says that less

than 2000 students were surveyed which is less than 3% of the current student body. This report says that these changes would help to further A&M as a research institution and if that is so then they should know that less than 3% is not statistically significant. I am disappointed that these steps would even be considered and I think that to implement them would be a disservice to all current and future students. As I have seen on a number of levels recently, these changes are an attempt to do nothing but gain money and disrupt an environment that works so well.

---

Howdy Dr. Banks, I hope to bring to your attention an additional area of TAMU not looked at in the MGT report and where I strongly believe further due diligence is needed. The neuroscience community (teaching, research, and leadership) at TAMU-College Station is comprised of numerous, small departments and institutes battling toward a common goal. I will from here refer to these departments, programs, and institutes as units. These units are decentralized and uncoordinated, and every year this leads to confusion for administrators, faculty, and graduate students. Realignment and centralization of TAMU neuroscience units will better meet undergraduate, graduate and faculty needs, allow for collaboration benefiting the larger campus community, and provide sound scaffolding to further develop TAMU's research competitiveness in life sciences.

#1: Basic neuroscience research at Texas A&M University-College Station is decentralized and affects both faculty and graduate students. - Six buildings across TAMU are home to primary (basic) neuroscience research:

- o Interdisciplinary Life Sciences Building
- o Biological Sciences-West
- o Psychology
- o Veterinary Medicine
- o Reynolds
- o College of Medicine – Medical Research & Education Building

- At Texas A&M there resides neuroscience units with several faculty holding joint positions:

- o Texas A&M Institute for Neuroscience
- o Neuroscience & Experimental Therapeutics Department (College of Medicine)
- o Psychological & Brain Sciences (Behavioral and Cellular Neuroscience, Cognition and Cognitive Neuroscience, & Industrial/Organizational Psychology programs)

- The vast majority of these units involving graduate students accepted less than 10 graduate students per year for the last 5 years, with one particular unit only accepting 1 student.

#2: Neuroscience Undergraduate Research at Texas A&M is about to explode with TAMU beginning to offer both a neuroscience major and minor. - Unknown # of Neuroscience majors – this is due to the battle for neuroscience between Veterinary Medicine, Biology, and Psychology - 350 Neuroscience minors (485/491 course) – for which there is one academic advisor, Sylvia Bernal

The overarching message of the MGT report was centralization and realignment to improve efficiency and better benefit our Aggie community. Neuroscience should be a part of these changes, to not only benefit the people in neuroscience units, but to give back to our larger campus community. I strongly believe we at TAMU have awe inspiring and collaborative neuroscience research occurring. However, the accidental division of neuroscience units at the College Station campus impedes growth and adds frustration to faculty and students. The return for stakeholders if proper reorganization of TAMU neuroscience units occurs could be invaluable! If you would like to talk further about this matter, or have any questions for me, please feel free to reach out. Sincerely,

[REDACTED]

[REDACTED]

---

I am very unhappy with the organic chemistry lab program. This program insufficiently serves thousands of students each semester. It should be restructured to be more efficient; currently, it is too large with too small a leadership team and cannot serve its purpose efficiently.

---

Centralizing undergraduate advising may not be a good choice since advisors need to know several major tracks.

---

I want to amplify the concern that the African American student population numbers are troubling. It would be worth investing significant scholarship dollars to ensure that talented Black Texans are choosing TAMU. Specifically, African Americans. African students could be recruited as well but that would not satisfy the goal of educating the citizens of this great state and is a different goal and initiative. I mention the international effort because my first exposure to the limited African American students on campus was at my Graduate Student Orientation. TAMU is great at recruiting from all over the world but can't ensure space for deserving students in our own backyard. This is an urgent call to action. Our campus is lacking without that important student voice.

---

The Department of Performance Studies is in NEED OF HELP. I say this department specifically because that's my major and I'm graduating in December and I have been diligent about applying for jobs and connecting with the hiring team and everything and I have yet to find one. I feel like there's no practical application for this degree besides going into research, teaching, or continuing into additional education. Don't get me wrong, I love the department, its professors, and the facilities that come with it, I think that the previous Theatre degree has much more application than a research degree like PERF studies. I think, however, they are NOT mutually exclusive and Performance Studies can exist alongside the Theatre Arts degrees. Anyhow, I am glad to have had the opportunity to do many incredible things here at A&M, but

I hope that future students, at least have this option.

Almost every suggestion is dumb and is this consulting group justifying their existence. If they find no problems than what are they being paid for, so of course they must invent problems. Moving engineering advising to be general is a poor plan and will lead to students being improperly advised. Engineering advising should be department specific so advisors are well informed on the huge range of classes that vary in material and difficulty wildly, which their students they are advising will be taking. The DEI stuff is dumb too. If TAMU cares about a quality education someone's immutable characteristics should have no bearing. TAMU should focus on hiring the best faculty for the job.

A&M needs to accept less students. A&M is getting too big and needs to raise admission standards. Currently A&M is going for quantity of students not quality of education.

the libraries are SO important. they do so much for the students and these jobs are very important! making them their own department and changing their jobs/roles needs to be something they have a say in. roles like raising money for the libraries keeps this university on its two feet and i just don't want that to be overlooked by putting them in the arts and sciences category. misleading for students! i've already had people ask me if only arts and sciences majors can use the libraries now (rethink this)

I think the TAMU Registrar's office is in need of significant reform. Registering for each semester should not be a battle. The registrar's office has made avoidable mistakes such as simply not opening registration in the morning or not preparing for website stress that causes Howdy to crash. Given TAMU's infrastructure and funds, it is incomprehensible how the process of student registration is such an extreme mess each semester.

fish camp is not holding back diversity. as an attendee, they provided every know recourse to minority students and I know how much planning goes into the skits from the counselors to avoid offending a specific group.

Don't listen to the report, A&M should not be evaluated purely as a business, which is all the reports does. Keep providing top-tiered education and research and all will be good.

Texas A&M is such a unique university, and as we seek to help it continue to keep it at the forefront of higher education in America, I think it's important that we make decisions wisely and somewhat cautiously. There are a lot of people who care very much about how the University operates and it's important to take these views into account. Let us not forget where we've come from as we look to chart our course for the future.

Creating such a central authority and merging many colleges together will be confusing. Major mergers to the point where there are only 4 main areas would eradicate the culture and atmosphere of being at a huge institution while maintaining a department that is small enough to be comfortable. The TAMU atmosphere attracts a certain type of student, one that is driven, has proven successes, and is ready to challenge themselves at a new level; this is what keeps TAMU competitive, us, the students. There are many more opportunities to connect with like-minded individuals here than at various other universities.

Overall, money should be sent to improving current infrastructure (ex: Heldenfels, CHEM labs) prior to building new infrastructure like museums. Core classes should be prioritized before anything else and the creation of new buildings, while existing ones are falling apart, is poor management of our great resources.

I think many of these ideas are interesting. I am all for efficiencies and reorganization if it makes life for students better.

A lot of this seems a bit disillusioned.

Overall I understand and agree with most all of the recommendations made in the report, and I believe some will have a significant positive impact on Texas A&M going forward. One section that concerned me in particular was this: "Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts." I agree wholeheartedly with this, as I've witnessed the flailing and aimless attempts to support these efforts at the department level. I have seen Inclusive Excellence initiatives lose all department support when they take significant action to reach their goals, through conferences, speakers, and other events. Hard work by students and their faculty supporters is belittled when the department removes its support from DEI events, removes the A&M logo from the marketing material, and removes all ability for the department to promote the events directly. I have heard minority students talk of feeling "let down", "jaded", and being "used to this by now". Political opposition to diversity and inclusiveness initiatives hampers efforts at every stage and leaves A&M looking like it only supports these concepts in name alone.

How come nothing in the report talked about the Mays Business School?

I am concerned about how the recommendations will impact academics. A&M is in academic institution and the issues addressed in the MGT report were not tied into how academics would be impacted. My concern is that in an effort to fix the decentralization problem identified by the report, academics will become secondary. I would like to see a more detailed implementation plan for how it would affect the students education.

Frankly, it was a bit ridiculous reading through some of the things in this report. Hardly any of it deals directly with education as the mission of the university, and instead focuses on administrative changes. Maybe I missed the point of the report, but I was still shocked to see how little of it directly related to education.

I'm honestly shocked and disappointed that the science aspect of Texas A&M is being treated in this way. The reason I love this school is specifically because it is so invested in furthering scientific research on every front and in every field. Downsizing and realigning the school's College of Science and its majors would do nothing but detract from the great things the students therein can achieve if given the time, money, and opportunity. To know that there are individuals in leadership positions that would try to limit Texas A&M's commitment to scientific research in order to artificially elevate less populated Colleges and Departments makes me lose faith in the University as a whole, and that's coming from a third-generation Aggie.

Please don't do the plan. It's not a good plan. We don't like the plan.

I strongly agree with the assessment and especially agree there should be a push for more inclusion amongst faculty and students. Specifically, the statistical data for the College of Engineering is very telling with minority groups being underrepresented across the board.

DON'T COMBINE THE COLLEGE OF LIBERAL ARTS WITH THE COLLEGE OF SCIENCE

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

Do better. This report comes across as a lazy justification for the administration to force major systemic changes as if it is repainting the walls in the MSC. If the university wants to eliminate more than a thousand jobs it better do more than "nearly 60 interviews" over the course of nearly five months. Five months to write a 133 page report, which was conveniently delivered a week later to the "stakeholders" than when it was delivered to President Banks. The Mays Business School is mentioned less than 10 times throughout the entire report. The Aggie Network is mentioned once and spelled incorrectly. The Corps of Cadets is mentioned twice and it is called a detriment and liability to the university. The report has the occasional citation which it uses to justify some outrageous claim and assert it as indisputable fact. If it were a research paper submitted to any of the professors I have had, it would be failed for the inconsistency in which it explains its reasoning, its lack of sources, its inability to be concise, and that it was written by people who do not understand Texas A&M University because they are not Aggies. As an aside it was pretty funny that the report cited the positive student satisfaction of freshman who were not on campus for the 2020-2021 school year, but did not mention the negative feedback from upperclassmen which was hidden in the appendix. Do the right thing, throw this report in the trash.

I believe most recommendations provided in the report should be implemented. The decentralized nature of TAMU, as shown in the report, has hindered A&M from reaching its true potential.

Give the University back to the students rather than making us feel like our voices are not heard and that they wouldn't matter if they were heard.

It's nice that TAMU is making more of a presence in TMC3

It seems like the consulting firm has misled students, faculty, and staff with the unrelated survey questions they sent to the campus community over the summer. Additionally, I have heard that portions of the report were copied and pasted from the report they performed for AgriLife recently. It seems like the consulting firm has no idea how these changes would actually be beneficial to the campus body or what the deliverables would be. I would like to know the reasoning and direct and tangible benefits these changes would have on the students.

There should be a more conscious effort from the university to help its students get jobs. There should be more job fairs, better resources for finding jobs, and better help and guidance available for students in need. The University residence halls and apartments need an overhaul. The facilities are old, in disrepair, and yet charge exorbitantly high prices for

rent. Most students leave the university apartments after only one year of residence. It would also be useful if the apartments had stores and dining options in the complex. That would help students. Also, the COVID policy of kicking COVID patients out of dorms and leaving them homeless is a really cruel practice and needs to be stopped immediately.

---

I am generally in support of all the recommendations outlined within the MGT report.

---

Combining the liberal arts with science is a big mistake. We as Liberal Arts majors already don't feel A&M provides enough support and resources to our college, this merger will only stiffen our opinions and silence our voices. We matter just as much as Engineering.

---

Please don't change anything. I'm going into my last year and I would like to keep things the way that I experienced them, combining colleges isn't a good idea for this and it will be messy. Thank you.

---

The College of Engineering and Mays Business school were largely ignored by the report and this is a massive oversight. Engineering is a great strength of this university and should be highlighted. In addition, the report was extremely one sided. It focused on reasons to do every recommendation and did not provide any cons or nuanced analysis or anything beyond an idea and half a reason. This makes it difficult to implement without a proper analysis of the possible shortcomings of each recommendation. Quite frankly, I am appalled at the lack of student input into this process. I am the only student I know who was selected to participate in the survey. I remember getting the email, and I was so excited to share my thoughts and shape the direction of A&M through the survey. When I took it, I was exceedingly disappointed. The very few number of questions was discouraging, and they were so broad I felt my answers were almost meaningless. Asking me if I think the University is going in the right direction tells you nothing at all, because I think the University is going in the right direction in some places and the completely wrong direction in others. Asking those sorts of high-level questions, especially when due to COVID-19 I have no baseline to compare it to, is useless and is paying lip service to the student voice and input while actually hiding my opinions. Second, the ratio between the current and former students surveyed is horrifying. It shows that this University is more focused on donors than it is on serving the current students. What care do people who graduated 30 years ago have for the organizational structure of the university? It is the current students, the ones who will see these changes and actually understand how they will impact our life, who deserve to have our voices heard. Many of our former students want to push this University backwards instead of forwards, and giving them such voice and platform while largely ignoring those who you claim to serve is morally bankrupt. [REDACTED] article in the Battalion was rude and inappropriate, but his conclusions were largely correct. I am glad that the feedback deadline has been extended and that you express a desire to hold listening sessions, but there should have been more student input from the start on such important issues.

---

If you are not getting feedback from students of color but wanna claim you are a Hispanic serving institution, that is embarrassing. The school needs to reevaluate why so many conservative people are sending their kids here and spreading hate to students of color on campus. I have never felt welcome on this campus as a latina and have never felt safe. I would never recommend latinx to come here.

---

Overall, students at Texas A&M Galveston often feel like second class citizens because of College Station administration. Our campus is full of proud Aggies who love our campus, Aggie traditions, and everything Texas A&M has to offer. Galveston students deserve the same quality of facilities and resources as College Station campus.

---

My professors at the Bush School have stated that they feel they were not consulted for this report.

---

Overall, I wholeheartedly share your desire to optimize efficiency (since it might reduce costs of attendance and lower barriers to higher education) and would like to see these changes take place.

---

Stop running this school like a business. Remember that your current students are your future donators, and we won't donate anything if y'all keep treating us so terribly.

---

Your conclusions on your data from attitudes towards DEI are reprehensible. The anti-DEI stakeholders that said DEI resources "could be used to invest broadly in education-focused endeavors for the entire student population" clearly don't understand the merits and intentions of DEI well enough to comment on it. Texas A&M is too well-positioned to invest in minority groups - especially women and hispanic/latinx communities - and see returns from that investment (i.e. HSI distinction, etc). Reinvigorating DEI is going to be the only way to sustainably keep pace with other comparable universities like UIUC, UF, Berkeley - all of whom have Latinx cultural centers. We should build a (physical) Latinx cultural center under the Office of Diversity. Otherwise, the recruitment efforts and reorganizing are not tethered to anything that translates to retention. A Latinx center would also tether and give credibility to a large swath of student success initiatives and student organizations.

---

Overhauling or restructuring has everything to do with people development and streamlined ways of working. I agree with the recommendations that some departments may be more efficient when re-aligned to existing units that best fits. The unit being realigned should be examined and staff interviewed for functionality. Having an older staff/workforce is not a negative, they built the system and what should be incorporated is effective knowledge management and documentation plus adopting emerging practices with required training. Eventually, we will still rely on people to do the job, a relocation doesn't fix the gaps. An office that is bureaucratic or having unnecessary delays need to incorporate timelines/feedback/escalation into their ways of working. Performance appraisals can be done based on those identified gaps. Ownership levels need to be increased from what I read here. Centralizing administrative units such as IT, HR is a good idea, however, efficiency should be prioritized. The scale of services have to be considered and the risks have to be assessed. It is possible they work as subs under an umbrella unit and adapt systems. We can look at how top tier institutions run, and we can also look at how top private organizations with large scale employees administer their services. Transforming Aggieland should be synergistic to reflect the world we live in today. I recommend positioning her to be a leader requires incorporating the Collaboration Learning and Adapting Model in various level of management decision making. There would always be irrational people, but the ways of working should be clear, not sentimental and results driven. I love TAMU and I know we can get to the zenith of our objectives.

---

I believe that the Technology Management major in the School of EHRD is being weighed down. We learn lots of useless information that isn't pertinent to our field of work, and we don't have enough realistic training to go out and be productive in a real work environment. We need more technology classes and less about things that do not pertain to our field. In short, please move us to the school of engineering.

---

NA

---

Firstly, the Aggie Spirit bus transport system needs a significant upgrade. The current system has many flaws. Buses are never on time, bus stops aren't sheltered, and bus routes are very limited and don't cover a majority of College Station or Bryan. There should be some form of shuttle service provided by the university to nearby international airports (Dallas, Austin, Houston). Secondly, more funding should be allocated to the smaller colleges to get basic facilities like a small café or coffee counter, reading and studying areas, vending machines that work, and other such facilities. I am from the College of Geosciences and we don't have any facilities at all. We only have vending machines which usually don't work. Thirdly, the university needs to invest more money on its graduate students. Teaching Assistants get paid measly salaries that have remained the same for decades even though living expenses have increased rapidly.

---

I would like to see plans of how all of these proposals would be carried out, especially for Information Technology and the proposed College of Arts and Sciences.

---

I started out at A&M university in the college of Engineering with my other option always be college of Geosciences. I decided to make the switch the second semester of my freshman year, as soon as I had made the switch I knew it was the right decision. College of Geoscience not to be biased, is the best college at A&M university. The professors and advisors not only help teach you and inform you, but they also inspire you to be extraordinary. I wish for every student at A&M to feel that way about their college. That being said I do not accept being merged with other colleges which would possibly change the college name on my diploma and the overall spirit of the different colleges. We are different colleges and all deserve the right to be separate colleges. We can help bring each other up in scale without having to merge together. The merge could lessen each college's own individual struggles, that they might bring up to administration at meetings. Texas A&M University should instead focus on being a more inclusive university for all the colleges instead of trying to join non-similar colleges together. That is not the solution to this problem the solution is raising awareness for the college of Liberal Arts itself, and making it more well known as an aspect of Texas A&M University.

---

I believe that A&M traditions could be isolating to minority students. These traditions are not catered or geared towards minority students. There is no interdisciplinary learning at Texas A&M. Furthermore, students are not even incentivized to engage in diversity. There should be more requirements for diversity and even new traditions to make students of color feel included. Liberal arts also needs more funding.

---

PLEASE DO NOT MERGE POLITICAL SCIENCE AND THE BUSH SCHOOL. I AM A PROUD BUSH SCHOOL AND AGGIE AND I WANT THE BUSH SCHOOL TO REMAIN INDEPENDENT. IT WOULD DISAPPOINT AS A FORMER STUDENT TO SEE THE BUSH SCHOOL NOT STANDING SEPARATE. It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my

favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

---

I think it is necessary to see the biology department for what it truly is. A department that gives its students priority, accessibility and the platform to thrive as a stand alone department. We have not only academics to prove how well students do, but the amazing faculty who go far beyond all of us. Please understand that were doing great were we are just trust that we are happy and capable of doing extraordinary things because of our biology department.

---

This university tries too hard to appeal to everyone and everything that it suffers a little bit because of it. Lower level Business school is a joke (the curriculum is terrible), and the school spends too much money on football to truly be great. Honestly, we really need a new clinic. A.P. Beutel is a grungy old building that has a literally unwelcoming exterior made of spiky, sharp walls.

---

A museum would be cool

---

In general I am very excited to see attention brought to improving journalism at Texas A&M. I think that one of the number one ways to improve journalism is to increase university funding of The Battalion, one of the greatest living, learning opportunities for students. The Battalion has launched hundreds of successful careers and stand as a representative of the importance of journalism to democracy. Recent decreases in funding have caused The Battalion to decrease the number of print products as well as the removal of one of Student Media's full-time employees. Student media revenue has not suffered, but the opportunity of revenue increases is very real and demonstrated if student media funding were to be increased.

---

The college of liberal arts should not be merged with sciences. That is not good

---

What reasoning was behind this study in the first place? Also why were surveys over this information given during the month of August, a particularly unpopulated time in college station, and at a time many professors on 9-month contracts do not have access to their emails? Texas A&M University has pride in the long-standing traditions and spirit which it upholds. Making too many changes, to again, something not broken, will not only hurt the reputation, but the students and the Aggie alumni which call TAMU their home. Furthermore, according to theedadvocate.org, Texas A&M University - College Station, has the largest student body of all Universities in the United States. If that fact does not show how successful a university is, that 67,580 students applied and were accepted into the College Station location alone this year, not adding those who applied and were denied, then I believe it to be possible there are investigations into problems that are not actually problems.

---

It feels like you hired people to find what you were looking for regarding reasons to consolidate the college of sciences, geosciences, and liberal arts. Just doesn't feel like it's in the best interest of sciences and geosciences students or faculty. It feels like A&M is treating these colleges like chopped liver, as the college liberal arts has been treated for years possibly decades. As a geoscience student who transferred here, I wish A&M higher ups cared about colleges other than Mays and Bush as much as the counselors and other admin individuals who talked to me about the college of geoscience here at Texas A&M. Thank you for your time and consideration.

---

There needs to be better communication to the university regarding this. Is this going to happen? Is this just something that's being considered? What will this mean for current faculty/staff/students? Do we need to do anything to prepare for this? Specifically where did the information come from that is being eluded to when providing rationale? Is it anecdotal or scientifically-backed data?

---

I understand with new leadership comes many challenges, and I hope this university goes back to where it genuinely cared for every student and saw the importance of each individual and what they can offer. I get everything needs money to function, and a university is no different, but when did it become okay for higher learning institutions to only care about money. I fell in love with Texas A&M the second I walked on campus, and six years later, I am not seeing the same university that I fell in love with, and I hope that changes.

---

The MGT report findings regarding the Department of Biology do not, in any way, reflect my experience as a current member of the department. I don't understand where these perspectives came from and would beg that current Dept.

---

of Biology members be interviewed to determine the actual opinions and assess how much disruption would be caused by massive changes to our structure. The prospect of my current department being reorganized is extremely stressful for a grad student. I do not believe the suggested changes would strengthen our work because it is already strong.

I am a new PhD student in Department of Biology. And since I am here, this department helped me a lot in settling up quickly and be familiar with problems and how to solve them too. As coming from a university in India, I can totally differentiate how helpful people are in this department and how can I make best use of them for my career. Faculty, staff and cohorts are so supportive and always eager to help. I don't want this department to shift anywhere, as it is working best for me. Thank you.

It is unclear to us how the BIMS program would be administered in the proposed Institute of Biological Life Sciences, which also includes the Department of Biology. Would CVMBS faculty who teach in the BIMS program move to the new institute? What about faculty who teach in each of our BIMS, DVM, and graduate programs? Does the proposed move of the BIMS program include our BIMS graduate program, or just the large undergraduate component? Over the course of many years, the CVMBS has utilized its human, space, and fiscal resources carefully to tightly integrate its responsibilities toward its professional, undergraduate, and graduate curricula. How would these resources (especially assigned classroom and laboratory spaces) be administered when BIMS is moved out of the college?

In regards the the report as a whole, there are obviously points in there that would benefit the university in the long run. My concerns come from the major changes proposed, with a lack of detail explaining the benefits. Many of them seem to be integrating great systems with average systems to meet somewhere in the middle. Within these rationales, they explain how it could possibly benefit the students, faculty, or programs, but not how it would hurt them. Merging faculty, students, and programs of many different colleges would require a major learning curve. Advisors would have to understand completely different majors. Faculty would have to change the way they grade, teach, etc. Lastly students would have to take classes that may be deemed unnecessary once they actually reach the degree plan they would like to achieve.

Fire [REDACTED]

would have been nice to have more than 2 weeks notice to report feedback, and some open dialogue between president banks & students.

"An Aggie does not lie, cheat, or steal or tolerate those who do." Then why are these ideas presented as only recommendations and proposals if there are already actions being done to achieve them as if they are already part of the plan for Texas A&M. TAMU is a university that stands out for its traditions and culture, and its uniqueness is what has made it so successful so why is it being compared to other universities as if we want to be like them?

I don't like the restructuring of the university to 4 colleges. Especially with the advisors some advisors struggle to keep up with the students and I can only imagine that getting worse if advisors had to deal with more majors as well.

we are not a Engineering and liberal arts school we are TAMU we are a engineering and agriculture school don't try to compare us to anyone else we pride our self on being the best at what we do so don't try to make our school into a copy of another school that cant compare to us. Don't get rid of the Architecture college its the best one in the state and a great school.

Dismantling the college of architecture and others will cause a huge change of tradition that will cause alumni to distance themselves from the university, and will deter people from wanting to attend this university. The report has many areas that are not wanted or needed.

Rational 9A on the report talks about the USAR program; however there is a reference to the student in this program that is seemingly calling them lazy. I feel this program is wonderful for students that are wanting to build a career in the construction science and/ or architecture field. As an USAR student myself, I am grateful for the opportunity that Texas A&M has given me through the USAR program. Changing this, along with the dismantling of the school of architecture, is a huge concern for my future fellow Aggie students.

I am a College of Architecture University Studies student. After reviewing the section about changing the the University Studies programs all into the College of Arts and Sciences, I can say that I am disappointed by this motion. Personally, I love that the University Studies programs are offered because for students that do not know exactly what they want to do for their careers, these offer students the chance to explore a variety of different career paths. This is the situation I was in two years ago, and I am glad that I had the opportunity to become a USAR student because I am getting education in the fields of architecture, construction, landscape design, planning, and global arts. I have been able to use

all of this information to decide what path I want to go down, but I was getting college credit throughout the whole process. Now, I have the option to continue my education as post-grad if I choose to do so, or go ahead and pursue my career. With that said, I would feel it would be a shame for future Aggies to not have the option to be a part of these University Studies programs. I do not agree that we are "distractions" to the other students that are in more concentrated programs.

---

The Final Report that was released last month seems unnecessary, in that Texas A&M University is perfectly fine with how it is. As a USAR student the way that the report refers to the program is rude. A&M is well known for Architecture program, and a big part of the program is Construction Science, TAMU's COSC is the number one in the nation why change it.

---

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

---

I feel that this a gross misallocation of student resources and abilities. Limiting the USAR students abilities to open the students horizons by placing them into Liberal Arts is a shame to the University. Without the USAR program I would never have found my interests and gotten my full time job when I graduate. I have never once been a "distraction" to the Architecture students or COSC students and to assume so is plain wrong. Any assumption based on this report will be outlandish at best considering the timeline that the surveys were put out and the speed that it came back. The colleges that Texas A&M was compared to is absolutely insane considering that in my opinion only one school listed has any comparison to Texas A&M.

---

Regarding the Construction Science portion of the writing, I disagree with the abandonment of the College of Architecture. People made the decision to go to the College of Architecture because it provides different opportunities that Engineering doesn't. People need the College of Architecture because it provides a level of diversification to A&M that other colleges don't have.

---

I believe the movement to get rid of the College of Architect and move construction science to engineering will only hurt A&M. I believe that Construction Science major's choose this field rather than any field in the engineering department based on their own preferences. So taking away a student's preference on this will only harm the program.

---

Don't fix what's not broken. This is Texas A&M, not a liberal arts school.

---

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be its own department.

---

While there are some good recommendations made in this report in terms of restructuring internal departments to better assist students, initiatives such as moving construction science to the college of engineering seem politically motivated to support missions like "25 by 25", raising the engineering population to 25,000 by 2025. This type of restructure can lead to a loss in application of theories and experience in the field. I also believe the engineering classes students would be required to take would deter construction science majors. It would also create cost of tuition, another deterrent especially for those struggling with finances. To balance such changes, maybe there should be an act to improve not only recruitment efforts, but scholarship and grant spending.

---

This seems like a very political move and it has not been well thought out. Personally, as a Construction Science student, I believe that I have gained so much knowledge and experience with the COSCI department lying in a smaller school such as architecture. A lot of us students have worked together to create the best culture we can in this department, another reason why it's the number one program in the nation. I personally feel like the phrase "If it's not broken, why fix it?" really comes into play here. We have become a very sustainable and strong program through this school and there is absolutely no reason to change the way we've been operating for so long. Approximately 30% of our COSCI students are first-time college attendees along with being minorities and it is a huge step forward in making the program/school more diverse. Through having COSCI in the architecture department, students who have fought for an opportunity to earn this major have more resources with less students to compete with for attention when it comes to academic

excellence and help. I have received the best help from my advisors who only focus on us cosci students. With a more general system for advising in the school of engineering, there would be less help accessible for us cosci students. We aren't just numbers, we are your students who chose this major for a reason. With this information, I hope you make the right decision and keep this major in the college or architecture for future generations.

---

Consolidating all of these separate colleges into a few is a horrible idea. What sticks out to me the most is the move of Construction Science to engineering. I am currently in the TAP program, before I was an Engineering student. Every day I hated going to class because it was uninteresting, extremely challenging, and I was not learning about real world applications. Since my switch to Construction Science, I have actually enjoyed going to class. My professors have years upon years of real world experience which is so valuable and interesting. I know I am learning things that I will actually see and I will actually be doing where as in engineering I was not. The claim that Construction Science is closely related to Civil Engineering and Mechanical Engineering could not be any further from the truth. The kinds of people in Construction Science and in Engineering are completely different and have totally different skill sets and mind sets. You see this every day in industry, Construction Science students need to be taught real world skills by real world people, not endless theory and inapplicable information. It doesn't matter if a professor has a masters or not, experience overshadows all and this University would be losing some of the greatest professors and teachers I have ever had in my life. If Construction Science is moved to engineering, the University will be losing out on countless potential students. Again, students who are built for engineering are not built for Construction Science and vice versa. Think realistically, everyone is different and there are different kinds of people. Engineering students, for the most part, are different than Construction Science students. Think about all the companies that hire Construction Science students from Texas A&M. How will this move and change of curriculum change the students coming out of the program? Will these companies be as inclined to hire Aggies? Students who want to go into construction may be turned away because construction science is under engineering. The basic engineering courses are not at all applicable to anything that a Construction Science major would need, take it from someone who was a freshman engineering student. Finally, this seems like a completely political move on the part of the President by trying to bump the numbers up in engineering and reach the "25 by 25" goal which is having 25% of students be in engineering. I believe this move is shameful. Peer reviewing this University to other is simply laughable. The thing that makes Texas A&M so great is that we are unlike any other University in the world. Why would we want to be more like these other institutions when our differences make us and Texas A&M so special. Just because other institutions combine their colleges into four main ones does not mean that we should. We may also want to look at the time this report was made. This was made over the summer when classes were not in session and many professors were not in school. This timing seems fishy at minimal and the amount of information collected is massive. Who really received a survey and who really went into these interviews. Why is the Museum of natural history in the Capitol Improvement Plan from August now seen as a "Recommendation" in this report. I think we should all take a look at the Aggie Honor Code and ask ourselves if this really values what we believe as Aggies.

---

Why? the current Construction Science Program works. Why are we messing with it? As a current student in the Construction Science department, I would not want to see this change happen. I chose construction science because I wanted to do construction science, not engineering. Do not take this option away from future students. I would not have chosen Construction Science if it was in the college of engineering because I do not want to be an Engineer.

---

I just think the department advising should stay, it's very helpful and i dont think general advising will be any more help.

---

I believe that there should have been more time to provide feedback. I also think there should have been a list of pros and cons that went into detail about the implications of each recommendation. Most students didn't even know this report existed, so how can we be expected know the implications of things we are saying yes or no to? I think it was awful planning, and although it states that student voices matter, it certainly does not seem like it with the way this was set up. There should be a very long waiting period before any of these recommendations are implemented. These are astronomical changes to the University. I also feel like the report could have formatted in a way that is more easily digested. It is overwhelming to look at, and there's no document outline in the PDF to allow us to easily reference back to specific sections.

---

The report seems very ambiguous and dramatic. All of these recommendations require major changes and in many cases, the creation of new departments and management systems. I would prefer to see us use budgets to improve current systems. It is important to be selective when considering these recommendations. I appreciate the transparency and communication with this process so far. I look forward to reading follow-up reports after review from the president.

Tamu should stay and operate the same. No changes.

I think the College of Liberal Arts and Sciences is a bad idea. As someone who transferred from the College of Engineering, I definitely like being in a smaller college. It feels much more friendly and accessible and the faculty and staff all seem to know each other too.

Merging advisors amongst various colleges is perhaps the worst recommendation within this report in my opinion. Advisors working within their specific college are extremely knowledgeable about it and provide a much better advising experience for students.

I dislike the University pushing DEI; A&M should not reach out to potential students because of their skin color. A&M should certainly reach out to as many potential students as possible, especially low-income students, but giving people advantages based on race is wrong.

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

Money education course AGLS 235 is an amazing resource for new college students. It should be required in students first semester.

The references used to support much of these findings are over 10 years old therefore they are not relevant to today's world. The whole document seems poorly written and written to make the university seem like a business. This seems like a poorly veiled way to put forth the new president's agenda. If these recommendations are followed through, there will be a faculty mass exodus and will lower our rankings at a university as a whole.

Above all, the University, faculty, and students are absolutely maintaining a cordial relationship in dealing with any current or future challenges to keep them abreast of the situation.

Personally, the department has always help me. They try to do the best for each individual I do not think it will feel as home as it feels right now, if the Biology department fusions with other departments

The president needs to release recorded messages directed to the student and faculty. Emails are fine, but I have yet to put a face to the name that is making these decisions, and there is broad frustration at the lack of transparency on the administrations thought processes up to this point. This report tells us what the company that was hired thinks but we have no context for what the administration wants or how they are interpreting these things.

n/a

I will say I don't think much would change by moving USAR out of the college of architecture because I don't think they do any type of studio projects, but if Viz and Construction Science get moved out, I don't think that would be in their favor. The dept. of Visualization, while leaning more towards an art degree, are still designing virtual worlds. Because design is so heavy in their projects and studios, I think it would be beneficial for them to stay in the college of architecture along with their fellow design majors. Having other design majors (ENDS and Landscape) to bounce ideas/ perspectives off of besides people in their own studio can be really helpful and we definitely have learned a lot from each other over the years that I've attended this school. Construction Science I think also benefits by staying in our college so they learn to have an eye for design AND structural stability. I've heard professors in class tell us time and time again that engineers don't have an eye for design, and by us (the architects) knowing how to do some of the engineer's job, we can prevent our design being ruined by, for instance, a column being placed in the middle of an open room. If we move the construction science majors to a more engineering-heavy school, their attention to design will diminish, and because they're the first one's in contact with architects, I think that would hurt the communication/ understanding between the two when it comes to working together in the future. Thanks for listening to everyone's feedback!!

Overall, the theme of centralization does worry me as this does not actually always make a process streamline and effective. I don't love that this survey did not get very good response rates from the current student body. It severely skews the data. The same goes for this feedback response. I would be greatly surprised if y'all receive a high number of students who are giving genuine feedback.

This report lack firm data. The bold propositions demand a more conclusive and better-designed research system that provides stronger data to support claims. In addition, claims such as the "Academic Realignment" seem to be the product of someone outside the academia with little knowledge of the implications of such changes on recruitment, current students, former students, and faculty. The few propositions that actually look enticing on paper will demand resources that might not justify such change. These few solid propositions should be perhaps the foundation for

continued exploratory research, followed by conclusive research before such resources are allocated.

---

I just think is sad that this report doesn't look out for the future of students and how it will harm them instead of helping them

---

This report is incredibly vague and not supported by any actual hard numerical data. It was simply pieced together through interviews with various people. If they have hard data to back up their claims they should have released it with the report, For example the "perception that the biology department is underperforming" who did you talk to that said this. Why do perceptions matter when it comes to performance it should be measured based on achievement, which in this case would be incorrect. The Biology department brings in plenty of NIH money to the university and college of science and is an award-winning department and has been for the past 100 years. Additionally, as a student who has done his undergrad, master's, and is now working on his Ph.D I feel relatively disrespected in how sudden this report was dropped. Overall I would appreciate and expect that before decisions are made about recommendations that come from this report that the university, the board of regents, and the president seriously review where the results are coming from. In addition to looking at the hard data each department has, perception is a PR problem, not an organizational problem or a case of an "underperforming" department. It is partly on the university itself to fix this problem with help and support from the department. I think this report has some serious flaws in its methodology and how they collected their data and was made

---

I am highly disappointed with the centralization of many campus organizations and departments. It is a shame to see someone who has very little experience with this university try to make such a big change. I understand as a woman wanting to make an imprint but these changes are radical and an extreme waste of time and resources for most of the findings. Also I think a lot of the data provided does not accurately reflect the university as a whole. I disagree with reorganizing the Biology department especially after the progress we have made so far. I think this would be one step forward and three steps back.

---

N/A

---

This is all vague and in certain parts seems to need to be reevaluated, fact checked, and/or more specifics need to be added. If you would like more information on my thoughts or want to know what I think could be improved upon email me and I would be happy to explain better.

---

I believe there should have been more of an effort to increase current student contribution to the responses of this survey. I believe that there was a great disproportion of former students to current students and while alumni certainly have valid opinions about their time at A&M, most alumni respondents had graduated over a decade ago. The university has to look much different now than it did when they studied here, so I think that ultimately the opinions that matter the most for this survey are those of current students. Why, then, were current students so underrepresented? Why were our voices not prioritized? Why didn't MGT Consulting and M+CG do more to improve current student representation in their surveying?

---

I think the campus would benefit from some cosmetic updates through more modern art installations, murals, façade renovations, updated paving where cobblestone currently is, and / or more enhanced landscaping. It is common knowledge amongst students and alum that our campus is a face only a mother could love. It lacks any beauty or charm and I believe it could benefit from some beautification.

---

I found several things disturbing: 1. The cost of this consultation begun so immediately after Dr. Bank's tenure as president implies she wanted to come in and start making changes without listening to faculty and students. I have heard a lot of faculty upset with how this process was handled 2. The first recommendation in the report is that the President's office should get more power. This seems fishy given the fact the President's office commissioned this report 3. The response rate on your surveys was quite low

---

I strongly oppose this recommendation for TAMU

---

I am a student in the Political Science Department. I love the idea of merging it under the Bush School of government. My feedback is that I would love that it be done soon enough so that my degree can reflect that it is with the Bush School rather than under the College of Liberal Arts. Thank you!

---

There is little communication from higher offices with the student population, which is often frustrating. There is an even smaller ability to influence the decision-making process by these offices, which is downright infuriating.

---

I think greater resources need to be allocated to diversity, equity, and inclusion efforts. All efforts that I've seen

attempted to improve quality of life or increasing education on how to confront racism have been undermined or dismissed. It's unacceptable.

It's a huge, shameful red flag that the (a) sample included such a small minority of students, faculty, staff, and campus leaders; (b) survey only collected data for about one week; (c) survey sample greatly overrepresents former students, who may have differing interests compared to current and incoming students; (d) and survey analysis states, "1,775 [student stakeholders] answered more than just the class level question", but fails to clarify how many completed the entire survey. Additionally, analysis of institutional DEI efforts is lacking.

I really appreciate y'all seeking students' inputs. I hope y'all take these responses in consideration when deciding how the University is to move forward.

Howdy, My name is [REDACTED], and I am a member of the Aggie Class of 2024. I am also a proud student in the [REDACTED]. I would like to provide my feedback in this report about the proposed changes that have been discussed in the MGT report. When thinking about the proposed move of the Department of Construction Science I had a lot of questions as I know several of my classmates had. Would Construction Science become an engineering tract, would we be able to keep all our professors (including those without PhDs), would our head of department change? My classmates and I have been discussing our thoughts on the report circulating back to these and other questions. When I first opened the MGT report and started reading about the changes proposed to Construction Science I was shocked to see how little of the article was dedicated to supporting the conclusions drawn. I was also shocked to see how many students were listed as respondents in the first pages of the report. Out of 500,000 people, only roughly 1,000 students had a voice in this report. Furthermore, I do not know of one Construction Science student who was interviewed in the preliminary survey. How can this be? When thinking about this topic, I thought about what it means to be a student at Texas A&M. I thought of our core values: Respect, Excellence, Leadership, Loyalty, Integrity, and Selfless Service. How does this report fulfill any of these values for COSC students? I have felt betrayed over the last few days with the lack of information and transparency that has been afforded to my classmates and myself. We are proud to be Aggie students. We are proud to be in our department. I came to A&M not to blow off and waste four years of my life, but because I wanted to do something with my life. Construction Science has thus far exceeded my wishes in all ways pertinent to my desire to be a Contractor. I have felt the value of my education in ways I know other students at different Universities and Colleges know nothing of. I have seen the application of my skills readily in my life, and I have grown to appreciate even more than ever the Aggie network and its spirit. How does the proposed move value the Leadership exhibited by professors who might lose their jobs if the change happens? How does the change exhibit Loyalty to students who might find themselves in a forced change of major after working for years for their degree? How does this move value Selfless Service to the students of the Construction Science program who came to Texas A&M expecting to receive what was offered from the program? And how does this move represent Integrity when many students have voiced the concern that COSC numbers are simply needed for the Engineering program 25 by 2025? "The primary mission of the Department of Construction Science is to prepare students for successful careers and future leadership roles in construction and construction-related industries." I have seen this mission at work in my own education while here at Texas A&M. "In our department, we treat students like family." I have been thoroughly pleased with the Department of Construction Science and the skills I have been taught thus far. The program has aimed to prepare me for the workforce and to exemplify the Aggie Core Values. It is true that the program is equal to none. The sheer size of companies who are so readily willing to hire Aggie Construction Science students reinforces this point. I mean no disrespect to engineers or the College of Engineering, but the parts that have been so far the least helpful for the development of my skill set have been those classes in my major that most resemble engineering classes. That is not what my classmates and I came here to learn. The report said, "Moving the Department of Construction Science to the College of Engineering will enhance the educational experience and research potential for faculty and students in both organizations." I, personally, and a large portion of Construction Science students cannot see that being the case. Please take this into serious consideration. Thank you.

I know that I am nearing my end here as a grad student. My goal, and overall hope is to continue to teach within my department. This new plan to expand the Visualization Program gives me a lot of energy for the future of this department. I want to see the department change, and the program a place where students no longer say things like, "I wish I went to a different school" and instead became highly desirable and bring in a lot of students to the university. Bringing more students means more money for the school. I realize that there needs to be a lot of resources put into this change, including a state of the art building for this new School of Visual and Performing Arts. I believe the return on investment for the university, and the future students will be tremendous! This new school could also take on all of the arts

courses for the entire university, introduce more collaborations, and push TAMU into becoming a leading research and development university for technology in this field. The potential is here. -- I hope my response and feedback was helpful, and I appreciate the time spent in reading these. I would love to talk about more ideas and wish you all the best of luck in making these decisions. I am willing to clarify any of my responses if needed.

Two comments: 1) University's website is really outdated. It's GUI is user friendly. 2) The ISS really bothers and upsets international students! Really really really inefficient office! Gig'em and good luck

I think this report has huge changes with not much information about the changes. The survey sent out earlier did not include any information regarding these suggestions or changes. The beginning of this report was discouraging in the fact that it appears A&M desires to follow after other colleges in the way our academics are aligned, and I believe our academic programs and structure set us apart from other universities, making us leaders of the future of a public university for the nation.

Over 65 tuition not addressed.

DEI is a very important part of campus initiatives, especially since more minority students are applying to A&M. I do not think it is wise to divert funds to more general educational purposes since minorities and underrepresented groups do experiences structural disadvantages and are often lacking in community on campus. These issues make DEI initiatives particularly beneficial for us.

I believe that moving Construction Science to the College of Engineering is a very big mistake. I specifically chose Construction Science because I wanted to be taught construction from the perspective of actual builders. Throughout my college career at A&M, I have found that the real-life lessons that my professors have shared with me from their careers have been the most useful to me. You just simply can't replace the knowledge of somebody that has actually been there in the field that you are striving to go into. I am worried that a move to the College of Engineering would mean a switch from a more real-life, practical learning environment to one that is not as applicable to my career as a builder. Another reason that I chose Construction Science is the near 100% job placement rating after graduation. It is clear that many companies love what this department is doing and they have for a very long time. This move would result in a large number of companies looking elsewhere for future employment because they would not know if these new graduates would be able to complete the job tasks as well as the past Construction Science graduates. I just ask that before the careers of many are disrupted, our sides to this are heard and taken into consideration.

n/a

I am very pleased that President Banks has taken the time and effort to have this report produced. I think a missing piece in the report is student feedback and recommendations. Asking for feedback after the report is complete is great, however, I believe this University has many students who would provide more, or better, recommendations to improve certain functions. Including student feedback in the primary report is important so other students know that the student body is being heard and represented. We should be part of the planning process because we are the ones who are taking courses, dealing directly with different departments and offices on campus, and more.

Read my comments on the Realignment. Please heavily consider the impact of those actions. I know for myself and others that we would transfer schools(I've talked with peers) if that occurs. That change will de-value our study and work. Geoscience will be forgotten about, especially all the important research we provide. I already know that you don't want to fund our fieldwork but don't take away our identity. Having identity and not being like other schools is what made me choose A&M. But I will leave if this occurs which saddens me greatly as this is a top research facility.

Changes purposed by the management survey report are an example of a failed attempt in accessing the needs of the next generation. Rather it is an example of assessing the needs of the current institute in hopes of generating future income.

Get rid of the stupid and discriminatory Gay person center as well as any department or organization that is gender or race/ethnic specific we are all Aggies regardless of immutable characteristics like sex (commonly referred to as gender)!

This would get rid of more than \$500,000 in scholarships as well as get rid of a program that has a highering rate of 100 percent versus the engineering hiring rate which is MUCH lower. This is a slap in the face to all of the faculty and students in the Construction Science Department.

I disagree with the proposition, I solely chose Texas A&M University for the Construction Science program. I have invested a lot of money into this department and I believe it shouldn't be taken from me.

I Don't really think yall look at this and care. but dont see your problem on trying to save money, US as students pay yall enough if money is a problem look to see where it is being miss used, and put to use by making the students life easier.

I do not believe that Construction Science should be moved to the school of Engeneering. Construction Sciecne plays an important role in the school of Architecture at Texas A&M and is notably known around the state of Texas and the United States.

It would be beneficial to get the Bachelors of Environmental Design degree accredited by the NAAB.

It is my personal opinion that this University has become too large and therefore the value of our traditions are fading. The city of Bryan/College Station can also not support the amount of traffic and people that are on and around this campus. I would push for a smaller student body and therefore a more valuable experience that will keep our traditions going. I appreciate the effort being made to help this University run better, and the feedback called for from students. I wish y'all all the best in consolidating all this information.

I think the COSC department should be moved to Engineering

Just because you have FAILED on your promise of something you wanted to do ma'am does not give you the ability to screw over other people because you don't want to be seen as a failure. This college preaches about its core values. I think you mama need to read back over those values and take a step back and see if this meets all the core values.

Don't fix what isn't broken

I think this report gives a lot of good recommendations for the university to consider. I appreciate the president taking the time to have this report conducted and for prioritizing getting feedback from students and faculty on these possible changes and adjustments.

I think centralizing the advisors is a terrible idea. I feel like when I talk to my advisors they can barely keep track of what my degree plan constitutes. I've heard many horror stories of people almost not graduating due to poor advice from advisors. I also hope you take into consideration Texas A&M is not a corporation. Texas A&M is tradition, its families, and its familiarity. We should aim to progress with the times by hiring better professors and providing more funding to programs than changing the fibers of our university.

Do not make rash changes to be like every other university. We wouldn't be here if we wanted to be in cookie cutter programs. HLKN is a strong department. See what the students and faculty want and cater to that.

Construction Science should remain in its current status. I had lost my interest as a conventional engineering student, but when I discovered construction science, I fell in love with the degree and rediscovered my passion. Construction science is not an engineering discipline, nor does it require interaction with engineers. We are in contact with the architect.

As a construction science student I am extremely worried that the decision of transferring the construction science department from architecture to engineering will harm the major in significant ways. I signed up for construction science because it is the number one construction in the world and that I wanted to be apart of something that was so well put together and is orchestrated in a manner by which I will learn what I need to learn to be most successful person on my job site in my company for my entire career. By transfer from architecture to engineering, the university with jeopardize the opportunity to teach the day to day relationships that construction science careers and architecture careers have in the real world. Not to mention as a construction science student I feel as if the attitude and overall experience that COSC currently has will not be achieved in the engineering department solely on the basis that engineering is not where we belong. The COSC family is one of a kind and if it was up to me there would be nothing that would make me want to change it. So please I urge you to not fix what isn't broken.

Make this survey more accessible/ not as time intensive to read entire report- students don't have time for that, and these decisions affect us greatly.

If they are going to change admissions then expand holistically admissions and other clearly earned paths for admissions. Admitting people just to fit a quota to appear more diverse is just pandering to try and look nice. If we are going to make the campus more inviting to other communities then fix the problems on campus.

I think it's very troubling that there was a huge lack of communication between the admin, faculty, and students regarding this report. I should not have found out about the report through The Battalion, nor should I have had to find out that professors were being kept in the dark from that same article.

I agree with the report that DEI efforts are not enough. As an Asian American student, I rarely see myself reflected in the staff or in the coursework I am learning. It is much harder to feel like you are part of a school community when it feels like the school is not reflecting your interests or your ethnic background.

I find a degree from the College of Arts and Science to be much less appealing than a degree from the College of Geoscience.

I respectfully think that there shouldn't be a merger of departments or libraries.

Some of these are my comments some are someone else's. 1. It is interesting that Business was not included in the "mega-colleges" proposal. I suspect that this omission will not go unnoticed in that college and someone will regret it. 2. Consolidating Science, Geosciences, and Liberal Arts is going to be a difficult transition. The climate of the three colleges are very different from each other. I would say that it would be like trying to blend oil with water, but am at a loss for the third element to combine. Air? Yeah, air will work for the analogy. 3. Outsourcing Transportation Services has the potential of making an organization that is already perceived as being unresponsive to the concerns of the people it serves into something that matches that perception. It will also probably destroy the livelihoods of those who drive the buses. 4. Consolidation of advising into one central office may make transfers easier, but it will be done at the expense of advisors getting to know the students that they are advising and the programs that they are putting the students into. 5. It is interesting that several programs have been proposed to be absorbed by the already over-stretched and ineffective College of Engineering. 6. Personally, I think that having the Library independent of the various colleges makes it stronger and less likely to become a source of turf-wars between the colleges. 7. I like the idea of a museum - we have needed one (besides the Bush Library) for a long time. 8. Viz could definitely benefit from being somewhere other than Architecture. While A&M has long proposed doing something with fine arts (I had a friend who came to A&M to study fine arts in the late 1970s on the promise (obviously unfulfilled) of a program being created), it has been unrealized. 9. Doing away with the Journalism degree did not make sense at the time. In these days of dying print journalism, it may make more sense to leave it dead. I'm of mixed mind on this one. 10. It looks like the Provost's office is being massively stripped (with things being given to the president's office). 11. Does A&M really need more Vice-Presidents? 12. While the scattered IT entities that serve the whole campus don't make sense, embedded IT in colleges and departments does. If A&M is serious about IT security, decentralized IT staff that actually know the faculty that they are trying to support (and can develop a relationship with) is extremely important. The quickest way to make faculty bring their own computers that can't be secured is to make it harder for them to use the ones that the university provides. 13. Please do not combine Poli Sci with the Bush School. As a bush school student this would be a disaster. Your report findings show that you want to increase the emphasis on art, be it media or music in nature, but there's currently an issue with the art program itself. I am a student with an art minor, but I am currently one of the last students in that minor. It is underfunded and understaffed. I would love to see more of an emphasis on the arts and be able to take a wider diversity of art classes and have a&m have a higher priority for it, but we currently lack so many students because we lack the ability to do so. If we could start focus now on expanding and making the arts more accessible to all students interested, it would be greatly helpful.

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

I'm not sure if this was talked about, I tried to find it but didn't find it exactly. I believe that the College of Veterinary Medicine and Biomedical Sciences (CVMBBS) should have more autonomy from Main Campus. I can't immediately remember all areas that having to rely on Main Campus causes issues but one recent one is that when we have issues with class material posted online, one of our IT people ( [REDACTED] ) previously had a student login for Moodle so he could see what we students see so he could troubleshoot issues. Even though he has requested it, he has not been given this ability with Canvas since we have switched over from Moodle and it has caused issues and confusion that could otherwise be avoided. In general, anytime we students ask why something is happening the answer is usually "because that is decided by Main Campus and we have no control over it". I believe that this is inefficient as Veterinary Medicine (Vet Med) is highly specialized and I don't believe it can be run in the same way as other colleges. It should be overseen by those who are in the field and know what makes sense in the context of Vet Med. Thank you very much for your

time and consideration!

---

The College of Science SHOULD NOT be consolidated with the college of Arts.

---

These proposals suck.

The recommendation to consolidate into four large colleges is alarming and saddening. I desperately urge the university to reconsider the benefits of smaller colleges, particularly in regards to student retention and recruitment, faculty and student wellbeing, diversity, and research. As a geology student in the College of Geosciences, I speak for myself and my peers when I say this will remove the main reasons students come to A&M for geosciences. When searching for colleges in high school, I originally ruled out A&M out of fear of being swallowed up in a large school. Upon touring the campus, the familial culture of the College of Geosciences, the small class sizes, administrators who know you by name and are willing to bend over backwards to help all endeared the A&M to me. What was unthinkable became my first choice. Many of my peers chose A&M solely because of this. By removing this significant benefit, you will be losing a large portion of prospective students resulting in a lower overall caliber of student recruitment regardless of your efforts to better it. Now a senior, I love the College of Geosciences administrators and advisors, having been able to build personal relationships with them that the large colleges cannot boast. If we are merged, many of these stellar administrators will be laid off or overburdened by the addition of many times more students and a wide-even hodge-podge- collection of majors. We here in geosciences can trust our advisors to know us, our personal goals and struggles, and know they will do everything in their power to help. Not so in the other colleges. In the College of Engineering, for example, advisors do not even know the students faces and the relationship is stiff and cold. I have known many engineering majors struggle to get help in applying for classes, learning of resources etc. because their advisors are so overworked. Merging will only exacerbate the struggles of the larger colleges while dragging down the smaller. This lack of support will inevitably lead to higher dropout rates and mental health struggles. Students like me will feel more isolated, not less. We identify not just with the university as a whole, but as a college with its own unique culture that will be lost with a merge. This move will also harm diversity. It sounds counterintuitive at first, considering the College of Geosciences long struggle with diversity. I make this claim primarily in regards to scholarship. Geosciences is a college with lots of funding due to our important research and participation in IODP. We pull in well more than our weight, especially compared to the arts. The college takes a significant amount of grant money brought in by professors to aid in scholarship and facility development. For our professors, it makes sense that this money is taken as it will be fed back to their own students and facilities. If it is shared with the liberal arts, which brings in much less money despite its larger size, the cut of money being fed back into researching, funding earning students in the College of Geosciences will be harshly reduced, resulting in a lasting decline in productivity and therefor income. Scholarship money is already spread thinly in our college as it is, and it is a significant help to those students who can get it, particularly minorities. If we merge with the Colleges of Liberal Arts and Sciences, our money will be redistributed away from us as we are a much smaller number, yet more prolific college. Our scholarships will be reduced further to accommodate this reduction, pushing poorer students and minorities away from the geosciences when we should be striving for the opposite. Additionally, the merge into a College of Arts and Sciences will hurt the image of our colleges. When I hear arts and sciences lumped together, the first thing that comes to mind is weak science. Is that what we want our university to represent? Prospective science and geoscience students want a college tailored to them and their needs. Think also of the college specific Living Learning Communities (LLC). These, specifically the Geosciences LLC as I was a member and peer mentor of it, strives to welcome students, give them a community of students with similar interests (the geosciences) and teach them things that are useful to know in their fields. An English major wants to learn aesthetic writing while a Meteorology major needs to unlearn that from high school and learn technical writing. Research, job searches, interviews, types of classes are all vastly different. LLCs are able to specially design their courses to best help their specific students. The LLCs and colleges know this and tailor their resources accordingly to best fit their students. This helps both the students and recruiters in promoting our familial image. Loss of high quality applicants could even lead to the loss of IODP, a major source of pride and income in the College of Geosciences and unique to us in the entire western hemisphere. Even risking its loss would be irredeemable damage to our image and recruitment. Art and science are both noble fields, but are too different to reasonably combine. One or the other will suffer as what is beneficial to the arts will harm the sciences and vice versa. Are such minimal benefits as the convenience of a few upper administrators really superior to the wellbeing of faculty, staff, and students? Has a single person wished their college was larger and less personal? I think not. There are other ways to insure consistency of values across the colleges

without merging that will not result in lower enrollment, fewer scholarship opportunities, higher dropout rates, worse mental health and community. Reducing spending is no use if it results in an even larger loss of income. Because of my strong love for this college and university, I beg you to reconsider.

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

I love this university with my whole heart and am proud to be an Aggie every day. Some people may think our traditions are outdated or we need to "advance" more socially or politically, but the traditions and core values of this university are the reason so many individuals want to be students here. It is a magical place, and I hope that we can continue that so some day when my children attend Texas A&M, they will get to experience the same incredible culture I did. Also, thank you for giving us students the opportunity to provide feedback!

Fish camp should continue to be student led. As [REDACTED] and someone who has been around the organization for awhile I know it has its faults, just like any org. But by removing student leaders who care about fish camp and who have experienced it you are damaging the experiences of future freshmen. Fish camp is as special of a thing as it is because it is student led, not in spite of it!

Please make central campus more bike friendly.

None

Really liked most of the ideas they came up with and hope to see these implemented in the near future

All in all, I've had a great experience here. However, I would say stop artificially growing the student population. Many of the facilities, classes, and parking lots already have too many students, not to mention the streets of college station. Cutting back on admission to a level comparable to recent years would not hurt A&M's financial status enough to offset the gains made in quality of student experience if it weren't so overpopulated. Just my opinion and something I've felt since the very beginning of my career here.

I do not think the idea of mega-colleges is a good idea. While some colleges might benefit from merging with other the arts and sciences college is not a great idea in my opinion. Those three colleges all handle things so differently they just would not mix well. A lot of these suggestions on the report are dangerous for the university. A university should not run like a business. We should care more about a proper education and improving the lives of students than money

none

put money were I need, not another rec. keep the recycling program, since they have taken away a lot of recycling, make it more accessible- and actually recycle it. academics need to be more open to every one also with disabilities. A&M has never been like the other schools, SO WHY ARE WE STARTING NOW TO BE LIKE THEM?

Overall, I like the centralization of leadership and tasks. I often feel at the dental school that we have to wait on a bunch of different offices to get approval for certain things and it's often by people who don't take the time to understand our issues. The dental school feels like an afterthought to CS campus. The new building is great and all, but a lot of the teaching and clinical practice is outdated and we are limited by old-school faculty who don't practice evidence-based dentistry or by CS people who don't approve of requests to enhance the student education.

I would like for TAMU to have a welcome desk and information desk for visitors/rivals at home football games. I had 4 friends go to a game last season, rooting for the other team - but still was glad to see them go and experience Kyle Field. They told me, no one talked to them or greeted them, or made them feel at home. I was so disappointed. I always hear about other campus visits like Notre Dame where rival visitors are welcomed with open arms and made to feel special - as they understand that going to visit their school is a bucket list trip for most. Kyle Field has become this way - but we need to make the rival team visitors feel at home. Also - first time visitors. I have seen lots of parents and guests look so overwhelmed. They should get a special badge - and then everyone knows to make the experience extra special for them - at the gift store, concessions, ushers, fellow students, alumni.

Combining McFerrin with Engineering Entrepreneurship... Engineers definitely benefit from these courses more than ever like practicing speaking in front of people, and coming up with a business plan. Most engineers will go into management roles one day and their current curriculum doesn't prepare them for the business side in the corporate world... We could create incredible leaders driven in innovation by all the McFerrin center has to offer. It is difficult with the schools being so far away from each other, but I feel like the impact would be incredible if there were joint forces.

I believe the majority of these are good recommendations and should be implemented. I think you will find pushback from within the org structures. I do believe that should have new blood with the same perspective of what you wish to accomplish. If you don't believe in the vision, how can you obtain it? Find the people either inside or outside the university. The ability of remote work has opened a new area of opportunity for the University. They need to embrace remote work and flex work. The amount of space saved on campus, and carbon emissions is a success story. If you have the ability to hire someone from Florida to work at TAMU remotely, depending on the office/duties, it should be invested!

I appreciate the idea of centralizing everything except I am curious as to how much this would cost and if it would be feasible. Additionally, would this create a slower system similar to how things work in the Federal/state level?

As whole, it seemed as though the recommendations of the report were not intended for the benefit of the students. The students seemed to be nothing more than an after thought once improving ranking and any monetary components had been considered.

N/A

I believe that a lot of issues would be resolved if the higher ups took into consideration the wants, needs, and concerns of their faculty and staff. There is no fixing the issues if important voices are silenced because they don't align with what the president and higher ups want to do.

Dear M. Katherine Banks, I simply want to express a note of joy and congratulations. What a long, long way this university has come. But isn't it all about growing and expanding our perspectives? I like to think so. I transferred to TAMU in the 70s because my fiancé was finished at ACU and going on to TAMU. He thought it might be a really good idea for us to get married, and for me to go to TAMU with him. I was an art major (no art studies at A&M in those days) but I went anyway, and decided to figure it out from there. I realized, at once, that I was limited there. There were few female students on campus at the time. I think the ratio was 11:1 or something like that. It was a decidedly non-persona world there for women in those days, especially women of voice. I ended up majoring in elementary education. There are two professors I particularly remember: one was my Elementary Language Arts teacher, who regularly told us that being a female student on the A&M campus was "just like being a fairy princess" (I could not possibly make this up) and the head of the department, who saw who I was and encouraged it, not because it fit the mold, but because he believed it would be good for children. He took a world view. I spent all of my time on campus in the Harrington building with the other young wives, even though I really loved the meteorology program. Some truly inspiring teachers in the meteorology department, so compelled their subject---but every single class was completely filled with male students. It was quickly made very clear to me that I did not belong there. So, I did become a teacher, and, in fact, was the first education major at A and M to earn a perfect trifecta--in those days, an education intern was evaluated by a committee of three: the supervising teacher, the evaluating supervisor assigned by the university, and an assigned faculty member. It even made the school newspaper. And I ended up loving the profession that I considered foisted upon me at the time. I have no regrets. I did eventually become an art teacher, but I taught many other things as well. Over the course of my tenure, my audiences included students from pre-K to university and adult levels. I was a Fulbright scholar. My contributions to the early synthesis of technology and education are housed in the archives of the Age of Information Gallery at the Smithsonian Museum of History. I am a [REDACTED] etcetera. I've been invited to speak to educators all over the world about my ideas, my work, my students, my passion. I've had, and am still enjoying, a full and beautiful life--and am still married, for 43 years now, to that sweet, strong-minded boy who thought we should head out into the Texas sunset together all those years ago. But good for you, M. Katherine Banks! I sincerely doubt that we will ever come face to face, but I want to state for the record that I am so proud of you, and what you will accomplish. Regards, [REDACTED]

The way that the colleges and academics are set are perfect the way they are. These drastic changes will overall harm the quality of education at the university. A true shame.

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

N/A

If the issue of communication is the source for desiring a consolidated advising department, I do not think the communication skills of the faculty will suddenly resolve with the consolidation. If communication is the problem, that should be addressed through training and management.

I think a Performing Arts School similar to the one recommended in the report would not ultimately benefit the university. The amount of time, effort, and funding needed to promote this new college would distract from the needs of the schools that already exist on campus. That being said, I think a Department of Journalism would be a noteworthy addition to the University and the College of Liberal Arts/College of Arts and Sciences. If t.u. has one, we should have a better one.

Overall I don't have much to say about each section above on its own but about the idea in general. The combining of the sciences into one big science is not a good idea as it defunds resources for the students while also making staff go into a general science space instead of being split up based on their separate studies in a certain major. Overall the best way for students to learn and grow is to keep the majors and their buildings as they are.

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

I believe that centralization in many respects is important, as well as maintain a well-structured organizational system for the university. These do not, however, constitute greater transparency. Much of that comes through better communication, which must come at a cost of saving face sometimes, of which the university seems to do a lot. The COVID-19 pandemic exacerbated already existing weaknesses in transparency and communication between faculty and administration, which trickled to affecting the graduate student population. It seemed nobody could get any clear answers out of anybody, or get any notion as to why or what the lines of communication were. There seemed to be an awful lot of responsibility-shedding at all levels of the organization. I'm also concerned about the shifting of some responsibilities on already-taxed faculty, who have expressed that there simply isn't enough time to satisfy research, teaching, and service responsibilities, not to mention additional administrative tasks.

I really enjoyed the attention and recommendation brought up about the Technology Management degree. The degree plan feels inadequately placed in the Department of Education and Human Resources. Since it has such close ties(2-3 class difference) with the Cybersecurity minor(which is located in the College of Engineering) it makes more sense for the whole degree plan to be relocated.

Want to have more money? Give less money to engineering and sports, other departments need it more.

As noted in the report, the effectiveness of DEI efforts are scattered. I think this is because both sides do not want to compromise. The people who think it's adequate are bombarded with trainings (that make them less interested in the subject), while the other side pushes for more (that they believe everyone will learn from).

TAMU needs to invest a lot on its graduate students. Graduate students feel neglected, as compared to undergraduate students.

I would agree, in that many of my frustrations are with aspects of the university being very decentralized. Looking to the future I would very much like to see more unified art and performance spaces that do NOT require extreme funding (Rudder), as this dissuades arts organizations and student-led performances from occurring. A campus museum that houses and showcases departmental collections and research would very much help to unify colleges, faculty teams, and students.

I think it is time to change up the ticket pulling aspect. Shouldn't be waiting in line for 24 hours to get a ticket to a game in which I already paid for the sports pass to receive the ticket. I'm not saying assigned seating, I'm saying to remove ticket pull but just do it better so that it is more reasonable and possible for students that don't have time to pull tickets.

N/A

Just remember you are representing the Texas A&M University, you have to adhere to the values, ethics and views of the University's current students and Alumni. Not the other way around. You're not representing the University of Texas or any of their systems..

It seemed like the vast majority of suggestions called for significant increases to department centralization and staffing increases. One of the benefits of A&M's decentralized approach is a low overhead. A&M provides a great educational experience for a great value. Let's not change that to a great experience for a pricy value

## General Feedback - Former Student

Please provide your comments related to general feedback, process, or other sections not listed above:

---

Student focus should always be paramount. When you must choose between students' best interests and the interest and ease for faculty and staff, the students must always come first! Sincerely, A former student and a 29 year educator  
Advising is often poor even when the advisors know the program they are advising. I can only imagine how bad it will be when everything is global in nature and not specific.

---

While reading this report, I felt like it was focused on the fact that Texas A&M was different than other universities and that it should be changed to be like the other universities. Texas A&M is a world renowned university and we should be exploring the strengths that make this university unique and building on those strengths. Texas A&M does an excellent job of preparing its students to excel in their chosen career and to have the leadership skills to become leaders in their respective industries.

---

My spouse and I, both Aggie graduates, applaud heartily this project. Both of us have worked various jobs for various companies both for-profit and tax-exempt, both Fortune 200 and independent entrepreneurs. Each of them accumulated their shares of bloat and departmental self-importance that overrode their stated goals and functions. Each needed to self-evaluate, to go back to their "Worker Bees" first when trying to determine how best to serve their stated interests, to survive and thrive in our very competitive corporate and governmental markets. A&M should "Lead by Example" in taking the difficult but very necessary steps to slim down, rearrange and reallocate resources and personnel, completely reimagine how work can best be accomplished to meet the needs of our customers (students, staff, faculty, taxpayers). Life is not fair or easy. Never has been or will be. But we as Aggies and as leaders and members of the Aggie community can make it better for ourselves and those whom we serve as educators and researchers. THANK YOU for taking on this monumental chore. It's long overdue. But we CAN do it.

---

Very well done, thought provoking survey. It seems as if A&M has become so large that it operates inefficiently in some areas. Probably to be expected, but I am glad that it is being addressed. I do hope that A&M's overall culture will remain consistent with its core values and conservative nature. Giving in to the beckon calls of today's media is less important than holding on to what makes this a truly great place.

---

I love A&M, and I understand the need for it to grow, change, and evolve over time. I clearly don't agree with everything suggested in this assessment, but I think it's good to be self-critical, even as an institution, from time to time. The beginning of this study though was pretty vague on what the larger goals of the university are. While I was there, A&M established "Vision 20/20" which was a relatively concrete goal in terms of investment in faculty & staff and seeing a reflection of that in university rankings. I don't put a lot of stock in the rankings, as the popular ones (US News & World Report) to me don't include unbiased criteria. I hope A&M is not just striving to win a popularity contest, but instead is striving to better serve its students, state and country. It would help if part of this report would clearly state what the university hopes to achieve by implementing any of these changes. One other real concern I have is that TAMU seems to be turning into a bit of a diploma mill. This is part of why I oppose the creation of the college of liberal arts & sciences. Student debt is a big topic right now, and ever since tuition was deregulated in the early 00s the cost has skyrocketed. A&M should care that it is preparing students who take on that amount of debt to succeed in life, including financial stability. There is also an element of prestige to not accepting every applicant just because they can write a check. Please don't let the business of college overshadow the mission. Thanks & Gig'Em.

---

DEI will be the death of Texas A&M. It is not a hallmark, particularly the E (Equity) portion. Give [REDACTED] a huge raise. The man has earned it. Get instructors who can teach without a student having to strain to understand. This is a HUGE deal that the Faculty Senate does not want to address.. One of my best professors was [REDACTED] an Egyptian gentleman who was raised in Great Britain. He spoketh the Queen's English. The man was a delight. The worst professors were those whose foreign upbringing weighed heavily on their speech. Passing the TOEFL is not good enough. These persons cannot communicate well, and have no business teaching in the US. We want to help students in their learning, not present difficult and needless walls.

---

Don't fix it if it's not broken!

---

This report has many recommendations, but a number of them are way too short on specifics and lacking in detail. Many of the proposed recommendations are far-reaching and could be significantly impacting, including in negative ways. Many recommendations also centralize processes and operations. While this can occasionally be good, it can also

result in increasing bureaucracy, impersonal service, and inefficient services when the centralized unit develops problems. There are a number of recent examples of that happening at Texas A&M under auspices of somehow improving services while cutting costs but what happens is that both costs and services get cut. In sum, too many of the recommendations in this report should not be implemented, and that does not instill a great deal of confidence in it overall.

Dr. Banks, My hat is off to you to go through this process. I thank you for the opportunity to provide input into this report. My apologies for I had personal demands that didn't allow me to thoroughly read this report and respond directly back by section nor provide initial input. However, I would like to add a couple of general comments that are extremely important from my perspective. They may not be in line with the organization and process feedback you are asking, but without the following, the organization and processes become rudderless leading to a decay of this great University. First and foremost, anything and anyone tied to the University must exhibit those 6 core values. They are the foundation of the University and should not be compromised. Diversity, growth, increased quality, and other initiatives including many contained in the report cannot be successful long-term if the core values are compromised to achieve them. Overcoming mistakes can be achieved if those core values are not compromised. There are individuals that confuse diversity with diversity in values.... Mistake, those can go elsewhere. All activities with the University and the supporting organizations must treat those core values as the roots to this great University. Second, strive to maintain ties with ALL former Students and not just the Elite... [REDACTED] often states; "We strive to be Elite, but not Elitist". This means establishing/maintaining ties with All aggies and not just the Distinguished Alumni or large donors. All former students must feel a tie to keep this University on the trajectory it wants. A HUGE opportunity is being missed and actually showing a divide with the Distinguished Alumni Monument in Aggie Park without a tribute to the other 99+% of former Students. Some of those have some remarkable stories which make up the fabric of the quilt that represents this University. Thank you for taking the time to allow us to provide feedback. Gig em! [REDACTED]

Increased centralization is one of those ideas that makes sense to academics, but not to people with real world experience. I don't agree with strengthening the role of the President's office.

students first. always. NOT MONEY

Stop having perverse events like drag queen shows on campus. Promote a campus life that is inclusive of conservatives and Christians.

This MGT survey was an abomination. Pushing the narrative further to change the campus and overhaul it to be another run of the mill university. What gives Texas A&M it's strength, power, and future, are the very things that make us unique. Curious how none of the universities we were peer/compared to are even in Texas. These comparison universities are beneath us, or different entirely, in the same manner as milking a cow vs milking a bull, and the complaining that your milk tastes differently. Cherry picked data to justify hitting Texas A&M with a banhammer and to alter the university, remove it's identity, entirely. People say that what we identify as matters, well Texas A&M identifies as Texas A&M, and if you refute that, you're a bigot and are dismissing the lived truth of A&M. Yes the College of Engineering is huge, as it should be. Advising is decentralized, governed by each major, as they should be. You'll never have a one size fits all approach, and trying to shove the university and it's respective colleges into a "big box store" feel, as this report would suggest, destroys the very fabric of what makes us Aggies. Trying to shove in 25,000 engineers by 2025 risks diluting down the degrees or simply put, dumbing down the curriculum to pursue more students.

Additionally, merging the College of Fine Arts and Sciences, as many smaller east coast schools do, does not make sense nor enable either entity the ability to perform as unique and necessary institutions on their own. If you wish to improve the university, might I recommend cost saving initiatives like never paying for another such a slanted and asinine survey again. Perhaps considering cutting the University Administration's salaries by 10% as well. Speaking of cost savings, DO NOT outsource student on and off campus transportation. The current model makes sense, and such outsourced services at other universities always ends up being more expensive in a matter of a couple of years than any immediate cost savings might hint. You will pay more, get less, and be confused as to why... Why was this even an option? Look at what happened with outsourcing dining services. Pursuing diversity over meritocracy, over talent or the outcome, is a fool's errand. Diversity should be cultivated organically and naturally, not forced and mandated. Diversity is great, but chasing metrics and numbers over anything else and rejecting the notion of assimilation while encouraging the students to celebrate what separates us is not healthy. Change for the sake of change simply to change and virtue signal will not yet results, will not bring us together, and will not continue the ability of A&M to be a natural melting pot. Let talent

speaking for itself, and let those who wish to join A&M do so freely. The desire to erase campus landmarks to resemble west coast university appeal also does not sit well with me. Remarks about the Corps of Cadets being "too Caucasian" is not only insulting to our diverse group of Cadets but a surface attack on the Corps' rich history and selfless service. Creating more commissioned officers to the US Military than all the service academies combined should tell you that the Corps has the ability to form the talent, respect, and love for each other that is required in a military environment. The Corps of Cadets, and the College of Engineering, are fine examples of successful melting pots creating cohesion and powerful leaders. As they say, Highway 6 runs both ways. If faculty, administration, or students, do not like Texas A&M, they are free to leave whenever, and can go attend or work for a university more aligned with their emotional support needs. Those who wish to be Aggies will be Aggies. The University has thrived for a century and a half being run the way it is... Forcing us to change to be similar to UCLA or Maryland will destroy our identity. I say this as a First Generation Aggie, who came not from wealth, but a family of poor immigrants, refugees, and poverty. As the first in my family to go to college, A&M represented everything I aspired to pursue and be. I took on tremendous debt to break the cycle of poverty in my family. Texas A&M was the beacon to freedom, and it still is. The desire of the MGT survey however risks undermining that legacy for the Boogeyman fighting game of "equity" and "diversity and inclusion" while throwing out the University as we know it. I strongly believe the MGT Report offers the chance/opportunity/paper thin justification to radicalize and change the University to better suit the political leaning aspirations of those who dislike Texas A&M.

---

The report is good for the most part and will likely provide a good roadmap for the next decades at TAMU. Without critiquing the individual items, I have concerns that TAMU is going the way of many public institutions and becoming too politically sensitive to ideals that are not in line with traditional, rational viewpoints. Not creating institutional bulwarks against these outlandish and incorrect politics provides inroads to political agendas that seek to destroy the long-standing culture at TAMU. Yes, many of the time-honored Aggie traditions may be outdated, but to re-write history to a narrative that destroys the institutional foundations of TAMU is ludicrous and paves the way to mediocrity and conformity, both of which should be avoided. I suppose that as a general rule, diversity in both students and faculty is a good idea, but the definition of diversity must be carefully defined to ensure these criteria are not utilized for anything other than legitimate collegiate affairs. In other words, diversity and its associated faculty positions and educational thrusts can and are being manipulated by factions to further their own pet causes that likely do not or will not ever benefit TAMU. Care must be exercised to not create a bias when seeking diversity and the outcome must be a natural one that is not contrived to meet some arbitrary standards or criteria that satisfies some political or societal movement of the day. This means that all students and faculty must be judged on their own merits that are relevant to the chosen area (students by academic and other relevant abilities; faculty by experience, knowledge, speciality, etc.). By injecting artificial criteria into the selection process that have no relevance towards the intended outcome, including race, gender, nationality or maybe even financial resources, the outcomes become skewed. In my estimation, when basing these decisions on anything other than merits, the process inherently overlooks many qualified and legitimately diverse peoples. The actualization of diversity must be organic and be directed by the "invisible hand" of the free market. To do otherwise is to nullify the outcome from the get-go.

---

As a former student, and with A&M's continued growth, I am worried that Aggies are trying to become more like other institutions. The conservative values held by the student body when I attended is one of the reasons I attended. Texas A&M was unlike any other place I searched. I think becoming more like other institutions is a mistake as the closely held traditions at A&M make it stand apart. This thought of 'inclusiveness' is detrimental to our society. Do not lower the entry standards to try and fit in some certain demographic. Hold on to A&M's history.

---

Please contact me to discuss the Department of Construction Science. Construction industry professionals would very much like the opportunity to express their serious concerns. [Kyle.h@agchouston.org](mailto:Kyle.h@agchouston.org)

---

I am proud that my university is taking the time to provide the report and ask for our feedback. I am proud to know that my opinion matters in my Aggie Family. As a First Generation College Graduate, the changes proposed by the report helps all students and understanding not only the demographic of Texas but the entire nation is important to the success of TAMU now and in the future. I am also here to help in any way I can. I think the TAMU Systems needs to embrace the support of the former students especially those who are able to do so now that they are more senior or retired.

---

Howdy, My name is [REDACTED]. I am a [REDACTED]. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I [REDACTED] I have always worked in engineering when I was using my degree. [REDACTED]

[REDACTED] In those years, I had to often correct people who thought I was an engineer and explain that “my degree is in Construction Science which is in the school of Architecture”. It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don’t know how that plays with never being able to develop from EIT to PE and so forth. It’s a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn’t an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, “Some women were made to bake cookies, and some were meant to be engineers.” I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn’t become so elite that a student similar to myself wouldn’t be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn’t have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn’t have the math and science components that the other engineering degrees require, and it doesn’t need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, [REDACTED]

---

The survey questions can be improved, provide some context for each question. Not all of use read the daily bugle

---

The sheer number of students now attending A&M is TOO many. The infrastructure is pushed to the limits, not enough advisors, not enough classes, traffic, parking issues, etc. It’s time to lower the cap. Our youngest is considering a different college just based on the challenges of too many students. Don’t dilute the value of the diploma!

---

Having professors with a language barrier are a significant challenge for students. How can they be expected to understand content when they cannot understand what the professor or TA is saying?

---

Online classes need to end. Stop the money grab. If Tamu doesn’t have enough faculty to teach, hire more faculty or decrease the student population. Students are yearning to sit in class and learn.

---

I love A&M as a former student. I have two children there now and hope for more but I love it less as a parent. It is getting too big which would be fine if you had the amount of classes and advisors needed for growth. I hear every year how I can’t get this class or I can get into an advisor. Keep A&M great but If it’s growing make sure you are providing enough resources for those you are letting in.

---

The results of the surveys and interviews conducted for this review indicate a large percentage of the university's stakeholders are satisfied with their educational experience and think Texas A&M University is currently headed in the right direction. However, the consulting group still recommended some rather broad and sweeping changes. While I wholeheartedly support increasing efficiency and eliminating waste, I don't think fundamentally changing the culture and structure of the university is necessary to achieve those goals, especially when most respondents have expressed satisfaction with the current situation. Change for improvement is good. Change for the sake of change isn't necessarily

good. Change to reflect the values of or imitate peer institutions is not good, in my opinion. Texas A&M University is unique and provides an exemplary education in an environment deeply rooted in tradition and shared values. I, for one, would like to see it continue to do so for many generations to come. Thanks, and gig 'em.

Thank you for providing the opportunity to provide feedback. Sadly, I do not believe that any of the feedback that I and others will provide will actually be used, but I have chosen to submit it to prove that we are reading emails/overly lengthy reports.

As Dr. Banks stated in her October '21 interview in the Texas Aggie, "Aggies are leaders, not followers. Aggies live our traditions and our traditions represent our values". Without our Core Values we are just another university. Again, it is my belief that the Corps of Cadets are the epitome of these Core Values and without a strong Corps of Cadets, we are no different than any other university.

GENERAL FEEDBACK While the report in many ways is excellent, and there are many excellent recommendations, it has several glaring weaknesses and mistakes in their comments/recommendations. 1. Their recommendations ignore economics and realism in some instances. The very last sentence of the background first paragraph fails to include a key, "The consultant team... success, "add" and the economic means, ie, required investments/expenses such changes would be required to achieve such changes. Problems are solved by identifying the required and the given, and then solving. The consultant makes some recommendations without reviewing the reasonableness of their recommendation with regards to economics and just says substantial investments are required, does not state how much, what the return on investment would be, etc. It is just assumed by the consultant that whatever the investment required, it would be good to do so. 2. The consultant never states how much can be solved by its consolidation of departments like IT, Facilities, etc. Certainly it appears that many of the consolidations would reduce expenses and increase efficiencies, but what are the cost savings? 3. The consultant says A&M's diversity is lacking and does not reflect Texas. The problem with educational diversity is the education problem starts at Pre-K, grade school, middle and high school, and at the home. One cannot solve it at the university level. You have lost the greatest part of the battle and waited too late. We can do our best to recruit Texans - of all diversities, and A&M has achieved significant diversity when one considers - we are #2 of all universities in the USA of Hispanic enrollment in engineering and number one in women enrollment of all engineering schools in the USA. We must start earlier in offering scholarships to blacks and all disadvantaged races because ivy league, Stanford, Duke, Rice, etc schools offer to such disadvantaged races scholarships that they must accept or lose before A&M even sends out scholarship offers, even though we offer such scholarships in November of the high schools senior's year. These schools offer our best disadvantaged students earlier and give such students a deadline for accepting the scholarships by December 1, before our scholarship offers have arrived in their mail. The consultant lacks experience in their statements of understanding the problems in the education process of the disadvantaged, where the problem originally lies and must be solved, and the recruiting process of disadvantaged. Furthermore, A&M should not recruit from only Texas and the southeast, but Texas primarily and then the entire USA and to a lesser extent globally. Recruiting diversity as stated herein can provide as much or more understanding of cultures, tolerance for beliefs, and selfless service benefits than the undefined large monetary outlays recommended in the arts. Though investments in arts is certainly good, one needs to determine and measure what is the return on investment of such investments. 4. All recommendations should be rated for their return on investment and then ranked. For example, the return on investment of a college education may be defined as - can students receive good paying jobs that encourages other students to also attend A&M? At the end of the day, students must be able to earn a return on their investment for their education in good jobs that have a reasonable return for their investment. If a consolidation or restructuring of departments saves money, state how much in expenses is saved and the rate of return on doing so. Too little is said or provided on the economics evaluation. The consultant just makes sweeping statements that money is saved or duplication of services reduces expenses. 5. No estimate of future budget cuts by the state of Texas are estimated. It is clear state funds will be decreased as a percent of A&M's total budget. Already it has decreased over the last 20 years such that state funds are only 14% of A&M's source of funds. Economic survival with a future decreasing of state funds must be a consideration of any realistic plan. 6. While recommendations of group inputs is good, it is important that the President has the power to make decisions and not be handicapped by a more powerful coalition of leaders. An example is TAMU's COM. It is highly dysfunctional yet the President is hopelessly unable to correct or change the situation. COM's dysfunction affects the viability of EnMed. No one of experience or stature from the COE is on COM's committee that chooses the Dean of EnMed, and no one from COM involved in such choosing of the EnMed Dean even has an engineering degree. The President knows this but is without any authority or power to correct the situation. ----- On page 108 of the report, it states the

response overview. One critical item overlooked is the requirement of having the necessary funds required to achieve these top priorities. The state of Texas is reducing annual funds provided to universities as a percent of that university's budget. A & M 's funds provided by the state are now approximately 14% of the A & M annual budget. In addition to all items mentioned by the study, it is an absolute must that A & M continue to produce positive results in research, faculty enrichment, student enrichment in selfless service and personal growth ( Leadership, teamwork, all A & M core values, etc.) and excellent job opportunities and superior salaries for graduating students to continue to attract students to attend A & M. A & M's significant growth over the last 50 years and even more so recently is because of the student A & M attracts, and A & M produces. This success story needs to continue to be the foundation of how A & M will continue to fund itself and grow with less and less state support each year. In short, A & M needs to consider how to be self-sufficient as a university as if the state will not be funding it in 10 to 20 years. I am not stating the state funding will stop, but that the percent of A & M's budget supported by state funding will continue to decrease. On page 109 of the report, the High Level SWOT Analysis says: 1) A & M has limited financial resources for recruiting talented faculty. When the number of National Academy of Engineers and other distinguished positions outside of engineering has increased dramatically the last ten years, and our engineering dept NAE's exceeds that of UT, Rice, etc., then statewide the comment lacks support, but perhaps nationwide this statement has more truth. We need more facts to support the statement made by the consultant. I would agree that we do need to continue to build a significant stream of funds and endowments that can continue to be used to attract talented faculty, researchers, and retain excellent staff. 2)The statement " The notion of an all-male, military component of the school impinges upon the culture of higher education." This statement is inaccurate, and in my opinion, false. First of all, the Corps has been male and female for many years, it is not all-male. The Corps does not discriminate on sex, race, religion, etc. It plays an important role in setting the bar for all Aggies and their core values. Its role in leadership, teamwork, and the spirit of Aggieland on campus and among fellow students is undeniable. It is one of the factors unique to A & M, and sets A & M apart from other schools that "think they are so grand". Today the GPA of Aggies in the Corps is over 3.1, and higher than the average of all non-Corps Aggies in the Corps. And approximately 43% of those individuals in the Corps are in Engineering! Last but not least, over half those in the Corps do not sign military contracts, like myself. The consultant has no idea why such students would join the Corps. There is a reason why A & M students stand up at half time for the Corps band. Go to a game and half time. Apparently the MGC team did not interview students. It seems the consultant is stating its own conclusion without gathering facts. When I read this, I wonder how many other statements and conclusions the consultant made without gathering facts? This is alarming! The consultant expressed a desire for diversity. This is a diversity story for the Corps. An individual named Shahrum Iqbal from Pakistan showed up at the A & M campus about 12 years ago to major in engineering. He spoke about 10 words of English. He knew nothing about A & M. Had never been outside the country of Pakistan. He decided to join the Corps the second day there. Members of his outfit stayed up to 2 am in the morning many many nights helping him that first semester, with English, with homework, providing support on their own initiative to a young Muslim man from Pakistan. Three years later this young man was chosen Deputy Corps Commander. This is the second highest position in the Corps. This is a vote of his classmates, and he was the only Pakistani in the Corps and yet won over whelming. In his senior year, this young man was chosen Outstanding Senior Engineer out of more than 5,000 graduates, and was also chosen Outstanding Senior of his Senior Class. Diversity, no discrimination, selfless service and support, teamwork, all exhibited by the Corps of Cadets to someone they didn't even know, and was always one of a kind in skin and color. This is the Corps of Cadets, a leader in the core values espoused by Texas A & M. And the Consultant missed all of this completely, and provided their own opinion which is wrong by what we would say is " a country mile". What else did they fail to learn about A & M and who Aggies are? With respect to other Weakness, Opportunities, Threats, on pages 109, 110, and 111, the biggest problem I find is the lack of data and analysis of such data. For example, it is said under weaknesses that "there are limited financial resources to recruit and retain talented faculty and staff. That A & M was not competitive enough." I need to have facts and figures. There are well funded universities, endowments, like Ivy League, Stanford, etc that will try to attract our best faculty in engineering and science. But A & M has also done a great job I attracting the best, eg, we have increased our National Academy Of Engineers award winners from 10 on staff to I believe over 40 or 50 the last 10 years alone? So who is losing fantastic staff? I am sure that we lose some faculty, but without facts and figures, I cannot take a position on this statement. It is easy to make statements when there is no requirement to support with facts. This is a continual theme in the consultant's presentation. Statements without facts, figures, return on investment, no analysis of cash flow, ranking of recommended changes , even inaccurate facts or completely false statements. In some cases the report is excellent and right on target, and in other ways, it is a complete embarrassment reflecting on the authors. We

have recruited students for over 30 years, and the most common statement from all high school seniors and parents is that A & M is the most welcoming and friendly campus of all they ever visit. The friendliness of A & M campus is renowned. We would like to know the source of the "not friendly " campus statements. How many stated, by whom, their position – student, professor, staff, etc. The diversity statements have been addressed elsewhere in this response.

---

I strongly agree with the need to reorganize / restructure and centralize the large bureaucracy at TAMU, especially if it will make the operations more efficient. However, I would only implement changes if those changes make sense. Please do not change the culture and environment at TAMU just for the sake of changing it or to mimic other large universities, Remember, one reason why TAMU is great is due in large part to its unique history, culture, and environment.

---

The report share a lot of information regarding Diversity efforts. I think the university does not need to get so worked up about this. We need to look at populations of the groups attending university nationwide and compare stats to that. We need to consider the success of all sister campuses (Prairie View should be included in this, I only saw the McAllen center highlighted), because TAMU is making a big impact in many areas. Some cultures have adopted fully attending college, whereas others have not. It is not necessary to attend college to have a successful life and career, which is shown to us by the many students who graduate with tons of debt and do not have the salary to support this debt long term. (This feedback is coming from someone who is a minority).

---

The report highlights a bloated organization with redundancy that can be effectively eliminated to reduce cost and streamline messaging. This should be done immediately to avoid increasing costs to student and families. Best of luck in implementing the solutions. The focus on academic success is encouraging if recruitment is based on merit and potential for success and not to meet diversity quotas. I hope to see more of a message on our core values and what makes Aggieland special as you coordinate marketing. Thank you for allowing for feedback.

---

Nice job with this report. In a direct but considerate manner, you cut right through many of the core issues at TAMU that need to be addressed at my alma mater.

---

This link doesn't provide access to the report recommendations. All that shows up are the general feedback questions for each section.

---

I appreciate the opportunity to provide feedback. [REDACTED]

---

The consolidation of business and IT and facilities an umbrella for each makes sense to me.

---

One issue I found lacking in the report was abolishing programs that were no longer attractive to students; i.e. Journalism. Keeping a department open for 9 graduates is a foolish use of taxpayer money. TAMU was founded as an agricultural and engineering school and should play to those strengths. It is not the responsibility of the taxpayers to educate people in esoteric programs which fail to prepare students to become productive members of a rapidly changing society. When I was working for large companies I had the opportunity to review job applications and it was heartbreaking to review resumes that were highlighted with major studies that had no value to the job advertised. TAMU should not be a leader in that scam.

---

Glad this project was undertaking. This action was necessary to keep pace with our rapid growth and help sustain our remarkable success. I will be happy to visit with anyone about my comments. Submitted by Rick Rickman, 4:00 p.m., 11/8/21.

---

Instead of following the example of other colleges like Cornell, be the leader A&M needs to trailblaze and set collegiate standards as we have been doing for over 100 years.

---

The problem I have is with trying to attract students based on racial percentages with the Texas population. I would like you try to attract qualified students based on their desire to become Texas Aggies, graduate and then continue to support Texas A&M. I graduated in 1963 and would never have qualified based on today's standards. I have continued to support Texas A&M in every way possible since graduation. I have 2 daughters who also graduated from A&M and also continue to support the school.

---

Overall this is a very comprehensive report and I agree with many of the findings that will aid the University in meeting the educational demands of the future. One glaring area that was missing was an evaluation of the College of Engineering. If the consulting firm conducted an evaluation of that college it should have been mentioned in some form. If an evaluation was not conducted it is a disservice to the other colleges in the University.

Dr. Banks, thanks for this opportunity to respond. And thank you for your service and leadership. I am excited about the future. I am not committing on the above categories or recommendations. I leave that to those individuals that are in the know, other than to say that we should be a university where our employees are putting in a full days work and committed to making the best graduates and candidates for work possible. We should be a lean organization with the smartest and brightest individuals leading our university and students and they should be compensated accordingly. The greatest thing I left Texas A&M with besides a great education was two very close life long friendships. What I want to see us (Aggies) do is preserve our Aggie DNA (just as it is and has been). Not be afraid to say NO to change that is "unhealthy" OR destructive to what we are and have been. The trouble makers need to go. I want everyone to respect this university and our country. [REDACTED]

---

As a former student and member of the Aggie family, I welcomed TAMU's effort to conduct research to investigate ways to improve processes and structure at our beloved university. However, as a consultant and researcher myself, I was a bit alarmed when I read the report's findings and immediate recommendations, which appeared to directly dive into quick solutions, rather than investigate the problems more in-depth. The plans of centralization in particular seem to be treating symptoms, not root causes. Some aren't even addressing problems but rather just rely on comparisons. For instance, the recommendation to combine colleges seem to be grounded solely on comparisons with other institutions. Before diving into solutions, I would encourage the leadership team to have an open conversation with departmental leads to really understand what challenges they are facing and how to best address them. Centralization may or may not be the right answer. Other similar recommendations are centralizing HR, IT, Marketing at the campus level. The report states that "The consultant team consistently found the university's operational structure is decentralized, resulting in ineffective use of talent and resources." However, having worked in both academic and corporate environments, I found that centralization doesn't necessarily solve misalignment. A clear mission and clear leadership, consistent processes and structures can be established at the campus level, while retaining departmental and team-level autonomy. Rather than a traditional top-down approach, a more modern, agile approach with the aim to create empowered departments should be the goal. Investing the extra time and effort into an open and honest conversation to explore ideas, really understand existing problems, and then pilot and test solutions and concepts will lead to better efficacy and positive organizational change. The alternative is applying quick solutions such as centralization, while misalignment and unsolved problems persist.

---

I do not have any comments about potential changes to the University structure or re-organization of departments. I believe the University staff is more attuned to those recommendations to make decisions in those areas. I do not agree with the statement near the end of the report that says: "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education" This statement does not seem to be true to me. The Aggie culture is what makes the university as great as it is. Any change to the culture will be detrimental to what A&M stands for. As for "the notion of an all-male, military component impinges upon the culture of higher education", the Corps is NOT all male. This study must have been looking at the A&M of 50 years ago. The Corps is a strength of A&M, the "keepers of the spirit". The Corps is one of the main groups on campus that is recognized by outsiders, and exhibits what is great about A&M.

---

None

---

The Report seems to wish to consolidate A&M into the vast Amalgam of other colleges and universities that are just like all the others. Those are all good places but they are not A&M and do not offer the same things that A&M offers. The life in Aggieland and our Aggie Core values have provided our state and nation with highly functional citizens and especially leaders in industry, the military, and Governance. Just because others do things is not a reason for A&M to do so. We are already one of the most diverse student bodies in the nation and we always have been. Even in a segregated nation back in the day, we had a President and knightly gentleman (Ross) that created a place for our minorities. And later we integrated them into our system. That is done so just as L S Ross did, lets measure our students and faculty by their character and their capability to perform. The best person should get the job. We should not judge others based on their skin-color, ethnic background or sexual preference. It should always boil down to that person doing that job with superior ability and embracing the Aggie Spirit and core values. A&M should recruit base on that metric and whether that person wants to be a part of the Aggie family.

---

I received the email concerning feedback from the consulting report 3 days before comments were due. For an undertaking of this magnitude and importance surely more time for thought and reflection is needed. Due to lack of adequate time to respond to each area I will say that in what I read I do mostly agree with Joe's comments. If there is to

be future input solicited I recommend additional allowed response time. Thanks much for your concern for and dedication to TAMU

As [REDACTED] long-time participant in the Landscape Architectural Professional Advisory Board [REDACTED], I would like to offer the following general observation regarding this report in particular regards to the COA and our profession of Landscape Architecture. The proposed Academic Realignment seeks to move the department of Construction Science to Engineering and Visualization to a new college for Arts and Visual Sciences. These two departments significantly support and are symbiotic with the design disciplines of Architecture and Landscape Architecture. As a 40+ year practitioner (now retired) and former President of the most significant Landscape Architectural Firm in Texas and throughout the southwest ([REDACTED]), I have personally witnessed the critical interrelationships of these disciplines in real world practice. As our practice evolved and adapted to the ever growing complexity of the developed world, we always benefited from the interactive collaborations with the construction sciences and always needed ever more sophisticated means of visualization to communicate complex solutions. In recognizing this critical need, our firm always sought to hire graduates who understood these interrelationships and who had experienced substantive collaborations in their academic studies. I personally have pledged a planned gift to the Department of Landscape Architecture to fund a professional visiting faculty position to support this need. I support the current Professional Advisory Board in their request for the university to further evaluate this recommendation in the report before finalization.

a. Much of this report could have been generically applied to just about any academic institution, in my opinion. Also, it was clear to me, as a former student, that some of the investigators did not fully understand or perhaps appreciate the history of A&M and what has made it unique among Texas colleges and universities, but I suppose that is to be expected. MGT's emphasis on "diversity" shows a pandering to current political correctness rather than to recognition of A&M's already diverse student population, as well as a lack of regard for admitting students based on merit rather than ethnicity or some other discriminatory criterion. While there are several good recommendations in the report, there are others that are downright bad. Let's look at the whole cloth and apply common sense.

There is a lot of proposed changes in the report but overall the changes don't appear to be driven by real improvements to the university or the students at the university. If I had more time, I would compare and contrast this report to other reports to similar universities to see if some of this was just stock consulting recommendations. I don't have that time, unfortunately.

It was suggested several times by the report that Texas A&M needs to set up programs and even quotas to change the demographic of the University. I am an American by birth and a Texan and Aggie by choice. All of these groups stand for loyalty, integrity, tradition, and the pursuit of excellence. None of those suggest my gender, race or socioeconomic status and that is how it should be. Students should be admitted to the University for reasons including their character and their interest and aptitude in learning and succeeding. I fear getting away from these principles takes away from the University's core values. In reading the report it seemed like there was a lot of areas where they are making suggestions for change simply because other Universities do it that way. I do appreciate being educated on what has been successful at other schools however don't think we want to go down the "me too" road. We have a very unique and successful history and I would want us to honor that as we progress into the future.

Dr. Banks, To me Texas A&M is a large Corporation and should be organized as such and run accordingly. You need a Board of Directors, a Chairman of the Board, A CEO, a Chief Operating Officer with Operating Groups, Divisions and Departments, And Corporate Staff Organizations such as HR, IT, Facilities, Sales and Marketing, Legal, etc. Whatever you do the Corp needs to be preserved and grown in size to at least 4000 strong. It is the heart and soul of the school. Launch a major campaign to get more scholarships for the Corp. Similar to the the 25 by 25 Engineering Program. And last but not least. Do not let Texas A&M become just another UT on the Brazos. A&M is a conservative school and should remain such. Every person should have a voice and be heard but the majority voice should rule. There are more than enough students who want to go the Texas A&M because of what it stands for than there others who want to try and change it to a liberal institution

This exercise is just way too cumbersome. I've already spent more than 2 hours reading the report and trying to provide feedback. Most people won't invest this kind of time. It gives the impression that you don't really want feedback at all. And now I give up. My final general comment is that in many places throughout the report, there is very little data explaining what the problem is. Consultants will always be predisposed to recommend changes (and then they can get more work to recommend how to implement the changes). It would be highly unlikely that a consultant would ever

come back with a report that says what you are doing is great - don't change anything. So to President Banks and those who are helping to discern where to go with these recommendations, please approach them without assuming that just because the report says changes are needed that they really are. Set a high bar for deciding to change things. Otherwise, you'll be going through this same exercise again when the next consultant issues a report that suggests putting things back where they were. I say this as someone who worked for several years in a Federal government agency that kept conducting strategic reviews until we'd reorganized ourselves into proverbial knots. Everything can be improved, but don't throw the baby out with the bathwater. Good luck and Gig Em!

---

I agree with your decision to conduct a comprehensive review of the major functional areas of the University, including hiring of outside consultants to assist in that review. I also agree that the major stakeholders in our university should have input. However, I am not sure that the two week comment period is sufficient time for interested stakeholders to provide their input, considering the breadth and depth of the recommendations. The successful implementation of the recommendations which are adopted will be a long and expensive process and will take years to accomplish to minimize disruptions and negative impact. There will be a positive consensus on some recommendations that can be implemented fairly quickly. However, many others will require comprehensive additional analysis from interested stakeholders, so that a broad consensus can be developed as to the plan of action. Otherwise, more harm than good may be the unintended consequence.

---

Dear President Banks, I'm not well advised or knowledgeable about the current organization structure of our university and I'll leave decisions regarding organizational structure, effectiveness and overall efficiency in your capable hands. Having said that, I have had considerable experience with consultants over the years often with less than expected results over time! You will be the one that has to make whatever changes work and I wish you well! I do have one recommendation about which I feel most strongly! Simply stated, diversity for the sake of diversity, racial quotas etc etc are wrong on many levels in my view and will simply "dumb down" the Texas Aggie culture! I urge you to be very cautious about diversity per se while focusing on merit, equal opportunity and individual accomplishments in setting admission standards. Finally, I urge you to continue to insure that the Corps of Cadets remains in the forefront of all that is good at TAMU! Texas Aggies have served our state and nation in war and peace will likely be called upon again at some point! I'm biased but I believe that the Corps is the hear and soul of our university! Respectively, [REDACTED]

---

Dear President Banks, thank you for the opportunity to review and comment on the report. I do not feel qualified to provide guidance and recommendations on the numerous departments and the day to day operation of each. I will share with you feelings about our University as a whole and what it means to me. TAMU is unique--there is none other even similar to it in the world. The positive impact which it has on the lives of its students and graduates is profound. The record number of applicants each year is the testimony to this fact. Revere and maintain the traditions and that will strengthen the Core Values. While I realize that there is always room for improvement and efficiency; remember the old adage: "if it ain't broke don't try to fix it." I feel that you will certainly be judicious in this regard. Texas A&M does not need to change in an attempt to meet the mandates of the current world we live in; the world needs to change to become more like Texas A&M. "We are in the world, but not of the world." I wish you nothing but the best in tackling this awesome responsibility placed upon you and wish you a long tenure to go with it. If I can ever be of service to you, please do not hesitate to call on me. Sincerely, [REDACTED] "I entered Texas A&M as a boy came out a man."

---

I did not see anything about measuring the effectiveness of the project to provide objective feedback for adjustments and further improvement. I believe A&M and all universities should track graduate success in the workplace between initial hiring and how many Fortune 500 CEOs we have.

---

I am an Outstanding Alumnus of the TAMU College of Architecture and have practiced Landscape Architecture for 40 years. I work daily with visualization experts and contractors. I see first-hand how critical it is that graduates understand and benefit from the education and immersion in both areas of the industry. They can not be separated and be successful. The most significant challenge I have experienced in my career has been having a voice in an industry ignorant of the depth and impact of the profession of Landscape Architecture. General Contractors are just now awakening to the understanding that "landscape" is much more than shrubs around their building. Due to the success of our interdisciplinary approach by Texas A&M and OTHER UNIVERSITIES, construction science graduates learn about the green infrastructure strategies, impact to the lives of humans in the built environment and the preservation of our trees, waterways, native plants and water scarcity. A unique and precious benefit of being an Aggie is the bond between us that is experienced in a profession that demands that we hang out in "job trailers" together to build the projects we have designed. Separating us will destroy that Aggie network that is so beneficial to the profession and the world.

In the 70s there was an article in the WALLSTREET JOURNAL that told of the expansion (Restaurant club?), that the owner could do so much better. If he was able, he no better than when had a smaller place for the bigger place, lost some of its coziness

General feedback - Lots of buzzwords. ===== Disappointing how few current students participated in the survey. ===== On the High-Level SWOT analysis...one of the threats "Faculty losing sight of need to continue educating, advancing knowledge, and granting degrees." Now...that's scary.....

Does A&M have any plans for expansion of the engineering college at Prairie View? It is becoming a popular alternative to College Station for many Houston students.

I'm a female graduate ('70) I only got to attend A&M because I was married to an Aggie. They sent him my grades, never to me. I remember when the Mills brothers were admitted to help desegregate the school. Curtis was in my education class, God bless him. Guess you could say we were the first round of diversity. We don't want to see what has made our school unique and special sacrificed on this new wave of equity and diversity. UC Berkeley can accommodate those folk. I think many of these proposed changes aren't any different from changes I see coming into the public school setting. Good luck, gig 'em, and God bless

I appreciate the university taking time to receive feedback from former students. Overall, I believe this plan will be of great benefit to the university.

I totally 100% support a museum on campus. We have remarkable collections that the average person never gets to see. Anthropology and natural history especially. I would also love to see an Osher Lifelong Learning Institute (OLLI) program here...or something similar. So many learned seniors in the area...we could all benefit. Thanks and Gig 'Em!

If the COLA is moved to be under STEM and overseen by the STEM program, I will lose a lot of respect and pride for TAMU. I will no longer be the proud Aggie that I felt I was when I graduated with my degree. Being an Aggie with a LA degree is part of my identity and if TAMU restructures their academic program in the way that is projected, I will feel that that particular part of my identity is not valued by TAMU. So much of what students hear as they go to school at TAMU is that they are valued and that they make the culture and the school what it is. But that is not true for every student who received or is earning their degree in Liberal Arts if it will just be combined under STEM.

Thank you for the opportunity to provide feedback. Please let me know if you need any clarification.

Katherine, Thank you for asking for feedback about the university third-party study and recommendations. I am a former student and current Aggie parent. I served two terms on student senate years ago in Aggieland. For the last 20 years of my professional life, I have been part of practices in management consulting firms, including accounting-focused firms, strategy firms, and boutique consultancies. I wanted to share a few thoughts and opinions as I read through the report. My time is limited so I will just share in a stream of consciousness format - THOUGHTS: First of all, change is not bad. Second, change must be managed and communicated well. Third, many of these proposals make sense - we just can't sacrifice what makes A&M unique and great. Sometimes it is difficult for the consultants to really digest that in their interviews as they haven't lived it. (Conversely, sometimes it is - For example, the McKinsey bonfire report was spot on). And fourth, we don't want to be Michigan, we are not trying to emulate Rutgers, we don't want to be any university in the peer group(s). A&M is a unique American institution - we are aspiring to improvement, change when needed, 360 feedback, etc. So I don't know about the large College of Liberal Arts umbrella and what that would ultimately mean. I do know that one of the ways A&M is unique in its undergraduate experience is the feeling and reality really that the playing field is level when you get here. You pull yourself up by your own bootstraps here. It is a public university - it is open to all - there is opportunity for all. No one shows up with a built-in advantage or gets a dorm or better professors because of their parents or social class. It doesn't matter if you are from a small town, a metropolitan city, life experience or color. Even the students' super casual dress code helps contribute to this. At A&M, it was such a freeing feeling that it was up to me - my destiny wasn't limited by anything but me. And there is this greater good element, a culture of service to your fellow man - that we don't need to lose. Can good and appropriate organizational change happen here for better functioning of departments, better efficiencies that make sense to faculty and students - I think so, but again, we don't want to be the Cal Irvine, Duke, or Cornell. There is this element of culture for service to your fellow man, an obligation to help, that makes A&M great. I'm not sure which voices are being expressed as well about the Fish Camp comments. Agree with general recommendations about efficiencies with eliminating some decentralization. This is basic low hanging fruit that third party consultancies are good at identifying. Same for the operational analytics findings - in this day and age, no brainer to implement more standardized performance standards and measurement. It must come with addressing the people involved - the people side - how

they feel, getting their buy-in, etc. Process and technology only works by considering the third element – people. Importantly, efficiencies are only efficiencies if they also enhance effectiveness. Agree with marketing and branding coordination, and general considerations and consistencies in communications. Is the Four Large Units recommendation simply the flavor of the day among intuitions these days? Not sure. Some of the proposals seem boilerplate. So I'd say consider strongly the efficiency, business process, etc. recommendations of the consultants because that is what they are good at. I'd say cast a more critical eye on their cultural recommendations as this is generally not what they are good at. Thanks

As an FAIA FACHA, FHFI with a bachelors of architecture and a masters of architecture and over 50 years experience .....Interdisciplinary collaboration is essential

Please be careful of the amount of students the schools is accepting. I think having a larger student body can sometimes devalue what a degree can be worth, and it takes away some from what makes A&M special.

There are already so many students at the University that individual students are not served. STOP trying to pack more people into Texas A&M. Bring the numbers down to something reasonable for the facilities and people that are in place.

I'm glad this report was solicited. It is clear A&M has settled into mediocrity and has become too comfortable in the ways of running a university. There was one chart that showed how the people felt about A&M overall and less than 50% thought it was good with some scores in the 30s. If this was a Google Review it would translate to one star. Nothing to brag about. You have a loosely coupled institution in need of the changes suggested in the report.

I am offended that the research group felt the Aggie culture was "impinging". There is nothing wrong with being conservative. Most universities are liberal so if a student feels they need that to meet their needs there are plenty of schools that offer that opportunity, including the one in Austin. Our conservative university core values are why Texas A&M has such a strong commitment of service to others. Why President Bush choose us for his presidential library. And why we have recognized eight Medal of Honor winners who made the ultimate sacrifice to others. I have not researched it....but I strongly suspect that other than service academies.....there is NO other school who can boast that. No other public school that had their entire senior class skip graduation, commission on the drill field and go off to war. No other public school that has shed so much of its son's and daughter's blood defending our country. That is worth 100 of these research company reports.

President Banks, Thank you for the opportunity to respond. I have read the report and I will say that I am not in a position to say yes or no to any of the changes. So, I will give my thoughts as a Former Student and as I have recently attended Texas A&M, Class of 1956, 65th Class Reunion. We discussed the Consultant's Report but not in great detail. My thoughts on the report are similar to the "Guide for our Lives" as is given in the Bible. You, Dr. Banks are the President of the University, The Leader, and you have been there only a short time, you have communicated the direction of Texas A&M that you want the University to go, and it is now one of the largest in the nation and that tells me that YOU are doing a great job directing the University and why would we want to change directions when we are NUMBER ONE!!!! Sure there minor situations within the system that will need changing from time to time and sure, make the management decisions from your advisors and from your position. But, from a Former Student's point of view, I like what you are doing and have confidence in you as The President that you have the knowledge and leadership ability to lead Texas A&M successfully into the future even though times are changing drastically from 1952-1956 when I attended Texas A&M College. God's blessings on you as you lead Texas A&M as President and we shall continue to be the greatest University in the USA!!!

Interesting ideas overall. What is the definition you are using for efficiency and effectiveness: Spending less money? Time to complete tasks/projects? Undergraduates graduating in 4 years (2 for transfer students), master's in 2 years, PhD in 5 years? Having fewer staff and faculty? Increasing rankings? Increasing research grant funding? Without defining what you are wanting to accomplish, it is difficult to determine the cost/benefit analysis for making the decisions recommended. Several recommendations will need tremendous financial investment in building programs because of the increase in faculty and staff, which may also require more facilities. How is success going to be measured if these changes are made?

I would approach these changes incrementally. Build a little, test a little, learn a lot. Prioritize initiatives and move slowly. Ensure a measurement regimen is in place to gauge success. Look for continuous improvement opportunities, lean out processes as you go, and involve the faculty and students you have with expertise in organizational leadership, change management, metrics, and analytics to help.

Changes are needed. BUT at the same time the history and traditions that make A&M so very unique and have elevated

it to such a strong unit with a national and international image must be protected. A&M is not some cookie pushing liberal arts university turning out mediocre students who have not connection nor loyalty to what A&M has provided them. That desire to give back and stay in contact and the great value and national image of having that Aggie Ring must be maintained and expanded upon. A lot of the flak we Aggies get from other schools is because we were fortunate to get in to A&M and they did not. We have an edge they wish they had. Our University and its faculty must continue to provide that edge to the students who are here today so that they will be the former students of the future who will give back and fight to maintain the success of A&M. The Corps of Cadets is a small part of the student body but it is a strong part of the overall A&M image and reputation. That small segment of the University must be maintained as it is a contributing element to the security and future of our nation. We are the Aggies, The Aggies are We.

---

I appreciate the opportunity for feedback and the transparency in the process through the clear, organized report.

---

I clearly support the assessment and restructuring of staff overstructure. Jobs must serve a clear purpose that deliver to the bottom line of an organization's mission and deliverables. I believe "diversity and inclusion" rhetoric and protesting is not helpful. If there are agitators that are unable to work with A&M management, they have no place here because they are simply detractors from achievement. If we have management that is not able to lead both by example and people implementation, they have no place here. We must do better in helping our undergraduates discover themselves and use A&M as the foundation to rise through Maslow's hierarchy to become the productive citizens of tomorrow. Faculty, staff, former students, programs, experiences--these need to all understand that these encompass the educational experience whether by formal education, mentoring, or experiential interactions. Texas A&M has core values and is doing a good job of creating leaders in industry, research, government and academia. We need to clear the impediments that are slowing down and discouraging students and A&M leadership and organizations. I strongly support Dr. Banks and Chancellor Sharp in their efforts to make A&M even better in what it produces.....and much more efficient.

---

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. [REDACTED] and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

---

This entire report seems to look at things from a top-down approach, trying to consolidate programs, resources, and power into a more central location. This is NOT what Texas A&M is. A&M's strength, especially in academia and because of its size, has always lied in individual parties to make better decisions for themselves that they are much more capable of making than an out-of-touch executive office that knows very little of day-to-day activities of the Colleges. Starting during college and continuing even more now, I see an administration at A&M that cares less and less about the actual concerns and welfare of students, and more and more about optimizing output, image, and efficiency as if Texas A&M is a business, not a school and community. I hope to donate in the future to give back to a university that gave me so much, but each year I see less and less reason to do so as the University no longer represents what it did to me as a kid raised in a family of Aggies and as a student that took pride in what I was a part of.

---

Please consider the time of implementation. One time feedback is not enough. Their needs to be talks even after the initial feedback is out. It is important and crucial to the success and well being of the university that we listen to what

people have to say. Consider our core values as we move forward.

---

Having read the report, I am not qualified to make substantive suggestions for each area. However, my overall suggestion is for the university and its decision-makers to fervently follow the core values of TAMU - Loyalty, Integrity, Excellence, Leadership, Selfless Service and Respect and steer clear of "popular and/or cool" organizational and education philosophies. Thank you for seeking my input.

---

I applaud the effort to make the flagship university better. There are definitely areas where improvement is needed. But I will also say the idea of making changes just for the sake of making changes does not always leave the situation better. Advising needs to be left in the departments or colleges.

---

Yes, I do actually remember my University ID number from my entry into TAMU in 1970, just like I remember much of what I learned in Aggieland; learnings that have guided me through much of my success in life. That is why I give back so much to TAMU today through my respect as a donor with endowments across six different Colleges and Departments; through my service on College and Department Boards; and through my service as a [REDACTED] [REDACTED]. Through my career I spent over 20 years in business process definition, continuous improvement, business performance measures, and global business realignments - most notable the Exxon - Mobil merger. Hopefully this gives me a platform to be more than one of 16,500 former student respondents. The MGT Review provides an excellent benchmark of TAMU versus 20+ top universities. The general recommendations are logical: move from a decentralized org structure to a more centralized org structure; target the span of management control to reduce overloading and improve focus alignment; implement business performance measures to track resource utilization and process result (yes, there are two types). As to the specific recommendations, test each one of these against the core competencies of your organizational units today. Unless the recommendation aligns with, enhances, and builds on existing core competencies, be prepared to lose ground. This identification of core competencies and testing versus the MGT recommendations should be the focus on your next steps. Without this step this restructuring effort runs the serious risk of making TAMU more like the benchmarked universities without continuing those things that make TAMU special and a leader in many areas. We have just completed a record fundraising program in Lead By Example where many have given: 4 billion votes of confidence in TAMU; investments that we need to insure do not get redirected or lost in this comprehensive review process. We must insist on change for improvement rather than change to make TAMU like other institutions who do not have the vision and global possibilities to obtain this level of confidence from benefactors.

---

Change for the sake of change is ridiculous. The administration should be mindful of the roots of the university, as most of the donors are. Students attend Texas A&M for a certain experience, a particular atmosphere. We do not want to be like other universities that are similar. A&M has always been unique. If a student wants to major in vocal performance, they should attend UNT or another school. A&M has much to offer. I don't think that we are hurting for all types of applicants. Nor do graduates have a difficult time finding jobs. Please do not strive to make Texas A&M like other schools. I did appreciate the statements about the importance of the Corps of Cadets to Texas A&M. The Corps is probably the single most important part of the tradition of this school.

---

It is a good report. Still concerned about the diversity not being handled properly. TAMU should be colorblind and only judge a prospective student on their ability, character, and willingness to abide by the honor code. I was at TAMU for two momentous occasions. Blacks entered TAMU and no one noticed or cared. They were welcomed as fellow students and that was it. My senior year, women open enrollment occurred and that really launched the university.

---

Texas A&M University is not like other universities. We are successful BECAUSE we are not like other universities. We do NOT want to be like the others. Traditions made us who we are and are vital to continuing the uniqueness that is Texas A&M. We are a world class school. We are a more conservative school. Aggie core values are real and not just something cute we show the outside world. Anything that changes the fundamental basis of the University is wrong. Hiring an east coast liberal consulting firm was a waste of time and money.

---

The existential threat faced by all universities is the spiraling cost of education. If Texas A&M assumes a leadership role in this area, by establishing metrics, with specific goals to keep the cost of education from rising at or below the rate of inflation, we can offer a greater value and prove our worth to the state and the nation. A first step would be to mandate cost increases to be no more than the midpoint of inflation and the average increase of a college education. If the former is 3%, for example, and the latter 5%, A&M's short term goal would be 4%, and the ultimate goal would be 3% or less, in this example. This is a critical threat that is not adequately addressed in this report.

My biggest points of concern are growing a diverse population of students and faculty, as well as expanding Texas A&M's influence and reach by investing in art and culture. I would also like the University to commit to a higher level of education. In my personal opinion, I am more concerned with Texas A&M being considered a "good" school than being considered a "big" school. I think there is a balance that can be struck and we shouldn't sacrifice our integrity for growth.

Thank you for allowing us to provide feedback - I hope the request for feedback occurs more frequently in the future.

We want to be a part of shaping the future of Texas A&M. Does everything really have to be centralized?

Colleges/departments/business units do have differences and not one size fits all. Considering the size of A&M, some decentralization is necessary and would be effective as long as the mission is clear. We applaud the University for looking for ways to improve, and encourage enrollment from anyone/anywhere. Diversity is a tricky/slippery slope in this day in age, and shouldn't be used or interpreted in a way that changes what Texas A&M was/is/stands for. Accept anyone and everyone that meets our standards but we shouldn't lower our standards to accept anyone and everyone. We don't want to ever lose sight of our traditions and values - they are mentioned frequently in the report as one of our strongest aspects of the school. We should have meaningful dialogue about statues rather than simply tear them down. Since there wasn't an area about Athletics, some simple comments - hope we always have flyovers - what an incredible way to honor our military. NO TENNESSEE behavior at our games ever! We need to continue to make a strong push to treat all of our visitors with respect and encourage the welcoming atmosphere that we are known for.

Did not understand the negative affects of traditions. Yes, hazing is a no-no. Male/military/etc traditions are a plus and are unique to the mystique of the university.

A&M is unique in so many ways and that should be communicated and demonstrated to not only students, faculty and staff, but also the world. Aggie core values should be the basis of any decisions made by administration, student services, academics, sports and marketing. While it's easy for TAMU to improve on anything another university is doing, that is only following, not leading. A&M should be in the business of producing leaders and should provide the framework and the example from which students emerge into their field of expertise and into providing a positive contribution to the benefit of all.

In reading the Executive Summary and some of the related documents, I could not find a reference to Mays Business School in the restructuring of the Colleges. As a Business graduate of Texas A&M, this was very troubling. I may have overlooked it, but I am concerned that I could not find any reference to the future role of the Mays Business School at Texas A&M. I am concerned that the Peer comparisons, that were mentioned several times as justification for recommendations, is an attempt to transform Texas A&M into "just another University". I am not opposed to improving the operations of Texas A&M, through restructuring, creating efficiencies and reducing costs, however, our differences make Texas A&M a unique and special institution. "Threats" in the SWOT, claim that the "University climate not always welcoming" is not only inaccurate, but FALSE. Again, Texas A&M has been recognized for being very friendly and welcoming! Again, I see a trend developing in the Report, claiming that "TAMU has historically been conservative and slow to change regarding diversity issues...and Fish Camp is an example of this...due to lack of control over the content of the camp." That statement makes no sense at all! No one is required to attend Fish Camp! Again, the Report attempts to create a problem that doesn't exist. Again, improving processes and increasing efficiencies should always be reviewed. Making sure that major decisions are transparent is honorable, but trying to remake Texas A&M into a liberal, left-leaning university, similar to most in our country, destroys the uniqueness of our great University! May God bless Texas A&M University!

The survey and analysis thereof are probably long overdue. TAMU has been growing for some time and a comprehensive effort such as this has obvious benefits; many of which are self evident after reading the report. I have two comments that are applicable to several sections of the report. For that reason I've included them here rather than repeat in multiple spots. First, the proposed reorganizations all stand to reason with four exceptions; finance and business administration (p. 59), human resources (p. 67), information technology (p. 73) and marketing and communications (p. 80). At first glance, all four of these have what appears to be more direct reports to the departments' VP than might be efficient. In the case of the marketing & communications it is the Associate VP, Communications & Marketing Operations in situation. If that aspect of the proposed reorganization has been addressed elsewhere please excuse this comment. My other comment is that it will be important to decide what success will look like after implementation. Additionally, there should be a scheduled review of progress and whether the reorganization is having the intended effect. Thank you for your attention. Please contact me with any questions.

Students and faculty should be measured by the content of their character and capabilities to perform. The best and most qualified person should get the job or position. We should never judge others based on the color of their skin,

ethnic background, or sexual preferences. We should only ask, "Can they do the job with excellence and embrace the Aggie Spirit and core values.?" A&M should recruit qualified students regardless of race or nationality. TAMU is already one of the most diverse student bodies in American, and we always have been. Historically and currently, students of all races and ethnic backgrounds seek out A&M to come to be educated and trained academically and socially with the AGGIE experience. Almost always, they thrive and are not disappointed. Finally. This report appears to offer a lot of "boiler-plate" suggestions that perhaps fit other universities, who are successful in their own right, but who are not the same as Texas A&M. Life in Aggieland and the Aggie Core Values have guided decades of students toward highly functional citizens and leaders in every industry our State and Country have to offer. I suggest we polish our rough edges, but NOT reinvent the wheel, especially one that has worked so well.

---

Diversity as a goal. Seeking racial diversity is, in itself, a form of racism. When race is used as a criterion or discriminator (for whatever reason), it is by nature, racist. (Yes, Affirmative Action is racist.) Ultimately to meet an enrollment goal, a compromise of standards will often be made. Set standards should be paramount. Why not take a counter-political approach and completely eliminate the race question from the application? Make a break-out policy that ensures absence of racial discrimination from the admissions process? Be a leader. Set a policy for other universities to follow – if they are brave enough! The Corps of Cadets. The Corps is the foundation on which the university was built, and it continues to be the holder of its traditions and core values. It must be protected and strengthened!

---

Dr. Banks is a strong leader who needs GREAT people supporting her. She needs people who listen, but are also willing to take risks to accomplish big dreams. While I could have commented on every section, my 45 years of Marketing/Communications leadership as well as numerous successful projects implemented on our campus, give me a unique and credible perspective.

---

Somehow we need to get to the point that everyone knows that Texas A&M at Galveston is Texas A&M University, unlike other colleges in the A&M system. The new ship and growing campus are likely to help, but I believe that we still have more work to do market the affiliation. As a general rule, I avoid giving advice to professionals and consultants practicing in fields that I am not an expert. Please take any comments as suggestions for your consideration, but feel free to discard and/or ignore. As always I am at the service of Texas A&M for whatever purpose I may be useful.

---

Former Students' Affairs: I have lived in five (5) US states and (1) foreign country since my graduation in 1984 (I lived in Spain during college.) I've encountered some Aggies along the way...but only a very small number who are close to my age/grad year who get together. Most recently, my husband (classes of 1986 and 1987) and I went to an Aggie get-together (here in the Dallas area) and only newly graduated Ags were there...with their babies! How can we inspire old Ags (Classes of 1980s and below) to attend??? We can learn so much of life from older Ags, and can commiserate with our peers about current life and our time at Aggieland if we can inspire them to attend functions, not just Muster. The Dallas A&M Club does a great job organizing functions (mostly football watch parties and Muster) but only new former students seem to attend. Thank you. P.S. since moving back to the US, I've misplaced my Association of Former Students stickers...how can I get one for my car???

---

Don't fire COSC Professors that lack a masters degree if the Construction science program is absorbed by the College of Engineering. They have provided me with the best value learn for my career. Compared to other graduates from other universities I've worked alongside, I believe they made the difference.

---

In complete transparency a report of this length is not practical to review and provide general feedback. However I will attempt to based on the summary of the report. In general, the report appears so far reaching and broad that any changes made in efforts to improve the University structure or process will prove to be ineffective on one level or another. No change will appeal to all groups that were interviewed or provided input and from similar experiences in the corporate world it creates dissatisfaction internally and a negative image of the entity/company. There are different levels of leadership and those who make changes for the sake of change are not effectively leading. Granted, Some structures may need to be altered but I hope the impacts of any changes made are beneficial to the student s and faculty and not in the interest of the perceived image of some dreamed of University structure being described in a report. If you think about it, wouldn't every university have the same exact recommended structure detailed in this report.

---

A & M is A & M ... not any of those other comparative schools. Think long & hard about trying to be so renowned we lose our core values, strengths , uniqueness. Clean up inefficiencies, redundancies but don't lose sight of why many of us chose it , want our children to go there & support it.

---

I commend president Banks for undertaking this important study, addressing the future of the university. As stated

previously my concern is that rash change without sufficient input from the affected parties could result in unintended consequences.

In Appendix 2, SWOT Analysis under "Weaknesses" I found the statement: "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." to be dismissive of the role that the Corps of Cadets plays in the culture of TAMU. When I entered TAMU in 1967, the Corps had about 2,000 members and I doubt it is more that that now. What is different is that it now offers opportunity for female membership and excels in developing individual leadership experience. I noted how few Corps members graduated and received commissions into the Armed Services in 2020. I believe participation in the Corps of Cadets is presently serving a different more expansive purpose at the University in addition to graduating commissioned officers into the military. Further, this new role is something that is unique and distinctive to TAMU and should be emphasized as a recruiting tool. Participation in the Corps at TAMU offers leadership experience and life lessons which are found in very few other universities. D&C cadets accrue all of these benefits without a military service commitment.

I can be reached at [REDACTED] so you can provide a way to download my 1985 letter or reach out to me otherwise. [REDACTED]

Texas A&M is a unique university with long standing military orientation and history. As a Land Grant institution the original purpose of preparing a state militia still is a requirement. A&M is also Space Grant and Sea Grant. All of these focuses in addition to STEM and Agriculture - and now Medical and Law - are part and parcel of Core Roots that should not be watered down with "fine arts" programs. To expand into "Fine Arts" is NOT the purpose of A&M. While there might be some interest in Fine Arts, they are not the foundation of what has made A&M great. If someone wants a degree in music or basketweaving or pottery making or art, photography, etc., they should go elsewhere where that is a focus of their education and it means something. At A&M it would only mean that someone taking those courses could not cut the STEM-Ag-Med-Law programs. FWIW, even "Business Administration" at A&M was considered to be the "fall back" for those students that wash out of STEM coursework. It was never the focus as the more rigorous programs at A&M. Freshmen "Engineering" at A&M often said their major was "pre-BA" with the meaning being if they flunked out of Engineering, they could always fall back into Business Administration. Every student needs to be "well rounding" in a "whole person concept" - but A&M has been founded on "Technical" STEM/AGriculture from the outset and does not need to water down its programs with "Fine Arts". Indeed, a radical thought might be that the professional degree in Architecture might include some "fine arts" such as (more) Art, and making design efforts into pottery or some such - it used to be every Architecture Student HAD to take Art and Photography courses as well as some Civil Engineering in their degree programs. That would enhance the Architecture College instead of butchering it up and parceling out programs as indicated in the recommendations herein.

How much did this report cost. Appears to be done at warp speed. Any Aggies work for MGT?

In general it looks like A&M will be changing from a conservative to not liberal but a leftist school.

In general, I agree with the recommendations in the report, but show me the money! What is going to save money, and what is going to cost more money?

There needs to be a renewed focus on making a quality undergraduate education affordable to citizens of the State of Texas. It often seems like the financial risk taken attending A&M is not reciprocated in a commitment by faculty and staff to help get the best out of the students. I have met several students that have transferred to universities with better faculty to student ratios because they were getting lost in the shuffle at A&M. We can and must do better. Accepting significantly more students than you want to keep and mercilessly failing out freshmen and sophomores is unethical. Not all students will make the grade or choose to continue but they should not be forced out by policies and ratios.

I am indebted to TAMU for the tremendous and cost effective education I received. My education at TAMU was the foundation of a successful and rewarding career. Large schools just have larger problems and more at stake than smaller ones, which sometimes leads to louder criticism and harsher politics. I am delighted to see TAMU take a hard look at itself and its culture through the attached consulting report. [REDACTED]

I did not notice a goal for total size of student body. At least for the main campus, surely there should be a limit.

Colleges operate in a free market system. Students are free to chose where they apply for admission and should be

presented with variety in the university spectrum. Looking at current enrollment, Texas A&M has been very competitive in the market place. This is largely due to aspects which are unique to the institution. Use judgement about making changes just to conform with other large institutions. Again students deserve options.

---

Lettermans club seems to cater to wealthy former athletes. Unfair

---

I'm consistently surprised that the conclusion to poor service (i.e., long wait times, inadequate help, etc.) is to cut funding, staffing, and sometimes the entire program all together rather than to adequately staff them and give them the funding they need to succeed. This is repeatedly a problem that A&M University "discovers" and then makes worse by outsourcing to a contracting company rather than makes better. I wish we could learn from our past mistakes (like the universally disliked move to have custodial and maintenance staff be contracted) rather than repeating them. Additionally, it's shocking to me that the report identifies the causes of our staffing problem ("a high internal staff turnover rate, a relatively small pool of qualified potential employees, in Bryan/College Station, and the recent increase in remote job offerings nationally") without addressing the one (two, if you count a wider pool of applicants) cause of high internal staff turnover that we can control: remote working opportunities. Why has A&M University spurned the opportunity to allow staff to work remotely when it is identified as something which could help? There is 1 match in the entire report when looking up "remote," and no options for staff to do flex scheduling, or other proven things that help with workplace satisfaction.

---

I oppose relocating the Department of Construction Science from the College of Architecture to the College of Engineering. I am a 1981 graduate of the program (then called Building Construction) and have served as the CEO of two major construction firms. The success of those firms lies in the Construction Science program located in the Department of Architecture under the guidance of a strong CIAC. The Construction Science Program has particular prominence and emphasis in the building construction industry ("vertical construction"). In fact, in the recent period reported by the department, over 85% of the students went to work for building construction related firms in the commercial (63%) and residential (23%) industries. If the department were moved to the College of Engineering, the building construction industry would be "competing" with a much larger variety of unrelated industries for hiring future graduates. This could place our industry in a challenging recruiting position at a time when our workforce is already diminished and strained. A program serving the engineering and technical industries already exists in the College of Engineering under the civil department. Rather than relocating the Department of Construction Science from Architecture to Engineering and impose negative effects on the building construction industry, perhaps more development of the existing program in Engineering may be prudent. I am confident that the department leadership and the CIAC would be willing to assist the university in accomplishing their goals without adversely affecting the building construction industry.

---

Overall, the recommendations look reasonable to me.

---

Howdy! My broad feedback about the institution is that there is way too much emphasis on sports and not enough on becoming a preeminent educational institution. You aren't trying to be the best public university in the US, you care more about being the best Football team. I don't live in the US anymore and I can tell you no one has heard of Texas A&M....UT? Different story. You are an academic institution yet your focus, I'd argue, is elsewhere. Personally, I would not send my children to Texas A&M as I find the academics, diversity, and overall recognition and acceptance of the school towards foreigners (and by that I mean anyone from outside of Texas) is limited. I think Texas A&M has an identity crisis. Do you want to be an amazing institution or an amazing football team and where do you want to put your focus and time? Right now, it seems to me the answer is the latter and if that is the case, this report is pointless. Thank you for giving me the chance to share feedback. I'm not expecting a reply as I'm sure you would be receiving more input that you probably would have liked :)

---

I am happy to see Dr. Banks pursue this study. Following up on these recommendations will take a lot of time.

---

This report is filled with bloated obscure language. It is clear that they have no more clue about what made Texas A&M a special place than the administration. It reminded me of the scam Germans ran on the US military about shuffling bases. Allegedly money would be saved. Growing bigger has not made A&M better. You have made sure that my contributions to A&M will remain minimal. I am mad as hell that the athletic department did not stand up for the Corps of Cadets and the tradition especially Lawrence Sullivan Ross. Lo

---

The DIE program should be abandoned completely and not replaced. Merit should be the only qualification used.

---

It is important to recognize the value of Texas A&M traditions and how they have made the campus strong and a truly valuable experience. We do not need to lower our values to other college campus levels.

---

This new plan is ridiculous and may finish destroying the unique culture at TAMU.

---

Throughout my career I have always been suspect of making changes because - a consultant to us to, other people are doing it, and we know best. TAMU is not just another University and I am not interested in following the crowd of other University's down the drain. This consultant has no unique insight into TAMU and is only spouting it's standardized procedure to getting to a standardized objective. I am especially concerned by the "diversity" comments and the idea that somehow the demographic population of the student body equal the demographic distribution of the state at large - that's nonsense. I thought quotas were deemed racist long ago - why are we headed there now? Perhaps there just isn't an equal interest across demographics? The only ideas worth following are ideas that - reduce cost, eliminate redundancy, and increase process or service efficiency. Do not tamper with culture - that's a big mistake. Overall - very troubling and I'd wary of accepting much out of this report.

---

(1) Texas A&M University Purpose Statement: To develop leaders of character dedicated to serving the greater good. Successful leaders benefit society. Being financially self-supporting is of benefit to society and individuals. When structuring degree plans, one of the considerations should be to prepare graduates to be self-supporting. By acting as a lender for a portion of Aggie students' loans, Texas A&M would demonstrate confidence in its ability to develop graduates who are financially self-supporting. Texas A&M can become a bellwether to improving the entire student loan industry. (2) Texas A&M University Purpose Statement: To develop leaders of character dedicated to serving the greater good. Texas A&M University has produced many leaders of character dedicated to serving the greater good. Studying these leaders to determine qualifiable characteristics could assist in identifying desirable attributes in students applying for admission. Texas A&M should focus on attracting these potential elite leaders. Texas A&M's Core Values demand that we graduate the finest. Conversely, striving for a massive quantity of admitted students or copycatting degrees that are effective at other Texas universities dilutes the impact of excellence. Elite leaders can be analogized as Army Rangers, Navy Seals, or Air Force Pararescue. These select units' ability to produce excellent results would be diluted beyond effectiveness if the entire Army, Navy, or Air Force declared all their personnel to be part of these highly effective units.

---

I applaud and thank the A&M administration for conducting this review and creating the draft strategic plan. While there are numerous portions/recommendations I disagree with and cannot allow to occur without a much wider discussion among current and former students, I sincerely believe that A&M's current leadership is operating in good faith to improve the reputation and reach of our beloved university. I would be happy to provide additional feedback if needed and be involved in any future efforts to continue to improve Aggieland in the coming years. Thanks and Gig 'Em!

---

I am excited about the proposed changes. Each change will be a project with risks and learning from each major change should be shared across other changes through some common quality management platform to prevent mistakes from being repeated in multiple fronts.

---

Strongly agree TAMU is unfortunately very decentralized, and in dire need of more centralization where it can be more effective and consistent. The decentralization has enabled: inconsistent transparency; lack of operational effectiveness; no clear succession plans; excessive bureaucracy; delays and slowness; confusion; rampant lack of accountability; inappropriate student behavior, attitudes, decision-making, leadership, preparation for post-college life; management from bottom-up; lack of responsibility; etc. Our Core Values should be defined and explained. The meaning of some are obvious, but, for example, many students and staff think Respect is something demanded and something to which they are entitled, rather than something earned during the life of a person, and something that can be lost in a brief moment. The report mentions that Aggie culture impinges upon change at Aggieland and upon the culture in higher education. Perhaps it does for some members of humanity, but I strongly disagree that Aggie culture is harmful to most Texans. Surely, TAMU has changed dramatically from 1876 to the present, and the changes have been difficult at times, but impressive and meaningful. We did not grow to over seventy thousand women and men students because the population was impinged upon! We grew because we did change dramatically and the population embraced the many changes and the culture. If we need to market better to the population, do so, but demeaning the culture would be destructive and harmful. We are the Aggies, the Aggies are we! May God continue to bless our unique and wonderful TAMU, and the TAMU System! [REDACTED]

---

In my analysis of the report, it seems to indicate that inefficiencies in the organizational structure throughout the TAMU system and the decentralization of control has caused many of the issues we face. Strong centralized leadership

providing clear guidance for the vision and mission of the future of TAMU with the emphasis on the culture and core values of TAMU is imperative. Reducing size of the bureaucracy within TAMU seems to be a very logical and potential effective course of action in my opinion.

Texas A&M has been successful being what it is. Eliminating redundant departments, offices, and services to gain efficiency, responsiveness, and economy of scale is important and I think the study presents some valid recommendations in this arena. However, as the saying goes, we should not fix what is not broken. Care must be taken to ensure that change is made where needed and not made where it is not needed. As changes are made, extreme care must be taken to preserve the character, heritage, and image of our great university.

N/A

To split up the College of Architecture would be a disgrace to every program in the College of Architecture. If anything, MORE collaboration is needed for the enhancement of all COA programs. Academia of the future is well rounded, well informed, and well funded. We no longer live in a world where these disciplines exist within Silos. They bleed into one another, collaborate, and shape the world together.

A comprehensive review has been needed for a long time. If one of the present requirements of a land grant university to emphasize diversity, equity and inclusion, that particular requirement should be studied in detail to prevent our unique university becoming just another big university. I understand the student enrollment does not reflect the state's demographics, but what education TAMU provides beyond the curriculum does not appeal to all segments of the young adult population. With over 67,000 students now attending TAMU, has the administration, faculty, and staff have just been overwhelmed by the large number of students? Is there a "dollar figure" associated with the recommendations and how will they be funded?

Much more emphasis needs to be given to recruiting Legacy students!!!! Parents that have raised their children to love A&M, taught Aggie core values, have financially supported the university find their children not accepted into the university. Their spots are taken by students that have no interest in the traditions and values of A&M.

I am concerned that the interview process in the College of Architecture did not allow sufficient time for the consultant team to understand the current inner workings of the College and how the various programs inter-relate to each other. I would urge that the recommendations for academic realignment affecting this College be delayed until more time for interviews can take place and a better understanding of the College is documented.

The process of self-reflection is admirable and to be commended. To reach the conclusion that the old model is both advisable and in need of concentrated redoubling of effort is not comforting. A&M seems to be concluding -- possibly based on the advice of its consultants, or possibly based on confirmation bias -- that it needs to return to the model of a military structure of command and control that has been diluted with the liberalization of the institution over the last half century.

- "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." This is laughable. A&M has great pride in being a former all-male military university. Why? Because we had a great impact on WWI, WWII, and the military conflicts after. To remove or diminish this "trait" diminishes our heritage and the growth that we have accomplished. - "Lack of investment in and inclusion of other TAMU branches and locations." TAMU in College Station should have no impact or financial responsibility on other branches in the A&M system period unless the report is referring to Galveston, or Qatar. - "Lack of faculty diversity and poor retention of diverse faculty members both at the university and department levels.... University climate not always welcoming, particularly to diverse faculty, staff, and students. Enrollment of diverse students, particularly African Americans, is low. Student and faculty populations do not reflect the state population." Maybe because they do not want to be here? If a student does not qualify academically or wish to attend A&M then why does the university need to push the topic? Do not change the culture of A&M to appease those who do not wish to be at the school A&M is a conservative school, this is a fact. Why is this a bad thing? The University of Texas is known for being a liberal school. Stop playing identity politics and let students attend what university they wish. A&M is not and will not always be everyone's top 1, top 3 or even top 5 university. That is ok. Should HBU and HBCs change their culture to include white or other ethnicities? If not, then why does A&M have to change the culture to appease others? The desire or requirement to pander need to cease. "Fish Camp is an example of this—there is a lack of control over the content of the camp. The challenges of polarized politics have the potential to threaten core values." No, what threatens the core values of A&M are admitting students who do not care for A&M culture and traditions. Stop pandering. Overall, the university is growing, too much if I may say so. Stop increasing student

enrollment, and stop forcing attendance and culture change. A&M is becoming a diploma mill. A&M is changing, some ways for the better, and in some ways for the worst. As the saying goes, "from the outside looking in you can't understand it, from the inside looking out, you can't explain it." I think this report should be treated as such, as the consulting firm clearly does not understand the rich history, culture, and pride Aggies have for their university. If they did then their focus would be on continuing that legacy as being the best university in Texas and the nation. A&M is special, and should be treated as such. We are not like every other university out there. Stop trying to change it to one.

If you do not reverse the damage Young created you will see a vast reduction in interest in the university as an avenue for students success. If you do not adapt for the future and address distance learning in a robust method, it will all come tumbling down. The old ways will not survive what is coming in the US and Texas. If you don't offer value for the price it will all be gone.

The cost of an education at Texas A&M is way too much. I know that the University's costs have increased over the years, but I believe that many of these costs were unnecessary, like those associated with athletic facilities and programs. I have a bill that I received from the College for the fall semester of 1962. The total of this bill was \$387.25. This included tuition, student services, student activities, board, room, laundry, and deposit fees. I could easily make that much money working during the summer. It does not take a genius to see that something went terribly wrong with the system since 1962.

TAMU appears to have grown duplicative processes in silos in the various offices and schools for many years; it is clear that opportunities exist for efficiencies in consolidation. However, consolidation brings with it the challenge of keeping close to your clients to meet their expectations and needs. The number of functions that need to be relocated to achieve this consolidation is challenging and during the process could cause chaos and further communications problems. It also appears that several new positions will be created in the top tier of the University management. Does the consolidation provide savings that outweigh the cost of the new positions and any new facilities? Are there existing measurements of the current service level; are these measures adequate to measure the service to compare with other universities; what are the projected efficiencies that will be provided by the consolidation, who will gather these measures, who will report these efficiencies, and who will be held responsible for achieving them? While it is great to measure university colleges and instruction to other universities, it would be good to go outside of academia to get measures for areas like HR, Payroll, IT, Facilities Management, etc.

I have some strong issues with the marketing company that provided the study. They appear to have bias against Ol' Ags, the Alumni that made Texas A&M what it is today. There obviously need to be some realignments and some consolidations at TAMU. That's to be expected. Right here, right now, we have an opportunity to strengthen Texas A&M or destroy it. The essence of being an Aggie is in the core values and in the Corps of Cadets. If we lose that we have just a no-name school churning out degrees. Being an Aggie is more than just a school and a degree on my wall. Its how I live my life. Its who I am. I became an Aggie because the core values were already the way I lived my life. I just found my tribe. It's the way I live my life : with integrity, loyalty, honesty, etc. Until the day I die, I will always be an Aggie. These kids you lure in with money based on the color of their skin or the high school they attend... they won't even remember what school they went to 15 years from now. There are so many kids coming in they can't plug in. They can't find their tribe. They won't even know what the core values are. So let's do some reorganizing and cut out the racist DEI stuff. Open the doors to A&M to all who apply and pick the best candidates, the smartest, most well rounded kids. Lets invest in the Corps of Cadets because they are truly the keepers of the spirit. Thank you for the opportunity to give my feedback. I look forward to more strong leadership from Dr. Banks. Good night.

Enrollment is too large and should be capped at 50,000-60000.

Dear President Banks, Thank you so much for taking the time to take a poll from those who dearly love and respect Texas A&M - the Former Students. My name is [REDACTED]. I have reached out to my dear A&M many times since my appointment in 2010 in hopes to offer a poetry event/reading at the Bush Library to the students. My requests have always gone unanswered. I understand the focus of the University leans other directions - such as football, veterinary focuses, business, etc., but the Arts are vital to humanity - it is what keeps us truly alive. Please allow me to come and speak to our future generation. [REDACTED]

There are likely several good ideas in this study. However, I am concerned about the overall theme of this study – increase the power of the president, create more bureaucracy, spend more money, build more buildings, and centralize control. It is curious that within 3 months we have a study that claims to understand the culture of TAMU and offers

advice on how to fix a myriad of problems using this common theme. I've seen studies and "listening tours" that were designed to give legitimacy to decisions that were made ahead of time. This study has that feel. Again, there may be some helpful ideas included in the study, but I would not embrace any of them without a thorough study of how each change would impact the Aggie culture. Bold innovation and action are needed from time to time. But, the reason must be the betterment of the university and not just empowering administrators or promoting any agenda that conflicts the Aggie core values. Additionally, there needs to be a protocol for determining when an academic area needs to be made into a department and when departments should be moved from one college to another.

The counter SWOT comments of : "...The Aggie culture presents a foundation of shared traditions and values that create a cohesive identity for students, staff, and faculty. The Corps of Cadets is a part of the school's culture and student body..." and "...The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education..." At first bothered me as a product of the Corps. But, I guess are inevitable given the different viewpoints that participants have. From what I have seen the Corps has made unbelievable leaps in developing into a premier leadership laboratory. The Corps today is vastly improved from the "OI' Army" Corps of my day. Hopefully the improvements I have seen will continue. I am excited that the University is looking to how it can improve for today and tomorrow.

I thought Gate's chapters in his book on his time at TAMU were very interesting. In this climate where everyone seems to go out of his or her way to misperceive whatever is said, this initiative will be difficult, but I appreciate the general thrust of the endeavor.

Overall, I do not particularly like a report that compares us to some schools that I think are not in our league. I would have thought more emphasis would have been placed on comparisons to schools in the SEC, or even better those that rank ahead of us in national university assessments. These kind of reports generate their own mandate to change to a certain standard that I do not think equates to TAMU. Hopefully, TAMU leadership can see their way to pick and choose the best conclusions that fit A&M and its future needs so that we maintain and strengthen our position. Surely A&M is capable of finding and implementing best practices without relying too much on outside consultants who may not have our best interests at heart.

I was taken back by their comments that A&M is burdened by an all-male military mentality is out of touch and is prejudiced by their bias. The University can not continue to grow every year. How big does it have to be at more cost to the State and students?

Bigger isn't always better. While it's important to have some change with the times, being a bigger University may not be the best course of action. Adding new colleges is sometimes necessary and important. I implore those in charge to make sure it is also the best idea for Texas A&M and the students. If we need to work on organization, maybe it isn't the time to add more of everything by adding new areas.

For Texas A&M to be sending this out and requesting feedback speaks volumes and makes me proud to be an Aggie to be a part of a University that still holds Former Students with high regards.

I understand the need for restructuring, but I am disappointed, overall, in the response to the report. Through out the report, we kept being compared to other schools, and how we are different from other schools. We are different. That is what makes A&M unique and special. A&M is one of the few conservative, tradition filled universities left in the United States. We all chose to come to A&M because A&M met our values, beliefs, and what A&M stands for. Why are you trying to change that? Why do we have to be like all the rest? What we have now is working and thats what people want - it is obvious - enrollment is through the roof (a bit too much and we cant handle the growth). Applications are through the roof, students want what we have, tradition, family, unity, core values. Too much time and effort are being put into inclusion and diversity - this is causing a greater divide - so evident is this past year. Skin color, sexual orientation, or anything else - does not matter in the eyes of an Aggie. We are all just Aggies. Now A&M is dividing out colors - all black dorms. That is creating more division and separation. What would happen if we had an all white dorm? The Statement: "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." How many made this statement? The Corps is only approx 2500 students. They are both male and female. They are the Keepers of the Spirit. The Corps helps keep the Aggie Culture alive- the Aggie Culture is what makes A&M special and unique. That is why we come to A&M. this does NOT need to change. I understand change is needed, we do need more efficiency as the University is growing. But do NOT change the culture. Let us have a college that is unique, let us have a choice and not be like every other university in the country. We are doing something right. Look how many CEO's of major

corporations we have, look at the \$ that is brought in by donors. Look how Aggies help all over the world in a time of need. Look at the fan base at our sporting events, Look at articles from other Universities complimenting us on what nice fans we are. We have been voted the happiest university and the friendliest university for a reason.

---

In general, leadership needs to always remember that Texas A&M is different. No outside consulting firm can come in and understand that. EVERYONE IS WELCOME AT TEXAS A&M! But bringing people in just to fill a quota is not acceptable! Again everyone is welcome, but should hold the core values and want to be there to be an AGGIE, not bc they got the best offer in order to fill a quota.

---

TAMU Reorganization – General Comments Section I am not familiar enough with day-to-day operations of the TAMU systems and processes to make comments on the specific recommendations contained in the report. However, I have experience with significant restructuring efforts in part of the private sector. My overall impression is that the recommendations are designed to move TAMU from a decentralized organization where the support services report directly to the operation segments, e.g., the Colleges, to more of a corporate services structure. I have experienced both and each has benefits and weaknesses. The decentralized system usually results in the services being more closely aligned with the goals and objectives of their operating unit. This is good but suffers from a lack of coordination across the entire service function, finance for example, and is somewhat more costly. The centralized system is likely to be more efficient and cost less but often results in higher turnover within the operating segment which in itself is inefficient. For example, the desire to give a finance professional a broad range of experiences within the entire university will cause key members of the financial staff to be transferred between operating segments rather than being dedicated to a specific operating unit. This generally frustrates operating segment management and causes a loss of time while the new transferee learns the specific processes of her/his new operating unit. I could continue with examples but I think that the point has been sufficiently illustrated. The final comment is directed to the President. When a reorganization like that recommended by the consultants is implemented be prepared for old lines of communication to be broken and for a lot of complaints and frustration by all members involved. You will need to be patient and give this at least a couple of years before the desired gains are achieved. Finally, do not be surprised when in a few years another consultant will propose that TAMU change from a centralized organization back into a decentralized one. The evolution of the change is a couple of years to become truly functional followed by several years of smooth operation. However soon the weaknesses of the new organization will become a significant problem and the process will start over again. Best Wishes.

---

Liberal arts and Sciences need to be separate departments. LA deals in subjective reality while the sciences deal in objective truth. Their perspectives on reality couldn't be more opposite or incongruous. Sciences deal in research that is funded by corporations that liberal arts has no way of relating to much less has any business courting for funding. Support for science students will be undermined by this maneuver and the future of sciences at this university will be compromised and eventually cease to exist.

---

TAMU should serve its students - educate them , help them realize their capabilities and make them want to be part of our Aggie family. This survey only allows one primary relationship to campus. Over the last 10 years, my husband was research faculty, I worked on campus, we are PES donors and had our own family members as students on campus. My perspective is much broader than one role and I suspect there are others in my position.

---

This is a great deal of information and expense. Please don't try to "implement everything" as it will be expensive and a daunting task. Pick and choose carefully as our students, our values, our atmosphere, our reputation and our University as a whole are affected by the decisions made.

---

I have read the report and it gives complete and 100 percent control to the office of the president

---

All students, regardless of "diversity" should be admitted to Texas A&M University, should be merit based. And the same standards applied to everyone equally.

---

na

---

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

---

"Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts." The most qualified students, staff, and professors should be accepted and working at TAMU. I don't have time to read the whole report but 95% of former students would prefer you don't turn TAMU into a tu!

---

Way too much money has gone into tearing down structures to make room for Kyle Field expansion. Football ticket prices are completely out of the range of most former students. Campus parking is a nightmare and paying the exorbitant prices to park on campus is ridiculous especially when you are not guaranteed a parking spot. Fees are out of sight as well. This survey is so generalized it is ridiculous especially for former students who have been out for a while and have no knowledge at all about the areas you want comments on. It is so generalized it is stupid.

I applaud making changes for efficiency of resources, funds, infrastructure. I also applaud moves to better communicate the tremendous quality of education and learning of adult responsibility that students graduate with today. We have a unique story - especially now - about what Texas A&M offers versus other universities. I personally don't want our campus, curriculum, faculty, graduates to be the SAME as other universities. I want A&M to be viewed as better, as unique, as special...because it is!

The greatest threat to our beloved institution is too much change too quickly without complete insight and without bringing along those who financially support the university. You've proposed a whole lot of change here, and I'd prioritize and make sure the strongest people are in the places of greatest need. We are a unique university, and we do not need to wake up one day and find out that Texas A&M, a school rich in tradition, abandoned all traditions for the sake of national rankings. Hold tight to our history and don't fall in the trap that this country has fallen into trying to erase history. We have a storied past of an all male cadet school that has beautifully transformed into the school it is today, a blend of cadets and non-regs, of male and female of much diversity. This school got there by carefully changing and adapting on its own pace for the right reasons at the right time with the right leadership, not just because everyone else was doing it.

Why do you believe that the culture of OUR University needs to change? If faculty, prospective students, or current students do not like it they are free to choose another school. Every school does not have to be a liberal cookie-cutter school. As members of the administration continue on track to take away the TRADITIONAL CONSERVATIVE values they will find that the funding from Former Students who embrace OUR TAMU will continue to decline. That result will mean fewer scholarships for students, fewer academic fellowships, and fewer new facilities. As you try to change OUR university it would be wise to remember what made OUR school special. It's the SPIRIT can ne'er be told, Its the Spirit of Aggieland. IT does NOT need to be reinvented. The last sentence of the mission statement is being ignored. "Texas A&M University seeks to assume a place of preeminence among public universities while respecting its history and traditions." The respect for its history and traditions is NOT being valued. Preeminence is not defined as liberal and that is what each of you is trying to make Texas A & M,.

I wanted to share how much I appreciate what the university is doing to grow the money education program. It is so vital to the success of whatever path students and former students forge in life. I live overseas and continue to see the issues of people not understanding the importance of these principles. The more access students can have to this program the better set up they will all be have greater impacts on the world around them.

TAMU is a unique university. My general impression of the report is that the consultancy provided by MGT seeks to move TAMU away from its uniqueness. It is fine to compare TAMU to other universities but It is not necessary to emulate those universities. Regarding the emphasis on diversity, the report compares diversity of the state population with that of the university and finds disparity. Is it not more important to focus on recruiting the best students based on academics and character rather than diversity statistics? I take exception to TAMU being perceived as a military organization and therefore a "threat" under SWOT. If TAMU Is truly perceived this way the "Community Communications" department should turn this narrative around and make it a Strength and an Opportunity!

The comments in Appendix 2, SWOT, were not well researched, particularly the note referring to the "all male military culture" in the Corps of Cadets. The Corps has not been all male since the mid-1970's, nearly a half century ago. Moreover, women make up nearly 15% of The Corps, and two of the Corps Commanders have been women. The culture led by the presence of The Corps is the embodiment of the Aggie spirit and is what makes TAMU in the words of President Robert Gates "a unique American institution. Without The Corps, TAMU would be just another fine university, but it would not be Texas A&M. The comment that the culture and values expressed by the presence of The Corps "are not consistent with higher education" is not what is wrong with Texas A&M; it is what is profoundly wrong with higher education.

My main concern is the growing feeling of the college wanting to be bigger just to be bigger. I'm all for growth as long as we can maintain our reputation of excellence. I do think that we should focus on what we are known for and good at; Agriculture, Engineering, and Sciences. In industry, the recruiters and HR personnel all know that if you want an

engineer, you go to ATM. That is what really benefits students the most. Having a performing arts center is nice, but being hired when you graduate is much nicer. If I was the one implementing many of these changes, I would be very diligent about making sure that all the "centralization" doesn't in turn just make the process bulky and inefficient. That is especially important with services that help students like IT and advisors. Have you ever tried calling a "centralized help desk" for something and actually been satisfied? Thank you for including former students in this process and allowing us to voice our opinions.

---

The word "utilize" should not be used, particularly when the word "use" is used in the same document.

---

I feel it's a privilege to provide this feedback and am so glad President Banks offered the opportunity for invested and passionate former students to participate. Many of us want to be an active participant in helping chart, promote and contribute to the future of the "school we think so grand". The task ahead is no small one, but our beloved university has proven we can be an agent of change while not losing sight of the foundation and traditions which make (and keep) us unique. I desperately want us to be viewed as a world class institution, a source of pride for our former students and a National and international asset to serve as a beacon for others to look up to. I hope there are thousands of other Former Students who feel just as strongly...whether or not they share my personal views. Please work hard to get this right. MG Rudder had to make some tough decisions when he chose to redirect some of the guiding principles of the university, but he did so in a way which did not compromise the core values and traditions. Please be mindful of how important these are and best of luck. Please do not hesitate to call on me if further input, clarification or service to this cause may be useful.

---

President Banks, thank you for your leadership. Please make any decision in line with our core values. Thank you.

---

Stop focusing on research. Priorities should be the job placement of students and setting them up for the REAL world.

---

Allow me to address some of the 'high-level findings:' - In general, if the operational structure of the university is decentralized, I don't believe the way to 'consolidate and focus' is by 'strengthening the office of the President.' That would actually be centralizing functions into an office with enough responsibility. - To solve inconsistent transparency and a lack of analytics and performance metrics: roles and responsibilities need to have clear definitions, and common practices and structures within academic and organizations units need to be implemented. - Centralization of marketing and branding is a fine goal, but remember that the university exists to educate students, and not to monetize its brand. Monetization is, at best, a tertiary goal, and should never take place at the expense of educating the students. Excessive focus in this area simply looks bad, and comes off as greedy. - Culture, Diversity, Equity, Inclusion. Respect for all of these attributes is important. No university will ever fit perfectly into any model purporting to be fair and equitable (this does not mean that we should stop trying to be supportive and transparent). When considering any high level changes, TAMU should never change for the purpose of fitting into any particular model of fairness and equity. Be as fair and equitable as you can, of course, but you cannot please everyone, no matter their background, their monetary contribution, their agenda, their politics, their legal standing, or their volume. The culture and reputation of Texas A&M will be continually established by the students who are currently attending, based on their experiences while there. (All former students compare almost everything A&M related (since graduation) to the time while THEY were there. Looking back fondly is fine, but our focus should be on the students now and in the future, and their experiences while students. The culture they have now is based on the student experiences that came before them. Their experiences now will be the culture of A&M in the future. The best way to serve our culture and reputation is to make the student experience the best we can. All purposes serve this. These Aggies will then be equipped to serve the state, nation and world, as their predecessors do now.

---

Dr. Banks, I believe you misspoke when you said you would receive feedback and then discuss changes. In fact, these changes have already begun. Asking for feedback seems to be a formality. I am ashamed of the behavior I have seen and heard about from faculty as it relates to diversity and to read that this administration tends to disregard it's student of color is terrible. I am mistreated on campus so I know students are too. I know you are not an Aggie but can you at least try to see it from a different perspective. World class institutions are not considered racist as TAMU is to most. Your own data proves that point. Let's work to fix it, not make the gap bigger.

---

Stop trying to be like every other university. Be what made A&M A&M!! Conservatism!! Cap enrollment in-fact cut it back drastically. 35,000 is big enough.

---

Overall, the recommendations will eliminate redundancy and duplication of effort. They will also reduce complacency which tends to plague institutions. Implementing the recommendations will align the university with best practices and

ensure all positions and tasks are working seamlessly toward a common goal. Do not let the individuals who are afraid of change dictate Texas A&M's path. This is the way forward!

My professional career included approximately 36 years in the nuclear industry. A large percentage of my time was spent managing different quality assurance (QA) organizations. One very important lesson I learned while working in QA is that an accurate evaluation of an organization's performance and effectiveness CANNOT be based on interviews and surveys alone, even when consistencies are found in the interview/survey results. The organization's deliverables (products and/or services) MUST be evaluated. This element is missing from the consultant's report. Without evaluating each organization's deliverables, it is not possible to determine which of the report's recommendations need to be implemented.

Teach and do not indoctrinate. Honor A&M Heritage and Traditions above Woke and so called diversity. Support for standing for the USA Flag. Honor our Flag. Have only one graduation ceremony. We are one Aggie family, regardless of ethnicity. Separate ceremony only divides us, does not bring unity. Different ceremonies - does that mean different rings will be recognized - will the degrees state something different. Respect everyone's ability to free speech. Honor and respect it. Protect it. Violence should never be tolerated. Promise to never again Lockdown the school. Those seniors were deprived of so many great and cherished traditions.

I cannot believe you spent money on this. It shows a lack of vision on your part.

I'd like to thank and commend President Banks on soliciting feedback from a wide-array of audiences for this report. Frankly, it took me by surprise. One day, I was cleaning my email inbox and randomly saw her email. As I read through it, I was astonished thinking that this is the first time I have ever seen a President of Texas A&M University seek feedback on things of such importance, let alone ask feedback from Former Students. I was genuinely honored and connected me closer to my alma mater (use of email like this is SUPERB Strategic Communication!). I hope my input is useful in some way or another. Thank you for the opportunity and Gig'Em! Very Respectfully, [REDACTED]

The MGT Report is very thorough and provided clear recommendations across all areas of TAMU. As a former student I am fully supportive of TAMU's goal to further improve its standing and reputation as a first class educational institution. I know President Banks faces many challenges. I am confident the former students, including myself, will support President Banks as she works to make TAMU a better institution. Best wishes to President Banks and the entire faculty and staff of TAMU. Gig 'Em Aggies.

There needs to be care in not increasing overhead/people or a lot of new positions. Job descriptions need to be re-written, and job fit analysis made. National press has indicated the rapid increase in administration costs leading to higher tuition, which does not necessarily contribute to better education! Sadly this report does not include #'s of people involved and is too general, in my opinion. The number of people in this study was 44 in-depth interviews with key university leaders, a strategic survey of 58 of the university's deans and vice presidents, and surveys of current students, former students, and faculty and staff. This seems like a very low number for such a wide ranging & broad recommendations, not to mention the implications for overseas operations. Productivity can be possibly gained with a good monitoring computer system to analyze needs and changes and responsibilities and of course key objectives tied to compensation and salary increases. Lastly, there should be stepping stone reorganization plans made, otherwise this process will be highly disruptive & chaotic, as well as new hire and training needs where necessary (in normally takes 6-9 months to fill a position and get up to speed. Where is the Cost Benefit analysis for all the added positions or even within departments? Verbiage for recommendations but no hard facts.

The transition team should be staffed with people who are knowledgeable of Texas A&M, not outsiders looking in. i.e. the MGT report that HIGHER EDUCATION was in danger due to the "all-male, military component" of Texas A&M. They obviously don't understand the DNA of A&M... the skeleton that the university is built around...something that cannot be seen, but must be experienced... the Spirit of Aggieland.

I am concerned that many changes will require money that likely does not exist and will impact existing services. Furthermore, I am concerned that the endowments and wishes of the donor's will be respected if the colleges are combined. I have seen multiple donors turned away because they were asked to share the money with all departments when the donor only wanted to benefit the department/major of the donor's choice. Also, I believe that graduate students that are employees of the university should not be subject to the various ridiculous fees that the universities keep creating.

Howdy! I am Class of 2016 and graduated in University Studies with a minor in English and Business and a concentration in Dance. I chose to attend the Texas A&M Dance Program for many significant reasons. It's a unique program that focuses on Dance Science, and the faculty are outstanding with impressive dance backgrounds. The Dance Program only continues to grow and produce highly educated and trained dancers. I will admit, I'm disappointed to see this survey not once mention the arts. Texas A&M has many art programs to offer, not only in dance, but visual arts, theatre, music, and design. There is so much potential for these programs to grow, but if you don't even mention it in this "university survey" how will this happen? Therefore, my main suggestion out of this whole survey is Pay attention to the Arts, actually build a Performing Arts Center for students, and continue to grow the art field at Texas A&M.

---

I would just ask that change makers keep in mind that no one knows TAMU better than those who work/study there and those who have worked/studied there. It is a VERY special place and its values and traditions should be protected at all costs. It is easy for a company to make recommendations when they are paid to do so, but not every recommendation is what's best for students/staff and their TAMU experience. Please keep this mind when deciding whether or not to accept and implement some of this studies recommended changes.

---

The MGT people know zero about A&M and its history. The report is far, far too negative. When it comes to words/\$, I think you got your money's worth. As I said earlier, while there's always room for improvement, you can't argue with success. Why was nothing mentioned about the academic success of the Corp of Cadets, as compared to the rest of the University. To implement the MGT recommendations will require a VERY large barrel of money.

---

You should do everything you can do to reduce the cost of attending A&M. I spent my first two years in college (1958-1960) at Tarleton State, a member of the A&M system at that time as well as now. My last two years (1960 - 1962) were at A&M. I had a summer job that paid about \$1,000. a summer - which paid about 95% of my college cost. Of course, I didn't have a car or other expensive item that students today deem essential. Still, the cost of college, in general, is far too high and should be reduced everywhere possible.

---

Listen to your students. They know what works and doesn't work with the way things currently are. A third-party consulting company doesn't spend enough time at the university to understand how important relationships are created between faculty and departments. Departments don't need to be in the same college to collaborate effectively.

---

Mission of my comments – To refresh the Texas Aggie (HSRWL) Culture which is founded, rooted, and established and need not be changed. It must impinge on each and every person within the Texas Aggie Community. Representing this highly valuable culture is the challenge for us who convey it, as true (transparent) Texas Aggie culturist. Organizational Development processes along with Training and Development curriculums must be envisioned and constantly refreshed to prepare our leaders for this effective conveyance. This will lead to overall student success. Response Management Overview number 6 A – This recommendation and its implementation cannot by itself be successful. The University's culture is not addressed as part of recruitment efforts investment. And since the University's culture has evolved from its unique heritage, it must be more clearly understood in order to convey it to those populations being recruited. With such an understanding of the true culture and the framing of it, certain decisions have to be made before implementing recruitment strategies. This so that the implemented recruitment strategies based upon better understood culture can be successful. So, we must understand How unique TAMU is and how to compare it with others if such a comparison is even appropriate? Comparing with other university systems was chosen as a method of estimating and making recommendations. This is problematic when a university such as Texas A&M University is without comparison. Of course many university systems claim to be unique and many of these might claim that no model nor examples exist for comparison. In the consultant report one might ask. How did the consultant teams develop ways to compare and contrast TAMU with other systems? And how did the consultant teams validate the comparisons? In order to determine if comparison to others is appropriate or, if appropriate, then to validate the comparisons points have to be made in the complicated question. Imagery can be useful here. One could image an educational system as a growing tree. As such, we would see a tree with root system, trunk, growing limbs, branches, and foliage prevalent. Now then if imagining how the tree could represent the growth of academic ideas, disciplines, strategies, and the supporting infrastructure, TAMU might appear much like other Institutional "Trees". Such institutional trees might include grafts, where which, an entire limb branch system being added onto the existing tree structure. For example, during the transition from college to university the TAMU institutional tree had new colleges and departments grafted onto the substantially rooted (90-year-old) TAMC tree. But does this obvious, easy to see, change completely explain if or how the college culture has changed in order to market the value? The tree within the tree, which is not seen, is what any change recommendation must consider in order to implement new strategies in a prudent way. Such discerning prudence will greatly improve the chance for effective results from strategic recommendations and their implementation. So, we must call upon more

discernment to accurately measure and understand our institutional tree at Texas A&M University. At least four good assumptions can be made about the TAMU tree, still growing well after 145 years. The root system is substantial like other trees we notice. The grafted (structural limb branch) systems have taken hold and are growing. The foliage, in its season, is magnificent. Some damaged places on the tree have been obscured by new growth, but deeper damage cannot be seen. To an Arborist, the trained discerner, scars and strength might be realized by patterns and structure. What sustains the TAMU Institutional tree and its magnificence in season and out? Is it the apparent bark, general structure, limbs, and leaves? No, these are results to be appreciated but not as reasons for substance. The culture or inner tree must be evaluated without hurting the tree. The culture, inner tree at TAMU is deeply rooted from its origins, its parent tree and protected growth. These ideas are fundamental to the discernment of the true culture at TAMU. As such they are highlighted here to guide the Consultant "Arborist". The origins of TAMU are based upon the Land Grant mission. But in Texas, unique to other state's land grant school planting, the institutional tree is born of harder, yet vibrant, enduring seeds. This idea must be factored into any understanding of the true Culture. Such a tree would be like a lively oak with no real peers. The root system sprouting from such seeds yield the following: A venturing, greeting, mutually\* respecting frontier spirit unbroken by earth, wind, fire and human interactions. This culture spirit makes comparison to eastern seaboard schools invalid. \* Here, the idea means a mutually respecting of respectable mutuals, such as whites, civilized tribes and tribes seeking assistance. A courageous fighting spirit unbreakable through its invasion, interstate, or intercontinental support when called. This culture spirit makes comparison to Western state schools incomprehensible. A thirsty and hand drawn learning spirit, not quenched, even though other schools have been inundated with new water brought from elsewhere. Schools that must have others draw their learning water over the United States have little in common. A tough-minded work ethical spirit, that has been bested rivals and still attracts others from aforementioned states, must stand alone when it comes to comparisons. These listed culture spirit seeds and growth present the type of Live Oak Tree that appears on the TAMU campus. This notable tree is magnificent and growing with man-made supports visible. It is not the job of the Arborist to change this monument tree but only to understand it in order to support it in place and convey it as value to others. It is noted withing the report that "The Aggie culture impinges upon the potential for change within the university". This impingement and influence on the culture is not a negative as the consult team suggest. As with the tree, we need not change it, only support it, understand it so that it can be truly represented to others who seek its value. Those seekers are either ready to adopt the culture Spirit that can n'er be told or who want to complete such a spirit in themselves. All recruitment must ask the populations sought if they want to change because TAMU should not. Now then, we must ask what supports the trunk, branches, limbs, and foliage of this TAMU culture. What organizations stand steadily firm and witness to the Spirit. It is those organizations who should recruit and be called to represent TAMU. SWOT Culture Strength - This strength should be restated for truths sake. The Corps of Cadets and its heritage is MORE than an equal part of the school's culture it is built upon the and extends the foundation of the culture discussed in observation 6 recommendation above. The Corps claims to be the keeper of the traditions and spirit. This can be seen in how it is instilled in minds laid open as fish, when old thoughts are displaced with new ones, creating a new progressive thinking. Fish camp connection and recommendations cited below in Student Affairs observations will be discussed at that point. SWOT Weakness - The TAMU culture must impinge on all recruits, students, and faculty, indeed the community. It must be, as a foundation, stay the same, then be supported to change, inform, and stabilize random mindsets to a new changing world. Certainly, strategies on how the culture is expressed, guarded, and made accountable should be in the offing. The all-male military components are few. A study on how to refresh these military components will be necessary, only if other all "One Look" student groups undergo a similar progression. That said, the idea of transitions sometime calls for intermediate steps. The military and corps, since 1975, has been going through intermediates steps. All female units, some integrated units, most all integrated units down to 36 of 44 now integrated. Since the integration mission is larger than just for the TAMU corps of cadets, the objective of total integration is rational but not always sensible. For testing purposes, over the long run, the question has to be asked again and again: Does the full integration military units place our military in the best position to protect itself and its mission? If the US military beliefs, proves and present the answer to be yes, then TAMU and the Corps by connection must comply. What more can be done. The Military Science Department at TAMU must certainly be monitoring closely the outcomes of various units. These results must be recorded and made ready for evaluations when called upon. This current balance suggests that TAMU is progressing and respects diversity generally. As such this small TEST group of 8 units out of 44 does not impinge upon TAMU culture. Students must respect testing while the examinations are in progress. SWOT Opportunities - TAMU and its student groups will be informed and encouraged as the University changes its structure (by addition), maintenance and strategies related to

culture, value, and foundational heritage. This informing should include position placements using leadership and experience to inform, influence and hold accountable student populations SWOT Threats - The perception that a not welcoming climate exists at TAMU is false. Now then students as individuals, used to their own thinking could certainly convey such attitudes. If anything, the HOWDY culture taught and conveyed at TAMU belies this fact. This HOWDY culture, has been regressing and must be recharged. Fish Camp is key to this as well as reemphasis in Fish Orientation and Spring Orientation Week. The key here is a look up and forward training. Young people tend to look down or be distracted with devices. We must and will set TAMU apart once more.

---

I like the direction of these changes. Any organization which has grown as fast a TAMU needs a structural reboot eventually, and it's time for TAMU to take that step. The implementation of the changes which are undertaken will be a huge task with some considerable disruption. A carefully thought-out phase-in plan will be essential to minimize the impacts. A number of "Old A&Ms" (of which I am one!) will bring up the argument that the Morrill Act of 1862 set up a land grant college for agriculture and mechanical studies, and this reorganization will violate that principle. One Old Ag has told me, "They trying to make A&M a liberal arts college, and that violates the Morrill Act." (By the way, many people, young and old, don't know that TAMU also has Space Grant and Sea Grant designation.) But if one reads the Morrill Act of 1862 they will see that the Act did not limit the curriculum to only agriculture and mechanical studies. Section 4 of the Act is one very long sentence, but the last half or so tells it all: SEC. 4. And be it further enacted, That all moneys derived from the sale of the lands aforesaid by the States to which the lands are apportioned, and from the sales of land scrip hereinbefore provided for, shall be invested in stocks of the United States, or of the States, or some other safe stocks, yielding not less than five per centum upon the par value of said stocks; and that the moneys so invested shall constitute a perpetual fund, the capital of which shall remain forever undiminished, (except so far as may be provided in section fifth of this act,) and the interest of which shall be inviolably appropriated, by each State which may take and claim the benefit of this act, to the endowment, support, and maintenance of at least one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life. There is one glaring error in Appendix 2 under Weaknesses, third bullet. The Corps of Cadets is not all male. And it would be interesting to find out HOW they reached the conclusion that the Corps "impinges change within the university." I agree the Corps impinges change within the Corps, but even the Corps of today is very different than it was when I was in school. It has changed a lot!

---

The University is growing too fast and needs to upgrade the Organization Charts.

---

This is a very comprehensive report and well done. It supplies a lot of recommendations for the university as organized now. TAMU has grown dramatically in enrollment and like many organizations or businesses, it seems from a distance, its' growth has not been well organized in response to demand from its customers ( students and parents of students). I do not think TAMU has a well defined "mission statement". I think with the current 73K student enrollment, it is time to decide what academic areas TAMU wants world class recognition for excellence. Organizations cannot be all things for all people! I was in the Corp when I attended TAMU, and the school was recognized for producing graduates with excellent leadership qualities. The Corp now represents a very small percentage of the student population. and I am not sure how it fits the current planning. but the TAMU Corp has a world class reputation in the business world today. It would be a shame to lose that asset! One last comment. TAMU has never been known for being a liberal arts focused University and I would surely modify that "fourth leg" scenario.

---

The overall report addresses a primary issue that has historically inhibited academic collaboration within TAMU; the existence of academic silos. As past chairman of the TAMU Research Foundation and an advisor to the the Dean of Medicine who conducted a study concerning its future, there are numerous redundant activities with each of the silos that both reduce efficiency and inhibit collaboration. The overall proposed reorganization appears to correct this historic deficiency. However, reorganization alone will not eliminate the problem. There must be a cultural change emanating from the top that encourages collaboration among academic disciplines.

---

I appreciate the time, effort, and expense that resulted in these recommendations. The hardest part is to come - planning for implementation, getting buy-in from those employees affected, and continuing to follow through in some way every day. When we make the effort the rewards will be worth it.

---

I find it very interesting that this report had no feedback on the College of Engineering, College of Agriculture, and College of Mays. Three colleges with a strong reputation of racism, sexism, and a hostile work environment. The report

has a very strong bias which makes it hard to believe. The lack of discussion about diversity was very concerning.

---

After twenty five years in the Army, I'll tell you I'm generally distrustful of organizations which demonstrate a lack of understanding of the core values of the organization they are making process observations about. This report is no different. I find fault in several general comments...all center around diversity. We should seek to attract THE BEST student faculty regardless of demographics. This means all genders and all ethnicities. Demographics while interesting, do little in the way of performance. We should seek to provide equality of opportunity across all areas at Texas, but forcing metrics to achieve a pre determined outcome argues against establishing excellence and providing opportunities for all Texans. "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education" is so ludicrous as to undermine almost every other comment and recommendation. It demonstrates not only a FUNDAMENTAL lack of understanding and knowledge of the current campus culture, but also a bias against the very things Texas A&M stands for and was one of the three reasons for establishing Land Grant Colleges in the first place. Change is good if done with purpose, but eradicating culture and purpose is not positive change. This comment about the faculty senate illustrates this point as well "...there is no requirement for the demographics of the elected participants, i.e., ratio of tenured/tenure-track faculty to academic professional track faculty, to mirror the university demographics." Establishing a demographic based membership requirement again, argues against providing opportunity to all and rather a pre established demographic mirror, regardless of competence or motivation to serve.

---

Centralization is not always a good thing. Good leaders delegate authority. Centralization harkens back to 20th century Eastern European organization failures. Texas A&M has the second largest student body in the United States, so I find it incredulous that the institution has problems attracting people. All statements that imply the university culture dampens enrollment are false and hide motives. Ignore recommendations from former Democratic consultants who have questionable motives and a history of degrading institutions.

---

Of the hundreds of colleges and universities in this country, we need one to stand out as a beacon for the very corps values we espouse. Incoming students should understand what A & M stands for before they get there. They should want to be a proud Aggie because they are part of something bigger than themselves. You can not convince me that 2,000 corps members are stifling the A&M image. If it does, go to one of the other institutions.

---

This is a very typical consultant report. I have seen many. Only those people that are intimately involved with each of these areas can truly comment in a meaningful way on these recommendations and the possible effects that these changes might make. I am clearly not in a spot to provide such comments. So after plowing through this extensive report and since I was asked to comment I will leave these few observations. 1. I saw absolutely no reference at all to the financial impacts of these recommendations on the bottom line or the budget of the University. Universities today are well known for poor money management (I have seen first hand evidence) and the ease of just raising the cost of attending makes for poor financial management. A massive recommendation to make this many changes with no reference to cost impact seems very unusual. 2. President Banks should choose her staff wisely. It really doesn't matter what the organization structure is if you have the wrong or poor performing people in jobs. Universities are fairly well known for being places that "if you just keep your nose clean and stay out of trouble, you've got a job" kind of workplaces. This tends to create workplaces where tenured folks (both faculty and staff) just get by and stay out of trouble and rise in the organization. These type individuals do not produce high performing workplaces or universities. Change that perspective at A&M President Banks, and you will make a bigger difference than all of the recommendations in this consultant report. If you really change that perspective and use those high performers to put these recommendations into practice, you get a bang for your bucks on steroids! 3. Good luck President Banks, REAL CHANGE IS VERY HARD!! I truly hope you are completely successful because I absolutely love Texas A&M and hope to see it succeed and prosper well into the future.

---

Very good report. Observations were specific and aligned with good recommendations.

---

Thank you for your detailed data, analysis, and recommendations concerning our great university. I did not personally receive an opportunity to participate in the data collection and have only general comments as to the SWOT results and recommendations. I am sure the information and recommendations that were presented will allow those who consider and present proposed solutions to the leaders and deciders with options that can streamline, financially save, and improve the university's performance in numerous ways. All these options should be studied and considered. But, as MGT implied, all universities are not the same and exist in different parts of our nation. Texas A&M University must

be among the very best academically and productively to have grown and expanded as it has over the last 60 years. The deciding authorities must carefully and thoughtfully make appropriate changes to improve organizational and financial effectiveness, while simultaneously maintaining the Aggie culture. I am hopeful that meaningful adjustments can be made as the university continues to improve, grow, and advance in academic performance, size, and value to individuals and our nation.

My undergraduate time Texas A&M was a life changing experience. I owe the University, and especially the Corps of Cadets for giving me the structure I needed to succeed. I was an above average cadet, but a below average student. I hope there are still Aggies like me; hacking their way through, getting to the milestone of graduation. I am so proud to call my self a Texas Aggie.

I have heard about the cuts to the college of liberal arts and find this to be unwise. I am coming from the college of engineering too. We need students of all majors and interests to make a great working world. Some of the best people I work with come from a liberal arts background, so I think the combining of colleges diminishes the liberal arts degrees

President's banks, I applaud your initiative to take on this challenge. This report highlights a very significant number of challenges and opportunities. And I believe will suit the University well. I see lots of opportunities to streamline functions that will provide better delivery of services and at a reduced operating cost. As a Former Student, I'm happy to see that this report was NOT a list of social grievances that the University needs to fix. A&M is an unique place. If students want the "woke" experience, there are many other places to attend university. [REDACTED]

First, let me commend President Banks and the rest of the leadership team at Texas A&M for recognizing the value in hiring MGT to conduct this review. As a former student, Class of 1995, it pleases me to see that steps are being taken in an effort to evolve and make this fine institution even better for the future. It also demonstrates to me that the University is humble enough to recognize that while it has accomplished much, it is still imperfect and can take subjective findings like the ones provided in the review to better position the University for sustained and continued growth. Now let's prioritize the findings and put an action plan together for execution. Continue to nurture this institution as if it was your own child and know that Aggies everywhere are proud of the image and reputation you are working so tirelessly to preserve.

Please compare the VDH paper with the MGT report. See: [REDACTED]  
[REDACTED]

Concerned about the admissions process for private school students or review admits from college preparatory schools. These students are more than adequately prepared to perform in a college environment yet are at a disadvantage in the admissions process. There has to be a more fair assessment among auto admits vs review admits.

"From the outside looking in, you can't understand it. And from the inside looking out, you can't explain it." This report started from the completely wrong place by comparing Texas A&M to other colleges, especially civilian colleges without our heritage as a senior military college. We aren't like them and we aren't meant to be like them; Texas A&M is a singularly unique institution with its own traditions and values. Specifically, the report mentions that Texas A&M is a "conservative school"; this is as it should be. Texas A&M stands in stark contrast to the strictures of liberal academia. We teach the virtues of individual liberty, personal responsibility, hard work and success by merit, respect for tradition and love of country. "Diversity and inclusion," which value students by the color of their skin rather than the content of their character, are not among those virtues. Our doors are open to students and faculty of any gender, race, creed, or sexuality, so long as they share our Core Values. That we do not pick favorites according to such innate and immutable characteristics is a strength, not a weakness. Further, one of the most frequent recommendations in this report was to "centralize." In some limited practical circumstances, centralization may make sense. But it should always be undertaken with caution, because centralization of power comes at the expense of individual liberty. As much as possible, we should give students and faculty the opportunity to form and act on their own judgements, to innovate, and to make decisions for themselves rather than be told one way or the other. This may not be the approach other schools would take on such matters. But those schools are not Texas A&M. And we did not become the finest educational institution in the world by following the crowd. Finally, we need to seriously re-examine our relationship with Qatar, in light of its government's participation in the financing of terrorism in the Middle East. Jordan Cope has done excellent research on the subject, and I would recommend you consult with him about the best course of action to preserve our values as they relate to A&M Qatar.

With regard to the right/wrong direction survey responses from students and former students, I would caution the current administration to keep in mind that is survey was taken after, not during, the tumultuous events surrounding

the Sul Ross statue protests last summer, as well as after the decision had been made to keep the statue, and after President Young had left office. If this survey had been taken during the protests, before the decision to keep the statue, and/or before President Young had left office, the results would probably have been far more negative. Another very interesting survey result was the majority of the faculty ranking A&M's unique culture as one of A&M's top three strengths, especially in light of the fact that only a small minority of the faculty listed refocusing Aggie culture as a top priority. This seems to indicate that our culture, and its preservation, is as important to faculty as it is to students and former students, and, by extension, should feature prominently in all recruiting and marketing efforts. A point of concern which emerges from the survey results is that the deans and VPs ranked engagement with former students last in their important elements ranking. This could indicate that the deans and VPs may see former students as a potential source of funding, but not as a genuine source of ideas, or as an important constituent group. MGT's SWOT analysis is concerning in that, on the one hand, it acknowledged A&M's culture and history as a strength, but on the other hand listed it as a weakness, and even specifically listed its conservatism as a threat. A&M's conservatism is not a threat, its is an important differentiator in a higher education environment which increasingly does not allow for the expression of conservative cultural values.

---

I was confused to see that A&M should further invest in a small animal veterinary clinic when the report clearly stated the need is for large animal vets. I understand there is more money in small animal, but are we catering toward that or the needs of professionals in Texas/the U.S.?

---

I FULLY support all advancements suggested for the arts, especially regarding the dance program. As a program that has been looked over for far too long, these advancements would provide such exciting opportunities for current, future, and former dance students. This program shaped me into who I am as a person and led me to my career in teaching. It deserves all of the facilities, equipment, and funding that all other departments receive. Growing this program would benefit future generations of dancers immensely, as the dance program trains its students to be the safest and best educated teachers possible. I learned dance science related information that people in my field are entirely unaware of specifically due to my education through the Texas A&M Dance program. Please push for any and all improvements for this program as it can affect the state, nation, and world with its incredible lasting effects.

---

I find the MGT report lacking in accuracy when in their SWOT analysis, weaknesses, call The TAMU Corps of cadets "all male". It is common knowledge that there are 18% women in the Corps. How many other inaccuracies are in the report?

---

Given the ability for distance working. the number of former students with expertise in these areas that can be engaged at low cost should be considered. The former students already understand the environment and culture.

---

In general MGT and M+ CG have done a good job of looking at TAMU and making recommendations that will improve the operation of the University and in the process make it more efficient and with better controls. There is one critical area that I think they failed in. Several times they mention our "Traditions and Core Values" as being strengths that we need to hold on to and build on, however they did not bother to understand where these came from. As a Land Grant College we were to have a military contingent and president Sul Ross promoted loyalty and selfless service. The "Corp of Cadets" is the basis of all of our "Traditions and Core Values". The study group states that we are still an all male Corp and that because of that diversity and inclusion will be hindered. I would argue that the "Corp of Cadets" is what sets TAMU apart from other schools and the Corp has not been all male for many years. The study recommends the combining of the Arts and Science departments with the expenditure of large sums of money for facilities and staff to grow those departments. If that means that we need to look more like Cal. Berkley, then I suggest that we take that money and spend it on better faculty for the areas that we are already doing well in. The world needs at least one conservative university.

---

During my 40 years of professional experience after graduating in 1977. The predominant feedback I received over those years regarding TAMU was "Outstanding engineering, technical, and veterinary university." While the many diverse colleges within the University are important the legacy of outstanding Agricultural Sciences (including the Veterinary School) along with Engineering & Technology should remain paramount.

---

I am sorry but I don't feel qualified to comment on the aforementioned sections having been out of the University for over fifty years. I did read the report summary and found it to be a frank and unbiased assessment that will undoubtedly lead the University to greater heights within the educational community. I am very proud to be a graduate of Texas A&M.

---

I recommend supporting the changes advocated in the study while requesting additional resources to achieve elevating the College of Architecture. Removing programs may assist with streamlining focus, but the created void of pruning

commonly shared resources may weaken a needed financial/staff/professor structure. While the financial/staff/professor structure aligned with the departing programs is not revealed, I suggest retention of at least 30 percent of the resources be retained by the COA with at least a 36 month committed boost to financial/staff/professor dedicated to "balance" during a time of change. My comments are based upon working within corporate mergers and acquisitions and participating in the impacts of these actions. Objective positive benefit impacts are typically over estimated during the short term while subjective adverse impacts are under estimated for a longer term. There is a time frame requiring cohesion and balance to be regained and companies who failed typically did not provide strong resources to bridge the transition. Having read the entire report I strongly recommend the President focus upon identifying a plan to implement an ample basket of resources to assist with transition over a three year period. The short term expense is an investment/insurance towards achieving the long term objectives. While the report focuses upon organizational change the undertone is creating a catalyst for cultural change. The former is easier to project and the latter is the "third rail" of success. Energy expended to divert the "recommended" impending changes is unlikely to have significant impact, but a focused effort to prepare and gather resources is well worth the effort. Thank you for providing the opportunity to collect our thoughts into your response. Be well! [REDACTED]

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

From my experience, even after you reorganize, tremendous effort must be spent on making processes and procedures efficient. A value rating needs to be established for each process and procedure.

Keep the woke activism to a minimum. Thank you.

Diversity of thought is important. Diversity of anything else is not.

I was a student in the 1960's when we changed the name of the Agricultural and Mechanical College of Texas, Dropped the mandatory Corps of Cadets requirement, and allowed women to attend Texas A&M University. There were many Aggies that thought the school was going to hell in a hand basket. BUT, those changes have made A&M what it is today .....AND.....these changes will once again propel A&M to a new height of even greater excellence. [REDACTED]

I just want to say thank you for taking the time and effort to organize and conduct this survey! As a student it often feels like I have no voice, and that things never change, but this whole operation restores some faith in the University. It's encouraging to see the University taking huge measures to reorganize itself and actually fix the systemic problems by actually changing the systems rather than just continuing to make bandaids fixes.

I think more analysis should be done on the student satisfaction surveys. The disparity between upper and lowerclassmen students is pretty significant. More work should go into discovering the reasons for the disparity, such as how classes managed/mismanaged due to covid, the general cultural shift at A&M for the last 5 years, or other factors that the upperclassmen might have that differ from underclassmen. Underclassmen came in to college already in the hybrid model while upperclassmen were fully in person for most of their academic careers. The freshmen might just not understand what they aren't getting, while the upperclassmen are upset at the experience they lost.

The report seems well researched, thorough and well written and easy to understand.

As a native and alumni of A&M, I have seen fire destroy the original presidents home, across from Sabisa, the demolition of Guion Hall, the outdoor pool, G Rolly Wright Coliseum, the "new" Presidents home on the South side (was it not "good enough"?), and the re-make of the MSC, that seems more of a shopping mall, than the living room of A&M. Please save historical architecture at A&M.

Collaboration between disciplines is needed. Investment in the college of architecture is overdue.

Construction science must remain with college of architecture. VIZA could move to new college of arts and sciences, but a program specifically for architectural visualization and rendering should be created in its place within the college of architecture.

The College of Architecture should have a professional five year Bachelor or Architecture undergraduate degree rather than the current four year Bachelor of Environmental Design. The ENDS degree without continuing on for your Master's, makes it extremely difficult to be successful in the real world - namely the time it takes to become registered, NCARB

certified, and reciprocity.

---

It is concerning that strengths were such a minor part of the report, makes me question the consultant's approach. The report seems to ignore the land grant mission of the University.

---

"Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts." I am more than conflicted with DEI. I find DEI to be a secular creed hostile to traditional creeds and beliefs. While DEI sounds appealing, DEI efforts undermine the educational function of the school creating a campus climate antagonistic to education.

---

I'm not convinced bigger is better. It seems we've become a bit of a diploma factory and I just wonder if we've reached the tipping point of how effective a college experience we can deliver for 65,000 students.

---

I do not understand why the University markets using the traditions and the Corp, but continues to throw those away, to try to make us like every other university in the country. It is not logical, but points to an agenda to continue to marginalize people who support country and free will, who are moderate to conservative in thinking. I have stopped giving money to AFS and am considering pulling my endowment back. We have been very successful for decades with the focus on Agriculture and Engineering. Our graduates had great success finding jobs and being successful, which seems to me the point of acquiring a college education. We are ranked very high on various lists, including one for diversity. I do not condone the behavior of the extremists on either side, but I don't like the focus to be race/gender/etc. The focus should be on being an Aggie and all that stands for. One of the most distasteful things I saw this past year was a young lady who was given money to attend TAMU, she accepted, but she flipped us off in a picture posted online with negative commentary. I am starting to find it hard to be supportive of the Texas A&M that exists now.

---

Thank you for considering the arts, specifically dance! As a former student, and one of the first in the Dance minor, I know that my current high school are searching for arts opportunities closer to home. Thank you, Texas A&M, for being the one to offer that!

---

I would like to see something like this for the Galveston campus.

---

Free speech and expression always evolve. There always has to be a balance of this evolution with the ability to experience different view points. I did not note any references to inclusivity in terms of speakers and faculty with this in mind.

---

Overall, the recommendations are vague and where success is suggested to come from building something, examples of the kinds of initiatives are not provided. So, in the end, one might do almost anything to change the culture of Texas A&M and end up worse off chasing some erroneous copycat strategy. For example, at some NE universities they hold separate graduations for black students. Supposing that is something that some blacks want, that is not to say the university should segregate graduations to improve diversity and increase black enrollment. We should ensure that we are welcoming and treat all students the same, if you come to A&M you should be comfortable that you have the same chance at the A&M experiences people rave about and that you came with the intention of enjoying. You should not be treated any worse or better nor recruited with anything other than a sincere welcome for any Texan, and an equal place for some of those not so blessed as well. Like all things with enough wiggle-room in them, they can be twisted into something unexpected and unwelcome. I would not support any change without a much higher degree of clarity. Texas A&M is not like everywhere else and that is a good thing; it creates diversity of choice for prospective new students and has created a loyal and growing base of former students. If you found that, for whatever reason, A&M was not sending the same number of ambassadors to recruit from predominantly black areas or border downs, then that should be corrected. We should ensure that we do the right thing. We can't be responsible for whether or not others choose to come to A&M, that should remain their choice to make not ours. Which brings me to another point. The report states: The recommendations in this report provide both direct and indirect pathways to achieve TAMU's goal of becoming a globally recognized, top-tier institution. I think that Texas A&M is already that. Indeed, the data support that Texas A&M is growing in student enrollment and in rankings. See, eg., <https://dars.tamu.edu/Student/Enrollment-Profile> and [https://www.thebatt.com/news/texas-a-m-climbs-academic-rankings/article\\_994d67ac-2fb0-11ec-b5c2-c70c6bc941c9.html](https://www.thebatt.com/news/texas-a-m-climbs-academic-rankings/article_994d67ac-2fb0-11ec-b5c2-c70c6bc941c9.html). So, while one can always find room for improvement, there is not a finding of a genuine problem on the scale of the sweeping and poorly sketched changes that the report might support. If there is, the report does not share it. Being different is no failing. Not being Harvard or following the trends of this or that other place is consistent with being a leader and carving your own path, true to your principles and traditions. The report also contains passages like: "There are four distinguishing characteristics of campus and community engagement.<sup>12</sup> It is scholarly,

cuts across the missions of teaching/research/service; reciprocal/mutually beneficial and embraces the processes and values of a civil democracy." It is not clear what the authors think the values of a civil democracy are would be the same as those that Aggies think they are. And, of course, as with so much else, they are not stated. Recent events make clear that different Americans have very different views as to what those values are. But, more simply, why aren't the authors asking whether or not the values of Texas A&M as stated being achieved--or those of the former students or those of the State of Texas? This analysis seems to start from the premise that Aggies want to be like others or that we need to be to be respected and successful, and neither of those is true.

---

Dear Ms. Banks, Thank you for reaching out to me via email and asking for my opinion. I am a 2nd generation Aggie, my father went to A&M, my 2 brothers went to A&M, my 2 uncles, dozens of cousins, my wife and her 2 sisters and their children. Unless you know and respect what has gotten us here, one will change just to change and try to keep up with the others. I understand the importance of consultants and their change management analysis. I have a strong undergraduate degree in Mechanical Engineering from A&M and an MBA from another Texas school. I care what happens to A&M. I have participated in building the State of Texas for over 35 years and currently hold a management job at the [REDACTED]. It is too hard for me to write out all my thoughts using the online survey. However, I will be glad to articulate some useful information to you that could help you understand one perspective on how you all can guide the university to stay great and get better. If you will call me on my cell or work phone, I will tell you more about what I think about A&M and MCG's report. Sincerely Yours, [REDACTED]  
[REDACTED]

---

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

---

There were a lot of good ideas and some disappointing realities in the report. Be good stewards of our (Texans', parents', students') treasure and do what is right. Be Texas A&M and no one else. Continue supporting the individual's growth with an eye to the health of the University as a whole. Stay at the top of innovation and technology. Hire good people. Recruit great young people with varying qualities (not just high test scores). Don't waste time on flash and glitter. Selfless service. Community service. The Corps of Cadets must remain a priority and be supported in every way. Stop trying to be the largest of every category and focus on quality and learning.

---

Overall, I like most of the changes in the report. I think it is important for large institutions to be challenged in pursuit of something bigger and better. I think this is an important step to take the university to the next level.

---

Recommendation #1. I affirm the wisdom of combining the Colleges of Science and Geosciences. I strongly discourage lumping the College of Liberal Arts with them. I experienced the many pitfalls of doing this at another university. Common sense says they are disparate colleges.

---

I still question the growth. Are we growing too fast? Is high growth getting in the way of success?

---

I have been a leader and worker in both governmental and private organizations. I am not familiar enough with educational institutions to make specific comments on the various divisions at TAMU. My one observation is that the organizational structure is very hierarchical and with lots of "boxes". In my experience this leads to managers of managers of managers and does not lead to efficiencies in achieving the goals of the organization. The only specific recommendation is that the report suggest some functions be "matrixed." I have worked in organizations that had a matrix concept and regardless of how many times we have tried to make it work -it did not work well. Having two or three managers who dictate what you are to do and how you are to do it is not a formula for success. Teams work, team collaboration works, group assignments can work - matrix not so much. Thank you for the opportunity to comment. My remarks are not very profound but come from life experience. The ultimate goal for making changes should be does it better the product we produce and are people enthusiastic about what they are suppose to do. Tradition is important and should be revered and honored but does the tradition uphold the values of the organization. I love the traditions of A&M and I believe the values I, my children and grandchild learned and will learn are unique to A&M and of value to our country.

---

Questions on this survey could be better. The recommendations made in the report were on point. There is a lot that Texas A&M needs to do to better accommodate its students. Tuition is high and getting into A&M is difficult. If students are able to achieve those things then the University should respond. Also, more can be done for former students than just asking them for money. That was the first thing that was said during my graduation and everyone found it to be in very bad taste.

---

Texas A&M is a unique and special place, more than just a school, that "Aggie Spirit" must be preserved and passed on to future Aggies. The President, Deans, profs and administrators have a duty and must protect and preserve this Aggie culture.

As a proud Aggie (class of 74), I am disturbed with the direction of my University. I believe in God, country and family. I would like our University to stand apart from the general collegiate direction of liberal, woke, crt teaching agenda of the liberal left. I also believe bigger is not better. It seems that we are loosing our identity as a friendly, God/country loving institution. We need to put Howdy back into all Aggies vocabulary. Thank you for the opportunity to express my views.

██████████

I did not comment on any of the above as those decisions are not mine to really have an opinion on - they are structural in nature and I feel those in leadership know what's best. My biggest concern is this pressure to drift towards how "others do it" when it comes to the unique qualities of A&M and the comparisons to other universities. I feel it is important to challenge students so they are prepared for their future. Sometimes, if not oftentimes, students are treated with kid gloves and too many are worried about their feelings. While I am not advocating to ignore those who are stressed and overwhelmed; I am saying life is hard and part of what I learned at A&M was how to deal with that. We don't need to graduate "soft" kids. We don't need to encourage "wokeness" because it is cool and others are doing it. For example, there was a young man who faked a racial incident last year. Nothing happened to him except he got his ring and a diploma. If some of the circumstances were different about who that kid was, he would have been kicked out of school. I don't see how having classes on Black Lives Matter and continuing to employ professors like Michael Alvard help move A&M forward. If a professor doesn't like what A&M has stood for over the years, they should be encouraged to leave. An organization in the private sector would do just that. I am not advocating a narrow vision and scope of what is to be taught. Whatever we do, it has to be done the right way and for the right reasons. Professors have gotten into a habit of teaching kids what to think; not how to think. Their agenda is not learning. I have a child who is a student in the College of Liberal Arts and some of the things she has told me about her professors is disturbing. Bottom line is A&M does not need to change who we are, because there is nothing wrong with our culture. We have grown immensely since the late '80's when I was in school. Perhaps we were a little myopic and lived in our own Aggie bubble then; but I think with people like Dr. Gates and those after him, we have evolved. Our traditions represent the foundation of the values and experiences our students gain from coming to A&M. Don't lose sight of that, please. We are not different; we are unique. Let's keep it that way. Thanks.

Keep traditions or you will loose Alum dollars

In general, I feel very positive about the information presented in the report. This type of restructuring should not simply add to the executive level and increase overhead but rather should decrease overhead while streamlining the University processes and make it easier to get things done. It appears that is the attempt with this review but there needs to be appropriate oversight during implementation and again 12 months after implementation to ensure this is actually happening. I strongly agree with the comment, "the Aggie culture presents a foundation of shared traditions and values that create a cohesive identity for students, staff, and faculty". Texas A&M has always been the state's conservative university and the Corps of Cadets helps to further enhance that. With the changing political climate in universities and across the US, we need to make sure we protect that conservative position while allowing for free speech and exchange of varying opinions. Everyone has a right to their opinion but we can not allow the Woke left to derail the foundation of Texas A&M.

I am very supportive of the organizational assessment and benchmarking to peer institutions. Organizational silos are common and expand over time creating significant inefficiency and lack of alignment across the enterprise. I also support the concept of incorporating strong performance metrics to establish measurable, achievable goals and promote transparency and continuous improvement. It is good to see the proposed consolidation of enterprise wide services.

We lose top engineering students as a result of the policy regarding the choice of majors. The student must commit before the freshman year, but the college does not commit until after the freshman year. Students choose other universities as a result.

Because of the lack of support for the College of Education and ridiculous self-centered support of engineering, I will no longer be donating to Texas A&M. What a shame. Please make sure the Foundation is aware of this.

I appreciate Dr. Banks assertiveness in initiating this operational review. All of the high-level findings and recommendations are logical. I would only emphasize the importance of executing our Land Grant mission of serving

the people of Texas. When we cannot deliver enough US citizens to meet the needs of our military partnerships, it is clear that we are failing in that mission. We should also be extremely cautious of lowering academic standards under the façade of diversity - this will neither serve the underserved or the greater good.

A&M does not have an optical sciences or optical engineering degree. Optics is one of the most important fields of engineering and science. This should be corrected two decades ago, so please get it done.

I always thought the goals and plan for Vision 2020 were well thought out and achievable. Please say that we aim to be a top 20 global university or at least try to be.

We have got the right leaders at the top. this is good news, because with them we have no chance to fix some of the pressing problems. Thanks

I completely reject the statement that "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education.". It is largely the Aggie culture, traditions, and values that draw students to Texas A&M. What other university alumni from all walks and student experiences value proudly wear, and recognize their university's ring? Isn't this a prime marketing strategy?

The only two top ten rankings I have ever seen A&M in is: size of the student body and endowment. A&M should focus on the same quality metrics US News uses to rank universities. Texas is ranked 30 spots higher than A&M for its undergraduate programs for example. A&M should try to close the gap, quality-wise. Expanding enrollment, with lagging academic rankings, is a poor strategy to enhance university reputation.

With the overwhelming growth of A&M and the pressure in academia to conform to shared cultural values extant in higher education today, A&M is at a crossroads. We can continue to celebrate those things that have made us unique, or continue to try to be all things to all people. Doing so will make us mean little to a few people. Having visited the campus last weekend 45 years after first enrolling, I was gratified to see a few things left that made A&M attractive in the first place. Please don't make them harder to find or nonexistent. Thank you for the opportunity to comment.

I am proud to be an Aggie. I struggled with grades but made it with a degree and a great career in Industrial Distribution. I suspect several "old Ags" don't like change, but we all benefit from TAMU success & achievements. Thanks for letting a common Aggie give his comments!

Above all else, tradition of the university needs to be protected. Student education on the A&M traditions outside of Fish Camp would be a good program in my mind to help ensure a more inviting environment.

Thank you for taking the time to gather so much input for this report. It is long overdue and very exciting to see for former students ('91) and current parents ('23) like myself. I noticed there were a few mentions of returning to an academic focus, and I appreciate that. I know there are many classes in which students are almost required to hire outside tutors and the explanation given is "professors just present the material, it's up to the students to seek out assistance in learning it." WRONG! I'm not paying the university to present material. I'm paying for an EDUCATION. Teach them. Inspire them. Make them want to learn more. They can purchase textbooks all day and all night if they just want material presented in a basic format. Professors should be teaching and inspiring. If not, they need to move along. Unless a student is in a class which is outside their gifting (i.e. me in calculus), they should not NEED tutors to help them learn the material. Hiring tutors should not be a given. It should be an exception. Parent rant over. Thank you for allowing feedback... hope you're not regretting it too much!!

Pretty standard consulting study in higher ed...what goes around comes around.

60 interviews is not enough to comprehend the scope of services within all these departments. A survey can have bias. In most cases, the findings are valid, but it's the recommended solutions that are weak. This is a 30,000 foot view of things. Enlist the subject matter experts to come up with better solutions. I am speaking as a former student, father of a current student, spouse of a TAMU employee and 30+ year member of the local community.

I don't agree with the general premise of the study - to provide direct and indirect pathways to become a globally recognized, top-tier institution. TAMU will not achieve this stated goal without being over-run with the radical left-wing thinking that plagues other 'globally recognized, top-tier institutions'. Strive to serve Texans, produce top-tier research, and help students and graduates achieve their goals in life. But do those things without worrying about what journalists and 'global experts' think about TAMU. Don't allow TAMU's culture to be watered down by seeking the approval of anyone other than Texans, students, and graduates.

The freshman class last year suffered so much, no in person howdy week, no in person freshman meetings or camps, online classes, it was pure misery- it seems that no acknowledgement of their loss of the TAMU experience happened.

Definitely not worth the money last year for my son. Truly considered not coming back, and the advisors are super unfriendly and won't help- way different than when I attended there and [REDACTED] was my advisor. They are there for the students they need to not treat them poorly.

Listen & learn from the Sul Ross Group (SRG). Their years of experience will not steer anyone the wrong way. Think of the SRG as "senior A&M statesmen" like one's grandfather giving advice.

The report nailed it, I highlighted some concerns not present in the report above. Thanks, & Gig 'Em!

Texas A&M shall prioritize its academic research achievements and reputation, as that's the core competence of universities worldwide. Also Texas A&M shall not be satisfied with its fame within Texas only but rather shall be ambitious to enhance its nationwide and international reputation as a top-tier research universities. A&M's goal shall be like UCB or UCLA. When I applied for university, UCLA has similar bar for admission as TAMU, but now it has climbed a lot in both academic rankings and much higher standards for admission. Catch up TAMU, Gig'em aggies! Your scope is the world!

This report seems very much focused on centralizing authority at the University level. This is not necessarily bad, though it creates inefficiencies and bureaucracies. Students are best served at the departmental/faculty level, not by the administration of the entire school. I would be very weary of listing tradition as a "roadblock to change." What change do you speak of? This seems like corporate jargon. The reason Texas A&M is so popular is tradition. Texas A&M is not like other schools. People are not silenced for their beliefs or political views like they are on so many other college campuses. We get so caught up in racial and gender diversity that we completely forget intellectual diversity (which matters far more). Texas A&M depends on its uniqueness. There are plenty of great schools just within Texas for all sorts of professions. If people were only interested in rankings or diversity, everyone would go to UT Austin or Rice. Yet this is not the case; Texas A&M is special because of its history and traditions. Not everyone buys into the traditions on-campus, but the choice is there for those that wish to do so.

DECREASE ACCEPTANCE RATES! Allow for improvements towards departments that are not sports related. Make it mandatory that each freshman has to live on campus and not have a parking pass. This will help decrease traffic to some extent within BCS, since Texas A&M is now on this path of accepting just about everyone that applies. There is no pride in getting an acceptance letter anymore.

Don't take good jobs and pensions from the citizens of College Station.

To the president, I ask that you not allow us to become Nazis on your watch. There is a strong right wing element to the former students that needs to be ignored or to have its objectives defeated. One, the Rudder Brigade seems bent on destroying the College of Liberal Arts for not being conservative enough. The Sul Ross Group seems bent on a backward look instead of focusing on how to capitalize on our current strengths to build a better future.

I have taught at other schools that had centralized advising. This usually did not work very well. Most went from centralized to departmental advising. Students, overall were much happier with departmental advising.

It's refreshing to see such a desire for change. Perhaps not all of this will come to pass, but A&M is a grizzly bear in sore need of a coat trim. For the current students' sake, I hope these recommendations are taken seriously.

Too many DEI offices across campus. Too much focus on DEI. Everything should simply be best candidate from the applicant pool based on meeting requirements of admission. Forcing diversity only causes divisiveness. A&M is a very open and accepting University. The comment about Aggie Culture being a problem comes from one who does not understand true Aggie Culture which is open and accepting. That comment comes from those who want to divide and push an agenda.

Make sure goals are focused on the blocking and tackling of education, not political winds. I see a number of very good recommendations, but we need to make sure the purpose is to elevate the student first by giving them the proper environment. The proper environment will allow faculty, research and staff to elevate as well.

Please actually talk to the visualization and former visualization students. I know this is supposed to be that, but seriously, go in person and ask for HONESTY. I recommend talking to [REDACTED], he is one of our best students, he has done more for the visualization program than most professors could dream of.

I did not read the entire review but scanned most of it. I was particularly concerned by the use of many buzz words in the report that are bantered about in much of the media today such as diversity, equity, race, etc. I hope TAMU stays away from putting too much emphasis on such "lightning rods" having to do with so much of the division within our country today. Just keep accepting those applicants that meet at least the minimum requirements but still aiming for

those at the top. Hold true to basic Texas and American principles as you have done over the years. Proud to be an Aggie. Thank you.

---

President Banks, you have a unique opportunity to make a significant impact on the organizational effectiveness of the Texas A&M University System. This study has uncovered several deficiencies and provided some very good recommendations to fix them. However, some of the recommendations do not fit the culture and values of TAMU. We are not one of the East or West Coast universities that espouse liberal ideas and policies. Please remember our heritage and do not let us move to the left politically or scholastically.

---

Please ensure Texas A&M does not endorse Critical Race Theory. Please do not be afraid to speak the truth and don't fear being cancelled. Texas A&M is special with its core values and principles and we should never be afraid to speak the truth and we need to be blind to the color of people's skin. Thank you for the opportunity to review and give feedback. May God Bless Texas A&M!

---

In your high level SWOT analysis, the report states "Aggie culture presents a foundation of shared traditions and values that create a cohesive identity for students, staff, and faculty." Yet, the report goes on to on to list Aggie culture in both the Weaknesses and Threats sections. As a Alumna, it is the the Aggie culture and traditions of which I am most proud. My hope is that while we may continue to evolve the university to continue to provide the best education to our students, we don't see our history, tradition and culture as threats and weaknesses to overcome, but a strong foundation on which we continue to build the university. Our culture of excellence and conservatives values does not need to be, nor should it be, a hinderance to furthering diversity, which is what this report states.

---

This seems like a lot of big changes and very little acknowledgement of what was working. Seems hard to believe a successful institution like A&M needs this much change and had so many inefficiencies. Centralization can be good but it can also lead to bureaucracy and whitewashing of what makes the individual colleges, departments, etc. great. I recommend the college of liberal arts join the University of Texas.

---

I find Ms. M Katherine Banks has obviously been a classical academia paper pusher. Never worked for a real living. This centralized, socialist bull effluent tells it all. Thanks to our 40 years of governor appointees.

---

This quote infuriated me: "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." Far from being a high-level weakness, the Aggie culture stands apart nationally and prevents Texas A&M from becoming a typical "higher education" institution. Values matter, culture matters. Higher education generally has strayed from being a marketplace of ideas to an indoctrination center for politically correct rhetoric. May Texas A&M NEVER become just another institution of higher education. May it forever remain distinctive and focused on values, service, and merit-based excellence.

---

This is a very comprehensive, well written report that I hope will lead to change that will move TAMU further up the ladder of premier nationally recognized universities.

---

Regarding the Diversity, Equity, and Inclusion initiatives: I believe the effort to include everyone is important. However, I strongly recommend changing the name/terminology. DEI is quickly becoming a divisive term. It has probably already lost its intended meaning, and I think it is going to get worse. I believe it would be smart to distance from that terminology. Outreach and welcoming everyone is great, and it can be done more effectively without using controversial words.

---

I wholeheartedly agree with the recommendations of the report, and hope that President Banks and Directors have the courage to implement them even though they know that there will be many forces that will resist these changes. Some may even work to make it hard for them to succeed. When individuals won't accept and support new changes it may be necessary to enable them to find work elsewhere. It may be outside of the scope of this study, but I have and additional area that I am concerned about. In the past year I have been working with The Foundation and various Departments to identify areas I would be interested in supporting with monetary contributions. My interest has centered on work the school may be doing in "Environment and Sustainability". I have been very disappointed in activities identified to date. Aren't you worried the world may be passing us by? You may even need a Department of E & S. Good luck.

---

It appears significant efficiencies can be created that will mean significant savings for the university to pass onto students or invest in new, better research and educational facilities. All routes to this end should be pursued.

---

It's a serious shame that the executive summary of the findings of the report did not address the strength of Aggie culture, which must have been a strong positive point of feedback in the surveys. Instead, it touched on concerns about diversity, which is a political topic in our country. Specifically, it is a political perspective, which does not align with the

majority of Ags. A&M should select the finest students and faculty we can and not concern ourselves with woke initiatives, which lead to lawsuits, as that lesser school in Austin knows all too well. For students and faculty that want to prioritize quotas over substance, they have other options in Texas. To put a finer point on it, I will pull every dime I contribute and encourage all former students I know to do the same if A&M goes the way of t.u. politically. I doubt it will be hard to convince them. Kowtowing to political pressure was a serious mistake of our last female President and I hope our new president remains committed to A&M's culture of color blind, apolitical excellence. She has been very impressive so far and I look forward to seeing what the future holds for her tenure! Gig Em!

---

For years I returned to A&M, both as a guest lecturer and as an advocate for hiring and supporting Aggies. Over the years, I've witnessed an ongoing erosion of focus towards the students and the "core values" that brought me to A&M in 1981. A&M's success in growth has also delivered unintended consequences, some of which have been captured in the report being reviewed. While the document provides some insights into areas of improvement, I believe it has missed equally important attributes that are structural elements of what makes A&M so unique. The current situation at A&M didn't occur overnight and will take considerable time and commitment to address. It is my hope that these issues can be fully vetted and addressed to return A&M back to core values, the most important being the students. Respectfully submitted - [REDACTED]

---

I have worked for a community college for the last 21 years and am a former student. Registering Joshua for the 1st semester was really confusing as a parent.

---

I have been away from A&M far too long to comprehend the details of this comprehensive report. From what I can understand, the report is quite well done and the recommendations seem relevant. However, the emphasis on centralization of functions merits a word of caution. Too often centralized organizations tend to take on a life of their own and forget their real "customers" -- the functional units they are supposed to serve.

---

Virtually all of the recommendations in consultancy report seemed to be designed to destroy the culture at TAMU that has made it a unique university, to the detriment of students and the state of TX. Restructuring TAMU to be like other universities would be a disaster. The general theme of centralization fails to consider that it diminishes the influence of the stakeholders that each organization provides services to. I strongly oppose implementing the recommendations of this report.

---

I really think A&M should look into the outcomes of the ETAM (Entry-to-a-Major) system for engineering as a whole. It's a system that requires students to apply to their majors after admission to the school to get into their desired engineering major. Fundamentally the system seems to be a huge negative to the students in engineering and I'm willing to bet data backs this up. Students hate this system's existence and want a better way for the college to admit students. I was one of the students eventually impacted by their negative ETAM results who had to transfer schools because they weren't allowed to study what they wanted. Overall this is driving capable engineering students away from A&M since they can't guarantee that they will be admitted to the school they want vs. going to UT where you're given the major you apply for as a first year. Please look into this more, it's extremely impactful to the future of the college of engineering and the outcome of future students.

---

I support the new plan to move the money education center to the new division where they will be much better supported!

---

In general, I feel like MGT Consulting and Martin+Crompton Group (M+CG) are just trying to make TAMU look like any other major politically left university today. However, the top of the list for Greatest Strengths of TAMU from those polled is the "Unique Aggie culture, core values, and traditions" which are founded in a politically more right major university than other options out there. I definitely agree that operationally speaking the university has gotten too big too fast and can be run much more efficiently. However, the many other suggestions to try to get more diverse people to the university that wouldn't like the culture and may even try to destroy it as well as trying to save/strengthen a bunch of anemic parts of the university like the liberal arts that aren't worth the ROI in the long run are horrible ideas to implement. It is ridiculous to try to force inclusion of people that don't want to be there in the first place and will only lead to the destruction of the values that TAMU has held strong to for so long just like every other institution that has fallen for this ploy from extremists. In fact, the recommendations go against what the polls showed that the university was also effective in "Commitment to diversity, equity, and inclusion" at the top of the list of all departments polled. It also feels like TAMU leadership is trying to pull a fast one by only giving a couple of weeks to read a 133 page report and respond before they start making decisions. If TAMU tries to become more liberal like other universities, then there will be no reason to go to this school over somewhere like the University of Texas (TU).

I love "my" university (TAMU). I graduated in 1989. Since then, it seems that access to campus as a whole to former students is limited to those that have the money to pay for certain perks. I used to be proud to walk my family around campus and show them the sights, but that has gotten much harder to do. I have become hesitant to take my friends/family to Midnight Yell because of the profanity that is commonly yelled by certain groups (in particular, fraternities). The point is, that TAMU is and has been losing its accessibility and innocence, some of the things that made this university what it is. Maybe instead of building another building or blocking another road, post people at access points to Midnight Yell to keep drunks out (I was vomited on by a guy on the level above me, because he was so drunk)! I'm appalled that beer is even sold in Kyle Field, but as with everything that's happening on campus, I guess it's just a game of money and keeping up with the Joneses. Sadness.

---

The university as a whole has a problem with only hiring from within academia. The values that are disseminated is not a reflection of the world or the culture that A&M stands for. We need to remove those with communist/marxist ideals and return the school to its core values. Additionally, it's time to fill roles with some new blood. If you don't look for candidates with business experience, you'll continue to get nothing but an academia mindset...which is typically bloated and inefficient.

---

I'm very excited about the elements of change being outlined in the plan. Of course, the "devil's in the details", and this will not be quick or easy. I do believe that the university leadership will need a very strong message about "why we're doing this", and they will absolutely need to communicate that message very consistently as these changes begin to roll out. Also, people respond to how they are measured, period. And even though the report mentions the need for strong Data and Analytics in many areas, defining the actual measures and metrics (values, timing, etc.) at an organizational unit level, and bringing them to life, will be critical to the success of this change. Ultimately, I love Texas A&M and I have great faith in our leadership that they can make this happen.

---

Texas A&M University needs to be charged to adapt the progressive ideas. The school has been historically unwelcoming and needs to change. Academically, we need to be aligning with other major players. Traditions are burdens to the school. If the school is not adapting changes, it will just become another Texas Tech.

---

I wish President Banks the best of luck. Her best chance to make necessary changes is now. She has the vision and strength to go through with the changes. That takes courage and conviction. Every Aggie will at least understand that!

---

We are pleasantly surprised to be asked.

---

I hope all of these recommendations are accepted by A&M because it sounds like they will help streamline processes to improve student and faculty experiences and create more robust work flows and degree programs. It sounds like it will help make A&M an even better university to attend and work for.

---

Don't go woke! You'll go broke!

---

I am not familiar enough with the University to provide meaningful commentary on these subjects, but I am proud to be a graduate of Texas A&M

---

I generally agree with the report. My concern is with the overall vision of A&M's current leadership. I certainly want A&M to be an outstanding academic and research university, which is what I feel certain they want. But we are the only land grant institution in the state. We have to insure that we always first meet the land grant mission. It is the challenge of making sure our basic infrastructure and needs are met while also striving to lead in advancing our future needs and opportunities. I am a rancher. I heard one of our wise agricultural leaders, an A&M graduate, make this statement. "If you want to have maroon cotton developed, go to A&M. If you want to learn how to grow cotton, go to Texas Tech." As the state's only land grant institution, we either need to do both or turn some things over to those institutions that want to do the basic and historic land grant mission. I think A&M's vision should be this; to be the world leader in the knowledge and management of the world's natural resources.

---

Thank God for President Banks and the opportunity to provide comments!

---

Please keep the Core Values of Texas A&M University intact and do not change to be like other universities. The goal should be to be the absolute best, not to be like all the other universities who are controlled by politics. Texas A&M should be the University that all the others strive to be like. By merging all the departments into the same setup that these other universities use, TAMU will lose what makes it special and allow the watered down values and lower expectations to take over. Of course the University can make improvements in every department at every level. This should be an ongoing process at all times and not just because a consulting company comes in with dramatic changes

suggesting A&M become a "me too" system. This consulting company recommends Texas A&M University become like everyone else. Instead, TAMU should focus on becoming the Best of them all. This happens through striving to hire, retain, and graduate the Best of the Best and not by trying to meet some random "equity" bias charts. Merit is the key to being the top University in the world.

I am glad to see this exercise was taken on by the university. I have family members currently attending TAMU and a senior in high school that is currently applying to attend TAMU. My insight on some things that need to be addressed from these two individuals' experiences: 1. academic counselors are not responsive to senior level students 2. campus is crowded, classes are too large (acct class with 1500 kids), parking is an issue 3. acceptance to Texas A&M may not include acceptance to the Business or Engr schools (this is an issue that would make me choose another school over A&M) 4. there is too much focus on football/athletics on campus tours - needs to be more academic focused 5. There is no recruiting effort for potential students - I know demand is high for A&M but other schools recruit high school much better/hard than A&M does

Born and raised in Bryan in 1945. Stephen F. Austin class of '63; Texas A&M Class of '67. Now a resident of Fort Worth. Back then the largest building on campus was the white Administration Building at the front of campus. Glad to see it's still there. My mother worked there. Before air conditioning my alarm clock was the band stepping off to the War Hymn at 6:30 am practice. There was about a 8 mile drive, give or take, between the Bryan and College Station city limits on Hwy 6. On the other side of the south RR tracks was nothing except the the Vet School, the train Depot and Aggie Farms. That's where they grew veggies for Sabisa Hall but that's where we took our girlfriends parking. Looking at it today, y'all sure messed that up! Then, after the campus expanded south, you took out deer lease after deer lease! But it was good, solid growth because the greatest University on the globe gradually came to life. So, looking at the photo today, I don't think there is anything I can add to the facilities other than to say -- stay a step ahead of tu, and don't lose the "hominess" of the campus with "space-age looking" buildings and glass. Thanks for this opportunity and don't forget we old geezer Aggies from long ago. My memories are still fresh as can be of John David rambling down the sideline, the Texas Special (ask to see that), the robbery by the referee than waived off the Jim Willowby interception of a tu pass and saying he was out of the end zone ... The next day the Eagle photo showed him an easy 3 yards inside the end zone. That caused us a W over tu. I remember when we kissed out dates after first downs because touchdowns were few and far between in the mid 60's. And I saw live and in person when Miss Revile chased down the terrified TCU coach, who dared cut across the end zone to get to the press box with the band doing their half-time magic, leaping and biting the butt of the coach with fabric flapping as he ran. No apologies extended. The field belonged to the Aggie Band at half time. But they stopped Revile from roaming the playing field during the Band performance after that ... a tradition that needs to be reinstated, in my humble opinion. Then a great cheer would erupt by an crowd anticipating Revile's "ggift" after an excited Revile would circle the field looking for a place to relieve herself, finding it and leaving her "performance" on the field as a group of Fish rushed out with rake and pale to remove it before the teams took the field. Finally, I was there for the first class when women were allowed to attend IF they had a place off campus to live. It was a Speech Class instructed by the old "voice of Kyle", C.K. Esten. In a heavy New York accent: "Welcome football fans to Kyle Field, the Home of the Fightin' Texas Aggies" "In the Aggie Backfield .. Osborn, Taylor, Karoww and Padeeeeeeeee" And I believe that's where the first "Woop" occurred. Another time was when the Thanksgiving Day game played, (it might have been the game after the Kennedy assentation) when, before the game, tu brought out their "I'i Smokey " cannon, popped it off and their fans all went crazy. Suddenly the Corps started rolling out of the tunnel a very large cannon with a very long barrel and pushed it to mid-field. Maybe at least 50mm . There was guy riding it at the end of the barrel waving his hat like he was riding a bucking bronco. They fired that cannon off with the loudest sound I'd ever heard at the time. The smoke encompassed the bowl of Kyle Field, delaying the kick-off for what seemed like 30 minutes or so. From that time on I believe we fire a cannon after a touchdown -- a much smaller one, of course. But what a sight that was. Living in Fort Worth, I don't get to games anymore. And I miss it so. In summary, it's history and traditions are what makes it special, in my opinion. There's no place like it. Guys like me, and all before and after, have one thing in common -- we all bleed maroon blood, and many have spilled it in far away places. Never, ever forget those Aggies. And, lest I forget, the pride I have of receiving my degree in Marketing, influenced by the great Herb Thompson. Keep history and traditions at the forefront, keep and grow The Corps, figure out ways to expose the band (i/e, figure out a way to televise Midnight Yell and half times), don't hire "out there" professors who could care less about our precious history and traditions, keep politics and weird religions out of their teachings, don't give them tenure if they display these traits, and don't lose what made Aggieland great and keeps Aggieland unique. I'm sure this isn't what you were looking for, but I relish the opportunity to re-visit the greatest

years of my life. God bless you and Aggieland. You hold magic in your hands.

---

I think we need to quit forcing growth of the university. It is bad for our reputation and bad for the local economy. I don't mind the university growing but let it be because of our excellence. Don't lower our standards just to let more people in. Find students that WANT to be Aggies. We don't need to be bigger than UCF, OSU, or UT; we just need to be better. The reason Aggies hire Aggies is because we have a common bond of excellence, integrity, leadership, loyalty, respect, and selfless service. Let that not be tarnished EVER.

---

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

---

Having been in a grad program, I can see how decentralized the colleges and majors are in with relation to each other. My department was ran by a small group of mid-career male faculty. I think the other professors did not have the energy to argue with them with respect to department policy. As such, you have entire departments steam-rolled by a few people (usually older males with egos who were ok with confrontation). Department oversight is needed. It can help with undergrad curriculum and department culture. I can also see it helping early-career faculty, who may not fit with current department culture. DEI is such a hot-topic for Texas. Actually, everywhere now. I benefitted from DEI programs in college. Despite their support I still dropped out of my PhD program with a Masters. I think the greatest aid for retention and matriculation of underrepresented graduate students is ensuring they have mentors in their field. If my advisor was someone who wanted to help me, instead of being critical with no constructive feedback, I fully believe I would have excelled in research. Having a DEI mentor in each department who is a tenured professor (ideally) would result in increase matriculation of underrepresented grad students. I understand the expectation of grad students is research and publishing, but the students who performed the best were the ones with the right advisor. Early intervention of a mentor identifying lab culture issues and providing me options (e.g. "why don't you switch labs") would have greatly changed my life. This may not just be a DEI issue - just a grad student issue. As for helping underrepresented undergrad students, having the right outlets and clubs is crucial. Those are already provided and should be defended. Underrepresented student academic success is dependent on their grades, just like every other student. They should be able to identify resources on their own like everyone else. I think the big issue here is ensuring safety of diverse student populations and defending DEI organizations. At the very least, the university can at least denounce racist and antagonist activities on campus. Can you imagine being a student who grew up being a minority, achieved academic success in high school, then attended TAMU where you have fellow students who have barely seen minorities in their life oogling at you, thinking the worst of you? Can you then imagine googling your school's racial incidents and realizing that you may not be safe on campus? And then when you want some protections, safety, or comfort in the form of DEI programs or basic denouncement of these racial incidents on campus you are met with fiery pushback in the form of "... tradition.... no big deal ... if you don't like TAMU then don't go to the school ... over-reacting..."? Unfortunately, TAMU attracts people who really do not care about that. Good luck changing current, and especially alumni, perspectives when it comes to those issues. The best thing TAMU has going for it in that regard is that Texas and Aggie pride almost supersedes racism.

---

Thank you for the opportunity to provide feedback. I am a former student, the parent of a current Aggie, and a permanent resident of College Station, so I feel connected to the university on many levels. I would like to express my emphatic support of using funds and other resources to improve Diversity, Equity, and Inclusion efforts and initiatives. I applaud past and current efforts in this area, but I believe that A&M has room to grow. By prioritizing DEI efforts and putting the resources behind short and long-term DEI goals, A&M can shake some of the stigma about the culture of A&M not being a place that values DEI. While diversity exists in both the faculty and student body, I'd like to see a stronger, more aggressive approach to the Inclusion portion of DEI in positions of leadership and decision-making. Thank you for the space to offer my feedback. Gig 'em!

---

A lot of up front discussion about minorities and matching demographics of Texas. Why? Access to higher education should be about merit, not race. Most things I see these day about A&M show females and minorities. Few show your average white male or female. I think you are trying to reach out and connect with students of every background and position. Do you really want to lower your standards just to admit these more from these groups? Ask the student body about the football players. Ask them if they think those players are there for academic achievement or because they can play football. Then ask them if those players or athletes in general, have to meet the same conditions they do

in their college career. I think you will they perceive they are there for football and they get more breaks for anything that goes wrong than the average student. Is that what we want those groups to be thought of? I think every wants to know that they earned their spot in Aggieland, just like they cherish the milestone of getting their ring. I've spent time in the Middle East. The culture there is vastly different than ours. Be wary of the recommendation's about what our campus there should be. Be mindful of what they want, not what we think they want or should look like.

---

After scanning the overall report, there is clearly a consistent theme of centralization across the board. Having been a part of the management team at a large aerospace corporation, I generally agree that centralizing functions to take advantage of synergies and commonalities within the various "business units" is the right thing to do. One lesson I learned is that each "business unit" must be incentivized to collaborate with the others vs. having an overriding incentive of success (however that is measured) within the unit itself. In other words, to use a swimming analogy, make the clear goal to win the meet, not just the race. On a separate note, and I did not see this directly addressed, I think that careful consideration should be given to the maintenance and upkeep of current facilities before taking on what seems to be the never-ending new facility construction. I'm sure there is a strategic balance between the two, at least optically, and the new facilities enhance university stature, research grants, and potentially enrollment. I'll defer to those whose job it is to understand those trade-offs but, let's not end up with a Cadillac sitting in front of a run-down shack. Finally, and I know this is a sensitive topic, but I'd like to address recruitment. Specifically, recruitment of the "underserved" and minorities. I believe that the pendulum has shifted from one extreme to the other on this issue and it needs to be gently maneuvered to the middle. My observation is that the current climate potentially discriminates against those who are not considered to be underserved or of a minority status. The time has come for universities and businesses to enroll/hire based strictly on capability and fit for the "job," not on socio-economic status. Thank you very much for the opportunity to be heard and I applaud your efforts to continue making Texas A&M University one of the foremost colleges in the world!

---

The report is typical garbage on diversity and inclusion. Focus on high quality, high character people regardless of race/sex. Every time I see A&M in the news these days, it is negative (race baiter fabricates incident, gets caught, no punishment or the Anthropology department). What a joke you have allowed A&M to become. The state of Texas does not need another watered down, milquetoast woke university. If you want to continue going down that road, do it without me.

---

Money Education Center: The Money Education Center is a great resource not only for current students, but for former students as well. This center helps with resources that Scholarships & Financial Aid cannot assist with. Students can learn about budgeting, managing money, credit cards, buying a car and much more. The Money Education Center has benefited me in many ways. As a college student whose parents were not big fans of credit cards, I as well, just never had one growing up. The center taught me about a credit score and the positive impacts a credit card can have for you through your journey of life. I immediately got a credit card after my Money Education center advising and decided to strive towards getting a great score and establishing my credit. After this discussion, I knew I needed to learn more about budgeting if I was going to have a credit card. The advisers were able to coach me on not only budgeting, but as well as monthly saving. Just after ONLY ONE short year of graduating college, I was able to take all the advise from the Money Education Center I learned and bought a brand new house just at the young age of 23. Just 5 months later, I bought my first car. There is no way I would have been able to concur this huge goal in life without learning the basics of budget, saving and establishing a credit line from the Money Education Center. We should be keeping this resource and venturing it out to students so they can learn money management that sometimes parents never teach their children about. Thank you so much Money Education Center for helping me achieve my financial goals!!

---

I appreciate the University System for proceeding with this report. I'm hopeful that necessary changes will be made that, as a fanatical former student, encourage me to indoctrinate my children to attend A&M

---

Overall most of the recommendations sound well guided to optimize university efficient and performance. As a former student (and one who actually did undergrad at another major university) I would like to say that what makes A&M truly unique is its culture and the quality of its people that thrive in this culture. The traditions it holds dear that stemmed from the military college framework has in my experienced continued to foster an environment where people could meet other high integrity people that they will have camaraderie with for a lifetime. In all decisions, I hope that this is a north star. Ten years after getting my graduate degree from A&M, all the core men and women in my life that I love and trust with anything are Aggies that I met while there. I hope that continuing to maintain an environment that fosters this serves as a North Star in all these decisions. I never want to see growth or change come at the cost of watering down these values and traditions because they are timeless.

As a working journalist, I am fully supportive of the proposal to create a department of journalism in the College of Arts and Sciences. The need to train journalists for our state and nation is huge and I believe that the presence of a journalism department could help with media literacy across the university. I am closely involved in the hiring of reporters and fellows for The Texas Tribune and, to be frank, most of the applications I receive from Texas A&M students and graduates are not very competitive. Our fellowship and entry-level positions draw scores -- sometimes hundreds -- of applicants from across the country. Candidates from A&M often lack the experience, clips and base of knowledge necessary to compete with students from other top universities in Texas and across the nation. The creation of a journalism department would be a great start. But the department must be done right. Students need training from and exposure to people who have recently spent time in modern newsrooms. They need to be encouraged to begin collecting clips and internship experience as soon as they enter school. And they shouldn't be bound by the old-school ways of doing a journalism education. For instance, I question whether it would be necessary to have a print track and a digital track. Nearly all print journalism outlets prioritize digital journalism these days. So how would these two tracks differ? That said, I'm very encouraged to see such a venture proposed. If there's anything I can do to help, please let me know.

If Texas A&M wants to do medical research, they have to be willing to accept some risk that is inherent to medical research. A forward looking plan is needed to mitigate the potential risks, but still understand that there will be risks. If the VPR is not willing to accept any risks, then medical research will not be successful. After working at Texas A&M, I have coined a term called "That Guy Syndrome." Another words no one wants to be "that guy" who is singled out as the scapegoat. The administration needs to have proactive plan on how to support research in areas that are controversial such as animal research for the advancement of medicine. Also, processes need to be in place which allow a more rapid progression of research in medicine. Academic policies and procedures typically do not transfer over well into the medical field due to significant malalignment of goals.

The fact that this is being shared with all Former Students says it all. Thanks for listening - Gig'em!!

The Corps of Cadets' influence impinges upon the university's ability to attain greatness.

The thrust of much of this report seems to be toward centralization, which I am ambivalent about. There are pros and cons to centralization. It may help with efficiency and alignment, but the tradeoff is that it tends to lead to more bureaucratic red tape, and make it more difficult to get things done. My fear would be that the administrative functions of the university become more sclerotic from this change.

The executive summary reads as if a company was hired that has admirable, broad knowledge across the academic market, but relatively little knowledge of the wonderful, unique, community at Texas A&M. There is no mention of steps to maximize student loyalty to A&M, the spirit of the student body, how to reinforce the guidance of the Aggie Code of Honor to create citizens of high moral character, or the absolutely fantastic marketing opportunities that the Spirit of the 12th man can provide to the university if the Spirit is maintained. Whatever you do, don't make A&M into just another big school. It is so much more than that and if you are not careful, you will reorganize the Spirit right out of Aggieland. I recognize that the System is a very large business and that actions must happen to make sure it runs efficiently. Most of the recommendations make sense and are a testament to the expertise of the consulting company. But if you don't revisit these recommendations with a lens on the Spirit of Aggieland, you will miss a golden opportunity to make changes that drive efficiency AND loyalty. For context, I am a former student and have two children enrolled as undergrads at A&M College Station currently. I've provided a few other points in the other sections of this form. Good luck and thank you for the opportunity to provide feedback. You hold a very special place in the world, Aggieland, in your hands. So be very discerning with the actions you take.

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

This seems like a thorough and necessary report. My guess is that a Transformation Office would take the helm of implementing changes. It's a tall order, but my perspective is that if TAMU would dig into these things, that the organization would become leaner and more effective in reaching its goals and serving its purpose. I hope to see some changes take shape, and for Texas A&M to reach even higher than its already great status! It does seem like there is quite a lot of room to grow, but it may start with deep culture change, moving more towards a leaner commercial business model as opposed to larger, slower-moving government mindset. If someone can crack the code on that, then lookout for an absolutely incredible University.

The student population needs to be reduced in order to retain the academic integrity of our university.

Less than 5% of surveyed members actually responded. How can the University expect to implement sweeping changes based on what can only be described as an inconclusive data set?

I did not read the report in depth, but tried to hit the high points. I'm amazed that I could grasp the consultants recommendations, but the report was easy to follow and logical. It sounds like TAMU has grown from 18,000 students when I left to 75,000 students today, and retained the 1972 organizational structure. Good luck with the needed changes.

We seem to only be worried about inclusivity, and concern for everyone's feelings, in one direction. Making people of a liberal mindset feel better, and are willing to ignore the feelings of the students with a more conservative view of life. The company that provided this report seems to be pushing for the University to not seek the middle, but to push way to left in competition with u.t. which is beyond being more inclusive, it is being exclusive of those with a conservative mindset. Please explain how those viewpoints are less important to our society.

Not sure what happens to COEHD. Consultant appears to be fixated on race. However, excellent, thorough review and analysis. TAMU must continually review its performance, consider consolidation where it makes sense, and make the hard decisions to keep us at the top.

Thanks for the opportunity to give input. Texas A&M is not like other universities and that's a good thing. Hire the best faculty and enroll the best students.

DO NOT abandon the traditions and Aggie culture that has made Texas A&M a great and unique university (i.e. Corps of Cadets, 12th Man, Aggie Muster, etc.) in order to conform to the 'woke' agenda and political correctness, an agenda that seeks to destroy rather than build future leaders. DO NOT employ American Marxist faculty or staff whose mission it is to destroy America, its Constitution, and the very Liberty and Freedoms Texas A&M has stood for and fought for, for over 150 years. DO NOT abandon teaching TRUTH instead of political correctness. In fact, the leadership of TAMU MUST purge those who value their political ideology and agenda over TRUTH! DO NOT succumb to the radical political correctness of the day, but rather stand true to the values and morals that has made A&M a trustworthy, respected, and esteemed institution of higher learning. Forsaking any of these core institutional attributes and A&M will become just like all the other formerly venerated universities that have forsaken their American values, principles, and traditions.

The report is comprehensive and a good starting point for making changes. However, it is missing peer review metrics in terms of \$ spent per student per academic year, as an example. Such metrics are needed in combination with this descriptive report to make good decisions. Thank you for sharing the report.

I realize it is important for universities to grow. My greatest fear however is that during that process, we will lose the uniqueness of Aggieland. Make sure that new staff is aware of the traditions and what the traditions mean to the school. Thanks.

Represent the core values of your state and local community. Not the values of other academic institutions. We are a unique school in a landscape of higher education that is trying to outpace each other. This report reflects on what we need to do to look like other higher learning institutions. I think we should continue to focus on what makes A&M stand-out and offer a refreshing alternative to what is "normal" on college campuses today.

More "centralization" is always the proposed solution. Decentralized structures are always viewed as inefficient. This is arrogance at a very high level. Decentralized structures provide diversity of solutions and local control of resources allowing for more innovation and responsiveness to local needs. Centralization is the solution of socialism which fails every single time it is tried anywhere in the world. Hiring law abiding people and allowing them to work in a distributed system has always been the most helpful system for the most people.

A search indicated the word "Sustainability" is only included three times in the 100+ page report. Wow.... It is barely on the radar screen; and Sustainability is the defining issue of the 21st Century for the human race..... The president and direct-reports should be shining role-models for Sustainability. Are they all driving zero-emission battery-electric-vehicles (BEVs)? Have they all included Sustainability projects in their planning and budgets? Global Warming is real, and deadly. If A&M leads in Sustainability, 100 other universities will follow.

Everything looks good.

The analysis is great to help devise a plan and course of action. Please don't forget to ensure there is a project management team that has a committee of leaders who report to them about progress being made on actually

implementing these changes. Nothing worse than building buy in, agreeing on these action steps then everything dying in committee or running grossly behind in the implementation calendar.

In the appendix, there was a comment about a negative influence from an all male military unit. Why was that comment made? That is an unfair biased statement. The Corp of Cadets is not all male anymore and hasn't been for many years. The Corp of Cadets has some of the highest standards for education excellence and leadership.

1. The university is not a manufacturing plant. Students are individuals, and true diversity demands that they be treated as such. Diversity isn't the political abstractions of race, gender, or economic class. Centralization of authority, "process standardization and control"... all enemies of diversity. If you "ISO 9001" the university, it will cost a fortune and result in misery. 2. I remember when distributed management and pushing authority to the lowest possible levels was considered to be the most efficient and most agile way to organize an enterprise. That's because it is. 3. Outsource Sbis? Hey, if people want McDonald's (standardized, process controlled, and mediocre) - that's right across the street from Zachry. Texas A&M isn't Dell Computer. 4. I remember engineering students wringing their hands in 1975, wondering why we didn't have more women engineers. They are still wringing their hands. It isn't because the guys didn't want women in Zachry. Trust me!!! Some things lie outside of the bounds of the university. 4. Consultants have no stake in outcomes. 5. Consultants have no stake in outcomes.

Organization usually follows, vision mission and strategic plan. This puts the cart before the horse unless the drivetrain is to reduce costs. If excellence is the driver it argues against the merger of Scorned, Geosciences and LA. Suggest you drive deeper in to UCB which sets the bar.

There are very few that I disagree with on this. Having been a student during COVID, this level of organization would have made life as a zoom university student much easier. It was hard knowing what I needed to do, who I needed to contact, or how I needed to go about different things because many things were not where you would think they should be.

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

The recommended changes sound reasonable, but make at net zero cost to the budget. Don't create new offices and positions unless you can fund them through cost-savings from closing offices and positions.

The thing that really bugs me is that the report conveys the University's conservative heritage as being a threat generally and specifically to DEI. That is not a threat, but a strength. The University can and should promote DEI and many other great improvements without giving in to liberal lunacy.

I received a BS in ME in 1963 and an MBA in 1974 from Texas A&M. Further I was commissioned as a 2nd Lt in the Army and served two years between November '63 and November '65. I am now 80 years old and worked in industry for over 35 years and retired in April 2000 and have had a consulting business since then. I want to thank A&M for the education and training that allowed me to achieve all that I did. The education was invaluable but in retrospect I can unequivocally tell you that the lifetime values imparted upon me by the Aggie culture were as equally important to my success as the education. Values of character, loyalty, pride, commitment, patriotism, hard work and the spirit to never quit are not taught but learned at Texas A&M. Further I understand times have changed, but there are some universal principles that should not be lost as we move on and I hope you keep in mind the tremendous value of these traits for an individual. My best wishes in your tenure I know you will do a great job. Best regards, [REDACTED] '63 and '74

In the survey analysis on page 92, faculty and staff say "refocus Aggie culture" is of importance. I am curious about this when on page 91 Aggie Culture is listed as by FAR the greatest strength of TAMU. I hope that staff and faculty are HIGHLY encouraged to support the things that make Texas A&M stand out from any other school in the nation.

The list of recommendations is daunting. If I counted correctly, there were 43 recommendations in the report, most of which represented significant, meaningful changes. Several things come to mind when embarking on such a massive change effort of implementing 43 substantial recommendations: 1. The risk of moving too fast and spreading employees too thin. There was no mention of a timetable to implement these changes. However, the risk of having such a large number of initiatives is that the organization tries to accomplish all of the initiatives concurrently and spreads themselves so thin that the initiatives last forever, none of them get completed well, and over time, the organization reverts back to its prior state. This is sometimes referred to as "initiative fatigue." These initiatives should be prioritized, so the highest priority initiatives get completed first. The initiatives should also be paced so that a small number of initiatives get started and get done before the next (small) wave of initiatives begins. 2. Change management.

There is a huge human element embedded in these 43 recommendations that needs to be effectively managed, or the large majority of the 43 recommendations will not succeed. Particular attention needs to be given to change management, i.e. the "people side" of these recommendations. Perhaps professional change leadership should be employed to help coach and guide the organization throughout this entire change process. 3. Project management. Each of these 43 initiatives is a project, and the large majority warrant being managed as projects. The initiatives should be initiated, planned and monitored/controlled as projects: - Who will define and monitor/control each plan at the detailed task level? - How will success for each project be defined? How will success be measured? How will ongoing performance be assessed? - When will an initiative complete? How will we know that it is done? - How quickly can each project be completed, or how slowly do we need to intentionally move so that we bring the people along with the change? - What resources will we commit to each project? What is the priority of these people's project work vs. their other duties? - What are the assumptions that we have as we launch each project? How will we validate those assumptions, and how do we modify our plans when we encounter an incorrect initial assumption? - How do we manage change throughout each project? - What are the risks for each project and how will we actively manage those risks to ensure successful completion of each project? I was disappointed to see the SWOT analyses presented as simply 4 separate lists. The true value of a SWOT comes in answering the question, "Now that we have detailed our strengths, weaknesses, opportunities and threats, how are we going to harness this information to produce value?" - How can we use our strengths to maximize our opportunities? - How can we leverage our strengths to minimize threats? - How can we leverage our opportunities to minimize our weaknesses? and - What strategies can we develop that minimize our weaknesses and avoid our threats? I think some additional evaluation should be completed with the SWOT analyses to answer these questions.

---

While A&M changes for the future, it is vital to keep our identity. Inclusiveness, security and more liberal arts are essential, but not as a means to make us like all other universities. I implore you to always keep that in mind with every decision.

---

I'm pleased that TAMU espouses a conservative culture and Christian principles from which this country was formed. I believe a concerted effort is needed to resist the systematic academic liberalization of American universities which began largely in the 20th century. Toward that end I would like to see a foundation of principle shared with each new student that refutes socialist pressures being promulgated in public education nationwide, with an evidentiary and fact-based logical underpinning. A proof-based approach should be used in whatever format this introduction, or educational endeavor takes. I believe that it is critical that our future leaders are taught truth, and that the future survival of our nation depends on it.

---

Texas A&M is unique in providing a high level Academic and professional development that few, if any, are comparable. A&M should concentrate on its past core values and not attempt to be like every other college. It is not broken- do not try and fix it.

---

What a surprise. Outsiders do a review of Texas A&M and trash it's culture and traditions. I stopped giving when y'all stopped defending our culture and traditions. Maybe my donations are not much, but lots of Ags have done the same. Not bad overall, but please explain how our history and traditions are SO VALUABLE on the one hand, yet SO TOXIC on the other? Those traditions are what differentiate TAMU from literally every other, unremarkable McDonalds of a university. For that reason, I strongly urge you to redline / ignore that portion of this report.

---

This report is out of touch. There seems to be no understanding of the university culture, let alone the individual identities of each college. I'd be highly worried for the future of the university if this report is followed.

---

The single worst feedback/questionnaire I've ever seen. If the President of A&M put this together, or approved of this going out, she should be fired. Administrators and "professors" should have very little input as to the direction of the university unless they have graduated from the school and understand the history and the culture of the school. Administrators of almost every organization, particularly academics institutions, are worthless. They cause more issues than solving problems. Just stay out of the way would be my advice.

---

I appreciate the transparency and the matter-of-fact analysis. I think that the majority of the recommendations are warranted; however, it would appear (from an outsider's perspective) that the key recommendations of decentralizing the Provost's office might be necessary to implement a fair amount of such recommendations.

---

Ensure the conservative values of Aggieland are held true, while allowing and promoting diversity is a thin line. I pray that we continue to search the Word for guidance, without sacrificing morals for the prevailing culture of the day.

---

Covid is real, it's time to do something about it.

I found several statements in the SWOT Analysis section very offensive: "Perception that TAMU history and culture have negatively impacted student body diversity. The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." TAMU has a proud military heritage. It sets the University apart from all other major universities. As a Naval Academy graduate, I am offended that having a military component somehow "impinges upon the culture of education." The last I checked, all the military academies and the TAMU Corps of Cadets have women and minorities as Midshipmen/Cadets. "TAMU has historically been conservative and slow to change regarding diversity issues. Fish Camp is an example of this—there is a lack of control over the content of the camp. The challenges of polarized politics have the potential to threaten core values." I am also offended that because the University (and to a large extent, Texas) is conservative somehow affects diversity. If the University sets standards for admission that are the same, regardless of race, gender, or other attributes, and does not discriminate based on any of those qualities for admission, then the University is doing what it should do as a public funded school. There is a big difference between "equity" (equal outcome regardless of qualifications) and "equality of opportunity." Texas A&M is unique among all Universities. Don't ruin it and make it another Harvard or Yale. [REDACTED]

---

Proud to be a part of the Aggie community. Keep up the great work.

---

Your request for comments is total bull shit. We do not want A & M to become another tu. Your request for feedback is so shallow.

---

Any time you centralize control within 1 office, it can lead to disaster later regardless of the original intent. There must be checks and balances on the office of the president to prevent abuse of power and to ensure that dissenting voices are heard and heeded.

---

Stop wasting money. You don't need to hire people to conduct research to see that TAMU is overburdened with bureaucracy. You also don't need them to explain half the stuff that the report went over, you could have just asked former students and faculty. This entire report was a waste of money. Just by being a leader TAMU could have found this information out, but instead someone decide to pay money for it and not do the leg work themselves. Formulating the questions and digging into this stuff takes no work at all, with as many VPs and bureaucratic superlatives as TAMU has it should have been easy to find someone to do this on their own. Alternatively, stop hiring managers. Hire leaders, the things that TAMU used to claim it produced. There's a difference between the two, managers don't want to acknowledge the difference. If you preach and support what makes TAMU different from UT then you won't need to invest as heavily into marketing. As it is, they seem to be becoming the exact same school except with different uniforms. I'm fairly certain this won't get read or acknowledged, which is fine. There's a lot of stuff to go through with this survey being sent out to so many people. Please get Aggies back to the military, it's where they're the best, not boardrooms. TAMU can create good combat leaders, it's what the school used to excel at. I haven't seen any TAMU grads in uniform for some time though, even near the top of the food chain in special operations.

---

Many of these recommendations appear to push decisions up to the president's office. This is likely to cause even more delays in decisions and increase faculty frustration with administration. The university should aggressively work to reduce the size of administration to streamline the university and give professors more freedom.

---

It is a historic fact that the more an organization grows, the more "the organization" becomes the focus of the organization. The clearest product of this report is a reiteration of that historic fact, and the notion that a right handed person can be taught to be left handed if the correct organizational structure can be developed. These two major premises pre-determine the conclusions of this report. A&M is not famous for its organizational structure, the number of faculty nobel laureates, the number of buildings or campuses. It's famous for the quality, utility, and consistency of its graduates. Historically, A&M did not produce these graduates, it found them. It found them in precisely the same way Army Rangers and Navy Seals are found: through strenuous testing which, in this case, was the Aggie Experience....many tried....few succeeded. What makes a world class forester is completely different from what makes world class engineers, medical doctors, veterinarians, computer programmers, or teachers. You don't produce/find them by focusing on centralization and "transparency". You produce them by decentralizing everything you can and shaping your organization compartments around those different needs. That's the currency you are expending to produce what you are now becoming. Now feel free to ignore that and go on with what you are doing.

---

In general the report is well written with compelling arguments for its recommendations. However, it has some points that have much weaker/vaguer justifications. The strength of the rest of the report makes those sections worrying.

The report was very nice and thank you for sharing. I would like to comment on the university system. My hope is that in the future the TAMU University system will take more care of its less endowed campuses. Some are in need of care for both its students and the physical structures. How could such a great school system ignore their namesakes? Please share the pride. Thanks for listening! [REDACTED] '86

---

Howdy, I'm class of '03, biochemistry major. I served in class council, and participated in Aggie Bonfire the year it fell. I went on to medical school and have been a family physician for 11 years. While at A&M, I remember the "Vision 2020" initiative. Among other things, it was a focus on improving diversity and inclusion at our university. As a white student, I did not see the value then, and the university did not do much to change my mind- truly I do not recall much more than seeing a poster. I wish the university had done more. I was blind, ignorant, and did not come away enlightened in that regard. I was content with a homogenous setting and had no idea what I was missing. As I've become more open minded, I learned of the sordid past of Sul Ross as a General in the Confederate army. I cringe to think of sending my kids to a university where he is still revered with a statue and traditions of wishing on his foot like some kind of god. I hope the university will consider looking at the A&M experience from a person of color's perspective. They don't want to go to A&M- why is that?

---

I disagree with the recommendation to add or expand liberal arts degrees, facilities etc. Students who pursue education in such areas will rarely learn a skill with which they can support themselves. It is a waste of time and money to add the human and physical infrastructure for the University to pursue this recommendation. I think it would be a good recommendation for a California school but not for Texas. Maybe Nancy Pelosi, Chuck Schumer and Joe Biden will put this in their proposed legislation.

---

The overall theme of centralization is presented well in theory, but I am skeptical about the true impact from predominantly restructuring bureaucratic roles. Also, while most suggestions presented seem sound enough as presented, the call for centralization from a review of central offices deserves an appreciable amount of skepticism. Many points feel like the review was an exercise in finding exactly what was being looked for. Further to this point, the process and reasoning behind peer institution comparisons comes off as almost cherry picked and lacking the transparency mentioned as a large concern. Again, this is not to say the proposed measures are wrong, but it feels like a lot of detail is being overlooked. The primary point of opposition I want to reiterate is the consideration of benefits from the current "decentralized" operation that can be retained or improved with structural changes, where a due process for personnel input should be considered in every case. The only other point I want to emphasize is that TAMU has a cultural identity crisis- as shown by survey responses- that needs further investigation for meaningful outcomes. If nearly every department values DEI and claims relative success compared to other issues while faculty and staff report an abysmal DEI in a measure of university strengths, there's a massive issue of hollow practices. I would propose the very identity of Aggie culture- not necessarily the Merriam-Webster definitions of core values that many and most other top-tier institutions share- is a direct cause of DEI disparity. At an extreme, the university can continue a legacy of self-serving generations of Aggie families or can adapt toward diversity and inclusion of the greater population. I would urge consideration of the threats outlined in the High-Level SWOT Analysis for the severity of this issue.

---

Change is hard but especially with a university with so many traditions and high expectations. If Texas A&M does not change it will fail as a leader and to its students.

---

Any time I see "DEI" I cringe. What is sold as being "compassionate and caring" is instead inherently racist, elevating some groups above others based on immutable characteristics. While I wholeheartedly support equality of opportunity, at the end of the day, higher education should be a meritocracy, just like sports, business, etc. I want the best possible students at Texas A&M, no matter where they are from or what they look like, and whether our student body percentages line up perfectly with overall demographic numbers or not. I don't care if our black enrollment is 3.7% or 37% or 73%, I just want the best students at A&M. Lastly, I was quite surprised to see nothing in the report about the rate of growth in enrollment. It doesn't take much to see that the infrastructure of College Station and A&M is not expanding quickly enough to handle the ever-increasing amount of students on campus. I get that more students equals more revenue and more alumni to provide donations, but growing this quickly is detrimental to the student experience (not having a parking spot to class, trying to enroll in classes, traffic congestion (on foot or wheels), etc.). I'd like to see a temporary cap on enrollment to allow the infrastructure to catch up and be able to support a fantastic experience for all current and future Aggies.

---

This report did not provide for any recommendation around the supply chain for the TAMU system. Think of this in terms of supplies, software, equipment, and other items that can have synergies when purchased in bulk.

The overarching theme in this study is centralization. I am for centralization if it is able to successfully cut the deadwood from the branches to allow the tree to grow. To consolidate to create fewer but more powerful positions is a recipe for failure. I have seen many institutions and companies fail because of the creation of powerful fiefdoms at the hands of ineffective/petty leadership. The leadership, from top to bottom, must be there to make their departments more efficient while recognizing the efforts of everyone in their department. Cross-training, as suggested in the report, is a fantastic way of insuring a more cohesive department while keeping the employees learning and growing more proficiently. Moral is key. Everyone's input is as valuable as the next. Each manager must be training their underlings to be able to take a management position if that is the employee's goal. An assistant should be able to step into a manager's position as seamlessly as possible. Like in a restaurant, the owner has to be able to cook, wait tables, and wash the dishes beyond the typical management duties. If the owner cannot or is not willing to step into those roles, the organization will fail.

This report was comprehensive and MGT did a good job in my view. I also appreciate the use of "impinge" in the SWOT analysis. I hope many of these changes are implemented. They make operational sense and many financial changes seem to be good for the future of the University.

Keep TAMU as a conservative alternative for those who don't want to go to TU

Get better at social and mental disability inclusiveness. You make it prohibitively difficult to receive accommodation, and the stigma added onto that usually makes it not worth the effort. This combined with overworked counselling staff contributes to drop out, failure, and suicide rates among students.

I was a student majoring in Journalism in the class of 1969 and believe that Texas A&M needs to have a journalism major to provide the background and principles needed in today's world for journalists. I was the sports editor of The Battalion and was the only student to win a first place in AP awards as a senior. The education I received was superb with outstanding teachers who helped me fashion a 40-year career in journalism.

NO FUTURE TAMU COLLABORATION WITH COMMUNIST OR OTHER UNFRIENDLY ENTITIES OR THEIR STUDENTS AND SCIENTISTS. I was extremely disappointed to see past headlines about this.

Please ensure we maintain the values that have made our university great. There is no place in TAMU education for Critical Race Theory or any other support that undermines the US and Texas constitutions. Thanks for the opportunity to comment.

As a Former Student of Texas A&M University School of Journalism, I am ecstatic to hear the re-opening of the school of Journalism on the campus of A&M. As stated by the American Press Institute, the purpose of journalism is to provide citizens with the information they need to make the best possible decisions about their lives, their communities, their societies, and their governments. Journalism holds the key of knowledge and information that stems from so many angles like a tree. It's a true honor to have such a program on campuses of higher learning. Looking forward to it's return.

I have not replied previously. I will try to reply more often in the future.

I think we need a comprehensive architectural image for all of our new buildings and any renovation.

Any move taking TAMU toward Leftist, Communist, Socialist, and totalitarian thought destroys the proud military, agricultural, and engineering foundation on which the university was formed. Discontinuation of the School of Liberal Arts would be a positive move toward restoration of a university that belongs in the constitutional Republic of Texas.

Do you really trust a consulting firm that doesn't know the difference between i.e. and e.g (page 5, Executive summary)?

None

I am concerned about "over centralization" of many functions at the University. I agree in theory about streamlining effectiveness, and minimizing waste in the daily operation of TAMU. Real life experience has shown me that while a strong central control mechanism does have merit, it also can squash creativity and motivation. I feel that the over "corporatization", (such as depending upon metrics or formulas to guide) of many of the activities mentioned in the report could have a negative effect. I would caution in adopting a program that worked somewhere else. TAMU is a unique place and may fail to thrive if central control is too extreme. I believe that diversity is a good thing. However, I am against following a formula or mandate to achieve it. Let's consider everyone equal and give preference to the smartest, and most talented, period.

"25 by 25" both lowers standards and crowds the campus. There are no "all male military components". There are no current barriers to diversity at A&M, but equity initiatives often create barriers. Traditions are what make aggie land a special place, and are vital to our success. I will not donate to A&M if many of these changes are made. I do think that the college of arts and sciences, as well as unifying the library are good ideas.

---

Despite having fairly clear goals, the University seems to have lost its way. It was founded as and is still a State of Texas University and not a private school or research company. The School should return to admitting the top 25% of Texas high school graduate. The university should focus more on educating Texas students and less on international and research. The true goal of the university should not be to be a global or top ranked university but rather to provide the best possible education for Texas students at the most reasonable price.

---

Please do not disregard traditions. They are what gives TAMU distinction. Way more so than the individuals who come and go.

---

I have been away and not very involved since 1967 so I am in no position to make judgment on most of the questions asked.

---

I wish that this President had been appointed when I was a student. Any student coming in with a female leader in charge, one who implements an inquiry by an external panel AND makes it public, shows no fear in sharing that while TAMU has many good qualities, there is much to improve and here is how it can be done. Transparency is very important. Thanks for sharing.

---

Appendix 1: Survey Analysis Less than 50% of juniors, seniors, and graduate students think TAMU is heading in the right direction. Hardly a ringing endorsement. Why? Less than 50% of former students think TAMU is heading in the right direction. Why? Less than 30% of faculty see TAMU's priority is to student success. Shocking. Why is it so low? How do you address that? See my comment about the Money Education Center. Why would a student be prepared to "face debt" when the faculty thinks success is not a priority of the university? Diverse and inclusive environment. Why should the faculty consider this as a priority. Again, demographic balance should not be a "goal". The faculty needs to focus on their paying customers i.e. the students. If you build it they will come. Importance of Texas A&M Elements to Student Success - I heartily agree with the faculty's assessment list except for "equitable access to education". That should read "merit based access to education" particularly in the university environment. K - 12 should emphasize equitable access to high quality education. Conclusion: The study has some good points but it is disappointing that the focus of the study was on the structure of the university first. The study should have started with finding out what parents think about the quality of the children's education, employers evaluation of the quality of the graduates, the spiraling costs to the students and having to face debt (actually long term debt), students spending their time and money on degrees with no future were all missing. If your goal is to keep Texas A&M relevant more soul searching must be done by the administration.

---

There are many reasons that I remain proud to be a former student. The Administration of the university is not one of them.

---

In general, I appreciate the transparency of information being shared with the public. I'm not sure if this interview/survey process during a president transition and subsequent dissemination of information has been done before, but it is well-received from my perspective.

---

This is a great start; I applaud you for working to improve the future of the University.

---

It appears that the report is determined to cram DEI down the throat of the university. Cracks me up that a comment was made as to not have control of content of Fish Camp. I guess Texas A&M will go down the same path to wokeness that all universities are headed/have gone. What a shame.

---

This report contains a comprehensive list of suggested improvements. I am sure this information will be prioritized and handled in stages. The report authors seem to suggest STEM focus and historical tradition has held back the university from better serving and recruiting students in other areas. I agree with some aspects of that perspective, but the suggested actions seem to push further past the point where I feel change is necessary. Reorganization appears to be merited. However, the degree of expansion proposed feels like an over-extension of resources.

---

Lets reduce the size of the student population to a manageable one!

---

In general, the suggestions within this report seem to have a different target audience than a former student. If you feel org charts need to be reviewed and revised, that is not particularly impactful for me. And I don't feel I can add much value to that part of the conversation. However, I think it is okay to decide that you will not have to be the best in every

category to be a success. I am proud of my degree in Microbiology and my MBA from A&M, even though those are necessarily what A&M is known for. I'm happy when Mays school is recognized, but I don't have to hang my hat on that. I went to A&M, and that, all by itself, is what I am proud of.

Where is any discussion on the School of Business in the academic section? In my day it fell under Liberal Arts, but it was not specifically mentioned here, or I overlooked it in your 4 major categories.

Reference: APPENDIX 2: SWOT ANALYSIS Threats • Lack of faculty diversity and poor retention of diverse faculty members both at the university and department levels. • University climate not always welcoming, particularly to diverse faculty, staff, and students. Enrollment of diverse students, particularly African Americans, is low. Student and faculty populations do not reflect the state population. • Perception that TAMU history and culture have negatively impacted student body diversity. TAMU has historically been conservative and slow to change regarding diversity issues. FishCamp is an example of this—there is a lack of control over the content of the camp. The challenge of polarized politics have the potential to threaten core values. ? Item 1 ...”Student and faculty populations do not reflect the state population.” Feedback #1: See below. Why are we not just as concerned about under represented ethnic groups in other parts of TAMU. Didn’t see that in the report. It appears we only use race statistics to support one particular philosophy, group or political agenda. Therefore, shouldn’t we also have just as much attention paid to the “diversity” of our sports teams that also reflects the population of Texas? Texas population by race: White 73.9% Black 12.13% Other 5.82% TAMU football roster from university website: White 41% Black 56% Other 3% TAMU men’s basketball roster from university website: White 17.6% Black 82.4% Item 2 ...” Perception that TAMU history and culture have negatively impacted student body diversity. TAMU has historically been conservative and slow to change regarding diversity issues. ” Feedback #2: So what! Has anyone ever heard of “Aggie traditions”? Every potential college student has a CHOICE. If they don’t like TAMU, go to another university. Why do we have to change our core values. Should we not be asking potential students to embrace ours? Is growth ALWAYS a good thing?

Thanks for doing this! It’s been eons since stodgy old A&M looked for new ways to do things. Maybe we can start setting precedence rather than being decades behind.

In regards to COVID precautions, all positive cases should be treated equally, whether vaccinated or unvaccinated. If you are allowed to be on campus if you are vaccinated with a positive case of COVID with no symptoms with a mask , you should be able to do the same as an unvaccinated person as long as you have no symptoms. This is an undue punishment to students and their college career for making a personal choice for their COVID vaccination status.

None

I am still deeply disappointed by the university's official statement on Sullivan Ross. Sully is a landmark historical figure on Texas A&M's campus, but he is a historical figure, and therefore far more complicated than a statue can express without context. I urge the university again to craft a more historically accurate and inclusive account of Sully as a historical and historic figure in Texas A&M's history.

Thanks for inviting us into the process, although cumbersome at times I'm sure, it will help in the long run through any change. Above all I hope we create a best in class university, unique to our strengths and core values that sets us apart from the typical university.

This is a very organized report with specific recommendations. Well done.

Please do more to integrate the Galveston campus. It still has plenty of untapped potential.

Every org chart expanded while centralizing functions. This may make oversight difficult. It can also make responsiveness slow.

Generally agree with report. Caution university against allowing students/faculty to incorporate "woke" cultural views. Diversity is great and valuable overall, but culture should not be sacrificed to placate the vocal minority. Every degree program should have an ethics class required for graduation, and it should be a senior-level course.

I disagree with the report’s major finding that the university’s decentralized operational structure is the primary cause of ineffective use of talent and resources, and that the report’s recommendation for expanding the role of the President’s office and centralizing five major units will effectively increase the effective use of talent and resources. Centralization generally results in less efficient service to those to be served, and an increase in complex bureaucratic systems. Nowhere in the report did I see any mention that the recommended centralization would be accompanied by a reduction in the number of non-educators employed by the university, or any reduction in administrative expenses. The

report appears to serve as rationale for increasing the overall size and expense of an already bloated, ineffective administration. The report does briefly reflect on those who are to be served by the university – the students, the faculty, the State (as a land grant college), the B-CS area – but I feel more emphasis should be on providing quality education to the enrolled students. More than once the report mentions a lack of diversity among students and faculty, specifically that the proportion of black and other non-white students and faculty are not representative of the State's general population. I don't believe there should be any mandate that student enrollment or faculty recruitment have the goal of reflecting the general population, recognizing that a university education is not, and should not be intended for the general population. A large percentage of college age Texans are better served by a two-year college or vocational training. And, sadly, too large a percentage of high school graduates, much less non-graduates, do not even meet the language, math and science academic requirements set by the State. Recruitment of well-qualified students and educators should be the primary goal. If there is a lack of population-proportionate well-qualified minorities, that is not the fault of the university, nor is it the university's responsibility to increase those numbers by admitting and graduating, or hiring and retaining the under-qualified, or lowering qualification standards to achieve that goal. I also want to say that as I have watched the university grow ever larger over that past 50 years, I lament the fact that enrollment seems to have grown much for the sake of achieving higher enrollment, by offering more diverse, non-technical courses and majors, some of which are not appropriate for my vision of a great Texas A&M. The university has become more of a "something for everyone" destination, able to boast that it's "as large as the largest universities in the nation" (tu and Michigan in particular), two goals that I never would have intended. There are a number of great universities that aren't nearly as large as A&M. Having a large student enrollment does not make a university great, but does make it more difficult to maintain greatness. And I don't believe that being a land grant school requires that the school be one of the largest in the nation. But, I suppose it's too late to turn that ship around, and to otherwise convince those who brought A&M to this point. You can certainly argue that A&M, as large as it is, is indeed a great university, but I feel it could be much greater if it were smaller and more focused. Finally, I want to say that while it is admirable that the university selects from among the high schools' highest academic achievers (based upon test scores), in my career I have known very many Texas A&M graduates with successful business careers, who likely would not have met the high academic standards now set by the university for acceptance. I have heard that A&M must accept all Texas high school valedictorians who apply, although all may not be otherwise academically qualified. And perhaps the school accepts all in-State applicants with high school grade average or standardized test score above some arbitrary cutoff value. While academic qualifications are the most important consideration, there must be other harder-to-identify factors (leadership, ability to overcome obstacles, etc.) among those who are just below some arbitrary academic metric. Hopefully, the admissions office reserves a few spots for such applicants. We weren't all Aggies when we came to Texas A&M, but hopefully most (98%) who attend and graduate will be imbued with the Aggie Spirit, and leave with leadership, entrepreneurial and technical skills, along with a sense of generosity that will lead to a lifetime of personal and societal achievement. [REDACTED] Class of 1973

I don't know what category this goes in so I placed it here. I am disappointed in the admissions process at A&M. I come from a small farming community (Weslaco, Tx.) and attended Texas A&M and come from a long line of aggies (3 brothers, [REDACTED], Aunts & Uncles, many cousins, nieces & nephews). Once I obtained a BBA in Finance and a BBA in Accounting I moved to Houston and currently practice as a CFO of a service company. My two oldest daughters both had above 4.0 in high school but neither was accepted into A&M. My oldest scored above a 1200 on the SAT but did not even get Blynn team. She end up going to UTSA under the caps program and graduated from UT. My second oldest also had above a 1200 on the sat and went to the OU were she received her degree. The oldest went on to the UT dental school and got her doctorate in dentistry. The Middle child has just entered into VCOM at Auburn and is working toward her doctorate degree. My son has also has above a 4.0 in high school and has scored above a 1200 on the sat. Sadly he to will not carry on the aggie tradition in my family since he is not a minority and goes to Cinco Ranch High School like my daughters where a 4.0 means barely being in the top 25% quartile. He has been accepted at Texas Tech, Ole Miss and Baylor and will choose from one of them. My daughters both had friends that made it into A&M who were lower in both SAT scores and class ranking but had minority last names. I find it difficult to believe that A&M's admissions process could not identify the potential in my older children through their strong well balanced resumes (NCL, Drill Team, lots of volunteering within the community). I am not expecting A&M to recognized the same potential in my youngest. One daughter is now a practicing Dentist and the other is in Medical school. It saddens me that the A&M admissions process appears to be broken and has been so for some time. [REDACTED] Class of 1988 - BBA Finance  
Class of 1989 - BBA Accounting CPA

I would encourage you to minimize or eliminate the Diversity, Inclusion Equity (DIE) stuff. My experiences with this philosophy have shown me that this is mostly a grievance related grift that contributes nothing of any value. Rather, the DIE experience is aimed at lowering academic standards and promoting vilification of individuals based solely upon race and excusing actions of other groups of "protected classes".

---

Two items in the SWOT missed the mark with me: 1.) [weakness] "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." I would ask the authors and President to consider the motivation behind why military education is at odds with higher education. I would offer that the two are not mutually exclusive and there are many examples of the harmonious coexistence of the two notions at multiple other institutions in the country. 2.) [threat] "Perception that TAMU history and culture have negatively impacted student body diversity. TAMU has historically been conservative and slow to change regarding diversity issues." I would argue that a conservative approach to higher education is, in fact, a strength of Texas A&M University and one that sets our university apart from other institutions within the state and country. Instead of considering our conservative history as a negative, I would ask the authors and President to consider how to leverage this as a strength.

---

I am unclear where this is best suited. True to form, TAMU continues to give short drift to the need to represent more than white male students. The underrepresentation of women, latinx, and people of color requires more than marketing and outreach. It requires a concentrated set of classes and training, for both staff (administrative and academic) and students, in all areas of diversity. The core ideology of white maleness continues at TAMU. It really is a shame that a school that should be world class represents the lowest common denominator student population.

---

In general the report appears to be very thorough and contains some good suggestions on possible ways to improve Texas A&M and the student experience. Though I could have overlooked it, I didn't see any analysis on the cost differential of their restructuring proposals. In almost every section, the number of positions added were far more than those being eliminated. One thing I found especially bothersome was their final High Level SWOT analysis. A&M has a whole lot more strengths than it does weaknesses and I have a hard time wholeheartedly accepting a report that states otherwise. Our culture is what makes us special and has attracted the second largest undergraduate enrollment in the country. We should think long and hard before we start making changes that would damage that culture to make a small minority of students "more comfortable". I am relieved that I don't see Texas A&M in the news for "woke" policies like the ridiculousness that is in Austin and fear that A&M's financial resources from donors would diminish if we abandon our core values of respect for EVERYONE and that a student's ability to succeed is directly related to the effort they put in for which they are solely accountable.

---

I find it a bit alarming that there is no section of the report dedicated to staff affairs, given that staff comprise the largest employee population at Texas A&M.

---

Please see comments regarding student affairs and the new student experience.

---

I wonder if the high ratings listed across the survey analysis regarding "commitment to diversity, equity and inclusion" are reflective of resistance to DEI - as in much of the population is satisfied with the status quo and/or unaware of the issues because they are so marginalized. It would be interesting to analyze what the ratings of "commitment to DEI" are among stakeholders who identify as belonging to underrepresented/marginalized groups. Aggies are exceptionally gifted at creating community. I applaud the commitment from campus leaders and believe that with strategic efforts that are implemented with metrics to assess impact (including successes and areas needing improvement) that are then communicated with transparency to the community, the administration can lead the broader Aggie community towards a more diverse, equitable and inclusive community. I think that the traditional Aggie strengths of natural generosity and desire to build connections are especially valuable and effective tools for the work to bridge the gap to a place where each person understands their responsibility in fostering communities where all individuals feel they have value, a sense of belonging and access to equitable opportunities.

---

Diversity and Inclusion start at the top - The Board of Regents, The BoD at the Association of Former Students and the BoD of the 12th Man Foundation. How do you expect to attract and retain a diverse workforce and student body with the current Boards? University Health Services and CAPS are not staffed to handle an enrollment of the size that you have.

---

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT

which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

---

See comments on Student Affairs.

---

After reading the executive summary, appearances would lend themselves to some fairly significant organizational and structural change. However having graduated 46 years ago doesn't give me much standing to have a lot of input. My comment would be related to my expectation for the school from which I graduated. Strive for excellence in every single thing that is done. Further, the President and the Office of the President must instill treating every single human, regardless of how they are affiliated with Texas A&M, with kindness and respect. Period.

---

I see two things that really bother me in this report. The President is apparently wanting to micromanage everything, which is bad for such a large organization. There are also distractions like diversity and inclusion. A&M is already incredibly diverse and the entire focus should be on educating students and not in political concerns like diversity and inclusion.

---

Please remember the great aggies that made Aggieland what it is right now

---

1. The Corps of Cadets is a strength of A&M. I remember in the 70s the Faculty thought the Corps was a weakness...seems it's still a prevailing view. Never allow the Corps to be viewed as a weakness...it is what makes A&M great! 2. Without the Corps, A&M is simply another large public university...blah, blah, blah. 3. A&M has thrived because we kept the Corps and yet significantly expanded the overall A&M educational experience and with that...the student body size. I just visited Charleston SC. The Citadel is a prime example of what not to do. It took another 20 years...1994 v 1974...to allow women at the Citadel. It is now a much larger, but still only about 3,500 students including graduate and non-Corps students. 4. Don't relegate Mays Business School to an afterthought. It is and should be supported so that it too becomes a highly-sought after degree.

---

I'm assuming this is a consulting firm the works primarily with business not academic institutions. Businesses love centralized control but that frankly doesn't work well in business that get beyond a certain size. I think there are parts of a Univ that do lend themselves to centralization but many parts do not. To be blunt, in many cases centralized control leads to regression to the mean. Parts of this Univ are truly outstanding and meet the goals of this expensive process already. Do not screw them up just to centralize the Univ and follow the recs of this review. Perhaps the best way to proceed is to follow a few suggestions, those most appropriate for centralization, and leave the others for a later date. That, hopefully, will allow you to learn from the mistakes made with a few rather than all.

---

Preserve the traditions and values handed down from previous generations. Many from the "greatest generation" called Aggieland home. We should seek to preserve rather than personalize the gifts they have given us.

---

I don't believe the office of equity and inclusion (or whatever it's called) should exist. We are all Aggies whether current or former students. We should celebrate that fact instead of being divided based on our color or sexual preference.

---

Any college that isn't placing students into jobs immediately will eventually fall into decline. College is no longer necessary for 90% of careers - and the youth know it. A&M is an underrated University academic wise but still isn't fulfilling the needs of the 21st century student. Also, most PhD science students are not American - we have big national security issues that A&M could help resolve if it partnered with more public grade schools.

---

I've made several comments above in response to your report. I am in fact a 4th Generation Aggie! My application had so many Aggie family members on it we ran out of room. I am however, not a current donor. I do not watch Aggie sports. And I will have nothing to do with A&M until it quit teaching white students that there is something wrong with them based on the color of their skin by being one of the state colleges in Texas that participates in CRT. I have heard this and many reasons similar to those I cited from my fellow Ags. Prayers this wasn't a fruitless waste of time for future Ags. 'Gig Em

---

Stop promoting/prioritizing the jab

---

Unsure as to who in former students had input on this as I don't recall being asked. I believe that the university really need to work on diversity issues. There is a poor representation of women on campus, especially in campus-wide graphics and statuary. As a woman, this makes me feel excluded.

---

Faculty and student body selection: It is stated that the faculty and student body is not very diverse or inclusive--and as such is a weakness. I believe that other criteria are much more important than diversity and inclusiveness. For example TAMU should hire/accept the best and brightest--regardless of race, creed, religion, gender, color etc. This will provide a

---

foundation for excellence in the faculty and student body and provide a magnet for more of the same to come to TAMU. It is not necessary or even desirable to reflect the state's population in this one institution. Let A&M be for the best and brightest--whoever they are, based on merit. Also, The traditions and culture at A&M make it special. Don't be too anxious to make changes for change sake or to be like peer institutions. Change is not necessarily good--it can be good or bad.

Honestly, I don't have the time to read the report. I skimmed the summary. My only comment is to be wary of this movement of "DEI" and forcing it to be true. The most qualified person should be selected on their skills and achievements, not their attributes that they cannot change.

Well done - I am proud to be an Aggie. And Proud to see the university growing better. But please never forget that management and leadership are not the same thing. Please never forget that bureaucracies always bloat, eventually. Whatever efficiencies will be gained by reorganization will be short-lived. Analytics can be helpful - essential - but it can also create people that simply check all the boxes and don't actually lead, innovate, improve. Be afraid of systems that promise to be the answer. PEOPLE of integrity, character, and, effort are the answer.

Don't fall victim to the "woke mob". TAMU should maintain her values and integrity, holding firm to what makes her a unique university. Change is always welcome where warranted, but changing for an extreme or loud opinion is typically not warranted. TAMU has come a long way since her inception, and Aggies should never stop striving to maintain and develop good, moral values.

This is so complicated it is impossible To fully comprehend this report

Proceeding the the recommendations regarding centralization and efficiencies appear important to be as competitive as possible. Operations and anything ancillary to academics, research should be approached aggressively with the intent to streamline. Attracting and retaining Faculty is of the utmost importance to overall quality of student experience and reputation. If faculty is disgruntled or frustrated it flows through to students.

Amazed that this study was commissioned, the best critical look at the university since Vision 2020. What a great start!

I think trying to align the student population with the overall state population is not as important as seeking the most academically qualified students, regardless of race, gender, etc. I do not think there should be a degree in University Studies. A&M should be preparing students for a career in something productive and meaningful. I would like to see A&M (and all universities) publish success data on graduates. That data would include the following information for all degree plans; % hired after graduation, % hired in their degree field, starting salary. Students and parents would then have a solid basis for selecting a degree. Thanks for the opportunity to comment.

I was interested to read the recommendation that the university continue to pursue private partnerships for services. As a student during that transition, I experienced: (a) decline in the quality of food services while prices increased (b) decline in the quality of cleaning services (c) a reduction in the care taken and visual appeal of landscaping. Outsourced service providers did not appear to feel as much ownership over their domains. I think that extending the model to something like transportation services will lower the quality of service for students in exchange for a temporary cost savings.

I truly appreciate the school investing into this research to help make it the best it can be. While I did not read all 133 pages in detail, the proposed solutions do appear to be good recommendations. However, my strongest feedback is that the school has to make the right investment into the right faculty members. We should never "just hire who we can get" because we are growing so big and need more faculty. Those educators have a true impact on our students. You have professors where the students may not be able to understand them because of language barriers, you have professors that are using the opportunity to promote their personal platforms, you have professors who clearly do not care about the success of the student and appear to be there solely for a paycheck as opposed to the love of teaching, etc. Granted, A&M has some absolutely wonderful professors, too, but the previous examples I just shared are just not appropriate for a school who is striving so hard to be the best. For you to be the best, you have to absolutely hire the best (no different than us recruiting a top-notch sports coach and players who want to win titles). I think if the school is honest with itself it could not say it has hired the best at all times (or even close to the best). Out of everything proposed, this truly is a critical topic for A&M's success.

PLEASE do not "plow up the field" to achieve some ideal of "world university." Remember the roots of our university are embedded in our core values.

If I understand correctly, there is realignment and centralization of certain internal or "back office" type functions - HR, IT, finance, facilities, etc. Completely agree on the strategic advantage of this type of reorg to breakdown silos, improve transparency and increase talent and collaboration. Again, from a corporate perspective, something I experienced beginning in the early 2000's.

---

Please protect your workers in order to protect your students. Cutting costs is not the most important thing.

---

I am pleased to see the action our new President is engaging. I believe this report offers a roadmap for the adjustments to make A&M an even greater University. Thank you, Dr. Banks. Clearly a more centralized, coordinated management will optimize resources and minimize duplication while ensuring all are on the same page.

---

I thought that the investigation and recommendations in general were "on target" and revealed many much needed opportunities for improvement.

---

I really dislike all of the emphasis on diversity and inclusion. I went to A&M because I LOVED that it was a traditional university with conservative values. I think most people attended for that reason along with the love of Aggie Spirit. I hope if there is any new branding of our university, that it will not keep pushing worldly values. There is no need to make a Facebook post saying that A&M Supports LGBTQ month as was done this year. Really? The Sorority Panhellenic did the same thing. I think that is so unnecessary! I heard that a new student went to Fish Camp this summer and that student was hoping to get to meet new people, play fun games, and learn all of the Aggie Traditions. Instead, all they did was go to lectures on diversity and inclusion. The student reported it was horrible and would not recommend Fish Camp to anyone any more.

---

There seems to be a consistent theme in the recommendations of centralization and standardization. While there can be efficiencies gained in that process, my 40 years in business has shown me, again and again, creativity and ingenuity will likely be stifled. If centralization is determined to be the direction to go, protections and processes should be established to encourage ideas, experimentation and innovation. And some mechanism should be established to insure a centralized bureaucracy remains directly accountable to the stakeholders you have identified.

---

I think we are beginning to see a shift back toward the trades. As I think back about my college experience, I realize that some doors were opened to me because I went to college. However, I've met a lot of people who did better financially than I did without a college education. One man specialized in training cutting horses. Another man built a business as a builder and contractor. I know people who built businesses doing car repair, doing shoe and boot repair, and a whole host of businesses that pay extremely well for entrepreneurs. Too often, I think, the college experience has been oversold. We hear too many cases of kids coming back home with college degrees they can't market. That happened to me. No, I was not a high flying academic standout, but I proved to myself on the GRE and the PCAT, that I didn't go through A & M learning nothing. I placed well into the 75th percentile in the advanced biology exam, and in one section of the PCAT in the 99th percentile, but I have to say that my A & M degree in a scientific field gave me no advantages in looking for an entry level job in 1976. I even saw a job posting for an entry level job that was open to women and minorities only. Even then, I was getting the impression that to be white and male meant I was not desired as an entry level employee unless I was so superior that a company could not afford to pass me by. I remember meeting a man with a degree in animal science from A & M who was living at home and working as a clerk in a convenience store. The myth is that an A & M degree is a ticket to a successful career. I think we need to rethink that. I don't think anyone should graduate \$40,000.00 in debt with a degree that will not pay enough to repay the debt. We should give away a college education. People need to think realistically about what it will cost and they should think of other alternatives, such as the trades, that are more certain to lead to good paying work without a B.S. degree. We are over educated as a society. What we lack is the "liberty arts." People don't know about their government. I think A & M needs to stop focusing on diversity, start focusing on quality, and stop making a college degree sound like the ticket to success it doesn't always prove itself to be.

---

I, like many former students, believe that TAMU has headed into a downward spiral of liberalism nonsense. Protests and vandalism of the Sully statue! A student drag show! Separate student groups by race! What happened to the Student Y being a major influence on campus and Fish Camp? What about Christian services in the chapel? THERE ARE PLENTY OF LIBERAL COLLEGES EVERYWHERE. TAMU HAS ALWAYS BEEN DIFFERENT AND APART FROM THEM AND SHOULD BE FOREVER. I would probably not even want to attend TAMU the way it is now.

---

Ignore everything about Diversity, Equity and Inclusion. That is one way to destroy TAMU. Remember that TAMU stands for Texas AGRICULTURAL and MECHANICAL University. TAMU is known for its history, for its tradition and for its focus. Don't try to turn it into anything else. It never was a school focused on the arts and theater. It shouldn't be now.

My major concern is one of philosophy. I hope that TAMU will continue its reputation as a premier CONSERVATIVE institution. Thousands of parents send their young adults to TAMU because of its conservative principles. Carefully vet every teacher employed. Marxist & Socialist doctrines must never slip in.

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

Don't be fooled by "a centralized structure is more efficient". Seems like lots of management gobbledygook speak.

In all things, moderation!!! Centralization is the management structure which is currently in vogue. (I knew that it would be proposed by the consultant when I first read about this work.). It sounds great, but it can put a choke hold on departments whose needs are not understood by those at the top. Some areas can be centralized easily. Some can not. And it can lead to much efficiency gains while creating a very unpleasant working environment, leading to a whole lot of I don't give a crap attitudes. Don't depend too heavily on the Consultant input. They aren't nearly as good at their job as they want you to believe! You need to involve people in every department and at every level to build consensus. You've got the time and money to do it, and it is surely worth the effort. Listen to the support staff. They are the ones who keep the wheels on the bus and they do the work. They have much better insight than they are given credit for. Don't rush. And lastly, resist the urge to make it all about you. This university can run for a long time without a President. It can't make it for a month without first line workers! Thank you for listening.

I do think more work could be invested in DEI and measurements of this in it's overall strategic plan. Also, considering diversity has for some reason become political, and considering A&M's conservative alumni, I think some education around why this topic is important for the campus to consider is needed.

This survey seems like a giant waste of money. It needs to be made known why a response would be unusable on the responses they threw out. That doesn't appear to be defined. Also, if we are indeed stuck with diversity of skin color among other things and equity (DEI) is a recommendation, then this was absolutely a lost cause. If we don't have the leadership and integrity to admit students and faculty based on how well they do their job, instead of based on their skin color and other types of superficial diversity metrics, then we are lost as an institution.

#### CONSERATION OF COST FOR STUDENTS

I'm very proud to be an Aggie Class of 1960, but I'm concerned that we seem to believe that always striving to be the biggest is the only way for the future. Let's focus on always being the best. Thanks and keep up the good work.

Unsure of what section to put this in. As an institution of public trust is is highly concerning to see A&M engage in financially short sighted and suboptimal results producing privatization. Aggie dining, housing, and other units fall well short of where competitor schools like Virginia Tech do in this crucial area. Turning over these critical functions to institutions based on profit and greed ensures anything but the highest standards of services as much of the money spent by students and the state serves only to line pockets instead of produce results. Explore the Virginia Tech model they have employed so successfully with Dining Services to correct this deficiency.

I simply wanted to provide feedback regarding the trends that I've seen at Texas A&M over the last 10 years under the former leadership where it seemed that we valued numbers and increasing the total number of students versus a focus on the quality of those students. As we've significantly increased the number of students, we've also seen our academic rankings slide compared to 10+ years ago. I can remember the original Vision 2020 plan to achieve a Top 20 academic ranking for public universities. It doesn't seem that has been our vision and purpose over the last 10 years. I hope we return to a passion of ensuring that a degree from Texas A&M University is viewed among some of the top universities in the country in regards to academics and prestige.

The school's main focus needs to be on education— not football, not what gender has what bathroom. Equip the students of tomorrow to take on the world and to lead. The school has the funding and necessary resources, it's just being wasted on unimportant initiatives to check a quota box.

Please keep A & M focused on learning skills that students can use in the real world.

Far left ideology is being mainstreamed at Texas A&M by radical professors and an aggressive mob of small but engaged students. Texas A&M should stop pretending this doesn't exist. It does. It is obvious. And it is destroying the University. The vast majority of American universities have become echo chambers of the increasingly radical American Left. Professors are routinely viewing their jobs as a platform to indoctrinate rather than educate. Texas A&M has a tremendous opportunity to differentiate itself by not becoming a cesspool of cultural Marxism and degenerate left wing ideology. If the University is truly committed to providing students with a well rounded education where they are exposed to a diversity of view points, it should immediately prioritize the hiring of Right wing professors and funding Right wing academics in order to start evening out the embarrassing ideological discrepancy that currently exists. Until the University starts moving in this direction, I will not donate a dime to it. Continue going woke at your own risk, A&M. Our alumni are turning over in their graves and you're well on your way to ruining all that made A&M special. For shame.

---

In the "Findings and Recommendations" section of the Report on Page 3, the following statement was made: "Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts. Some survey respondents believe the DEI efforts are ineffective, resulting in an inability to recruit underrepresented student, faculty, and staff populations. Others have questions about the effectiveness of resources invested in DEI that could be used to invest broadly in education-focused endeavors for the entire student population." No where that I can find in the Report was this issue addressed other than to point out that the various areas of the TAMU administration have "successfully" implemented DEI. Since "large portions" of the survey audience questioned "the effectiveness of resources invested in DEI," why wasn't this matter specifically addressed by the consultant, with recommendations about how to ensure that the strong/unique culture that TAMU possesses and not diluted such that in X number of years TAMU's culture is indistinguishable from any other major public university? If/when that happens, I believe that the TAMU's administration will have totally failed in its mission to maintain the culture that makes TAMU the most unique large public university in the US.

---

in Appendix 2: SWOT Analysis it is noted that "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." I am a Former Student and former member of the Corps of Cadets. The history and tradition of Texas A&M as an all-male, all-military school has built a culture that is a source of pride for myself and my family (My wife is also a former Corps member). The University should take no action to reduce the impact or minimize the role that the Corps of Cadets plays in the Aggie Experience. The University should strengthen the role of the Corps and encourage membership in the organization that has produced thousands of the finest officers that the US Armed Forces has ever had. Diminishing the role of the Corps and the culture that it has created will transform the university into just another state school such as Southwest Texas (Texas State) or that horrid school in downtown Austin. In general, I support actions that Texas A&M could take to optimize and better use university funds. All organizations and businesses should continually strive to optimize their processes and procedures. I do not support ANY actions from any office of Diversity and Inclusion. Students of all races, ethnicities, and nationalities are welcome to attend A&M if academic standards of admission are met. A&M should not work to fulfill any racial, ethnic, or nationality quotas of any kind. These types of quotas or non-merit-based methods of admission are un-American should never be used in a prestigious institution like Texas A&M.

---

I appreciate the opportunity to provide my feedback. Gig'em Aggies!

---

Organizational Structure - The report recommends expanding the role of the President, but doesn't the President already have authority/responsibility/oversight over the areas the report says have issues? I'd caution to not jump right to pushing authority to the "top", but to first make sure the existing organization functions effectively, e.g., make sure lower to middle management is able to and does their job to address/handle the issues.

---

Sure would love A&M to start focusing on quality over quantity. WAY too many people, way too many who aren't there for an Aggie education. SO MUCH more to A&M than just a degree. No doubt that folks with Aggie rings from the College Station campus have VERY little in common with those from McAllen, Law School, Qatar, etc. No need for yell leaders in Galveston who wear the same uniforms as the true yell leaders in College Station wear. Would love to see how people react to fund raising initiatives like raising \$4.25 billion and then trying to raise \$350 million more on new athletic facilities. Sure seems like SO MANY high profile money initiatives are derived by athletic entities. Pretty sure there are MANY other needs out there. And finally, for A&M to have torn down the VPSA residence (built in the late '30's) without any consideration for what that house embodied and the lives impacted there sends a LOUD message to

folks in the know on what A&M does not value. Respect the past. Invest in it. Preserve it. I hope A&M never asks me for money again. I give \$50 a year so I can have access to the online Aggie Network.

One point to raise - TAMU Galveston is not, and should not be treated, as "College Station South". Students there should certainly enjoy the benefits of being an Aggie, but still be able to have their own unique experiences. As someone who has run a branch campus (for a much smaller University) for several years, I am concerned about any branch campus, especially one as special as Galveston, being made into a shadow of the main campus. Please make sure this does not happen.

I think this process is very positive for the University. I'm not in a position to agree or disagree with the findings. I thought a study similar to this was done about 20 years ago. The one comment I would make is as a civil engineer, I think more students should be encouraged to get a masters. I don't think A&M does this well.

I find the process of achieving a passing grade to move forward a failure of the educational institution. Perhaps it is the only way. I will continue to look at a graduate's transcript but will not hire on this alone but search the individual for the core values of our institution.

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

I hope you will consider all Aggie comments on this with serious consideration. Being old shouldn't disqualify comments as outdated or out of touch. Many of us old Ags have kids recently graduated from A&M and a few more yet to go there. Make it better for all of your students and not just for these woke victims of fake oppression. Thank you.

Don't try to be good at everything—let's be great at the things we really want to be and don't try to do everything. That's a recipe for mediocrity.

I believe that creating more administration is the opposite of what you should do. Remember, the job of the university is to teach. Hire good people who know how to do their jobs and who work hard. If someone can't do their job or is lazy, fire them. In my experience, the best performing organizations push authority down to the people who are responsible for doing the work, then get out of their way and let them work. Every layer of administration requires data to justify themselves. Ultimately, the workers which are actually producing the product (in this case, teaching) must take time away from their primary job to perform such reporting. State universities should be inexpensive so that all scholastically qualified residents can afford to attend.

I believe that maintaining both the moral and financial support of former students is vitally important to the future of Texas A&M University. This can only be achieved by maintaining the core values that former students identify with Texas A&M. This includes maintaining the symbols (like the Sul Ross statue) that are identified with our unique history, culture and traditions.

-In general I am guessing that a liberal leaning organization created this survey and interpreted its results in the nuanced ways that they addressed what they do not like about Texas A&M being a more conservative University. Though Texas A&M should seek to make sure that all ethnicities have the opportunity to become Aggies, what we should not do is implement the extreme liberal policies and dogma that are pushed on students at liberal schools such as Critical Race Theory or the University of Washington forcing all students to have to learn about all of the different gender pronouns that have been invented. Texas A&M provides diversity in that it is one of the last major Universities that leans more conservative. Unlike the liberal universities that do not allow conservative speakers to present on campus, Texas A&M still allows the debate of thoughts and ideas and I fear that if we transform into one of the liberal universities, all freedom of thought and debate will be extinguished. -I take great issue with the statement "The Aggie culture impinges upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education," as a weakness of Texas A&M. What makes Texas A&M unique is its traditions, and the Corps-of-Cadets is at the heartbeat that keeps the traditions going. Without the traditions and the Aggie Spirit, we are just another University.

Texas A&M is losing it's unique identity and is turning into another UT. Congratulations!

The word Equity and the mechanisms associated with achieving said equitable outcomes is at odds with Aggies values and should be stricken from any A&M literature and/or plans. Equality of opportunities should be the goal for our campus and university culture. Creating opportunities for under represented populations vs our states demographic makeup should be done through a hand up system and not a degrading hand out system. Also, the university should protect the rights of all individuals and place into writing protections for students political beliefs along side those codified by law. See Michigan State's protection policy as a reference for keeping a civil campus culture in an

increasingly decisive climate.

My largest concern is that the University should focus on its core missions while preserving neutral, non-divisive principles. Any push of "equity" or a dozen other leftist buzz words should be stricken as official policy just as faith and religion (significant conservative principles) are appropriately excluded. Discussion of such principles should be encouraged without discrimination. Professor [REDACTED] continues to harass students, faculty, and former students based solely on their race. A quick facebook check of his remarks on Facebook regarding Batt articles should find ample evidence to back up his hostile/racial/racist remarks against anyone he perceives as white.

Thank you for taking a look at the operations of the University; I will have faith that all decisions made will be well-thought-out and beneficial to the most important parts of the operation: the students. Gig 'em!

I do agree recruitment of minority and under-privileged students is vital, however, this should not contribute to a reduction in the quality and rigorous standards of a Texas A&M University education.

Honestly, please just make sure that requiring tolerance means everyone is tolerant of everyone. A&M is much more accepting now than it was in my day, but I worry that Christian conservatives are the only unacceptable group now. We still make up a large portion of the donor pool and the Aggie network.

Love A&M, Don't love the progressive and "one world" attitude. The COVID restrictions and testing on campus seem unconstitutional and against our own Governor Abbott's orders. When will A&M be a leader to remove this tyranny upon our students/faculty?

I was embarrassed that my university had to do the typical corporate approach and seek consultants on how to improve. The report was a cookie cutter approach to consolidation. I think the general direction of consolidation is the wrong direction when you see that businesses are moving in the direction of independent units and lean management. I understand the inefficiencies but if we put the right people in leadership positions and empower them the upside is far greater. The issue is people and not positions- Through the years the university has grown in unusual ways and a review should be done every five years to make sure that organization makes sense and is lean. Lets build a dynamic great school not a bigger bureaucracy.

Texas A&M University is too large. A worthy goal would be a "Less Than 25 by 25" initiative in which the total enrollment of the College Station campus were to be reduced to less than 2500 students total - undergraduates and graduates - by the year 2025. In addition, how many students leave the school equipped to think freely and live virtuously in the postmodern world? Do we know who we are and where we began? To form persons rather than mere producers, I invite TAMU to implement a four-semester classical liberal arts core curriculum that is mandatory for all students, especially for those in engineering and business who are farthest from the traditional patrimony of the Western world.

Just don't go woke. You are one of the last bastions of reasonableness, integrity, sound thinking, and character in the public higher education landscape. The entire conservative half of American society respects A&M. Know your legacy, own it, and live it. Don't go woke and join the insanity of today's world. Dominate your niche as a conservative institution, with conservative values, and honorable, conservative students. If you do, our kids will be proud to join the Aggie family when they start college in about 10 years.

I apologize for not aligning my comments to the associated topic (above). My daughter goes to UT (the first and only... :) [REDACTED] ) their academics programs are really fabulous. The fact is no one goes to a company with one specialty (acct, fin, ). They have to integrate and comm with marketing, C level, mfg, etc, etc, Their business programs have a small core set of the Biz basics, then they wire together these other disciplines in as it would in an org. I believe the emphasis needs to be on flexibility and fast thinking in a highly disconnected, digital market place. So I think the strategic vision for academics has to be on thinking and cognition; adversity is what we deal with in life, and biz. Faculty talent - at Texas A&M University, it is NEVER about the money. You need to ask. These people are crazy about this place. I don't know you, I knew some others bowtie, bright... Aggies will figure out how...you ask. Stroke those ego, get some chairs. There are some ags that are making a spit ton :) of money. They LOVE to have those ribbon cuttings with you! :) go for it. Marketing...you want to get the message coherent and focused...? Go to the ath dep and get the folks who are producing that content; like the Pulse. They know the digital world are MONEY! There is no way we can be behind in the marketing race. A&M is poised to be the greatest University institution east of the rockies...we let ourselves UNDERSELL OUR UNIVERSITY and we have FROM THE BEGINNING. That needs to be addressed in a global world.. \$0.02 Thank you for taking my feedback. [REDACTED]

The key finding (decentralized structure resulting in ineffective use of talent and resources) is consistent with my observations that A&M is slipping with regard to value proposition. For years, A&M has represented a strong value

proposition, but this has changed over the last 10 years or so. I live in College Station and I have gone through 2 advanced degree programs over that period of time. I did not go through A&M despite a strong desire to do so and despite my proximity to the university. The primary reason for this was a relatively poor value proposition, especially for a working adult. In particular, I am disappointed to see so little attention paid to the critical importance of keeping up with advancements in digital education. I am a proud Aggie. I enjoyed my time at A&M, I met my wife at A&M, and I want my kids to attend. I hope you receive my feedback in the spirit of helping this university grow and not as an attack or otherwise unsupportive. I keep going back to value proposition... The A&M undergraduate experience has it from what I can tell. The programs oriented towards working adults seeking to continue their education simply do not, in my opinion. I would hope that any restructure or actions resulting from this review would not seek to be an ends themselves, but rather a means to the end of helping Aggies succeed.

---

I'm about to have two children reach college age. As I dreamed of them becoming aggies one day in the past, I'm now concerned that the campus is no longer a safe place for conservative students. The college's actions on masks, vaccines, asking students to report on other students and other political issues show a clear slant in the leadership of the college. What the hell has happened to Aggieland?

---

There were several examples where a push for diversity seemed to be the priority to academic excellence. Let the demographics take care of itself while our school should focus on excellence. Let's focus more on what students can achieve rather than what they look like.

---

Remain strong in Texas A&M tradition. Do not allow cancel culture to change this University.

---

Don't shoot for U ranking no. 1 in the nation. Stay at least top guns.

---

As you centralize, you lose the independence of departments to run things the way they want, but gain the efficiency of sharing/direction from the top. If you do centralize you must still be accessible. That means when someone has a complaint/problem they must be heard at the top and the department manager must still have the power/responsibility to make it right at their level.

---

The university model is broken. I highly doubt the broad non-descriptive language the consulting agency's report provided echoed many of the responses of former students. The core values TAMU has long stood for are being lost through "DEI" efforts. Every student at TAMU is an Aggie deserves to be there. There shouldn't be any divisiveness through intersectionality/identity, which is what most of these "DEI" programs promote. High level recommendation: downsize faculty and departmental positions, especially in those programs such as liberal arts that don't contribute to students completing their undergrad with tangible and marketable employment skills. Additionally, separate athletics from academics. With NCAA players now being compensated for their marketing potential, their "scholarships" and the related resources should be allotted towards students who can apply them towards academics. A student studying to be a cancer researcher deserves the support of a scholarship more than an athlete that never goes to class, makes a respectable salary off their social media profile, and will leave the university before graduating to enter professional sports with a seven-figure contract. Until these two issues are specifically addressed, there is no hope for the continued excellence of this higher learning institution.

---

The report has merit to some of its recommendations, specifically in relation to organizational structure. However, its approach towards diversity is concerning. The role of any institution is to find, promote, and retain the brightest minds that it can find to further the fields that constitute the institution itself. To this end, the University's focus on DEI (and the reports support of such measures) is absurd. Diversity itself is to ignore the hierarchical, expansive orientation of the institution's research. It cares not for qualifications, merely if you "fit" the racial (or for that matter any socially constructed/engineered) box. Equity goes beyond mere elimination of biases toward coddling any victimized person through providing what they themselves have not earned because of historical inequities, which has been life itself for millennia. And lastly, with respect to inclusion, it is not incumbent upon everyone to accept and support everyone else. Rejection is, by nature, natural. Thus, the university should be teaching qualifications over racial or gender characteristics. It should be teaching that not everyone can undergo the same activities and receive the same outcome, as life itself is not codifiable in such a manner, therefore heightening the importance of adaptability. And lastly, it should be teaching the importance of resiliency over the feigned notion that one must be accepted without any question. To support such a ridiculous DEI policy is to flout the very foundation of human nature itself. And the fact that the University has sought to implement this while hiring a consultant supportive of this is indicative that indeed, Texas A&M University is on a pathway towards woke-ism. To that end, I can no longer support the University.

In reviewing the document I felt an overall sense of dread. Texas a&m is unique. We don't need to be like everyone else nor should we strive to be. I'm certain there are areas that need improvement and streamlining but large sweeping changes on many fronts continue to erode at who we are. The current climate in the world is imposing on the very core values of this beloved university. Fix the things that save money and make things more efficient but let who we have been since 1876 stay. We aren't the other "comparable" universities in the study but special and one of a kind. Only an aggie can know that.

Unfortunately, today, DEI has been undermined from its original intentions. I was brought up under the teachings of Dr. Martin Luther King Jr. in that the content of a person's character is what is important, not the color of the person's skin. I have stressed that to my children and they have learned well. Integration was the goal. Now, DEI is all about segregation, about defining people based purely on skin color - to hell with the content of their character as their character is irrelevant. It is about punishing people for something their ancestors may (or may not) have done over 100 years ago. It is about focusing on people's failures instead of their accomplishments. And now, many organizations have a DEI group to oversee DEI. But, as a general rule, those groups now create controversy and division to justify their positions in the organization. In general, something that was originally created to improve organizations is now being used to hurt organizations. Like it or not, that is the sad truth.

This sounds like a great way to move the campus forward, and get rid of a lot of the frustrating red tape associated with student life. I particularly appreciate the effort to include the community more; there is a definite divide in BCS between students and former students/community members. More inclusion in the campus family would only make former students feel more included (and more likely to remain engaged) and foster better feelings from the general population. I only wish to comment on the topic of "diversity, equity, and inclusion (DEI) efforts." A&M must always remain an institution of "meritocracy." We must never sacrifice rewarding and furthering merit in pursuit of the nebulous goal of "diversity, equity, and inclusion." Skin tone is completely irrelevant to A&M's core values.

Adding to general feedback, as a minority female former student who came from out of state for grad school, it was VERY clear that A&M biggest threat is its "conservative values" as that always came at the expense of growing its diverse populations. I felt out of place there. Having Breakaway Ministries at Reed Arena is a big red flag and threat to alleviating that negative culture. If I was looking at the state of Texas for undergrad now, I would not consider A&M.

Overall, I feel there are many good ideas in this report. However, I really feel if you want to maximize Texas A&M's contribution to Texas, America, and the world, keep the focus on where we are changing the world already, and where the demand will be for years to come. Let's further the impact of our Engineering programs, and not divert critical funds to areas where we will never be a significant university - e.g. School of Performing Arts.

My main comment is if this report is followed then you will continue to see former students slow or eliminate our contributions. A&M needs to not be like other "woke" schools, in fact we need to eliminate that part of wokeness we have allowed into the system. Affirmative action ended a long time ago. Admittance to our school should be on merit and nothing else. It's disappointing to see we wasted a ton of money on a report to get to a specific response.

Texas A&M requires a total transformation to survive in the coming decade. Equal and separate focus must be placed on the student and their readiness, wholly separate focus from research. Today, research receives 90%+ of the focus. This must be developed with extreme focus on geopolitical trends (Great Power Competition) that will greatly shape and dictate the future of the US, world, and Texas A&M in the next decade and later. The consulting firm failed to address these most important critical success factors. (I'm an Aggie management consulting executive).

SWOT points: The Aggie culture is the most important strength, it is the catalyst for all other strengths and more importantly, the Aggie Network. Limited financial resources? What are y'all wasting all the money on? My DEGREE costs less than one full year at A&M now. Change for change's sake is not wise, the Aggie culture is what makes the higher education received at A&M more valuable to "the real world", both corporate and public. Hybrid classes/options should be the norm going forward. There should be little difference between lectures of in person and online. Labs, practicals, and research classes would not need to meet the same type of compatibility due to the obvious differences. The only Diversity which should matter is the Diversity of MERIT. Hiring, recruiting, or "climatizing" based upon non-MERIT based factors such as race, color, nationality, sexual orientation, financial status, etc. are DISCRIMINATORY practices. A&M does not need to EXCLUDE to INCLUDE. The A&M SYSTEM should look at a cross-platform incentive to allow MERIT based moves within the system, making it easier for transfers within the system, it is rare for transfers from PVAMU and A&M for example.

I read this entire report and determined basically Texas A&M is too big for it's britches. Furthermore, there are too

many departments with too many heads and levels of staff. What is needed in my opinion is more and better trained people on the lower levels dealing with students and instructors. My time at A&M things have changed and there was little place for the instructors to get assistance. That has changed but is that going backwards at this time because there are too many levels again, let's call it fluff and where the rubber meets the road not enough rubber as to say. As a general overview it appears positions were added to fill a void, but was that the right step. No, but it solved that problem immediately, finger in the dike not fixing the problem for the long term. Basically pawn to King-4 opening. My suggestion would be to hire another firm with the same mission as this original firms and compare. I think the results would be different. In fact I am sure the results would be different. I wouldn't want this report to guide the future of A&M,

---

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED] Class of 2014

---

I think that the abandonment of preference in legacy applications for undergraduate students in the recent past was a dreadful mistake. I'm not a legacy student, nor will my children attend A&M. But as a student, grad student, and eventually faculty at the university - I believe that the legacy of Texas A&M was its strong legacy base. Few other institutions have as strong a history as A&M. And that history was forged by students, their sons, and their grandchildren over the first 100 years. While we need to be inclusive of the state's eligible students who apply based on their academics and class placement, putting additional other constraints on admissions before legacy I feel is wrong. Don't turn our backs on the "family" aspect that formed the school and its deep roots in Eastern Texas. Bring back a preference for legacy candidates as long as they meet basic academic requirements.

---

I feel that Texas A&M has lost touch with the current demographic of its student body and is trying to operate as if its the 1950's. I'm very disappointed that Texas A&M hasn't kept pace with the changing world.

---

The general theme of better coordination and centralization is badly needed as the university has grown exponentially. One word of caution would be to try to maintain a balance of centralization without losing the ability for individual creativity and entrepreneurship within units so the total system is not stifled by too much control at the top! Better coordination and efficiency are admirable goals but should not be enforced at the expense of losing the ability to react, change, and grow as the world changes.

---

The University should take positive steps to maintain their reputation as a champion of free speech. See <https://www.thefire.org/>

---

I chose A&M because of its reputation as a more conservative school. Many of the recommendations presented in the auditor's report are centered around DEI initiatives. While those initiatives are an important part of any university's modern plan, great care should be taken to retain the traditions that have kept A&M strong over the years. DEI as a part of our existing culture is the right move. Changing our culture into a model that looks more like our friends in Austin would be the wrong approach. There is a common sense approach to solving these issues, and I would strongly support initiatives that focus on equality of opportunity, while limiting mandates on equality of outcomes.

---

I see a trend in this report toward more actions on Equality, diversity, etc. This CANNOT become a mask for false political correctness goals. Admission and faculty recruiting must be based on merit. Some small amount of reserved spots for improving diversity is fine, but large affirmative action type programs and goals have proven not to work and will drag A&M's reputation and impact down. My firm hope is that people succeed on their abilities and hard work at A&M, like I did. Do not give way to allowing cancel culture to win. The desecration of Sully Ross statue is an example. Do not teach fringe theories based on marxism and socialism except as an informational part of world wide types of governments. And ABOVE ALL if faculty, individuals, or student organizations are discovered to be fomenting hate through a particular political agenda, they should be fired or banned. Do not destroy our traditions, take down statues, change building names, change song lyrics, or remove courses for political correctness. If so, you will be cowards.

---

I think the following statement is inaccurate and is based on a sensitive opinion of very few: "The Aggie culture impinges

upon the potential for change within the university. The notion of an all-male, military component of the school impinges upon the culture of higher education." Is the Corps advertised as all-male? No. Should there be stronger marketing to ensure that the target population understands the the Corps is not only-male? Yes. But an all-male concept does not negatively affect the perceived level of education received at Texas A&M. The past culture of A&M, especially the Corps, which is a founding component of the university, should be embraced, celebrated, adapt to change, and be viewed in a positive light.

I strongly urge you to reject any and all DEI initiatives, especially those focused on so called "equity". These are toxic, Marxist ideas that will slowly erode this institution from within. Focus on what TAMU does best: educating students and performing world class research. Everything else is a distraction. Reject Marxism at every turn. Question the conventional. Is diversity really a goal worth pursuing? For what reason? Diversity for it's own sake is senseless. Equity ought to be rejected in all forms. Inclusion is a purposefully (and dangerously) vague and overly broad term. In essence, it is meaningless. To say you promote "inclusion" is a waste of space and breath. Come up with something original and separate yourselves from the common and the mundane.

Please remove anything and everything related to DEI. it is inherently racist to its core, although purporting to be exactly the opposite. Texas A&M has long had processes in place that advance its diversity in all areas, even dating back to when I was a student.

I DONT want TAMU just to be the greatest institution of higher learning: what America needs is be LEADERSHIP academy. Great leaders are not pure Republican, democrat, woke, BLM, antifa, socialist, communist; they serve the greater good.

Great university, with a brotherhood matched no where in this world short of the Marines, possibly.

Please continue to invest resources in the Career Center and Financial Aid offices to ease student debt burden, increase access to scholarships, and place students in relevant jobs during college and after.

My most recent associate with TAMU has been via my special needs son attending Project LEAP. This program is beyond fantastic and I hope it and its related programs (WACO, etc) can continue for years to come.

Don't follow the recommendations that try to make Texas A&M like other universities instead of focusing on what makes A&M uniquely successful. Our heritage is in Agriculture, Engineering and the Sciences, not in Liberal and Performing Arts. If students desire education in those areas,, let them seek it at places that are based on those disciplines.

Whenever I read reports from universities regarding DEI efforts, I never see any comments regarding diversity of thought. How many teachers/staff are Democrats? How many are Republicans? How many are Independent? Does that percentage mirror the breakdown of the overall American population? Does it mirror the state of Texas? In my experience having attended Texas A&M and worked at SMU in Dallas, the vast majority of faculty are leftists. Anyone with an independent, conservative, or even classical liberal lean are ostracized. These days debate and discussion isn't allowed, but safe spaces are. If Texas A&M is going to continue to be the best in the country, diversity must be encouraged. But discussion and giving students different viewpoints from both sides of the aisle is equally essential. Thanks and gig 'em.

Please listen to most if not all of the firm's information. As a past student leader, I saw student need for these sorts of changes. I just hope the school will actually listen and make the changes needed to be efficient and increase the ability to be student-oriented.

I am both a former student and a former staff member. I absolutely loved my time at Texas A&M in both capacities but am not impressed that a report that we surely spent 100s of thousands of dollars on is telling you exactly what we already knew: things need to change at Texas A&M. I was continually challenged while working at Texas A&M with just how little had been done to change the culture/processes, and just how much power was given to certain groups because "that's the Aggie way". Texas A&M is positioned to be not only the largest college in the country, but it is positioned to have one of the worse downfalls if things cannot be fixed. There are way too many people at the university that are complacent in their jobs and there are too many people at Texas A&M that are being underutilized. Succession plans MUST be put into place as well as better focus on the development of staff and faculty that are not in senior positions. Texas A&M was my fifth place of employment within higher education and it is light years behind the other places I have worked. We have the money, we have the resources, we have the staff. I hope that our new president is able to shake things up and make the staff/faculty experience at Texas A&M just as much of a focus as the student and tenured faculty experience.

Bring back Community Development as a major.

A&M should focus on its flagship academics such as the stem fields and not waste resources on unemployable degrees and dying fields like journalism.

One of the weaknesses in the SWOT analysis states "The Aggie culture impinges upon the potential for change within the university." Is this truly a weakness or a major reason students and parents choose TAMU over other institutions? Parents more than ever worry about where they send their young adults and the Aggie culture is one of its greatest strengths in resisting what many throughout the state believe to be dangerous and divisive cultures entering into university curriculum. Does Texas A&M need to be like every other university out there? We've made great progress in become more inclusive, and it has been a driving force derived from our culture, not a hindrance. We love Texas A&M because of its tradition and culture, not because we are trying to become Cal Berkley.

## General Feedback - Other

Please provide your comments related to general feedback, process, or other sections not listed above:

I see lots of mention of diversity (& inclusion). TAMU needs to concentrate of recruiting and accepting students who model the Aggie values of honor, integrity, discipline, service, courage and so much more. Forget political correctness. TAMU is better than that. Prospective students should want to be Aggies. Not to change what an Aggie is. There is nothing to be gained by bending to what a very few in society try to convince the rest of us is desired/in vogue/fair/whatever. And while we are at it, we are going to have to curb growth. It is hard to turn applicants away. More students equals more money, but at some point the quality of the education/experience is affected. Thanks for reading. Gig 'em.

I am excited that TAMU is looking to reorganize, consolidate and improve our management of assets and talent. Their is a lot of good input and the pursuit of excellence is evident. Please don't throw the baby out with the bathwater. Many things need to be updated and growing pains will be experienced in this process. Thank you for being mindful in your deliberations. Thank you for letting me air my concerns. Gig 'em and God Bless Texas A&M University. [REDACTED] '80

N/A

Thank you for the opportunity to review and comment on Comprehensive Review Final Report. This is an expansive document, so my thoughts will be limited to those areas with which I have personal opinions and professional experience.

TAMU could have done a better job in demonstrating their community focus by requiring COVID testing prior to the start of the school year and sending out clear, consistent messages about mitigation efforts before students came to campus - as evidenced by the significant number of students testing positive for COVID after they had already been on campus. Regardless of your political or religious views, taking care of each other and the community seems to be the Aggie spirit but this is not what we observed. The reality is that the BCS community at large is unable to handle any increase in university medical needs. In order to be good stewards of your community medical services, TAMU needs to respect the limitations and be diligent in mitigating the spread of illness and consider how many students health needs can be supported in your community as a growth factor.

The executive summary's assertion that some respondents believe IDEA resources would be better utilized by "invest[ing] in education-focused endeavors for the entire student population" seems to deeply inform the report's proposed realignments. Yet this claim perpetuates a fundamental misunderstanding that far too many people hold about IDEA work in higher education. Diversity and inclusion, and even more specifically, intercultural competency benefits everyone in the institution because it requires each of us to gain a deeper understanding of our cultural identities and how we are situated in the world. As a result, it broadens our capacity to effectively engage with a wide range of people across cultural differences and commonalities as well as troubles white normativity as the institution's default identity position. Taking actions that develop a more diverse and inclusive campus enables all campus stakeholders to more fully engage with the institution's mission to serve all of the people of Texas. I'm also concerned about this claim's suggestion that IDEA is somehow not an education-focused endeavor. Enhancing climate turns on educating the community about IDEA work, incentivizing IDEA work and, most importantly, holding all campus

community members accountable for engaging in this work. The institution can enroll and hire minoritized students, faculty and staff, but if the campus climate isn't healthy meaning that it is not inclusive or welcoming to people who do not hold the campus' historically dominant identities, it will be increasingly difficult to retain people who do not hold those historically dominant identities. That's why centering climate and equity are crucial to the success of all of the proposed structures. As the realignment moves forward, I hope leadership will implement climate and equity accountability tools across units. Helping the institution to better reflect the state's demographics is a goal that all units should own. The Emerging HSI Office is a wonderful example of an equity-minded approach to recruitment and enrollment and I hope there will be an equally energetic effort to address the institution's persistently low enrollment of Black students in College Station and in Galveston. The executive summary also contends that "the student experience at Galveston is separate and unique from College Station and has various levels of connectedness with the College Station campus." It goes on to assert that "improved connection with the TAMU College Station campus is expected with the centralization of TAMU's Division of Marketing and Communications and the development of a strategic communications plan. Increased collaboration with TAMU Student Affairs and the TAMU Office for Diversity is necessary to ensure Galveston students, faculty, and staff receive the true Aggie experience and available training and support." As the reorganization moves forward, I look forward to learning more about what such collaborations might look like beyond the existing partnerships with the units mentioned here, as well as learning what constitutes "the true Aggie experience" and how TAMUG might provide it. I hope that moving forward the Galveston campus will be more fully engaged and included in the process.

---

We had a great staff keeping A&M looking good. High morale. Good jobs for the local economy and for people of color and their families. Then A&M got rid of them with false promises of continued good jobs, etc. A&M lost a lot of respect in Brazos Country for that cost-saving measure that hurt hundreds of real families -- but not important people. Please try to avoid such ugly decisions in the future. A&M is beloved by many. Some of us gave it 40 years of our lives. It is not god and it f\*cks up now and then. Try to be good, not just clever.

---

Financial Aid Office~ I am sure there is an overwhelming number of people reaching out for assistance, but it is much more efficient to actually have people available to answer the phone. We had a simple question about my daughters student loan not being applied. Even though we may not be available when someone decided to finally call back (most people call when they have time), we got "in line" 3 times (never did get a call back) and e-mailed (got an automated response that did not answer question or help). Also followed the frequently asked questions and tried questioning that way and was basically told to call the financial aid office. Why have a phone number if no one ever answers? My daughter ended up walking in and yes it was a simple fix. It seems like all that you have in place would be helpful but it was a huge waste of time and never did lead to resolution. Thank you for adding this to the list of concerns/complaints for consideration as you plan for improvement. After all, it is about serving the students that are paying for your help.

---

My daughter was a transfer from Blinn this last semester. She was very excited about finally having an advisor that showed understanding and compassion. Well, at least she was! A requirement for a class was to meet with her advisor, she scheduled three appointments and they were all cancelled. The final cancellation was on the final day. To top that, it turns out one of the classes she was told was required was actually the wrong class.

---

Thank you for the opportunity to weigh in on this report. As an Interim Dean, I stand ready to support our directions forward and help lead our implementation processes when provided.

---

Stronger rules regarding COVID. Help keep our professors and students safe. Encourage mask wearing and vaccination. More PSA announcements on efficiency and safety of vaccines. Some students still think the vaccine affects future fertility. Thank you!

---

One thing that jumped out at me from the report was the discussion about A&M's student body not reflecting the state demographics. I believe every student should have equal opportunity to attend college, including the most sought after public institutions in our state. Education is the best way out of difficult circumstances. My concern was in the insinuation that something needed to be done to ensure that the state's demographics are reflected in admissions. The top 10% rule already seeks to achieve this by ensuring that students from all parts of the state, that have achieved that academic standard, have a chance to attend A&M, regardless of their overall academic fitness. The challenge is that the rule also hurts very academically qualified students that attend high schools where the top 10% only captures a portion of their academically qualified students. Further trying to force the demographic for the sake of demographics would likely result in less qualified students being accepted over more qualified non minority students. I would argue that the best way to address this issue is the states K-12 schools. Efforts need to be made there to prepare students better that come from heavily minority communities. This is not a college admissions problem, this is a general education problem.

Education is not equal from one community to the next. Those with resources seek to buy homes in the best school zones or districts. Please don't further manipulate the admissions process. Instead, consider how A&M can, as a research institution, help to seek solutions in the K-12 education community. The goal is worthy, but one has to address the problem where it is actually at.

---

Advising, or lack of, has been an overwhelming and very stressful process at this school. Very hard to reach advisors, and many cancelled appointments and unreturned emails. We feel that our daughter has not received the guidance she deserves. This has been an issue since the moment she was admitted. Very disappointed with this process. Daughter had to register without getting the advising that she needed. In addition, school is collaborating with Blinn that is offering way too many 8 week week courses and on line courses. This has not been a good experience, especially when it is a math or science course. When you add that fact that she must coordinate between 2 schools and advisors who are difficult to reach, it is very stressful. We are a Texas Tech Red Raider family who completely wanted to convert and love all things Aggie. However, our experience with how Tech handled initial advising and how TAMU handled it has been a huge difference and not in a positive way. I hope you will take these comments to heart. Thank you.

---

As a parent of a current student, I can say I'm "moderately" satisfied with the value and quality of education that my Aggie is getting (he's in the College of Engineering), and I'm not sure I agree with those polled that Texas A&M is "headed in the right direction." I say "moderately" satisfied because of the simple reality that TAMU is enormously large in enrollment and cannot seem to adequately manage classes for students. First, not enough in-person classes are offered for the upper-level, necessary classes, which forces our students to enroll in online classes (VERY unwanted by a lot of upperclass students). This is VERY stressful for our students. We parents are very frustrated that the tuition cost remains \$600/credit hour for these online classes. Second, our students often complain that they are unable to get in contact with (or hear back from) their Advisors. The professors in the College of Engineering are notorious for being terrible/unreachable advisors. This is a large complaint (and stressor) of our students! Third, communication with professors in general - every day, on multiple social media groups for TAMU parents, I read posts of parents desperately reaching out to other parents, begging for advice on behalf of their students who have an issue needing a resolution. These students have attempted to reach the professor with no luck. Again, I believe these are all issues of TAMU growing too big. It seems the professors have little motivation to really partner with and mentor the students (in general). I mention that I don't think TAMU is headed in the right direction in part due to the enormous enrollment numbers and limited capacity of buildings, professors and classes. I also say this because I do NOT feel there needs to be such a focus on "inclusion and equity." Diversity is a wonderful thing, and TAMU does well in attracting a diverse population, but "inclusion and equity" are not appropriate to focus taxpayer/parent dollars on. Students should, by their merit alone, be accepted to our great university. When recruitment and admissions focus on gender or sexuality, or drastic life circumstances, then we lose the purely competitive nature of admissions to TAMU as an upper-level academic institution. I do NOT think A&M should jump on this "inclusion and equity" bandwagon of "woke" institutions. Focus on the greatness in students that has built Texas A&M since 1876 - talent, academics, and the RELLIS qualities of our wonderful students, both current and future.

---

In person classes are a must and virtual classes should be limited. The TAMU experience is not online. The world expects highly qualified and educated students when they are a graduate of Texas A&M. Many of the students are able to pass online but have not truly mastered the subject material. There is limited debate and networking opportunities online.

---

Covid obviously disrupted everyone's lives, but my son still has 4 out of 5 classes online. He did not declare to be a distance learner, yet he can't get in person classes. Too many offered online for the amount of tuition we pay! This needs to be corrected!

---

This reorganization plan is brilliant. Kudos.

---

As an Aggie, and parent of current students, I could not be more proud of all that A&M has achieved in the last 30 years. The issues the report calls out are often visible from the outside. A&M needs to make some bold changes while maintaining its core values that make it so special.

---

Organizational change management is a discipline just like project management. To be successful, you have to have Organizational Change Managers and a plan. Otherwise, you will fail. Further, you must plan for OPERATING the org before, during and after the change. Having Objectives and Key Results (OKR's) is one way to drive the top level and KPI's are a way of driving the tactical (hands-on) level. Having the senior-most leadership actively participate in the creation, monitoring, reviewing of those metrics is also critical. Assigning it to a Chief of Staff sends the wrong message

to everyone in the organization. Leaders lead from the front, and eat last. You must model the behavior you seek in order to increase your odds of success in implementing so many changes over the course of your tenure.

I thank Dr. Banks for sharing the MGT report and offering the opportunity for feedback. I am not involved in higher education, so I don't know A&M's present SWOT. That means I don't know how the MGT report might impact A&M positively and/or negatively. I am disappointed that Dr. Banks was not available to be the featured speaker at the 2021 Bryan/College Station chamber of commerce annual banquet. Don't know if she knew when she accepted the position she had a conflict for November 8, 2021 or if the invitation was not offered until after she had committed to something else. Has she made any public appearances other than being seen at football games? While A&M is a worldwide brand, I have been here long enough to wish that three presidents and three interims would have or will schedule time to mix with the locals.

Look forward to the implementation of some of these changes

Given the profound nature of the proposed changes for the Department of Political Science, I think it was ill-advised to not consult with the leadership of the same. I hope that my faculty and I will be included in the implementation of the proposed changes.

As [REDACTED], I want to emphasize the following: The University Libraries has been working on a new strategic plan. We have identified three primary strategic priorities that I believe are reflected in the MGT report and TAMU values: Advance Student Success, Partner in Innovative Research, Cultivate a Dynamic Library Organization. As the Libraries continue to finalize our strategic planning, we are also starting the foundation for a space strategic plan. As part of the space planning, we are creating Building Modeling Plans for the Libraries that we hope to be used as an example of recording, curating, and utilizing facility-related data in an innovative way. These plans will also allow us to assess and review our library spaces with user needs as the top priority. The Libraries has an understanding of what University Administration values in the larger organization and mission of TAMU. Using the two University Libraries strategic plans and using the MGT report, I suggest that rather than moving forward with the MGT report recommendations for the Libraries, that the Libraries contract with a consulting firm that specializes in library assessment and planning. Together, the Libraries and the University Administration can work to continue supporting the academic excellence of our students and the research needs of our faculty.

1) A very big part of A&M's value and legacy for 150 years is that we've been unique. We've been able to compete and surpass our competitors by doing what's right in terms of applying the sciences during the education part of our lives and then applying that education in developing our communities...locally, regionally, nationally and internationally. I fear that we're in danger of losing that uniqueness. We don't need to compare or pattern ourselves to other universities...they need to compare and pattern themselves to us. I take exception to the consultant referencing other universities as benchmarks for A&M...especially 2nd tier schools. With all due respect...i don't care what other schools are doing...A&M has been a leader for 150 years without using other schools as benchmarks. 2) i have personally known A&M for over 50 years. A&M has always been inclusive. We had students from all walks of life when i attended A&M more than 50 years ago...and its gotten better without the BLM movement. It's never been...we are the black Aggies, the black Aggies are we....or we are the Hispanic Aggies, the Hispanics Aggies are we....or we are Asian Aggies, the Asian Aggies are we. This thought process needs to be reversed!!! Past administrations have sanctioned and even promoted this trend without taking the opportunity to emphasize.....WE ARE AGGIES, THE AGGIES ARE WE!!!!

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

My understanding of the organization of universities is fairly limited as I have not worked in a university environment. I have spoken only to what I know best as a graduate in Landscape Architecture and 35 years in professional practice in one of the largest LA firms in Texas. We hire a TAMU graduate almost every year so we have a good understanding of the strengths of the LA department and College of Architecture and have many excellent success stories with those graduates. One last comment, it seems that the Recommendations in general are campus wide. Certain universities are known for different strengths. As I read through all the recommendations, the phrase comes to mind - we can't be all things to all people.

As the Trustee for the Texas Chapter of the American Society of Landscape Architects, I must take issue with the lack of information made available regarding the education of our future professional leaders. I understand if the University is not compelled to reach out to it's alum and professionals who have taken it on the volunteerism to shape and guide Landscape Architecture in as it relates to Global, Societal, Regional and HSW of the population.

---

With all change, a lot of us are not always a fan. I just ask that you keep the true meaning of attending Texas A&M in the forefront of your decisions. Like I stated above, this will not effect my daughter, but it will effect many students in the future. The true meaning of brining unique and an Aggie go hand in hand.

---

Please don't rush to make change for the sake of change alone. Much of the rationale for change discussed in the report seemed to be to "better align with peer institutions" which is a weak reason. Focus change on underperforming areas. Stay the course and fine tune the areas that are working well.

---

In general, centralization tends to lead to more bureaucracy, less efficiency, and less ability to be nimble and address issues specific to a community, department, etc.

---

In general, do not change the culture that TAMU is known for. At all costs, do not change anything that turns TAMU into another t.u.

---

It is disconcerting to me to observe this move to centralize and neutralize the effectiveness of programs that were established at TAMU and have served as industry leaders, in order for them to fit a mold in an academic world and continue to loose the ability to be cutting edge in the real world. I implore this report to reflect input that this pendulum swing may represent current politics in academia but does not reflect the highly effective programs established by land grant schools and the needs in our world today.

---

My opinion on moving Construction Science Dept to the Engineering Dept. I feel moving the Construction Science Dept to the Engineering Dept will be a mistake. The move would eliminate the personal/small feel the dept has and the students strive in. They will be lost in the thousands of students in engineering. The majority of students currently in CoSci would probably not have been accepted into engineering where they could studying the field they love- construction science. After the first year of ETAM the majority of students that go into CoSci Engineering will be the students that couldn't get into the engineering major they wanted. The engineering dept will not be getting students that love/want construction science you will be getting the students whose grades didn't make the cut for their 1st or 2nd choice engineering major. I hope you consider all comments and opinions from parent and former students. Thank you for your time. [REDACTED].

---

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose "blue collar", "1st generation" and "make it happen" students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

---

It is our position as the Landscape Architecture Professional Advisory Board that the proposed Academic Realignment would weaken the College Of Architecture rather than strengthen it. The departments of Construction Science and Visualization are integral with the colleges and professions of Architecture and Landscape Architecture, Urban Planning and Interior Design. The synergy and support that each department gives the other is not readily understood by the outsider but is evident to the students and professionals of our respective trades. We ask that a deeper understanding of this connection be sought out by the University and its consultants before moving on any recommendation.

It is our position as the Landscape Architecture Professional Advisory Board that the proposed Academic Realignment would weaken the College Of Architecture rather than strengthen it. The departments of Construction Science and Visualization are integral with the colleges and professions of Architecture and Landscape Architecture, Urban Planning

and Interior Design. The synergy and support that each department gives the other is not readily understood by the outsider but is evident to the students and professionals of our respective trades. We ask that a deeper understanding of this connection be sought out by the University and its consultants before moving on any recommendation.

This seems like a good idea to improve the university. TAMU is already a very good engineering school. Only suggestion I have is to include anonymous feedback from faculty candidates after their visit to TAMU.

Thank you for recognizing the need to invest in the arts and sciences and the libraries. These areas rarely receive the attention they deserve. Investing in these areas will elevate all academics at A&M through stronger general education and libraries.

Search out bureaucracy, and kill it where you find it!!!! There is a lot of needless bureaucracy at A&M that could/should be identified and eliminated. Maybe some sort of an incentive program to search out and make recommendations.

"The student experience at Galveston is separate and unique from College Station and has various levels of connectedness with the College Station campus. Improved connection with the TAMU College Station campus is expected with the centralization of TAMU's Division of Marketing and Communications and the development of a strategic communications plan. Increased collaboration with TAMU Student Affairs and the TAMU Office for Diversity is necessary to ensure Galveston students, faculty, and staff receive the true Aggie experience and available training and support. " TAMUG is unique, especially for license option students. The license option programs' purpose is to produce knowledgeable merchant mariners. I hope the centralization of marketing, communication, communications, and increased collaboration with College Station's Student Affairs & Office of Diversity does not lose sight of this uniqueness & purpose. Bigger is not always better. I read the phrase "other universities" too much in this report. A&M is not like other universities, nor should it be. Although I do understand that change can be for the better. Just be careful not to change for the wrong reasons. MANY parents of current students have their kids at A&M for the core values & the focus on EDUCATION (not special interest groups, not what is politically popular today) that will be worth something in the workforce when they graduate. Please do not lose sight of these values and become like so many other universities.

There is a lot of material in the report that makes sense, but some of the centralization suggested seems to be based on the idea that such a move will automatically result in improved efficiency and cost savings, with no regard for any other likely effect. There is also much in the report that is not said. One such item is governance. The existing Colleges of Engineering and AgriLife are led by Vice-Chancellors, not Deans. Who will lead the new College of Liberal Arts and Science and the Institute of Biological Life Sciences? And what then happens to the remaining colleges that are not mentioned? Where do units such as TEES, TAES, and SRS fit in the new structure? They are not mentioned as far as I can see, yet are vital to the research activities within the university.

Stop the students from vaping on campus as they walk around.

The Management Report is based on surveys with extensive feedback by faculty, staff, students and former students which is a very good basis for the review and recommendations. As a member of the International Advisory Board for 20 years, myself and fellow Board members were always impressed with the professional quality of the faculty and staff members who made impressive presentations during our sessions. However, we also had continuous problems to understand the organizational structure of the management and operations of the university and its colleges. We felt that there were many overlaps of responsibilities and activities and a pretty slow decision making process. The Management Report confirms that impression and gives good reasons for it. It finds that many functions are duplicated and competing between the main management unit and many others in the colleges and other organizational units. Therefore it recommends that certain responsibilities as for student affairs, finance/business services, information technology, human resources, libraries, biology and others should be concentrated in the main management unit and removed from all others.. That is an excellent approach and will hopefully be implemented by the new President. I also support and very much like the recommendation to strengthen and expand the Bush School, the formation of which our Board has observed from inception.

Well, this won't be popular. Stop spending money on Aggie Football. You are effectively running a professional farm league for the NFL. The University is complicit in the exploitation of these young men - it's terrible. Call it exactly what it is. A way to give young men, predominantly minorities, Traumatic Brain Injuries all while lining the pockets of A&M. If research is important give the money there. In 20 years you will have a monument to a game that is irrelevant.

The report is not "tinkering around the edges" by any means. I applaud TAMU leadership for supporting such a comprehensive, all-encompassing review of the university.

The on campus and virtual career fair for the liberal arts students is terrible. There are so many companies for engineering and business but liberal arts sad.

---

N/A

---

In general, I was surprised at the heavy budget and monetary focus of this report. Although financial efficiency is valuable, the true goal of any university should be academic prestige and high-quality student education. This report did not touch on those topics at all. A university of Texas A&M's size and renown should be focused on strengthening their academics and innovating to better the future. I'm also not convinced all of the suggested recommendations will prove financially worth the hassle. I hope that additional research, either by a third party or some sort of task force, would consider the academic effects of these recommendations, which will likely be numerous. Finally, from an academic lens, I think this report provides quantitative and qualitative information, which can be valuable, but just like any other academic study, quantitative and qualitative data is not infallible, and the collective knowledge of peer reviewers and experts in the field is valuable. I hope that these findings are compared to the academic literature on higher education, that other experts are consulted, and that the data is analyzed with a fine-toothed comb before any recommendations are implemented.

---

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

---

The College of Architecture. You want to be competitive on the world stage yet you have a college called, "The College of Architecture" yet you do not have a bachelor degree of "Architecture". It was like that when I went to grad school here 25 years ago. And it's still like that! All this talk of change and NOT ONCE has anyone said, "We're going to provide the 2-3 extra classes necessary to make sure you are graduating with a Bachelor's of Architecture instead of a Bachelor's of Environmental Design." Because I received a B.S. of Architecture at another school, when I came to A&M to start grad school I had completed all the courses necessary to start my degree. However, all the grad students who had graduate from A&M only had an "Environmental Design" degree. They had to take 2-3 extra courses to get to the level of a Bachelor of Architecture while working on their masters courses. How backwards is that?!?! "Degree of Environmental Design", what is that? I run my own business now and if I had someone coming to me with an Environmental Design degree and someone else coming to me with a Bachelor of Architecture degree I would chose the B.A. immediately. It's not fair to the "Architecture" students to go through the "School of Architecture" and not receive an actual degree of Architecture!

---

More need to include engineering fields related to non carbon emitting new energy sources. A&M has all the expertise it needs to be a world leader in clean energy and environmental sustainability. If it does not take the lead in these areas it will not achieve the status of world class University.

---

My enthusiastic support for Dr. Banks' ascension to A&M President was cemented by my observation of her transformation of the College of Engineering. Her steadfast determination to increase both the quality and quantity of Engineering Graduates, consistent with the objectives for TAMU as a Land-Grant University is an example of true leadership. In the face of an academia mindset I would largely define as "exclusivity equating to excellence" - Dr. Banks took an unpopular and yet pragmatic leadership position. The College of Engineering today - to her credit - is both larger in size - and of higher quality in terms of graduating students better able to support the business demands of our Global Economy. With that backdrop, I fully expected this Consultancy Report to address the elephant-in-the-room for TAMU, specifically - the diametrically opposed approach being pursued by the Mays College of Business. Mays, by my observation, continues to revel in the number of Business school candidates that it disqualifies each year vs. endeavoring to increase both the quality and quantity of graduates. With no disrespect toward recommendations to improve the Visual & Performing Arts degrees at A&M, why is this topic prioritized ? By my reading (and I endeavored to read all 133 pages of the report), there were zero observations or recommendations regarding the College of Business. This is a miss that Dr. Banks will, unfortunately, need to shoulder without the support of MGT's analysis.

---

Banks is the chancellor's pick to make massive changes...she is consolidating power...building her image of A&M...says everything implemented by Sept 1...doubt seriously input will be taken seriously. My bet is that she and chancellor

basically dictated the final report.

---

Get rid of the VP for Diversity and the entire office. I have never known what it does but suggest that A&M is politically correct.

---

In general there needs to be greater collaboration of all system members and TAMU. This can lead to more degree plan offerings, research opportunities and a greater community involvement. TAMU already has a history of public service greater collaboration as described would only further that.

---

I'm not 100% sure where the comment belongs, but I'm disappointed the report did not address systemic racism, especially prevalent in the Corps, as well as the fact that this is 2021 and the ENTIRE military is gender-integrated, but the Corps of Cadets continues to have all-male units. What does this teach these students? That it is OK to exclude half our population? That it is OK to embrace male supremacy? Something else? This absolutely needs to stop along with the racism. Come on man, let's get your act together and address these issues.

---

TAMU is special because it remains focused on educating students for various careers and hasn't fully embraced woke culture. Please continue your unique role.

---

What an interesting and thorough report. I have two comments. First, there is much in the report regarding diversity. I think it's overly simplistic to say that our student body, as a percentage, should mirror the racial demographic breakdown in the State. I note with interest that the focus is on black and Latino populations, not the other racial ethnic groups in the state (Asian, Native American, etc.). It also doesn't take in to consideration the percentages within each demographic that attend college. Hypothetically, that 25% Latino student population at A&M may be far more than our fair share if few Latinos attend college. In short, I fully support diversity. I do NOT support diversity when solely defined by skin color. Poverty comes in all colors, for example. Education won't change anyone's skin color, but it WILL break the cycle of poverty. Second, I'm struck by how often the phrase "peer institutions" is used. It kind of reminds me of when I was a child and my parents telling me, "Just because everyone is jumping off the cliff doesn't mean you should". My aspiration for A&M is not to climb the US News and World Report college rankings. To do so presumes that those above us are doing it the "right" way. Rather, we should aspire to set a new standard that all of those schools aspire to follow. As former A&M President Robert Gates said, "A&M is a unique American Institution". That uniqueness makes our students in great demand in public and private industry. Rather than trying to be like everyone else, and somehow doing it better, we should be innovating ways to set the new standard for higher education in America. I don't now enough about the issues to comment on the specific recommendations, I just hope that we use as a guiding principle that whatever we do puts us on a path to become the university of the future, the one everyone else wants to emulate.

---

We need to advertise our core values.

---

Please do not cave to social pressures of diversity, inclusion and equity, which all function in practicality to Divide, Exclude and Lower Expectations. Let TAMU be a beacon of merit and accountability.

---

As you continue to prioritize students to meet ethnic and economic quotas, you are leaving out really good kids who want to be a part of A&M. Soon, the average middle class student will no longer be able to attend TAMU as they are either over looked because they don't fill a quota or they are overlooked for scholarships and can't financially afford it.

---

Outsourcing Transportation Services will only enhance that animus felt towards the organization. An outsourced TS will be perceived to be even less answerable to concerns of the university's population than its already low popularity. On the other hand, a museum is a great idea! We have many interesting things that departments and colleges don't have the space to adequately display or properly store. The Library needs to remain independent. If it becomes part of a college, it will be subject to turf-wars and funding fights.

---

I believe there is a need for a Share Ride drop off for ADA. by the hotel. The Bell Tower is too far away from the escalators, and my wife struggles to make that walk. I've seen many others struggle as well.

---

I was a student there and I feel that there are no paid academic advisors to the students. I had EXCELLENT ADVISEMENT IN THE LATE 80s. We do not need a college student advising our student. A paid professional or advisor to accurately guide and ADVISE is needed. My son made poor choices based on other students advice.

---

I think this is a great overview and am supportive of the changes suggested.

---

Feedback from former faculty and staff might be helpful to provide some insights why retention was an issue.

---

I would love to see more assistance for students who want to change their majors. As soon as you decide, the former

counselor drops you like a hot potato, & new one can't really help until official. Looks like there needs to be a group to assist transitioning students.

I was an administrator at TAMU for 36 years, so my comments come from observations during a long period of tremendous growth at TAMU. I don't know if anyone will appreciate my comments, but one of the big challenges in university administration is the idea of 'one team' and common goals. It is a lot easier to reach goals, if everyone supports each other. Many years ago, this seemed to work better than in recent history. Recent history seems to indicate territorial issues, which only detracts from the 'one team' idea. For this to work, there must be mutual respect between Vice Presidents. This has to start at the top and the President needs to be a good listener and then make a decision and expect all divisions to move forward together; otherwise, turf battles will only continue. Turf battles will always minimize the effectiveness of any change that is made. I hope the President is a good team builder.

It appears that the company providing the report came in with an agenda rather than an open mind. And while they did manage to pull in some information regarding the traditions and core values that make TAMU unique, they didn't seem to really understand who we are. Thank you for the opportunity to share my thoughts.

I would strongly caution you to not set a metric for "desired" diversity to match Texas or any other number. The minute you start only measuring race/gender/orientation etc., you lose sight of the actual people you are trying to recruit. If you set a metric you will get it, but you may inadvertently undermine your intent. Rather than lowering the bar for specific minorities to win a spot at TAMU, I would much rather see outreach programs to elementary, middle and high schools to reach those same minorities early and give them the skills to compete for those TAMU spots with the same credentials as their peers.

I am extremely disappointed that in the freshman application process, the "legacy" information has been removed. These potential students feel strongly about attending the same university where their grandparents, parents and siblings have graduated and have a strong desire to attend and graduate from the "legacy" university of their past.

Growth has been prioritized over a quality educational experience. The students do not seem to be valued except for the tuition they bring in. I love my school, but things are much worse since the strategic plan to be gigantic started.

Hiring a non-dentist to run a dental school is foolish, particularly with regard to benevolence and development of donors. This is widely viewed as negative in your alumni community. It is no different than hiring a humanities professor to run the college of engineering-you should we'll understand this.

We were so disheartened with your admissions process. Students with less extracurricular and leadership roles with similar test scores and GPAs were admitted over our child - many of whom had 504 status and were allowed more time on tests for reasons such as asthma and anxiety. Students whose families had long histories of attending UT were admitted to A&M, attended one year and transferred out, taking freshman spots over longstanding Aggie families. The proof your admissions process is broken can be seen by how many students transferred into A&M as sophomores because there were so many spaces available due to letting in the wrong students in the first place. Please, please consider work experience, character and leadership as well as family history with our phenomenal institution when considering who will make up the next student body. Just because someone can score high on a test doesn't mean she can look you in the eye and shake your hand and conduct herself with honor and integrity. Thank you.

I am warning you now. The report dismisses and disregards the culture of Texas A&M. If you ignore the campus culture, and the culture of rich former students who support this institution, you will fail and be replaced like Murano and the man you replaced. This report is meaningless and worthless. Look to what happened when the former president formed a committee to rename buildings and remove statutes, he was removed. If you wish to succeed, you must learn from previous mistakes. Look at the culture and attempt to learn why things are why they are. Divide them between the sacred and profane and see how they impact the students and the ones who pay for us to continue functioning. We live and die through old army paying our way. This report dismisses this group and it will severely impact funding.
