**Q42 - Please provide your comments related to the Provost Office:**

Provost Office - Faculty

---

☑ Significantly reducing the scope of the provost's office is likely to have long-term, negative effects on the core academic mission of Texas A&M University. In many of our peer institutions, the provost oversees the full academic mission of the university and is the clear No. 2 official at the university, and we are concerned deeply about deviating from that successful model.

---

the reconsideration of the role and functions of the Provost Office is welcome but please, please don't centralize counseling and advising services. We've tried this on a college level and it was not successful. Some majors simply require specialized knowledge in order to provide the best student experience

---

no special input; the overall design seems to be to prevent future Provosts from annoying the Deans who hold System appointments

---

no comments

---

no comment

---

looks good!

---

looking for a strong leadership TEAM. Want to make sure the Provost is a big part of the team. The centralized advising is not a strong model. our advisors become a lifeline to our students and the relationship to the students to the advisor needs to be a strong connection the student's major. our students meet regularly with their advisors - if they are centralized and meeting with a number of advisors our student will not feel important and will have too many steps removed from their advisors

---

i agree that a lot of things should be pulled out of the Provost's office. This is a relic of when Bob Gates was President, and very busy with national service. It would be a very bad mistake to centralize advising. Many advisors are faculty, not staff, so will remain in their departments. Advising is major-specific. The advisor for one major cannot sensibly advisor another major. And that is certainly true of job advising. It makes sense to provide common resources, such as the Navigate system, and training, but not centralized reporting. The motivation seems to be to make it easier for students to change majors, but at the cost of providing worse advising for all students. Centralization of advising in AgriLife has had poor results. This is my #1 concern in the report.

---

can't comment

---

With regard to Recommendation #2 Centralize undergraduate academic advising This is a bad idea. Finding enough people that have expertise in courses available to students across campus will be almost impossible. Many departments have spent a great deal of time, effort, and money to improve student advising, and to lose that expertise to a centralized system will be a waste. What should be done is to provide sufficient funds for all departments and colleges to have full time staff and faculty that can effectively and efficiently advise students.

---

While the report consistently promotes the reporting to President and not to Provost, I worry that this really diminishes faculty input in the University. Provost is a faculty member, someone who has had a long experience of being faculty, someone who can relate to faculty and understand the pressures and challenges faculty faces. If we bypass Provost or remove this position altogether, we have greatly reduced the voice of faculty. I think this is clearly detrimental for a respected research University that relies on its faculty for its success. Centralizing undergraduate advising. I think this is a very wrong move. The suggestion is made because many undergraduate students change majors. There might be a better way to deal with this. Perhaps create a separate advisor who can help those undergraduates who want to change

major. However, centralized advising would really affect the quality of advising within the units. Our advisors have specialized knowledge about faculty, their interest, their availability to work with undergraduate students, etc. Advisors often deal with special issues that are very difficult to predict and standardize and are able to provide solutions because they have close knowledge of the department. In case of the centralized advising this close knowledge of the department is lost and, therefore, specialized help is lost. This specialized help could be different – from recent experiences I can mention undergraduates who wanted to engage in research, undergraduates who needed an online course due to family or health reasons, a completely blind undergraduate student who needed special arrangement to manage the required courses (and the special arrangement was made by finding another undergraduate student who needed mentoring experience). All of this would be lost in case of centralized advising. Similarly, centralized advising would limit the information that the department has from advisers. Currently, our advisers help us understand the needs of undergraduates and help us to design the program and our approach to help undergraduates. This kind of feedback is much harder and much less precise if it comes from centralized advising. I think centralized advising is really detrimental for our land grant promises and would really reduce the quality of the experience for our undergraduates.

---

While moving some of the functions of the Provost Office to VPs offices may be reasonable, a suggestion to centralize academic advising is very problematic. Academic advisors attached to the departments know programs as no one else and provide the highest quality, consistent academic advise to the students. They also handle transfers very well, based on my experience. I would suggest to keep academic advising within the departments.

---

While making it easier for students to transfer between majors is laudable, centralizing undergraduate academic advising will likely harm students needing specialized advising related to their planned future careers and there needs to be connectedness between students, advisors, and professionals working within an academic discipline.

---

While it is certainly true that many undergraduates change majors, especially in the initial parts of their studies, there are also very specific requirements for individual majors, and the students who need this most are the students who would otherwise fall through the cracks. In my experience as faculty advisor our staff advisors are uniquely positioned to understand these needs of our majors. Regarding the stated aim in the report for “consistent, streamlined” advising, if by streamlined the thought process is that a smaller cadre of central advisors can somehow serve the needs of the entire university, this recommendation seems to be poorly developed. Please do not follow this recommendation and replace our current system with consistently mediocre advising for all.

---

While I agree with the notion that the Provost Office has gotten too large, I disagree with several of the suggestions for downsizing the Provost's office. In particular, as the senior academic officer, the Provost should retain most of the departments proposed to be moved to the VP of Faculty Affairs. Research is part of the academic mission and so I do not agree with the suggestion to move the VPR to the President's office. Academic advisors should not be removed from departments or, where appropriate, from colleges. Our advisors know our programs inside and out, are able to give high quality advice and direction to students because they have specialized in these programs and interact with faculty and know the classes, and they assist department/college leadership in structuring and restructuring programs and courses. There absolutely should be more support for students switching majors, and maybe a small central advising unit to handle issues like this and work with students. Centralizing all advisors, especially if this involves relocating them to one physical space or expecting advisors to specialize across multiple programs. Doing this would hurt the students, our ability to retain and develop advisors, and the department functioning and ability to offer courses needed by the students and have viable curricula.

---

While I agree that the Office of the Provost has grown in a haphazard way and shape over the years, its independence and size is designed to resist or temper undue political pressure from outside forces. By "undue political pressure" I mean the occasional waves of political paranoia that appear: fear of communism in the 1950s, fear of campus radicalism in the 1960s and 1970s, fear of CRT in Texas today. Turning the Provost's Office into a larger Academic Success enterprise has a little merit, but removing faculty governance from it will diminish this office as well as a Faculty Affairs Office. This puts far more pressure on the President to govern perfectly, a challenging task for anyone. Without a strong Provost office, future Presidents will be lightning rods for everything, as will future Chancellors and Board of Regents. This kind of centralization might just politicize more things at this university, I fear. Also, centralizing Academic Advising away from colleges/departments is potentially creating ever more distance between academic units and their students which is not a good thing at all. Two very good things here, lest I seem too critical, are the elevation of Academic Success initiatives and especially the creation of an HSI office, which is sorely needed and which has lagged behind unconscionably in the last few years. Having raised HSI status with university administrators several years ago, I had hoped we would be further along toward a more intentional and thoughtful embrace of all that HSI status should

mean.

---

Where does unit committed to supporting/advocating for faculty reside? Instructional Media Services move – need to ensure/maintain a unit dedicated to faculty and student quick response – especially for realtime classroom situations. Need to Clarify Research Specific Units remaining with VP of Research. Communications restructure – very much need communication support specifically focused on Division of Research (DOR) units and delivery of content, information, etc. that supports internal and external comms related to research and research activities. Research Facilities Operations to Facilities – does recommendation mean buildings or other facilities? Attending veterinarian and animal health staff must have control of all animal facilities and direct access. This is necessary to ensure animal health, as well as compliance standards and accreditation. Moreover certain research facilities require direct involvement by DOR personnel.

---

What is Lorem Ipsum? Lorem Ipsum is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum. Why do we use it? It is a long established fact that a reader will be distracted by the readable content of a page when looking at its layout. The point of using Lorem Ipsum is that it has a more-or-less normal distribution of letters, as opposed to using 'Content here, content here', making it look like readable English. Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for 'lorem ipsum' will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like). Where does it come from? Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45 BC, making it over 2000 years old. Richard McClintock, a Latin professor at Hampden-Sydney College in Virginia, looked up one of the more obscure Latin words, consectetur, from a Lorem Ipsum passage, and going through the cites of the word in classical literature, discovered the undoubtable source. Lorem Ipsum comes from sections 1.10.32 and 1.10.33 of "de Finibus Bonorum et Malorum" (The Extremes of Good and Evil) by Cicero, written in 45 BC. This book is a treatise on the theory of ethics, very popular during the Renaissance. The first line of Lorem Ipsum, "Lorem ipsum dolor sit amet..", comes from a line in section 1.10.32. The standard chunk of Lorem Ipsum used since the 1500s is reproduced below for those interested. Sections 1.10.32 and 1.10.33 from "de Finibus Bonorum et Malorum" by Cicero are also reproduced in their exact original form, accompanied by English versions from the 1914 translation by H. Rackham. Where can I get some? There are many variations of passages of Lorem Ipsum available, but the majority have suffered alteration in some form, by injected humour, or randomised words which don't look even slightly believable. If you are going to use a passage of Lorem Ipsum, you need to be sure there isn't anything embarrassing hidden in the middle of text. All the Lorem Ipsum generators on the Internet tend to repeat predefined chunks as necessary, making this the first true generator on the Internet. It uses a dictionary of over 200 Latin words, combined with a handful of model sentence structures, to generate Lorem Ipsum which looks reasonable. The generated Lorem Ipsum is therefore always free from repetition, injected humour, or non-characteristic words etc.

---

Virtually all major R1 Universities have a strong Provost's Office. The recommendations in this report significantly diminish the academic authority of the Provost's Office.

---

Too much would be taken from the Provost's office. The opening statement is that the Provost office is too large and complex. Moving so much to the President means that the President's office becomes too large and complex. The Dean of Faculties should be retained, and the vacant position filled.

---

This seems like a power grab. Provost's office is significantly weakened. Faculty need shared governance and taking away power from Provost and Dean of Faculties just makes the governance very very top heavy. We already lack shared governance, this power grab just makes it worse. Decentralizing advising is just going to make more work for everyone. Our advisors are amazing. They know our degree inside and out. They help with student success. They care a lot. Centralizing loses that personal touch and knowledge. It will just allow students to slip through the cracks and get misinformation if we lose departmental level advising. Our advisors know our faculty well and can provide a lot of specific advice and make our students feel like they aren't just a number.

---

This restructuring (removing some offices and adding others to this department) makes sense to me, regarding specifically the business or administrative duties of the this particular office.

This report seems to remove a lot of power from the chief academic officer's office. I am concerned about removing all faculty affairs from the Provost Office. It is essential to ensure that the chief administrator over faculty is a faculty member and that faculty are involved in the selection of this person. Clarification and assurance of these two is critical. The idea that faculty hiring and firing decisions would be removed from the office of the chief academic officer raises big concerns and calls into question the primary educational, research, and service missions of the university. The repositioning of the office for diversity is also concerning. The proposal would relegate this critical function to an office with unrelated (and outward focused) responsibilities. As the report mentions, this institute has long standing DEI problems - a history that needs to be acknowledged. The way forward is to ensure DEI consideration in all essential missions of the university, and consideration of all people working and studying on campus full time. The proposal appears to remove independence and programmatic reach from this essential office. It also appears that the office will be focused exclusively on student issues, whereas this office has previously led (and been successful in) faculty recruitment and retention initiatives. There is a lot of evidence showing that the best way to increase the diversity of your student body is to increase your representation of diverse perspective and backgrounds among the faculty. Academic advisors should not be removed from departments or, where appropriate, from colleges. Our advisors know our programs inside and out, are able to give high quality advice and direction to students because they have specialized in these programs and interact with faculty and know the classes, and they assist department/college leadership in structuring and restructuring programs and courses. There absolutely should be more support for students switching majors, and maybe a small central advising unit to handle issues like this and work with students. Centralizing all advisors, especially if this involves relocating them to one physical space or expecting advisors to specialize across multiple programs. Doing this would hurt the students, our ability to retain and develop advisors, and the department functioning and ability to offer courses needed by the students and have viable curricula.

---

This report is pathetic — let us hope no money was wasted on it. The recommendations are in exactly the wrong direction. But it is what one might expect from business management types who are obsessed with organization charts and expanding an already bloated bureaucracy, as opposed to aspirations of excellence, and of the quality of the experience of students and other members of the university community.

---

This is an intriguing way to solicit feedback. The report has viable recommendations, and I concede that I am averse -- but neither am I sufficiently informed -- to comment on each segment or recommendation. I am glad to see, for example, that there is interest in setting up a college of "fine arts" -- which, in my opinion, is long overdue for us as a major institution. But I am concerned about the lack of faculty involvement in the development of this report. The consulting firm does not appear to be concerned with our status as an AAU university, or appreciate the sense of purpose that faculty have in meeting our mission as an AAU, Research 1 intensive, state university. I was offended to read that the "the College of Education and Human Development was mentioned as one where the lack of focus on the core mission of producing educators for the state and nation has negatively affected students and other units in the university." Is this a fact? Who said \*this\*? In what way have we lost our "focus" and who determined our "core mission" other than what we already know it to be? We produce educators, and some of our programs lead the nation in producing educators (check out our bilingual education program, for example). \*Whoever\* wrote this seems unconcerned with our mission in research and service, both of which befit our status in a Research 1. We have \*increased\* in national rankings over the years, we have developed innovative programs (apparently, the consultants were unconcerned with these, or did not recognize them as such), and many doctoral graduates are in faculty positions at other major institutions (and others, as well). We have the same mission as every other college on this campus. It seems to me that there is some "de facto" assumption that we are to be a lesser college in status, purpose and mission. It was appalling to read this dismissive, condescending and uninformed language about my college. It gives the clear impression that the consultants and those who participated in the report are determined to limit our impact and reduce status to that of a teacher's "normal" college from the early 20th Century. Or perhaps they know nothing of this history and these institutions?

---

This is a major concern of all faculty I have encountered. No peer institution functions without a Provost as a Vice-President, or the equivalent. Researching and teaching are the primary mission of the university, and all teaching and faculty research should be governed by that office. The ombudsperson is someone who knows the rules. The faculty need and deserve an independent advocate. The

---

This is a big move. If we change in this way, I would suggest a period of engagement with faculty / staff / students (this doesn't count, it is the first step) to ask what challenges they see in all of this and a period of planning to best manage negative outcomes and enhance the positive ones. For any big administrative changes - there should be a means of

ground truthing during the process of changing the way things are done to validate if outcomes are as intended or if unexpected challenges are emerging. Please keep in mind that too often around here there can be issues where administrators think things are fine, but if you just talk to the boots on the ground it is clear that things are not. Recently in our college we had an IT change and faculty/staff were upset about implementation. For a period of time the Dean's response was (our automated system tells us we have a 98% approval rate for IT). It turns out that there were problems with the way the data were collected and this resulted in a disconnect that was and continues to be disruptive for us (affecting class delivery, review requests, publication and grant related communications, etc). So - talking to live human beings and accepting their experiences as real is important. Blowing faculty/staff off because the automated system says we're happy, when we are telling administration that we are not, can lead to disconnects that lower morale, so please avoid these types of issues. I would encourage the administration to evaluate the transition from having the Research Foundation and the transition to Sponsored Research Services. There was a marked decrease in performance immediately and some faculty claim that quality never returned to the previous baseline. Please study that transition to determine what could have been done to improve the situation.

---

This has already been implemented!

---

There is a critical need to enhance biological and biomedical research at TAMU. It is a right and necessary move to enhance and strengthen existing program. In particular, integrating other biological programs from college outside COALS, e.g., Colleges of Education and Sciences, to COALS is essential. This is also the only way to made TAMU competitive among peers. Specifically, I recommend to include or integrate biological programs (from College of Science), biomedical programs (from Vet School), and kinesiology programs (from College of Education) into COALS.

---

There are many very exceedingly valuable recommendations for this office, and ultimately a more focused and streamlined mission will help us recruit an amazing new Provost. I would suggest that the TAMU Career Center remain in the Provost's portfolio given that it is a pivotal foundation of student success and I respectfully suggest that the Career Center preserve its current model of embedding Career Services personnel within the colleges (dotted line reporting). The other recommendation that I wish to highlight concerns centralized advising. Please consider allowing time to study the effective advising structures currently in place in the (current) individual colleges given that it was beyond the scope of MGT's analysis to discuss college-level practices in support of student retention, experience, and success. We believe many of these impressive structures can scale-up and perhaps better achieve the stated goals than a centralized model. I'll add that I was thrilled with the recommendation to elevate the McAllen HEC!!

---

There are a couple of problematic areas: 1. Why are Dean's still under the Provost and not under the VP for Faculty Affairs? 2. Who will oversee, provide guidance and mentor the Deans?

---

The undergraduate advisor - student relationship is an important piece of the academic community at Texas A&M. Successful advising requires a deep understanding of the dept/major and an individualized approach to each student. Centralizing UG advising would take a more bureaucratic approach, reduce the feel of community among the dept, students, and advisors, and lack the personalized attention that each undergraduate requires.

---

The traditional design of the Provost's brief to cover all academic matters should remain in place.

---

The suggestion to centralize undergraduate advising seems very ill-advised, and does not reflect an understanding of the day-to-day activities of undergraduate advisors. Frankly, if advising services could be so uniform, we could just plain eliminate advisors and replace them with AI bots to give students feedback. The process that is implied as onerous is actually exactly what you want students to do before changing majors! They should consider the implications and talk to people from both the existing and planned future major before making a switch.

---

The report seems to completely miss the point with diversity and inclusion. The word "diversity" is sprinkled throughout the report to suggest that this is something important, yet there are SO many ways that diversity is regarded as an afterthought, starting with the lack of clarity on the VP for Diversity position. It isn't clear whether and how that position will fit into the future organizational chart, and what responsibilities would remain with the VP for Diversity. Wow - there isn't even a box on this form to discuss Diversity and Inclusion which is why I am putting this here. The VP for Diversity is a KEY position at this university, and deserves more respect.

---

The report proposes to strip the functions of the Provost Office to bare bones, which will give the president unlimited power. This is very dangerous in the long run for the university.

---

The reorganization of Provost's Office, particularly with regard to student success, largely ignores the role of the office in graduate student success. The positive recommendation of many units leaving the office creates the great opportunity

to invest greater effort and resource into graduate programs, particularly growing doctoral programs and supporting distance MS programs. Furthermore, the MGT should consider recommending strengthening of ties between the VP for Research and the Dean of the Graduate and Professional School, thus advancing the critical role of research in our graduate programs at TAMU.

---

The reorg of the provost's office seems ok

---

The reorg of the Provost office to only focus on student success does not make sense. It seems to position is being tailored towards one person. The idea that the Provost's office has "s hindered the faculty's ability to perform the essential functions of education and research," seems pretty far-fetched. Again it sounds like the position is being tailored to [REDACTED].

---

The removal of faculty issues such as promotion and tenure from the provost office is concerning and unclear the evidence to support such a decision. Other universities maintain P&T within the provost as decisions about faculty are central to supporting the educational mission and outcomes for undergrad and graduate programs. Separating these two seems like it has no evidence and that it will create a divide and potential for miscommunication. The centralization of academic advising is also concerning. First, changing majors shouldn't be easy but more importantly it is unclear that this will speed that up. As a faculty member who does research with undergraduates, our college level undergraduate advisor is an exemplary communicator with those students. She knows all her students, and has provided some of the most dedicated and talented undergraduate research assistants I have ever had. Having a central office does not show how it will improve service for the students or for faculty.

---

The relocation of the Aggie Honor System Office to Student Affairs and away from the Provost Office is concerning. It signals that issues of academic integrity are student concerns and not tightly tied to concerns of the faculty. In addition, centralizing academic advising for all undergraduates seems like a laudable goal and may work well at smaller institutions. However, the scale and complexity of our undergraduate offerings presents challenges for centralized advising. We may lose a considerable amount of detailed departmental knowledge while we undergo this transition that could be detrimental to student success. The rationale that we should undertake centralized advising in order to address change of major is a false equivalent. Students change majors, not because advising is poor, but because they are forced to choose a major upon entry to the university when they have little or no experience on what the curriculum will be or what the major entails. Instead of making it easier to change majors, why don't we focus on the root issue of getting students to select a major that matches their goals and aptitude AFTER they have had time to explore options. Applaud the decision to raise the profile of McAllen. The Higher Education Center was built without taking into consideration some of the common student success services that are essential to student learning. There is no library, no writing center, no learning/student commons for students to gather and participate in group learning, etc. Students do not have the same access to resources, student organizations, campus assistance services, etc. Students are directed to access the College Station resources remotely. These students are not getting an equitable learning experience which needs to be addressed immediately, especially given that many of the students at McAllen fall into student demographics for underserved populations.

---

The recommended changes to the Provost office already appear to be underway and I am agnostic. I agree that the VPR should report to the President and the scope of the office should be focused on academic (faculty affairs and teaching) issues.

---

The recommendation to centralize advising will result in lower retention rates and increased time to graduation. Academic advisors are career counselors, academic coaches, and parental substitutes. They are the liaison between students and faculty, and help direct, and encourage, students to work with faculty. Because academic advisors are situated in departments and colleges, they are familiar with the faculty, the courses, and degree options with implications for career pathways. They have very detailed knowledge that is necessary for students –which courses to take, in what order, with whom, and how to succeed in them. Academic advisors deserve a career track, and more standardization of responsibilities from person to person – but there are many ways to accomplish this while still allowing them to serve students within their home department. Academic advisors specific to departments and colleges are key to retention and high 4-year graduation rates. Texas A&M will see an immediate deterioration of these key indicators with the proposed plan. Departments will need to create new positions to cover the responsibilities currently carried out by academic advisors - creating redundancy and increasing costs to the university. Students changing majors should be required to talk with a number of people who are knowledgeable about the programs and career paths of students in those fields. It is appropriate for students to change majors – but it should be a thoughtful and

careful process that is not undertaken lightly, but that requires guidance from knowledgeable advisors about the specific requirements and career options for different degree programs. No centralized advisor can provide this detailed information for every major in the university. Without strong, knowledgeable advising from both the department the student is leaving and the one they want to enter, students may change majors multiple times, increasing time to graduation.

---

The recommendation to centralize academic advising should be summarily rejected. Changing majors is a life-altering decision. The process should be deliberate, methodical, and well-considered by the student ... not a one-stop shop and select process. Each of the 5 steps listed in the report is vital: talk to the current department advisor, talk to new potential department advisors (including General Studies), understand potential new degree requirements, submit request forms. These activities cannot be centralized because of the unique understanding needed of the different degrees, even within the same college. As one who arrived at this university many years ago with a primary goal to focus on students, as an professor, academic advisor, and program coordinator, I have met face-to-face with prospects (and parents), transfers, freshmen excited about the department (and wish to meet with the department staff) as well as students undergoing challenges and students who need to change majors. But, without a doubt, the academic advisors at the department know the specifics of the department (degree plan, prerequisites, multiple options, course substitutes, career opportunities) best. These details are too specific to be put in the hands of general advisors. Too many times, students (maybe transfers, or from other colleges within A&M) discover that advice given by others has been well-intended, but not correct and a set-back. I offer two suggestions ... (1) add resources to each department to increase the advising staff at that organizational level and (2) if the student's decision time is too limited by Howdy deadlines, then explore methods to open that window. Our university's number one mission must be how to best serve students. Recommendations to consolidate academic advising for organization effectiveness and resource management for economy indicate flaws in the team's understanding of the primary mission of Texas A&M University.

---

The provost's office obviously had undergone mission creep and many of the functions needed to be reassigned. If, however, the mission is merely academic, then the deans, who have a wider managerial brief, should report to the president and not to the provost, especially if the latter has no purse strings.

---

The provost should manage academic and faculty. If IT doesn't report to the provost, and only to the president, then some mechanism to insure the adequate prioritization of academic related IT issues needs to be in place.

---

The provost office, if reconfigured, will be significantly weaker. Maybe that is what is desired. That seems like a bad idea in a giant university. The Provost is the highest academic officer. It just is. Why weaken the highest academic office?! As long as I've been here we've had terrible Provosts--we need a strong academic leader, and no provost worth anything would take such a weakened position.

---

The provost office needs to be preserved as an office maintaining programmatic efforts to boost research and faculty resources. The integrity of T&P and shared governance require this, minimally. There is no need to transform it into a student-focused office exclusively.

---

The proposed restructuring offers an opportunity to focus on the education and academic mission; this is far superior to the previous model, developed under Karan Watson, to centralize reports to the Provost. I see only benefits in the restructuring as the current form is unwieldy and ineffective. There are specific concerns to the form of this restructuring that require more detail and attention. Centralization of academic advising is highly problematic. I think that the College-level academic advising model that one sees in Geosciences may be a middle ground -- it is not by department but organized through and under the Associate Dean of Academic Affairs. There is coordination through those direct reports, and yet at the same time, there is a level of contact and knowledge about majors and students that will be lost centralization. So this moderate centralization with the Colleges would be a way to achieve the goals of the report without going too far to the detriment of students. I was disappointed that the report did not address some of the major issues with OGAPS/GPS. The Graduate office is highly unorganized, does not provide adequate information or service, and seems to miss the mark in terms of service to the students. I have been at TAMU for almost 20 years, and for most of them I have had graduate students navigate complex processes that are always changing. There is poor communication between leadership and staff, and staff and students with a byzantine platform and website to figure out the policies and processes. Perhaps this is a leadership issue, but it is equally problematic as other challenges in the university.

---

The proposed move of the VPR reporting to the President is an excellent move and in line with other peer institutions. Removing the DoF from purview of the Provost is not in line with peer institutions and is justified by several vague and

unsubstantiated statements that the DoF does a poor job. Removing faculty affairs from Provost duties is counter to the model used at peer institutions and amounts to a power grab by the Office of the President. Planned centralization of advising will be a disaster. Only advisors in different units have the program knowledge to advise students on different courses that apply to different degree plans offered. It is fantasy to think that advisors in a central facility would have the knowledge needed to advise students from units with fundamental differences in degree plans (e.g. engineering, liberal arts, science, business, architecture) . Such an office will diminish advising effectiveness, the student experience and will lead to increased time to degree.

The proposed elimination of the current VP and Associate Provost for Diversity and the incorporation of DEI activities under the Office of Undergraduate Recruitment would be a serious mistake, and a big step in the wrong direction for Texas A&M. TAMU has an unhappy history in this area, and it has only recently been able to make significant progress in recruiting and retaining students, faculty and staff from under-represented groups.

The proposed division of responsibility for academic program planning and development and faculty issues is unwise. Decisions about academic program development should be made hand-in-hand with decisions about the deployment of resources to hire, develop, and retain faculty members. Preserving these functions together in the office of the provost ensures that these considerations are balanced and coordinated.

The proposed changes to the Provost office is long time coming. the provost office had become unwieldy as a result was unable to focus on faculty excellence. VP for DEI must have a cabinet rank.

The proposed changes to the Office of the Provost is unlikely to solve the stated problems. With consolidated power at the President's level, too much sway of one office is likely to lead to unbalanced decision making across the University. Centralizing undergraduate academic advising, on paper, seems to be a positive. But, in reality, centralizing this will lead to loss of specialty. The finding that "decentralized with advisors siloed in individual department of colleges" is stated as a negative ignores the boots-on-the-ground need for the Undergraduate students. This is the way it should be. The reason for this is that Undergraduate students receive more personalized and up-to-date information in this current mechanism of advising. Centralizing will lead to brain-drain and a loss of adequate advising.

The proposed changes make the Provost Office less influential in the academic matters of the university. Centralizing undergraduate academic advising is a bad idea. Academic advising must be improved across the university, but centralization is the answer for it. Elevating the McAllen program requires significant investment of resources, not just changes to the reporting structure.

The proposed changes here are disproportionate and, sometimes, unjustified. For example, "Data and Research Services" to "Finance" (does not make sense); "Education Abroad" does not fit the charge of "Academic and Strategic Collaborations"; "Academy for the Visual and Performing Arts" should be either under the umbrella of the new (?) "School of Visual and Performing Arts" or under the College of Arts and Science. The most striking change that seems to find opposition from every single unit is "Centralize undergraduate academic advising". This will be very harmful to students. Some procedures and more clerical aspects of advising can be centralized or unified or optimized, but the advising of each major should remain within the units, as they have the curricular and career-focused expertise that will be lost with a broad/generic advising system. I am strongly opposed to the change. Finally, the office of the Assoc Provost for Undergraduate Studies has operated remarkably well under the current structure. The proposed changes are stripping it from many of its current function and moving them with no good reason to other offices (such as Academic Affairs and Strategic Initiatives).

The movement of all those units to VP units is worrisome.... VP's are appointed right? Provosts and Associate Provosts are positioned through processes of shared governance and thus potentially represent the faculty and the students.

The idea of centralized undergraduate advising will hurt the students and the programs. The students may be able to visit a smaller amount of offices. However, the quality of the advising they will receive will suffer dramatically. It will cost the students the semesters and years of lost time and money. An advisor has to be local in order to know all the details of a particular major and how it overlaps/interacts with other majors. A "centralized" advisor will just rubber-stamp whatever bad decision a student will make as long as it does not violate any regulations.

The first change that I am grateful to see is the restructuring of the Provost's Office. Removal of the proposed unit and reassigning them to more appropriate tracks should help streamline processes and increase efficiency. From the Rationale Section, I work closely with the Aggie Honor System Office and watched it decrease in efficiency when it was transferred to the Provost's office. The AHSO will do better with Student Affairs, from whence it came.

The findings and proposal seem reasonable.

The evaluation of the Office of the Provost includes some potentially useful recommendations as well as some ideas that need to be countered. First, centralized advising could work well if implemented wisely. However, the current model, which is based in departments and colleges, is not broken, and it actually seems to work quite well. Perhaps its greatest shortcoming is the paucity of advancement opportunities for excellent advisors, and this is one thing that could be remedied by the proposed centralization. If centralization is pursued, the most important component to retain would be advisor expertise in specific degree programs. This could be accomplished by assigning an individual advisor to students in a particular department to ensure appropriate expertise regarding the intricacies of that department's degree(s). Second, the assessments and recommendations about student, faculty, and staff diversity are off the mark and oversimplified. Frankly, they are politicized. It is astounding that MGT identifies as a threat (p. 110) that "TAMU has historically been conservative and slow to change regarding diversity issues." On what basis does MGT conclude that conservative political views are a threat to the university? MGT does not have the prerogative to denounce certain political views or to advocate the political agenda for a pluralistic public university. The administration should take the firm's political bias into consideration when deciding which recommendations to implement. In fact, the administration needs to take a hard look at how the diversity issue is already being used to advance an illiberal political agenda that suppresses free expression and splinters the campus community into representative classes. This university could be a great light among all public universities in the U.S. if it were to stand up against this divisiveness and instead treat every individual as having equal and immeasurable worth. Third, the MGT report says little about academic assessment, but this is an issue that needs to be addressed. The comprehensive restructuring that is being proposed offers a good opportunity for the university to come to terms with the heavy burden that is placed upon departments through curricular assessment. This is a burden that only grows heavier with each passing year. Let me be so bold as to suggest that this university should abolish assessment. This single step would greatly free up the faculty and staff to be more productive, and it would save the university a large amount of money. Some would no doubt argue that this move would damage academic quality, but that simply is not the case. Professors are not motivated to teach well because they pay attention to assessment reports. They strive for teaching excellence because they love their disciplines and care about students.

---

The diminishment of the Provost's office and removal of the office for DEI is unsettling. The messaging in the report basically is, yes, we see DEI as an area for improvement but we aren't going to take it seriously and are actually going to do less.

---

The centralization of undergraduate academic advising has the potential to lose the unique knowledge and relationships that department/college level advisors have with students. Areas of the change of major process should be examined for potential streamlining, but the overall process of changing a major should require careful consideration from students.

---

The centralization in AgriLife has destroyed several well-run support systems. We are now struggling with insufficient and unexperienced administrative support; the graduate advising is a disaster - no experience/hard to reach/no clear chain of command.....These centralization-associated problems have caused so much frustration and consumed so much of faculty's time. This has been a killer of our productivity and morale.

---

The appointment/re-appointment process and credentialing of faculty is much too slow. I applaud moving faculty affairs to the president's office to perhaps create some efficiencies and accountability in that respect.

---

The Report criticizes the University as for its "decentralization" and fragmentation, then advocates creating more decentralization and fragmentation by restructuring the Provost Office. The job of overall internal responsibility should ultimately remain in the hands of one office - the Provost - with support given to achieve the different missions administered through that office.

---

The Provost, as the chief academic officer, should also be the primary point of contact for faculty. I understand why the research arm may have a different reporting structure because there are researchers who don't teach, but the same logic doesn't hold true for academics.

---

The Provost's office has had too much under it for a long time. Streamlining will make it more effective. I support the recommendations here.

---

The Provost should remain the chief academic officer with both academic and faculty oversight. Reducing the current Provost duties is a good idea, but the university still needs a strong provost with the right combination of responsibilities and authorities. The trend of centralizing power around the President works only if future Presidents are as engaged as the current one. My experience is that Provosts often fill the leadership gaps when Presidents are disengaged.

---

The Provost Office should remain intact. No power should be transferred to the President. The concept of "shared

governance" is not compatible with the proposal to give more power to the President, who is appointed by the Board of Regents without any input from faculty.

The Provost Office provides a valuable and essential service to oversee the academic function of the University. While the President has the final decision, the President's office also has many other responsibilities both operational and strategic. This makes sense that academic matters reside in a separate office that has a certain level of autonomy. This is crucial in faculty matters including tenure / promotion, academic freedom and other issues of self-governance. The faculty are a critical stakeholder at the University and need an office responsive to our input and perspective.

The Provost Office has been a political revolving door, and has lacked positive leadership for years. A previous provost was in total conflict with the President and Faculty.

The MGT Plan makes sense--the Provost has taken on far too much and there have been delays. Without the protection of the Provost the Aggie Honor Council is likely to be pressured by Student Affairs to find in favor of students rather than serve as an impartial upholder of the Honor Code. A&M had centralized academic advising when I arrived, then shifted it to departments--most of the best advisors have a strong loyalty to their department that will be impossible to achieve in a centralized system

The Center for Teaching Excellence should be under the VP for faculty affairs. There should be a VP for DEI-A, and the Emerging HSI should be under there, along with a center for first generation students. Engineering should not be part of the central advising.

The AHSO is behind on cases due to an influx of cases from COVID as well as not enough faculty/student members to serve on hearings. There is no direct relation between the business of the Provost's office and the efficiency of the AHSO (which is running quite well). Furthermore, moving the AHSO to Student Affairs might impact faculty involvement. The Dean of Faculties should remain so that there is some objectivity (and faculty advocacy) in T&P. We are far too large for centralized advising. Content specialists are needed for advising students on degree plans because there are many 'what ifs' that advisors encounter. These are not readily apparent by looking at degree plans.

The proposal to move the office for Diversity and Inclusion to what is essentially an "outward" looking part of the university (one aimed at presenting the university to the community) is deeply problematic. We need to MAKE the university more diverse and inclusive, not (falsely) tell outsiders that we are.

Texas A&M ranks 8th in endowment, but does not rank anywhere close to that overall as a university. Why? In general I find the report is sensible, with many well researched and thought out recommendations. It is focused more on organizational structure than providing some explanation of the underlying mechanisms and remedies for why A&M has the problems that it does. If implemented, the changes could save significant funds that could be used to improve the quality of the faculty and facilities. I encourage you to have the strength of leadership to implement the report's recommendations. I think there are several areas missing from the report, 1) an analysis of how Texas A&M came to be so untenably bureaucratic, disorganized, and silo decentralized 2) and relatedly why it is so difficult to be innovative at A&M, and 3) why A&M is not competitive with the market, 4) why A&M is so focused on undergraduate education to the detriment of the graduate programs, and 5) the lack of convenient and wholesome food on campus--which could be one of the assets to address the need for artisan and cultural diversity. I suggest one of the fundamental reasons for this is that the policies and procedures and management of A&M confuse rank in hierarchy with rank in profession. Junior faculty are encouraged to engage in all sorts of nonsense bureaucratic committee work that represents goal displacement and mission drift. Bureaucratic fiefdoms arise around this work and faculty get rewards for it and then it is defended fearlessly. The same effort could go into professional organizing work instead that then would help junior faculty in their profession, not compete for positions in the A&M hierarchy, and get to be known in their profession and have a citation count of note. It takes two years to get a new course through all the curriculum committees who hold things up from reasons like the abstract has 51 words rather than 50. Many of the faculty have their degrees from Texas A&M--there should be a hiring freeze on this practice. I participated in one promotion case to full professor brought by a faculty person who was the dissertation adviser to the faculty member seeking promotion. I was horrified by this and expressed so only to receive a negative sanction. In addition to implementing new more centralized and less duplicative organizational structure, which does matter, also spend time on professionalizing the organization. I have mentioned this before and was told that the bureaucratic nature of A&M is due to the Texas Legislature rules and regulations. This is not what I observe. I think it is due to the culture of the faculty to invest in the hierarchy, rather than their profession. The comment in the report on the composition of the academic senate is telling. In my department we have instructional faculty teaching Ph.D. students rather than the faculty most qualified because of the idiosyncratic use

of rules. This is unfair to the students, and in the collective, negatively affects the reputation of the university.

---

Texas A&M may be large and it may feel corporate at the top; but the Provost and the Provost's Office play critical roles in University life. The rationale for changing it appears weak in the report. Moving the duties of an independent Provost Office that is responsive to faculty concerns to a unit under the control of the President is not needed to fix a perception (unsubstantiated) of inefficiencies in decision-making by the Provost's Office. For example, getting rid of the office of the Dean of Faculties? The Dean is removed in one bullet point without an explanation. People may argue about how many Deans there should be, but this is one Dean that is hard to argue away. Faculty Affairs belongs with the Provost, not the President. Another specific example of inefficiencies created by the Provost's Office, which is a poor example indeed, was the issue of the Honor System Office assessing Spring 2021 cases. Given the extraordinary number of cheating violations reported when classrooms and testing went virtual, among the other challenges presented of COVID-19, it was astonishing that the Report would cite this as an inefficiency and not acknowledge that no matter where the Honors System Office was located, this was an unprecedented situation that would have presented challenges. It is certainly possible to make the Provost's Office staff and budget commensurate with what it needs to do without moving core responsibilities, such as faculty affairs, to the President's Office. Many other proposed changes are troubling and I cannot discuss them all. For example, I think that having Academic IT distinct from "Central" IT is critical because the needs of academics for IT differ, even by discipline, from the needs perceived by Information Technology.

---

Taking away all faculty issues from the Provost office does not seem like a healthy or legitimate approach from a governance perspective. The Provost office should be overseeing faculty affairs. The President has to be far-sighted enough to realize that she will not be President forever and so it does not make sense to consolidate so much power in the President's office which might be very difficult to undo in the future. This consolidation creates potential for undue conflict or perceptions of a power grab. While the report makes recommendation to centralize essentially every service, there are no tradeoffs discussed. This is particularly relevant in the case of academic advising which will suffer tremendously if it is centralized. Students need much more advising beyond courses need to change a major. Advising is the one place where students get personalized service and the advisors if working closely with a department or unit can facilitate student connections with faculty, high impact activities within their department, and so many other opportunities. This would not be possible with a one-stop advising office where it is impossible for some folks to have all information about all programs.

---

TAMU is doing a great job prioritizing meeting the needs of all Texans (and non-Texans as well)

---

Strongly support Recommendation 1. The provost office is an area where the red tape and bottlenecks of the university are most pronounced. These changes will improve its focus. Oppose Recommendation 2. I'm concerned high-performing, focused students will not be able to have advisors with expertise in their major curriculum. The risk of getting bad advice from an advisor without expertise in your major is much higher than the complications involved in changing majors. The goals here can be accomplished in other ways. If you want to change majors, it makes sense that you should talk to an advisor in both departments. No opinion on Recommendation 3.

---

Streamlining and eliminating redundancy in the Provost Office is an excellent idea.

---

Some of the recommendations to streamline the Provost Office make sense; however, the recommendation to centralize undergraduate academic advising is a terrible idea. The university has already taken advising out of the departments and placed them at the college level, I believe as a result of the 2018 report that the MGT report quotes. What the MGT report doesn't reveal is that as a result of centralizing at the college level, we have found that students' needs are NOT being met as well as they were when the advisors were in the departments. The advisors often don't know the nuances of relationships among courses and degree plans; they may not be aware of why certain courses may/may not be substituted for others; they may not be aware of course options to meet needs of degree plans. Furthermore, we've found that students have a much more difficult time meeting with advisors or when they've been given erroneous information by advisors, meeting with department personnel who can help them correct the problems. Furthermore, we've had a very difficult time keeping advisors, and every time an advisor leaves, it takes months to train new ones, and in that time, students fall through the advising cracks. Centralizing advising has already proven to be a mistake. Moving it to the university level will be a disaster.

---

Since system and university leadership has stated they are interested in how realignment and restructuring might bring about greater efficiencies, transparency, and effectiveness with the ultimate goal of improving student success, why not further explore how the greater integration of athletics into the broader university structure might improve

opportunities and outcomes for student-athletes at the university? There are certainly peer institutions in the SEC (e.g., Vanderbilt) and beyond (e.g., Stanford) that have done so. I know this was not a focus or recommendation in the report, but it might be something worth at least studying.

---

Seems weaker.

---

Restore the reporting lines for the Office of Diversity so that it reports to both the President and the Provost, as there are both university functions and academic considerations for diversity. Additionally, it should not be subsumed in the VP for Academic and Strategic Partnerships office, as this office has a different focus and audience.

---

Reply to Recommendation #3: Elevate the Higher Education Center at McAllen by establishing a clear leadership structure of the Higher Education Center at McAllen. It is essential to separate managerial leadership from transformative leadership and customize the structure to fulfill the needs of this population-specific community. a. Transformational leadership can continue reporting to the Provost office and lead the program expansion, marketing, and recruiting. Hire dedicated personnel(s) to specialize in the marketing of the McAllen program in the Rio Grande Valley region. b. Have managerial leadership in-house to oversee student performance and work on initiatives for student success. Considering the fact that all the faculty members are distant employees, managerial leaders are expected to serve as a conduit between the academic and administrative needs of the faculty members at McAllen. Consider multitasking is part of the daily work for some staff and could potentially be challenging and daunting, managerial leaders are also expected to assist staff in maintaining a smooth and balanced workflow with clear expectations from their supervisor(s). As the McAllen program expands, managerial leaders will also help determine the essential needs and sources to support the program expansion and the hiring and retaining of staff and faculty. c. Faculty and Staff liaisons should coordinate between faculty, staff and the administration, and students. They should support the professional growth and interests of staff and faculty by helping to create a positive and supportive work environment focused on the overall success of the McAllen Program.

---

Reorganization is probably the correct way to increase institutional effectiveness. Moving some administrative functions from the Provost to other administrative units makes sense. Caution should be taken to carefully evaluate the impact such moves would have on student and faculty success. Staff and administrative positions should decrease as these realignments are made...not increase. How will eliminating the Dean of Faculty and changing this to a VP level position really change anything? If the new VP of Faculty Affairs is to work directly with the Provost, then why have them in another administrative structure? Give the former DoF the correct resources and that office would have been fine. Although these positions appear to be moving from the Office of the Provost, my guess is that it will be a huge increase in administrative burden.

---

Removing the VP for Research from the Provost's office seems to risk dividing up the core academic functions of the university - research and teaching are \*both\* core to the academic mission and seem like they should both be under the Provost. Removing research suggests that the university thinks research is not part of "the academic mission of achieving excellence".

---

Removing enrollment services from the Provost Office may lead to more efficiency. However, I have concerns about the complete separation of faculty and academic affairs. I have given a great deal of thought to the idea centralization of advising. My belief that this moves sacrifices quality to solve a problem rather than focusing on solving the exact problem that exists.

---

Removing Faculty Senate from Provost office under guise of focusing on student academic success seems to imply that the faculty aren't a key part of student academic success. Perhaps more importantly, though, moving the Honor System Office out of the department mostly focused on academic success seems to imply that integrity and other things the Honors System Office are concerned about are somehow more about lifestyle and student satisfaction rather than a key part of what it means to be academically successful. Centralizing advising seems a bit odd, given the importance of connections between advisors and the departments they serve and understanding the situations, offerings, etc. of the department due to local factors. I think moving the advisors away would increase the difficulty of their jobs.

---

Regarding, Recommendation #6: Merge the University Libraries into the newly created College of Arts and Sciences and create a new Department of Library Sciences: The University Libraries support the university mission of teaching, research, and scholarship through a wide range of services, programs, and initiatives --we do not serve any one specific college but all colleges; we do not serve any one specific user group (undergraduate students, graduate students, faculty members, staff) but all users groups. Our services, resources, and physical facilities that support research and learning are as diverse as the user groups we service across all the disciplines. This requires our faculty and staff to work

collaboratively across units and libraries to best serve our users. It also requires that the Libraries remain independent from any one college in order to maintain its structural integrity and ability to serve all equally. MGT's recommendation to provide a "home" for our faculty librarians within a department under the new College of Arts and Science defies logic. The OU model completely ignored the fact that while OU does have a School of Library and Information Studies, it also has a separate University Libraries system with faculty and a "Dean of University Libraries" that reports to the Provost. See: <https://ou.edu/provost/about/provost-direct-units> Finding a "home" for our faculty librarians within a department under the new College of Arts and Science defies logic. This would decentralize a system that works to serve all of the TAMU community and narrow the reach of our librarians to a limited audience of students. It also assumes all our faculty librarians have the same expertise and provide the same academic support to the same users -namely students. This is not the case. Our librarians possess a variety of specialities including metadata experts, scholarly communication experts, curatorial experts, preservation experts, data management experts, user experience and service design experts, collection development and electronic resource access experts, liaison and disciplinary experts, and more. MGT has also recommended that under this new organizational umbrella within Arts and Science the Libraries would have the "opportunity to design and deliver a learning commons model". It is clear that MGT did not consult with anyone in the library nor did they look at our websites to see that this model is already in place in some of our facilities. The University Writing Center is housed within the Evans Library and has a satellite location at the "Business Library & Collaborations Commons" on the west side of campus. We also work with the Academic Success Center and Student Success Center to provide space for student tutoring and student advising services in our 24/5 locations. We partner with OAL and provide students with OAL computers and printers in all our buildings, as well as have an OAL lab within the Business Library. We would love to collaborate more with these groups, as well as others on campus, but our public study space for students is not an unlimited resource/footprint. We constantly have to assess and balance the utilization of our spaces to ensure we are meeting the varied needs of our users, particularly our student population who make the most use of our public spaces. We also have to balance this with dedicated space for collections and our employees. Student enrollment continues to increase, the most recent build for the Libraries was the addition of the Annex building to Evans library in 1999. I would also like to point out that there is no mention by MGT of how merging the Libraries within the College of Arts and Science would provide us with this "opportunity to design and deliver" an information commons model? Overall, one could argue the Libraries serve as an excellent model on campus in terms of our ability to balance competing needs of our users: research vs. instructional services; study space for students vs. collection space for researchers; disciplinary support to departments for research and curricular needs vs. functional support models and faculty expertise for programs and services such as systematic reviews, data management, open access and copyright, information literacy, and more. Our faculty librarians support both the student side of a higher ed's mission and the research side in support of faculty and graduate researchers. We do it all. As a tier 1 research facility, the Libraries need to be able to work with the entire academic community in partnership with the other college deans and reporting to the Provost helps to ensure this.

Regarding centralization of undergraduate academic advising: the core finding, regarding student changing their major, is accurate, but (1) the "time consuming and daunting" process is not contextualized and (2) the "siloe" claim is not accurate (p. 14), leading to a flawed recommendation #2. Regarding the first point, there are reasons why students should go through a process, which has been much streamlined in the past year, thanks to the work of a group including [REDACTED], EIS, and academic advisors. If students do not follow a process, they can increase their time to graduation and take unnecessary courses. Across the university, degree plans vary wildly in terms of required courses for the major (some having many free electives and others have none) and pre-requisite courses. Some programs have strict GPA requirements, and others (such as some in my College, Geosciences) welcome change of curriculum students below 2.0 GPA on a probationary basis. Training centralized advisors in all these requirements and course sequences would be daunting across our diverse degree programs and not enriching for the staff charged with working with students. Regarding the second point, it is not true that academic advising is decentralized. In my College, we centralize training and processes, to ensure consistency and process back-up. Our advisors are in constant discussion with each other and their supervisor, working as a team and not "siloe," as the report argues. This leads to a positive work environment for them, partly because they are able to see students progress and evolve through the four years of an undergraduate degree program. Moreover, we encourage advisors to participate in advisor-focused networks and professional development. In addition, students have strong connections to an advisor who is with them for the entire degree program. Certainly, we can do better by working productively with HR to create more consistent advising roles/responsibilities and a clearer career ladder, but extreme centralization of academic advising processes will have

negative consequences for staff morale and student engagement and progress to the degree. At least, we should be cautious in implementing this recommendation and consider "what kind of decentralization for what kind of advising for what kind of degree programs?" and focus on the core challenges of academic advising.

---

Regarding Recommendation #2: Centralize undergraduate academic advising: I am not sure of the details here, but one positive aspect I would point out in having advisors based in each major is their knowledge of that specific discipline and the ability to provide the best feedback and guidance to students. I'm not sure this would be the case with centralization of advising

---

Regarding Recommendation #2, centralizing undergraduate advising services: Advisors need academic-department-specific knowledge, knowledge that is gained working within and for a department, knowledge that is lost when advisors are assigned to some centralized operation and expected to know everything about UG requirements across campus. Jack of all trades, master of none. I'd be very careful in just assuming that centralization is an unmitigated good, either for delivery of quality advising services or for financial efficiency.

---

Regarding Finding #2, the centralization of academic advising. I can understand the financial and organizational incentives behind centralization of student advising, but in my experience it is already leading to something of a disconnect between advisors and faculty. A key to graduating happy and engaged students is to making them feel more connected to their departments and faculty. The advisor could and should be that bridge. When our department's undergraduate advisor moved to another building and a centralized advising office a few years ago we lost the daily (or at least weekly) interactions and exchanges of information that acquainted both the advisor and the faculty with current needs of our students and with recommendations that made all of us more effective in our roles. He might as well have moved to Siberia in terms of his accessibility to the department faculty. The person presently in that role may be doing a good job, but I no longer have any updates. Moving all advisors away from departments creates barriers. Perhaps the university should rely on a two-level system, with a centralized office of advisors for each college, individuals who can serve as a clearing house of general information and guidance for our students needing guidance about majors. From there students could be directed to department-level advisors who provide specific information about department faculty, academic requirements, opportunities. Our department currently has a dynamic and proactive graduate advisor and she has improved our effectiveness in guiding our grads in a manner I have not seen in three decades at the university. A well-trained, motivated, and adequately-paid person of her caliber in our department's undergrad advising office could work miracles. This is an aspect of student support where the university should avoid shortcuts.

---

Refocusing the Provost's office onto academic excellence and moving all other current functions elsewhere will do much to elevate this university. This is very constructive proposed change and if executed well, we will be accelerated.

---

Redistributing many of the functions of the Provost Office makes sense. Transferring Tenure and Promotion to Faculty Affairs is problematic. T&P is one of the most important academic activities and deserves the attention of the chief academic officer.

---

Recommendation 2 is seriously flawed. Centralizing undergraduate advising would have the effect of disconnecting students from the academic center of most relevance to them. Advising requires that the advisor serve as representative of the program to the student and representative of the student to the department and deans. The first of these activities requires close interaction with the department and an understanding of the goals of the major's academic curriculum, not merely the rules. The second of these again requires close interaction with department and college in order to advocate effectively for the student. There certainly are some functions that could be centralized or automated--most obviously the handling of Q-drops--but viewing the advisor's role as cookie cutter interchangeable misses the point of the academic enterprise.

---

Recommendation 1: I hate to see the Dean of Faculties Position go. A good Dean of Faculties can focus on faculty issues (tenure, promotion) and provide independent advice to faculty concerning how to deal with problematic Department Heads and Deans. I would be reluctant to take my concerns about a biased or bigoted Dean or Department Head to the Vice President of Faculty Affairs, who reports directly to the president. Fortunately - my college and department have a great leadership team. But if we had an alcoholic dean or department head (it has happened), our best option would be the Faculty Ombudsman - a person who has no influence over major decisions. Moving the Aggie Honor Council to Student Affairs takes the process of addressing plagiarism and cheating out of the hands of the faculty and the Academic Units, and reinforces student perception that faculty are equivalent to 'teaching staff'. Cheating and plagiarism have evolved and will continue to evolve as the internet evolves. Faculty may have to change the way we teach and assess students in order to preserve the quality of education at Texas A&M. For this to happen, the Aggie Honor Council should

stay in the Faculty Affairs side of the University. That said, I think the Aggie Honor Council needs to be able to hire more staff - it's rather unfair to increase the size of the student body without increasing the size of the Aggie Honor Council and then criticize them because they can't handle cases quickly enough. Recommendation 2 - Centralize undergraduate academic advising. The core finding, regarding students changing their major, is accurate, but (1) the "time consuming and daunting" process is not contextualized and (2) the "siloed" claim is not accurate (p. 14), leading to a flawed recommendation. First, the process of changing majors has been streamlined in the past year, thanks to the work of a group including [REDACTED], EIS, and academic advisors. If students do not follow a process, they can increase their time to graduation and take unnecessary courses. Across the university, degree plans vary wildly in terms of required courses for the major (some having many free electives and others have none) and pre-requisite courses. Some programs have strict GPA requirements, and others (such as some in my College, Geosciences) welcome change of curriculum students below 2.0 GPA on a probationary basis. Training centralized advisors in all these requirements and course sequences would be daunting across our diverse degree programs and not enriching for the staff charged with working with students. No staff advisor can be an expert in all of the undergraduate majors at Texas A&M - inevitably some majors will be overlooked. Finally, education is never wasted, and students who transfer from different majors have skill sets and insights that students who enter college and finish in one major don't develop. Having these students in upper level classes is good for everyone - they provide academic cross-pollination. In the College of Geoscience, we centralize training and processes, to ensure consistency and process back-up. Our advisors are in constant discussion with each other and their supervisor, working as a team and not "siloed," as the report argues. Our staff advisors see students progress and evolve through the four years of an undergraduate degree program and our students have strong connections to an advisor who is with them for the entire degree program. Faculty members can rely on our staff advisor to recommend ways to motivate underperforming students. Having a dedicated staff advisor within the Department is essential for student success in our Department. Finally, staff advisors give our students the sense that they belong to the Aggie Geoscience family. Extreme centralization of academic advising processes will have negative consequences for staff morale and student engagement and progress to the degree. At least, we should be cautious in implementing this recommendation and consider "what kind of decentralization for what kind of advising for what kind of degree programs?" and focus on the core challenges of academic advising. That said - my Dean of Students supports the idea of working productively with HR to create more consistent advising roles/responsibilities and a clearer career ladder for Staff Advisors.

---

Recommendation 1 I agree with the proposed reorganization. Recommendation 2 It is important to keep advising at a departmental level. Advisors do much more than process forms. They need to know degree requirements and the students they are advising so they can give help and advice. For the example in the report, interaction with both current and new department is important when changing majors. Recommendation 3 McAllen needs closer coordination with College Station departments. Ensure that a given course (PHYS 206, for example) gives the same student experience and grade assignment as the course at College Station.

---

Recommendation #3: Elevate the Higher Education Center at McAllen Faculty Feedback: It's fantastic that you want to improve McAllen's higher education center (HECM). One thing to remember is that elevating the higher education center will not happen unless you take care of the faculty who teach there. Unfortunately, HECM does not have a faculty representative. I hope you appoint someone to oversee faculty development and needs. There are also many facilities on campus that are required for campus growth but are lacking at HECM, such as a library, open access computer lab, and recreation center.

---

Recommendation #2: "Centralize undergraduate academic advising" should absolutely NOT be instituted. Holding academic advising positions within colleges and departments allows the academic advisors to know the details of individual majors and provides individualized advising so that students feel attached to a college/department that cares about their success. Advising that is individualized for majors is critical for maintaining student success and centralizing advising could lengthen time to degree and lower student retention. The steps to change a major can be reduced and a uniform pay structure for academic advisors could be implemented across the university without centralizing academic advising.

---

Recommendation #2 Centralize undergraduate academic advising This recommendation is motivated by the finding that students often change majors. That is indeed true and it is worth streamlining that process. But it is even more important to have academic advisers that are intimately familiar with the particular needs of each academic program, such as the optimal sequencing of courses to reduce time to graduation. The danger with centralization is that academic advising is treated as a fungible resource and the importance of specialized program-specific knowledge is diluted. Fully

embedding academic advisers in the department/program is essential to preserving that specialized knowledge. If centralization cannot ensure that, it could result in students receiving lower quality program-specific advice, with negative outcomes such as lower graduation rates and longer degree completion times, outweighing the benefits of streamlining the change of majors.

---

**Recommendation #2 Centralize undergraduate academic advising** It appears that the proposal to centralize undergraduate academic advising is trying to solve one problem--facilitating changes in majors--but seems likely to create a different problem, which is that centralized advising is unlikely to be as helpful to students of a particular major as an advisor associated with the department offering the major. In my experience, departmental advisors are very good at providing students with information not only about requirements, but also about course content, research opportunities, etc. They may not be as familiar with the details about another major, but they can certainly help students navigate the initial steps of investigating other majors. I am concerned because the stated goal of providing "a consistent, streamlined advising experience for students" doesn't take into account that student advising is not a manufacturing process that can be optimized and made maximally efficient. There is an inherent inefficiency in all academic processes because we are dealing with people and, specifically, with young adults who come to us with varying backgrounds and different life experiences.

---

**Recommendation #2 Centralize undergraduate academic advising** A cadre of centralized Academic Advisors would be valuable in helping students select a new major. However, each department needs one or more in-house Advisors. The Advisors are central to the student experience and departmental success. They know the required and elective courses for specific degrees, get to know the students, their career interests and their needs, assist faculty in shepherding students to obtain help when in crisis, and help departmental undergraduate committees in making wise choices when a program change is needed. COALS centralized Advisors a year ago. The standardized job descriptions and collaboration among Advisors have been positive. Keeping Advisors' offices in their departments is very helpful to students and faculty. Each Advisor focuses on 1-2 departments, learning the degree plans for those units. It is not reasonable to expect an Advisor to gain expertise across all campus degrees.

---

**Recommendation #2 Centralize UG and Grad Advising.** Not a good idea. I was [REDACTED]. Major outcry of students there was their recent centralization of student advising. The advisors did not have knowledge of subject culture, job market, details about programs. The students resort to faculty and staff for advising. We, as a committee, recommended decentralization of their advising structure. If the advising is centralized, no advisors should be outside of the department of their full expertise, and only reporting to be centralized.

---

**Recommendation #1:** Traditionally, the Provost is the chief academic officer for a university. The recommendation is to make the Provost to be similar to a Vice President of Undergraduate and Graduate Student Academic Affairs. I am concerned that moving research and faculty affairs outside of the Provost will hinder, not help, undergraduate and graduate students. **Recommendation #2:** I don't know if a centralized advising system solves the issue of forms and deadlines. That seems to be separate. Also, I'm under the impression that a centralized advising system will still mean decentralized advisors. I'm not an academic advisor, and I know of universities that are going towards more centralized advising.

---

**Recommendation #1:** Reorganize the Office of the Provost to allow greater focus on student academic success. **Comments:** The Provost's office should be responsible for faculty affairs instead of student academic success. Perhaps a separate office for student academic success could be created. **Recommendation #2 Centralize undergraduate academic advising** **Comments:** The Academic Operations Committee (AOC) deans should have the greatest say in this recommendation. They have the best knowledge of the academic advising needs for the students. Having served in the position of AOC dean previously I strongly suggest that this recommendation be declined. No group of individuals can be aware of all the nuances of every degree in the university and for which careers each major could prepare the student.

---

**Recommendation #1: AGREE:** I support flattening the Provost's office as the job has become too big and ineffective simply due to the scope of duties. **Recommendation #2: DISAGREE:** Having served as a dept. head, I do not believe that for the larger academic units that centralizing advising and taking away College and Dept. control is a good idea, especially in units where the process is working well. HLKN's advising group is one of the best on campus, and it is successful because of our grass roots effort to integrate advising into the decision making process at the Dept level. This approach has been critical to student success for such a large dept. to ensure that appropriate classes are offered within budget limitations and faculty workload requirements, and to ensure a 4-year graduation trajectory is achieved. This direct process is also critical for our pre-professional student success to keep them on the right path to professional

school. Recommendation #3: AGREE: This is a necessary move as this Center has been underutilized.

---

Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success. My comment: Academic success is a success in learning. Students do their learning in the classrooms, not in the Provost office or any other administrative offices. The teaching in the classrooms is done by faculty. In order to focus on the students' academic success, the focus must be on how to help faculty to do the teaching. How to decrease the student to faculty ratio, how to allow faculty time in order to become better teachers and/or create new courses. Any reorganization to an administrative office will only increase the number of administrators -- those who do not teach. Case in point, the enrolment to the engineering program has increased dramatically for the last 10 years, while the number of faculty in our department has decreased, while the number of administrators in the University has been steadily increasing. Is there any way to think that this is the right way? Recommendation #2 Centralize undergraduate academic advising. This is probably the worst thing that can be done to academic advising. Advising can only work when there is a personal connection between the student and the advisor. The further the adviser from the student the worse it works.

---

Recommendation #1 will cause massive disruption--best to proceed cautiously. Recommendation #2 not needed (best to keep student advising at a local level). Recommendation #3 is good.

---

Recommendation #1 - Moving Aggie Honor System Office to Student Affairs Academic integrity is an academic issue and is appropriately placed in the Provost's office. Academic integrity is not the same as other violations of the student conduct program. I do not agree with this recommendation. Recommendation #2 – Centralized undergraduate academic advising I do not favor this recommendation. Having academic advisors located in the major/department for which they advise allows them to be more familiar with the class and professors that teach in that major. It also allows them to have better connections with those who hire those majors. I have had experience with centralized advising at another institution that my daughter briefly attended and my daughter constantly received incorrect information regarding her major and eventually transferring to Texas A&M. I can see centralizing advising within a college, but I do not support centralizing advising across the university.

---

Recommendation #1 (Reorganization): success will depend on the people Recommendation #2 (Centralize UG Academic Advising): undoubtedly the worst, absolute worst move that could be made. The justification was because the change-of-major process was too difficult. That is such a small, small part of academic advising. Plus, that is a life-changing decision that should require the student to reflect and seek input before changing. The larger problem is that it is not possible for an academic advisor to understand all the complexities of the hundreds of degree programs at TAMU. The implementation of academic advising centralization in AgriLife was done poorly and created animosity and confusion among students, faculty, administrators, and staff that is still ongoing and this was all done on a relatively small scale. Advising has not improved. The work-life balance for advisors has deteriorated. Students get conflicting messages between their advisors and the Departments. Departments need direct lines to their academic advisors for a myriad of reasons to manage curriculum and many other student needs. I cannot even imagine the chaos that would ensue if centralized advising was implemented university-wide. Please, please, please do not centralize UG academic advising. Recommendation #3 (Elevate HEC@ McAllen): Seems like a large investment. How will this be funded?

---

Re: Recommendation #2 - Centralize undergraduate advising. Please, no. The last round of centralizing moved supervision of undergraduate advising from the department to the College-level. This removed most communication and connection from advising with the faculty that actually are in charge of the curriculum. As such, this type of 'centralizing' is actually less efficient for advising since advisors are not necessarily in touch with the curriculum changes. Provost appears to have been weakened somewhat, with oversight of certain areas going direct to the President. That appears to be a pro-authority and anti-faculty move on the surface.

---

Presumably the Provost's Office has the array of responsibilities it currently has due to some past perceived issues or concerns that thrust the Provost's Office into the fray. The report does not address how those responsibilities came to be, only that the Provost Office should divest itself of some of these responsibilities. Making recommendations without understanding the root causes of how this came to be in the first place is a recipe for disastrous repetition in the coming years.

---

Please broadly implement the VSP retirement program. Our College and Department are choking from the large number of tenured full professors who are not engaged, have minimal teaching responsibilities, and do not have active research programs. The salary burden these older faculty have on the College/Department is staggering and dramatically impedes our overall mission and ability to plan for the future. Please help address this issue.

Pg 14 Recommendation # 2: Centralize undergraduate academic advising As a former assoc. dept. head and program coordinator, I can state from experience that the undergraduate advisors in the College of Architecture are critical to student success, to student progress in their degree programs and in reporting any issues that individual students may be having to administration and faculty. The difficulty that students have in changing majors multiple times does not rest in the academic advising realm but in the restrictions imposed by enrollment caps in specific majors. For example, a student entering the University can state 3 preferred majors. But if their preferred major is already filled for the year, they may enter a different major in the same college and attempt to transfer to their desired major after a semester or two. A student who tries to change from the College of Engineering to the College of Architecture encounters enrollment caps in most of the COA departments and is therefore blocked with no hope of transfer. These are the students who become University Studies in Architecture majors.

Personally, as a relatively junior faculty member I am not overly familiar with all that the provosts office oversees, but the report seems to suggest that the majority of the responsibilities of the entire office be shifted elsewhere and the provost be eliminated. If this action is to take place, I think it is important to think about how the authority and responsibilities of the office will be reallocated. Much of the report talks to the idea of efficiency; when it comes to governance, too much efficiency can lead to impulsive or reactionary decisions being implemented with little resistance. This in turn can lead to damaging unintended consequences.

Overall, the Provost role in a university has been to support the academic programs through the hiring, professional development, and continued support of faculty and advising. Thus, the recommendation to revise the roles seem to be quite different from what is typical at any university.

On Recommendation #2: Centralizing undergraduate academic advising could bring many benefits, especially, as the report notes, in allowing students to change majors easily. However, it will also require extensive training to make sure advisors understand details about the structure, mission, and identity of each department, major, and program at Texas A&M. Centralization can be quite effective, so long as it does not reduce contact between advisors and the departments they serve.

Numbers and metrics are important, but, more importantly, listen to what is not being captured by the data. Walk the halls, talk to faculty, ensure them of confidentiality, and you will learn what is really going on at A&M.

None, other than I encourage this reorganization effort to not ADD additional significant upper level administrators. Perhaps a reduction (through attrition) is more appropriate. So many units (including individual colleges) are so top-heavy with administration.

None

None

None

None

None

None

No opinion.

No concerns with centralized advising, but it would be important that advisors are imbedded or located within colleges across campus. There are unique intricacies of within each major/minor that having dedicated advisors enhances the student experience.

No Comment

N/A

My greatest concern here relates to the centralization of academic advising. One of the greatest strengths of our academic advisors is how well they know our students, and our degree programs. What the report calls "siloing", we call

"expertise". Without the specialized knowledge that our advisors have relating to their particular college and department, they will not be able to advise students as well as they should be able to. How can an advisor who knows nothing in particular about a degree program advise students on the courses they need to take? Or the potential career options that might await them? The only problem that this recommendation appears to "solve" is making it a bit easier to change majors. What we lose in expertise and experience far outweighs the benefit of a slightly easier major change. This recommendation will ultimately not benefit the students, but will, in fact, be to the detriment of the overall student experience.

My concerns associated with this are largely associated with the future of the Dean of Faculties. Currently, the DOF is closely tied with faculty and answers to faculty, but the report would eliminate this. As with most things in the report, the "problem" they are attempting to solve with the proposed solution is not identified. The people who did this report met with [REDACTED], for less than 15 minutes to determine what her office was responsible for. My concern is that this change and several others will erode faculty rights and transparency.

My comments are directed toward Finding #2 - Students often change majors, and Recommendation #2 Centralize undergraduate academic advising. The finding references the 2018 SSI report. I agree that a university should provide an opportunity for students to explore their career vision and find the majors that provide the best opportunity to achieve that vision. This is especially true for first generation and other underrepresented student groups. However, those are also the students who can least afford to spend additional time taking courses that might not apply to their eventual degree. There is also the matter of legislative influences on streamlining time to graduation whose sway is given much more credence than their actual contribution to university funding deserves. The College of Engineering currently uses a common first year for engineering students that allows those students to explore the opportunities of various careers in engineering. After their first semesters, they apply to the majors of their own choosing to best fit their career desires. The system is not perfect and students still change majors, but the numbers of changes has been significantly reduced. Beyond that, various sources show that only about a third of college graduates currently work in a job that is closely related to their degree. The SSI report recommends a centralized office to address the needs of at-risk and struggling students. It does not recommend that all academic advising be centralized. The College of Engineering alone has 22 different majors in fifteen different departments. The civil engineering major has eight different technical tracks. There is no way that one centralized office can provide adequate knowledge of all of the curricula available at this university. Only an advisor with intimate knowledge of a department's degree program, the prerequisite knowledge provided in course sequences, the courses that taken together in a semester either complement the program or add unnecessary challenges to it, and other details gained through supporting individual students can ensure that those student graduate as efficiently as possible and find their way in the workforce. I agree that expanded advising opportunities for students who struggle academically and who struggle to identify their career vision is a good idea. I disagree that this should be accomplished at the cost of providing specialized advising in the department where the degree programs are housed.

Much of this study demonstrates a total misunderstanding of the culture of higher education in general and TAMU in particular by the consultants. That or they were given an answer in advance and told to torture the numbers until they got it. As a faculty member I concur with some of the issues with the Provost's Office BUT I'm very concerned with the splitting off of many of the proposed functions to a VP that appears to be totally unconnected to the faculty chain of command.

Much more attention needs to be spent on creating and maintaining a culture of diversity both with the students and faculty. This means more, also, that race. It means LGBTQ friendliness, regional diversity (students from outside of Texas) and so on. It seems whenever A&M gets great scholars dealing with race, gender, sexuality, etc. they get hired away by other schools, even in cases (I know of one) where the faculty member wanted to stay. A&M didn't even come close to a fair counter offer for this individual. If A&M is going to provide graduates for the 21st century business world this must change.

Moving all undergraduate advising to the Provost Office to streamline a fraction of students who change majors ignores the big picture that (at least in the College of Engineering), accreditation is on the basis of each degree program and that student transcripts are carefully reviewed, including from the view point of how prerequisites are met to insure adequate student preparation, and how transfer credits are accepted which may not match TAMU courses exactly. Saying that the Provost Office will have "specialist advisors" qualified to advise for each and every degree program is probably not the right track, in that the advisors need to be responsible to each degree program's accreditation, rather than the Provost Office. It is less than wise to make the departments responsible for program accreditation without the authority to do that job to the best of their abilities.

Most of these seem like sensible realignments between this office, VP for Faculty Affairs and the VP for Student Affairs. The Center for Teaching Excellence is a resource for faculty development, not for students; so it would seem a better fit under the VP for Faculty Affairs, instead of the Assoc. Provost for Student Success. The centralization of advising worries me the most. The main rationale for the change is quite weak. Many students change majors (is this supposed to be a bug or a feature, the report is unclear on this). But if 44% of all 2021 sophomores are not in the same major in which they entered the university, and 15% are not in the same college, it can't be that daunting and difficult a process. The five steps described already seems pretty streamlined to me. The only thing this plan would eliminate is talking to a second advisor. But surely a student would want to talk to someone associated with the new major? If it is not an advisor, its going to be a faculty program director. It hardly seems likely that making the process dependent on getting appointments with faculty instead of advisors will make this simpler. In my experience as a program director, having continuity of academic advising by people knowledgeable about the program is the single most important factor in student success and satisfaction. Our average time-to-degree went from almost 4.8 years to 4.0 years once we stopped changing advisors every year. Surely there is a better way to reward advisors and ensure a career path than making them all interchangeable cogs. This is probably the recommendation in the report that will be most damaging to morale over a broad swath of the university.

Most of the reorganization within the Provost office is fine. I foresee massive issues with the idea of centralized advising. This has been already tried in a couple of colleges, and has for the most part been a failure from the student perspective. What would be better, in my opinion, is better connection and training of advising staffs across the entirety of the university. In many departments, we have advisors with excellent departmental and institutional knowledge that is needed, in place, to support students. To try to replicate that--for 70,000 students--is not possible and will increase the time to graduation for students who are mis-advised.

Many of these changes seems sensible. The Provost's Office has grown too large in recent years, and I agree that a focus on academic affairs, as opposed to a wide spectrum of tasks, will make the office more efficient.

Many of the recommendations are reasonable. However, it seems that redundant programs for student success persist. Changing majors is not difficult, as is obvious from the fact that many students do this. The single most effective service the university can provide to assist students through curricular changes is to have well-trained, unit-centered academy advisors. Centralized advising has already proven to be ineffective on this campus and at other institutions.

Like the emphasis on increasing diversity of students, faculty, and staff. Centralized undergrad advising seems good, but it is not clear what other problems that transition might create.

Liberal Arts recently centralized advising within the College. That experience has clarified the importance of having specific advisors who specialize in each of the degree programs, even though we appreciate that other advisors can pinch-hit during busy periods. Each degree program is complex in a different way. The quality of the advising is notably weaker when our students work with non-specialists. Students benefit from building relationships with advisors over time. Working with a specialist in their major strengthens their connection to their studies and their department. Directors of Undergraduate Studies in departments benefit from having a partner in the advising office who knows their students. Advisors pass on student feedback while maintaining confidentiality (where appropriate). Advisors support recruitment and retention efforts, as well as curricular development. It is also important that the advisors are physically accessible to the students and faculty. When their offices are too far away from the department they serve, communication suffers.

Just organize the office so that it is fair to all. We saw vastly changing rules and expectations (ie. Tenure and Promotion) that irreparably harmed many careers. You can't have an office that changes the direction of flow without communicating that years in advance. We lost some fine faculty at this University due to a poorly run Provost's office

Just as the Associate Provost and Dean for Graduate and Professional Studies has oversight of graduate and professional academic programs and students, the Associate Provost for Undergraduate Studies should have oversight of campus-wide academic programs for undergraduate students. This means the proposed Associate Provost for Student Success should become an Assistant Provost for Student Success reporting to the Associate Provost for Undergraduate Studies. The Academic Success Center, Math Learning Center, and University Writing Center can be merged into one overall structure aimed at Academic Student Success. The Office of Student Success would be better designated the Office of Student Transition/Entry/Matriculation and Support. Since PPIP and Education Abroad are academic programs through which undergraduate students earn credit, they should remain with the Associate Provost for Undergraduate Studies. The Assistant Provost for McAllen should report directly to the Provost, as do the Deans. As written, the report is

contradictory in that it recommends elevating the HEC at McAllen, and then keeps it organizationally at the same level, reporting to an Associate Provost who reports to the Provost.

---

It would be a mistake to centralize advising. Our advisors are experts in the departments, programs, and colleges to which they are attached. Currently, our advisors are able to give students personalized guidance in all aspects of their majors, and are able to help them navigate the sometimes complicated features of their degree plans. If advising were to be centralized, this expertise would be diminished, and the advisors' ability to assist students would be greatly reduced. The report states that the current structure prevents clear lines of communication among the advising staff. This is simply not true. As things stand now, the advisors are able to communicate effectively with their colleagues across campus and do so on a daily basis. The report also incorrectly states that students are inconvenienced by having to communicate with too many advising offices in the case of a degree change. In such cases, the students only need to speak with advisors in two offices: the office of their current major and/or minor, and the office of the major and/or minor to which they wish to switch. What would truly be inconvenient and inefficient would be students communicating with centralized advisors who do not understand all of the details of a specific degree program. This would lead to miscommunication, misunderstandings, and the need to for students to seek help repeatedly instead of once. Please do not centralize advising. This would be deleterious to A&M as a whole, and it would negatively affect the academic experience of students across campus.

---

It seems unwise to centralize academic advising. A&M is too large and undergraduates will have difficulty seeking advising counseling outside of their major department or college. Having a dotted line to an academic dean is little consolation to an undergraduate who isn't getting help from someone with knowledge of their specific program and constraints. They can already get swallowed up by the enormity of finding help on campus. Why would we make it harder for them? I have seen the magic that an academic advisor can pull off when they can just walk down the hall and talk to a faculty member about getting a student into a full class. This recommendation will have a negative impact on our customers.

---

It seems to me that in this instance consolidation is warranted, but centralization is not, particularly in relation to undergraduate advising. To make sure that students are able to be successful and successfully change majors, we do need to make sure a more thorough system is in place to reach all students and provide them the help that they need. However, centralizing the advising only leaves things generic and creates more standard kinds of advising that will not be able to adequately handle the diverse needs of our students. Students interested in the humanities, for instance, will not be as easily served by people who are daily dealing with people in engineering. Please do not continue to draw students away from those who will be intimately familiar with the professors, courses, internships, scholarships, and other experiences that are particular to that major or even college. This is not a place to centralize and streamline but rather invest and distribute so that students can be advised more directly by those who are invested in them.

---

It seems like the provost office is now more like a student affairs 2.0 with most of the functions being taken away. This is where a definition for what the roles of the office is would be helpful. My understanding is that the provost is the chief academic officer and such responsible for all academic issues on the campus. However, some of that is being taking away out of this office, thereby diminishing the power of the provost.

---

It is unclear if Diversity and Inclusion is added to the role of the VP for Academic & Strategic Collaborations or falls under it (do not see a box in the proposed org chart). Either way this recommendation needs further study. If Texas A&M is committed to reflecting the state of Texas in our students, faculty, and staff we need to keep the DEI leadership at a higher level.

---

It does seem like a good idea to reorganize this office, and what was proposed seemed logical.

---

In the process of reorganizing this office, please be sure that programs dedicated to DEI affecting faculty/staff and students are maintained and expanded.

---

In the last few years Texas A&M has been honored for its work on Diversity, Equity, and Inclusion; the progress it has made toward increasing the diversity of its undergraduate and graduate student populations; and work toward achieving Hispanic Serving Institution status. The proposed changes threaten to set back that work by at least a decade. At a minimum, these changes signal DEI is not a priority. To the darkest elements, they signal it is open season on faculty, staff, and students from underrepresented groups. The composition of the president's cabinet signals her priorities. Removing Diversity and Climate from a cabinet-rank VP position says loud and clear it is not a priority. The report's authors should be taken to task for a complete failure to understand that work on Diversity, Equity, and Inclusion is not only about recruiting undergraduate students. If they feel unwelcome; experience racism; are constantly

subjected to exclusions and made to feel unsafe or uncomfortable; and do not see people who look like them in their classrooms (as faculty), their lab sections (as graduate students), the offices that serve them (as staff), and the university leadership it will be harder to recruit in the future. If we want to reflect that demographics of the state we must elevate our diversity efforts and those who lead them, not marginalize them.

---

In the Math Department, faculty serve as academic advisors for our undergraduate students. We do not have staff advisors. Since 2017, I [REDACTED], and I have been involved in undergraduate advising since 2009. I have a passion for both parts of my job--teaching and advising--and this passion was recently recognized by [REDACTED]. I say all of this only to emphasize that what I am about to say comes from a place of experience and a strong desire to promote student success: Please reject Recommendation #2 (centralizing undergraduate academic advising). The MGT report lists two reasons for consolidating advising, only one of which has anything to do with students. Their sole student-related reason for the recommendation to consolidate undergraduate advising is based on the fact that it takes five steps for a student to change majors: "1) talk to your current advisor, 2) review change of major requirements, 3) talk to an advisor in your prospective major, 4) decide if you need to switch to General Studies, and 5) submit the change of curriculum in Howdy before the deadline." What is wrong with this process? Arguably, nothing. A change of major changes the entire trajectory of a student's undergraduate career, so this is not something that should be done on a whim. Step 1: Talk to your current advisor. Absolutely--perhaps your current department has other majors within the department that would better fit your career and academic goals. If not, then it is 100% necessary to move on to Step 2: Review change of major requirements. Again, this is absolutely necessary. A student must figure out if it is even possible to change into a desired major. If it is not, then that major should not be considered, but the student won't know this unless they review the requirements. Step 3: Talk to an advisor in your prospective major. Of course--this makes perfect sense. An advisor in your prospective department is (presumably) an expert on helping students determine if one of the majors in that department can help that particular student accomplish his or her goals. Step 4, determining whether time in GEST is necessary, can and should actually be done at the exact same time as Step 3, so we now move on to Step 5 (which should really just be Step 4): Submit a change of curriculum application. How else is a department going to know which students want to change into one of their majors? Of course an application for change of major is necessary. If this is their only student-driven reason for consolidating advising, then this is no reason at all. Consolidating advising will change none of this process. There would still have to be discipline experts. There is no way that you can train an army of hundreds of advisors who know the fine details of every single major on campus, so students will still need to schedule meetings with multiple people to change their major. Consolidating advising would, in fact, be disastrously detrimental to student success. If a student meets with an advisor who is not \*the\* content expert for a particular major, then he or she may be told to take a course for which they already have an acceptable alternative, or the student may be told to take a course in a later semester, only to find out later that it is a prerequisite for another course that is required for their degree but only offered in spring semesters, or the student may be told one of a million other incorrect things. Please, for the sake of student success, \*do not consolidate undergraduate advising\*. Nothing good will come of it for our students.

---

In [REDACTED], I have always deeply appreciated reporting to a provost who has broad academic responsibilities in the university, and to someone who has breadth in administrative experience and exposure to a wide range of academic disciplines. I relied greatly on the provost to provide me with mentorship as I assumed new roles in the university. I am concerned that the position as described in the report is very limited in scope and will significantly affect the quality and depth of the relationship between the offices of the deans and that of the provost. That said, I enjoy a good working relationship with the interim provost. Not having a strong provost's office may negatively affect the recruitment of senior scholars of the highest caliber, and the evolution of the promotion and tenure processes.

---

In general, it seems reasonable to align the responsibilities of the Office of the Provost to be consistent with a vision of the Provost being the chief academic officer of the university. However, the rationale to centralize academic advisors based on "students often change majors" is weak. That is one time point in an extended college career. If the change of major procedure is a problem, then revise the procedure. That doesn't mean it is smart to blow up the whole advising structure. The good reason for "siloeing" advisors into colleges or departments is the expertise that is required in properly guiding students through complex degree plans and into specific careers. Some de-centralizing of academic advising has already taken place, but there is no comment in the report on the success (or lack thereof) of that approach. The reorganization of advising in COALS has not been viewed positively by students, faculty, or staff. I suspect

that trying to have generalist advisors will result in extended time to degree and angry students who have not been properly advised about prerequisite courses, etc.

In general, it seems reasonable to align the responsibilities of the Office of the Provost to be consistent with a vision of the Provost being the chief academic officer of the university. In connection with [REDACTED] prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

If implemented the new office of the Provost would be significantly less influential than the current one. In General, that is not concerning, but the transition should be made in a step-wise fashion as not to lose organizational memory in the process.

IMO, academic advising should NOT be centralized per MGT. The org chart changes are easy to do, unlikely to hurt, but Provost's office effectiveness may not be affected by much. IMO and experience there is a degree of truth in the many 'classic' jokes about this - e.g. making out three envelops (#2) and 'rearranging the deck chairs on the Titanic'. Leadership is not determined only by the org chart.

I'm worried that this reorganization will create more bureaucracy and cause academic issues to end up in the hands of bureaucrats and not academics. Also, at least for the upperclassmen (juniors and seniors) advising is probably better done by each individual department--surely someone from a centralized office really can't be expected to know every field of study that the university has well enough to advise students in it.

I would love to hear more arguments about centralizing advising. Our school is so complicated and so large that it seems like a disservice to students to have advisors that are not aware of individual classes, teachers, career goals, and so on. What are the benefits of this?

I would like to see the provost with over oversight over other aspects (e.g., facilities, IT, etc.) since they support the academic mission.

I was somewhat surprised in reading the negative comments about the Provost Office, particularly our prior provost, Dr. Fierke. It is certainly the case that there are many offices under the Provost that may better fit elsewhere to streamline things. However, the Provost has always been a key player in University affairs and helping to drive both the educational and research missions of the University. The movement of many of the duties from the Provost office to the President instead could end up creating "presidential bloat" if you will. All to say, this streamlining seemed a bit extreme and it is not clear what the goal of this was beyond limiting the power of the provost to give more power to the office of the president.

I was glad to see the Graduate and Professional School still under the VP and Provost. However, there are some changes that were not addressed in the report. Graduate programs and colleges, graduate certification programs, and graduate distance education do not currently fall under the grad school as a direct reporting line. These are still delivered by the colleges. Page 6 of the Graduate Task Force Report articulates these dynamics (<https://grad.tamu.edu/OGAPS/media/media-library/documents/Graduate-School-Task-Force-Report-1.pdf>). The change could be made, but it would take a substantial revisioning of the Grad School operations.

I was disappointed to see that the Provost Office was eviscerated in the report, and I believe that the shift of responsibilities, most especially the elimination of the Dean of Faculties, places way too much power in the hands of the President. The Provost provides a check and balance to the President as the #2 position at the university with an academic focus on curricular matters and research tasks related to students and faculty. I believe it is dangerous for faculty matters, in particular tenure and promotion, to be directly under the President via the proposed vice-president of faculty affairs who reports directly to the President and is hired by the President.

I want to say that I agree with the concerns raised about Diversity initiatives from former students. Many faculty in my department are upset about diversity initiatives being questioned, but I feel like the university has been divided into first and second-class citizens for some time, the diverse and the non-diverse. I have seen cases of hiring faculty by simply not considering applications from non-diverse faculty, so that a diverse faculty member is then hired. This happens with the ACES program, and it has happened with the provost's initiative. I've seen people excluded from consideration for jobs simply for being white, and it makes me feel sick to think about this abject racism taking place in our university. The focus on diversity has also detracted from the now defunct goal of Vision 2020 of creating a culture of excellence. It doesn't seem like we care about excellence because all we care about is diversity. Thank you for listening and responding to these concerns.

---

I view the provost as the chief academic officer; thus, anything academic-related should be under his/her purview.

---

I understand the provost's office becomes devoted uniquely to undergraduate and graduate education.

---

I think the shift for the Provost Office to focus on academics is a good one. The Provost is the Chief Academic Officer and therefore, removing non-academic items from the provost office makes sense.

---

I think the University Libraries should remain under the purview of the Provost Office, as the University Libraries serve all academic programs and all faculty and students, we should remain under the person who oversees the school's entire educational offerings

---

I think that diversity and inclusion should remain with the provost office since it is a key player for "the academic mission of achieving excellence" and diversity and climate is not just a marketing and recruiting issue. More than anything else in the report, the suggestion of centralizing undergraduate academic advising is very concerning since it is not taking into account the crucial role of trained and informed department-specific advisors who are experts in degrees and curriculum of their home department. In my administrative role as DUS I had a supervisory role in our INTS advising office, and I participated in the hiring and training process of new advisors and completed their annual evaluation, and I had worked closely with our advisors for more than four years. It's clear that the level of efficacy of advisors depends on their deep understanding of the degree (including historical changes and adjustments), their direct knowledge of students that major in the department (their experiences, their challenges, their successes..), and their close contact with the faculty in the department.... as they are often called to play a crucial role in mediating the department's relationship with students... not only guiding students semester after semester but also giving to the DUS and department head important insights about students' challenges and about particular areas of concern that need to be addressed at the level of departmental administration. The local knowledge and experience of advisors is key in the mission of keeping improving students' experience in their major.

---

I think streamlining the provost office and focusing on academic affairs are the correct directions to follow. I generally agree with report findings and the need to centralize and streamline service functions improving communications.

---

I support the report's recommendations concerning streamlining and re-focusing the office of the Provost. Centralizing advising is going to be challenging. The report is not clear how a cadre of generalists can replace the current assembly of specialists for each discipline.

---

I support restructuring in general, but I would like to see the Diversity & Inclusion Office to continue to report to the VP & Provost. Focusing on recruitment of diverse undergraduates is not enough. We need a DEI office with some power, which can work to make the campus more welcoming. I agree that existing efforts are sometimes (although not always!) ineffective, but that doesn't mean we can stop trying.

---

I support reorganizing the Provost's Office and centralizing Advising.

---

I strongly feel that centralizing undergraduate advising would be very detrimental to our students, and at best would simply create another unneeded layer of bureaucracy for a decrease in efficiency. Students need to talk with faculty and staff in their major departments for anything specific to that department and its courses and career options etc, since that is where the expertise lies. In many departments, the advisors, whether faculty or staff, develop a close relationship with students that is very beneficial, making students feel less like a number in a big university and more like a member of a smaller academic unit. And to address a particular process pointed out in the report: Changing a major is a big decision affecting a student's career options after graduation, and should be made only after careful reflection and consideration of information provided by advisors in both departments. I am also concerned generally about the diminished role of the Provost and a potential corresponding reduction in shared governance.

I strictly oppose the suggestions for centralized undergraduate academic advising. Effective and professional advising in most of the fields in natural sciences requires that an advisor will have a very strong academic background in the field (preferably being a research faculty or instructional faculty with a Ph.D. degree). In order to effectively advise students, it is not enough just to know formally what are the degree plans and requirements and what are the courses names and their catalog numbers (the modern AI programs can do it more effectively than a human) , but an advisor should be able to identify what academic problems/ gaps/ goals a student have and create him an individual path in order to overcome those issues and achieve this goal. For example, this individual and highly professional approach is crucial to advise those students who plan to go to graduate school in order to prepare them better for this move, This includes identification of the areas in their major of study along which they want to proceed in graduate school, of the faculty members in our department, who are experts in those areas and can advise the students and potentially are willing to mentor their undergraduate research (crucial for their graduate application portfolio), advising what sequence of upper level/ directed study classes will better prepare to the graduate school and boost their resume for graduate school applications. Currently, our departmental advisors, who are either research faculty members or instruction faculty members, do a very effective and professional job. I just cannot imagine that a person without a solid academic background in the field may effectively replace them and this is what I am sure will happen with centralized advising. So, I am afraid that instead of an effective body for advising students, centralized advising will become just another formal bureaucratic institution with a huge amount of incompetent and rather highly paid staff, and the department will still need to have their own professional advisors as we have them now in order to direct our students properly. So, instead of optimizing, the university will just pay a lot of money for this new and absolutely useless institution, especially for senior advisors (and the hierarchy of ranks of advisors in such institution with rather different salaries for different ranks is inevitable), while the departments will still need to have their own advisor and pay them for their advising in the form of a reduced teaching load.

I see almost no upside to the proposal to centralize student advising and pretty certain damage that would come from it. In fact, I view it as being one of the most thinly supported recommendations in the whole report, and possibly the most certain to cause problems. The damage from change would also fall directly on our students, which is (I hope) something that nobody wants to see. The report treats advising as a mainly bureaucratic exercise--as if all we want our advisors to do is make it easy for students to change majors and then check a bunch of boxes to get students through some degree plan and graduate (and even then centralization would cause problems!). If this were the case, the recommendation to centralize might make some sense, but then again in that case we could also get computers to do most advising work. The work our advisors do is much more personalized and complex. Our department has quite a few degree plans, and choosing one of them in an educated way requires some expertise in our field. (It might be possible to cut down on the number of degree plans, but this wouldn't really reduce the complexity of the problem because students still would need to choose a direction that fits their talents and interests, and the number of plans we have reflects the fact that we have a large and diverse field with a large number course offerings and possible foci.) Our advising office is embedded in our department with faculty readily available to help students navigate the area and make good choices about directions. Staff advisors generally don't have degrees in the areas they are working in, and it takes some time and a lot of close contact with a department for them to learn the culture of the areas they are working in. It also takes significant time for them to learn the ins and outs of the degree plans they are working with--not just the ability to get students through a degree to graduation, but to optimize course choices based on their individual goals, interests, and abilities. Even if staff advisors carry a lot of the direct advising burden, it's absolutely imperative that they have close contact with faculty, and that advisees have access to faculty advisors at times. Taking advisors out of departments by centralizing services is going to take them away from the people and information they need to do their jobs well. Finally, our advisors also work closely with departmental administration on course offerings and choices, even to the point of working to change course times due to conflicts. This ability to flexibly meet the needs of our students would unavoidably be compromised with the proposed new advising structure. The report seeks to ease the process of changing majors. I'm all for reducing bureaucratic hurdles, but changing majors is a big decision and should NOT be viewed as merely a series of bureaucratic steps. The goal should be to help students land in the right place in the long run, not to make the process as easy as possible. Students *should* have to talk to advisors in the outgoing and incoming areas to change majors. I also understand that one of the bureaucratic steps criticized in the report (deciding if a student needs to switch to general studies) is necessary in part due to federal financial aid rules and could cause problems if eliminated. Overall the offered students success rationale for centralizing advising looks to me to be complete nonsense. In summary, the advising recommendation looks to be a nice step to take if we only care about

helping some students get some degree. If on the other hand we want to have our students being given the best possible advice about degree and career options, then having advisors embedded in the department is the right way to go. In addition, departmentally-based advising also helps our students to enter the department's culture. I am very against the idea of moving advising out of our departments.

---

I respectfully disagree with the assessment to consolidate HLKN under the SPH. Thanks!

---

I love the idea of elevating the Higher Education Center at McAllen. The additional support would be greatly appreciated. With the legislative support for a new nursing building, it will be even more important to have the additional support. The report at one point recommends "Elevate the Higher Education Center at McAllen to report directly to the Provost" but the organizational chart on page 11 has the Assistant Provost at HECM report to the Vice Provost for Academic Affairs and Strategic Initiatives. Would the HECM report directly to the Provost or to the Vice Provost? Given our location in McAllen, we have some concerns about the centralization of advising. While it would potentially be very beneficial for the institution, we are not sure what this would like like for the Higher Education Center at McAllen. Love the idea of offering extension programs to our local community.

---

I like these suggestions. Allowing the Provost's office to focus on education and academics will provide a voice for this essential role of the University. Sometimes we get so focused on research and football and faculty concerns that we need a voice dedicated to academics backing those education and scholarship missions. In this day and age Academic advising is an even more important for our students - this area being centralized can lead to: 1) better advising for our future graduates on obtaining the skills and resources they will need AND 2) making certain Texas students who come from backgrounds that haven't fully prepared them for the hidden curriculum are brought up to speed upon matriculation.

---

I like the elevation of student success.

---

I largely agree with the notion that the Provost's Office is too large. Many of my colleagues are gravely concerned about the centralization of advising because they feel it will lead to unsatisfactory undergraduate student outcomes. I have not seen an issue with the current state of advising--it has been quite strong in my time as a faculty member--so I can see their hesitancy to follow this suggestion.

---

I have always been impressed by the Provosts office.

---

I find that the intention to centralize student advising, while possibly (but I think dubiously) advantageous to students taking multiple majors, will be highly detrimental to students who need anything but plain vanilla advising. As a student (double major, Churcill Scholar, NSF graduate research fellowship) at a large public Land-Grant University and now a professor and advisor at another, i have seen the value of advising by faculty and specialists in one's major. I often advise students about the value of different classes, which track to follow, whether to take a graduate class instead of an undergraduate class, research internships or scholarships, conferences and presentations, undergraduate research, graduate school, etc.; the information I dispense is something that only one with a career in the area gains. Mentoring is best done by those in one's discipline. Over centralizing advising will result in mediocrity.

---

I feel that it is very important to have undergraduate advising within the academic units and not centralized where you may have advisors that are not fully informed of the career that a student is seeking. I have worked at other universities where there was centralized advising for undergraduate students and it actually resulted in more work on the part of faculty as students were being misinformed and in many cases it resulted in more time to graduation. Advising is more than just having students follow a preprinted degree plan, it requires thorough knowledge of the career path. Also, changing majors should be a multi step process so it is done with deliberation and through consultation.

---

I feel it is a terrible idea to centralize Advising. It is essential to have advisors in the separate Departments or at least College so that students can get informed advice about what each subject entails. A centralized advisor will only know what is written in the catalog and cannot possibly know the content and culture of every academic discipline. When a Math advisor talks to a student, they talk about the beauty of mathematics, how each course relates to the others, how it is possible to talk one course before, after or simultaneously with another, how math is the basis for other topics the student is interested in, etc. I fear that a centralized advisor will say something like "I hated math in school. So let's try to find you the easiest Math courses to get you through your math degree." I have heard that all too often when talking to public school teachers or just those who are not in the sciences. The difficulties with changing majors is not a reason to change the whole advising system. The 5 steps all seem essential. Maybe there should be a few centralized advisors in

student services or the provost's office or somewhere else who job is to guide students through the process of changing majors.

I don't understand the need for these changes. How does it reduce bureaucracy to promote the Dean of Faculty to be a second Provost? I am strongly opposed to centralizing academic advising. Every student needs advisors who know something about the subject matter and even more about the professional and academic structure of the field of the student's major. Ideally these advisors are faculty, but some routine functions can be handled by staff -- but inside the department, please! The only rationale given for this proposal has to do with students changing majors. Is not this a case of the tail wagging the dog?

I don't have strong feelings one way or the other about the report comments with respect to the Provost Office. I will say that response time on important processes, such as approvals for new hires, has been very slow in recent years. It seems the DoF/Provost Office has been the cause of most delays. This impacts research and teaching productivity.

I don't have any comments on this as it seems like a fairly distant rearrangement of responsibility a long way away from me.

I don't have a strong opinion on this. Either way is okay in my opinion

I don't believe the Center for Teaching Excellence should be the responsibility of the Associate Provost for Student Success. It is a resource for faculty and instructors. Centralization of undergraduate academic advising will dilute the expertise of advisors.

I do not understand the reasons for these changes, except maybe the Provost Office became a grab-bag of programs over the years. Having been a professor at TAMU for 26 years, having brought in \$13M in grants including a NSF-IGERT and being a leader in my field I have met TAMU Provost once or twice and never about university affairs. So I really can't care much about what you all decide to do "up there".

I do have some concerns about the plan to centralize Advising as my prior experience as Department Head provided me the opportunity to appreciate and value the role of our advisors at the department level in facilitating student success. The uniqueness of programs and respective degree programs seems to support the value of department- (or perhaps in some cases least college-) level advisors. This may be unique to my college as we do not have many students changes majors (outside of Mays), but it's difficult for me to agree with the rationale for the proposed change.

I do agree that the Office of the Provost is too large and has competing priorities. A reorganization at this level makes sense. But I do wonder what the provost(s) would be doing after this reorganization? Also, how would this impact academic freedom and the Tenure and Promotion process? And could you define what you mean by the "academic mission of achieving excellence"? That's a fussy term and various groups would have differing and even competing definitions/expectations. I'm a bit concerned about the centralizing of academic advising. While I understand it can simplify and streamline, my concern has to do with the amount of expertise that would be lost. Too often I've seen students choose or change a major based on too little information about what that major entails or what the prospects for a given degree are. I would have liked to have seen more discussion of the pros and cons of each recommendation.

I didn't realize how big it was. The reorganization there makes sense to me.

I cannot comment on most of the restructuring proposals, however, I have spoken to many of my students about the proposal to centralize advising. Many have strong feelings against this. My department has faculty advisors, and our students feel strongly that these advisors, who have intimate knowledge (and contacts within) their field of study are an invaluable asset to their education, career development and, when needed, mental and physical well-being. Personally, I expect that the loss of faculty advisors and the shift to "staff" advisors who are only doing their job for a paycheck and reading flow charts to make decisions will not be able to give students the specialized guidance they need and deserve.

I believe the Provost Office should continue to be responsible for faculty development, hiring, and evaluation. In the proposed report its duties seem to be directed more towards student issues. That is a diminished role. There needs to be an independent (from the President's office) unit to address faculty-related academic and research issues in the university.

I believe that the Provost should conserve its key role in shepherding the general mission of the university on both a day-to-day and strategic basis, particularly since the Provost is always much closer to the faculty than the President.

I appreciate the reorganizing to focus on Student success Focus on Diversity is critical to institution moving forward and staying culturally relevant reorganizing for more efficiency is also a priority

I am very concerned with the reorganization of the Provost Office. Most importantly, there are some offices, like the Office for Diversity, that need to be university-wide and have direct access to top-tier university leadership. The MGT report de-prioritizes diversity efforts, understanding diversity only as the recruitment of underrepresented undergraduate students. In fact, it is near consensus in the education literate that student diversity cannot be achieved without faculty diversity. Without a strong Office for Diversity with direct support from the Provost, this university will not improve its climate, and in the process retain world-class faculty.

---

I am very concerned that it appears all matters related to faculty, including tenure and promotion decisions, are being taken away from the Provost. The Provost is supposed to be the chief academic officer of the university. Decisions related to tenure, promotion, development leave, performance, and the like are inherently academic. Hence it seems necessary that they remain the province of the university's chief academic officer.

---

I am very concerned about the de-coupling of the office of the Provost from issues related to the faculty. The Provost has historically been the primary academic officer of Texas A&M University and academics cannot be understood without paying attention to issues related to the faculty. I am concerned that moving faculty affairs (see below) under the President would weaken the strong coupling between student and faculty affairs that is necessary to nurture and foster in order to grow our academic mission.

---

I am surprised at how radical a restructuring of the Provost's Office is being proposed in this report. The thing that's most surprising is that the VP and Associate Provost for Diversity is being removed from its spot as an Associate Provost with the Office. I believe that is a mistake that will be detrimental to the recruitment and retention of Latino and African American faculty. Relatedly, I also think it's an embarrassing setback for the institution to make that role solely a VP for Diversity with no direct reports on the org chart and the former direct reports being subsumed in other areas. DEI needs to be a priority for TAMU and the recommendations of this report are a step back, not the several steps forward that we need.

---

I am skeptical that this re-organization will provide significant benefits. However, without more direct experience with many of these offices and functions it is not clear how I can evaluate many of these proposals. I simply have experienced the effects of consolidation of certain services in the name of cost savings and efficiency. I have found that the administrator of centralized facilities often don't have the specific knowledge to oversee disparate functions that are, on the surface, related, but that actually require specific knowledge. For example, shifting Academic budgeting and finance to finance seems like a reasonable idea. On the other hand, I do wonder if a department without a specific focus and intimate familiarity with academic finances will perform as competently and efficiently. Probably one of the worst proposals in the MGT report involves centralizing undergraduate academic advising. The advisor in our department is close to our students, knows our faculty, and understand which courses are required and in what sequence. In other words they have an understanding of our curriculum that I don't believe will exist in a central advising office. This will, no doubt, be detrimental to our students. Apparently we will lose this so that students can more easily change majors. I must imagine that we can help student change majors without removing academic advisors from Colleges and Departments.

---

I am particularly concerned by the recommendation to condense and reorganize the Provost's Office and have certain functions this office previously performed be absorbed by a Vice President for Faculty Affairs. For example, the Provost's Office previously provided a valuable vote and had input in all promotion and tenure cases, and I think it would be a mistake to take this important step out of the merit review process in promotion and tenure cases.

---

I am particularly commenting on point 2, the recommendation to consolidate Academic Advising. I feel strongly that this is a terrible recommendation for a few reasons. First, experience: my department has gone through the experience of having our advisors moved out of the undergraduate office and into a more centralized location in the past few years. This has had a really negative effect on students' ability to navigate the relationship between advising and the undergraduate office (and that is the fault of the physical division, not anyone in either of those departments). The close space of the major is eliminated through the separation and students find themselves waiting longer for appointments and less sure about where to go for small questions. Second, I question the idea that advisers can develop the expertise needed to navigate all the pieces of all of our majors. I have often run into students who have had advising issues that have led to missed opportunities; our majors are complicated. This is part of what makes switching majors complicated (which it needs to be, given the complexity of degree plans). Students need more access to \*specialized\* advisors with whom they can build relationships--not more opportunities to feel overwhelmed and anonymous in the university.

---

I am opposed to the idea of centralizing academic advising. There is a lot of expertise on each department about the

particular courses, areas of specialization, jobs, etc. that a generic academic advisor cannot do.

---

I am not sure I understand enough about the workings of the provost office to comment but it does appear that a lot of power will be removed from this office.

---

I am not in favor of a centralized advising structure. The rationale given on ease of transfer between colleges is not compelling. I believe it is not good practice to formulate rules that cater to the exception (i.e., the advising structure must benefit the majority who actually stay in their majors as opposed to the extremely small number that seek to transfer outside of their college). Instead, we should focus on means to improve student success within their major, to the extent possible. Secondly, advising is not a business service like IT for it to be centralized. Our core mission is to teach students and it is imperative that the program-specific knowledge that comes with departmental advisors is not lost. To expect an advisor from a different department in the same college, let alone a different college or major, to be able to provide meaningful advice to student on major-specific classes is not realistic. This would certainly eliminate the personalization and customized advising that students receive from the departmental advisors. Third, advisors also help students with specialized opportunities (e.g., honors research within the Department) that a centralized structure cannot effectively accomplish. Fourth, the centralized model often results in a lack of ownership or connection to the home department. While this may be ok for a service like IT or facilities, student success needs the advisors and faculty to have "skin in the game". Unfortunately, it is well documented that the level of engagement and investment decreases with multiple reporting lines which could be counterproductive for student advising. In summary, any savings or efficiencies that are realized due to centralization are greatly outweighed by the potential drawbacks. For these reasons, I request that the centralization of advising be reconsidered.

---

I am highly critical of the recommendation of centralized advising. The MGT report states that advisors are "siloed" in departments. They are, in fact, "experts" in departments and department curricula. With their relationship to department faculty and department administration, they offer important professional feedback through the expertise they generate precisely through their singular involvement with a department. They are the constant face that our students see and get to know and trust. They follow enrollment trends and pick up on potential bottlenecks to graduation. In short, they are indispensable to the success of our students and teaching mission. This will be all the more true as the university embarks on significant academic reorganization. The hollowing out of the roles and responsibilities of the Provost's Office is another area of great concern. Under the new organizational chart, it appears that the Provost's only responsibilities are in student learning (undergraduate and graduate). The Provost, traditionally the Chief Academic Officer of the institution, will have their purview reduced to curriculum and student retention, it appears. Faculty concerns are wholly removed from the Provost's office, which raises questions about tenure and promotion, faculty advocacy, faculty mediation, budgeting for faculty, etc. There appears to be a huge disconnect if the Academic Deans report to the Provost, but the Provost has no role in faculty affairs. Who is approving new faculty lines? Who is working with Deans to make long range hiring decisions? In short, the separation of faculty affairs from the Office of the Provost is not advisable. A university of our caliber should launch a robust national search for a new Provost – it is hard to imagine that top talent will have any interest in such a limited role. University Diversity, Equity, and Inclusion (DEI) efforts are marginalized to a unit (Academic and Strategic Collaborations) that otherwise includes community outreach programs, Education Abroad, and student recruitment. DEI efforts should be front and center in all aspects of the university administration, including faculty and student affairs. What will happen to the ACES program, a faculty hiring pipeline?

---

I am highly concerned about the recommendation to centralize undergraduate academic advising, which has the potential to undo the currently existing dynamic in which students, advisors, and faculty/departmental leadership can sustain productive relationships and channels of communication to find the workable balance between maintaining program standards and accommodating the individual needs of students in the program. If anything, the current dynamic could use more support in strengthening the collaboration between faculty, students and advisors at the department/program level as opposed to removing advisors from equation to be siloed within the Provost Office. Having an advising office in the department has made it much easier to work with students who come to me with questions related to courses that fulfill their degree requirements. I worry about how the proposed centralization of advising could precipitate a loss of expertise at the department/program level that the current advisors bring to their role. I have also seen first-hand as a graduate student at a peer institution the adverse effects of centralizing the function of undergraduate academic advising leading to a vacuum at the department level and a deterioration of student academic experience as a direct result of such changes.

I am glad that the University is soliciting input and hope that together we can all make a difference for the place we hold dear.

I am concerned that the recommendations in the report lessen the voice of the faculty, transparency, and interaction with upper administration by weakening the office of the Provost.

I am concerned that the proposed model of a provost that is not the 2nd highest person in leadership will not be appropriate for an R1 institution. I can't find an example of this model being used at any peer institutions. Too busy to research as much as I would like, but here is what I have found <https://www.washington.edu/leadership/> <https://www.princeton.edu/meet-princeton/our-leadership> <https://www.ucla.edu/about/leadership> <https://msu.edu/about/leadership> <https://www.unc.edu/about/leadership/> <https://www.ufl.edu/about/administration/> For such a drastic change, I would like to see data on how this works at other large AAU universities.

I am concerned about the plan to centralize advising. TAMU's various department and college requirements are complex, and changing majors can have unintended negative consequences. Having "boots on the ground" in departments is important for student success, in tangible and intangible ways (enhancing students' sense of belonging, for example). To best serve students, I would like us to keep advisors in departments, but work to strengthen communication and transparency among departments and between units.

I am concerned about the evidence base substantiating the recommendations made. I am concerned for faculty representation and services if the recommendations are carried out, effectively stripping the Provost Office of its capacity and authority.

I agree with some of the assessments about the provost's office, and the proposed restructuring. I am skeptical of the centralization of academic advising. My concerns stem from the problems we see with high turnover of academic advisors in centralized offices. Any plans to centralize advising should consider some approaches to reduce turnover. if not, these tend to create more problems at the department and faculty level.

I agree with all comments in the report. I think Provost office lost track of their mission and became a pawn in a political battle.

I agree the Provost's office has got too large and it should focus on student learning and developing high quality academic programs.

I agree that too much has been crammed into the Provost's office and some realignment is appropriate. I am satisfied that our current Interim Provost, Dr Scott, has our best interests at heart and is a good person to help negotiate these times of change. I have trust in him.

I agree that the office has too many duties. I like the plans for removing and rearranging some of those duties.

I agree that the Provost Office could use some reorganization. However, I think the following should stay with the Office of the Provost. Faculty Senate Aggie Honor System Enrollment Management Veterans Services Education Abroad Programs Dean of Faculties (and not be eliminated) VP of Research

I agree that the Provost Office carries too many diverse responsibilities but would prefer to see a Vice Provost for Faculty and Academic Affairs within its purview rather than directly answering to the President (similar to other peer institutions).

I agree that new undergraduate students who have not decided their major or only have vague ideas about their college major will benefit from a centralized approach to advising, with a broader overview of the University's undergraduate majors and programs. However, I do not believe that such centralized advising will be beneficial once a student has finalized their decision to follow a particular major. I would like to offer a hybrid approach: Advising could be centralized for freshman starting their undergraduate studies, and the student and centralized system advisor could come to an agreement when the student has identified their chosen major. At that point, the student could be directed to a particular department/program with advisors who are specialized for those fields of study. Ideally, all students should be able to decide on their major within their first year. But if a student still has not chosen a major, they could continue with centralized advising. My concern is that centralized advising for juniors and seniors cannot be as well tuned to the career opportunities or graduate school opportunities as can advising within a department, consisting of both advising by staff advisors and faculty who can meet with students to develop their understanding of opportunities. The rationale given for this - "streamlining advising" sounds like economizing on our students. I do not favor this. The successes of our students should not be under-resourced. Advising is important so that our students know how to

proceed with their educations and careers. Ultimately, we should involve faculty in our advising, and that will, of necessity, involve specialization within a department or program. Many undergraduate students in our department come from failed attempts to major in one of the Engineering programs. This can be due to grades being deficient and many students I've spoken with feel lost with the generalized advising they received as prospective Engineering majors. Many of our students are very happy with the more specialized advising our department has been able to provide. I also have perspectives to offer from my own undergraduate education at a large state school with an excellent national ranking (UCLA) as a geology major in a small science department. I benefitted from the resources offered by the large state school but I am happy to be advised one-on-one in a small department. I was almost unaware that I was a student within a broad College of Letters and Arts (similar to the proposed College of Arts and Science) other than the broadening courses it offered, but I was keenly aware that I was a member of the Geology Department. I found this arrangement to be excellent. I expect that I would not have been pleased by a centralized advising office. And it may have been unlikely that I would have done a senior research thesis, which initiated my graduate studies and my career.

I agree that it has become bloated over time. Yet that is not due to incompetence at the Provost level. Rather it is due to empire aspirations and repeatedly inconsistent directives from the TAMU System (aka the BOR and the Chancellor's Office).

I actually agree with streamlining the activities under the Provost's purview to allow him/her to focus on academic operations and issues.

Hi. My name is [REDACTED] and I am not afraid to put my name with my comments. I am a Professor in the Department of Biology. I was recently appointed to be [REDACTED]. I was also recently selected to join the ADVANCE Workshop Committee. I really do not have the data to argue for against any of the suggested Provost level changes. However, centralizing undergraduate advising would be a nightmare. Many advising issues need to be done in a timely manner. Currently, I am able to interact face-to-face with advisors that are extremely knowledgeable. The direct contact is needed for context as each new student or curriculum issue needs customized attention within the Biology majors themselves. Centralizing would lead to a group that does not know the ins and outs of the Biology curriculum (i.e., you would have a Jack of several trades but a master of none). Centralizing would decrease the personalized communication I currently rely on for effective administrative duties in our undergraduate programs. If turnover in advisors is a concern, then you should pay them more (simple solution). I do agree that a higher level office can be created where advisors from different units could meet and coordinate. But, this higher office would simply facilitate communication and not have control and/or dictate policy or procedures.

Good recommendations for reorganizing this office. Although a large number of units in the organization chart might give the impression of bureaucracy, the separation of units is logical and can lead to effectivity. Much will depend on the personnel in the leadership positions in the Office to make it work.

General questions and concerns against the report; 1. "Based on comments during the interviews, there is a perception that the current Department of Biology is underperforming". You must provide how the current Department of Biology is underperforming. You must show all the comments related to this finding to expose what the problems are. Is there any statistical information that indicates the poor performance of the Biology Department? 2. "splitting the program between three colleges creates confusion for students about appropriate majors and creates barriers to changing majors which results in increased time to graduation". I understand and agree with this point. However, this issue can be solved by rearranging the undergraduate program without reorganizing the College/Department. This reorganization creates another huge complication not only for current and future students but also for faculty and staff. I do NOT think breaking up the organization and/or reorganization is not the ideal way to fix the problem related to the undergraduate Biology program. 3. "Most peer institutions do not have a stand-alone biology department, but universities do offer microbiology and other specialized biology programs". This is very true. Yet, this is an important and unique signature of the Biology Department. The TAMU's 'stand-alone' biology creates the diversity of academic and research programs that make the Department/College extraordinary. Why are you so afraid to be 'stand-alone'? This is the individuality of the Biology Department. Modeling success stories like Cornell is a feasible idea, but is discourteous for the legacy and accomplishment built in the Biology Department and College of Science. Personal opinion; Since I am a newly hired Assistant Professor in the Department of Biology, I have a solid reason that I chose the Biology Department as my new home. I feel the Department of Biology is a very diverse research group consisting of biological researchers from different biological research fields. I saw a beautiful collaboration and synergy within the Department. All the students and researchers can discuss and develop science together with colleagues from the different biological research fields. I like the highly diverse research environment. I am 100% sure I could develop myself by placing myself in the research

environment. Overall, from my personal vision for the Biology Department and perspective for future development, I do NOT understand the need for Departmental reorganization. The proposed plan has a high risk to lose generous and gorgeous outcomes from the Biology Department, including research publication, grants, hiring, etc.

---

From the org charts it seems like the new provost office is a gross expansion of upper administration rather than reduction of upper administration with consolidation. Would like more information about what would be cut in the consolidation or is it really an expansion of upper administrators. (E.g. elsewhere in the report, like combining the three Colleges into the College of Arts and Sciences clearly eliminates two Dean positions and so a clear cut upper administration)

---

Focus on the teaching enterprise and student success is strategic - the only concern is that the infrastructure/systems/administrative workflow to support looks to be moving out of this reporting line. Centralization of non-core operations can result in more efficiency - but I do worry about responsiveness.

---

First and foremost, some of the recommended changes make sense and will potentially result in some of the efficiencies sought. Major Concern: Centralizing undergraduate advising is fraught with numerous issues. First and foremost, accrediting bodies for college and program accreditation require knowledgeable advisors who are "actively" involved in school and program curricula. Meeting accreditation requirements of this nature would prove difficult to impossible in a centralized model. In addition, the University prides itself on being student-centered, something especially important with almost 70K students. One way the University has accomplished creating a connected student body and a sense of belonging is through advising within majors. I fear that centralized advising would result in a DMV ticket pull system where students go to the next available advisor. A sense of community and connecting with an advisor would be almost impossible to achieve. I also think this will impact the ability of the University to aid and assist at-risk students, if they are not known and connected to advisors in their major how can we ensure they receive the assistance and guidance they need early on? Potential for Improvement: It is unfortunate that an aspect of our University, the Aggie Honor System Office, was singled out in the opening of this report. I will admit this opening did not sit well as the AHSO works very hard to uphold the academic integrity of the university among students, staff, and faculty. As a member of the council and a faculty reporter, I have seen firsthand the amount of work required to adjudicate cases and think it is important to recognize that there are factors in timing that are beyond the control of AHSO staff. Namely the delay in initial reporting by faculty and delay by students to engage in the process. Both of these delays can be addressed by ensuring all are aware of the processes and procedures. For students, in particular, failure to engage in the process does impact their ability to register and move forward in their curriculum but it also ensures that they are heard by a council of peers as well as faculty. I have been on numerous cases, somewhere the student delayed out of fear only to have the outcome in their favor. I encourage university leadership to uphold the hard work of the staff in this office but also the countless student and faculty AHC members who volunteer their time to ensure academic integrity is upheld in situations where it may have fallen short in the past. For the report to suggest that delay in registration for students as the only thing that AHSO does maligns the efforts of many directly and indirectly involved with academic integrity and places the focus for improvement only for the purpose of student registration rather than a holistic approach of academic integrity and procedures.

---

Faculties have been voicing concerns about the structuring of the Provost Office. It appears that this will result in one less vote in every T&P case. The Provost has to also a Tenured faculty. The equivalence suggested in the report does not have such a requirement. Overall, I share the same concern of many that just moving blocks of units in the org tree will not bring efficiency, per se.

---

Expect to function either way. Many of the current responsibilities seem to be out of place for optimal performance. Centralized undergraduate advising might work for first year students starting in a common program, but even that would be unlikely to serve beyond the college level. My fear is that students will be dis-served if we do not have advisors who are really current on degree plan options and who also serve as counselors as they do now.

---

Eliminating the Dean of Faculties appears to be the nail in the coffin of any shred of faculty governance. DEI is boiled down to "emerging Hispanic institution." These are both very concerning recommendations.

---

Education Abroad and PPIP are credit bearing courses and thus should be under the auspices of the Provost. The Aggies Honors System Office also deals with faculty and grades and belongs in the provost's area. Transition Academic Programs was not included but again is very involved with academics. A Learning Commons is well overdue for this campus, so it was good to see it addressed. The Core Curriculum initiative should include W/C courses.

---

Divesting the role of Provost into multiple offices strikes me as a good idea. The move will enable administrators to

specialize, both their skills and knowledge bases, rather than relying one person to be responsible for too much and to be distracted from the core role of a university provost. I especially like the creation of a VP for Faculty Affairs. Such moves work to unpuzzle a complicated web that is the current reporting structure, which currently reflects the skillsets of past employees and challenges from a generation ago.

Diversity issues seem to have been forgotten in the report and given that this has historically been a weakness of TAMU it is very disappointing that this receives so little mention. Shifting the Dean of Faculty into the provost's office also seems like a poor idea. The DoF needs independence from the provost in order to serve their function as an independent voice in support or and in resolution of faculty concerns.

Diversity and Inclusion and also ADVANCE may have a stronger impact if they are under VP for Diversity. TAMU Climate, Diversity and Inclusion work may progress more if the VP for Diversity has a place in president's cabinet as direct report.

Diversity and Inclusion One of the most disappointing failures of the report is its recommendations about improving diversity, equity, and inclusion (DEI) at the university. The report is absolutely correct that Texas A&M suffers from a seriously bad reputation on DEI issues. While there have been some improvements, these have not been uniform across the university, and the fact that our demographics still do not mirror the demographics of Texas, or the United States for that matter, despite decades of at least nominal effort by administration demonstrates that we still have a long way to go. In short, this problem is nothing new. This makes the perfunctory recommendations in the MGT report to improve DEI issues on campus even more egregious. Yes, of course we need to improve our recruitment efforts. We've been saying that for decades. However, creating a new position to focus on recruitment won't move the needle significantly if we don't also address the serious problems we have with the climate at Texas A&M. It's unconscionable that the MGT Report didn't address climate at all, not even acknowledging that the university recently did an in-depth analysis of climate, with specific recommendations, not one of which is so much as mentioned by MGT. Finally, I have nothing against creating an administrative unit at Texas A&M that focuses on DEI issues. Indeed, I would wholeheartedly endorse such a recommendation. Nevertheless, MGT's rationale for moving such an office out from under the Provost is unsettling given their claim that "[t]here is a need to condense and focus the Provost's office to elevate the profile of teaching and learning within the auspices of Academic Affairs." While it can be argued that DEI issues affect far more than just teaching and learning, it cannot be argued that DEI is not integral to teaching and learning. There's a misalignment of reasoning here that is disconcerting to say the least.

Disagree with moving faculty issues out of Provost office and into a new VP position. We need shared governance in terms of choosing the VP for Faculty Affairs (like we do for Provost) if they are handling P&T. Potential problems with moving faculty issues to VP: a) Lose faculty input and voting? b) No longer a direct line to president; not dealing with faculty issues, c) A VP does not represent the faculty, but represents the president, d) Needs to be a faculty member, e) How will this affect the tenure process? In terms of removal of Diversity from this office, potential problems: a) Lumping together diversity issues with focus on undergrads - should not be compartmentalized, b) Needs to remain a major priority, c) Important for faculty recruitment and retention In terms of moving TAMIN out of Provost office: Why not affiliated with GPS? Why different than other IDPs?

Current Communication processes are very cumbersome, complicated, have no clear accountability and responsibility. This was so visible during pandemic and even now. This needs to improve to have a proper and effective administration.

Coming from a career in industry, the organization of this "corporation", when viewed from an organizational perspective is way too siloed and segmented and ripe for duplication of efforts and under utilization of resources. This segmented viewpoint of different departments / colleges has so many different duplication of department functions and college functions that trying to get anything done or moving in the overall organization moves at a pace and at staffing rates that would be unacceptable in any other industry. In the 2 decades since I came here for grad school, nothing seems to have changed with the pace of decision making and the fiefdoms of the school organizations, even though technology and management methodologies of running large organizations has dramatically changed. The weirdest part is that we are surrounded by people who are supposed experts in their fields, specifically experts in how to run organizations effectively, but yet the organization selected for this venture is a model that is stuck 50 years in the past. As a taxpayer, working here the last couple years has readjusted my thoughts on the mission of Texas A&M, as an educational organization, but as a business venture associated with costs and the duplication of effort and waste associated with the way things run here, my thoughts have also been seriously adjusted, both faculty, staff and management arrangements. Layers is a way I would classify in one word the organization here.

Changes to the Provost office remove many functions from the Provost to the President. There are two issues with this

approach, besides the fact that it is uncommon at research universities, 1) the President typically responds primarily to concerns from outside the University (media, BoR, government), and the Provost typically response to concerns from inside the University (students, faculty). The re-structuring creates potential conflict with one person being called to respond to external and internal voices simultaneously, creating issues with communication and trust. 2) It is not clear how the President would assume all of these duties in a way that would be functional. For example, the President is unlikely to have time to meet with Deans, Department Heads, and the Faculty Senate regularly, in addition to other duties. This effectively shuts down communication and shared governance within the University, and will cause confusion about mission and garble messages. One important role of the Provost is typically to develop a clear consistent message around initiatives and then to share that message with different leadership groups to create buy in and support.

---

Centralizing undergraduate advising would take an extremely important discussion (a young student deciding on her/his focus for the next few years & probably life) and pull it away from people that are most familiar with the describing the major and the types of jobs. At their best, departmental advisors can paint an optimistic and realistic picture of what lies ahead for a Freshman and, if needed, can point to one of several faculty with industry experience to assist. Phrased another way, this is "providing the best customer service" to an undergraduate by providing not just generic advice, but actual advice including listening to a student state what they might like within the major (at the same time possibly realizing that this major may not be right).

---

Centralizing undergraduate advising is a horrible idea. Advisors in departments have specialized knowledge about that department's academic program(s). Expecting an advisor to be knowledgeable about both (for example) marketing and math is not reasonable. I am surprised no mention is made of COALS efforts to centralize advising and how poorly that is going. The justification for this is that "students often change majors", but no numbers are provided. In the College of Engineering, once students are in a major around 90% of them graduate from that major. In Engineering at least, it seems that this change might benefit a small portion of the students, and hinder a much large number of students.

---

Centralizing advising would provide SIGNIFICANTLY lower quality of service and experience for undergraduate students across the entire university. Texas A&M University offers a wide variety of degree plans and individual degree plans require expert knowledge in the discipline to understand how to navigate them, tailor them, and what substitutions or transfer credits can be made. Advisors not in a student's discipline cannot be equipped to handle these questions. Additionally, advising is more than administration duties. Advisors help students navigate what internships, co-ops, research experiences, and other high impact opportunities available to them. This is discipline specific and cannot be appropriately handled by centralized advising. Students will also lose the relationships with their advisors when advising is no longer within each discipline. Instead of smaller offices that foster relationships so that students in need feel comfortable to reach out, centralized advising promotes the idea that "students are just a number." They will resist reaching out to a large office of advisors they do not know with their concerns, especially those that are related to mental health. Of all the recommendations in the report, centralizing advising is the most grievous and poses the greatest threat to the students academic well-being.

---

Centralizing advising will not create more efficiencies for students. In order to be an effective advisor the advisor has to learn the degree plans and requirements they are responsible for. Having a student walk in to talk about their degree plan to someone who is not familiar with the plan because they have to cover everything the university offers will create issues. Students will likely at some point get incorrect information because the advisor is not an expert in their needs. This will lead to longer graduation times, reduced four year graduation rates, and an impact on student success. You all may want to look at simplifying the change of major process, but centralization is not the way to do it. With this process students also need to understand what will and won't transfer, so they need to talk to an expert in the area they are transferring into.

---

Centralizing academic advising would be a disservice to students and faculty. Academic advisors need to understand the specific needs of their departments. I work closely with our academic advisors to identify high-potential students, especially ones from traditionally underrepresented groups in economics. This can only happen because our advisors have a repeated, trusting relationship with our students. Further, our advisors know a lot about our classes, requirements, and so on. Turning this into a take-a-number central office would lead to much, much worse advising. Unlike most faculty, there are actually a number of things in this report that I like. But this one is a truly terrible idea that would make the academic quality at Texas A&M appreciably worse.

---

Centralizing academic advising is a terrible idea; it sounds, as some of the recommendations in this report do, like the suggestion of someone who doesn't know how academia works. A centralized advising office will consist of people who

know a little about a lot of things, when students need the deep knowledge that local advisors can bring to bear.

---

Centralizing academic advising has the potential to be disastrous for the students in departments where primarily faculty act as advisors. There is much more to academic advising than just ensuring that a degree plan fits requirements and it seems that the authors of the report do not understand this. Perhaps your plan is to centralize the easy part of academic advising (checking degree plans) and then asking that faculty do the rest of the job without any compensation; I think it is clear that students lose in this scenario as faculty have less incentive to do a good job in their advising.

---

Centralized advising would be a disaster. Currently, a student can see the same advisor over their entire career. The advisors have specific knowledge about each major degree plan, the courses, and options. With the hundreds of degrees across campus, this knowledge would be lost. The advisors would simply be reading the information from the catalog like the student. Also, as a faculty member, I like to be able to interact with advisors about individual students and as a collection. Are there courses that students can't get into. As a department do we need to make changes. This will be lost.

---

Centralized advising in a university of this size is probably the worst thing that could happen to the students. Students in our department currently receive excellent guidance on their degrees from advisors who are intimately familiar with the details of our program including one advisor who has extensive professional background in the discipline. The advising staff are housed in our building and are accessible to our students all day with close proximity to their study space and classrooms. Department administration works closely with our advising office to manage our undergraduate program. By removing the staff from the department for advising, we would still need to hire support staff that could help with administrative aspects and community building activities for our students that are currently provided by our advising office. The office also supports ABET accreditation activities and helps to manage programs for students

---

Centralized academic advising does not take into consideration the nuances of our degree plans. Having content specialist do advising means that students receive personal advice that isn't readily apparent on a degree planner.

---

Centralize undergraduate academic advising - there is only so much centralization can do. Centralization of undergraduate advising loses the individual touch and the ability to reach out to students that have the potential to be great economists, though no understanding and appreciation for that. There have been many occasions where the academic advisers in Economics reached out to me about course details and whether certain students with non-traditional backgrounds might be able to succeed in the course. Without these individual conversations, I am afraid, we are going to leave behind students. Economics already struggles with diversity, this will make it even worse since it will cut our outreach opportunities.

---

Centralization of Academic Advising would be a huge disservice for our students. How can an advisor possibly know all of the details of courses, prerequisites, careers, electives, etc. for more than one major? Would you ask your favorite Librarian to give you advice on which Physics course to take? Each major has very specific guidelines. Even students within one major have different advising issues. The college of Engineering has general advising for freshmen. Feedback from freshmen is "frustration" because the general advisors are not capable of giving direction related to specific majors within engineering.....even though they are engineering advisors. How bad will that disconnect be when all advising is centralized?? When students finally get into their engineering major they finally have the one on one advising they need to navigate a complicated system. Students are more likely to reach out for help when they have a personal relationship with their advisor. This is a giant university. We must strive to help our students to NOT feel like one of thousands. Advising is not only academic. Advising includes talking through student troubles, providing career advice, being a support system (many students have none), encouragement for success. Every student needs an advocate. A personal advisor can be that advocate. Take a number? I'll see you next week? NO. Open office hours. Come see me whenever you need me. I'm here for you. That's what our students need. Please don't do this to our students.

---

Because their programs involve academic credit, I believe the Aggie Honor System Office, Education Abroad, and the Public Policy Internship program should remain in the Provost's office. Because one of the main objectives of the MGT recommendations is supporting/improving diversity on campus, I believe the position of Vice President for Diversity should remain elevated and report either to the President or Provost. Because the Provost is critical to the overall educational mission of the university, I believe it should be classified as an executive vice president. While I agree that consistency in academic advising could be improved, I believe a more effective strategy is through stronger policy and procedure rather than centralization. This is especially true if centralization would involve physical relocation of advisors out of their home department/college and into a common location. This would separate advisors from the students they serve and would almost certainly prevent some students from seeking assistance.

Based on my experience as a Faculty, I have heard many non-major Biology students who took my sophomore-level biology course that they often get wrong advices from their advisers (who are often non-biologists and do not know the content of what we teach). While centralizing advising may save money, I do not see how this will benefit students as this will likely increase the number of advisers advising on topics they are unfamiliar.

As the [REDACTED], I am \*highly\* concerned about recommendation #2 - Centralize UG Advising. 1) Reaching out to a different department to discuss changing major is not the big of a deal. All departments/majors have protocols for students from any other major to setup a meeting to discuss changing major - in many cases these appointments can be scheduled through online scheduling tools. We handle these requests all the time. This is not really a serious concern, and I am uncertain where this claim originated. 2) UG advisors must know all of the ins and outs of their specific programs. They must be aware of how to process degree program changes, what courses make sense for a particular set of circumstances, what minor/certificate programs make sense, and how students can get further in activities within their major. It is impossible to expect a centralized advising office to be aware of these details for every program. We already have issues even within our college (college of engineering), where first-year advisors are unaware of the details of the relatively small number of BS programs within the college. Centralizing the role of UG Advising is a step that does not offer any clear benefits to the students, and serious downsides. Following through on this action would be a serious disservice to our UG population.

As relatively new faculty (I just joined Biology in September 2021), I do not have enough insight into how the Provost Office functions or should function to provide substantial input on this section. I look forward to continuing to learn and to staying informed as I integrate into the TAMU community. Overall, removing barriers that students may face in navigating their undergraduate career (which may include changing majors several times, as I did as an undergrad) is a good goal. I did not know about the Higher Education Center until reading the report, but I look forward to learning more about its mission and to observing how it serves the surrounding community.

As chief academic officer, I believe the provost has a fundamental role in faculty affairs, including recruiting and retention, promotion and tenure, and promoting a diverse and inclusive faculty. I would prefer that these functions move from the Dean of Faculties to the Provost's office, rather than to a newly appointed VP for Faculty Affairs.

As a professor who teaches for the BIMS program, I am highly concerned that the centralized consolidation of undergraduate academic advising (Recommendation #2) will negatively impact BIMS students and likely students in other majors across campus. For BIMS students specifically, most of them are preparing for professional schools that have various strict and non-standardized requirements, and therefore these students require tailored advising specific to their planned path. This necessary tailored advising requires extensive experience and focus to learn the specifics, which is inherently at odds with a plan to consolidate advising into one general group.

As I understand, one recommendation is to consolidate IT resources at the university. This would mean no IT Department in the Mays Business School for example (note: am a faculty member in this college). This centralization would be disastrous to research faculty. We need frequent access to IT professionals to help with office computers used in research. Without our college IT folks, I know that I would be in serious trouble. Highly recommend not eliminating our college level IT department!

Among the recommendations, I am strongly opposed to "Centralize undergraduate academic advising." Departments have developed highly specialized know-how on how to advise students within a given major. Our economics advisors have deep knowledge of the courses being offered. Such courses vary greatly, for instance in the extent to which they are writing or math intensive, and a centralized advising system would not be able to distinguish the different courses and properly advise students on which ones are most appropriate given the student's strengths and weaknesses.

Agreed that reach has become too difused leading to lessened effective impact. Agreed on the DoF collapse. They, too, had become too thin and fractured. Need to emphasize the importance of CTE as they helped immensely during the transition to online and I want to keep that attention going. TTLC is very impactful and we need the full university to get behind that initiative to provide excellence in presentations and engaged attendees.

Agree there are some functions currently under the Provost that could live elsewhere. Would prefer to see P&T remain under the Provost.

Agree that the duties of the provost office have become massive and diluted. Much of the reorganization proposed in the report is fine. However, the provost is the chief academic officer of the university. Three functions that should REMAIN IN THE PROVOST OFFICE ARE; 1. Faculty Affairs, DOF, Diversity and Inclusion, and functions related to student academic success. Its a conflict of interest to have faculty affairs and DOF (which interprets and enforces the rules

related to faculty, search committees etc\_ report to an untenured person fire-able at anytime by the president (VP for faculty affairs). Diversity and inclusion SUCKS at TAMU- if we are to have any hope of increasing our student and faculty diversity- we must have a very high level office remain in charge of this area.

---

Advising for both undergraduates and graduates is very discipline specific in my experience. In our department we have numerous courses that include field trips, for example. Understanding the nature of the field course and knowing the instructors personally allows the advisor to address any issues the students or their parents may have about the course. A centralized unit could lose this local knowledge and could result in incomplete or misguided advice. At a minimum awareness of departmental-specific issues is a necessary component of any centralization. As a faculty, I also work closely with our advisor for both undergraduate and graduate courses. I rely on their knowledge of the student process to aid in getting students into the correct courses and maintaining the correct paperwork. Losing this would present more burdent for the faculty and students.

---

Abolishing the Office of Diversity and removal of an essential mission from the Provost, and splitting responsibilities into functions of Undergraduate Recruitment, Student Affairs, seems to decentralize activities (a notable deviation from all other recommendations), as well as limit the scope of focus primarily to undergraduates. Loss of focus on academic climate, including retention of graduate students and faculty, could negatively impact DEI efforts. Undergraduate retention is impacted by climate, which is in large part shaped by graduate student teaching assistants and instructional faculty. Creating offices focussed on UG recruitment and developing the "whole student" does not require abolishing the Office of Diversity, nor removing it from the Provosts purview. It appears that DEI is being buried, which in itself can be a hindrance to recruiting students that reflect the population of Texas. The rationale seems to be based on antipathy to the perception of DEI efforts by some survey respondents, rather than best practices in higher education, "Others have questions about the effectiveness of resources invested in DEI that could be used to invest broadly in education-focused endeavors for the entire student population." Texas A&M can either lead by example, or it can follow. It appears the report chose a strategy for the latter.

---

A university of this size must have a provost's office that combines academic and other functions. While our current provost's office is perhaps too big, I think it would be a mistake to take certain key areas away from the provost's office. This is particularly true of Diversity and Inclusion.

---

A centralized advising office will produce an added layer of administration between the students and the departments. This will not streamline, but generate more bureaucracy. Advising for majors in a department should occur at the department level, because most of the courses for the majors are handled within that department and information on general courses outside of the department are readily available. The current procedure to change majors could be streamlined without the formation of a centralized advising office.

---

1. The opening to Finding #1 says "the Aggie Honor System Office is still reviewing cases from Spring 2021, which has a negative impact on students' ability to enroll in Fall 2021 courses"...I understand this is true on its face but it seems disingenuous to not acknowledge that this backlog occurred in a academic year greatly affected by the pandemic. The AHSO had to quickly switch gears to move students through the process as safely as possible with all the precautions that had been put in place. 2. Finding #2 describes a "time consuming and daunting" process for students who are interested in changing majors, but the steps listed are the logical steps that students need to take, including the input from advisors who are well-acquainted with curricular requirements. It's unclear how centralizing will remove any need to review curricular requirements and discuss a potential change with an advisor, both of which can be time consuming because a student needs to consider what is gained & lost with such a move.

---

1. I do not believe the Aggie Honor System will do well if moved to Student Affairs; faculty will not respect the process, they will suspect Student Affairs will be too lenient. 2. I am concerned that this organizational structure overloads any potential provost.

---

1) Streamlining some units under the Provost office is a good idea. 2) Centralizing undergraduate academic advising is a bad one though. It has not worked at any colleges or universities this has been implemented in. It has not only hurt students but has created distrust towards advisors in places this has been implemented. It would help if majority of students are interviewed regarding this. If student success, retention and graduation on time is our goal, then centralizing advising will not help us reach the goal. Each degree curriculum varies between departments and colleges, and localizing advisors who have extensive knowledge about the curriculum helps students immensely and keeps them on path for timely graduation. A general centralized training to keep some things consistent is not a bad idea, but specialist advisors are a MUST. No amount of training will help any one advisor learn about every degree and curriculum

on campus in depth to give informed advise to students. This move will also decrease the access to advisors and increase waiting times to meet with them.

1) Reorganization and streamlining of some units under the Provost office is a good idea. 2) Recommendation on centralizing undergraduate academic advising is the worst idea. It has not worked at any colleges or universities this has been implemented in. It has not only hurt students but has created distrust towards advisers in places this has been implemented. If student success, retention and graduation on time is our goal then centralizing advising will not help us reach the goal. Each degree curriculum varies between departments and colleges and localizing advisors who have extensive knowledge about the curriculum helps students immensely and keeps them on path for timely graduation. No amount of training will help any one advisor learn about every degree and curriculum on campus in depth to give informed advise to students. It will also decrease the access to advisors and increase waiting times to meet with them.

-Do not eliminate the strength of the Provost network as they provide great benefit to A&M ( ) It appears as though previous Vice Provosts are being converted over to Vice Presidents. More than the semantics of their role, be sure to retain their effectiveness while pursuing efficiency.

“Operational structure is decentralized” as is all universities—on purpose. This report is written like a university is a business or military. I imagine that MGT writes similar reports for all universities, regardless of their unique strengths and weaknesses. MGT advocates “increasing the role of the President’s office.” That is the last thing faculty needs, especially since our current president seems so ineffectual. In the decades I have been here we only have had one outstanding president—Robert Gates. Frank Vandiver was good, interested in the faculty and their thoughts. Gates knew that the ratings are based largely on the student-faculty ratio, so he hired 450 new faculty in 3 or 4 years and Texas A&M for the first time broke into the top 20 public universities, number 19. Number 18 was U.T. The Great Recession, and then Sharp needed money so he let in another 20,000 students. We dropped in ratings close to 30. Well Tex, Bigger is Better, just ask Harvard, or Michigan, or Berkeley, or... One of the main problems with TAMU is it already is a Top Down system. We don't need a more powerful President's Office. The Provost used to represent faculty. ( )

whole lot of moving things around but no real change. Just another way of avoiding accountability for the last President's decisions. Improving diversity and inclusion goes hand in hand with Academic affairs and student success. Seems short sighted to segregate them, unless the real goal is to undermine diversity initiatives per Chancellor's fantasy. Recommendation 2: It would be good to add a centralized service, but best to keep advisors at the college level as well, as they are better familiar with the faculty and culture of each place, and can advise better

1. Focusing only on student success in the Provost’s office is without precedent at a university – the head academic at an institution should be concerned about students AND faculty. A more successful approach would include reorganizing or reprioritizing but not separating, since they are inextricably linked. In addition, a lack of definition of student success and the notion that student success should look exactly the same in every department and program will lead to graduates who are unable to compete in the job market. 2. Eliminating the Dean of Faculties position sends the message that faculty voices do not matter and that faculty are not important parts of the university. This message will also be heard by our peer institutions in the competition for faculty talent. 3. Moving research communications to the generic marketing and communications department will eliminate any possibility of nuanced communications coming from the university. Close collaborations between experts in research communications and researchers are essential, and centralizing all marketing will take that possibility away. 4. The reference to a single report of a case study of teaching undergraduates about lean principles suggests that the rationale for this type of overhaul of a large and complicated institution is not well-supported and is likely to fail. 5. Centralizing academic advising will lead to even more confusion and waste of student time. Academic advising requires deep knowledge not only of the major, the departments, and the college, but also of the field the student hopes to enter upon graduation. This will not happen in centralized advising. In addition, if centralized processes are also to be physically centralized, this will disproportionately affect first generation students and students who are still considering their career options, since they will be even less likely to seek help from a large office not associated with their major or program of study. 6. Although the efforts to enhance the campus at McAllen are welcomed, the focus on administrative support by changing the reporting structure demonstrates a lack of understanding about the role of faculty in teaching: reporting structure doesn’t teach students. And extension programs don’t create students with degrees that can get jobs.

## Provost Office - Staff

Please provide your comments related to the Provost Office:

•What is the plan to phase in these changes without throwing all the departments involved into University-wide growing pains? •Why were no new success centers recommended if there is now a new A. Provost for them? I would like to specifically recommend a success center for students whose first language is not English. [REDACTED] •The human element in academic advising was ignored in this report. Academic advisors are on the first lines of student success. They know what classes to take with other classes, they know which students would mold well with which professors. They know things that a computer program can't replicate under a centralized system. This will accomplish the goal of having fewer students switch majors because they will be leaving the university.

"Talent management is a critical issue." Please allow remote work as long as it does not affect productivity. At least conduct a trial and let the evidence guide future policy.

n/a

looking forward to the changes coming.

Yes, I completely agree that the Provost's office has become too large, and should be scaled back, and I agree with the assessment provided. I do NOT agree that advising should be centralized, nor do I believe that the HEC at McAllen should report to the Provost (it should go to external affairs).

YES! Please split up this huge office! As mentioned, some of departments within the Provost's Office better align with other offices around campus. This would make it less confusing for students, faculty, and staff and make it easier for faculty and staff to refer students to the appropriate office.

With regards to Recommendation # 2 Centralize Undergraduate Academic Advising. Need to further define what "centralized advising means". I think a model that works is having some degree of centralized command and control but decentralized execution. For instance, some colleges have advising centralized under the Dean's office but the actual advising centers are co-located with the the departments in order to ensure quality of service to students and faculty. In my experience as a Director of Advising supporting the largest Department on campus, it critical to be co-located because of the numerous overlapping issues that need to be coordinated on a daily basis. While the report cites Change of Major as a reason to centralize, that is just one aspect of a very dynamic advising mission. I think there needs to be centralization when it comes to policy, practices and activities that are "universal" advising functions i.e. use of Navigate, etc. What has happened is that some advising policy and practices were seen more as suggestions and largely ignored by some colleges / departments. What needs to happen is establishing clear policies and practices that are required of all advising offices and enforcing those policies and practices and the University level but executing the advising functions in a decentralized manner. I recommend looking at the military construct where you have centralized functional areas such as administrative, logistical, communication etc. that have a "functional area chain of command" but also have a administrative chain of of command that is focused on meeting the needs of the specific unit which can differ from unit to unit. The "functional chain of command" ensures compliance with policies and practices that govern that entire organization but the administrative chain of command ensures the specific academic advising needs of the students are met within the college/ department.

With regards to Centralized Academic Advising: What would this look like with a campus as big as ours? Will advisors be responsible for all majors, college-specific? Will all advising be in one location? Even if advisors are divided into larger groups (colleges) this is still a lot of majors and programs that advisors would then be required to know in detail. An aspect of my job that I love is getting to know our students and connecting them with the Department. We call it their "home Department" because it should be a place where they feel comfortable and have a familiar face to turn to if they ever have questions or concerns about anything. My fear is that if advising is centralized on a larger scale then we will lose this connection and academic advising will become more concerned with getting people in and out rather than building relationships, teaching them about their degree plan and knowing the curriculum, and supporting them in their academic endeavors throughout their time here.

Why was the Division of IT not looked at nor discussed within this report?

---

Why 2 IT groups (Provost\_IT, DIV\_IT? Never made any sense to me.

---

Who will handle faculty promotion & tenure? Will that become a Faculty Affairs process?

---

While some reorganization may be warranted, to cull the herd would cause great disruption in the ability of employees to do their jobs.

---

While centralized advising sounds good in theory, I am not convinced it is best for Texas A&M University (TAMU). The report suggests that students need a more seamless way to change majors. However, changing majors is not something that should be done on a whim. Students need guided, knowledgeable advising to do that. Transition Academic Programs (TAP) does a great job of helping students through this process. The Office for Student Success has provided data in the past that shows that the sooner students who need to change majors, are able to move to General Studies in TAP, the better they progress towards degree. While the wording on the Undergraduate Studies page could use some tweaking, TAP is a one-stop place for students to get assistance in changing majors. The TAP advisors are likely the only advisors on campus who are already knowledgeable about University-wide change of major processes. My suggestion would be to have centralized advising in each of the colleges, as students need college and department specific advising for their majors and give TAP more authority over the change of major process. Additionally, I am not making the connection with how moving the reporting line of certain offices will make a difference if the structure within those offices are not changing. I can understand the Academic Success Center reporting to the Associate Provost for Academic Affairs and Student Success; it makes sense because of the name. However, just changing who that office reports to will not change the outcomes of those offices. From what I see and the data out there, these offices are doing a really good job supporting students and helping them success right where they are. I also believe the VP for Diversity needs to continue to be an elevated position, especially if the goal is for the student population, faculty and staff to mirror the population of the state. I don't understand how a VP reports to another VP.

---

While I appreciate the intent of simplifying student processes, I have significant concerns about finding & recommendation #2. As an academic advisor, we do not require students to meet with us if they wish to change their major, and the steps of reviewing change requirements and meeting with an advisor in the intended major are really one and the same. While I acknowledge there are a plethora of opportunities to provide professional development for academic advisors when it comes to students changing majors, I don't believe this is justification for a wholesale structural change to advising. I am fortunate to work in an academic department where my voice as an advisor is embraced and sought, and I am concerned about how this might change if reporting lines are centralized. I work to be an excellent advisor to my students, and part of that commitment comes from our shared membership in the department. I know the faculty working with students and can reach out with concerns without being perceived as meddling or overstepping my place. My relationship with my academic department is WHY I find my role fulfilling and engaging - I am constantly learning and growing along with the program.

---

While I agree that student academic success is incredibly important, I am unsure how creating a new complex bureaucracy will be better than the complex bureaucracy being replaced under the Office of the Provost. Enrollment Management should remain under the Office of the Provost and should not be subject to a matrix decision approach.

---

While I agree it would be easier for students if offices were in one place, there is also the issue of the expanse of our campus. Majors such as business and ag with courses and libraries/facilities central to their degrees primarily on West Campus would be at issue having to go to central campus for advising when everything else they do is on west campus, and other majors would be at issue if these offices were too far from their major's central buildings. Decentralized advising may also result in students not getting the correct information.

---

When one thinks of the role of an academic advisor, the automatic assumption is that all we do is help students pick classes to register for each semester. While this is partly true, advisors do so much more. Academic advising has been a part of my professional life for 17 years. Fourteen of those years, I have proudly served the students and advisors at Texas A&M University. Most of my career at this university has been in the College of Agriculture and Life Sciences. I have advised at the departmental level and worked in the Dean's Office for nine years. In those nine years, I have had the honor and privilege of working with some of the university's best advisors as a Program Manager and most recently, Director of Academic Advising. I have seen two different advising models applied in our college with both pros and cons to each of them. Historically, the college had a decentralized model that allowed for departments to house their own advisors. Advisors advised on the programs in the departments they were part of and worked closely with faculty

members within that department. Students received individualized advising from their advisors that aided in their overall success. However, the advisor's jobs often included "other duties as assigned." These duties ranged from being a departmental room scheduler, assessment liaison, recruiter, webmaster, and even someone that was tasked to clean the breakroom. In addition, there was a widespread issue of inequity in pay and titles among advisors. With no clear career ladder, nor pay that was equitable based on education and years of service, many advisors were underpaid or overpaid depending on the department they were part of. These inequities and other duties created a divide among advisors and our college recognized this. In 2020, the college centralized academic advising at the college level. While changing a model during a pandemic brought its own unique challenges, it was ultimately the best thing for our college, the university, and most importantly our students. Our model created advising centers by combining advising for similar academic disciplines among our departments. Our advisors are tasked with academic advising and only academic advising. We have been able to create a student to advisor ratio of approximately 300 students to one advisor. This ratio allows for students to receive more proactive advising, better communication, and an overall more individualized advising experience. While our advisors are content experts for one or more degree programs, the creation of advising centers has also allowed our advisors to cross-train among programs so students are continually served in the instance their advisor is not available. While the advisors no longer report to a specific department, our centers are still embedded in our academic departments. This has allowed our advisors to continue maintaining and building effective relationships with faculty members in our college. These relationships play an integral role in a student's success as it allows our advisors to advocate for students when faculty support is needed. In addition, they can still have relationships with their fellow college advisors that play an integral role when a student needs assistance from another program. We encourage and support the professional development of our advisors as continued learning translates to the most accurate information and services provided to our students. With the restructuring of our college advising model, one of the most important pieces that came from it was the creation of a clear career ladder with equitable pay among our advisors. We were able to create the Senior Academic Advisor position for each advising center. This position not only advises students but also administratively runs the center while mentoring and guiding the advisors they supervise. This role allows for an individual to gain important and necessary supervisory skills that will hopefully open other doors for them throughout the university. Our advisors are continually reviewed by those directly related to advising and help determine future promotions and pay based on their performance in their advising center. Our college believes in advising and our pay structure reflects the respect our administration has for the role that our advisors play in a student's overall success at the university. This past year has proven that a centralized model of academic advising is beneficial to the many different stakeholders at this university. However, I believe that going to a larger, centralized model at the university level could be problematic and could lead to an impersonal, numbers-driven advising experience for students. While I believe that consistency is needed in structure among our colleges, I also believe that this can be created by having academic advising centralized at the college level. This would allow all students at the university to be in an environment where they are assisted by advisors who are student success-driven and play an integral role within their college. Advisors currently play a role when there are questions from curriculum committees on course sequencing and potential bottlenecks changes could have on a student's progress. They are able to give feedback on the semester course schedule for issues such as required courses at the same time and the projected need for seats in a course. By centralizing at the university level, advisors would be removed from many of these interactions they have with faculty and administrators. The removal of them from those conversations could create barriers to a student's progress towards a degree. These barriers ultimately would have a negative impact on the overall retention and graduation of students at our university. The centralization of advising at the university level could remove the specialized services, both on the front lines and behind the scenes, that so many of our students now receive. While it is still unclear of the recommended reporting structure of centralized advising at the university level, the current office that has overseen advising at the university these past few years have lacked in the understanding of this profession. This office has created meetings, committees, task forces, and programs aimed at incorporating feedback from the advising community. However, these efforts have proved to be unnecessary and time-consuming as most of the feedback and/or information they receive is disregarded in final decisions. This is an office that is removed from the day-to-day advising of students and is often not effective when developing or implementing policies or programs related to academic advising. If this office will maintain a part in overseeing academic advising at the university, I encourage university leadership to look deeper into their role and provide an opportunity for further feedback from the university community. I believe that much of what was addressed in the report related to the rationale behind centralizing at the university could still be fixed by centralizing at the college level but also allowing

Transition Academic Programs (TAP) to have a greater role in working with undecided students. Many of our new students come to Texas A&M in a major that they were either forced to choose or had to choose to be able to start as a freshman. Allowing students to come in as undecided would allow them to fully research a variety of fields and choose a major that best suits their interests and aspirations. For those that do have a declared major but need to change, I believe that creating college liaisons in TAP would allow these students to have a transition major to change into while working to meet the requirements to change into their desired program. It would also allow them to receive advice towards a variety of programs in a certain college or discipline area to help them make an educated decision on which program best fits their educational and career goals. A couple of years ago, at a new student conference presentation to parents and students, I was able to describe what is that we do. I compared our role to the job that a sports or entertainment agent does for their clients. We negotiate with our counterparts around this university when a student needs assistance getting into a class. We work with their faculty members and advocate for them inside and outside of the classroom. We talk with them when life may seem to be going in a different direction than they planned and help them get to the services they need to get them through a trying time. We point them in the direction of opportunities outside of the classroom such as study abroad, research, internships, and post-graduation jobs. And most importantly, we celebrate the ultimate win when they finish their final semester and walk across that stage to get their diploma. Advisors play an integral role at this university that not only aids in a student's path towards graduation but also helps them create a sense of belongingness. Through individualized service to each student, we help them feel at home in a large university by making it feel not that big. I hope that input such as mine is taken into consideration as proposed changes are reviewed and made by our university's administration.

What would the centralization of advising look like? The report is still vague and does not explain what this structure would entail. When reading the report, I envision all advisors from across campus advising for all majors offered at this university. If this is what the consultants are recommending, then the centralization of advising would be detrimental and devastating to students. This structure that I am envisioning based on the report, reminds me of what we see at community colleges or in General Studies. In these structures you have advisors trying to advise for a variety of different programs and transfer pathways. Inevitably, students are misadvised and given inaccurate information, because there is no way one person can know all the nuances or requirements for the number of degrees offered at TAMU. One of the majors I advise for is very interdisciplinary, and no two students will have the same degree as there are multiple variations. Unlike other degrees at this university that are very straightforward or sequenced, the major I advise for is not. I could not imagine a person that has no prior knowledge of our department, courses, faculty, and more, stepping in to advise a student over these requirements. We consider ourselves subject matter experts, because of the time we spend working with our programs and students. We pride ourselves on making students feel like this is their home away from home. Students receive a personalized experience when meeting with us, and do not feel like just another number. Centralizing advising would take that away. Special student circumstances and student issues need to also be considered. When students are dealing with sensitive topics or issues, they are more comfortable speaking with someone they know and who knows them. Taking away the sense of personalization could cause a ripple effect where students are not going to be as forthcoming with advisors, they are not familiar with and who they have not created a relationship with. I can say from experience that students can feel this way, as was evident when I was an advisor in the College of Engineering (EASA). I worked with the General Engineering students and due to the number of students we admitted each academic year (in large part due to the initiative of 25 by 25), students felt like a number. We were expected to advise students based on a shared first year curriculum, yet we were also expected to know about all the different majors within the college. In my opinion, this was an impossible feat, as the college has over 20 majors and there was no way we could become experts in each field. Students did not receive personalized advising. There was no way they could given the number of students in the first-year program and the number of advisors tasked to do this. One of the primary reasons I left engineering, was because I wanted to build a rapport with students. I wanted the ability to know my students and their story, to understand where they were coming from and their needs, and to watch them start their academic career at TAMU and continue down a trajectory towards graduation. How would centralizing impact our ties and relationships with our departments? In our current structure, we are very involved with our department as far as working with administration on course offerings, recruiting efforts, enrollment management and more. When we have student issues, we work with our administration (Undergraduate Director and Department Head) to solve them, since again, they know our students and degree requirements. I also work closely with our Director of Undergraduate Studies, and he relies heavily on advising for his job as well. Centralizing advising will sever this relationship and will distance advisors from their departments, who support them in so many ways. In terms of

streamlining the change of major process, while the Office of Undergraduate Studies lists five different steps, the reality is that the process is much simpler. Students do not necessarily have to meet with their current advisors. In fact, most of the students I meet with for change of major come directly to me and bypass their current advisor. When I meet with the students, we then discuss the change of major process and whether they are eligible. If not, we discuss General Studies as a possible option or other majors. I do not feel that the process is as complicated as it is made out to be. However, why would you want students going to advisors who have no expertise in what a major requires.

Centralization is a reoccurring theme throughout this report, but I wonder if higher-level administration, or the consultants really understand what happens at an advising level. While I understand wanting to keep up with other institutions of higher education and modernize our practices, TAMU is a university based on traditions, a network, and a sense of connectedness. When you centralize, you take away personalization and in a sense accessibility.

We are lucky to have currently a President with a strong practical background /experience with academia. That would not necessarily be so in the future where the President could be a strong administrator but not academic. Removing faculty affairs from the Provost who always has been, and should be, a strong academic and passing the same to a potentially weak-in-academics President may amount to placing such an important role in the wrong office. I suggest Faculty affairs remain under the Provost.

To read the Provost office were still reviewing cases from the spring 2021 is enlightening & concerning – is this due to staffing shortage brought on by continual hiring freezes? To read that Open Access Labs, Enterprise Information Systems and Instructional Media Services is suggested to move back to I.T. is interesting. These areas were once under I.T. before. I would question why they were moved out once before moving them back. I suspect it would work well in either area. The constant back and forth is mind boggling, not to mention how much these changes in manpower alone must cost.

This section has a lot of recommendations. While the concept of narrowing the focus of the Provost sound good, this is a large amount of change. I would be shocked if this level of change could be accomplished by September 1, 2022. I would be very cautious in implementing these recommendations. There are numerous pitfalls to each recommendation any wrong decisions can be very costly in terms of both reputation and money.

This offers an opportunity to center the institution's effort related to student/academic success. My interpretation of the proposal is this would primarily be programs, collaborations, and outcomes focused on the student learning, not instructor teaching per se. The Center for Teaching Excellence interacts solely with faculty/instructors (and graduate students related to teaching). Certainly CTE supports and contributes to student learning of student/academic success. I also believe this mission would continue to be supported in however the CTE is relocated. If it is important for CTE to remain under the Provost, then I would recommend relocating under the VP for Academic Affairs & Strategic Initiatives, instead of under the AP for Student Success (which is proposed). CTE is invested in many ongoing and emerging "academic affairs & strategic initiatives" (i.e., Program ReDesign, Mentoring, English Language...) areas. To me, that is more seamless and maintains the emphasis on faculty/instructors (and graduate students related to teaching). The support for Higher Education campus at McAllen is important. This campus' faculty and students and community would offer more valuable insight.

This is a much needed change. Over the past 4-5 years the Provost Office has acquired multiple units across campus and they detract from the proven mission of the Provost Office. Additionally, the McAllen Campus operations should be elevated, but should not reside in the Provost Office - they have proven over the last 4 years that this campus cannot grow under the current structure and leadership. The McAllen Higher Education Learning Center should be relocated to the new VP for Academic and Strategic Collaborations as this should be viewed as a community impact program and asset to the community of McAllen. This area cannot be treated as a Branch Campus (like Galveston or Qatar). It will never be successful in the current model. It must provide value for Texas A&M as well as the Rio Grande Valley and the McAllen community.

This is a logical and admirable goal in an of itself but the "focus on academic success" is an unclear measure. Numerous units listed to be removed from the Provosts Office seem to directly impact the academic offerings on our campus but little explanation is given as to why some offices were removed and some were left behind. If "Academic Success" is only to be deemed those offices in a College unit, then that assumes that the Labs, Media Services, etc. that support that unit are not directly tied to their success. Will they be as responsive when they are no longer in the same reporting chain? Further centralizing advising does not seem to support the prevention of students changing majors. Generalists across 120 majors run the risk of not being able to recognize a student's fit to a specific major and more frighteningly the potential to misadvise students based on unique degree requirements. It could very well solve issues that definitely exist

around advising availability and the differing quality of student experiences across campus but again, this isn't the stated goal.

They are way too big and way too powerful. They are so busy, they can rarely focus on being strategic in their core mission, student academic success. A report like this needed to happen five years ago. I support the idea of creating a more balanced Texas A&M.

These changes seem logical. I have only a few thoughts: 1) Should enrollment management align with recruitment operations in the Academic and Strategic Partnerships vs. the division of Finance? 2) If academic advising for undergraduates is to become simpler for students to use, someone needs to address the multitude of major specific elements that have to be kept track of by each departmental advisor. Having dotted lines to departments may work well, but true efficiencies won't be realized until someone addresses the massive customization of academic programs by department/major. Any student who has ever tried to change majors knows this. The advisors in Transition Academic Programs would have excellent insight to these issues. The elevation of the Diversity Office to report through to the President seems like a logical next step for it.

There seems to be good recommendations in the organizational structure, with a focus on student success through a more streamlined Provost Office.

There seemed to be several centers or distinct offices under the existing Provost umbrella that better align with other areas (I.T., Student Affairs) etc --- the plan to move them seems well founded and necessary to streamline the true duties of the Office of the Provost

There are many concerns/questions around centralizing advising - will the advisors still be located in each college for easier access by students and relationship-building with the departments they serve, or will they all be centrally located in one building? Will advisors still be subject matter experts for individual departments or will they cover more departments? This could create less availability to students and reduce the amount of detailed knowledge they can provide.

The statements in Recommendation #2, Finding #2, Rationale #2 appear inaccurate. In our experience, changing majors, for both undergraduate and graduate students, is as simple as having students fill out a digital form and having it approved by their current majoring department and the new department they desire to change to. This change can be applied within a few business days thereafter once this step is taken. Because of this inaccuracy, I do not see the pressing need to centralize undergraduate advising. Doing so would eliminate the advisors' intimacy with a department in which they have in-depth knowledge of, and force them to be more generalized. I would foresee this recommendation creating more problems than preventing.

The report is not clear whether the centralization of UG advising is in terms of reporting lines or physical relocation, but advisors should remain physically dispersed throughout campus in their college buildings. In Fall 2020 the College of Architecture's Student Services office gave a voluntary, anonymous survey to undergraduate students after advising appointments. We received a total of 243 responses. Only 4% (10 students) said they discussed change of major during their appointment. Instead, most appointments related to course registration (60%) and degree plans or minors (53%). Students could select more than one topic, which is why the percentages sum to more than 100. 92% said "advisor was helpful in resolving my problems, addressing concerns, and answering questions." 94% said "advisor was knowledgeable in discussing my degree plan and answering questions." 96% were satisfied overall with their most recent advising session. These data indicate: 1) that the current structure for advising is highly effective, in part due to having highly knowledgeable advising professionals equipped to answer discipline-specific questions; 2) that students are satisfied with their advising experience in the College of Architecture; and 3) that the advising process for change of major is not a major function in terms of number or volume of appointments. Building relationships with their students is fundamental to effective advising, and our advisors are able to do that in part because their offices are conveniently located where students can drop in and because they get to see the same students throughout the students' careers at A&M. Our advisors are deeply knowledgeable about their program curriculum and processes at A&M, and this knowledge benefits the entire department and college, not only students. For example, one program with a new faculty director was recently considering significant curricular changes, and it was our advisor who was able to consult and provide advice to the department about how the changes would affect students since the faculty member was inexperienced and unfamiliar with university requirements around core curriculum, W/C requirements, etc.

The report does not provide any cost-benefit analysis. It is easy to move offices on paper but who will pay for the movement of the offices, inefficiencies created as a result of new work flow etc.

The reorganization the report describes would be a massive undertaking. It would take strong leadership and accountability to keep people from getting frustrated and leaving. Yes, TAMU is made up of silos. However the silos developed because of pressures exerted by being a state institution which put significant constraints on accountability and change. I'm not sure the writers of this report can fully grasp how TAMU became this way just in the few months they were involved in gathering their info. I work in research and we've discussed the benefits of centralization of research services for the entire time I've been here. Reasons I've seen why centralization hasn't occurred is because college level leadership doesn't want to give up the power, money, and control that centralization would entail. In addition, it's difficult for higher level administrators and leaders to force significant change upon college Deans because Deans and college faculty have a strong say in whether higher level leaders keep their job or not. Bottom line - it's pretty easy to come up with a new org chart but it would be very difficult to implement the organizational change the report recommends.

The reorganization of this office is concerning on many levels, but specifically because it seems to have left out any mention of Transition Academic Programs (TAP). This office houses the General Studies (GEST) and TEAM majors and runs the Aggie Gateway to Success program. These majors and programs serve students who are moving between and/or wanting to learn more about majors/colleges via the GEST major as well as students who enter the university as either partial (TEAM) or provisional (Aggie Gateway to Success) admits. Collectively TAP serves some 2000 students who are looking for new major homes. Given the comprehensive nature of the report and the sweeping changes to the Provost Office I was surprised that TAP was not mentioned and was not listed on the proposed organizational chart. I fear it might have been overlooked, or might have been assumed to be part of another program. If it was not overlooked then I have to wonder where the services that TAP provides might be located in the proposed scenario.

The reorganization of the provost office seems to better fit the mission of the provost in the academic setting. Recommendations are provided for the academic advising to become centralized. How will this impact the structure of academic advising or student success programs on the Galveston Campus?

The provost office definitely needs restructuring and processes need to be refined so workflows are more efficient. It seems like so many things get stuck at the Provost's office and there is zero transparency. I don't really agree with centralized undergraduate academic advising without really thinking it through.

The proposed restructure and re-alignment will increase efficiency, especially in the areas of faculty hiring, student employment. The shift of immigration services will need to be closely communicated with the other A&M System members who use these services. The idea to centralize undergraduate academic advising may have an impact on the colleges specifically and it is the hope that college will maintain some of this oversight to maintain and/or reach enrollment goals. Having all academic advisors connected is an excellent idea, but a truly centralized approach to this may impact our student growth.

The proposed move of the Center for teaching excellence to the Associate Provost for Student Success does not make sense. This is a service for Faculty and not for students.

The process of changing majors does not require the 5 steps, though doing each step is encouraged. A student does not have to meet with anyone if they do not want to. They can simply go to the University's change of major website <https://us.tamu.edu/Change-of-Major> to find out the requirements to change their major. They then fill out the universal change of major application via Howdy and follow the university (University wide) change of major application opening and closing dates. \_\_\_\_\_ The College of Agriculture and Life Sciences changed to centralized advising at the College level in summer of 2020. Advisors were changed from reporting to the Department level to reporting to the College level. The structure that we now have includes a Director of Academic Advising who reports to our Associate Dean for Academic Affairs. The Director is the supervisor to the Senior Academic Advisor for each of the advising centers. The Senior Academic Advisor is the supervisor for the Academic Advisor 1-4, as applicable in each center. Each center is comprised of like departments and each center is a similar student load. This structure has allowed for streamlined career ladders, salaries, advising policies, student to advisor ratios, etc. Student receive a better advising experience with this College centralized structure because they now have the flexibility to speak to numerous advisors within their center and Advisors are more familiar with more curricula. We can now advise better and more efficiently. Centralizing at the University level would be a disservice for several reasons. Losing the College and Department's would damage the student experience, especially regarding advising. It is important to have the Advisors be involved with the Departments (not report to), to know the classes well (what type of assignments they do, which classes not to take together, etc.), to know and interact with the faculty, to know the departmental student organizations, and more. These all allows better advising. Having Advisors be responsible for being content experts on more than a few departments

worth of curricula would cause quality to decrease. There is no way that advisors could give the thoughtful time and expertise to their job if they are expected to know everything. There would be more of a chance for mistakes to be made during advising experiences. There are positive reasons for students to be able to see more than one advisor, but I believe that if you give them too many options, they will lose the relationship building that can come from advising. If students do not see the same advisor consistently, they will lose that opportunity and trust. It is very important to have a unified process for advising on-boarding, professional development, and accountability. I would stress the importance of getting anonymous feedback from Advisors about to which office they report if centralized, their thoughts on what they see as important on-boarding, professional development opportunities, career ladder and pay scales. I believe many Advisors would have a very strong opinion on which office is "in charge" of all the Advisors at the University. I do not believe you will get truthful feedback about this unless you ask for anonymous feedback. If advising changed to university wide centralized advising, there is the question of which office would be the supervisors of all the advisors. I would be very hesitant to put the Office for Student Success (OSS) as the boss/supervisor/head of all advisors. This is a concern to me because it is my belief that OSS is too far removed from the student and advisor experience to give good insight into the needs of advisors and their students. We have seen time and time again where there is a disconnect between what OSS believes should occur and what Advisors believe should occur. When OSS has asked for advisor input in the past, whether it be sitting on committees or just general feedback on topics, the advisor input was not considered when making future decisions. At times, feedback is not solicited at all. Advisors are on the front lines with students, and we know what our students need and what we as advisors need. My last note, is that If centralization occurs at the University or College levels, please do not make these changes through Reduction In Force then having people reapply to the newly centralized positions. We have seen this in the past and it has cause severe consequences, to include but not limited to: loss in trust between employee and employer; poor mental and physical health of not only RIF'ed employees but the supervisors who had to inform the employees; low morale; and overall bad reputation.

---

The primary function of academic advising is to provide students with information regarding the courses and actions they should take to be successful in their chosen major. Achieving this primary function requires the advisors to have extensive detailed knowledge of the requirements for the major that they are advising. TAMU offers 112 discrete undergraduate degrees/majors. If UG academic advising is centralized to serve students from all majors, each advisor would have to possess detailed knowledge of all 112 majors. This is not a realistic expectation. An alternative would be for centralized advisors to specialize in specific majors or colleges – similar to the current department/college advising structure. While it is certainly desirable to assist students in changes of major, this is a lower level function of advising. Facilitating changes of major could probably be done with an online app that would guide the students in a step by step process with specific requirements of each receiving major/college. In summary, the recommendation to centralize academic advising advances a lower level function (changing majors) at the expense of the primary function of advising. That is, the tail is wagging the dog.

---

The previous fact-finding missions to Qatar carried out by the Provost's office have been ineffective. Holding a public and, group townhall meeting in a public form has a chilling effect, and people do not share their true perspective. No one is willing to air grievances or frustrations in a public forum like that. It is also unclear as to how the reorganization of academic advising will affect the Qatar campus. There is already an advisor in the TSO providing advising to TAMUQ students remotely. Will TAMUQ advising be centralized to main campus as well? The same goes for all other TAMUQ services like HR, Finance, etc.

---

The premise for recommending centralized advising seems flawed. "Students often change their major" and the cited source do not include the percentage of Texas A&M undergraduates who even change their major in their time at Texas A&M. While "some" students change their major, it seems like a MAJOR change, for a small subset of students. The answer to the change of curriculum issues should be to look at the change of curriculum process, not upend customized student support. The value add of advising is not creating a catch all system - it's transformational when it's done in the context of personal relationship and narrowly tailored to the individual students' goals for their academic, personal, and professional life at Texas A&M. Additionally, effective advising is closely tied to deep knowledge of programs and opportunities within a students' college. When I meet with a student, I am not only helping them pick classes. I am connecting them with alumni within from our program, pointing them towards internship opportunities, and telling them about minors and organizations that support their interests. The value add comes in customization and personalization, not increased generalization.

---

The plan in the report of putting business affairs back under the president and keeping the provost functions mainly academic seemed logical.

The office of the provost has in the time that I have been here been one of the more successful shared services providers. Although some of the offices proposed make more sense in other portions of the university, the support structure in the provost office has been a better place for these organizations. Aggie Honor System Office, is a critical part of the university and should be more featured in both undergraduate and graduate education here at A&M. The A&M Career Center has in my opinion been underwhelming in the support that I received as a Technology management major, however that was more due to poor understanding in that unit of what my major was. Diversity and Inclusion should be a balanced but important priority in the university and understandably should be a part of the new Strategic Collaborations group. I do not have a lot of perspective on some of the movement of Faculty Affairs responsibilities except that if this office is created it needs to have a large buy in from faculty and hopefully invest time in evaluating the tenure structure at Texas A&M and work towards a better overall environment for staff and students when interacting with faculty members.

---

The new organizational structure that has been suggested for the Provost Office seems to make more sense, and I like the idea of the creation of an Associate Provost for student success. Centralization of undergraduate academic advising would take away from personal relationships that many students form with their advisors, and it would take away from specific knowledge about courses/professors/degree plans that departmental advisors have and use to help their students.

---

The idea of centralizing the advising departments is very distressing. As a former student and a staff member in an advising office (the same advising office) for 27 years, I can not fathom how someone can justify that centralization is better than individual advising. Texas A&M University prides itself on the Aggie Spirit and being one big Aggie Family. By centralizing advising, you are definitely getting rid of that "family" facet. How is a student supposed to feel welcomed, part of a family if they don't have that one person, that one special department, that makes them feel welcomed? It is very disturbing to this fellow Aggie that our new president is starting her term by trying to change what Texas A&M is all about. As an advisor, how can I consciously encourage students to want to become part of our Aggie family when I know with this centralization, that is far from what it will be. Sincerely, A VERY concerned former Aggie (Class of '93) and 27 yr advising staff member at TAMU

---

The comments related overall to Provost Office sounded fair and enlightening. To read they were still reviewing cases from spring of 2021 seems to reflect a shortage of staffing, and appears to be the continued result of reviews performed many years ago at TAMU and ongoing hiring freezes. Also to read that the conclusion to place Open Access Labs back to I.T. makes sense. They resided in this area once before and it worked well.

---

The changes suggested to this division make sense, however, the current changes that have been in place are slightly confusing when you compare them to the propositions in this report.

---

The centralization of advising at the University level is not compatible with advising success for an institution of our size and specialization. When looking at completely centralized advising models, centralization at a community college and/or smaller institution might be feasible. When we think of a successful centralized model for advising, the College of Agriculture and Life Sciences [COALS] has done a phenomenal job. The creation of Centers has allowed for centralization with specialization. Advisors are able to become the content specific experts for their student caseload while keeping student caseload at a sustainable level. This type of centralization has reduced the competition for caseload, increased the sharing of best practices, minimized student confusion, and promoted a well-rounded team of student success minded advisors. With that being said, should University-wide advising centralization be deemed necessary, I recommend that content specialization be taken into consideration. With the model of centralization that has been adopted by COALS, advisors have an opportunity to cross-train, develop professionally, learn in a safe and constructive environment, as well as maintain connection with faculty and staff in specific majors/programs. This intersectionality is imperative. This allows faculty and staff to better monitor student success and retention, allows for professional staff to provide feedback on curricular issues and gives faculty a contact when students need assistance and/or support beyond faculty scope or comfort. The report was vague on the supervision of this University advising centralization. I implore leadership to provide further information on this and allow for further feedback. The centralization efforts that has been overseen by The Office for Student Success [OSS] have not been constructive or positive in advising career growth. In fact, it has been detrimental to advising morale, professional development, and retention. This office has not successfully coordinated themselves, we cannot expect them to coordinate advising at large. This office does not and will not listen to input from advisors. They will develop committees and host meetings, create taskforces and documents but when the products from these are shared; the voices of advisors outside of OSS are not represented. This group is so far removed from the frontlines of student success, they are no longer effective in the development and/or implantation

of university advising policies.

---

The basic logic appears to be about the notion that the Provost Office Has suffered from years of Accumulated "Mission Creep" and is too disparate in Interest to do a good job at anything given it's many tasks. Moving the various programs under a more appropriate organizational tree seems appropriate. The idea that the Provost Office provides an organizational buffer to the Presidents Office should be considered, and I see no indication that this has been considered.

---

The authors of the report do not seem to understand what the provost does or were directed to get rid of the position as part of their scope of work. If you had positive experiences with the Provost then you want the position kept - if you want to vest all power in the President then you want it eliminated. My hunch is that the authors were given directives that have not been shared with the university community.

---

The Texas Real Estate Research Center Comments on How Recommendations in the MGT Comprehensive Review Would Impact the Center and Texas A&M University 1) The Center was created by an act of the Legislature and placed at Texas A&M with the mandate of conducting applied research in all areas related to real estate and urban and rural economics and communicating results and findings. These separate statutory responsibilities are outside university purview. Since the Center is not specifically mentioned, it is unclear if the intent is to apply MGT's proposed structure even to specialized entities like ours. If applied as outlined to the Center, it might be perceived as out-of-step with the culture that drew the industry to place the Center, at its inception, at A&M. The recommendations clearly do not align with the Center's enabling legislation and structure. Change with as much potential for negative impact as this would have to be disclosed as part of my periodic updates to the advisory committee and the industry. In its fifty years, the Center has by precedent and since 1987, by a formal affiliation agreement with Texas A&M and Mays Business School, operated with wide latitude for independent administrative action. The Center is an innovator with many firsts on campus. To continue being an innovative organization that is relevant to business and policy leaders, the Center needs that latitude. The principles in that precedent and agreement have served the Center and Texas A&M well and should be retained, and I am requesting dispensation for retaining the Center's communications, information technology and administration/financial/business functions. Rationale: a) The Center is amply funded by real estate license fees directed to the Center through the state comptroller's office. The Center receives no financial support from Texas A&M University and no tax revenue, and its staffing, salaries, operations and overall spending have no impact whatsoever on Texas A&M or Mays Business School. b) The Center's funds are placed in a separate account and by law cannot be usurped, reallocated or used for any other purpose. c) The Center operates under a nine-member advisory committee appointed by the Governor that evaluates and approves its plan of work, staffing and budget. d) The Center and its director are formally evaluated annually by the Advisory Committee and by their review of Center publications. The Center undergoes broad-based scrutiny by industry, state leaders and the public at large. 2) Affiliated by law with Texas A&M, the Center welcomes sharing recognition for its work, but it also must retain its own unique identity and branding to survive and thrive. Rationale: a) The relationship has been and continues to be mutually beneficial. The Center benefits from the good name of the University, and the fact that the Center's research continues to positively impact public policy and the quality of business decisions for the betterment of every Texas accrues to Texas A&M. b) The Center survives politically and financially because of the advocacy of the real estate industry and its governmental affairs leaders. The Center's funding, after all, is derived from the licensing fees paid by their members. As a result, the Center must maintain a high profile and continually produce high-quality, relevant and timely research and information to justify its existence. This is key to maintaining support and goodwill for the Center. c) A marketing study commissioned by the Center pointed out the need to strengthen the Center's branding and broaden recognition for its work. That same study revealed that the Center has struck and continues to strike the balance of meeting the informational needs of the industry without "being so cozy" with the industry as to diminish the Center's reputation for independence and unbiased research. d) The Center is unique in all the states; it is the largest, most productive academically affiliated real estate center in the nation. e) The quality of the Center's research and communication vehicles has earned the Center national and international recognition, and that reputation accrues to Texas A&M University at no cost to the university. f) As evidence of the degree to which the state depends on Center research and data, Texas' largest metros by recent state statute must rely on Center data in setting housing policies. The Center has devoted more resources to assisting Texas municipalities in addressing affordable housing issues. The work we are doing in this realm is highly popular, and the accolades accrue to Texas A&M as well as the Center. 3) The Center must maintain its award-winning communication function. Rationale: a) Enabling legislation requires the Center to communicate results from its prolific

body of research. Stripping the Center of its communications team would place an additional cost burden on the University that the Center now bears. b) The Center's editorial team tailors photos and graphics to enhance every report, article or product offered by the Center. A centralized communications function could not offer the same synchronized results in a timely manner. c) Center editors turn articles and reports prepared by researchers with vastly different levels of writing skills and styles into quality communication pieces that target the Center's audiences. Surveys are conducted to determine readability and other factors that a centralized function could not offer. d) By law the advisory committee reviews all written material flowing from the Center, and their comments are taken into account in the editing process. I cannot imagine that being done in a timely manner at a centralized function. e) The Director reviews everything that flows out of the Center at least twice, and his/her comments and edits are incorporated into the final manuscripts. This extensive review process is to ensure that the research and messaging are methodologically sound, unbiased, apolitical and cannot be construed as advocacy. By law the Center cannot lobby or advocate. The Center has a stellar reputation among legislators and statewide elected leaders for quality, unbiased research that helps inform public policy without lobbying. Michael O'Quinn is fully familiar with the Center's work and reputation among the state's leaders. Once again, it's hard to imagine a centralized editorial staff outside the Center being able to do this in a timely manner, given the prodigious amount of work the Center generates. The flow of work out of the Center would be impeded or grind to a halt altogether. 4) The Center needs wide latitude to retain and recruit talent, and to take personnel and salary actions (hiring, salaries, promotions, recruiting). Rationale: a) Since all the funds the Center expends are dedicated to the Center's exclusive use by law, these actions have no impact on Texas A&M or Mays Business School. b) The budget covering all hiring, promotions and salaries is reviewed and approved by the Advisory Committee. c) Since the Center conducts applied research, it competes directly with private sector industries for talent, and they typically pay higher salaries than the academic community. d) With a number of the Center's long-time employees retiring, succession action is of utmost importance. The Center needs the freedom to recruit and pay salaries that are competitive to fulfill its mission. We are short-handed now, needing to fill critical positions. e) How work is accomplished has changed, and attracting talent is more challenging than ever. As a result, AWL and remote work must become basic tools to attract and retain knowledge workers. Our own qualitative research points to organizations using less office space in the emerging hybrid work environment. f) We continually strive to be good stewards of our resources, and reducing our own real estate footprint and related costs are simply prudent to consider. g) The surge in productivity we experienced during the pandemic demonstrated our ability to make remote work viable. h) Because our mission focuses us on research rather than classroom instruction we are not bound by the need for a physical presence on campus. 5) The Center must maintain its business/financial management and human resource functions internally. Rationale: a) The Center's funding is exclusively for the Center's use, and we are accountable not only within the University but to other entities, including the Legislative Budget Board, Texas State Comptroller's Office, Texas Real Estate Commission, members of the legislature, Governor's office and the Center's Advisory Committee. b) The Center's funds cannot be co-mingled with and reallocated on some new proposed merit-based system. Those funds are the Center's alone and are under its exclusive control. c) We must have business, HR, and admin functions with first-hand knowledge of operations within our department. d) There have been numerous times when as director I have had to answer immediately for fund balances, budget or specific expenditures by category to outside regulators or industry groups. e) The Center's funding is substantial, but it can fluctuate with economic conditions. Admin and financial management personnel are necessary for internal revenue and expense projections. 6) The Center has to retain its information technology staff. Rationale: a) The Center maintains one of the largest, most advanced data warehouses on campus with billions of datapoints. It is central to all of our extensive research, and we literally could not continue in our mission and our relevance would rapidly decline without our own technology staff. Our three IT experts have overlapping responsibilities that could not possibly be outsourced or parceled out to a centralized office. b) Because of our extensive proprietary data, we maintain our own high-level security protocols in addition to those of the University. We have become the leading Center of our kind in the nation because our research has led to better decisions by policymakers, business leaders and Texans. I appreciate your favorable consideration of my request so we can continue to fulfill the mission the Legislature charged us with. We appreciate the relationship we have enjoyed over our fifty years at Texas A&M.

[REDACTED]

[REDACTED]

The Provost office is currently too large, and the MGT's recommendation to reorganize the Provost office's organizational structure is an excellent change. In addition, the recommendation appears to allow the Provost office to

focus exclusively on the academic mission of achieving excellence. I work in the Academy for the Visual & Performing Arts department, and I often wondered why it was under the Provost Office, but I can now understand why AVPA got very little focus.

The Provost Office restructuring makes logical sense. There are superfluous entities within that office that have needed to move for years but haven't because they have become entrenched. Centralized advising will fail. There are many different types of advisors and advising that happen on this campus. The position descriptions vary and changes are handled poorly (i.e. what happened in AgriLife last year with the RIF). Undergraduate advisors are grossly overworked, underappreciated, underpaid, and unsupported. Centralizing their efforts will further alienate them. Any way of handling restructuring is better than what AgriLife did, but if this is going to happen it should be done after being thought out and purposefully executed. There should be conversations with the people who will be impacted the most and not only discussed at the upper levels. OSS has not eased advising strain, it has created more. McAllen campus is a wonderful opportunity and should be explored more.

The Provost Office needs to still be in charge of the faculty. As the primary Academic Officer for the institution, handing those responsibilities off to a VP -- who may not even be a faculty member, much less a fully tenured one -- shows a lack of respect for and understanding of what it takes to be a faculty member, particularly if the supposed goal of this entire endeavor is to elevate the status of A&M as a major research institution.

The Provost Office needs to be scaled back over the years it has been a place to park programs that had no other home.

The Provost Office gains a lot of power and influence that it's lacked. While it's influence has grown over the years as the report indicates, the changes suggested make it seem like it would be a more effective office.

The Provost Office administers the Accountability, Climate, Equity, and Sustainability Faculty Fellows Program. Who will administer this VITAL diversity initiative in their absence and where will the funding be housed? It is upsetting like this that prove of underrepresented scholars that Texas A&M is not very a place where stress about simply being on a stable track to contribute and be valued as a scholar will be ever present.

The MGT recommendations for the Provost Office does not appear to be grounded in a clear understanding of the role of the Provost within higher education. In fact, the complete neutering of this office actually works in opposition to the goal of providing academic excellence. The Provost is the Chief Academic Officer at the university. This position has always served as a #2 to the President and often Provost positions are a training ground for the role of university presidents similarly as being a governor puts you in prime position to be President of the United States. As I mentioned, the MGT report neuters the Provost Office and reduces its mission. As the Chief Academic Officer of the university, the Provost is not only responsible for the academic success of students but providing excellent academics to students. The Provost accomplishes this through the Dean of Faculties. The Provost cannot ensure the success of students if they lack control of maintaining the integrity of the academic information being delivered to students. This report purports that the issue with the Provost Office is a lack of focus, it has gotten too large to maintain its mission. The report suggests that reducing the scope of the provost's office and creating new resources will alleviate this problem. I partially agree. It's not that the Provost Office lacks focus, the problem is the Provost Office does not have the resources to maintain its mission. An example used in the MGT report is the Aggie Honor Office, this report suggests that if the Provost Office was more student focused this backlog of cases would not occur. The Aggie Honor Office would be in Student Affairs which is dedicated to students and thus be able to meet its goals of addressing student honor cases. Well, if someone had spoken to the employees in the Aggie Honor Office they would know, the issue isn't that they don't know their mission, the issue is their workload increased by 200% and they can't get more resources, i.e. people to assist with processing. Everyone is overworked, underpaid, and can't meet the demands of the increasing student population. We have multiple programs to support our students but there is usually a sore lack in financial resources to staff these programs. The Provost Office does not lack focus, the Provost Office lacks financial resources to achieve its mission. On the org chart, MGT proposes that the Vice Provost for Faculty Affairs and Interdisciplinary Initiatives, Dean of Faculties, and VP and Assoc Provost of Diversity, and VP for Enrollment and Academic Services should leave. I disagree, these units should stay. I would propose that the Vice Provost for Faculty Affairs replace the Dean of Faculties (DOF) and the DOF unit is incorporated into this office. I will go into greater depth in the section on the proposed VP of Faculty Affairs. By keeping these units under the Provost, the Provost will be able to maintain the mission of delivering great academics to the students of Texas A&M. I would suggest, doing a deeper dive and supporting these units with the much needed resources to be successful. For many departments, the student population and the number of student programs increase but the staff to help deliver those quality programs has not grown or has not grown to reflect the university's

credibility as valuable component in the educational process as students seek internship, cooperative education and full-time positions, as well as admission to graduate and professional schools. Last year, the staff of the Career Center had more than 24,000 total advising contacts, hosted over 1,000 programs with more than 50,000 attendees, and communicated with hundreds of the organizations that recruit at Texas A&M University. This marked a 14% increase in advising contacts, a 28% increase in the number of programs offered, and a 61% increase in program attendance over the previous year. In addition, we provided support campus-wide for more than 50 virtual Career Fair events, virtualized campus recruiting and all our interview rooms, and interacted with more than 3,000 recruiting organizations. We remain connected to the colleges and departments with our Career Coordinator program, through which dedicated staff with specific skills and experiences relevant to specific populations serve both undergraduate and graduate students. Our team members are engaged in classrooms with 18 of them serving as assistant lecturers, visiting lecturers and instructors, teaching a wide variety of courses, including Hullabaloo U 101, BUSN 481, GEOS 203, BIOL 302, AGLS 125, and EHRD 613. Beyond their work in the classroom our staff members engage in college-level meetings with advisors, faculty and administrators on a regular basis, allowing Career Center programs, services and resources to be integrated into students' educational experiences while at Texas A&M University. In addition, many of our team members actively support development and former student initiatives in each college and across campus. This past year the Career Center strengthened our collaboration with the Higher Education Learning Center in McAllen, presenting to their administration and faculty and beginning the process of hiring a new career coordinator to serve the McAllen campus on site in the Higher Education Building. The Career Center has served as a central point of contact for employers, allowing us to engage key staff, faculty and administrators in various campus visits and meetings, with both prospective and existing recruiting organizations. Since the beginning of the fall 2021 semester, our employment services team has participated in more than 230 meetings with employing and recruiting organizations, and has organized campus visits for several, including SpaceX, IBM, and Tesla. In addition, since August 2021, the team has managed more than 4,000 recruiting organization contacts through phone, email and in person. The Career Center team provides regular feedback to faculty and staff across campus about industry trends, emerging opportunities, and marketable skills. Last year, the Career Center collaborated with Scholarships and Financial Aid to integrate the Jobs for Aggies job board into the Career Center's Symplicity platform. This has elevated the process for students seeking employment on campus and connected them to the process required for finding internship, cooperative education, and full-time opportunities. The Career Center has become more engaged with the Office of Admissions and the Student Recruitment team as prospective students and their families continue to focus on outcomes following graduation from college. Our inclusion in several areas of the Strategic Enrollment Management Plan and at key points in the existing admissions cycle has given us the opportunity to connect students with our First and Second Year Career Coordinators much earlier in the career development process and to provide relevant career-related information for student recruitment materials and programs. While the Career Center will remain dedicated to our mission regardless of our location and reporting structure, we have thrived under Academic Affairs and hope to continue this level of progress and engagement in serving all our constituents across campus. Thank you for allowing us the opportunity to provide feedback in this process. If there is additional information that is needed in the decision making process for the Texas A&M University Career Center, please contact me by email at [REDACTED]

Research has been beneficial but I think in this aspect you should rely on individuals who perform the functions day in and day out to better suggest what the best option would be.

Regarding the recommendation to move the Veterans Services Office to Student Affairs, as the wife of a combat veteran, it is my opinion that veterans bring to their educational career a wealth of experience and challenges that are not found within the regular student body. Combat veterans have seen death and destruction, and have caused death and destruction, that no other people group has experienced, except for international refugees, and those are elements carried into their careers as students. As such there is a need for greater specialization in engaging with these students for their success that is best served by leaving the Veterans Services Office under the Office of the Provost.

Regarding the centralization recommended for academic advising, I do not believe this is an action that would be successful for our students or our university. The report pointed out the difficulty of changing majors at TAMU as a precipice for this recommendation. Centralizing academic advising would not solve this issue. The real solution for that situation is to allow students the ability to enter the university as undecided so they can explore their options without earning credits in majors that may not apply to the major they are passionate about. The General Studies advisors are particularly adept at helping student to navigate their career interests, plan for courses that work for a multitude of majors, and plan their journey to get into that major. Please provide students the ability to explore in college while

taking coursework that applies to potential graduation. Centralizing advising is not an act that will rectify the change of major problems on this campus. In fact, this would be a detriment to students who benefit greatly from the the targeted information their professional advisors have with the faculty and leadership in the major. Breaking the ties between advisors and the colleges will not help any student and I fail to see how that would even help students who want to change majors, as noted in the report. The connections that our advisors have with their faculty and specialized knowledge about course offerings, internships, opportunities, networking would all be destroyed if centralization were to occur. Our students would in turn not get the personalized experience they deserve at this institution. So many students feel alone at this large university. Their academic advisor is the first, and sometimes the only, university representative they create a personalized one-on-one relationship with when they arrive. Creating a one-stop hub for advising would take away something that we pride ourselves on. Families love hearing that their student has an advisor of their own and this is seen as a great benefit of this institution.

---

Regarding the "overreach" of the previous Provost, I would like to be known that much of the accumulation of departments by her office were done so to shore up deficiencies in those departments. I'm all for realignment as long as all the departments are handled appropriately. I'm particularly interested in the IT side of realignment, but I know that management and HR for these departments has been consolidated due to a need.

---

Recommendation: Reorganize the Office of the Provost to allow greater focus on student academic success. One office listed to remove was Enterprise Information Systems (EIS). This office manages the student information system (SIS) for everything that impacts students and the academic operations of our campus. Academic records, billing, financial aid, admission applications, etc., are all connected to this office. This office is the connection point between students and academic affairs. The student-facing portal (Howdy) is of high importance to the academic community, specifically academic advisors. The advising community relies on both the ability to pull information from the database as needed, but also knowing how to operate systems managed by EIS that are displayed to students. Recommendation: Centralize undergraduate academic advising Decentralized advising causes confusion for everyone (students, parents, administrators). Our campus lacks clearly identified advising structures, we do not have a standard delivery model of advising, and advisor retention is impacted by the lack of a strong career path. Lack of clearly identified advising structure: A lack of an identified structure led to a lack of clarity with roles and prevents both organizational learning and sharing. This leads to advisors not being prepared for the expanding nature of academic advising along with the constant evolution of student needs. Reference: Jones, S., Dougherty, K., Lahr, J., Natow, R., Pheatt, L. and Reddy, V. (2015), Organizational learning by colleges responding to performance funding: deliberative structures and their challenges, working paper No. 79, Community College Research Center, New York, NY. Standard delivery model of advising: A Shared, Split model of advising would establish a central advising office within each college to establish and assess advising expectations, increase availability for student appointments, facilitate quicker resolution to student questions and concerns, standardize advising, balance advisor to student ratios, and enable advisor schedule flexibility and retention. Reference: King, M. (2008). Organization of academic advising services. In V. N. Gordon & W. R. Habley (Eds.), Academic Advising: A Comprehensive Handbook (pp. 242-252). San Francisco, CA: Jossey-Bass Lack of a strong career path: Without a clear definition of advising, advisors feel overwhelmed balancing internal and external pressures. Adding to the pressure, advisors know there are pay inequalities between colleges, especially colleges that do not report to Texas A&M or those that cannot offer competitive wages. We also note a lack of promotions and reclassifications prevent advisors from advancing and leads to advisor turnover. Reference: Data received from Texas A&M Human Resources notes the salary disparities that exist between TAMUS guided colleges and everyone else (TAMU). Those reporting to the System are given additional funding for salaries and additional titles leading to more advancement.

---

Recommendation 2, to Centralize Undergraduate Advising, would in my opinion be disastrous for retention efforts at TAMU. I am an academic advisor at TAMU so this is my area of expertise, and the one where I will be leaving the most feedback for this report. The main supporting information provided in this document is that it is "too hard" for students to change their major currently. This is firstly, a misrepresentation of our process. The major change process outlined extrapolates far more steps than is accurate. Students typically do not need to meet with their current major advisor, though many opt to since they have a rapport with that advisor and know that we can provide helpful information. Steps 2-4 listed (review requirements, talk to an advisor, and decide if you must switch to general studies) are all in fact handled in the meeting with the prospective major advisor. They will let the students know what the requirements are and whether they already meet them or will need to go to General Studies first, I do not understand why this was stretched into three separate steps. Then, yes, students must submit an official document (which is readily and easily available in Howdy, allowing students the potential to bypass all other steps) to request the major change. This is a two

step process, not five. Meet with the new advisor, submit the request. If a student opts to meet with their previous advisor first, that is their prerogative and shows the value of that existing advisor/advisee relationship. The second "finding" which prompted this recommendation, was that we are siloed in our colleges and departments. This is, again, simply untrue. Advisors can choose (many of us do) to participate in the University Advisors and Counselors group, which is made up of advisors from across the entire university. We meet and discuss whatever impacts all of us monthly. We have an email list so we can communicate important information as needed. I personally touch base with advisors from the College of Education and Human Development at least monthly to discuss my students that are interested in teaching and speak with Engineering advisors before every registration period to ensure they have the correct information about a required course for their students, and I send a list of relevant courses from my department to all advisors during registration. While it is true that not every advisor knows every thing about every other department on campus, I find that most of us are completely capable and comfortable with reaching out to advisors from those departments for relevant information. There are certainly opportunities to ensure there is more equability in position descriptions, duties, and pay, between advisors across the university. We also have a need to build consistency across our different colleges to ensure students know what to expect and what the processes are with advising for any TAMU major, but throwing out everything we have and starting with a model that doesn't make sense for our institution is not the correct approach. Lastly, a centralized advising model is hugely detrimental to students. You do gain ease and uniformity in terms of processes. Students do get a more streamlined experience and can expect roughly the same thing from any advisor they speak with. This is great for a bank, or for another business where everyone needs and receives the same thing, this is great if your business relationship is transactional. This is NOT what a developing student needs. For most students, the first name and face they are told, unequivocally, that they can also reach out to if they have a question and don't know who to ask, is their advisor. We meet them at New Student Conferences, they get to know us a little while they learn about their degrees, and they get all of our contact information. We help them with their schedules and give them time to ask questions to make sure they feel confident with what they are doing. This is the first hands on, one on one, contact they get at the university. We as advisors take this time seriously and build a rapport with those new students. I have students reach out to me for questions that are typical for advisors, but I also receive questions about what extra curricular activities I think a student would like, or they tell me when they are struggling mentally and don't know who to turn to, or they just had a house fire and lost everything, can anyone at the university do anything for them? I've had all of these questions in the last few months, from students who knew me from our interactions and knew that I could help them find what they needed. I reach out to students directly when a professor reports on their absences. When I reach out and interact with these students, they often seem relieved to know that there is a person looking out for their interests. They know that I am going to do what I can to help them, or help them figure out their next step. Without a trusted connection like this, many students would never get the resources they need, and some would simply drop out. A centralized model sacrifices all of the work done to build these relationships by cutting out that personal relationship. If a student can meet with Advisors 25-50 because their last name is a J-P, they meet with someone new every time. Someone who will answer their immediate question and send them on their way. This can be great for non-traditional students or in a community college setting, those students needs are very different. For a university like TAMU, it simply doesn't work. Students need to know that they are meeting with someone who has even a small degree in investment in them personally and who they can trust to give personalized recommendations. I can remember the strategies that work best for a student when I meet them again and make recommendations to them that make sense. Students need a long-term point of contact they can trust, if they can't get this from their advisors (who are currently well-trained in this area) they will seek it with faculty, who don't have the time or the knowledge of university resources to be effective in this role. Please also consider the value of this relationship as it relates to first-generation students, who we have recently committed to assisting, and who are the most susceptible to falling through the cracks simply because they don't know who to talk to or what questions to ask. Cutting off the one relationship they are told from the beginning they can turn to, would be disastrous for retaining first gen students. A shared model could potentially work, but I have serious reservations about changing our entire advising model based on the extremely limited, and inaccurate, "findings" of this report. There is much space to improve advising at TAMU, but moving to a centralized model is far too drastic a move for issues that could be solved by simple communication improvements.

Recommendation 1 - I applaud the effort to declutter and realign the Provost's portfolio. Several functions had become too decentralized or too extraneous to allow the Provost office to function properly. That said, I do think there are some areas that are worth examining closer before removing them. As a 20-year practitioner and scholar in student success and undergraduate academic affairs, the areas of the career center, education abroad, and veterans services may be

better served more closely aligned with student success. The career center serves as a natural extension to the success students achieve while in the classroom. The top career centers in the country often link internships, co-ops, professional training, and academic exploration through experiential learning or student success. These key stepping stones are critical to students not only receiving high GPAs, but also persisting and successfully launching out of the institution into the field of work. Similarly, education abroad was recently renamed "education" abroad, because of the shift in good practice and trend in the literature. These study abroad experiences may need to be created strategically, but from a student's stand point, they must be education focused. To move this high-impact practice out of the Provost area may be a mistake. Lastly, the veteran's service area is closely related to our work with transfer and first-generation students in the Office for Student Success. Many veteran's are transfer and first-gen. Given that their identity is stronger as a veteran, many gravitate to this office. However, the core of the work we do in all of these areas is similar. Helping the students navigate and advocate for their success on this campus. I recognize that this recommendation intentionally aligned many offices that support student success under a single AVP. I believe this will help tremendously, but I would also consider including the three offices above in that grouping as well as LAUNCH, another high-impact practice area, all under that AVP for student success. These office have the potential when organizationally housed together to make a significant impact on student retention. Recommendation 2 - I am a supporter of some form of centralized advising on this campus. However, I feel the recommendations in this report were too unspecified which has resulted in the pushback I am sure has already reached you from across campus. Advising is broken on this campus, but simply declaring centralization does not sufficiently explain the need. My fear is that the much needed attention in the area may end up serving as a straw man for the other many historical change proposals in this document. Centralization can mean many things. Most recently, the College of Ag and Life Sciences "centralized" their advising staff by terminating their positions decentralized and had them reapply to new centralized positions. This did not go well and from an informed position, it seemed to mask what ultimately was a reduction in force. The end result was less advisors in the college. My concern is that the practice didn't change only the org chart. The Office for Student Success which I oversee has been working tirelessly to improve academic advising on a decentralized campus that is happy to take its ball and go home if they don't like what they are hearing. Centralization or coordination, done correctly could transform advising practice. But the situation in Ag and the MGT recommendation potentially threaten that work. I think advising has to be an active dialogue in the Provost area. College politics have prevented it from happening until now. My hope is even with the opposition that this recommendation is facing from Faculty Senate and some colleges that there may be a path forward. If responsible parties are willing, my name is attached to this survey and I would be happy to discuss further.

---

Recommendation #2: Centralize undergraduate academic advising.--I have a lot of concerns about centralizing academic advising. Several years ago, when academic advising was moved from departments to the college (I'm in the College of Liberal Arts), there were some problems. For many years before this change, students had shared with me that they were pleased with the advising in the English Department. They enjoyed the personal connections they had with the advisors in our department, and they appreciated their level of knowledge not only about the English major, but also knowledge about minors and core curriculum. When advising was moved to the College level, there were lots of bumps in the road, and some students who were here during those changes expressed their dismay at no longer being able to go to the advisor they had been using through much of their undergraduate career. I know that the College has been working to improve advising, and I do think the advisors in the College of Liberal Arts are now forming those valuable relationships. I worry a lot about centralizing advising because I think it will mean many years of students not having good relationships with their advisors. They may see a different advisor each time, and these advisors won't have specialized knowledge about the English major and other Liberal Arts classes the student might be taking. I think academic advising is central to retaining students, especially first-generation students. If academic advising is centralized, I fear there will be fewer students who will stay at TAMU to complete their degree, and I am especially concerned that this will hurt retention for first-generation students.

---

Recommendation #2: Centralize undergraduate academic advising. This can tremendously assist advisors who are not located in College Station. For example, Advisors at the Higher Education Center at McAllen have to work with multiple programs/majors, but do not belong to a specific college. They report to the Assistant Provost of the Higher Education Center so this can lead to issues of lack of communication and a disconnect between advisors and the programs they are assisting. Knowledge, training and guidance from a centralized advising service could greatly improve options for advisors university wide. This can help bridge the gap staff and students face between McAllen and College Station.

Recommendation #3: Elevate the Higher Education Center at McAllen. The Higher Education Center at McAllen currently serves approximately 250 students. There is one building trying to house 7 programs, staff and faculty. There is a lack of

physical space to accommodate growth over time. Limitations of Library Services, Computer Lab access and quiet study zones for students are a constant topic amongst students. Additionally, there are 3 advisors, 2 program coordinators and an enrollment specialist (financial aid focused) handling student services. Each staff member is tasked with their main responsibilities while also getting more duties added to their job due to lack of support. Program coordinators are doing the job of at least 3 people when compared to College Station offices. Elevating the Assistant Provost to provide additional support would be helpful, but the evaluation also needs to include the staff and faculty in place due to different nature of their job descriptions and duties. The Assistant Provost provides the leadership for Student Affairs, Academic Affairs and Advising, but there are levels in-between that need to be considered for additional staff support and professional growth. The Higher Education Center at McAllen also needs more consistent and present outreach in the RGV community and surrounding area. The Prospective Student Center in the RGV does recruitment for the Higher Education Center, but does not hold events or functions at the center itself. There is a disconnect that should be addressed to increase TAMU presence, enrollment and services in McAllen. The Higher Education at McAllen and the Admissions Office/Outreach need to bridge the gap to ensure greater clarity and increased teamwork.

---

**Recommendation #2 centralized advising:** This recommendation is based solely on the finding that students often change their majors and that process is often challenging for students. While that process may be time consuming, there is great benefit to meeting with all of the different people in the process to ensure the student is getting the correct information from each department, and is properly advised to make the best decision. Further, advising involves so much more than just assisting students who are changing majors. Departmental advisors intimately know the intricacies of the degree Programs housed within their respective departments. For example, they know in which catalog year Program changes may have been made, which transfer courses may satisfy Program requirements, and which substitutions are acceptable. They are familiar with their Program's coursework and Instructors which is invaluable in assisting students with making class selections. Many advisors are in tune with the current job market and career opportunities for their individual graduates. The relationships they build with their students during the students' undergraduate tenure is an integral part of student retention. By centralizing advising, you will lose this type of local knowledge and the students ultimately suffer. On the Galveston campus where I work, we have centralized advising for first year students. While the model is great for helping incoming students with such generalities as TSI compliance, Math placement exams, Howdy checklists, etc, it is woefully ineffective for actually advising students for their first year course selections. No advisor in that unit has the local departmental knowledge to make adequate recommendations, often resulting in students taking unnecessary classes or classes to which they are not suited.

---

**Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success.** Remove the following units from the current Office of the Provost: • Student Employment Office to Human Resources and Organizational Effectiveness Page 12 of 133 **Recommendation #1: Reorganize Human Resources and Organizational Effectiveness (HROE) and implement a one-stop human resources service center.** Reorganize Human Resources and Organizational Effectiveness and align organizational functions according to shared purposes, including consolidating the HR and payroll functions and creating a one-stop HR center. Integrate the following units into Human Resources and Organizational Effectiveness: • Student Employment from Provost Pages 68-69 of 133 **Rationale #1 To adopt fiscally responsible and accountable administrative structures, Human Resources and Organizational Effectiveness should administer all aspects of payroll and personnel for the entire university. This should allow for a cohesive and consistent application of all employment policies and practices... Removing AABS HR/Payroll, Student Employment, and Faculty Personnel from the Office of the Provost enables the Provost to concentrate on the academic mission of TAMU. The Student Employment Office (SEO) has existed within Scholarships and Financial Aid (SFAID) for many years. TAMU SAP rules designates the SFAID as the office responsible for oversight of student employment at TAMU. Student employees are categorized as either a student worker or a work study student. The SEO oversight differs from what HROE would offer to students and their supervisors. The SEO administers the following:** • Federal and Texas Work Study Program management for the TAMU-CS, Health Science Center, Galveston and McAllen Higher Learning Center campuses. • Maintain a TAMU-CS and Health Science Center job board for both on and off-campus positions. • Participates in the Job Location and Development Program which is funded by the Federal Work Study Program. • Provides Customer Service to students in finding a position. Provides customer service to employers positions a position. Provides customer service to HR Liaisons, HR Contacts and Business Coordinators to all of the above campuses. • Creates and hosts annual part-time job fair for students. Recruits area businesses to join the job fair. Advertise to students to come to the job fair. • Coordinates the Community Service Work Study program. Provides Human Resource function in posting positions, onboarding, training for students, training for agency supervisors and termination of students. This is a required

component of the Federal Work Study Program and has been a component to the Texas Work Study program in past years. • Coordinate and host National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony for both on- and off-campus student employees. • Promotes student employment information at the following events: o New Student Conferences o Fish Camp o Howdy Week o Aggieland Saturday o Resource tables o CSP Zoom sessions o Part-Time Job Fair o • Provides student and supervisor workshops and information sessions to both students, on- and off-campus supervisors. • Represents TAMU-CS through national and state employee organizations like National Student Employment Administrators, Southern Association of Student Employment Administrators, Texas Association of Student Financial Aid Administrators, and Southwest Association of Student Financial Aid Administrators. The SEO has been a part of the SFAID office for over 20+ years, it should remain with our office per the TAMU SAP rules. SEO has different roles than the HROE, it would better place within SFAID office. We are a forward-facing student employment office that provides excellent customer service to students, supervisors, staff and to faculty. It is important for the SFAID to maintain the Federal and State work study functions to ensure oversight of the program. The Jobs for Aggies job board is well known by TAMU students, staff, faculty, and off-campus employers. It must exist to offer both on- and off-campus employment opportunities. With student enrollment over 70,000, it is important that our students have one consistent resource where we are able to provide as many job opportunities to our students as possible. This streamlined, one-stop approach limits confusion by providing a central website, Jobs for Aggies, and a location, Student Employment Office, to which students, staff, faculty, and off-campus employers may refer. The SEO has an established presence on campus and collaborates with many offices and departments on campus regarding employment and student development. We believe moving these functions would be detrimental to students and employers across campus if we no longer exist. It could also jeopardize compliance that is essential for Federal and State Work Study Program funding. The SEO has an established presence in our community. We work with off-campus businesses and supervisors within a 30-mile radius to post their positions in our Jobs for Aggies Job Board. Many employers often call us for our assistance in creating and posting their positions. If we no longer exist, they would no longer know where to call for help.

---

Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success. Removing the Aggie Honor System Office and Career Center to the Student Affairs side would be harmful. On the Galveston Campus, the Career Center is currently housed in Student Affairs. In our recent Strategic Plan, faculty and academic affairs staff noted barriers to access and resources that the Career Center handles. There is more communication from the TAMU Career Center to our office as compared to the TAMUG Career Center. Because of this, Department Heads have a hard time getting exit surveys from our graduates. The Galveston Career Center has not been aligned with the services and resources that the main campus Career Center offers. As a result, our current and former graduate students do not get the critical pieces needed for career placement and success. In addition, the Aggie Honor System Office represents our integrity policy that other universities have studied as a successful case study. This office connects faculty, students, and academic affairs staff. It only indirectly touches Student Affairs as it directly touches what happens in the classroom, studio, lab, etc. Remember, this office handles ACADEMIC misconduct not general student conduct issues. It needs to be on the academic affairs side. With all that said, the Provost Office has had too many units to handle them effectively. The President needs to be mindful if the office is better suited to the Academic Affairs side or Student Affairs side.

Recommendation #2: Centralize undergraduate academic advising As a graduate academic advisor for over 10 years and former undergraduate academic advisor for 7 years, the President needs to be very careful with this recommendation. The rationale for this recommendation is that changing majors is a cumbersome process. However, the current process is important to keep. Academic advisors, faculty and professional, within the academic department/college are content experts within the field, policies and procedures, and witness to the subtle nuances that take place within the academic unit. Moving to a centralized structure will mean: • Less faculty advisors who are a critical piece in the advising structure, • Less accountability rather than more accountability as centralized advisors will now have to juggle the multiple majors/options/tracks that a student can provide. They will not have the adequate resources to do their job. The overall quality of advisement will go down. • Students time to degree will increase as poor advisement will occur. • Student debt will increase due to poor advisement • Lawsuits from parents will increase due to a poor advisement • Even if the centralized model means that advisors will have a comparable number of majors/options/tracks as the current model, then student still will have the same process as they do now. Academic advisors provide a space for students to explore. These critical conversations cannot be rushed. Changing a student major should not be viewed the same as dropping a course. It is an important decision that requires reflection and exploration of the best fit major. This recommendation puts our Aggie students last. The only benefit that could come

from this structure is making sure that faculty and professional advisors have the necessary, required training.

Recommendation # 2 Centralizing undergraduate academic advising would completely diminish the student experience, water down the academic advisors expertise, and increase faculty workload by a large margin. The findings to support the MGT's recommendation are inaccurate. This is a reflection on MGT's poor review and discredits any of their findings.

Rec #2 – centralize undergraduate academic advising • This unit was missing from the organizational chart shown on page 13 of the report. Rec #3 – Elevate the Higher Education Center at McAllen • My comment related to the HEC @ McAllen is that effort is needed to help these employees understand the processes and procedures that need to be followed since they are located so far from main campus. I think their isolation away from the rest of campus has challenged them to understand certain protocols for purchasing, and standard processes that other individuals learn through “osmosis” by being in College Station among employees who have campus experience. If facilities is centralized as addressed later in the report, I would suggest placing some TAMU facilities employees in McAllen to better serve this location and train them properly. This would allow the current McAllen staff to focus on academics and student success.

Realign to 4 academic units - if this does not involve "renaming the colleges" to these 4 units then yes. BUT each college has a "name" recognition that is invaluable, so careful application or changing of this would be in order.

Provost Office Honors office reviewing courses are they lacking in staff or is this an issue due to courses being online causing more students to be reported and having everything to have been done online, when this institution is not an online serving institution, we had to accommodate with the pandemic that was affecting the world. Career center in general works closely with colleges, which many Student Affairs departments and/or programs do not. Our college has a huge working relationship with our liaison in the career center . This needs to remain for academic success, since they are also an integral role in the success with the services they are providing with our current students and have provided with former students (which I am hoping the ones who were reached out to fill out the survey used the services they provide for our undergraduate students) This University is known as a veteran Serving institution, by moving someone who was in the corps of cadets will not help moving an office that serves veterans to academic affairs. Unless there is going to be a rehaul of academic affairs on how to better serve other areas of the university, then this office is better served with the provost since they work closely colleges academic advisors Centralized undergraduate academic advising Taking away the advisors from departments who are involved in the undergraduate education is a disservice to the student. Every department across our college and university are different. There is one place on this university where student can gather information about changing majors and that is TAP. We could always bring TAP back as a major and students can go there even as incoming freshmen. As a college we have a very efficient way, I was under the impression that the Office of Student Success help with onboarding on top of what we do as a college and department. Being part of the College of Liberal Arts I have had the opportunity to maintain a close relationship with my faculty in both departments I serve and other faculty in other departments. This has allowed to “walk” student to faculty offices or discuss in depth what they are working on. I assume other college do not have that opportunity. Overall this will be a disservice for undergraduate students in building relationships with specific people and faculty. This can be detrimental to relationships that are made within our departments and also detrimental to advisors, making many feel that we have no worth and only one job and that is it.

Provost Office Academic excellence through teaching, research and service should drive any reorganizations made to the provost’s office. Perhaps segmenting the functions of the provost’s office with one or more assistant or associate provost that focus on the building blocks that propel academic excellence forward would address the concerns here? Units such as the Aggie Honor System, Career Center, that deal specifically with students would work well under student affairs if proper support/direction could be provided.

Pg. 10-13. Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success. The following comments first state the proposed move and then my comments are below. Enrollment Management to Finance This seems like it would be better under Student Affairs. Student Recruitment to VP for Academic and Strategic Collaborations This seems like it would be better under Student Affairs, though it might be fine under this new proposed office. Instructional Media Services to Information Technology At the College of Dentistry, Instructional Services was housed with IT for a long time and that structure didn't seem to work very well. I think having this under Academic Affairs or the proposed Faculty Affairs office would make more sense. Though Instructional Media Services may have some small overlap with Information Technology they are there to assist with curriculum, so being under academic affairs makes more sense. They assist faculty with the with developing instructional materials, so maybe the proposed Faculty Affairs office would be a good fit. Student Employment Office to Human Resources and

Organizational Effectiveness Again, I think it might be better to house this under student affairs. Student employment usually follows different rules and guidelines than traditional employment and I don't know that people trained in HR really have the knowledge of that area. Diversity and Inclusion to VP for Academic and Strategic Collaborations This VP needs to continue to report directly to the Provost or should be completely separate and report directly to the President. The Diversity and Inclusion unit deals with issues that affect the university as a whole, including students, faculty and staff. Housing it under Academic and Strategic Collaborations instead of reporting directly to the Provost or President give the office a lesser standing and may not send the best message to the internal and external community about TAMU's commitment to DEI. International Student Services to VP for Academic and Strategic Collaborations This seems like it would be better under Student Affairs. These services are for current and incoming students, so it makes more sense to house the unit under Student Affairs. This unit doesn't seem to fit within the mission of Academic and Strategic Collaborations as well as it does with Student Affairs. I am concerned this would divide the International Students from the rest of the student community. Immigration Services for Faculty and Scholars to VP for Academic and Strategic Collaborations This seems like it should either be with Faculty Affairs or HR. Since Faculty are employees, it might make sense for this unit to be under HR. However, since it specific to faculty, Faculty Affairs might be more appropriate. Academy for the Visual and Performing Arts to VP for Academic and Strategic Collaborations Maybe I'm misunderstanding what this department is, but wouldn't it make more sense for it to be under the proposed School of Visual and Performing Arts or the proposed College of Arts and Sciences. Continuing Education to VP for Academic and Strategic Collaborations This seems like a weird department to house this with. I would think this should be either with Academic Affairs if the office primarily deals with curriculum for continuing education programs or HR and Organizational Effectiveness if it primarily deals with continuing education for employees. Pg. 14. Recommendation #2 Centralize undergraduate academic advising While I can understand the need to have more access to advisors, one thing that really helped when I was in undergrad is having advisors who knew the program I was in and knew the available classes and could steer me toward classes and areas that aligned with my interests and away from ones that didn't. If you centralize advising, you may lose some of the specialized wealth of knowledge that advisors can develop from working with the same students going through the same limited sets of programs. Also, as faculty and advisors have pointed out in university-wide meetings, it shouldn't be easy for students to switch majors. There should be a strict process in place and students should have to meet with advisors in their current program and their potential new program to assist them in determining if switching majors will benefit them or address any issues they may be having.

Pg 11: It is noted that the Texas A&M Institute of Neuroscience (TAMIN) would move under the VP for Research. There are additional recommendations in the document to create a large College of Arts and Sciences, as well as to move Biology and BIMS together into an Institute. There is an undergraduate major with concentrations in three colleges and collaborations with an additional college: Neuroscience. There are three concentrations: Behavioral and Cognitive Neuroscience: from the Dept. of Psychological and Brain Sciences, Molecular and Cellular Neuroscience: from the Dept. of Biology, and Translational and Preclinical Sciences: from the College of Veterinary Medicine & Biomedical Sciences, in conjunction with the TAMHSC Dept. of Neuroscience and Experimental Therapeutics (NEXT). This single undergraduate major falls under the auspices of TAMIN yet resides in multiple colleges for funding and faculty teaching lines. What is the vision for how this major, its faculty and its resources would have oversight, given two of the three concentrations are managed through programs that are proposed to move to an Institute of Biosciences? Would collapse of the three concentration's oversight fundamentally change the pedagogical goal of the major to allow all students access to the primary degree content, while choosing concentrations in specific areas of neuroscience? Pg 14: Centralized advising: My observations of semi-centralized advising in various units on campus (including advising between remote campuses, as well as observation of advisors who are trained to counsel multiple majors) still points to a high degree of specialization and knowledge for specific college constructs. This specialized, institutional knowledge, by discipline, contributes to the success rate of the students, as it involves more than preregistration advising and change-of-major requirements. The university is already moving towards standardization of specific processes: change-of-major, transfer admissions, advisor career ladders, training opportunities, recognition; and, in some cases, meta-majors: Engineering. Unification of processes, rather than actual advising offices, seems to provide the needed continuity of advice to students across the university, and the networking necessary for continuity of care between colleges. The centralized repository of information at the TAP website, as well as the registrar's page for minors on campus, assists in this endeavor. The Office of Student Success plays a pivotal role in unification of advising offices on campus. I fear that full centralization would not achieve the desired effect, given the multitude of majors on campus. Advisors would still endeavor to become experts in a subset of related majors, rather than maintain knowledge of over 100 majors and

concentrations. Pg 15 and 16: I absolutely feel the Higher Education Center should be elevated and expanded. One of the initial difficulties for students when only 4 programs were present on the campus, was the ability to remain in the region when changing majors; particularly if the major they wished to change to did not have a program in McAllen. This also affected financial aid in some cases. It is unclear how the new Institute of Biological Sciences would intersect with the Higher Education Center at McAllen. The Biomedical Sciences Program is the second largest program (85 students Fall 2021, vs. 102 students in Engineering) at the Higher Education Center at McAllen. What is the vision for the BIMS faculty, funding, and teaching resources at HECM?

PITO itself is unreliable, takes too long to respond to issues, and the workers don't ever seem pleased to be doing what they have to.

Our department, EIS, has worked very closely with the Provost Office, especially in the area of Student Success. We have been taking many strategic plans into reality including enhancements to the Undergraduate Degree Planner, Undergraduate Curriculum Change, the Graduate ARCS project, CARES Act funding processes and hundreds of enhancements or changes to Compass and Howdy to support the Student Success Initiative, campus Covid protocols including notifications, certifications, grading changes and other mission-critical efforts. The functional and development work done in the department is directly related to student, staff and faculty needs related to student data. Having previously been moved from IT to Enrollment and Academic affairs and the related change to domain, software, licenses, access, etc. and now being sent back to IT and going through all of those changes again seem counter-intuitive to efficiency. The pace at which our staff work to keep up with demand and the time lost to getting computers, networks, access, printers, licenses, etc., functioning at full capacity is significant, not to mention the cost in both financial and productivity. I, myself, spent hours and hours of time assisting in identifying the software needs for each individual and team, discussing with the new support team and assisting our staff in getting back to full productivity. In addition, moving to a new division means significant time to review each and every SAP, policy and procedure not only for terminology, but for actual practice. While linked already to university policy, changing divisions greatly impacts internal practices to maintain security and FERPA standards. Daunting. Our department is losing employees quickly, especially due to inability to offer remote work after proving our efficiency with remote work (currently over 15% loss recently). Staff are finding 100% remote opportunities at much higher corporate pay and we cannot compete. Add the stress of these changes and we are set to lose several more.

Our academic advisors are in our college's building which gives students quicker access and better availability for when they need to meet with them. I feel that moving them from our College would make students feel like the advisors were not as readily available to them. Currently if the student has time between class they can set up an appointment with their advisor and still have time to make it to class. If they advisors are removed from our area I feel the students would not have that same option.

One of the reasons that Provost has "increased in scope and function is because other units were doing a poor job at managing these functions. Provost IT was performing exceedingly better than any other "IT" units. I am biased.. but I have never heard a contested view from other IT units or other personnel in central IT. Please consider elevating Provost IT into a leadership role for the new centralized "IT".

My name is [REDACTED] the Public Policy Internship Program (PIIP), which has been recommended by the consulting firm to be moved out of the provost's office and into the Division of Student Affairs (DSA). It is unclear why this recommendation was made, as there was no explanation of the proposed move in the narrative of the document. I'm writing to provide some background on PIIP for perspective of why it would be most effective for the program to remain within an academic setting. Here are a few details about PIIP that support this perspective: 1. PIIP is an academic program • PIIP was established in 1999 as an academic, credit bearing, program. Students are required to take UGST 492 (Co-op in Public Policy) while on their internship semester. Additionally, the program course is often added to student degree plans and assists with fulfilling some degree requirements. • PIIP is housed in the provost's office because it is a university-wide, academic program. It has not been housed in a college because it is open to students from all majors. • Many High Impact Practices at TAMU are housed in Academic Affairs. • PIIP does not provide a "student service" as the other areas in the proposed new organization chart do (e.g. Money Education Center or the Veterans Services Office). 2. PIIP is tied to another academic program via an MOU • PIIP has a long-standing MOU with its sister program, the Agricultural & Natural Resources Policy (ANRP) Internship Program, which is housed in the Dean's Office of the College of Agriculture & Life Sciences. ANRP is also an academic, credit bearing, program. • PIIP and ANRP share many resources, including splitting staff salaries and program operational costs, a separate MOU for technology and equipment, and coordinating D.C. housing costs which are covered by endowments to the two programs. Therefore, it would be optimal to maintain as much consistency between the administration of the two programs as possible. 3. Similar programs at peer institutions are housed in Academic Affairs. Here are some examples: • University of Texas, Archer Program – housed within Undergraduate Studies. • University of Michigan, Michigan in Washington Academic Internship Program – housed within the College of Literature, Science, and the Arts. • The Ohio State University, Washington Academic Internship Program – housed in the John Glenn College of Public Affairs. Thank you for taking these recommendations into consideration. I would happily speak with someone in more detail about our program as final decisions are being made [REDACTED].

---

My feedback pertains to a recommendation that is listed in two areas of the report; the Provost Office and Student Affairs. I will provide all feedback in the Student Affairs section.

---

Moving advisors away from their colleges and specialties is not the way to move forward. I understand the compliant given but there are too many degree options for advisors to not specialize. You cannot know the ends and outs of every possible degree. Centralizing advisors by College and cross training across departments within each College can work as seen by College of Ag and Engineering.

---

More discussion and information is needed regarding centralized undergraduate advising at the university level. Concerns related to change of major is not sufficient reason to consolidate. Generalizing advisors is not in the best interest of our students. There is a loss of expert knowledge specific to disciplines and majors. Centralizing at the colleges seem more appropriate.

---

Many times when you see recommendations for consolidation its the staff that get the short end of the stick and the management gets more positions. It is good to see that they looked at all aspects of the the college from Provost office down. I think these recommendations will help TAMU as a whole and encourage more students to apply at TAMU.

---

Little confused about "Transfer Students" in the proposed organization structure

---

Limiting to notes about Academic Advising. The experience of my son in trying to "Get Advised" proved to be a process that was a real time drain. In My Day.... ('87) you grabbed the Catalog and followed it and my advisor served no value to me. I would not advised going back to that as students today do need more help than that but the fact is a modern student can typically navigate an online tool 10 times faster than a face-to-face meeting. The process of "Changing a Major" was a nightmare for my on and many of the Colleges simply do not let people "move in" to their school.

---

It seems wise to refocus the Provosts Office on Academics and Student Success, but an important part of the student success equation includes career readiness, career development opportunities and employability upon graduation. These outcomes are expected by families sacrificing financially for a brick and mortar higher education experience, when there are far cheaper alternatives available to them. These goals are best accomplished when Career Services works in collaboration with academic units. I'm concerned about the placement of Career Services as one of several units in Student Affairs serving smaller, specialized student populations. Maintaining a high profile for career services is important for recruitment, retention and motivation of students in the current environment in which the return on investment in higher education is often questioned. TAMU's centralized Career Center model provides access for all students to a huge variety of resources, and the college liaison model ensures that all student populations are served by someone familiar with the needs and opportunities unique to them. I would consider keeping the Career Center in the Provost's Office for greater visibility as it relates to student success outcomes.

---

It seems wise to refocus the Provosts Office on Academics and Student Success, and an important part of the student success equation includes career readiness, career development opportunities and employability upon graduation. ---

It seems that the recommendation is to significantly reduce the oversight of Provost Office. I disagree with moving the VP of Diversity out of the Provost Office. I also question why Academic Affairs would move out from under the Provost as that is the chief academic officer of an institution. It is not clear to me if the recommendation is to centralize all advising, or to centralize advising at the college level. Considering the size and scope of A&M and the particulars of all degree programs, I do not think university wide centralization of advising is doable. I do agree with the idea that each college should centralize their advising.

---

It seems a lot of things are being removed from the Provost Office. Moving IT functions to the Division of IT makes a lot of sense.

---

It makes sense to remove as many department as necessary to focus on student needs. Centralizing undergraduate advising seems like a good idea. I switched my major before graduating and it would have been helpful if advisors had a better understanding of other majors.

---

It looks like there are are too many programs under the Provost Office and reorganization would be appropriate as suggested in the report.

---

It is not a secret Provost Watson made changes to the institution to move power to the provosts' office. It is not clear how all these changes are a rectification of issues created by previous administrations. My concern is that changes being made will shift the power in the provost's office to the president's office rather than find the balance necessary to move this institution forward. Academic support belongs under the academic officer/provost. I am a fan of centralizing academic advising. My experience working with advisors is they rarely have enough time to do all the work assigned to them. Primarily because they catch the junk jobs no faculty member is willing to complete for an academic department. My concern is centralizing outside of the college may lose the nuance necessary to prepare students for the field they

are pursuing.

---

It is my hope that Dr. Tim Scott will be named Provost.

---

It feels like there's little difference, and sometimes overlap of reporting, to the VP of Undergraduate and VP of Student Success. I'm confused as to why these are not the same. Does student success within these programs include graduate students, and if so, how? I think centralization at the college-level of undergraduate advising is a great idea for those colleges who have not yet done so. While this would help standardize advising across campus, I disagree that it would help those wanting to change their major. Policies need to change for that impact.

---

It does not make sense to move the division of Enrollment and Academic Services out of the Provost's Office, particularly the Registrar. The Registrar enforces academic policy.

---

It did seem like this office had too many "pots on the stove".

---

Interesting ideas overall. What is the definition you are using for efficiency and effectiveness: Spending less money? Time to complete tasks/projects? Undergraduates graduating in 4 years (2 for transfer students), master's in 2 years, PhD in 5 years? Having fewer staff and faculty? Increasing rankings? Increasing research grant funding? Without defining what you are wanting to accomplish, it is difficult to determine the cost/benefit analysis for making the decisions recommended. Several recommendations will need tremendous financial investment in building programs because of the increase in faculty and staff, which may also require more facilities. How is success going to be measured if these changes are made? Page 2 indicates that "more than 20 percent of the university's employees are currently over 65...." According to the Texas A&M Staff Demographics website (<https://accountability.tamu.edu/All-Metrics/Mixed-Metrics/Staff-Demographics>), in fall 2021, there were 350 staff over 65 out of 7,269 (all campuses), which is 4.8%. The faculty headcount (<https://accountability.tamu.edu/All-Metrics/Mixed-Metrics/Faculty-Headcount>) for fall 2021 was 3,845. While the age ranges are not provided on the website, based on the known numbers, 49% of faculty would have to be over 65 to get to your 20% estimate overall. You also state there is a high turnover rate, but do not mention what that number actually is. Is it greater or less than our peers, the Bryan/College Station area, or over the last five years? You also talk about a small pool of potential applicant pool in Bryan/College Station. In my area, most of the professional staff have at least a master's degree in a specialized or related field. I would not expect that many local people would have the expertise. In addition, it is common for younger professionals to move on after a few years to other universities as a promotion. If Texas A&M's goal is to become a "globally recognized, top-tier institution" (p. 5), I would expect us to attract faculty and staff from around the country and world. As someone who strongly believes in professional development, I am always a proponent of more education, training, and development. I do think there are pockets of quality professional development and training around campus. Page 3 suggests that academic "centralization and targeted realignment of academic units" would increase effectiveness. I'm not sure what the definition of effectiveness is and how combining units would increase that, especially if there will not be layoffs. I'm also not sure what this means for colleges who are not addressed in these recommendations. Page 4 mentions "successful outsourcing models." From my personal perspective, I would not draw that conclusion, but, again, it depends on how you are defining success. I do not believe that the staff in those areas fared better in terms of wages and benefits, nor do I believe that the quality of service (thoroughness, timeliness) to the institution has increased. On page 6, you indicate you had in-depth interviews and a survey to key leaders, including Deans and Vice Presidents. What I wonder is how valuable those interviews were considering the large number of people who were in interim positions and/or had only held their position for a few weeks. Did you talk to Associate Vice Presidents/Deans who had more institutional knowledge? People have more motivation when they help create structures and processes. I feel like some people were blindsided and/or some decisions were already being implemented prior to the release of recommendations. It would be great, as you say on page 8, for people to come together for a sense of ownership of shared priorities. In some areas, I think that will need a strong facilitator for larger changes. On the Provost's Office recommendations, some of the titles became confusing. The current organizational chart mentions an Associate Provost for Academic Affairs and Student Success (p. 12). The proposed organizational chart includes Vice Provost for Academic Affairs and Strategic Initiatives (p. 13). But, it looks like there is a new position, Vice President for Academic and Strategic Collaborations, that will report to the President. The similar titles are confusing. On page 14, I agree that the academic advising process can always be improved. Some students are confused, and some advisors are not helpful. I'm wondering, though, if academic advising is completely centralized if that will be a disservice to students who need department-specific knowledge. I'm not sure your explanation indicates how this will be more efficient for students if advisors are still representing their respective

college.

---

In the MGT report proposed org chart, the Center for Teaching Excellence is under the Associate Provost for Student Success; I believe the efforts of this office are more closely aligned with Faculty Affairs. Academic Innovation and Online Learning- AIOL should be reassigned to the Vice President for Academic and Strategic Collaborations. This office has been under the Provost for several years and they still do not know their mission, purpose, or what is their value to the institution. Since it's not done well under the Provost, and it requires a significant amount of collaboration, it makes more sense and will likely receive greater advocacy under the new VP. With the creation of the Aggie One Stop, I think there is an opportunity to integrate advising and students wishing to change their major into this shop. Perhaps it's only office hours for certain common majors but if we're looking to simplify and help the students with as few stops as possible, the scope of this effort may need to be explored to expand, which requires further collaboration.

---

In regards to finding #1, Center for Teaching Excellence deserves to be kept under Dean of Faculties. In the proposal, CTE would exist under the same category as Math Learning Center, OSS, writing center, and several other student-serving offices. While you could say an end goal of CTE's offerings is to increase and promote student learning, their services are for faculty, not students. Aligning them with other student services does not make sense. CTEs programming is for faculty and other educators on campus. In regards to finding #2, can you operationally define "centralize". This term has a different meaning depending on who you speak to. Does centralize mean all advisors would physically be in the same building? Does centralize mean all advisors are employed by their college instead of specific program? Does centralize mean all advisors are employed by the university instead of their specific program? This rationale presents a guessing game for all involved.

---

In regards to centralized academic advising: There is not enough information provided to understand what is being proposed. Even if advising was centralized by college, students would still have the same difficulty changing majors outside of their college, so the only way I interpret this rationale is to have all advisors located in one area with knowledge of most or all majors and programs. this would be an unbelievable burden/demand on advisors. There are other ways to address the difficulty students face when changing majors. If we are centralized and removed from our departments, the ramifications will cost students more than the current change of major process does. There is no information about what our caseloads would look like in this centralized structure. If our student populations are large and unrelated, we would lose our ability to support and build relationships with students. We would also lose the ability to network and build relationships with faculty in departments - which directly benefits our students because we can connect students to faculty who have similar career interest, research interest, or opportunities like research positions. students are less wary and more likely to meet with faculty when the advisors serve as the go between - the relationships we build with our students allows them to trust us and allows us to hold them accountable. I am concerned that a lot of harm will be done in the name of these prodevo/career benefits. While I would like a better career ladder with more professional development opportunities - There is not enough information to understand how centralizing will take place and if we will be losing the status/pay/career we have already worked to build by having advising centralized.

---

In regards to Finding #2 related to undergraduate studies - the whole recommendation to centralize academic advising is based on the idea that it is not uncommon for students to change their major. Texas A&M is home to 144 different majors (as found on the TAMU Career Center website). Creating a mass reorganized structure where advisors report to the Provost Office, not individual colleges, will solve nothing in regards to the change of major process. Students will still have to meet with one or possibly two advisors and fill out a form that the department reviews so that a change of major decision can be made. Yes, advisors are "siloed in individual colleges and/or departments", but that gives us more opportunities to better learn the curriculum for the majors we serve and it allows us to teach the students their curriculum and give them a more specialized and complete service. Making centralized undergraduate advising structure where an advisor in the Horticultural Sciences department is expected to know what the requirements are for one student to change their major into Aerospace Engineering and another to Biomedical Sciences does not benefit the vast number of students. In reality, it makes it impossible for advisors to learn everything required for each specific major and it is a disservice to the majority our students. We already have a Transition Academic Program team who are wonderful at their jobs and already do a great deal of service to students who want to change their majors. They put students in contact with the major advisors for the major they want to change into and they really help students meet the requirements for change of major. Centralizing undergraduate academic advising to the Provost Office will do nothing but hurt the students who attend Texas A&M University because it will create a great deal of chaos while the

reorganization is happening.

---

If the provost's office moves to focus more on students, how will the reporting structure of the deans change, if at all? Will they also report in to faculty affairs? And they also report to the president? My concern is that too many people to report to limits their autonomy and effectiveness.

---

I'm worried that truly centralizing undergraduate academic advising will make the experience for students worse overall because each degree plan is so complicated and unique. This is an area of consolidation/reorganization that I think should have more of a middle-ground approach; perhaps having a solid line responsibility to a particular college and a dotted line of responsibility to a central academic advising unit that can provide training and resources to advisors who need it.

---

I would agree that the Provost Office could use reorganization and that some of the individual groups would fit better in other departments.

---

I worry about moving more responsibilities into IT--They appear to be overwhelmed as is and often are unable to respond to our college's needs.

---

I worked in TAMU IT (previously CIS) for 19 years (1988 - 2007), primarily in management, and have been with EIS since then, working in management until my retirement and return to work as an active retiree. Based on my experience, EIS has a far superior reputation with customers, and is a significantly more organized, professional, and security-conscious department. EIS's audit results show few, if any, findings because of this. If we are integrated with TAMU IT I am very fearful that this will not be the case in the future, that our customer service reputation would suffer. That would be a change in the wrong direction. If we are integrated, I think it's crucial to keep the department intact as much as possible, keeping the staff who are experts in this mission-critical system assigned solely to the Compass application so we can maintain our processes.

---

I will only say this as to the Provost office and when attempting to remove certain entities in general. Every university should have a well balance set of checks and balances within it. No one entity should have full control over every decision and it's outcome. This appears to be the suggestion in this report. Does the Provost Office need to be adjusted, yes just like a number of entities but the checks and balances still need to be there across campus.

---

I will leave academic areas to the academics. Finance is really a service function to enable proper resource allocation and budgeting. We need to know the mission so that we can enable success through proper allocation of financial resources.

---

I was surprised to see how many units were under the umbrella of the Provost. I agree that the provost office should focus on academics only.

---

I was relieved to see the Provost's Office is still considered vital to the academic success of the university. However, I think Provost Communications should remain reporting to the Provost, since the messaging is specialized and not commonly understood by all communicators on campus. With Provost Communications under Marketing and Communications, the chances are good others will be asked to lead the communications efforts.

---

I was not aware of the varied units that were housed under the Provost. Some don't actually make sense so moving those to an area that might be more appropriate seems reasonable.

---

I think the re-structuring of this position sounds logical and sound. Creating a more honed focus for a high-tiered position should help the University move forward in whichever direction chosen in a more efficient manner.

---

I think that the slimming down of the provosts office is overall a positive thing, and sharpening the focus to concentrate on Student Success is a good idea. Centralizing undergraduate academic advising may not be feasible, as the colleges themselves have different processes, etc. Perhaps more information, networking and training (using the HR Liaison network as a model) could help improve the student experience without removing the advisors from their other roles in their departments. I have no opinion regarding the McAllen campus.

---

I think moving the Career Center and Veterans services to Student Affairs makes a lot of sense.

---

I think it is good that the VPR does not report to/through the Provost.

---

I think centralizing undergraduate advising is madness- you want to relocate all of the advisors to a central location where 50,000 undergraduates will go to see them? This seems like an extremely inefficient set up. Watching the staff in my College be slowly redistributed from the departments to the college, I can tell you taking staff away is not as great as it seems. It is bad for morale, walls go up with individuals who want a more direct line to their supervisor or want to be

close to the department they are serving, departments are expected to act uniformly when the very nature of their discipline makes that infeasible.

---

I support the suggestions in the report

---

I support all recommendations.

---

I suggest you elevate this IT group to a leadership role in the consolidated IT infrastructure. I base this upon security assessments as well as current responsibilities across campus.

---

I suggest elevating the Office for Academic Innovation and including the Center for Teaching Excellence and Continuing Education under the larger umbrella of Academic Innovation. At the very least I recommend aligning AIOL and Continuing Education. There is significant revenue left on the table by not having DE and CE offerings under the same umbrella, as oftentimes content is re-purposed across scales for different audiences. A more contemporary revenue model in line with peer institutions could be assigned to both DE and CE if these two were aligned. Revenue generated could then be re-invested into innovations into the 88% of course sections that are taught face-to-face. Seeing models of instructional delivery as the umbrella and having the digital learning environment serve all modes of delivery would start to move the needle on TAMU's potential with digitally-forward teaching and learning. There were so many lessons learned by the Office for Academic Innovation during the simultaneous transition to a new learning management system while supporting remote instruction (the ultimate stress test). Very little of that is being utilized to move the teaching and learning enterprise forward. Additionally, student success cannot be an institutional priority, nor can DEI, without the linkages to the digital learning environment. Currently teaching and learning technologies exist in a vacuum. Our peers have all elevated and strategically embedded this portfolio as a result of COVID19. TAMU is not doing the same, and the loss will be to students. I look forward to working with leadership on these matters, as their centrality to a 21st century institution is critical for the institution to remain relevant.

---

I see no issue with the restructuring of the Provost's Office, and agree that TAMU should further invest in the Higher Education Center in McAllen, TX. However, I do think it would be a mistake to centralize undergraduate student advising. Student Advisers that work in specific departments are able to specialize their knowledge about the degrees and classes offered within their departments, as well as maintain more personalized relationships with the students and faculty/staff within the department. I think it would actually help the students more if retention of student advisers was more of a focus. The process to change majors is somewhat daunting, but this could be remedied by streamlining the processes to change majors or add minors, etc. rather than restructure the entire department. This streamlining could look like putting more of the interdepartmental communication upon the advisors, rather than the student.

---

I only receive emails and have not had any interaction with this office.

---

I like what will be happening to the provost office. I think it will make university wide communication better.

---

I have one piece of concern regarding the reorganization of the Provost Office. One of the recommendations in this section is to move the Veterans' Services Office out of the Office of the Provost and to Student Affairs. As a member of the Scholarships and Financial Aid Office, this is concerning to me for two reasons. Currently members of the Scholarships and Financial Aid Office who are located on the Galveston Campus, Law School, and McAllen Higher Education Center are responsible for certifying veterans benefits in addition to processing and advising on Scholarships and Financial Aid. I feel that removing the Veterans' Services Office from the office of Scholarships and Financial aid would leave these remote employees with inadequate resources, supervision, and guidance necessary to provide excellent service to those campuses that they serve. I believe that if certifying veteran's benefits is going to no longer be a part of the mission of Scholarships and Financial Aid, then it should no longer be a part of the job description of those Financial Aid Advisors on that campus and that the duties of certifying those benefits should be aligned with main campus. I would also like to voice my support of the recommendation to elevate the Higher Education Center at McAllen. This campus is a unique place and has a lot of potential to serve the Valley well. I would love to see more emphasis placed on this center. Increased recruitment and retention at the center could also increase the amount of latinx students that our institution serves.

---

I have no comment for the Provost Office. I do agree that the Provost office has become too big and that it is too hard to navigate when you do need to talk to someone.

---

I have had many interactions with the Provost Office as a former employee, and feel equipped to share some reinforcing observations. I agree 100% that reorganization is needed as the office has become confusingly bloated and

---

unnecessarily complex to navigate for faculty (Dean of Faculties) and staff (AABS, Provost IT / IMS / Academic Affairs / External Affairs, etc). The list is long and I applaud the deep dive! I am especially in support of centralizing communications, as the messaging out of the Provost Communications office has been noticeably absent, confusing, or irrelevant since Dr. Fierke's departure. It's embarrassing to see so many "corrections" attached to leadership level messages.

---

I have concerns related to weakening the overall authority of the Provost's office, given that we're at a Research I institution and the faculty are an integral part of our strength and reputation. By taking out faculty affairs from the Provost's areas of oversight, you risk weakening shared governance. I worry that this will cause decreased faculty satisfaction and, thus, issues with recruitment and retention of top talent.

---

I have a serious issue with centralized advising. The advisors who do their job for a specific department become familiar with the nuances of each department and help make the advising personal. For example: When I am creating the next semester schedule - I loop in our advisors so I ensure that I am offering the correct amount of upper level classes or writing intensive courses. What am I supposed to do when the advisors are centralized? submit a ticket? We have undergrad research programs, 3+2 programs and department level study abroad programs - all of which our advisors sell to the students they see in the department. Having a centralized advising system means we lose all of that personal connection. It states that students are inconvenienced when they have to visit multiple advising offices when they want to change majors. Well guess what - that is part of the experience....the student wants to change to POLS then they go visit the POLS advisors to get a feel of the department. Same for changing to STAT, ACCT - whatever. Centralized advising is going to cause MORE changing of majors because students are just going to walk in select a major that they qualify for and poof - one-stop change of major.

---

I have 21 years of academic advising experience. I started out in a department in AGLS at A&M then moved and started working at a smaller university in general advising. ALL freshmen came into the university as a "pre-major" and then they had to meet the requirement to declare their majors. They had centralized advising for all undeclared majors except engineering because of the complexity of the degree plans and ABET accreditation. General engineering for the first year to year and a half was great so they could explore majors (very similar to EASA). After they declared their major they had either professional advisors or faculty advisors who were there to specifically work with that major to provide the best for the student. After about 3 years in general advising I moved over to general engineering advising. I was trained on the specifics of all disciplines offered to accurately guide them in the beginning coursework, almost exactly like EASA. After 7 years in engineering, I came back to A&M, specifically in EASA advising. I am now in an engineering department and very happy but it has taken me a while to learn all of the information I have at this point and I know there is a lot more to be learned. Because of my various advising experiences in different areas at different Universities I can say that advising through a central location worked well for students at lower levels (first and starting second year) however because of the diversity/complexity in the majors I think centralizing advising would put the students at a disadvantage. There is entirely too much major specific information for one advisor to be knowledgeable enough about to be of benefit to the student. Without saying, general engineering is a very effective way to advise the students headed towards their discipline however once in their major (engineering or not), there is too much discipline specific information to have them combined. I have heard (right or wrong) that the plan is to have centralized advising but then to group majors in different areas. Isn't this exactly what we have now?? Sounds like a lot of wasted time & effort as well as confusing, disorienting and harmful to the students.

---

I had not followed the matter closely, and I was unaware that the Provost's office was considered too large. A focus on "student academic success" is indeed a wide purview. I like the ideas of centralizing some academic advising and elevating the McAllen campus.

---

I fully support all of the recommendations provided by MGT as it relates to the Provost Office. This is much needed!

---

I firmly believe that our students need better help with Academic Advising. Oftentimes there is only one academic advisor catering to multiple departments which prevent students from being able to get the help they need in a timely manner due to the Advisors being overloaded. I also think that there needs to be more cross-communication between academic advisors so that they are better able to help students who are transferring from one department to another. Many students currently are being told different things by different academic advisors which can make the process very confusing and stressful. However, I am not sure that centralizing undergraduate advising (as mentioned in Recommendation #2) would be the best way to fix this problem. I am concerned that doing this would result in advisors having less expertise in each department's varying requirements and could potentially make it even harder for students

to reach an advisor who could help them.

---

I feel that Finding #2 and Recommendation #2 in the Provost Office section lack context. The change of major process has actually been streamlined quite a bit over the past year and a half. Centralizing advising would perhaps further streamline the change of major process, but at the expense of the detailed knowledge of departmental advisors. Departmental academic advisors often get to know their students' interests and goals quite well over the course of 4 years which makes for a more productive advising relationship. An advisor who is embedded within a department/program can help students more easily connect with high impact experiences and the departmental faculty, as well as helping students network with former students. It is not unusual for advisors to hear stories of dissatisfaction from students changing majors from units with centralized advising at the college level. Often times we hear things like "I'm just a number to the advisors there" or "the advisors in X office don't listen to my goals and struggles." If one is interested in the student perspective beyond anecdotes from advisors, one should visit r/Aggies on Reddit. Relationship building is a key element of academic advising and that seems to often get lost when advising is centralized. While I disagree with the idea of centralizing advising under the Office of the Provost, at minimum I think this recommendation would require extensive further study before changes are made.

---

I don't work with the Provost office enough to provide feedback but a lot of feedback. I do feel the consults didn't interview enough people to make sure strong recommendations. I hope certain entities that are doing a great job will be studied and their practices are adapted.

---

I don't not have enough interaction with the Provost Office to provide strong feedback, but the idea of moving the Student Employment Office to HROE makes sense. A lot of the practices such as onboarding, work in Workday, I-9 documents are already handled by HROE. It would be a strong fit.

---

I don't disagree that the Provost Office had amassed a very large operational portfolio; however, in recent years it has been clear where the delineation of power was. If these recommendations are implemented there will need to be a very clear explanation of who reports to the president (provost, vice presidents, deans).

---

I do not think it is wise to move the business functions from the Division of Research to Finance. The Division manages many special initiatives that extend past this one system member. I believe we best serve our customers by remaining under the direction of the Vice President for Research. This will allow us to continue to focus on those initiatives and our customers needs rather than having to split our focus between our customers and the mission of the Division of Finance.

---

I do not see issues with this realignment.

---

I do not believe that the Provost office should be cut down in the ways suggested. I do understand a further centralization of services. The academic advising offices should not be centralized out of the departments. This is an extremely drastic and frankly over generalizing of the work these staff do in individual colleges and their departments. Puts all the fire in one area and solves none of the aims sought to be solved by this move.

---

I do not agree with recommendation #2. Centralizing undergraduate advising is detrimental to the student experience. Student's need the ability to meet with an advisor that they know personally can assist them with their exact degree plan and needs. It should not be made easier for students to change majors, as they need to fully understand the potential risks and consequences that could come from that decision in regards to graduation time. Overall, I believe it is highly important for every department to have their own academic advisors to meet one-on-one with their students.

---

I do agree with the recommendations here, especially the recommendation to place the focus on student academic success and become more exclusively focused on the academic mission!

---

I do agree that the Provost's office was slightly over-extended and moving some of the units/organizations to other areas makes better sense. However, I work in the Vice President for Research department, and I do have some reservations about moving our support units (communications, finance, HR, and IT) to centralized offices. As we have developed very specific skill sets and relationships with our researchers and research supporters, it seems non-productive to have us centralized where our attentions might be directed elsewhere.

---

I concur with the recommendations of the study regarding the Provost Office

---

I completely agree with the Finding that indicates "the Office of the Provost has increased in scope and function, making it a large and complex unit with competing priorities." I have seen this need as an observer, partner, and accountable party to ensuring the security, privacy, and compliance of all the systems and data managed by Provost IT are in place.

The separation of Provost IT from TAMU IT makes many IT functions unnecessarily harder including some aspects of security and IT compliance. It would be simply natural and best practice if the functions that are squarely in the realm of Information Technology be a direct part of the University's One Information Technology organization. This would allow for the reduction of technology and effort duplication while at the same time increasing the available and quality of IT systems, services, knowledge, and capabilities at the direct reach of those managing and supporting IT systems currently under the Provost Office.

I can certainly understand making the Provost Office more efficient by moving various parts around that may better be suited in other departments. However I would like to say that I am hopeful that although I am a functional (IT Business Analyst) staff member that staying with EIS makes sense. We ease the interruptions from our customers to the developers and have skills that help both be more efficient. Having us stay with EIS is beneficial in that we have neutral oversight from our customers. TAMU is such a huge University that I would want to make sure the changes that are being recommended do not impede from the customer service we currently provide the departments we serve, especially the timeliness that we currently operate in.

I believe the confusion and disconnect for students and faculty between Academic IT and Central IT services is pervasive and warrants unification both strategically and operationally of the two groups. Additionally, the other unification recommendations seem to align with the overall theme of reducing costs, increase efficiency, and raising the level of service delivery across the university, so I am 100% supportive.

I believe that some functions do need to be taken away from the provost's office to make them more efficient, however, I still believe that the Provost's office should still be in the reporting chain on issues involving students, learning, and everything that the TAMU stands for. The Provost's office could serve as a last link in the chain before something moves up to the President's Office level. We still need that system of checks and balances.

I believe centralizing advising at the university-level would not be a conducive change for the advising of students. Standard processes would allow for a better flow of information and standards in regards to change of majors. The common change of major application has helped this process already, but has not been in effect for an entire year. Centralizing at the college-level would be a better start. This would allow for advisors to keep their specializations within their departments but standard operating procedures for the advising of students could be created.

I appreciate that the centralization of advisors suggestion includes a dotted line report to the academic dean, I feel that advisors have a strong passion for the majors they help students with, and that passion is felt by the students. It certainly was when I was an undergraduate, my biology advisor helped support my passion for my major.

I am writing in support of Recommendation #2 to centralize undergraduate academic advising, however, not for the reasons stated in the report. While the change of curriculum process is one of the biggest challenges undergraduate students face, it is not because of academic advisors or an academic advisor's workflow. In most academic departments, change of major criteria and requirements are established by faculty groups. Other issues related to student progression on degrees include vague and open degree plans which do not allow for students to adequately take advantage of advising and technology tools that show their progress to degree. For example, a degree program with a lump of 32 free electives or 12 directed electives that must be selected in consultation with an advisor will NEVER be able to self-approve their undergraduate degree planner and will ALWAYS have to rely on an advisor submitting a course adjustment for their class(es) to fill those areas of their degree evaluations. Again, faculty committees own the curriculum and curriculum requirements, and advisors are the ultimate advocates for students to complete such requirements. It is difficult to be the executors without any control. Academic advising is a relationships and a process - an exchange between an advisor and student. I am 100% in support of centralizing advising because it professionalizes the role and allows for hiring qualified personnel to fulfill these roles. Additionally, we can maximize career ladders and provide clear pathways for advisors to progress in their career while expanding their skillset and expertise. The general studies major should remain a vibrant option for students, and academic advisors who work with first year students should be the most experienced, well vetted, and credentialed advisor; in fact, we should be recruiting from personnel with graduate degrees in student affairs administration, higher education administration, college student personnel, counseling, etc., to fulfill these roles. While many advisors have been successful at "falling into" their advising role, it should be done through an entry level position to allow for an opportunity to grow and progress in the profession. I recommend centralizing at the college-level to begin with. Several colleges, liberal arts, agriculture and life science, and education and human development have seen some success (and some setbacks) with centralizing advising at the college level. Academic advising should be focused on holistic student development and progression through their degree, and while advisors do not control curriculum or dictate course requirements to fulfill degree requirements,

advisors should focus on helping students make meaning of their curriculum, design and select coursework that closely aligns their personal and professional goals, and serve as the students' primary advocate and navigator of university policy and procedure. A centralized model allows for synchronized hiring, onboarding, training, and maintenance of standard operating procedures.

I am unsure why the office for Diversity and Inclusion is being relegated to a subordinate of "Academic Affairs and Strategic Initiatives." This seems contrary to the stated goals of the university to foster diversity in all facets of the university's operations. Instead, this will serve to further silo the efforts of our diversity and inclusion staff away from any meaningful impact on the campus as a whole. It also seems like a mistake to consolidate all the advising offices under the helm of the Provost. An advisor for Engineering will have a much different skillset and knowledge than an advisor for VetMed. While this move is couched in terms of student success, I fail to see how changing the roles of academic advisors to a bland, general sort of advising helps. As a former student, my advisor's knowledge of the department and professors (and knowledge of the students!) were vital to my success, and I don't see how removing specialization will help matters.

I am unclear on the information gathered for finding #2. Five steps for students to change majors is not a reason to centralize advising. Most of these steps are completed by the student on their computer and steps 1 and 3 are not mandatory. While it is not advised, students can technically review the major requirements, decide to switch and submit the change of curriculum all without ever seeing an advisor. But visiting with 2 different advisors and reviewing/deciding to switch majors is anything but daunting. Maybe A&M needs to consider admitting students without a selected major and there would not be so many change of majors. At 18 most people do not fully know what their interest are. Centralizing advising from the department to the College of Agriculture has been a nightmare. While staff is fully aware that we are mere peon's at A&M, the centralization of advising in COALS has left many of us with little motivation and very low spirits. I loved my job before the restructure and although I still love working with students, I feel like I am not important anymore - not by the students, but by the dean's. Also, students complain enough as it is, will centralizing us really make it any better?

I am really not sure how enrollment management should move to Department of Finance. Enrollment management is about well-planned strategies and tactics to shape the enrollment of an institution and meet established goals, especially enrolling qualified and well rounded students who will retain and graduate and become contributing citizens in society. It is not only related to budgetary issues but a lot other issues. Did not find the much linkage between enrollment management with finance at all. Please reconsider that move. What is more interesting is that I did not even find Enrollment management in the Proposed Finance Organizational Chart- probably an oversight.

I am particularly pleased to see the land-grant mission focus and efforts to standardize the quality of support services both outward-facing (advising) and inward-facing (IT, HR). My experience with the consolidation of IT, business support, and HR within Undergraduate Studies several years back, though, is that the people in our unit who held these responsibilities were taken away, and much of the labor related to these functions rolled back to us on top of our programmatic responsibilities. For this reason, I am apprehensive about further consolidation. It might just mean that the help we need is further away and harder to access. Along these lines, I'm concerned that the ability to tell the story about the diverse programs at TAMU is beyond the scope of one office.

I am not opposed to 'slimming' down all the units currently under the Provost Office. However for EIS (Enterprise Information Systems), I think the current positions, to include Functional Analysts should stay in tact and a part of EIS.

I am not in a position to provide good insight into these changes.

I am not as familiar with the Provost Office but the report does seem to illustrate the many different responsibilities that should probably be housed elsewhere.

I am concerned that the Office of the Provost is being divested of too many functions and how that will affect being able to bring in quality candidates. If it supposed to be student-centric, why remove Education Abroad? I also feel that centralized academic advising would be an unforced error on A&M's part. Given that the concept in the report is not fleshed out at all with no recommendations as to how it would be achieved, it is hard to see what it would look like, but having advisors who are jack of all trades and master of none is not a good idea, particularly in more technical majors. Perhaps look at each college or School having centralized advising rather than the entire university.

I agree with the review and also believe the size of the Provost Office leads to "competing priorities" that negatively impact students, staff, and faculty. If the primary focus is on student academic success, then the recommended organizational structure seems to make more sense and could be more effective in that mission. Also, it makes sense to

centralize academic advising, however, I can't quite imagine what that would look like at a campus this size. At the very least I think advising could be consolidated within each academic college instead of designating advisors to individual degree programs. The current process for switching majors is complex enough without making students meet with multiple advisors before making the switch. With the current staff to student ratio and the turnover/department switching, students have significant difficulty getting an appointment prior to the deadline. Not to mention academic advisors have to work long hours to try and accommodate students' needs.

---

I agree with the reorganization of the Provost Office with the focus exclusively on the \*academic\* mission of achieving excellence.

---

I agree with the recommendations under the Provost Office section. I believe centralization should be accomplished in a manner that ensures the unique aspects of College and Department partners are valued and accounted for. Some areas may require a higher per-student investment OR a different level/mix of experience in the advisor cadre for a specific College or Department that on the surface seem like disparities across Colleges today.

---

I agree with the recommendations outlined in the report for the Provost Office. Under Provost Watson, that group grew in scope and needs to be whittled back down.

---

I agree with the recommendations about the Provost Office. The office has grown inappropriately and disproportionately powerful.

---

I agree with the proposed restructuring.

---

I agree with the findings in this section.

---

I agree with the dissolution of the DOF.

---

I agree with a support the recommendation made by MGT.

---

I agree with Recommendation #1, especially as it pertains to Student Affairs and IT. I highly disagree with Recommendation #2 to Centralize all undergraduate advising. While a central advising office may work well in a smaller university, centralizing advising could greatly affect the quality of advising at an institution of Texas A&M's size. Having been an academic advisor for the past 5 years in two different colleges on campus, there is no way one office could learn and keep up with the differences and requirements of every major and catalog year on campus, along with updated nuances, transfer credits, course combinations for prerequisites or combinations to avoid, etc. In my first advising position in the College of Architecture, I advised for all Environmental Design students and managed four minors. In my current position we have two majors, one of which has 8 technical tracks options. I know other majors across campus cannot be less complex, including prerequisites for programs such as Nursing, Pre-Med, Pre-Vet, Pre-Law, etc. If the goal changes to make it easy to change majors throughout their college experience, undecided students could easily be lost in the shuffle or not meet our 4yr and 6yr graduation rate goals, and could in turn cause more students to pay out-of-state tuition with excess credit hours. It is a big decision for an 18-year-old to choose a major, but in this case I would argue we invest in admitting undecided but quality freshmen to General Studies and review career inventories and review major options in a required Hullabaloo U course instead of encouraging them to change majors multiple times. My second disagreement with this section is that it would greatly inhibit advisor's ability to invest in and get to know their students throughout the time in the major. When you know your advisor well, it makes it easier to discuss when you are struggling in a class, having a tough time, making decisions for after college. On the other side of the desk as an advisor, being able to work with your students as they grow through adversity, conquer their fears, and realize they can achieve their goals, is what makes the paperwork and administrative processes associated with advising all worth it. In a centralized model, due to the magnitude of the caseload, I don't see this as possible except on very rare occasions. I agree with Recommendation #3. Providing increased accessibility of TAMU opportunities to students outside of College Station is a great way to continue meeting our purpose to serve the state and the people of Texas.

---

I agree there is a lot of duplication of effort, but the report almost seems like there will be more positions created which goes against efficiency.

---

I agree the Provost Office is managing too much and moving some functions out will be good.

---

I agree that the provost office is too large and handle many different things. I agree that it should be separated.

---

I agree that the demographics of student enrollment at TAMU do not currently mirror the demographics of the state of

Texas. Would be interesting to see how our competing university is fairing in this area. Agree that all forms of communication should go to Marketing and Communications Agree Student Employment Office should go to Human Resources Veterans Services Office should not go to Student Affairs Data and Research and Enrollment Management should not go to Finance

---

I agree that the Provost's office should focus on the recruitment, retention, and success of students. If disbursing some of the areas under the Provost's office to other areas is the best way to achieve this goal, I agree that restructuring may be needed. However, some of the moving parts don't make sense to split from the Provost's office. Provost Communications Office should remain with the Provost's office. Someone still needs to handle Provost-specific communications, so it makes sense for there to be a direct link between the Provost's office and the group handling the marketing and communications instead of moving them to an outside department. Similarly, splitting Academic Affairs Business Services and Academic Affairs IT is counterproductive because these groups work together. Splitting them apart takes away the effectiveness of their operations. Looking at Research for example (Research HR moving to HROE, Research IT moving to main IT, Research Facilities Operations moving to Facilities), you will lose some of the effectiveness behind the success of these operations. As a non-researcher, I can understand that faculty/staff/researchers serving together under research have a very specialized skill set. Moving these areas to a general area (main HR, IT, and Facilities) means taking away people with the specialized knowledge needed for research specific purposes and moving them to a general area while allowing people in the general area without the specialized work experience to now make the specialized decisions. Centralizing Academic Advising sounds like a disaster. I say this with utmost respect, but as a former student, I can acknowledge that Advisors in specific departments is greatly to the students' benefits because they are working with advisors who are directly familiar with the needs of students in that department.

---

I agree that the Provost office should focus primarily on students and less on the peripheral activities the office has become involved in over the years.

---

I agree that the Provost office has become top heavy and involved in areas that are not education related. In regards to Finding #2 students change majors and have a difficult time doing so is incorrect. The change of major process has recently been restructured to alleviate that issue. Time frames for changing majors are posted on the Academic Calendar. The Change of Major application is posted on each colleges website. The student submits the filled application. Application is reviewed by the Academic Advisor and a decision is made based upon grades, course completed that are applicable to the new major and time to degree. So a student does not need to go to several advisors to change majors. It is strongly suggested that a student schedule an appointment with an Academic Advisor in the majors they are considering in order to find more in-depth answers regarding the degree, course work, high impact opportunities and job opportunities. A student who is doing his due diligence is selecting a major should be expected to visit with as many advisors as majors they are considering. In our college each department only has 1 Academic Advisor. So that advisor does wear many hats and has responsibilities other than advising students. However, the vast majority of what they do is advising in person, via zoom, email and phone calls. Our Academic Advisors have an opportunity to make real connections with our students and grow with them from first semester until the last. As such students are more likely to communicate with us when they are struggling either personally, financially or academically. In a large central advising center this interaction and personal relationships would not have an opportunity to develop. Our college advising staff are decentralized in that they are housed in their own departments in order to be more accessible to students and faculty. The supervising Advisor ensures that all training is consistently provided. New advisors are required to learn through observation of other advisors in the college. The supervising advisor also requires that the new advisor has opportunity to learn how to conduct advising meetings by observing. Then the supervising advisor also sits in with the new advisor for several weeks to ensure the advisor is comfortable with their level of knowledge of their majors. The advising team meets weekly to discuss ongoing issues, upcoming events and any potential issues. Each advisor also meets weekly with their departments Undergraduate Director or Graduate Director to discuss items such as course equivalency, sequence of courses or possible substitution of courses based on availability of required course work. This close working relationship with the faculty representative helps to ensure that the advisors are maintaining the integrity of the degree. I do agree that their should be common training and procedures in order to unify advising but to centralize it would be detrimental to the student. Like all things there are good people who ensure that their staff are performing their jobs correctly and efficiently and there are those that don't. That is a larger systemic issue that can be rectified without centralization. In regards to providing a consistent and streamlined experience for the student that is provided by knowing exactly who their academic advisor is and how to contact them. In a central advising center it is

unlikely that a student would consistently meet with the same person and might get different answers from each advisor that they meet. This potentially is more detrimental to the student and their success.

---

Great ideas, and they all make organizational sense.

---

Great change, allow the Provost Office to focus on their core mission.

---

Generally agree. The recommendation to realign units currently under the Provost Office to their respective areas of function should provide an opportunity for a more directed, effective office focusing on the academic mission of the University.

---

Enterprise Information Services is not just a group of interchangeable consultant coders. We typically have years, sometimes decades, of domain specific knowledge as well as technical expertise. Assimilating us into the DivIT collective needs to be done carefully and preserving our existing relationships should be a priority.

---

Enrollment Management should not be moved to Finance. It should be moved to Academic and Strategic Collaborations.

---

Eliminating this office will slow the process of hiring faculty and T&P cases

---

EXECUTIVE SUMMARY - Thank you for accepting feedback to the MGT Report. [REDACTED] [REDACTED]. The Center was created over fifty years ago by the Texas State Legislature and placed at Texas A&M with the directive to conduct studies in all areas related to real estate, urban, and rural economics and to disseminate those findings. We have had an affiliation agreement with Mays Business School since 1987. The enabling legislation established the Center's unique identity by providing fee-based funding from Texas real estate license renewals. Those funds are distributed by the Comptrollers' Office into a separate account for the Center's exclusive use. The Center manages its funds under the guidance of a nine-member advisory committee appointed by the Governor. No tax revenues, appropriated funds, or other financial support flow from the University to the Center. As a fully-funded, self-sustaining entity, the Center pays all of its expenses, including facilities, staffing, and operations. Accordingly, Center funds, whether revenue or expenses, have no impact on Texas A&M. The Center has 24 budgeted positions and a dozen student workers. By nature of our state mandate, our work is widely distributed through self-publication and our website, [www.recenter.tamu.edu](http://www.recenter.tamu.edu). Due to our high profile and the value of our work, demand for new research has never been greater, and we are continually recruiting for research positions. Our staff is composed of research scientists, data and technology scientists, an administrative team and communications staff. Our affiliation agreement designated the entire staff as faculty-equivalent even though we have no student or classroom responsibilities. It enables the Center to meet its mission to produce and disseminate scholarly research with as much expedience as possible. Our scope of work is entirely outward facing to policymakers, the business community, and the broadly defined real estate industry, which includes land-use developers, planners, builders, banking and finance, cities, municipalities, and more. Decision-makers depend on the Center to provide relevant and reliable information. Viewed through the lens of the Center's legislative mission and unique funding, the MGT Report leads to these thoughts: 1) Project Overview - It is not possible to compare the Texas Real Estate Research Center to any other university because there is no other academically affiliated real estate center in the nation (possibly the world) operating at the scope and size as ours. We are a model for many of those smaller organizations seeking to create or expand similar units. 2) Organizational effectiveness - The Center creates and executes strategies to achieve the highest quality and quantity of work. Budgets and Scope of Work are reviewed and approved by our Advisory Committee. The Center and its director are reviewed by the committee annually. 3) Finance and Business Admin - The Center's money does not flow between departments. Budget strategies are unique to the Center, and funds cannot be reallocated to any use beyond the Center. The Center is financially responsible and has demonstrated fiscal prudence throughout its history. 4) Facilities - The Center pays for all facilities costs, including rent, common area maintenance and utilities. We negotiate terms and enter into contract agreements with a private company that owns the building. We pay rent and maintenance directly to them, and maintain contact with the property manager. The department receives no funds or office space from the university. 5) HR - Due to the limited pool of potential staff employees, the Center has found it difficult to attract workers beyond BCS. Our department has missed out on great candidates because they were unable to, or preferred not to, relocate to College Station, or because we were unable to offer competitive salaries. Our department could benefit from greater latitude in salary and hiring actions. We are in competition with industry for high-level talent, often with a pay scale that is below accustomed standards in other parts of the state or nation. Tools such as AWL and remote work could greatly enhance our appeal to candidates. As an economic research group, we want to be leaders in the new world of work and make

efforts to reduce costs while increasing agility and employee satisfaction. 6) Marketing & Communications - The Center's communication team is tasked with the dissemination of research findings. They are adept at messaging, editing, and production. We produce a quarterly journal, as well as weekly, monthly, and annual technical and economic reports. The Center's affiliation agreement allows for a separate communications function within the department because of the specialized knowledge needed for effective distribution.

---

Do. Not. Take. Diversity out of the Provost's office and bury it in a new division of with a VP between the Vice President for Diversity and the President and no connection to the Provost.

---

Do not move the library under one particular college. Otherwise, funding decisions will become highly politicized. Also, the addition of roughly 200 non-teaching staff and student employees to an academic dean's responsibilities will be highly disruptive.

---

Diversity and Inclusion should not move to a new office of the Vice President for Academic and Strategic Collaborations. I fear that this is going to water down the visibility and effectiveness of the Diversity Office. Rather Diversity and Inclusion should either stick with the Provost Office or, more desirably, get their own overarching center that connects all units of Texas A&M and serves as the overseeing structure and incentive/impetus development facility that holds all threads and can provide feedback/advice/monitoring on how each unit, including the President's cabinet units are doing in terms of their commitment to DEI.

---

Difficulty in changing majors and inadequate academic advising are HUGE problems for our students. I believe the idea of centralized advising is a good one, but it needs to result in BETTER and more readily available advising. This centralized advising office should work hand in hand with the career center. I am concerned that this idea will actually result in less advisors in the name of streamlining and funneling money elsewhere, and actually have the opposite effect. Students should also be able to come into the university under a general studies major, but not graduate with one. I think the idea of a general studies major in within each college/department, is a good one, and then students would need to apply for major status, similar to the way Mays and ENGR operate now.

---

Decentralized advisors within academic departments are able to learn the intricacies of the degree plans for the department and build personal relationships with students within a program. Centralized advising runs the risk of being impersonal with a relationship never developing between a student and their advisor(s). The McAllen campus, at least, needs a support office to handle their payroll, course scheduling and such. Their faculty would be best evaluated by administrators at the McAllen campus.

---

Dear President Banks and Team: With an abundance of respect to all parties considering centralized advising, it makes no sense to me that academic advising would be banished to an "administrative" function in the name of "efficiency" rather than remain in academic departments from which flow the knowledge and resources our students need to make informed decisions about their degrees and careers. Advisors in departments (versus in a college or university unit) are physically near their students, academically and pedagogically knowledgeable of their unique needs, and are best positioned to provide the guidance our students require to make an informed decision regarding choice of major and to prosper in that degree program and beyond. Advisors are also physically situated near faculty, facilitating interactions between students and faculty who each often seek an advisor's guidance on connecting with the other. Finally, departments and their advisors are inherently motivated to support their students through specialized advising and programming—the success of their students and degree programs depend on that connected, symbiotic relationship. Centralized advising, while being hailed as an "efficiency," would actually remove the high-touch, value-laden advising experience and suggests the university is concerned only with herding students in and out with their diplomas, and equates the personal growth and development that comes from an ongoing advisor-advisee relationship to a "drive thru" transaction. Further, the individual accountability of advisors who are a stable, known-to-students departmental resource, versus a one-stop-shop advising center equipped to help any student, whether at the college or university level—again, in the name of "efficiency"—dilutes the accountability people have to one another, advisor to advisee and vice versa, such that advising is relegated to a transaction versus a trusted resource and relationship. In my experience with semi-centralized advising that includes both college and department advisors, I have personally witnessed and learned from students that (some, not all) college-level advisors who have no departmental affiliation inherently advise based on course availability and level of rigor (or lack thereof). In not being affiliated with a department, through no fault of their own, centralized advisors generally lack the content knowledge, curricular and pedagogical insights, faculty and research connections, and major-/department-specific accountability intrinsic to department advisors. It would be a mistake to disconnect academic advisors from academic departments under the guise of facilitating efficiency. Higher education can certainly be more efficient in some areas, but not where student learning and growth is concerned. As

we know in higher ed, individuals learn in unique ways and at their own pace—that process, inclusive of academic advising, cannot be scrimped or economized. As someone whose own undergraduate advising experience was merely transactional, I didn't know until I began advising in a department/program at Texas A&M how invested in and instrumental advisors can be to students' success. I have prided my career on engaging my students with developmental, collaborative advising. Referring students to other offices and contacts, an inherent advising role, helps students gain insights from multiple resources and perspectives, and critically think through a change of major and other significant academic decisions. Removing those opportunities diminishes critical thinking, one of the primary reasons for higher education's existence. I would hate to see Texas A&M revert to an advising model where a student is valued for being one among the many, relegated to "next-in-line," all to "improve the student experience"? Don't we want to enhance student education? We should be rallying our current advising model where each academic advisor is fully supported—with all the necessary resources (time, i.e., appropriate caseload; treasure, i.e., competitive salary; and talent, i.e., instrumental support/training/development)—in developing relationships with and positively impacting the lives of their students through the ongoing, one-on-one, sacred academic advising relationship, keeping education and academics at the forefront and hinging academic advising to academic departments. Aggies deserve so much more than advising "transactions."

---

Deans should continue to report to the Provost.

---

Currently the Student Employment Office is not a stand alone office, it resides in Scholarships and Financial Aid (SFAID). If SFAID is moved from underneath the Provost's Office, I would agree that the SEO should move as well. But, it needs to remain under SFAID and not be moved to HROE. Please see my comments under the Human Resources & Organizational Effectiveness section below. I would also encourage you to re-evaluate moving the VSO and Money Education Center from underneath SFAID. Neither of these offices are stand alone either. They exist as a function of SFAID.

---

Centralizing advising would be detrimental to our students. If its all centralized, how can we be certain that the right advisors and helping students with the right information? I fear that our students will be advised by someone who doesn't know anything about our department. Direct and personalized attention that is currently given to our students will be greatly affected.

---

Centralizing advising removes advisors from the departments and colleges and completely severs those ties and makes advising students extremely difficult. When advisors are housed within the departments, they can be included in curriculum meetings, class scheduling decisions, student organizations, and program reviews, just to name a few. They are the voice for the students in these departmental meetings. If advisors do not have any input or awareness of changes in the programs at the departmental level, they cannot properly serve the students. It is also just as important that advisors have their departments trust and open communication to properly serve their students. There must be involvement within the departments and colleges to ensure that the needs of those students and programs are being met. Without this involvement the advisors lose creditability with their students. The soul of academic advising is the relationship established between the advisor and the advisee. That establishment of trust and the creation of a safe environment for students to have is vital to a student's academic success and professional growth. If centralized, the ability to meet with the same students year after year is lost, as well as the "home" base within the student's department or college. In a centralized environment that safe, personal atmosphere can be lost because of the sheer size of a centralized advising office. This report includes data on other "peer" institutions; was centralized advising or advising in general reviewed at these institutions? Do you have the data showing which of these institutions have centralized advising? If yes, how is it structured, how many students are enrolled at that institution, how large in terms of physical size are these institutions? Can you elaborate further on what the centralization of academic advising would look like at the University level at TAMU? If centralized advising did take place, what does the University have planned for graduate advising? Would that remain under the departments or would it be centralized as well?

---

Centralizing advising means that advisors will be an "expert of none" and students will have even more difficulty identifying someone who can provide insight into what particular majors provide in terms of career prospects, content and student experiences. We already see this in the College of Engineering... the ENGE advisors often provide vague and/or incorrect advice about majors, leaving the students more confused and coming to the department advisors

anyways. Further, having advisors in close proximity to their program faculty mean they are often aware of student performance in classes, research opportunities, etc. at an early stage and have the chance to adjust advice and communication accordingly.

---

Centralizing academic advising will turn advisors knowledgeable of specific degree programs into a conglomeration of generalists forced to take a cookie cutter approach to every student's academic path. It is entirely possible to facilitate communications between advisors in different areas without combining all of them into a single organizational structure.

---

Centralizing academic advising will hurt the undergraduate experience - that recommendation should not be accepted. Undergrads need advisors who understand the complexities and particulars of their department and degree program. Specialized and degree-program-specific academic advisors are incredibly valuable.

---

Centralizing academic advising sounds terribly anti-student. Students appreciate having an advisor in their department who knows them, has day-to-day interactions with them, and to whom they have easy access for in-person meetings. Depersonalizing that relationship by centralizing advising is a huge step in the wrong direction.

---

Centralized undergraduate advising will not improve the student's advising experience. A centralized environment will promote impersonal, rote and less efficient advising. Currently, the College of Liberal Arts and, particularly, PBSI, has great rapport with our students. We are inviting, personal and are able to easily collaborate with all advisors across campus. Centralized advising will eliminate the intimate atmosphere students are so comfortable with in our advising sessions. Instead of feeling welcomed, they will feel as if they are just another number. Instead of experiencing the warmth of the AGGIE family, they will lose their connections to their departmental and college advisors. Not everything needs to be streamlined. Some things are better left the old-fashioned way, where we can actually interact with our students, get to know them and they get to know us. I also extremely value my current work environment. Our office allows us to communicate effectively, work efficiently and actually enjoy our jobs. I do not wish to be place in a large venue stuck behind a cube where the only interaction is via chat or email. In addition, I feel confident that career ladders and salary can be balanced without centralized advising. Our position descriptions and pay should not be based on where we are located or how many students we advise. While I appreciate some of the possible advantages of centralized advising, I do not believe it is the best interest of students or advisors.

---

Centralized Academic Advising recommendation number two is not accurate based on "claims" provided. Having a centralized form for advising will cause a lot of disruption in ways that departments have already made a system that works for them. This is not to say that every department has everything in order, but departments like mine have had a great amount of success due to the support of our supervisor/college/department/dean. There was the creation of student success center which has been a great addition to the university and is a great way for students to talk to an advisor if they need information from other departments or last minute help with something. In addition, each department is vastly different, of course what works for us will not work for everyone and vice versa. We work as a team in our department and "centralizing" advising will not create as the report claims "an environment that allows the advisors to work collaboratively with other like-minded professionals to increase additional job growth opportunities" because each advisor deals with extremely different disciplines. The centralization and training for this to happen will cause an extreme amount of stress on staff which already work hard to do what they can to help students succeed without pay that justifies the amount of time/effort they put into the role. Students come to us advisors not just for academic help but really just to talk sometimes when they need to vent or tell us about their weeks/weekends or advice in regards to a situation. If advising is centralized it will not look the same for students and it seems like they wont want to go out of their department to talk to an advisor because it is not as personable. We shouldn't run like a business where they come and go and check things off a list it should be more personable than that. Our students have yearly evaluations and they talk about their experiences from this past year with COVID and how the impact of that was extremely hard and mentally exhausting but they had their advisor to go to. If they are put in a spot where they have multiple advisors or just general advisors it takes away the ability to be personable with students. In addition, what will happen to graduate advisors, and those that advise both graduate and undergraduate students. Graduate advisors and undergrad advisors interact with faculty as well and moving them to a centralized location will make this a big inconvenience for many. Those that advise both will run into many issues if we are centralized as graduate students work differently than undergrads and the interaction is usually more frequent and spontaneous as I am speaking from experience. How about creating a focus group with those in the University Advising Committee? We can get advisors from all campuses, departments and degrees to brainstorm ideas of what can be an alternative to centralization. The community in UAC is wonderful and it is the way that we already collaborate as advisors all over campus, including

Qatar, Galveston, McAllen. We should also consider that the universities that have centralized advising do not compare to A&M, especially in size. With students being enrolled being over 70,000 we cannot emulate universities that have extremely smaller student populations. We are Texas A&M University and we pride ourselves in being a university that is unique and different than others, and copying what others are doing isn't going to benefit us since our student population is incomparable.

---

Balancing the TAMU portfolio via reorganization of the Provost Office is a much needed change to the University. The unorganized nature of the Provost Office in previous years and currently has lead to the decline of University's focus on academic excellence. The proposed organizational chart by MGT has the potential to balance out the offices and higher positions while re-allocating the duties within the new hierarchy(ies). Specifically, the VP for Research reporting directly to the President will put a larger emphasis on the role that research plays at TAMU. This could be the push needed to achieve a world-renowned institution.

---

As an academic advisor, it is incredibly concerning to me that it seems the only rationale and consideration for centralization of advising to the university was the change of major process. Change of major is a very small part of what advisors advise students on and the change of major process is a very small part of what students seek advising for. To completely change to a fully centralized structure to allow students a "one stop advising for change of major" will hurt student success and degree progression if the expectation is that all advisors can advise for all majors (which is what is hinted at by saying centralization changes the change of major process.) The only thing that seems justified by the rationale provided is that there may need to be an office on campus that can specifically help students needing to change majors. This role is currently provided by general studies so perhaps providing additional support for that office accomplishes the same goal. While centralization to college units with a structure that groups "like" majors together under certain advisors may make more sense, it doesn't look like advising was fully explored at all except in the context of change of major and university centralization. Advisors directly and significantly impact student success so to make a new centralized structure without full consultation on all duties and how that affects students is incredibly premature. Even when looking at centralized advising structures such as the ones at peer institutions such as Purdue, advisors are still specialized to majors.

---

As a parent, I am guiding four students in navigating college at various universities. I believe centralized advising would greatly improve the experience for students at Texas A&M.

---

As a long-term professional advisor at Texas A&M University, I have very strong feelings against the centralization of advising at the university level. I have spent 14.5 years advising in my current department. I have been able to create lasting relationships with former students, who come back to the department time and time again to hire new graduates and connect with current students. I have seen and celebrated their accomplishments, as well as their trials. I come from a smaller department where I was the sole academic advisor for 14 years, and I have seen 1000+ students graduate from this department during my tenor. Every one of those students was required to meet with me every semester to discuss class enrollment. I am effective in my current position because of my ability to create those relationships with current students, former students, faculty, and staff in my department. My students trust and value my advice. I know which classes must be taken during specific semesters, and in what order classes must be taken. I know which classes can be shuffled, as needed, to maintain a student's current graduation plans. The proposal to create university-wide advising will be catastrophic. Period. There are too many majors and concentrations within those majors at a university the sheer size of Texas A&M University to have centralized advising. The reason cited that centralized advising should be implemented was due to "some students' struggles" to change their majors easily. We have worked towards implementing uniform and consistent change of major policies throughout TAMU, but this was rolled out during the global pandemic (June 2020). We have essentially gone through ~3 cycles of the new change of major process, and most of those students/faculty/staff were working virtually during this time. I can see where it may have been confusing on where to go, who to meet with, etc. when we were not working in the office. However, students seek academic advising for many purposes beyond what was outlined in this document. When I began my advising career in 2007, students were still able to come into Texas A&M University as an undeclared major (GEST). Bring this back – allow students who don't know where they want to go in life, as a 17–18-year-old, to apply to an undeclared program and figure out what they want to do. My advising caseload currently consists of both undergraduate and graduate populations. There was no mention of the graduate advising at Texas A&M University and how that might be impacted by a centralized advising model. There needs to be very careful, thought out, information on how our graduate students will be impacted. Advising at the graduate level is very different than undergraduates, but I have been able to transition into this role easily due to the fact that I have relationships already established with the faculty in my department. I know which

faculty are seeking new students, which areas of research they work with, etc. I can direct both undergraduates and graduate students to those faculty for content expertise. If I am moved into a centralized advising model, in which I will be required to meet with any student at Texas A&M University regarding any major that we offer, I will lose that connectivity with my current colleagues and will experience decreased effectiveness as an advisor. Over the years I have heard many of my advising colleagues state that they became advisors because their undergraduate advising experience was poor. They wanted to do better for the next generation of students. I guarantee that creating a university-wide centralized advising model will be a disservice to the students and advising staff. Retention rates will decrease significantly or time to graduation will increase. Students will experience frustration with the lack of content/major specific knowledge. Advisors will feel the frustration of students, therefore decreasing job satisfaction leading to a toxic work culture. Academic Advising is the cornerstone for student success. Best practices can be shared across the Texas A&M University advising community, as we currently do. The office (Office for Student Success) currently charged with what has already been centralized is not effective in sharing or soliciting feedback from the UAC community. As a land grant institution, we are charged with serving the public at large. In the current decentralized advising model we are able to meet the needs of the public where they stand.

---

As I read the report, the thought that kept coming to mind was that the Provost Office would have to undergo a lot of change. A lot of functions would have to be surrendered to other groups. I think these are good changes, and as a parent to two students and member of the staff, I think I see the need for that realignment. However, I also imagine that there will be a lot of resistance to such change. I'd encourage the leadership to execute those changes in spite of that resistance. Communication (well in advance) will be critical to help people prepare logistically and mentally for such changes, and even with great communication, the changes will be stressful. But they are good and necessary.

---

Although there are benefits to centralized services, I feel like institutional and historical knowledge is lost if departments are put into a queue for the first available person to handle. It is more effective if some level of coordination remains within the units as well.

---

Although the process of changing majors isn't instantaneous, it is a SERIOUS choice, and does need to have a few hoops to go through, and make sure that people with knowledge about the changes the student will really be ensuring that this decision is both RIGHT for the student, and won't backfire later, if it turns out they don't have some requirement or don't have a pre-req or meet some need. The rules for each major are SO specific, it is definitely something that shouldn't just be rubber stamped easily. I think centralizing advising could be a big mistake - you are essentially turning advisors with some expertise into jack of all trades/master of nones. If they are responsible for being able to answer questions and advise on ALL majors, there is no way they will be able to give a more informed response than they would if they just gave info that is available on the website/marketing materials currently available to students. I completely understand the IDEA of one-stop as positive, so you don't have to call 50 people, but I feel like this will be you calling Spectrum to try and cancel your cable - you won't be talking to the same person twice, they will have little context on your actual situation, and would have to bring them up to speed EVERY time.

---

Although centralizing undergraduate academic advising could make the process easier and smoother for students, there are inherent risks of completely eliminating silos. Acceptance to a major should entail so much more than completing a list of prerequisites. Some students just aren't strong in the areas needed to excel in some programs. For example, an engineering candidate who has passed all of the required math courses and meets other eligibility requirements is a viable candidate on paper. However, an advisor who is intimately familiar with the level of mastery and rigor required to be successful in an engineering program is far better equipped to advise the individual student than an "all programs" advisor in a centralized office. A more effective approach in my mind would be to create and refine our processes to ease switching majors while retaining siloed advisors who know their programs' nuances.

---

Almost all areas within the Provost area have been realigned for effectiveness. I will only address one gap in the MGT report that is baffling. The Office of Academic Innovation is not addressed in the report at all other than the org chart where it appears to be unchanged in reporting structure. The migration from Blackboard to Canvas was painful. There have been innumerable policy changes coinciding the technology change that have been made with little input from power users of the LMS (often referred to as "academic liaisons"). The governance of the LMS is severely flawed and fostered significant inefficiencies and low morale among staff. The chief users of the LMS have no input in decision making, only feedback and reactions after policy is entrenched. The fact that the MGT report ignored this unit is concerning. I know there had to be negative feedback about this unit from faculty, IT, and many staff. If they did not find this, they did not ask the right probe questions. I hope you address a change with the leadership and governance of the Canvas LMS moving forward. We would welcome anyone in Engineering leading this change. The centralization

of academic advising should be data driven. Those majors most impacted by this should be centralized. I doubt TAMU Health and professional schools see this movement so it seems unnecessary and disruptive to them with minimal benefit. Let the data drive the changes.

---

All good. Especially recognizing and embracing more fully the McAllen campus.

---

Agreed on all points that the Provost office needs to have its scope reined in.

---

Agree with recommendations.

---

Academic advisors help students to get specific degrees, not generic ones -- a task facilitated by a certain amount of specialization and departmental identity. Please do not centralize these positions.

---

Academic advising should not be centralized. The advising needs to stay with the colleges and departments for better communication and understanding. TAMU advising should not turn into Blinn advising - where all advisors advise for all majors. Centralizing does not solve problems. Collaboration solves problems.

---

Academic advising should not be centralized. It is important to have advising at the departmental level. Advisors have specialized knowledge regarding the courses that are offered and it would be a disservice to both advisors and students to expect advisors to know details about all courses on campus versus the courses specific to the department they are affiliated with.

---

AGREE WITH ALL FINDINGS.

---

AABS should not be split (ATS to Finance and HRPR to HROE). Majority of a dept's budget is payroll. Close ties and communication between accounting and hr is essential to the proper management of a department's financial and personnel resources. Dotted line reporting to Finance and HROE is ok but these services need to stay closer to the individuals they service (the dept). Total centralization of these services decreases the engagement between business services and the dept. Without that engagement/relationship depts are less likely to contact their business services early on when an issue arises. Decreased engagement/relationship between depts and business services will decrease the dept's organization effectiveness. This will result in more time and resource being used to correct issues that would have been easier to resolve early on if there had been proper communication with a dept's business services in the first place. AABS has 10 years of experience in this area. You NEED to consult AABS's Executive Director, Brandy Kosh, on this matter as there is great knowledge to be gained on providing OUTSTANDING business services here at TAMU. You will do a great disservice to the university's operations and business services if you do not consult Brandy Kosh and learn what she can share regarding TAMU business services.

---

A lean Provost Office can focus on serving students and ensure they are getting the best educational experience. Centralizing undergraduate services makes sense only if you put this resource in one building. Doing this could increase the potential number of changes of major because it's much easier to do so. Yes, the current system requires students to do some legwork but a little legwork should be required to change the purpose of being in college. If the problem is unclear communication between advisors then develop a clear communication process. If the problem is advising may not be someone's primary load: administration should help rebalance that.

---

1) The reports seem to indicate that the Provost Office will be focused on student academic success. This is a huge shift and may significantly impact the quality of candidate who expresses interest in the Provost Position as opposed to the current model of academic success for students and faculty. It is a model that reduces the prestige and appeal of the position. I understand why that may be a desired outcome, but it is still something to keep in mind. The Provost has historically been a critically important, perhaps second only to the President, position at large research institutions. This seems to diminish the importance, which isn't necessarily good or bad but an observation. This proposed model appears to be more like a business model and less like an academic model. 2) The single sentence used to justify moving the Aggie Honor System Office away from the Provost and into Student Affairs mentions how backlogged the office has been. There was no mention of how this single move would influence or help with the backlog. Unless additional efficiencies, staffing, or organizations are captured, I don't understand the move.

---

- Moving the Career Center to Student Affairs makes sense and aligns well with the Student Affairs mission - Moving Enterprise Information Services to the Division of Information Technology aligns well with the Division of IT ability to manage hi-level enterprise functions. This will yield significant efficiencies and cost savings to TAMU - Further investigation of Academic Affairs IT may reveal complexities that make consolidation ineffectual given the varying focuses, tooling, and expertise of the Division of IT and Academic Affairs IT - The Division of Student Affairs has a

---

significant focus on DEIA concepts and has well-integrated DEIA info student programs. This is further managed and overseen by the Department of Multicultural Services. Moving Diversity and Inclusion to VP for Academic and Strategic Collaborations reduces the focus of DEIA programs - this is better aligned with Student Affairs - Centralizing Academic Advising is one of the best recommendations in the report and will positively affect students at TAMU

---

(I have few direct dealings with the Provost's Office, so my comments are likely of little value)

"Centralize undergraduate academic advising" is a phrase/recommendation that I have heard again and again during my 7 years at TAMU. However, this report fails to provide any concrete, actionable suggestions to make this happen, other than "move it under the provost umbrella." This would not result in impactful change. I do agree that departmental advising is "silosed", but that allows for major-tailored advising that is more meaningful than "general advising." I think the recent shift towards advising centers (see: College of Ag and College of Liberal Arts) is a better option that allows for tailored advising while also "centralizing" services. I also noticed an overwhelming lack of commentary about the advisor pay/classification structure. This does need to be centralized and addressed--there should not be \$10,000+ pay differences for advisors with the same title because they happen to work for different colleges. This is where the university can "invest" in advising.

Much of any institution's success is the "invisible" work that is done. If it is done well, it is often hardly noticed, and only its absence or poor performance makes it visible. This is especially true for administrative support. As re-structuring is considered, shedding light on some of the invisible work will be helpful. I am particularly concerned that the realignment of Enterprise Information Systems (EIS) to IT may result in reorganization that will negatively impact the important services they provide. As you know, EIS is responsible for running, maintaining, upgrading and customizing the student system for Texas A&M, Texas A&M Galveston and Texas A&M Health Science Center. The backbone of the system is the Banner product by Ellucian, branded "Compass" when it went live in 2009. EIS has four main data types, which "belong" to four home departments: Admissions, Records, Financial Aid, and Accounts Receivable. EIS's work is not only to keep Banner and its many related applications running smoothly, but to help end users (departments and people) get what they need to get their jobs done. EIS typically has teams of business analysts and developers for each of the home departments. I have worked in and with TAMU student AR since before Compass replaced SIMS. This team set up has been most effective for AR in particular. In my view, EIS-AR has four main internal customers: Student Business Services (SBS - the bursar), and the University Accounting Services (UAS) units Student Accounting Services (SAS), Banking, and Tax and Compliance. I lead SAS, and we depend mightily on the reports and processes that EIS-AR develops, maintains and updates for us. EIS-AR business analysts are instrumental in translating our stated needs into working requirements because they have accounting experience and a good understanding of our myriad business processes. EIS-AR developers are also familiar with our business processes, but their expertise is technical, not accounting. They find innovative solutions to difficult and often urgent situations. As a team EIS-AR helps us process transactions in the student system (for example, banking has to meet the differing escheatment requirements for all 50 states), create financial data feeds to the finance system, put holds on student refunds if the student is in arrears with a state of Texas agency, provide demographic and financial data for state and federal reporting, provide financial transaction files for reconciling to the accounting system of record, provide and data and/or tax forms. This is but a small sampling of what the EIS-AR team does for UAS. SBS's needs are far larger, and I can assure you that the EIS-AR team is critical to meeting the needs of our students as well as internal and external entities. All of this to say: As you consider where EIS will be in the reporting structure, and how EIS itself will be structured, please be aware that our three institutions, TAMU, TAMUG and TAMUHSC, are extremely fortunate to have the kind of support that we get from EIS. This is no shortage of new work for EIS-AR, and what they do for us is essential to our success. EIS-AR may be "invisible" to the universities at large, yet their contribution is necessary and significant. I have put this same comment under both the Provost and IT, since it is proposed that EIS move from the Provost to IT.

---

Veterans Service Office move to Division of Student Affairs- I highly recommend that this is not approved as part of the recommendations presented in the MGT report. To provide some context to my recommendation note regarding Veterans' Service Office (VSO), What does VSO do and why this office should not be moved under the Division of

Student Affairs. Perhaps in review of all offices under Enrollment & Academic Service consultants and others on campus staff surmised VSO as a separate office reporting to the VP of Enrollment and Academic Services and there was duplication of efforts in VSO versus Veterans Resource & Support Center (VRSC). The primary functions of VSO are to certify military educational benefits eligibility for Veterans and Dependents of Veterans based on eligibility requirements, assist with other financial resources needed to help pay for college, ensure compliance in administering the military educational benefits programs, provide the necessary reporting required in administering these programs, provide data upon request and oversight of audits for military educational benefit programs. The vast majority of military educational benefits administered by VSO are for Dependents of Veterans and not Veterans themselves. Veterans comprise a small number of students overall. (approximately 1000 Veterans and approximately 2800 Dependents of Veterans are receiving military educational benefits. The VRSC was created several years ago to remove all programming and other support services for veteran's student support from the VSO. (as noted in the MGT report the primary focus of the Division of Student Affairs is student development), I note this as the VSO has a totally different mission and purpose as noted previously. The removal of student support from VSO several years ago allowed VSO to focus on administering students with military educational benefits as well as other financial assistance, eligibility for all programs, compliance oversight for military benefits administration and required reporting. This restructure created an office which expanded programming/student development that VSO had been doing, to align with other student support in the purview of the Division of Student Affairs. VSO has a heavy emphasis on reporting and compliance. The two offices in which data is reported to are Veterans Affairs and the Texas Veterans Commission, and the Texas Higher Education Coordinating Board (THECB). Hazlewood utilization is monitored and reported several times a semester. These two entities audit SFA/VSO each year on these programs. The VRSC provides student support primarily veterans, many veterans assimilate into the general student body population of campus. VSO administered educational benefits for approximately 3000 dependents of veterans receiving military educational benefits: and approximately 1000 Veterans' receiving military educational benefits. Dependents of veterans use all the general student support systems across campus and rarely the VRSC, as they are not veterans. There is a commonality of name between the VSO and VRSC, "Veterans" in their name. They serve two very distinct functions on campus. One other pertinent point to make, VRSC and VSO campus networks and dependencies are VERY different. The VSO collaborates with EIS, Registrar, and Student Business Services on a daily basis to effectively and efficiently process military educational benefits. The established working relationships of these offices has allowed SFA to use their Banner system expertise and financial aid processing knowledge to automate for a better student and family experience as they seek the military educational benefits they have earned. Automation has allowed for rarity of visits by students and their families to the VSO to apply for and receive their benefits. We have a very small team who processes all military benefits for our campus. Benefits processing is an enrollment services function, not a student development function. Not only VSO structurally falls under SFA, as well as part of the Banner (Compass) Financial Aid module, which includes a special module for processing of the Hazlewood program as it is specific to Texas residents. All eligibility/processing/forms fall under the financial aid security structure in the System. Why VSO as part of SFA Facilitate/collaborate for professional judgment for cost of attendance increases using professional judgement that can only be done by a Financial Aid Administrator. Provide assistance with federal, state, and institutional aid programs Identify additional eligibility opportunities (emergency aid, TEXAS Grant, etc.) to maximize college financing for students who also receive military education benefits. VSO as part of SFA allows for immediate awarding for students with educational expenses without visiting yet another office. In reading the MGT report there was no reference to new Aggie One Stop which will open its doors January 2022, which will provide integrated enrollment services to all students. The Aggie One Stop will provide customer services supporting the following offices: Admissions, Registrar, Scholarships & Financial Aid, and Student Business Services, as well as military educational benefits. In moving the VSO customer service representative to the Aggie One Stop students receiving military educational benefits will have enrollment services available in one place. The remaining financial aid officers who process military educational benefits will continue to focus on administering those programs, which are very efficiently done in an already very effective system. VSO will no longer need or will have their own office or separate identity. The Financial Aid Advisors who processing military education benefits are house with the SFA team. Although the benefits processing staff will still communicate with and provide assistance to students, it need not maintain the name Veteran Services Office. Based on the information provided, I would appreciate a sincere review, thought process and decision that would maintain the military educational benefits processing and all it entails to remain under the purview of Scholarships & Financial Aid. I am available and open for additional questions regarding my recommendation.

- Student Employment from Provost I wanted to provide some clarity and understanding to

consultants and other university staff on the functions of the Student Employment Office (SEO). SEO might have been seen as a separate office under the VP of Enrollment & Academic Services which duplicative functions within Human Resource functions (HROE). SEO is within Scholarships and Financial Aid (SFA) and is responsible for oversight of student employment at TAMU. (TAMU SAP 33.99.08.M0.01) Student employees are categorized as either a student worker or a work study student (awarded federal or state financial aid funding specific for employment- for on campus or off campus employment). It is important to note that Graduate Assistants are not categorized under student employees and Graduate Assistants are not part of the scope of the SEO, all the hiring etc... for Graduate Assistants is within their respective departments. The functions of SEO are very different from what HROE or a traditional HR would offer to students and those who supervise students. SEO does not directly on-board student employee's campus wide, on boarding student employees on campus is decentralized within departments who hire students. These hiring departments handle the human resource functions to ensure the students are eligible to hire, complete of all required paperwork and facilitate Workday entry. I point this out as withing the MGT report it states "it takes too long to hire and get a student on board", this function is not handled by SEO. SEO- must verify a student is eligible for work study- the programs that are state and federally funded for the specific purpose to provide financial assistance to help pay their educational cost.

SEO- • Assist students in a detailed job search • Actively assist employers in filling positions o Promote specific job openings via Jobs for Aggies social media accounts o Assist with targeting groups of students o Advise on job postings • Coordinates and hosts an annual part-time job fair • Coordinates the Community Service Program which is required by the Federal Work Study program • Coordinates and hosts National Student Employment Week activities, including the Student Employee of the Year Awards Ceremony o Both a Campus and a Community (student not employed by TAMU) student employee of the Year are recognized • Maintain a job board for both on and off-campus positions o Texas A&M participates in the Job Location and Development Program which is funded by the Federal Work Study Program. Through this program we help identify and promote off campus employment opportunities in the local area. SEO assist approximately 10,000 students find off campus employment each year, which is important to those students who need jobs, and to the community which could not run their businesses without the TAMU students. o It is critical that students have ONE location to perform a job search, reduces the ability for missed opportunities for students and employers. Students know where to look for jobs. o SEO monitors to make sure that all required on-campus positions are posted on the job board. (enhanced student experience initiatives implemented a couple of years ago) • Provide on-demand workshops and information sessions that are relevant to the current/immediate needs of groups of student employees and supervisors. • Assist employers with the creation of job descriptions that include learning outcomes (another enhanced student experience initiatives) value added for student so they can take job skills with them as they graduate and move into their full-time careers. • Work Study funds management including federal and state compliance and reporting, working very close with accounting services and EIS/Banner for reporting data for the following: o Data for the annual required Fiscal Operations Report and Application to Participate (FISAP) reporting-required reporting for all campus based federal programs by the institution. o Data for Financial Aid Data System reporting-required yearly reporting by the State of Texas for all financial aid administered on campus (3 cycles for each campus-College Station, Galveston and HSC). o Ensure compliance of federal and state work study policies and regulations ☐ Educates hiring departments ☐ Coordinates Community Service Program ☐ Ensures Reads and Counts program meets requirements by working with College of Education • Promotion of student employment as an enhancement to their education. o Information presented at the following events ☐ New Student Conferences ☐ Fish Camp ☐ Howdy Week ☐ Aggieland Saturday ☐ Resource tables • Offer career readiness workshops specifically designed for student employees • Ensure that students receive performance reviews annually • Offer workshops specifically designed for supervisors of student employees and HR Liaisons including o Rules, Regulations and Best Practices (including work study) o Supervising students o How to utilize the Jobs for Aggies Job Board The information provided is to provide the responsibilities of the SEO, the services provided to students and supervisors, as well as the administration of federal and state work study programs, reconciliation and reporting to the federal government and state of Texas. The value SEO adds to student who work on campus, and off campus and value added to those who supervise on campus beyond traditional human resources on boarding and payroll processing. Best practices on the administration of federal and state work study programs note the combining of these functions within Scholarships & Financial Aid. There are established relationships on and off campus for work study administration. I asked that you thoughtfully consider all information presented and the recommendation to NOT remove SEO from the Scholarships & Financial Aid. I am open for any additional questions related to my recommendation.

## Provost Office - Student

Please provide your comments related to the Provost Office:

"Centralize undergraduate academic advising" As a [REDACTED] student, I can say with 100% certainty and 0% regret that our advising can't really get much worse than it is, but it seems like y'all are trying to give it a run for its money. I've quite literally written a 1400-word email to our Senior Academic Advisor about how horrible our academic advising has been the past 2-3 years. We can't get an advisor to stick around for any substantial length of time, though our current advisor has been here about a year and a half. I had high hopes – or as high as they could be – for her, but \*oh boy\* has she let those hopes crash and burn. In jet fuel. Ask any transfer student and we could make your degree plan better and quicker than she ever could. A journalism major has no business advising STEM majors, which brings me to academic realignment.

{Firstly I know each student is only regarded one response, I apologize my first response somehow erased what I had said and therefore, I completed another response. I do hope you take the time to read and take into consideration my comments.} I am not entirely sure of all the aspects of this office. However, the website mentions providing advice for new students and maintaining Aggie spirit. With that being said I really do hope the University management takes in to consideration those aspects, "new students and Aggie spirit". Throughout these comment sections I constantly mention we are all different individuals and should be allowed to express it and be respected for it. Choosing the right college for you can be a challenge, but once you find the college that best fits you, like I did with college of geosciences. You can find a family and a home you won't find anywhere else. Don't prevent future classes and current ones from finding their rightful places.

please DO NOT merge these colleges, so many organizations and sub groups within each one will not hold the same significance as they do right now and on top of that this would make texas a&m less unique as we would have more cookie cutter colleges just like other schools.

n/a

n/a

n/a

n/a

creating such a central authority and merging many colleges together will be confusing. Major mergers to the point where there are only 4 main areas would eradicate the culture and atmosphere of being at a huge institution while maintaining a department that is small enough to be comfortable.

a. The slimming down of the Provost Office seems like a good idea, but the units that were moved away and where to does not seem conducive to student academic success b. A huge part of academic success is to prepare someone for the workforce, so moving career center away from this office seems counter intuitive c. Aggie Honor System Office is very connected to academics moreso than student affairs and co-curriculars d. Education Abroad should remain central to academic success in Provost office e. VP for Research: research is largely touted as a cornerstone of this university and our academic status, and is often the reason given for why professors are employed here. Moving this away from academics raises more concerns as to why this is not being leveraged to benefit academic success for students f. Centralizing academic advising raises a lot of concern from students as many feel absolutely lost without an expert on their specific circumstances and major there to help them with actual experience in the area.

You are making diversity seem less important than anything else by lowering it on the totem pole of priorities. Centralized advising also would not work with the number of students and programs that we have. This is an all-around awful idea.

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities,

GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

Very impressive to see this step taken and I believe it was needed to have a fresh look. Excited for Dr. Bank's to take on this new role with the university at heart in everything she does. This process may take a lot of time to restructure over the years, but I look forward to seeing the outcome and Texas A&M rise to the top!

Undergraduate advisors should stay in different colleges in order to provide specialized advice to students. Students' schedules are often highly specific, and having a "genera" advisor will not suffice to maximize opportunities.

Undergraduate academic advising should not be centralized, as it is unrealistic to expect advisors to (1) have specialized knowledge about each of the 130+ undergraduate programs of study and (2) be able to assist undergraduates, across all of the 130+ programs, in making informed academic decisions.

Under Recommendation #2, I disagree we should centralize undergraduate advising. I agree that talking to multiple departments can be stressful for the student, but I think it is a significant drawback for students like me in the College of Geosciences who know I am not just a number to my advisor. Whenever I have to re-explain my situation to someone multiple times because I might have a different advisor every time I go to an appointment, I would get pretty tired of that (if this is included in the change). I have had 3 different advisors for my undergraduate degree since freshmen year (now senior) and it has been a lot to have to re-explain to each person where I am at in my degree plan every time. I actually work for an advisor in the department, and all of her students absolutely loves her because she knows their degree plan, knows who they are because she has seen them more than once a semester, and knows who they are as a person. I have seen the good and bad when it comes to advising, and I think centralizing advising is not in the best interest for our students at A&M. When it comes to academics and my degree (the reason I am here), it is a very serious subject that should be handled delicately, and I think I have seen that from my boss with her students from a student-outsider perspective. I think centralizing many other areas on campus is a great idea such as the one-stop shop for admissions, financial aid, etc. For my academic achievements though, it is important that I have an advisor that knows my situation. My question is, will I have an advisor for all 4 years if I don't change my degree? Or will I see a different advisor each time? Advisors already have a lot on their plate for the significant amount of work they do for the school and for students on both a professional and personal level, this would prevent them from being as diligent and supportive as they are in those areas.

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

This makes sense. I don't mind this move.

This comment is regarding the centralization of the academic advisors. As a student who has changed their major, the process is definitely long and tiring, but I don't think centralizing advising will fix this. In fact, I believe it will make it worse. I switched my major from Animal Science to Univeristy Studies Architecture, so I have experienced advising at both the College of Ag. and Life Sciences and the College of Architecture. The advising experience at the COA has been much more efficient and helpful, and I believe this is due to the college being much smaller making it easier to have a relationship with your advisor. I feel that centralizing advising would be disastrous, and make the whole process even

more confusing. Instead, I propose we create a new set of advisors specifically for switching your major. Another option could be simplifying the whole process into an online form to switch your major, and then recommends to the student where to go and who to talk to for advising on the situation.

There is not much detail in recommendation #1. It seems that a large percentage of the Provost Office is proposed to move to other division areas. There is no information regarding this impact on student success or how these changes will affect the resources and our ability to access them. Recommendation #2 concerns me as it is focused purely on changing majors instead of providing quality advising to students while they are in a specific major. The TAPS office exists to assist students in changing majors, and the current process forces students to really consider all of their decisions before switching majors. My main concern comes from "establishing centralized undergraduate advising" with a "dotted line report to each respective academic dean". This approach might hinder offices with excellent academic advisors by putting all advising in a central office. Our advisors are specialized in their respective department areas and that is what makes them successful in assisting students. Centralizing advising seems that it could limit advisors' freedom to connect with students in a personalized way.

The time line this report is executed is a little hazy. How do you justify doing "surveys" that very few people got relative to the size of the university, faculty and students, in just 3 months after becoming president at the VERY start? It doesn't make sense how "interviews" would be executed during the summer weeks right before the semester begins. Why wouldn't you execute during classes and take more time to ask the students on campus or us COSC students.

The restructuring plan for the most part does make some sense. I don't really understand why the changes need to happen, though. Unless the university expects to have its money cut in half, it should just continue to operate the same way it is otherwise the university is just cutting jobs sort of needlessly.

The restructuring looks weird, but I don't have much experience with the Provost Office to be able to formulate an effective opinion on it

The office is up to the task of meeting the useful information as expected.

The new recommendation to combine the College of Liberal Arts, the College of Science, and the College of Geosciences to create a new College of Arts and Sciences is by far the worst recommendation that A&M has ever considered. If I wanted to be in a huge college like engineering I would have done engineering. As a student in the College of Liberal Arts, the whole point of this college is to have it more tailored to these specific majors, majors that do not relate at all to science or geoscience. I get that A&M is all about saving money and only caring about the engineering program, but this is ridiculous. A&M is already far behind with outdated majors (nothing for fashion design or graphic design are small examples to name a few) and this is just another way for A&M to dissolve its arts programs and focus on STEM. I have been an active member and officer in Liberal Arts Student Council for 3 years. This organization would completely disappear. I cannot begin to explain what this organization has done for me, it has been the only thing keeping me from transferring to a different college. This organization is tailored to Liberal Arts majors and minors, but we have a diverse range of students and even have some in STEM who have wanted to find something different from this college and have found more support in the smaller College of Liberal Arts. We bring speakers in that have degrees in different majors of Liberal Arts, and they often give our members guidance about options after graduation. Adding in the college of sciences and geosciences to this does not make sense. I know this decision is about money, and I am sure it is being overlooked at how budget cuts would probably put students and professors out of jobs. Disappointed in A&M, as usual.

The idea of centralizing academic advising is probably one of the worst thought out and researched plans in this entire feedback report. If TAMU was to centralize Academic Advising this would be a disservice to the departments, students, faculty, and staff. The main reason listed for this change was to help students who are changing majors- anyone who has spent any time at all in an advising office knows that Change of major decisions are a tiny fraction of all the work that advisors do. Centralizing all academic advisors in 1 area would inhibit their ability to function well within their department, and it would put strain on students needing to go to advising meetings. Right now, my advisors are in the same building that majority of my classes are in. If I need to speak with an advisor, I simply go upstairs. I also have experience working in a TAMU advising office as a student worker, and I have seen first hand the amount of work and collaboration that goes into day to day meetings within the advising department.

The decentralization of the provost office does perhaps increase efficiency by facilitating each individual branch to focus solely on task that directly impact their mission. I feel that such decentralization, however, also innately might lead to red tape when seeking to enact decisions given that such decisions will likely be reviewed by groups who had no say in them. If measures are taken which confide power to these individual groups while also insuring a strong means of

checks and balances to important decisions, the reorganization could be beneficial.

---

The centralization of undergraduate academic advising is a dire mistake. While the current processes are far from perfect, removing advisors within the individual colleges or departments would be doing students an extreme disservice. Academic advisors do more than just initiate paperwork processes, they contribute significantly to one's education and are especially skilled in mentoring students on what to do with their degrees and relevant coursework upon graduation. By taking away another avenue for students to discuss academic plans and express concerns about their courses to a knowledgeable individual, the university would thereby be placing a larger barrier between students and their success.

---

The career center should be maintained as a separate entity from the student affairs building but may be allowed to work under its departmental authority. The Institute of Neuroscience should be maintained separately. Do not centralize undergraduate advising but rather make the process clearer for moving majors by publishing a list of requirements that must be met on howdy and a check off once it's been fulfilled. This can be done through programming. Centralizing advising will increase student confusion with their major and prevent students from getting an understanding of what blocks occur in their major.

---

The Provost Office in place is very effective and has personally helped me tremendously. For example, my department specifically provided me with the things I needed or was able to direct me to someone on campus, in times of need. Although it can be viewed as not the most effective system, it is still effective. Why alter something or attempt to fix it, if it is not broken or is not in desperate need of fixing?

---

The College of Science SHOULD NOT be consolidated with the college of Arts.

---

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

---

TAMU should stay and operate the same. No changes.

---

TAMU needs to ensure decision making does not become too centralized. This is true for major decisions as well in which all colleges, students, former students, faculty, staff, etc. should have a say.

---

Student Employment should be retained in the Provost's office, as the intersection of academic and career in student employees is so unique that it requires academic oversight and not simply HR, as the management of the student worker program could become more focused on work rather than studenthood. Diversity and Inclusion should not be moved out of the Provost's office. Diversity and academics are closely tied and indeed to be successful in DEI it has to be woven in, not shuttled to a collaborations department as an afterthought for special events. Inclusion needs to be centered and part of the process, not tacked on at the end for performative goodwill. Centralizing academic advising is a good step, but it must be done with care. It is certainly true that our high turnover and low standards for academic advisors pose challenges for students. The way to fix this is by having stronger centralized training programs yes, but it is equally if not more important to ensure that advisors have technical expertise in their field. Advisors should serve with a career focus and industry experience, not be given a copy of the course catalog and degree plan without context as to what these courses will teach students and how specific courses connect to careers. An advisor should be trained by the university and follow their set procedures, but should have that specialized devotion to their department.

---

Strongly disagree with centralizing advising. Currently each advisor is an expert in their field for their major it is nice to talk to someone who knows your degree plan inside out instead of talking to an advisor who may not be familiar with it at all especially for people like myself in a smaller major.

---

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

---

So why are USAR students considered unqualified and a distraction to the COA? It is a university studies of ARCHITECTURE degree so I don't see why it should be moved out of that college. Also all of the current seniors who have spent the last 4 years working on a USAR degree, myself included, are not being taken into consideration. The first sentence of rationale 9a is incredibly offensive and discredits all the work that every USAR Aggie has done to get to this point. If it is not broken don't fix it. Landscape architecture and architecture students are not being distracted by us, as we are in completely different classes. This proposed change is unnecessary and backhanded.

---

Reorganizing the office of the provost will require excessive costs to simply change reporting structure, yielding no benefits to students. Centralizing undergraduate advising will create a multitude of incompetent advisors, as seen by

the general engineering advisors. Known as some of the worst academic advisors on campus, the requirement to know the standards of each department leads to them knowing the standards of no departments.

Recommendation number two states that academic advising should be centralized. From experience with the TAP Program I can say that this does not work. With so many students and disciplines at Texas A&M advisors need to be specific to the college or advising becomes chaotic and unorganized.

Please don't do the plan. It's not a good plan. We don't like the plan.

Please don't change anything.

Personally, I have mixed opinions on the idea of a centralized academic advising at TAMU. From my own experience, the current quality of advising at Texas A&M is very dependent on what major a student has. When I was a psychology major, my academic advisors were not good; they were unhelpful and approached me in a way that made me feel like I was bothersome and annoying for asking them a question. As an English major, my academic advisors have been amazing and are always incredibly helpful. If centralized academic advising would improve the current quality issues with academic advising then I think it's a great idea.

PLEASE DO NOT MERGE POLITICAL SCIENCE AND THE BUSH SCHOOL. I AM A PROUD BUSH SCHOOL AND AGGIE AND I WANT THE BUSH SCHOOL TO REMAIN INDEPENDENT. IT WOULD DISAPPOINT AS A FORMER STUDENT TO SEE THE BUSH SCHOOL NOT STANDING SEPARATE. It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

Overall the report seemed to be very forced and one sided to be completely honest. The university that we were compared against did not make sense. The insinuation that the biology is underperforming giving the large grants and continues enrollment of the graduate program as well as undergraduates in comparison to the rate of graduation within the major is quite representative of how well the program is doing. I thin there has to be some reanalyzing of the information and data that was used agains the biology program. Really its not a representation of how well the biology department treats, and educates its students which is the main concern here. As a graduate student i learn from great professors that go the extra mile, that share their knowledge and that work with me. The fact that were a stand alone department grants us the students the accessibility and clarity to reach out and know exactly what is going on.

Option 2 is the best option in my opinion. We had a similar option at Arkansas State University, it allows those who aren't sure gain a better understanding on what to pick or discover what they would like to be educated on a lot faster.

One of the main objectives given in the report to reform the Provost Office is to centralize academic advising. While the goal would be to allow advisors to better support and connect with their students, this would likely have the opposite effect. Being in the College of Geosciences, I have the benefit of having an Academic Advisor that does not have as many students to manage given how small the current college is as a whole; this allows her to build closer, more personal relationships with her students as opposed to viewing us as "numbers" in a large sum of students. If centralized advising were to be implemented, my fellow Geoscience majors would lose that close personal mentor as she would now have a much larger group of students to manage and could no longer offer that connection to us as individuals, affecting not only us but future Aggies as well, who would lose a valuable mentor figure. If the goal is to better assist students with navigating through their major, centralized advising would likely be more of a hindrance given how it weakens the possibility of a closer personal advisor in favor of one advisor managing a greater number of students. In my opinion, a better solution would be to hire more advisors so the current board do not have to take on so many more students, thus giving more Aggies the chance of building those close mentor relationships rather than losing them with spreading advisors too thin.

None, agree with the MTG Report.

My concerns with the Provost Office is related to rationale #2. As a student, I have had nothing but good experiences with my advisors. This is in both the College of Engineering, as well as the College of Architecture. If the goal is accommodate for students who have had bad experience in their college, would this problem not expand to students in other colleges?

Most recommendations seem obvious, and I do not know why we were not doing this before.

L

Just remember you are representing the Texas A&M University, you have to adhere to the values, ethics and views of the University’ current students and Alumni. Not the other way around. You’re not representing the University of Texas or any of their systems....

In relation to the Provost Office findings I find Recommendation 1 to be a logical and helpful change. Recommendation 2 I do not think would be beneficial to the students of A&M. The student body is too large to centralize the advising. Already the advising for individual majors is so backed up and unhelpful, having only one team to understand every major would not be affective.

In regards to Recommendation #2, Centralize undergraduate academic advising: This section is entirely too vague. While it sounds

In my experience, small departments benefit from having close and immediate access to undergraduate academic advising. The decentralized structure actually helps build relationships with the department's undergraduate academic advisors, and the physical proximity of their offices promotes communication between students and advisors. The difficulty of changing majors seems like a strange objection to the current setup in advising. I strongly considered double-majoring for a time, and the people I know who have changed their majors find it surprisingly easy. The five supposedly daunting steps can easily be done within a single day. Finally, while I have enjoyed the privilege of easily-

accessible advisors who are supremely knowledgeable about my department, I often hear strong complaints about the advising setup of the College of Engineering, which seems much more centralized than the College of Science. The centralization (and the sheer number of students that each advisor must help) seems to have a detrimental effect on the communication between students and advisors. I have found it better to have decentralized advising with robust methods of communication between them.

---

In different as long as they aren't liberal

---

If you value the integrity of your school, and want to improve the organization, I suggest that you demote the [REDACTED]. She lacks organization. She enjoys being a sadist. She spontaneously loves to give sudden deadlines or makes changes to the syllabus without sufficient notice. She doesn't tell the TA's in advance as to what is needed during the beginning of the semester as far as due dates, how assignments are to be collected, etc. I highly doubt you will fire her because she is married to [REDACTED]. If she has won awards, it is the faculty that nominates her, and not the students/TAs. I ask that you force her to change her organization. It is a disgrace that she has a decade working at Texas A&M, and she successfully demotivate students from pursuing Chemistry. The only concern for her is safety, which is good, but she doesn't care about anything else. She devalues and threatens students/TAs. In any other state, this is harassment, and can lead to termination.

---

If this is the one about giving the president more power and responsibilities then I disagree. This country was founded on limited power and letting the people, in our case the students, be in charge and not the president.

---

If centralized advising is added, it should not replace department-specific advising. Even at just the college level, my experience with general engineering advisors was significantly less useful than those located in the Computer Science department (where my degree is located). While common advising might help with major changes or general questions, these advisors would not know enough about specific degree plans to be of much help with major-specific advising.

---

I would not like for there to be centralized advising. I think because our counselors are close to us and are in the building they have a better understanding of what is going on and can have a better perspective on how to help us.

---

I would like to be able to change my name - remotely without sending the original documents.

---

I would agree that to an extent the reorganization of the provost office should be done. There are too many people in power controlling and changing things that in my opinion they do not have knowledge of and therefore have no business controlling or changing anything. Most importantly however, is the recommendation to consolidate advising at the university level. I CANNOT stress enough how much of a colossal mistake this would be. As a student who is in a small major, the role of advisors have been crucial in my development as a student. Working closely with advisors who have detailed knowledge of my degree and have connections with other advisors has helped me numerous times. The investment that each advisor is able to make in the individual student because they are part of a single department and college means that they can make appropriate and timely decisions on a case by case basis. My connection to my advisors has been one of the best parts of my time at A&M and without them I would not have been able to be successful in the way I have been so far. So, once again I will say that restructuring the advisors (I already heavily disagree with how they have recently been restructured) would be a devastating mistake and if it is done I feel that it would greatly damage one of the best aspects of A&M. I know that as someone who will soon become a former student, I would be very disappointed if this change was implemented as I feel it would lower the quality of the education and experience of A&M as a whole. Additionally, I would be less likely to donate as a former student if this change was implemented. As a student who interacts with many departments through two majors and minor, I can say that the rationale the consolidating the advising staff to make changing majors easier is, to put it kindly, bogus. Working with several advisors, specific to each of their departments is not complicated and instead provides all the more support for making educational decisions.

---

I worry that centralized academic advising would lead to advisors not actually having the specific knowledge to help each student.

---

I will say I don't think much would change by moving USAR out of the college of architecture because I don't think they do any type of studio projects, but if Viz and Construction Science get moved out, I don't think that would be in their favor. The dept. of Visualization, while leaning more towards an art degree, are still designing virtual worlds. Because design is so heavy in their projects and studios, I think it would be beneficial for them to stay in the college of architecture along with their fellow design majors. Having other design majors (ENDS and Landscape) to bounce ideas/

perspectives off of besides people in their own studio can be really helpful and we definitely have learned a lot from each other over the years that I've attended this school. Construction Science I think also benefits by staying in our college so they learn to have an eye for design AND structural stability. I've heard professors in class tell us time and time again that engineers don't have an eye for design, and by us (the architects) knowing how to do some of the engineer's job, we can prevent our design being ruined by, for instance, a column being placed in the middle of an open room. If we move the construction science majors to a more engineering-heavy school, their attention to design will diminish, and because they're the first one's in contact with architects, I think that would hurt the communication/ understanding between the two when it comes to working together in the future. Thanks for listening to everyone's feedback!!

I was not able to read the report in full, but I for a fact do not agree with centralized advising. Part of the reason why I love being a member of Mays so much is that we have killer advisors. The notion of receiving an advisor at random who knows little to nothing about the programs, opportunities, and people that participate in them is honestly alarming to me. I would much rather keep my current, AWESOME advisors, even if that does mean other majors are still stuck with less effective ones. We fought to be in that college, and we deserve the rewards for that effort. I stand very firmly on this, as do many of my direct classmates.

I think this is a bad idea. The departments have relatively little in common, and it will introduce a lot of issues for geoscience students.

I think the provost is always helpful just because of the important emails they send out.

I think the new organization would increase productivity and organization. I agree with Finding 1. As a previous undergrad at A&M who not only switched majors but also switched campuses from Galveston to college station, I can tell you this change would be a nightmare for me. It is hard enough to get into advising when you are just competing with your department. If undergrad advising was centralized, 1. you would be unable to establish a relationship with your advisor. 2. you would have to compete with the whole university to get an appointment. 3. You would be dealing with advisors who are not intimate with the classes you would plan on taking and cannot give you the best pathway to success. I highly oppose finding 2 and the proposed change. For finding 3, there is so many things that need attention on this campus, why would I want my tuition money going towards institutions outside of the university. I strongly oppose this change as well.

I think that creating centralized advising is a terrible idea for the university, but I think it has some silver linings for the students. It takes advisors a while to get to know their departments. I am a meteorology student, and we've had 3 advisor changes since I started school here. The most recent advisor is starting to become familiar with the classes, but the previous 2 simply didn't have time to get to know us or our needs. Centralized advising will be exactly this--the advisors won't know the students or their needs. However, I think this could be a good thing--advising will be so bad that no student will seek it. Overall I think mandatory advising is unnecessary, if a student knows what they're doing, they shouldn't be forced to be hand-held through the registration process. I think a good compromise would be to allow students to choose to get advising if they want or choose to not be advised, or be advised by faculty they are close with.

I think moving COSC to engineering isn't the best idea for the COA. It would minimize if not stop the ENDS and COSC students working together on some projects. Funding for the COA would dramatically decrease which could be fatal to the other departments in the college. It would make more sense to keep Construction Science under the COA. As for Viz I think they also bring a lot to the college but I don't think it would impact the college as much if they left.

I think centralizing advising would be beneficial to larger majors but for smaller majors it could have negative impacts

I support a decrease in staff positions in the Provost Office.

I strongly disagree with decentralizing undergraduate advising. Advising in individual colleges is already not that great. Thankfully I've had good advising from the two colleges I've been in (Geosciences and now Mays Business school), but so many of the other advisors I've went to for help or advise (especially when transferring into Mays) were not great at advising. I know a lot of other friends of mine deal with very incompetent advisors. Many know very little about classes, professors, careers, etc. Many actually didn't want to help me at all and I had to deal with a lot of really rude advisors when I first tried to get into Mays. However, that being said, I think centralizing advising is absolutely the worst way possible to fix this problem. Advising itself needs an overhaul but combing all undergraduate advising to be one combined effort across campus is a disaster waiting to happen. You think students are confused about how to change

their major (which honestly, it's not that difficult), just wait until you've centralized tens of thousands of undergrads into one advising system and see how efficient it'll be. (it won't) The report mentioned multiple times grievances with TAMU's demographics: student population not representing Texas as a whole... So??????? What would TAMU do to fix this? Lower standards like SAT scores for Blacks and Hispanics? Choose to accept more Blacks and Hispanics over Whites and Asian based purely off of skin color and the need to have some be "represented more"? Exclude Asians and Whites from scholarships because of race? Because these are all blatantly discriminatory to ALL races! Lowering standards for some people because of race or denying someone a scholarship because of race is straight up racist. TAMU if you care about your students at all stop allowing affirmative action to divide students on campus. Focus on accepting students based off of academic and moral integrity as well as their involvement in their schools, community, etc. Even if they were disadvantaged in high school somehow, offer them support don't lower the bar for them and treat them like they are stupid and need a handicap to get into college. Treat all students equally.

---

I strongly disagree that undergraduate academic advising should be centralized. While it would benefit those who wish to change majors, it would significantly negatively impact the majority of students. Centralized advising would be overwhelming, paired with a lack of specificity and detail. When approaching an advisor, I wish to gain specific information about my college, not general thoughts about Texas A&M as a whole.

---

I strongly believe that "Recommendation #2 Centralize undergraduate academic advising" is not going to benefit the students of Texas A&M University. Each college was established for the reason of providing specialized teaching and advising for the respective field group. Each college should keep their specialized advisors who know the courses that they plan with and assign to students, and the professors who teach the course content. It does not make sense to have generalized advisors who barely know the courses and professors they plan with and assign to students. Thus, the quality of advising would decline which is not something the university should want. I agree there should be a universal set of responsibilities for advisors across the university for accountability of undergraduate academic advisors, but that requires a centralized set of rules that they must adhere to and actions that they are authorized to do. Equal responsibilities would lead to streamlined advising and position titles and salaries that are balanced across campus, not eliminating specialized advisors across the university. Creating a portal for advisors to collaborate through would improve their effectiveness.

---

I love the proposed realignment.

---

I like the updates on the programs offered by Texas A&M.

---

I like the idea of consolidating the Provost Office so that they are better able to focus their attention on specific areas. The newly proposed structure seems more organized and facilitated, with everyone knowing who to go to for a higher opinion.

---

I like the idea of centralizing academic advising! I've heard of multiple BIMS majors who have been told contradictory information for their degree. For example, two PA schools do NOT accept the anatomy & physiology of BIMS. When a girl asked one advisor if she could take the A&P from the bio department instead of the BIMS A&P, they said she could. However, when it came time to sign up, the next advisor told her she couldn't do that unless she wanted to take it as an elective. I know another girl where the same thing happened when she couldn't get into genetics. I've personally experienced the advisors telling us different things, so I thinking centralizing academic advising would be beneficial if they could all get with the program.

---

I like how covid is being handled

---

I kindly prompt you to accept all recommendations. Your office ought to improve.

---

I have the highest regard for the provost office and for the support of the entirety of its work and service.

---

I had no idea the Provost office had such a vast oversight in so many areas, I agree it should be condensed while responsibilities are ciphered off to other departments or new ones.

---

I feel that the academic advising overhaul may be shortsighted. For freshmen and maybe sophomore students a centralized general advising center would likely be very useful. However, for junior/senior students who are set in their department, a centralized advising system is likely to hamper their progress. There are so many programs and to have an advisor be expected to understand and be able to intelligently guide someone through the specifics of each program does not seem realistic. At the graduate level I can tell you already that the centralized advising is a disaster. The

advisors simply cannot keep up with the multiple programs across multiple departments - it forces the students to have to search out answers that our old advisors were able to help us with without any effort on their part.

I feel that consolidating undergraduate advising, while it potentially could streamline the process, would remove the benefits of having an specific advisor for each department. My experience with my advisor has been exceptional, largely because of the personal approach that is taken because she works solely with our department.

I don't think they addressed the issues happening in the Provost office. If something is happening in the world where other university presidents are speaking up, ours is always silent. The provost doesn't seem to be actually speaking for the students, but is carefully trying to talk to donors and old ags that are not affected by the actual change.

I don't really have any comments here other than to say that centralizing academic advising could be worse than what is already here. Students I know have had issues trying to get an advisor that is shared with multiple departments. Centralizing could make problems like this worse.

I do not support the idea of completely centralizing academic advising. It is important that academic advisors that are specialized in their specific departments/majors. Advisors are supposed to know the most about a specific major's requirements, resources, and other academic opportunities related to the degree program. By centralizing advising, it will make it more difficult for advisors to serve students at their full potential as they will not be able to know every single degree plan requirement for all majors. Having an advisor that knows your major requirements like the back of their hand really makes the student academic advising experience more personalized, focused, and productive. I do agree that there is a need to have better routes of communication between advising offices to help improve the process of switching majors, but fully centralizing advising would only hurt the student experience. My advisor, Mrs. LeAnn Hague, in the Soil and Crop Sciences Department is amazing because she actually knows the students and the department well. Recently she and one other advisor has had to take on the responsibility of advising students from two additional departments. This has increased her workload severely and she is still in the process of understanding the degree plans of the two other majors so she can best advise the new students she works with now. Seeing Mrs. Hague working through this challenging transition makes me worried about the type of unnecessary stress and burden a fully centralized advising system would put on our academic advisors.

I do not believe that centralizing undergraduate academic advising would result in increased student success. As a student in a smaller major, it is vital that my advisors understand the struggles that my peers and I undergo during registration, taking courses specific to the tracks offered by the department (which are constantly changing), and working with us to determine which electives can be utilized for certain requirements (as many of us have minors in a wide variety of areas). Centralizing the academic advising would result in the loss of opportunities for my peers and I to tailor our degree plans to our specific needs and career paths.

I disagree with the recommendation to centralize academic advising. I can understand the rationale that it would significantly reduce the number of advising offices necessary on campus, but I also feel that the advisors dedicated to each College have an in-depth understanding of course requirements based on each major. This is something that I truly don't think could be accomplished if undergraduate advising was centralized across the student body.

I believe there's merit to both the current system of advising, as well as a more general advising system. As things stand currently, advisors can serve as "experts" in their departments and provide students with more department-specific advise ("what is this class like?", "Who should I take this class with?", "Does this work well with what I want to do moving forward?"). In a system with more general advisors, this expertise could quickly be lost and advisors could potentially be less helpful when students ask more department specific questions. The positive side of moving to more general advisors seems to be that if/when a student decides they want to change majors, the advising process can still continue. There may be less hoops to jump through and a student may still be able to keep their previous advisor.

I believe that the current advisors for specific colleges are specialists for that college and it does not make much sense to bunch them all up under one category. Students trying to change majors should have a more streamlined process, but that solution shouldn't have to require centralizing all of advising. Putting data and research in the care of finance also does not make much sense. I feel that this would limit data and research and put them under the authority of people that don't fully understand their needs.

I believe that the Department of Construction Science should stay in the College of Architecture in respect to field operations. In field operations COSC majors communicate more with architects than engineers. Furthermore the department of Construction Science is based on the management practices that go along with construction rather than the designing process.

I believe that recommendation #2 to centralize undergraduate advising is a poor decision. I believe that doing so would make the quality of the advising low, and the accessibility lacking as well. Rationale 2 seems like a very insensible reasoning for such a drastic change to the university structure and to student academic resources.

---

I believe that a lot more effort and funding need to be focused toward the higher education center at McAllen. It has been 4 years with the building being open and we are running into space issues as well as there is no where to study.

---

I believe off-loading the provost office to individual departments will be successful.

---

I am extremely against this potential shift. If we are looking to restructure the Provost office, this restructuring offer would be absolutely chaotic and way too far off the beaten path. This is too large of a single shift to be productive and efficient. More people associated with the university would get confused and annoyed with this than feel its positivity.

---

I am currently an MFA student in the Department of Visualization, College of Architecture. I totally agree with the suggestions provided in the report. The department of Visualization currently has two graduate programs: 1) Master of Science and Master of Fine Arts. However, the curriculum is skewed towards the Master of Science program such that there are only one or two courses for Master of Fine Arts. Only a few, such as Dr. Felice House, and a few others can teach MFA students. Most of the faculty members major in computer science, math, and animation. As an MFA student, for me and other future students, we need to take computer graphics and programming, such as Python. We don't have any courses such as studio design, color theory, painting, etc. I've first entered this program expecting that there are more resources for MFA but now I don't get why they maintain the MFA program. Professors who do computer science and entertainment thereby have power internally, so things will not change without revision suggested by the report.

---

I am a student in the Political Science Department. I love the idea of merging it under the Bush School of government. My feedback is that I would love that it be done soon enough so that my degree can reflect that it is with the Bush School rather than under the College of Liberal Arts. Thank you!

---

I agree with the reorganization

---

I agree with the findings of MGT and their comments related to the Provost Office. Decentralizing the different offices will allow the workflow to be more efficient.

---

I agree with the assessment. I am a former student, a former employee and now a current student as I seek my 2nd Master's degree. Over the past 20 years, the Provost office began to take and assert more power over other areas of campus. This includes areas of IT and some academic areas.

---

I agree that the Provost's office should focus more on academic success. I also think there should be much more attention paid to cheating. As a graduate student with many friends who teach, there does not seem to be enough attention or support given to teachers to combat cheating.

---

Howdy, My name is [REDACTED], and I am a member of the Aggie Class of 2024. I am also a proud student in the Construction Science Department. I would like to provide my feedback in this report about the proposed changes that have been discussed in the MGT report. When thinking about the proposed move of the Department of Construction Science I had a lot of questions as I know several of my classmates had. Would Construction Science become an engineering tract, would we be able to keep all our professors (including those without PhDs), would our head of department change? My classmates and I have been discussing our thoughts on the report circulating back to these and other questions. When I first opened the MGT report and started reading about the changes proposed to Construction Science I was shocked to see how little of the article was dedicated to supporting the conclusions drawn. I was also shocked to see how many students were listed as respondents in the first pages of the report. Out of 500,000 people, only roughly 1,000 students had a voice in this report. Furthermore, I do not know of one Construction Science student who was interviewed in the preliminary survey. How can this be? When thinking about this topic, I thought about what it means to be a student at Texas A&M. I thought of our core values: Respect, Excellence, Leadership, Loyalty, Integrity, and Selfless Service. How does this report fulfill any of these values for COSC students? I have felt betrayed over the last few days with the lack of information and transparency that has been afforded to my classmates and myself. We are proud to be Aggie students. We are proud to be in our department. I came to A&M not to blow off and waste four years of my life, but because I wanted to do something with my life. Construction Science has thus far exceeded my wishes in all ways pertinent to my desire to be a Contractor. I have felt the value of my education in ways I know other students at different Universities and Colleges know nothing of. I have seen the application of my skills readily in my life, and I have grown to appreciate even more than ever the Aggie network and its spirit. How does the proposed move value the Leadership exhibited by professors who might lose their jobs if the change happens? How does the change exhibit

Loyalty to students who might find themselves in a forced change of major after working for years for their degree? How does this move value Selfless Service to the students of the Construction Science program who came to Texas A&M expecting to receive what was offered from the program? And how does this move represent Integrity when many students have voiced the concern that COSC numbers are simply needed for the Engineering program 25 by 2025? "The primary mission of the Department of Construction Science is to prepare students for successful careers and future leadership roles in construction and construction-related industries." I have seen this mission at work in my own education while here at Texas A&M. "In our department, we treat students like family." I have been thoroughly pleased with the Department of Construction Science and the skills I have been taught thus far. The program has aimed to prepare me for the workforce and to exemplify the Aggie Core Values. It is true that the program is equal to none. The sheer size of companies who are so readily willing to hire Aggie Construction Science students reinforces this point. I mean no disrespect to engineers or the College of Engineering, but the parts that have been so far the least helpful for the development of my skill set have been those classes in my major that most resemble engineering classes. That is not what my classmates and I came here to learn. The report said, "Moving the Department of Construction Science to the College of Engineering will enhance the educational experience and research potential for faculty and students in both organizations." I, personally, and a large portion of Construction Science students cannot see that being the case. Please take this into serious consideration. Thank you.

---

Howdy, My comments towards the report on Construction Science changed to the Engineering department. Why is there a need to change? Is this a business move? I know that changing the Construction Science program would bring the engineering department more money. Being that we have a big program and it is a popular degree. As a first-generation student, I am concerned is that engineering tuition is more expensive than architecture. Why is there a need for a change when we have an excellent program? Truly the faculty is amazing, experienced in the construction industry I don't think engineer professors have the experience of real-world application as Cosci professors do. The curriculum now prepares us to be ready for the Real-world in construction and management. There is no need to go forward with this recommendation. If this recommendation proceeds. A question to ask yourself. Do you care about the students at Texas A&M or do you care about the increase in money it will bring to this institution or more specific to engineering? Honestly, I do not really even know what this office does. There is little communication with the student body on which office runs what, and who should be contacted if higher powers than specific buildings (Disability Resources, Housing, etc.). Likewise, there is little chance for student input on changing processes, and even less ability to effect or influence proposed changes.

---

Hi there! I believe the USAR program still receives the least amount of attention I. And the program already needs to be more organized as I feel most of us in that major are not able to even take classes to prepare for their career. The major is advertised as a way to make your own degree plan which is a great concept but you might have already heard about the problems with our major. Also taking usar out of architecture and having to get my degree in arts and sciences and not architecture is still not fair for the many who are enrolled. If this does go on, I would like it atleast implemented for the students coming in for the semester onward and not for us students who are already in the program.

---

Having advisors within my department is essential in helping me place trust in someone else regarding decisions within my life. I could not expect a general advisor to give me advice on my specific major and career goals. Having my department advisor that is able to keep track of my progress is important to me.

---

Good.

---

Good plan, it needs to be reduced.

---

Good

---

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

---

For Recommendation #2 Centralize undergraduate academic advising - On its face, centralizing advising to one location seems as if it would make advising easier and the process of changing majors less complex. However, removing advisors

from their respective colleges/departments will have the opposite effect. The advisor is currently in position to be the most familiar with the colleges/departments and the specific requirements for majors and minors as well as the courses currently offered or that will be offered in future semesters. It can already be difficult to have students meet regularly with advisors, having them in the same place as most of their majors classes makes it easy for students to meet with the advisors. This greatly increases accessibility to advising. Speaking specifically for the Department of Geology & Geophysics, our advisor is readily available for students and can meet with them between classes. The G&G advisor knows the class schedule and the degree requirements and can quickly solve student issues. Moving to a centralized location would destroy the close relationships that have been fostered and lengthen the time that it takes to correctly advise students. As a Graduate Assistant Lecturer, it has been extremely beneficial to have the advisor in the G&G building when I have questions about student progress. Our advisor has cultivated relationships with other advisors and can check on non-majors who are struggling in my courses. The ability for advisors to know their students makes it easy to check-up on them and ensure student success. If the goal of the Provost Office is to ensure student success, then installing advisors in the middle of the departments and colleges where they are working is far more valuable than locking them away in a remote advisor-only office that students will only begrudgingly visit. Diminishing accessibility to advisors will diminish student success.

---

Don't combine liberal arts and sciences

---

Don't centralize the academic advisors, they're already ineffective enough. Getting a bunch of general advisors who don't know the ins and outs of each major is absolutely not helpful.

---

Don't have any.

---

Don't centralize academic advising. I believe that would be a disservice to the advisors and students alike.

---

Don't centralize Undergraduate Academic Advising. Changing majors is only 5 steps, and students are in full contact with their advisors. It also makes sense to keep an advisor for a specific department; it's efficient for advisors to specialize in the knowledge of a specific major instead of learning about all majors.

---

Do not under any circumstance think that mandating vaccination for students and staff will be acceptable. I, along with other students, will use every tool available to fight back in the court of law. Individual health is NOT the responsibility of the university or any government. It is only the business of the individual. COVID-19 vaccines do not prevent transmission or acquisition of the virus. So, the notion of protecting other people's health by getting vaccinated is ludicrous to say the least. The constitution, Texas education code, Americans with disabilities act, and the American civil rights act, among others, are on the side of individual bodily autonomy. I trust that the university will make the right decision and not attempt anything unconstitutional.

---

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

---

Division of responsibilities is always a good idea

---

Diversity and Inclusion should be elevated and report directly to president and NOT to VP for Academic and Strategic Collaborations.

---

Dismantling the college of architecture and others will cause a huge change of tradition that will cause alumni to distance themselves from the university, and will deter people from wanting to attend this university. The report has many areas that are not wanted or needed.

---

Department advisors are a gift to the students. They are uniquely positioned to understand the particular struggles that students of a given program may face. I would like to highlight the case of Suzanne Rosser, from the Department of Geology & Geophysics. Ms. Rosser has implemented a course called GEOL 180 which helps freshmen get to know each other, the professors, and basic life skills. Every single student in that department owes her countless debts of gratitude for helping us understand the class registration process, how to manage our time well, and how to navigate other challenges. When several of our classes whipped our behinds, it was Ms. Rosser who figured out that the profs had actually violated academic policies with their approach, and helped us report it to the appropriate person. When I became president of a student org which COVID had left in shambles, Ms. Rosser was a lifeline to the entire officer team, and even went out of her way to brainstorm solutions we hadn't even asked for. I support finding ways to make the change-of-major process easier, but you must understand that advisors have countless other roles, and we, as students, depend on having advisors who know how to help us.

---

DO NOT CENTRALIZE ACADEMIC ADVISING. This would make the already lacking advising by specialists who are supposed know about your degree plan, even worse.

DISCONTENT with Recommendation #2: Academic advisors should NOT be centralized among colleges. There are many smaller departments within colleges that have super specific degree requirements that the respective departmental advisors have the best knowledge of. These advisors provide their best insight, as their knowledge is specialized to specific departments. By centralizing academic advisors, this will be a detriment to both students and advisors as students will not get the specialized knowledge for their degree plan that they need and DESERVE, and advisors will be forced to know a little about a lot of departments rather than a lot about a single department, which would result in more student questions being unable to be answered. Students deserve advisors with the best knowledge of their degree and advisors who can help keep them on the right track for success and graduation on time.

Covid-19 has been handled well.

Construction Science is a unique field that does not belong in the College of Engineering. Construction needs all the business classes as most of us will go onto to control construction project finances. Also, most of the structure classes we have now are way too advanced for even the jobs we enter. Engineering classes will provide absolutely no benefit to Construction students entering the general contracting world. The college of engineering and what Construction Science teaches are two separate things that should not be included together. Engineers job and construction do not mix even on a jobsite as engineers don't build actual buildings, construction guys are the ones on the job building buildings.

Concur with report, especially recommendations related to reorganizing/centralizing advising services. This would dramatically simplify the overall advising process.

Centralizing undergraduate student advising would make it more difficult for advisors and students to actually navigate through their major. This would not be in the best interest of the students.

Centralizing undergraduate student advising may indeed help with cross-department communications, but do not let it be at the expense of the advisor's knowledge of their specific department for which they advise. There are already so many ins and outs of navigating an undergraduate degree that the advisors can hardly keep up just for one department. It would not be feasible for an ENGR advisor to advise third year MEEN students as well as AERO students. A unified system may be called for, but having advisors answer to a single department is an effective way to keep them beholden to the people for whom they serve and work for.

Centralizing undergraduate academic advising would potentially be good for advisors but bad for the departments. Academic advisors currently perform a multitude of tasks for departments that are not directly related to advising students. I do not think centralizing undergraduate advising will ultimately save the University money because more staff positions will need be created in departments because of the immense labor (that is often underpaid and underappreciated and sometimes unethical) that undergraduate advisors do for their departments. These positions are also going to largely affect women and people of color since this is a pink collar position in the University. If diversity is an actual concern for the University, staff need to be considered and taken care of in addition to students.

Centralizing undergraduate academic advising would help students who may have double majors or multiple minors in different colleges and are required to meet with different advisors as a result. Centralizing this service would not only help these students but also provide a great opportunity for students to easily talk to advisors about different majors/minors.

Centralizing the advising for students will only be helpful if the advisors remain well educated with the specific majors they advise. In my experience, my advisors have not been very helpful with my questions due to not being familiar with the degree plan. If the advising is made centralized, the advisors need to maintain knowledge of specific requirements for the majors they are assigned to.

Centralizing academic advising would be detrimental to the meteorology department as well. We have dealt with first-hand having an advisor that doesn't know what they are doing, and it sets people back at least a year most of the time. A lot our classes are only offered in the spring or fall semester so if a student is unable to get into a particular class, or they were not told which course they need to take for that semester, they are automatically behind a whole year since those courses are prerequisites for the others. As a senior, I have had a total of 3 different academic advisors, since the turnover rate for that position is high. So I have witnessed what it would actually be like to have someone try and tell you how to work your schedule who has no idea what they are talking about. Meteorology is very specialized, and a centralized advisor would not know the proper recommendation for coursework.

Centralizing academic advising would be detrimental to the current and future student body. I say this with confidence as a former undergraduate student, former employee of the Department of Biology Advising, and current medical student. The worst parts of A&M tend to be related to its size. For example, it is near impossible to get quick financial advice because of its centralized structure. Every student has to get in line for the same department, which fails to provide any information specific to the student's situation after the student waits an outrageous amount of time to get an appointment. I tried to meet with this office once, but it was absolutely useless, and I received better information at my department's advising office. This will be the experience if academic advising is centralized. There is no way that the advisors will be able to give appropriate advising to students of every single major. The strength of the advisors is their understanding of the professors, classes, and degree flexibility within their particular department. They also meet with the same student multiple times, getting to know their particular situation. These benefits will disappear with centralized advising. The only rationale for this suggestion that will improve student experience relates to those changing majors. A better option to address this issue is to provide department advisors with information from different departments regarding requirements for admission; for example, a specific list of requirements to meet for a student transferring into the College of Engineering from the College of Science. When I was working in the Biology advising office, I was very familiar with the requirements for changing majors and the classes that would count toward each degree, and that was without input from any other department or college. This is not an unreachable goal; training the department advisors would take less than an afternoon. To sum up my point, I do not agree with the suggestion to centralize academic advising because it will take away the current strengths of the system without replacement.

---

Centralizing academic advising could only be an asset as long as the academic advisors from each advising unit are brought over to the new centralized space. They have worked within their departments for years, know the necessary steps, and provide the best insight for students. To lose them in any way would be a detriment to overall student success.

---

Centralized advising is already taking place within AGLS and has created issues for students in more specified majors. We have fewer people trained in how to navigate the program making it difficult to make appointments for pre-registration. There is also a loss of personal connection with the advisor as before there were just a couple of people that you knew you could go to. Now the number has increased which means that each semester a different advisor could be paired with the students. There is then a loss of personal relationship that has been able to form in many departments.

---

Big fan of centralizing undergrad advising! It's SUPER confusing as an undergraduate who I'm supposed to go to when I have questions.

---

As long as the current Provost Office's needs are heard and considered, I am fine with most of the proposed changes. (See IT section.)

---

As a student who has changed majors, I do not feel like it was, in any way, a complicated or lengthy task. The report makes it seem like each step is long and daunting, when in reality you should already be meeting with an advisor at least once per semester. If a student does not have the capacity to research the requirements and coursework of the major they are trying to switch into, they likely do not have the capacity to succeed in college at all. Changing one's major should not be an effortless process, or students will change majors after every difficult class.

---

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

---

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

---

## Provost Office - Former Student

Please provide your comments related to the Provost Office:

---

"25 by 25" both lowers standards and crowds the campus

the report made a good argument for changing the make up of the provost office and responsibilities.

none

none

no feedback

needs reorganization.

make sure that all decisions made reflect the well being of the STUDENTS, not any monetary gain that A&M will receive

agreed the Provost office should be solely focused on Academic integrity across the entire college

a. Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success. i. Finding 1: The Provost Office is a prime example of “diversity and inclusion” run unchecked. According to MGT, it has so many unrelated areas under its cognizance that it needs to “... elevate the profile of teaching and learning within the auspices of Academic Affairs. Other student support offices should be redistributed to different organizational units to ensure the Provost’s office can focus on elevating student academic success, including growing graduate education and supporting new expectations and models for student learning.” Yet, MGT counters its own advice to a degree when it says later in the finding that TAMU needs to mirror the demographics of the State of Texas. Why? TAMU needs to focus on admitting students based on merit and providing them with the best education we can, and leave political correctness out of it. b. Recommendation #2 Centralize undergraduate academic advising. i. Finding 2: Agree with MGT solution. c. Recommendation #3: Elevate the Higher Education Center at McAllen i. Finding 3: Agree with MGT solution.

You still need more women Professors!

XXX

While from the student perspective, we don't interact much with the Provost Office, I agree with the recommendations to have the Provost focus most on instruction and research, faculty and students.

While I agree with much of the recommendations, I absolutely do NOT agree with relocating the Veterans Services Office to Student Affairs. As a military family, with a military connected student at TAMU, I assure you that these students needs are not as simple as one not in this lifestyle might think. It is my assumption that no one doing this consultation is truly qualified to make a recommendation in this area. VA connected students have specialized needs that only those within VSO can accurately, faithfully address with these students. It is VERY important that these students have direct, timely access to the VSO without a bunch of red tape that going through student affairs can cause. They don't have weeks to wait for appointments nor do they need to have to explain themselves repeatedly. PLEASE keep all veteran connected services separate. These students are different and deserve a one-stop, specialized office to handle their challenges with encouragement and ease.

What’s that? I don’t know that was functioning at my era at TAMU

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

We are spending too much time and money on trying to be "woke". All the inclusion, diversity and equality promotion is created to much division. Promote Aggies as a whole. Aggies as one. Recruiting minorities to get the "numbers up". Why not select candidates based on their merit, grades, and desire to be a fighting Texas Aggie who will uphold the honor and tradition that A&M holds so near. Not select them based on their skin color.

Was the previous provost heavy handed as this study reports? I’m wondering if our new president is trying to be as well.

Traditionally a strong position. I cannot tell from the proposals whether this weakens or strengthens the position. If the changes result in more focus on student success, then it makes sense.

Totally Agree

To much centralized power in one position is not good. Could lead to corruption. Diverse opinions must have equal weight.

This report says it desires the provost's office to be more invested in student life and academics. The provost office is untouchable and therefore cannot be focused on students when it's bogged down in politics. Everything about offices that align extremely close to the President are smothered in political minutiae which means students will always take a backseat. I am thoroughly disappointed that the VP of Diversity was removed from the office and basically placed in the corner. The disrespect shown to diversity and students of color throughout the report is shameful. As a former student who experienced racial trauma on the campus and has tried to help alleviate it throughout the years, it's hurtful to read the thoughtless words in the report. If you want to help, use your voice and stop allowing the powers that be to hurt your students in the name of tradition. It's not right.

This MGT survey was an abomination. Pushing the narrative further to change the campus and overhaul it to be another run of the mill university. What gives Texas A&M its strength, power, and future, are the very things that make us unique. Curious how none of the universities we were peer/compared to are even in Texas. These comparison universities are beneath us, or different entirely, in the same manner as milking a cow vs milking a bull, and the complaining that your milk tastes differently. Cherry picked data to justify hitting Texas A&M with a banhammer and to alter the university, remove its identity, entirely. People say that what we identify as matters, well Texas A&M identifies as Texas A&M, and if you refute that, you're a bigot and are dismissing the lived truth of A&M. Yes the College of Engineering is huge, as it should be. Advising is decentralized, governed by each major, as they should be. You'll never have a one size fits all approach, and trying to shove the university and its respective colleges into a "big box store" feel, as this report would suggest, destroys the very fabric of what makes us Aggies. Trying to shove in 25,000 engineers by 2025 risks diluting down the degrees or simply put, dumbing down the curriculum to pursue more students.

Additionally, merging the College of Fine Arts and Sciences, as many smaller east coast schools do, does not make sense nor enable either entity the ability to perform as unique and necessary institutions on their own. If you wish to improve the university, might I recommend cost saving initiatives like never paying for another such a slanted and asinine survey again. Perhaps considering cutting the University Administration's salaries by 10% as well. Speaking of cost savings, DO NOT outsource student on and off campus transportation. The current model makes sense, and such outsourced services at other universities always ends up being more expensive in a matter of a couple of years than any immediate cost savings might hint. You will pay more, get less, and be confused as to why... Why was this even an option? Look at what happened with outsourcing dining services. Pursuing diversity over meritocracy, over talent or the outcome, is a fool's errand. Diversity should be cultivated organically and naturally, not forced and mandated. Diversity is great, but chasing metrics and numbers over anything else and rejecting the notion of assimilation while encouraging the students to celebrate what separates us is not healthy. Change for the sake of change simply to change and virtue signal will not yet results, will not bring us together, and will not continue the ability of A&M to be a natural melting pot. Let talent speak for itself, and let those who wish to join A&M do so freely. The desire to erase campus landmarks to resemble west coast university appeal also does not sit well with me. Remarks about the Corps of Cadets being "too Caucasian" is not only insulting to our diverse group of Cadets but a surface attack on the Corps' rich history and selfless service. Creating more commissioned officers to the US Military than all the service academies combined should tell you that the Corps has the ability to form the talent, respect, and love for each other that is required in a military environment. The Corps of Cadets, and the College of Engineering, are fine examples of successful melting pots creating cohesion and powerful leaders. As they say, Highway 6 runs both ways. If faculty, administration, or students, do not like Texas A&M, they are free to leave whenever, and can go attend or work for a university more aligned with their emotional support needs. Those who wish to be Aggies will be Aggies. The University has thrived for a century and a half being run the way it is... Forcing us to change to be similar to UCLA or Maryland will destroy our identity. I say this as a First Generation Aggie, who came not from wealth, but a family of poor immigrants, refugees, and poverty. As the first in my family to go to college, A&M represented everything I aspired to pursue and be. I took on tremendous debt to break the cycle of poverty in my family. Texas A&M was the beacon to freedom, and it still is. The desire of the MGT survey however risks undermining that legacy for the Boogeyman fighting game of "equity" and "diversity and inclusion" while throwing out the University as we know it. I strongly believe the MGT Report offers the chance/opportunity/paper thin justification to radicalize and change the University to better suit the political leaning aspirations of those who dislike Texas A&M. Dismiss the overall outcome of this survey. And remember, Highway 6 runs both ways.

The university needs to invest in the College of Architecture. My father studied at TAMU in the late 1970's, studying at the time "Building Construction". I studied in the mid 2010's Urban Planning and Land and Property Development. When

my parents would visit, my dad would laugh at the fact that there was little to no change in the facilities from the mid 2010's versus what the CoA looked like in the mid 1970's.

The suggestions for increasing duties and responsibilities of the Provost Office make sense and probably should be implemented in a logical amount of time. This would allow them to make the necessary changes without being rushed and pressured which would allow the best transition.

The streamlining and focus appears to be a solid approach. Over the years TAMU has tended to add VP positions as rewards for service, and putting the focus and funding back into more faculty that teach rather than more VPs is positive.

The start of the plan sounds great. Then you get to the details and it lays out more of what Pres. Young was doing. More woke garbage.

The review was well planned, demonstrated thorough research and thought.

The restructuring in the report seems like it needs to be done so this office can get back to its original intent.

The report says, "This reorganization will provide a much more balanced portfolio and will allow the Provost office to focus exclusively on the academic mission of achieving excellence." In general, I agree, but many of the functions of offices being moved out of the Provost will still require substantial coordination and collaboration. The Provost should ensure that someone in his/her organization is charged with that liaison function. Centralization of Academic Advising was recommended, but may create new problems with advisors not being "plugged in" to their academic colleges/departments. One suggestion is to continue to colocate advisors in their respective colleges (proximity increases communication), and do central planning, reporting, and coordination from the Provost's office.

The report provides many solid recommendations for the provost office. However, it creates a more bloated office structure within the provost office. This will make management and oversight more difficult. I would caution the TAMU team to slowly and carefully think about efficiencies and effectiveness of this level of centralization.

The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

The reorganization of functions assigned to the Provost will allow the Provost to focus on academic matters, giving them more time to elevate the university's standings. I support this. The centralization of advising means pulling it away from the departments. I need to see a more detailed plan for this before throwing my support behind it. I don't think the McAllen campus is large enough to report directly to the Provost.

The reorganization is needed

The reorganization appears to be needed.

The recommended changes should be made.

The recommendations to restructure the Provost office as presented seem prudent to allow for better management of faculty issues and student academic programs.

The proposed reorganization of the Provost Office makes sense and seems to increase the focus on the academic mission of the institution.

The proposed changes make sense

The program/office realignment proposal makes sense if it will enable the Provost Office to be more focused and responsive.

The office should only be focused on academic affairs.

The office of the provost should be entirely focused on academic excellence, completely stripped of the encumbrances of forced racial, ethnic, and gender diversity, equity, and inclusion. These are distinctive elements that retard academic progress and divert valuable resources to counterproductive objectives.

The office of the provost as chief academic officer is almost impossible in attempting to fairly distribute funds amongst programs. I hope that the person in this role will vigorously defend the college of liberal arts.

The intense growth of TAMU over the last 20 years is disconcerting. Adding so many student begs the question as to whether the University can adequately serve so many people. Also, dei policy will be the death knell of this institution, as it is at every institution dei policies are stringently followed. This happens because dei treats people as part of a group, instead of the individual they are. It divides groups and increases animosity thereby creating a hostile learning environment. Your job as a university is to teach students their specialty, not socially engineer them. Notice that doesn't mean don't discuss difficult topics or explore challenging social topics. It does mean don't, as the leadership, choose winners and losers based on social groups. Stay in your lane. Teach well and provide a system which tests students in their learned knowledge and in their problem solving skills. As a University, you should be apolitical and asocial (made up word). Focus on your academic rigor and all else will fall in line.

---

The idea of re-focusing the Provost's office primarily on academic issues and moving student related issues to student affairs is long overdue. It has long appeared that the Provost's office is best geared towards dealing with faculty and curriculum related issues, while student concerns and disciplinary matters ought to, and under this proposal would, be handled by a separate student-centric office.

---

The great thing about Texas A&M has always been the conservative values it represented and stood for. It has been in stark contrast with those espoused in Austin for many years. Most of the people who chose A&M over the University of Texas, did so for these exact reasons. It seems, however, that much of this has changed in an attempt to become more mainstream. Conservative values, beliefs, and morals have been tossed aside as the university appears to try to become more like the school over in Austin. We are not UT, and we should never strive to be. We are better than that and should not allow ourselves to be transformed into a group that stands for nothing in order to be liked by the vocal minority.

---

The following quote concerns me greatly. I see no reason why "diversity" is an issue at TAMU. I thought quotas were determined "racist" long ago, yet this report seems to indicate that "diversity" should match percentages of population = a quota. There is no other reason given than we're a land grant school and as such should somehow mirror the demographics of the state. That's ridiculous. Did one ever consider that not all demographics are interested in TAMU in the same ratio as their population? Please, please, please don't go down this road. "The demographics of student enrollment at TAMU do not currently mirror the demographics of the State of Texas. As a land-grant institution, TAMU should prioritize meeting the needs of all Texans and therefore must concentrate on increasing recruitment, retention, and success of all students, but especially diverse students."

---

The designated position for Hispanic Serving Institution is encouraging but may not be appropriately placed. To receive this designation, we must not only be at 25% Hispanic undergraduate enrollment, we must also enroll 50% or more Hispanic student who are considered low income. This presents not only a recruiting challenge but a financial aid challenge as well. Is the Provost office best suited to be outreach to these students? Or should this instead belong in Academic and Strategic collaborations?

---

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

---

The assessment of the Provost's Office appears to be accurate. Organizational changes are needed and should be implemented as recommended in the report.

---

The Provost's office should also include performance and apolitical approaches to students at the University. DI&E is

fine, but not at the expense of the quality education A&M was created to provide.

---

The Provosts Office has grown to include many functions that are better handled by others. The concentration of authority is unhealthy for a vibrant, achieving university. Strongly agree with recommendations! Giving focus to student academic advising would be very positive!

---

The Provost should focus on Student Academic Affairs - I agree with the report

---

The Provost office does appear to need to size adjustments and realignment. There seemed to be a LOT of focus in this report on diversity or the preceived lack of it. Yet we have had minorities in almost every aspect of student leadership: Student Body President, Yell Leaders, Corp Commanders, etc. When you buy into the traditions and core values...your color is Maroon.

---

The Provost in the past has had far to much power. He/She should be the academic leader and make sure that all classes taught are relevant and challenging. Let someone else take care of the other areas.

---

The Provost and the structure of nepotism present within Texas A&M University's upper organization is destructive to the academic success and progression of the students and school. The organization within the Provost is ill equipped to handle the educators who are more concerned about their pockets than the university and its, as well as its students' success. The main perpetrator here is [REDACTED], who has disrespected/driven away multiple highly promising candidates (One from UPenn) for the architecture department head, as well as vetoing the decision made by the committee with the support of the students, and implanted an interim department head whose specialty and background was not in architectural education [REDACTED]. The fact that I received this email with [REDACTED] in it makes me sad. Genuinely, I have seen him have no regard for any department in the college of architecture except for the construction science department and those he knows who are related to it. His impact in destroying the potential of the resources of the college has been enormous, and his connections to the provost have sheltered him from repercussions, and have allowed him to stay dean of the college.

---

The Provost Office should refocus it's efforts on the academic mission of the University. Including meeting the needs of a more diverse student body.

---

The Provost Office needs to see its role are supporting the academic teaching and research output of the departments, not as a centralized command and control center to direct their diverse activities. At a time when the world needs greater collaboration and interdisciplinarity, A&M seems to be focused on the efficiency of the administration to control the message that we have become a major player in the academic arena. If the departments are performing well, the message will make its way out.

---

The Provost Office is and appears to be recommended as the structural location for entities who serve/support the academic excellence of TAMU educational delivery through it college units. Those organizations who function in this capacity would seem to be best placed here

---

The Provost Office does appear to be rather unwieldy and seems to have taken on many areas that are normally outside the provost office.

---

The Provost Office (based on the report) appears to have become burdened with obligations outside of the normal provost function. I concur with the recommendations. While centralized undergraduate advising seems to be very appropriate, it cannot fully take the place of college or department level advising. Perhaps it would be helpful for the centralized entity could provide training to those providing advisory services at the department level.

---

The Journalism degree should be kept under the department of communications as the two disciplines provide complimentary instruction for students wishing to pursue promising careers in media, advocacy, public service, and corporate affairs. I fear the lack of a focused journalism degree will diminish opportunities for students wishing to pursue such a major at TAMU and look to other schools such as UT or UH that have dedicated journalism programs. I minored in journalism and went on to attend the Bush School where I graduated in June of this year. I find my journalism background very helpful in my career as a Public Policy consultant where I worked with tech firms such as Salesforce, AWS, and AT&T to build out their government affairs framework. The practitioners, professors, and administration within the communications department are well-versed in curriculum related to media, communications, and journalism and, I believe, the best to be teaching the subject at this university. Please keep the journalism degree under the department of communications so students can receive the top-tier instruction needed to pursue the career of their dreams.

Texas A&M looks backward and not welcoming to a diverse student population with its veneration of a confederate general. It's time for Sully to come down.

Texas A&M is at risk due to radical changes in the core mission and long history of success and growth as an institution of higher learning - primarily due to the lack of expanding university leadership that are not graduates of Texas A&M.

Taking too much from the Provost office. Academics should stay here

TAMU seems to do well academically. In my tenure at TAMU, though, I felt like I took some classes as part of my grad program which did not translate into anything meaningful. One thing to note, I believe we had professors of practice who were teaching very academic subjects that would be better taught by an academic professor.

TAMU needs to keep traditions. Diversity will happen on its own

Survey indicated significant student dissatisfaction with Academics. Research is important, but researchers are not always great teachers. There should be evaluation and identification of great teachers, based on anonymous feedback from students. Those great teachers should be rewarded with extra compensation based on student feedback.

Supports move to get smaller.

Support separating from the Provost and centralizing finance, IT, marketing to the President's Office.

Streamlining the activities of the Provost Office makes a lot of sense to me. I was quite surprised when I read this section to learn about all of the activities that are currently under the Office of the Provost today that certainly don't belong there. Having the Provost focus on Academics and Student Success in the Classroom is spot on. The other many activities (being removed) should have never been part of that office in the first place.

Stop promoting/prioritizing the job

Some of these reorganizations appear on the surface by title to make better sense. However....A&M was always a small/big University. Ags helping Ags. I hope the idea here is not to turn our institution into one of the schools you keep sitting in this survey. That is not A&M. And if the new President believes it to be....she needs to go. Students shouldn't get lost while seeking help and have to search out numerous departments for that information where before it could be obtained in one place. With some of these remaining under Provost control does it alleviate student frustration and endless lost in the system search for requests. Going where?

Slimming down the Provost Office and putting emphasis on teaching and learning aimed at student academic success make abundant sense.

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

See comments on merger of colleges

Restructuring toward academic values seems to be a good approach to improving transparency and clarity of executive command. Some issues of academic value exist from a perception of disparity between colleges, departments, and majors. This disparity generally falls along lines of STEM emphasis noted later in the report. Implementation of executive and offices restructuring aside, more investigation to the detail, equity, and accurate value of across all academic disciplines offered should be conducted alongside centralization of advising and overall academic structure. Also, the report fails to consider established values of a decentralized structure- which may contribute to disparities between disciplines (good or bad); successful implementation should thoroughly address the varied needs across academic areas.

Report recommends removing some offices out of Provost Office to other offices at univ. No where did the consultant recommend abolishing any office. Failure to do a complete analysis.

Reorganizing to serve the students and nothing else is a good move.

Regarding recommendation #2, centralized undergraduate advising. I would recommend additional research and consideration before adopting this plan. My employing university has considered jumping on this bandwagon, and most academic programs are STRONGLY against it, given the specificity of each department, but mostly due to all of the other department-specific tasks that advisors complete (especially during the slower summer months), and the information and support that local advisors can provide for their unique majors. If adopted, absolutely do your research and learn from institutions who have done this. Finally, if advising is centralized, be sure to maintain program-specific ways to

guide and connect with your majors and prospective majors.

---

Regarding centralizing academic advising, I have reservations about centralizing advising. The concern is that the advisors would not be sufficiently familiar with the majors they are discussing, even though I concede that there might be a certain efficiency to having students receive their initial advising through a central advising center. Also graduate students have specialized advising needs that likely would not be solved by universal advising.

---

Recommendations sound logical.

---

Recommendation #2 Centralize undergraduate academic advising: Undergraduate academic advising needs to improve in some colleges but creating a large, centralized bureaucracy will only produce "an average" organization at best, thereby reducing the effectiveness of undergraduate academic advising for the good colleges and only slightly raising the advising in the lowest performing colleges. I am the parent of two children who graduated in 2017 and 2019. One had excellent advisors in Bio/Ag Engineering and Mechanical Engineering. The other had poor advisors in Mays Business School in Honors and Marketing. Concerning the consultant's finding on difficulty in changing majors, I think that is grossly overstated and incorrect. Both of our children changed majors and graduated with honors/high GPAs in four years. I think the problem cited by the consultants relates to students who do not meet the academic requirements of their college or major and need to change to University Studies and then have difficulty finding a college and major that will accept them. This is a real problem which is somewhat addressed by the consultants. I think the options for 2.0-2.25 GPA University Studies students should be narrowed to just a few majors within a few colleges (e.g., Liberal Arts and Ag). Requiring all colleges to have to offer degree plans for University Studies students places undue burdens on all colleges and lowers the overall academic experience for well performing students.

---

Recommendation #1: Reorganize the Office of the Provost to allow greater focus on student academic success. If according to MGT, the Office of the Provost has so many unrelated areas that it needs to "... elevate the profile of teaching and learning," then a reorganization is needed. The Office of the Provost should be focused only on academic success and not on diversity and non-degree programs. Academic success and increasing graduation rates will also result from focusing admissions on merit and providing students with the academic environment to succeed rather than trying to mirror the population of Texas. Students should be admitted on their proven ability to finish their degree not based on racial quotas. Recommendation #2 Centralize undergraduate academic advising. Agree with MGT solution, but advisors should have accountability and oversight to match students with appropriate majors and provide quality counseling across all majors not only focused on a few areas from past expertise. Recommendation #3: Elevate the Higher Education Center at McAllen Agree with MGT solution.

---

Recommendation #1: Reorganize .... Agree, but do not agree with restructuring to accommodate racial and diversity gaps.

---

Recommendation #1: Agree Reorganize to focus on academics and less on diversity, equity, inclusion. Encourage hiring of professors, instructors, staff based on merit and no other metrics. Recommendation #2: Disagree. Students are more likely to discuss their academic options within a college or department setting rather than an inflated, impersonal structure. Recommendation #3: Disagree. Focus on TAMU and TAMUG as flagship campuses. All others including Qatar should be under the System.

---

Recco to reorganize makes sense. Overburdened per current Org Chart.

---

Realignment looks good

---

Re-Alignment is greatly needed. The left hand does not know what the right hand is doing.

---

Rationale #1 - I agree that the existing organization is too large for a Provost to handle efficiently and properly. However, in my opinion, the report in this rationale places way too much emphasis on disparities in demographics, and in racial and ethnic diversities. We need to devote all of our resources to make sure the students we have are being educated to the fullest extent in their respective areas of learning. Rationale #2 - I agree and with the solution. Finding #3 - The final four words "further strengthening TAMU's prominence." should NOT be why we're making these adjustments. This teaching center, and TAMU for that matter, exists to educate and train primarily the citizens of Texas. We should not be doing any of this just to make A&M more prominent.

---

RE: Centralized undergraduate academic advising While the findings and recommendations do make somewhat sense, the implementation of such a role seems challenging. The current undergraduate advisors within the respective

colleges/departments have knowledge that helps students succeed in those housed majors. Having a centralized organization beyond, say, coordination would require advisors to have a vast array of major-specific knowledge across all of the departments. Thus, the actual implementation of such a centralized unit requires a better understanding of the roles/responsibilities of the team.

Provost's Office has grown and assumed many responsibilities under previous aggressive Provost. Reallocation of many of units described is appropriate and Provost's Office should be focused on academics.

Provost personnel must not allow the use of the use of materials or speech in classrooms, laboratories or fields which is politically or racially divisive.

Provost office is very much too political in hiring new professors and does not fairly represent our state, community, and former students.

Provost office Did the consultant consider the economics of all the changes? Th proposal is taking away much of the responsibility of the Provost. Does the Provost still have enough important work to do to occupy all their time? On finding number two: What is the source of the problem related to students often changing majors? It needs to be identified. The recommendation of number two does not address the source of the problem. On finding number three: Why are they going to have the higher education at McAllen report to the Provost?

Proposed changes look to be moving functional operation in positive and effective direction.

Please stop turning a&m into t.u. We went to school to a&m, and hope to send our kids to school there as well, because of a&m's traditional conservative values. Stop caving into the race baiters and keep Aggie land, Aggie land. Stop worrying about diversity, and let the best kids in, in, regardless of race. I will not send my kids to school to a&m in 10+ yrs at the rate the university has been progressing in the liberal agenda direction.

Please stop adding bureaucracy to TAMU. Any group that is purely focused on DEI should be ABOLISHED IMMEDIATELY. There is too much emphasis on kingdom building and not enough on having a strong, values-based university.

Please handle academic affairs only. Most people should never hear of your office, which is how I know there was an overreach of power in the last few years. Restructure.

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

Please do not establish any of the liberal arts colleges recommended in this report. Along with being a drain on university resources they're also a huge reason for the student loan debt problem as there are no jobs in these fields of studies that justify the tuition. Additional we were established as an engineering school and should remain school with focus on studies that lead to marketable skills and jobs. Finally we are a conservative school and proud of it. We don't need to become progressive or "woke". Highway 6 runs both ways and those that don't like it would look better in orange.

Per the proposed org chart, a lot of areas are removed from the Provost's office. Considering they generally set the overall tone/mission of the University's Academics, not sure so much of that should be offloaded. For example, why would the Enrollment and Academic Services be removed?

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own

child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

Online classes need to stop and you need to offer enough upper classes so students can graduate. Stop the money grab.

Not certain that I agree with moving Data & Research and Enrollment Management to the Department of Finance in the proposed realignment. These analytical functions tend to be part of analysis, assessment, and accreditation functions that typically report to a Provost or directly to the President - unless the intent is to house financial and budget responsibilities arising from enrollment outcomes. Those belong to, or are at least a shared responsibility with Finance. However, the exact functions of the units to be realigned was not delineated in the report to completely agree or disagree with the recommendation.

None. I applaud your action as internal review and assessment.

My specific concern I related in my response to the survey previously. But the report itself poorly addresses the concern. The Virginia election of Youngkin did a MUCH better job of making the point. The emphasis on Diversity, Equity, and Inclusion needs to be disconnected from Socialistic and Leftist rhetoric and to be honest the Faculty needs to be carefully balanced to include voices across especially the MIDDLE of the political spectrum and should carefully avoid overloading on extremist positions. I feel some of the organizational changes simply increase costs by adding administrators. I also wonder if the purpose is to manage to essentially a single voice and if that represents a left of center position. The report should have explained if there is absolutely any political intent and who provides that guidance. I think it fails to do that, but I'm available to discuss further. You can reach me at [REDACTED]. I'll be very clear that politics belong to the voters and the majority of statewide offices are held by Republicans who are conservative. So the school shifting left doesn't serve the more conservative former students nor the state that voted for the conservatives. With that said: I have had rather helpful discussions with Karen Allen in the past when my daughter was applying and matriculating and I fully support the spirit and the law of the 10% rule. I also understand that it is strongly supported by our minority legislators and I applaud the effort by MY SCHOOL to address that law even at the expense of so-called "legacy" students. And I believe the effort to expand enrollment does help address the need to provide broader access to Texas A&M as a flagship, as a campus, as a loosely coupled set of campuses, and within the Texas A&M system as a group of schools. I want to make sure that we don't abandon this legal responsibility in the hope of limiting attendance to take the cheap way to a high USNWR rating by rejecting students when we are capable of serving them. I view these comments as neither general remarks nor necessarily relevant to the other organizational areas. I view Provost as the owner of the vision of the results of what the school is trying to accomplish. And I'll further note that while it is a learning community, it isn't there to change the students but to prepare them. The distinction needs to be carefully observed and managed.

---

My name is [REDACTED]. I am a former student Class of 1957. My BS from A&M is in chemical engineering. I was a member of the Cadet Corps, commissioned as an officer in the USAF. I completed graduate studies in chemical engineering at the University of Colorado, Boulder. I have supported A&M for 64 years and will always be a Proud Texas Aggie.

---

Must maintain a true communication with the chain of command, not skipping a level with or for private information. It is critical to always keep your people informed the correct way.

---

More IT help there

---

More "centralization" is always the proposed solution. Decentralized structures are always viewed as inefficient. This is arrogance at a very high level. Decentralized structures provide diversity of solutions and local control of resources allowing for more innovation and responsiveness to local needs. Centralization is the solution of socialism which fails every single time it is tried anywhere in the world. Hiring law abiding people and allowing them to work in a distributed

system has always been the most helpful system for the most people.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. [REDACTED]

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

Like

Liberal arts and Sciences need to be separate departments. LA deals in subjective reality while the sciences deal in objective truth. Their perspectives on reality couldn't be more opposite or incongruous. Sciences deal in research that is funded by corporations that liberal arts has no way of relating to much less has any business courting for funding. Support for science students will be undermined by this maneuver and the future of sciences at this university will be compromised and eventually cease to exist.

Katherine, Thank you for asking for feedback about the university third-party study and recommendations. I am a former student and current Aggie parent. I served two terms on student senate years ago in Aggieland. For the last 20 years of my professional life, I have been part of practices in management consulting firms, including accounting-focused firms, strategy firms, and boutique consultancies. I wanted to share a few thoughts and opinions as I read through the report. My time is limited so I will just share in a stream of consciousness format -

It sounds like some realignment is needed, I would defer to the faculty and current staff for direction

It makes absolutely no sense to centralize academic advising. Changing majors is a convoluted process that needs improvement, but this is a very poor solution to that problem. The adviser in a department is key to student success because they have such an intimate knowledge of that department. Sending kids to a generalist adviser will lose those connections. To me, this is the worst Recommendation in the report. The key question to always ask is how this helps the student (the customer) and this is a net negative in that area.

It looks like A&M has quite the reorganization task ahead, but that's not surprising. Any organization that grows rapidly like A&M has grown faces this situation. The administration and faculty are immersed in College Station and the campus, so the growth seems normal to many of them. But really, it is far from normal. It is rapid growth. All I'm saying is that no one needs to feel that management has been poor. The need to reorganize is a natural consequence of A&M's success and growth.

It is interesting that one of the findings was related to the number of times students change majors. Both of my sons were told very forcefully not to plan on changing majors once in the University and that it was frowned upon. The findings are correct. College is the time to learn and discover what you want to do, however, that is NOT the message we received for either of our children. One in the College of Agriculture and one in the College of Architecture.

It is clear that a recurrent theme in the recommendations offered up in this report is the "...needed response to ever-shifting enrollment demographics..." and the call to action to "...address persistent (and resistant) diversity gaps" by building "...a foundation for addressing racial and ethnic diversity among college faculty, staff, and administrators, which still does not reflect that of today's college students." While the author's high-minded rhetoric may seem well-placed in today's world of extreme social and race consciousness, they discount the very essence of what it means to be an Aggie. To become a member of the Aggie Family is to suppress and reject the countless social, racial, gender, and political identities that masquerade as "defining" a person in today's world. When you set foot on campus as a new student, the common Aggie identity is the one that matters. Part of that identity comes from knowing that you were selected to join

the Aggie ranks because of what you as an individual have accomplished, NOT because you bring the student body into closer alignment with a preconceived quota designed to adjust the make-up of the student population to match that of the general population. Texas A&M is NOT the general population: we hold ourselves to a higher standard (and in higher regard) than other schools because we see and judge each other as equals, without regard for whatever ethnic makeup, cultural background, or other unimportant classifiers are attached to us. To go and destroy that by actively changing the composition of the student body and faculty in pursuit of diversity goals is unacceptable.

It is always good practice to review a large organizations processes with an outside perspective, however do not lose site if what makes Aggieland unique. A quality education with an amazing culture and former students.

Interesting, when I changed majors I had an index card signed by my current department, then walked it over to my new department, got it signed, and voila, I changed majors.

In regards to the statement to increase recruitment, retention, and success of all students but especially diverse students...I do not believe that an outside company can fully understand the culture of Texas A&M and WHY people choose to go there. Texas A&M does not even NEED to recruit. Anyone is welcome at Texas A&M. No one cares about your gender, race, ethnicity, or sexuality. The most important thing for students to come to A&M is to BE AN AGGIE and hold to the CORE VALUES! We ALL BLEED MAROON! Texas A&M is a different and very special place. Please don't mess it up!

In favor of a streamlined way to change majors, but often a student needs the expertise of someone in their specific major. I hope there would still be departmental advisors available.

In all probability, the Provost Office is too large and unwieldy to be efficient. I do not understand why the emphasis on disparities in demographics and racial and ethnic diversities in a University that already is one of the most diverse in the nation. Let's educate all the students and quit beating a dead horse. Regarding Rationale #2 : I concur Regarding Finding #3: Again the Teaching center and TAMU is for educating the citizens of Texas. "Further strengthening TAMU's prominence" smacks of empire building by some administrator striving for self-importance. That should not be a reason for making the adjustments mentioned.

If we assume one person per proposed position, that will be 26 reporting to the VP & Provost position. So it is hard to see how many people currently report to the Provost position. There needs to be care in not increasing overhead/people or a lot of new positions. Sadly this report does not include #'s of people involved and is too general, in my opinion.

I'm disturbed that a conclusion of the report is that the President's Office should have more decision making power at the expense of the Provost Office.

I would love to see the Money Education Center fall under Student Affairs. It is an incredibly important program that I think would benefit from being under Student Affairs.

I would like to see TAMU recruit and retain more people of color. Not just for football team, but academics. You are missing out in critical components of increase for your school.

I would agree that focusing on academic achievement is the best focus for the Provost office and ultimately will give the university the best chance at continued success.

I was at A&M on a Friday afternoon about two weeks ago. The campus was fairly empty and I got to walk casually around and passed the Academic Building. To my surprise I noticed a "black lives matter" banner hanging in the rotunda. Two of my six children graduated from A&M. The others attended "other" liberal universities. I have several dear friends that have their children attending A&M. I asked one of those students about his "take" on politics. He gave me to understand that socialism is his preferred brand of government . . . he and his friends prefer it over our constitutional republic. I was stunned. He didn't develop this thinking from his parents, but he did let me know that his fellow students (at A&M) primarily thought the same way. As a graduate of A&M I was comfortable with the hope that it would stand strong in the face of the current liberal onslaught. Hearing from this student and seeing the "black lives matter" banner in the Academic Building lets me know that I was wrong. In the report you asked us alumni to read I found the words "equity" and "inclusion" used. Those are liberal buzz words for brand of tolerance and inclusion that distort and warp the very meaning of tolerance and inclusion. It's a new form of bigotry that is powered by a gross desire to destroy every existing cultural institution that forms the foundation that has made our culture here in the United States a successful "experiment" in a civil society. As a graduate of the College of Architecture and Environmental Design I have spent the last 45 years working in a field that is populated by ALL persuasions of people. For most of my experience people were judged by their character and their ability to be creative and perform. Since

architecture and the arts is a creative community it became (and still is) a haven for all who were creative and intelligent, but felt victimized. Today those folks who felt "victimized" are parading their behavior in full view and its shaping education and public policy. It is destroying culture. It's tough to take a stand in this environment and if a person does . . . or a business does . . . or an institution does . . . they are labeled a bigot or racist. The gloves are off and it's a civil cultural war. Please take a stand and allow A&M to be a stalwart institution that stands against the tidal wave of "equity" and "inclusiveness" . . . the liberal theology that is rushing into every area of culture. If no person, or business, or institution is willing to take a stand and bear the slings and arrows of the liberal theologians we will wake up one day to a perverse world that nobody will enjoy living in. Loudoun County in Virginia woke up to that horror this past month.

---

I think the reorganization of the Provost office makes sense. the overall findings of sprawling offices with too many departments is consistent with my time at A&M.

---

I think the conclusions and recommendations are very good. But the devil is in the details regarding how they are implemented. A centralized, both across the entire TAMU System and within each institution would be VERY helpful when working with industry partners, but it is the implementation of change that will be the biggest challenge.

---

I think the changes proposed are good for the future of the Provost Office. I

---

I support the suggestions for focusing the Provost Office on student academic success. That is, after all, the number one task of both the Provost and the University. While I support centralization in general, I do have some concerns about how to make sure that a centralized academic advising team can continue to provide major-specific insights and context. Note well that I am not against centralizing this function; rather, just strongly suggesting that context and major-specific issues be retained.

---

I support the recommendations of the study.

---

I support the program to try and represent the diversity of the Texas population. Allowing the Provost to increase focus on student diversity, retention, creating welcoming culture, and even creating NEW traditions, are a priority. Centralizing advising is key because when I was at TAMU, it was very poor to seek advise. All advise was siloed. Career coaching and educational pursuits advise needs to be higher elevation thinking and provided by people with a broader perspective.

---

I support refocusing this office on management of academic affairs and less on overhead functions.

---

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

---

I represent former distinguished alumni James Sewell 1927 mechanical engineer and TAMU Foundation Trustee and Association of Former Students President since 1971. As a former student body maritime president myself since 1992, my masters thesis concept was endorsed by a former department head of TAMU Marine Transportation and Captain of the Texas A&M original flagship campus USS Queens Texas Clipper to honor a First Family turnaround for the national flagship SS United States and it's entire maritime system. The concept endorsed and sanctioned has been for TAMUG to help and helm UTMB via a health/hospital aboard training ship system. Metaphorically, the UT Texas Longhorns are in charge of the Texas A &M Veterinarian and this is destructive and frankly backwards. A&M Galveston should be training its own nurses and doctors aboard it's own training ship program, not replying on the destructively competing campus of UT for healthcare. The research for the thesis concept implementation study concludes that TAMUG either should take 51 percent ownership of the original historic Soule Medical School presently owned 100 percent by UTMB and or place a martial arts based health and defense masters degree program aboard the TAMUG training ship system as the foundation and helm of placing a hospital training ship program aboard to help and helm UTMB. The study analyses the amount of world petroleum to turnaound the entire national flagship maritime system. Presently, only approx 40 years of petroleum resources remain as consumption rates near 50 million barrels per day (mbpd) of combustibile fuels and 100 mbpd overall including petrochemical production... Therefore, it is advised that A&M produce a healthy disaster response training ship system where the USS Queens, the original flagship campus if the entire university system is raised for a Seawolf Park "no barnacles on hull" style "First Lady Flagship Campus" to honor and respect a "First Family" turnaround for the national flagship SS "United States" or at least mitigate risks to the entire national flagship maritime system. It is also advised for TAMUG to produce a healthy/hospital aboard training ship system and take over at least 51

percent ownership of the present UTMB Galveston campus to produce The Great Physician system instead of allowing UTMB to monopolize health education thus producing an overgrown destructive Texas Longhorn aka The Great Beast system which is not adequately mitigating such risks as covid and world shut down. At present legal counsel will be reaching out to the president of my masters degree school to acquire the environmental entity and maritime leadership necessary to implement this thesis and being forward a "No barnacles on hull" policy for the USS Queens into next year. I greatly appreciate the university and look forward to continuing service to help anyway I can. [REDACTED]

---

I recently attended the wedding of our God-daughter, the youngest daughter of a close friend. Die-hard UT grads, they had long punished my wife and I for our A&M roots. But, then they told us how their daughter struggled over two years at UT and then at SMU, as she tried to find groups or a community at those schools to support as well as be respected and embraced in return. Over Christmas break a few years ago, she met several of her high school friends -- Aggie undergrads who saw her unhappiness and encouraged her to go back with them to A&M in the days immediately before the spring semester. In just those few days in College Station, she found any number of students who made her see something special in the university as well as a path for her to find that in herself. She transferred to Texas A&M that spring. It almost killed her father. But as I talked with him at the wedding and asked about this beautiful young woman, he told me how Texas A&M had saved her...not in a religious sense at all but in the sense of worth and purpose the university and the peer groups there helped her see. She easily graduated and is one of the managers in development at Texas Children's Hospital -- a job she loves because (as she said) of the kids it saves. Her marriage that day to another young Aggie grad brought tears to everyone's eyes, and a deep sense of pride to my wife, myself and two UT grads who now see Texas A&M as so much more than just another university. That is the kind of success story I want to hear about Texas A&M. At a time when I fear A&M and so many other schools are losing sight of the reason people like me write checks, I want A&M to help more students like our God-daughter find themselves; find purpose and self-respect. I want the University to never forget that it should strive to be the best -- not the biggest and not a place where change and the qualities of a liberal arts education are lost.

---

I really like this analysis and the common sense recommendations. I heartily support this.

---

I only have one concern that I will post in the comment section at the end,

---

I like the idea of refocusing the provost unit on academic services and student success. I also like the four categories of AgriLife, Engineering, Arts and Sciences, and Texas A&M Health

---

I like streamlining everything. It sounds like it will be a lot easier for undergraduate students to get the proper assistance they need for maneuvering their degrees.

---

I invite you to look at: 60x30TX Strategic Plan for Higher Education (texas.gov). If you are not already aware, this document seems to have been commissioned by the Texas Higher Education Coordination Board and outlines (4) Goals: 1. The Overarching Goal 2. The Second Goal: Completion 3. The Third Goal: Marketable Skills 4. The Fourth Goal: Student Debt You will also find the following statement expressed within this 34 pg. document: ", two- and four-year colleges in Texas will need to consider more explicitly the primary reason most students attend college: to get a better job and achieve a better life." My point in bringing this up is to say that in the area of duplication of effort; it appears to me that the state and the university have independently arrived at similar conclusions.

---

I hope that the undergraduate advising is better than I received in the 1980s. My advisor continually refused to meet with me. I was struggling academically and he refused to even talk with me. If it wasn't for the support of my Corps outfit I would have failed to finish my first year at A&M.

---

I hope that the Provost Office will respond to faculty behavior that is against the law and unbecoming to the campus. They need to be reminded that they represent the campus as employees of it.

---

I have no issues with reorganizing the Provost Office. I will say that the organizational chart does not appear to significantly reduce the scope of the Provost Office. While centralizing advising makes some sense, I think the argument that "it's a little hard to complete 5 steps to change majors" is overstated. This is college, not grade school. If you can't read & follow directions then I think there are larger problems than a student's major. I think students should have to put forth some effort in this regard, and it should not be reduced to asking an advisor to simply "take care of it".

---

I have no issues with realignment of current departments. Office of Diversity and Inclusion should ONLY exist to meet federal requirements and nothing more. Students either meet the entrance requirements or they don't. Race and ethnicity should never be allowed to weigh an application in a positive or negative way. If any preference is given it

---

should be to legacy students. Student advising is a train wreck but can one office effectively counsel the many diverse majors? Recruitment of students from lower socioeconomic backgrounds would be great if scholarships are involved but should be based on qualifications not race or ethnicity.

---

I have insufficient experience to provide feedback on the proposed changes to the Provost Office.

---

I feel that the separation of the Construction Science Department SHOULD BE DONE. The Construction Science Dept. should go to the School of Engineering as it no longer is strictly an "Architectural" curriculum and is more related to Civil Engineering.

---

I don't understand the issue enough to have an opinion here.

---

I don't think you should focus on increasing diversity. Texas A & M has 68,000 students. When I was there it had 18,000. When I was there, affirmative action was in full swing. We've had 40 years to increase diversity based on academic qualifications. That is more than a generation of kids who were never forcefully segregated. They had access to financial aid, head start, school lunches, CHIP, subsidized apartments, fair housing, you name it. Their parents got special breaks based on race. Yet, you have to keep your academic standards high. Kids either make it or they don't. You should not have to lower your standards to increase diversity. A few will rise to the top in each generation. If you start excluding high quality students from the so called "privileged" classes, you're just going to push them down and the economy as a whole will suffer from lost productivity. I do agree that you need to review the functions of the provost's office and redistribute the functions to other offices. The overall goal should be to reduce the size of the administrative staff throughout the system.

---

I don't know what the provost is and don't recall any interaction with during my time there

---

I don't have enough knowledge of the Provost Office after reading the report to comment on it. It looks to focus on restructuring in ways that the average former student may not be able to evaluate.

---

I don't have a strong opinion on the Provost Office, however if the report's recommendation on reorganizing can lead to the inclusion of a more diverse faculty and student body, as well as increasing their success, then I support the recommendations.

---

I do not agree with separating enrollment activities, as recommended: Enrollment Marketing to Marketing and Communications; and Enrollment Management to Finance. I believe this will easily get out of sync and you should market to/provide marketing materials based upon whom you will be enrolling. I also believe Enrollment Management should simply not be in Finance. There are more factors at stake with enrollment and I would hate to see the enrollment decisions denigrated to a decision based upon numbers.

---

I disagree with the recommendation for one streamlined academic services office. There are simply too many students for this to be effective and other A&M services which are streamlined in this way are incredibly ineffective and problematic. For example, the student counseling services are made available to every student. Because of this access, any student can have free or low-cost counseling services, which is amazing. However, the university does not properly fund these services nor make them easily available to students, leading to a backlog of appointments in which it can often take months for a student in crisis to be able to meet with someone. This is the same scenario I fear with academic advising. Texas A&M chronically underfunds necessary student services and one academic advising center would suffer the same fate, leading to a large backlog of students and a struggle to get an appointment. I struggled to find appointments with my advisors in my small department, and I can't imagine that making a general advising center will help in this regard. I also think this will create a problem in which academic advisors are not knowledgeable enough in the many different degrees that Texas A&M offers to give meaningful advice to students. In a university that has consistently given priority to the engineering and other stem programs, I fear that this will once again be an avenue in which liberal arts and other non stem students will suffer because a majority of advisors will focus solely on engineering and stem and leave the rest of the university to fight over a small number of advisors.

---

I disagree with Recommendation #2. As a former student who changed majors during my time at A&M, I found that working with advisors specific to majors I was interested in changing to helped me to make a decision that was the best one for me. My concern is that centralized advising on changing majors may prevent students from getting everything they need to make an informed decision.

---

I did not personally have to knowingly use any of the services of the Provost's Office, but reorganization for the purpose of more effectively meeting goals and needs, especially when they're not otherwise backed by tradition, should be

universally supported. However, on the point of centralizing academic advising, I'm worried it may lead to reduced understanding of particular Departments and their needs. My undergrad advisor, Jill Raupe, was wonderful and understood the program inside and out. Centralization efforts would be most effective if other departmental restructuring was also implemented.

I concur with the report. Too often in the past the Provost has been become the COO and hence the inordinate amount of activities presently associated with the office.

I concur with the report findings.

I concur with reducing the size and transferring responsibilities elsewhere.

I caution keeping research with the president and academic affairs with the provost as it can create tension for individual faculty members if the president is also signaling g the importance of student success

I believe once a student is in upper level undergraduate classes they should be advised by someone who specializes in that college (or just a few departments/colleges). A more centralized advising could work until students reach their upper level classes.

I appreciate Dr. Banks assertiveness in initiating this operational review. All of the high-level findings and recommendations are logical. I would only emphasize the importance of executing our Land Grant mission of serving the people of Texas. When we cannot deliver enough US citizens to meet the needs of our military partnerships, it is clear that we are failing in that mission. We should also be extremely cautious of lowering academic standards under the façade of diversity - this will neither serve the underserved or the greater good.

I am unfamiliar with 1 & 3, but 2- I wholeheartedly agree to do centralized advising. For the first two years of college, everyone is doing their basics that they would be taking regardless of major. Centralized advising allows students to enter and see a very broad array of class options & what is available to them.

I am so sick and tired of hearing about trying to recruit minorities and "underrepresented". This school should be focused on recruiting the best, regardless of demographics. You want to set an example, assign everyone a number at application and stop asking what race they are.

I am not sure what category to place this in, but I am a graduate of the Mays Business School and I am so pleased that we have continue to maintain and increase excellence in our school of business. In that regard, I believe that finding the next Dean of the business should is critical to keep the strong momentum going, and would ask that be a priority for your administration. Thank you for your consideration.

I am glad the Provost office will focus on academics.

I am concerned about the recommendation for a centralized academic advising program. If I understand it correctly, it sounds like these advisors will not be professors in a student's current major - it's actually not even clear they will be professors at all. It also sounds like they will be "faceless administrators" whose only job is paper pushing for changes in major. I found having a professor in my major who knew the courses I was taking or considering, who I knew personally, and who I felt was invested in me as a student was extremely valuable. I did change majors and my advisor helped me make that decision. But this was in the 1980s and the process to change majors was really simple then. Pick up form, advisor signs, drop off form. Perhaps A&M should also consider why they are making something as simple as a change in major so much more complicated these days. Or perhaps consider having both an Administrative Advisor - someone who knows the processes, requirements, etc. and an Academic Advisor that is engaging directly with students and has a deep understanding of the coursework. Both are very valuable. I do agree with many of the recommendations on streamlining the Provost Office. A&M has a Chancellor, a President, a Provost and who knows how many other top administrative roles. I doubt most students, Former Students, and some faculty could tell you what each job does. I support streamlining this matrix, defining clear roles, and holding officials accountable for delivering on the performance of their responsibilities.

I am a member of the Sul Ross Group and I feel that the recommendations that they submit will cover the things that I am most concerned about.

I always thought the goals and plan for Vision 2020 were well thought out and achievable. Please say that we aim to be a top 20 global university or at least try to be.

I agree with the study's recommendation to make the Provost Office relationship with students/student affairs more direct. Centralizing undergrad academic advising will also help promote a more student-oriented education atmosphere.

I agree with the restructuring proposal but metrics also need to be introduced to ensure that staff are efficient and productive.

I agree with the report that the Provost Office has become too big and it has been hard for me to understand exactly what the Provost can and cannot do resulting in confusion amongst former students. Often times the answer we get to questions of "Who did that?" is "The Provost, I think."

I agree with the recommended strong focus on the academic mission, but do have some concern relative to full centralization of academic advising, which could easily hinder students receiving sound advice from knowledgeable faculty in their academic field.

I agree with the recommendations - much needed to help focus on student success. Positive student responses to "Are we headed in the right direction" and "Are you satisfied" begin with these positive steps. Specifically 1 and 2.

I agree with the recommendation to reorganize the office. Makes sense.

I agree with the proposed changes. However, what I did not specifically read is that there needs to be better oversight of the faculty. I am also a parent of a current student. Parents are paying A&M to provide our children with a wonderful education. We are not paying the school to hire faculty who are indoctrinating our children with their political beliefs. I find it interesting that it was noted that "challenges of polarized politics have potential to threaten core values", and this was used with an example of fish camp yet no mention of other more meaningful things like faculty. While A&M has typically been a conservative school and maybe some thinking should be more open minded, it should in absolutely no way ever allow political beliefs of professors to come into the class room. We are funding the education of our child's particular major rather than to be "recruited" for a political side. Therefore, this department must hold the faculty more accountable to teach what they have been hired to teach and what the kids have signed up to learn. Also, I don't know where this falls into the survey results, but A&M continues the push to grow bigger and bigger. While that is fine, the school has not maintained the structure it needs to support this growth. Hopefully these changes recommended in the report will help. A good example is the Engineering Department. You have the push to have 25,000 students enrolled in engineering by 2025, yet there are many times when the kids can't even get an advisor to help them with their plan, or an advisor who gives them correct guidance (this is even applicable at new student orientation), and the registration process continues to be a nightmare trying to get the classes they must have for this degree. While I read that the advisor structure would be revisited and perhaps become more centralized, I think it is important to look specifically at the Engineering College. From an outsider, the Engineering College just does not appear to properly support the students (even though the college wants more students), which is causing a lot of unnecessary stress for poor students who are already stressed out trying to meet the demands of a very demanding program.

I agree with the need to restructure the Provost Office to focus more on individual student success. It appears that too many programs are disjointed. Creating a simple, clear hierarchy can improve communication access among the office's groups.

I agree with the logic of moving Aggie Honor System Office to Student Affairs for the logic given. The idea of centralizing undergraduate advising seems to be long overdue. As a 1981 graduate from A&M (and then a 1996 graduate from another university), I experienced many of the frustrations that seem to be expressed by today's students. Traditionally we expect new high school graduates to have set the course for the rest of their lives. That works for many. But many others (like me) had no real clear idea of what their course can be. I was well into my late 20's when I found my true passion and went back to college to get a second degree to pursue that as a career. Having "professional" advisors, I think will give students a better chance of finding the paths in their lives and increase graduation rates. I am far removed from most of other items discussed relating to the Provost Office.

I agree with the changes for the provost, particularly moving branding communications away from the office

I agree with recommendations in the report.

I agree with needing to focus the scope of the office. To have students waiting until the fall 2021 on honor code violations from the spring is ridiculous. HOWEVER, I do not agree with the need to constantly mirror the demographics of Texas. As a latina woman that is a first generation college student, my mother attended A&M for a year before getting me. During that time my mother embraced the traditions and love for A&M and knew what was "expected" of me as an Aggie. Can the same be said if we start forcing demographics and minimizing those who actually want to be here? That is how traditions are ruined, watered down, scrutinized for no reason, or worse, done with. Stop pandering

to the need to create diversity. Bring people to the university who want to be here and understand what is expected of them- embracing the traditions and core values of Texas A&M.

I agree with Recommendation 2 of providing a more centralized advising group for undergraduate students. I changed my major 3 times during my undergraduate career mainly due to transferring into Texas A&M (2 of my major changes happened once at Texas A&M) - mainly due to one being the easiest to transfer in as and the other because I was having trouble figuring out what I wanted to study. I think this would definitely allow students to sit down with someone and really think about what it is that they would like to study.

I agree with ALL of the recommendations in the report on this topic. This key area MUST be streamlined. ANY changes, no matter how large or how small, will create controversy, conflict, protests, anger...the usual array of human concerns. But A&M MUST stand firm when making changes that ultimately will improve efficiency, cut costs, and help us manage time and resources for everyone involved.

I agree the Provost's office should focus entirely on academic, faculty and staff enhancements. Student success, persistence and degree attainment should be the #1 focus.

I agree the Provost Office is unwieldy and would benefit from refocusing and shedding departments

I agree the Office of the Provost has evolved to an enormous size and warrants restructuring as proposed. Within such a bureaucracy, not only is there the issue of competition for resources and budget, serious issues within this high office can inadvertently be buried altogether. I support the creation of a VP of Faculty Affairs as proposed. However, I do not agree with centralizing undergraduate advising. The association between an undergraduate student and his/her departmental advisor is an intimate relationship, and vital to the student's academic growth. An alternative could be to develop universal standards and expectations where commonalities exist; however, the student's chosen course of study should be guided by a faculty member who is utterly experienced and familiar with that field both from an academic point of view as well as from real-world experience and expectations to succeed.

I agree that the Provost Office has been required to grow quicker than it can keep up with and should be more streamlined to run more efficiently, but there is a disturbingly higher interest in Diversity and Inclusion Programs than anything else. These special programs meant to discriminate against people who don't fit the definition of Diversity and Inclusion should NOT be the focus of this or any study, but seems to be at the forefront of this entire report. There are many more important items to be worked on and towards than trying to make TAMU like any other liberal university trying to become a socialist/communist indoctrinating factory. The reason that the demographics of the school don't align with those of the state of Texas is because the university is traditionally based on more conservative values which are NOT generally as acceptable to demographics that don't believe in them or want them destroyed. If they don't want to apply, then we shouldn't be trying to pay them or paint a picture for them that they don't want. Every organization that I have seen in the last 10 years do what is being recommended has lost its identity by scrubbing everything great about it and replacing it with the empty promise of looking just like everyone else. It is absolutely insane that people think that an organization or university such as TAMU that has no problems whatsoever with getting enough applications to continue growing extremely well for decades to come would try to change into something they are not just so that they can make numbers match what somebody else thinks they should be and then they end up losing the very base of people that loved them so much (Boy Scouts of America is a great example). It is also insane to say that we need to stop accepting talented white male students just because other demographics don't want to be at or don't have credentials for somewhere like TAMU.

I agree that the PO does too much, but you can't argue with success. After all, we're the largest university in the country. It appears that people will just be changing titles and/or bosses.

I agree that reorganization is critical to narrow the scope of the Provost and focus on academic success of TAMU students.

I agree that a refocus and new look at the student body and addressing their challenges should be a priority effort for the Provost Office. Ensuring balance of instruction and academic novelties should shape how students are prepared to enter the real world workforce.

I agree on the need to realign and centralize the Provost Office and reduce its size. The goal of this office should be on achieving academic excellence, developing students, staff, and faculty, and helping rural population around McAllen as well as other rural areas in Texas. Moreover, I would suggest that TAMU work to establish a larger presence in West Texas and the Texas Panhandle. Both of the areas have been historically underserved by TAMU, but offer tremendous potential in energy (both fossil fuels and renewables), agriculture (mostly ranching), health sciences (especially rural

health issues), and environmental issues. These are all strengths of TAMU.

[REDACTED] I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for Fluor Daniel and for Lockwood, Andrews & Newnam performing project controls. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls.

[REDACTED]

How unfortunate that there was only ONE mention of Alumni (Former Student) in the SWOT recap...and sadly in the Weakness section lamenting that you only have data on typically the first job upon graduation. What should be a huge strength is not even noted as an Opportunity to leverage the Half Million powerful Aggies out there. Also only ONE brief mention of the Aggie Network in the section on Recruitment & Retention of Undergrad students...leveraging connections with... Though not sure how you do this without once again recognizing a Legacy Application process that has alienated soooo many Aggies when their kids are passed aside in what seems to be an all consuming quest for DEI. You cast us aside when we are 20 years into our careers and wealth accumulation, really bad timing on your part. Good luck

Hi there, As a former student, (Class of '18) and a current broadcast journalist at KETV in Omaha, Nebraska, I would implore you consider making journalism its own degree and create a focus in broadcast journalism. We need more Aggies in our field. We need the intelligence and integrity that Aggies bring to the table. We need better writing, more curiosity and much more diversity in all facets of journalism. Journalists are more important than ever before. We're delivering vital information to our viewers and readers, despite the immense scrutiny we face. We need strong-minded people who can ask hard questions and deliver good product every single day. I would not be where I am without my

degree in Communication and Minor in Journalism from the best school in the world. But, I still had a major learning curve getting into broadcast from a school that does not offer any broadcast journalism courses. We could be the leader in this industry, just like we are in nearly every other industry. Again, please consider adding the journalism degree back to academics at Texas A&M University. [REDACTED]

Hardly seen by most students. They either hide or make themselves unavailable to the pawns. If you don't have accurate information from the bottom, how can you run an effective college ?

Good idea to not have conflicting goals for the Provost Office, which is addressed in the report.

Good approach to de-cluttering Provost Office and reorienting it to it's primary purpose.

Good

Giving to much authority to president

Get rid of the DEI. Period. One of the hallmarks of A&M is individual success... Fred McClure, a black student body president, when A&M was virtually all white. Henry Cisneros, a Hispanic Corps of Cadets leader. Will Hurd, a mixed race gentleman who was student body president and then US Representative. The list of successes goes on and on. The DEI efforts are meant to appease the liberals in this country. Aggies can do it on their own.

Generally, these recommendations seem to be thoughtful and worthy of implementation toward the goals of efficiency, effectiveness and gaining the necessary state of an effective "chain of responsibility" through unity and purpose and effort which, as the report points out is missing at TAMU!

From the report it does appear this office is over "burdened" and in need of reorganization as recommended.

From the outside, the last two provosts seemed ineffective with too much power concentrated in that office. Recommendations as to returning that position to academic excellence sound positive.

From my limited perspective, our university seems to be run well with a bright future. Please keep what makes Texas A&M great (Traditions: Corps, Values, etc.) intact.

Follow our Core Values and preserve A&M traditions and history from 1876 to today.

Focusing the mission of the Provost's Office appears to be a good idea.

Finding #2: According to the Office of Undergraduate Studies at TAMU, students often change majors. Comment - Students change majors - that's nothing new. So the student has to do a little work to accomplish that....that's probably a good thing. The goal of Texas A&M administration should not be to create a generation of "professional students" who change majors every semester and never reach that elusive degree. People are better off spending as little time as possible at institutions of higher learning these days.... Preparing students for careers in the real world -- that should be the goal.

Finding #2, Recommendation #2 (pages 14-15 of October 19, 2021 MGT Final Report). I find the idea of centralized advising as being unworkable and not in the best interests of students. As a former student, faculty member, Department Head and Associate Head for Undergraduate Programs (in the Aerospace Engineering Department), my experience tells me that students are best served when advising is as close to the home department as possible. Staff located in the home department (or at least in the college) know the curriculum the best and are best suited to advise students accurately and with knowledge of pre-requisites, current offerings, nuisances of the curriculum, and so forth. As an accreditation volunteer in ABET, I visited over twenty-five Aerospace Engineering programs and my observation was that advising located in the home department was by far the best and tended to deteriorate as advising became centralized. Centralization of undergraduate advising would be a huge mistake for TAMU.

Finding #2 Concerning Changing Majors. Recommendation #2 Centralize undergraduate academic advising. I see an important need to refine the system of students changing majors. The difficulty I see in a centralized undergrad academic advisor is the fact that some advisors may not be as invested or as aware of differences in one major over another. Example in the system as it is each college has advisors for those students involved. They have a vested interest and in many cases have walked out the process personally. That personal knowledge of class combinations can be invaluable to students. Decentralizing may end up with a former business major trying to help a student in CIED (if that is still what it is called). Does the system need to change? I totally agree. I believe that a whole department dedicated to

student advising would in many ways dehumanize each student. For incoming freshmen it absolutely could work. For Sophomores / Juniors or above wrestling with these choices, someone who has navigated the same system may be more valuable. Simplify the steps to change major. 1. Email your advisor. 2. Email advising office for major you wish to change to. Let the advisors make the changes. 3. New advisor reports to student. Thank you for the opportunity to respond. All other areas I read seemed like very reasonable changes to our system.

---

Extreme systemic dysfunction. Lack of focus on the student and the end-customer who hires the student. No customer focus on building a quality product (student). Student experience, curriculum, and preparedness for the real world has become robotic, cold, and detrimental to the student and A&M image. Extremely poor placement services.

---

Don't take good jobs and pensions from the citizens of College Station.

---

Don't remove the Aggie Honor System Office to Student Affairs.

---

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

---

Do not agree with centralizing undergraduate advising. There are already enough issues with incorrect advice given to students within one college; I can't see this getting better if all advisors have to support all colleges.

---

Diversity is important but not surface level diversity. True diversity is deeper than appearance. TAMU does not need to change to adapt to who people are. People want to be part of TAMU because it stands for something and that makes it unique. It should continue to be what has made it so great for so long, not strive to alter it's identity solely for the purpose of appealing to more people. Suggesting that it's not diverse enough and therefore should change is an insult to people not associated with TAMU currently because it suggests they don't have the complexity to be part of a great place as it currently exists. As an educator, I see this all the time. Adjust the standards when people don't meet them. I don't like it at all. People of all colors, faiths, and socio-economic backgrounds can be successful and are welcome at the TAMU I know and love. People from outside may look at the appearance (surface level) of people and assume that is not true, but the people who know and love our University know better.

---

Disagree with the finding that "As a land-grant institution, TAMU should prioritize meeting the needs of all Texans and therefore must concentrate on increasing recruitment, retention, and success of all students, but especially diverse students" (p10). TAMU may be a land-grant institution, but it is many other things as well (sea grant, space grant, tier 1 university, etc.). It is poor logic to make this assertion without dealing with the logical implications the statement. Further, it is unclear what being a land-grant institution (as opposed to not being one) has to do with "meeting the needs of all Texans" as a priority. I would argue that a priority must be on those students who are enrolled rather than those who might one day enroll. The idea that this is more true for diverse students seems unsupported. The idea of balancing the portfolio of the department makes sense (finding #1) as long as it is accompanied by a restructure of compensation to reflect lower job requirements. Agree on finding #2. Changing a degree shouldn't be so complex. In my time at A&M I actually faced departments who made changing difficult due to rivalry (engineering and business). There is no place for that behavior. Finding #3.... Finding #1 (although I disagree) that priority should be placed on meeting the needs of all Texans... Why prioritize McAllen, one of the more extreme locations in the state. And what does this elevation look like (TAMU Galveston level, or something else).

---

Construction science must remain with college of architecture. VIZA could move to new college of arts and sciences, but a program specifically for architectural visualization and rendering should be created in its place within the college of architecture.

---

Consider creation of a museum for historically significant but politically distracting statues / institutions to address conflicts over our culture, diversity, equity, and inclusion. Sully in a museum would satisfy this member of the Class of '69.

---

Congratulations on taking a very public and transparent step in engaging the consulting team to do this survey, and requesting feedback from so many. It is time to run the university like a structured business, and this is a great first step.

---

Concur that the provost needs to be streamlined. My son had an issue this year and had conflicting guidance from counselors, the provost, and others on how to resolve the issue. Cost him his Army OBC date, now unemployed (ish) until a new one is done.

---

Clearly, the issue is management of success. A&M's unprecedented growth has provided new challenges for the entire administrative structure at A&M. Change is often difficult and entrenched 'culture' can take considerable time to transform to a more efficient system. Only when those in leadership roles take the initiative and the "risks" in meeting

the challenges will true, sustainable and transformational change be accomplished.

---

Change may be needed, but that change should be based by what works and is required for TAMU.

---

Centralizing undergraduate academic advising may provide a good opportunity to eliminate redundancy and waste, but I'm concerned it might also make it difficult for students to get access to the academic advising they need or desire. It's my understanding that current students already have issues with access to advisors. Centralizing advising may worsen that bottleneck.

---

Centralizing undergraduate academic advising is a horrible idea. The College of Engineering did this my freshman year, and the advisors end up having very little knowledge of the specifics of each individual program.

---

Centralizing the presidential powers is great as long as there are checks and balances to micro-management, oversight, and over stepping.

---

Centralizing student advising not a good idea. Undergraduates need to have specialized academic advising by those who know their fields. This risks watering down the expertise.

---

Centralizing and streamlining under the provosts office makes sense if you have the right person at the helm. A good number of tasks and departments can be handed off to others so the Provost can concentrate on student success.

---

Hiring a former student / an Aggie is probably the most critical decision you can make. Can we stop hiring people we train, they do damage to our university and then they run off to another school. Hiring someone who is dedicated to TAMU and understands what it means to be an Aggie is a MUST.

---

Centralizing academic recommendation number two it's based on a lot of assumptions. Centralization of academic advising would cause a lot of disruption in departments all around campus. Each department has a different way of running their advising and obviously not everyone has a clear method to their advising but it doesn't mean that there are departments that don't have a well run advising team. Having a centralized advising team would not benefit students in the long run because the relationships with advisors would not be as strong as the ones that they have now with their current ones. Some departments don't even require other advisors to meet with students every semester and obviously those kinds of relationships are not built because of that. On the other hand we have departments that go above and beyond to meet with their students every semester to make sure that they are on track to graduation and to make sure they are doing well overall, outside of academics. Many of the references to successful centralized academic advising that are made throughout this report are from universities that have students with enrollment incomparable to our university of 70,000+ students. In addition things from many years ago that aren't as current as they should be. We need to be unique in our university as we claim and not go with what other universities do because we can't be compared to them because of our size and just the unique A&M experience. I will refer to some of our core values at Texas A&M, first excellence as I quote Dr. Robert Gates "Excellence stems from a great sense of pride in who we are and what we believe in." Leadership another core value. If we are being asked to provide feedback in a limited time window with not a lot of information as to what will happen next it doesn't show the character of an Aggie as a leader. If we want to be acknowledged as one of the best universities it has to start with students, faculty and staff the CORE of the university. These are the people that will be affected the most and they have the right to speak up about their feelings.

---

Centralizing academic advising is a wonderful objective.

---

Centralized undergrad advising: Over-centralizing this service may hurt a student's search for the right academic direction. I would hope the advisory service would become a clearinghouse for the opportunities that A&M offers with points of contact in the varying academic programs so students can meet one-on-one with an advisor from each department prior to making their decision. A one-size-fits-all approach would be detrimental.

---

Centralize undergraduate academic advising - As long as the students are able to easily access an advisor, this would be fine. If this change adds a layer of people that stops the student from getting the advisory they need, then this should not happen and it should be left as is to each department advisory. My daughter Class '23 needed to change majors early in her Freshman year and then needed her advisor for academic planning in her Psychology major. She was able to easily get assistance. Again, if this move creates another layer of people students have to go through, it could deter the students or make them give up trying to get through the "red tape".

---

Centralization vs Decentralization. The neo-socialist and classic Marxist philosophy of centralization has proven time and again is flawed. I can understand a new President (while a ten year employee) Ms. Banks is not an Aggie. She is a student of Purdue and NC Chapel Hill however her academics and understanding of A&M, is former students and

traditions/expectations is not Texas A&M. Being a check cashing employee does not provide her our insight. In the Regents insight (all are political appointees of current and past governors) many too are not Aggies. As our University Presidents come and go, centralizing operations while it may "improve" centralized planning it will not necessarily improve innovations and implementation. A&M's strength has been in its individuals and loyalties. My conclusion: allow the tried and true to work. Forget cliches such as efficiencies in planning. As far as demographics of Texas and student body. Equity and equality does not exist in real life. The strong survive and prosper. The weak fall back. The provost office has no duty to recruit "like Texas". Every individual has the opportunity to apply to whatever University, College or Trade School they desire. As A&M our traditions and success are paramount. We accept those who carry our thoughts and desires and wish to be a part of them. I read the Provost Office seeks the "inclusion" of a traditional liberal. Perhaps it is time we refocus the Provost Office to what is best for success and not so much on watering down that they seek to be mediocre. Regarding organization chart. The Provost should focus on understanding the missions of Dean, the community it serves, Student needs and contracts to fulfill. The Dean is far better in understanding the needs of the Community it serves. Centralized planning has never worked: neither in academic theory or real life. Looking at the Provost, there are a lot of heads crying out for early retirement and layoff.

Centralization is good on paper, but being the first or second largest University in the country this doesn't seem like the best idea. Our individual colleges are already larger than many of the Universities we were compared to. Each group should be trusted to run their own affairs.

Based on the organization chart comparison, it does seem like the size and the scope of the office is far too large to be effective when compared to other institutions or even private enterprises. Given the sheer size of Texas A&M, it would make logical sense to separate out departments and duties as recommended.

As the business world must periodically review their operational structure, so too should public service organizations such as universities to see if departments need to be reorganized as responsibilities and challenges change. If the students can be better served and the efficiency of the Office improved, the proposed suggestions should be implemented. Regarding students changing majors, consider having students wanting to change majors to take an interest survey comparing their talents and areas of curiosity with individuals who are currently employed in those fields and happy with their work.

As a member of the Texas A&M University Press Advancement board (which for years was overseen by the Provost Office), I have witnessed continued turnover of Provosts and I have witnessed an unwieldy administrative load on the Provost staff. I agree with the study's recommendations.

As a former student, but a professor at another university, I would not like Faculty Affairs to be separated from the Provost Office. Academic Affairs should oversee all aspects of the faculty since their entire fate is in the hands of this administrative unit. It appears that there is a desire to strip power from the Provost based on past issues, but take care that the decision to reorganize is not based on a person rather than on organizational issues.

As a former student, I don't feel qualified to discuss the organizational structure of this, or any other, office. I can say that A&M is a HUGE university and my son, who was enrolled in 2016, got lost in that hugeness. He tried several times to change majors and ultimately left the university even though his grades were fine. He just felt unsuccessful in his attempts to navigate the opaque and confusing processes that were required to find his place at A&M. Perhaps I should have been more of a helicopter mom, but if this office is supposed to help students be successful, I can tell you that they were not there for my son.

As a former student who has been away from the University for a long time, I do not pretend to understand the complexities of the Provost Office. However, I do know that as organizations grow, change is needed to accommodate that growth in order to maximize efficiencies. The report seems to make recommendations that do this.

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of

how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts.

As a Hispanic, Mexican American, first-generation college student, I can tell you that we are a very prideful people. We do not want to be coddled. Challenge minorities to rise to the occasion, but do not treat us like we are stupid or that something is wrong with us. Show up where we live, visit our homes and communities, but do not lower the bar for us. Do these things and you will see admissions from Hispanics (and hopefully other minorities too) climb through the roof. Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

Architecture is a team profession you're taking away a lot of our required team i.e. construction

Appreciate Mark, and now Tim, and the staff.

Although I agree with all findings, I can relate the most to finding number 2. I changed my major twice while at Texas A&M, and it was not a smooth transition. It is a large ask of an 18 year old to know what they want to do with their life!

All recommendations seem logical and would benefit the university

All of these recommendations seemed good to me. Much easier to understand the organization.

Align and define your mission, vision and goals. Industries in the state of Texas should help drive these.

Agree. Provost's responsibility should be solely academic life of the university.

Agree with the report findings; the function of the Provost Office have expanded too much and become cumbersome. These need to be streamlined and refocused as the report suggests.

Agree with the recommendations from the report

Agree with recommendations.

Agree with recommendations

Agree with most recommendations

Agree with assessment, too large to accomplish missions.

Agree that focus should be on academics

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

Academic advising needs a lot of help. Some colleges are doing an amazing job while others are struggling to meet the needs of students. Taking away the positives from those colleges doing well seems unfair. Why not simply take those best practices and put them in play across campus. I want advice from someone who has a real working knowledge of my degree program, not someone who has basic knowledge of the university by no specific knowledge about my degree. TAMU is too large to even think that any human being can have detailed knowledge, and therefore be able to properly advise students in specific areas. Streamlining the way in which students change majors is a good move, but destroying currently thriving advising departments is ridiculous!

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

1. Centralizing of advisors will make it HARDER on students, not easier. Already, with the asinine 25k by 2025 Engineering goal, Engineering students rarely get meaningful help or feedback from advisors. This already results in too many students needing the same prereqs at approximately the same time, and with a lack of engineering counselors already, even getting forces and/or more sections opened is very rare. I don't think administration or overpaid consultants truly appreciate how frustrated current students and parents of students in the College of Engineering are with overcrowded, understaffed, and underserved experience.

"The demographics of student enrollment at TAMU do not currently mirror the demographics of the State of Texas." What does the demographics of the entire state of Texas have to do with university student enrollment? A better demographic measure of the student enrollment is to measure the demographics of the eligible high school graduates in the state. The university is dependent on the performance of all the high schools in the state and that varies considerably. The university can only work with the available high school graduate pool. "prioritize meeting the needs of all Texans" - TAMU needs to prioritize meeting the needs of the employers in the state. Employers need competent graduates who can contribute to growing their businesses.

"The demographics of student enrollment at TAMU do not currently mirror the demographics of the State of Texas. As a land-grant institution, TAMU should prioritize meeting the needs of all Texans and therefore must concentrate on increasing recruitment, retention, and success of all students, but especially diverse students." This does NOT matter, the most qualified students should be accepted; nothing else matters.

"Large portions of the interview and survey audiences were conflicted about the university's culture and diversity, equity, and inclusion (DEI) efforts." I am more than conflicted with DEI. I find DEI to be a secular creed hostile to traditional creeds and beliefs. While DEI sounds appealing, DEI efforts undermine the educational function of the school creating a campus climate antagonistic to education.

## Provost Office - Other

Please provide your comments related to the Provost Office:

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

n/c

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

You should completely abolish the Provost office. I've never seen anything positive come from them. They have absolutely no clue whatsoever what they're doing when it comes to IT issues and are generally worthless in their other areas as well.

You have got to be kidding! This is a stupid move to combine geosciences and sciences with liberal arts. What's the true motivation behind this?

Very nice recommendations to enhance the effectiveness of the Office of the Provost. Focusing the Provost as the academic leader of the university bring clarity to the roles and responsibilities. I really like the focus on student success and that can be carried through to the colleges, Deans and our academic student success centers. Second, student success is elevated across faculty and staff. I always communicate to our faculty and staff that our students are the most important people on this campus!! Without our students, we would not exist.

Very encouraged regarding the recent change in that department...a positive move

The training that Money Education provides is crucial to the future financial success of your students and making face-to-face meetings more possible is critical. Please consider adopting the recommendations on page 41 of the report.

The report mentions that the student body does not match up with the demographic makeup of Texas. I would ask if this is significant. Does the university want to make up numbers just for numbers sake or to bring in the best of talent of students who want to be at TAMU.

The process for a student to change majors is WAY TOO COMPLICATED. It must be made simple and it should not discourage a student from doing so. It is rare for a student to enter the university as a freshman and have their entire collegiate career mapped out.

The plan to centralize undergraduate academic advising is very much needed. As a parent of a current student, I read about the vastly different experiences students are having depending upon their major. My student has been dealing with BIMS advising. It has been a very disappointing experience.

The Provost's Office has become a large unresponsive bureaucracy. Restructuring is highly recommended so that primarily deals with academic issues and not operational issues.

Rutgers Meteor is ranked #29. MGT is suggesting that our #2 program follow a #29 lead??? IF you move Meteorology it should be in College of Engineering, as the degree requires massive amount of engineering courses. And many other STRONG, highly ranked and respected Meteor programs are College of Engineering Programs.

Related to the recommendation to centralize undergraduate academic advising: My sophomore cadet has had a frustrating and confusing experience in an attempt to talk to academic advisers to talk about the direction of his course plan. In one case, one adviser told him one thing and referred him to someone else, who told him something different. And an attempt to schedule an in-person appointment with an adviser in an attempt to clarify the steps he needed to take was met with resistance, with the person saying she was too busy to meet with him and he should just email his questions. I'm not sure if "centralizing" advising would help in this case, but something needs to be addressed so that your students' concerns are given priority and in-person meeting requests aren't rejected outright. His experience alone seems to indicate incompetence and apathy on the part of the university to which I'm sending a large sum of money each semester. That should be unacceptable.

Proud of themselves, unnecessary instances of overreach. This is c/w the leadership of the board.

Pick a few strategic initiatives and keep focus on application of differential resources to move the dial on these.

PLEASE PLEASE PLEASE keep the advisors within the specific colleges. Let them be subject matter experts. That is what the students rely on. Being department specific also allows them to build relationships with the students. In a school as large as A&M, the major and college specific advisors is critical to make it feel personal. I believe it would be a huge mistake to centralize the advising. I think it will make students feel like a number instead of a person and keep advisors from being able to be as effective.

On the recommendation to centralize undergraduate advising, I see both pros and cons. There are obvious benefits to having advisors who are well versed in many programs give consistent advice, and follow the same procedures. However, advisors are intricately connected to the departments they support, including the staff, faculty, and department heads there. Separating advisors from departments would still require strong and structured relationships with the department. Additionally, if all advising were located in the same building (or in a few buildings), this would likely disincentive students from stopping by advisors casually or on their way to class which would definitely make the

advising experience worse. Also my experience with student services makes me think that students will miss advising appointments more, even if they are required, which will lead to additional flags and hurdles for students retention. In conclusion, I think the necessary adjustments to create a cohesive campus-wide advising system can probably be achieved without centralizing all undergraduate advising, and a the proposal to centralize advising does not address the necessary and complex advisor-department/college relationships that must be maintained and would need to be formalized in the new model.

---

Office of Diversity - Moving the Vice Provost for Diversity under a new Vice President for Academic and Strategic Collaborations is a step back in the diversity efforts that this campus is making. The Vice Provost for Diversity should be a higher-level position that helps enforce the importance it has on this campus and in turn aid in the recruitment of more diverse students, staff, and faculty. University Libraries - The University Libraries is an interdisciplinary, academic college that should remain under the Provost Office. More on this in the Academic Realignment section.

My last assignment as a TAMU employee was in the Academic Affairs Business Services (AABS) Office, Division of Academic Affairs under the Executive VP and Provost. Karan Watson was the VP. I was forced to move from Information Technology to this division due to the decentralization of Information Technology . This ultimately led to my retirement earlier than planned. I was a PhD, Leadership Trainer and Developer under Dr. Pete Marchbanks, and was effective in developing IT supervisors as well as the VP, Dr. Pierce Cantrell and his directors. More on this topic will be found in the Information Technology section below. The Division of Academic Affairs didn't know what to do with me (even though they could have used extensive leadership development at all levels of leadership). It seemed to me that Dr. Watson's biggest devotion was to Diversity and Inclusion. As a married gay woman, this focus seemed quite biased, and she was married to another trainer and developer who got her more than fair share of "business" in the division. People in her division were largely fearful of her, in my opinion, as she was so strongly focused on the Diversity and Inclusion mission. No one dared voice their true feelings about the subject if they opposed it. One of the jobs I was handed was as the AABS representative to the Diversity and Inclusion Committee that reported to the division committee. This was a mission that I was not happy with, as what it represented was contrary to my religious convictions. I had been a member of AABS for about eight or nine months, and asked my supervisor if I might be removed from that assignment. She got the director's approval to reassign me from that role. Approximately one or two months later, my position was written out of the division's organization without warning. AABS didn't know what to do with me from the very first day, and I was informed that they weren't used to paying people what I was paid. Even though I was promised a leadership training and development role (I had designed a program and plan for the role), I was never allowed to implement it. My last impression of this division was that their major focus was on Diversity and Inclusion to the detriment of the other missions. Of course, Dr. Watson was later fired from her VP and Provost position. My impression of that division was very negative afterwards. Had IT not been de-centralized, this situation would have never occurred. (see comments regarding IT in the IT section below) One final comment: In IT, I had the VP's permission to speak on his behalf to his directors. He trusted me that much. In the Division of Academic Affairs, I wasn't even allowed to speak with directors without the AABS director's ok.

---

Libraries should remain under the Provost's Office since the Libraries are integral to academic success and access to study materials.

---

It looks like the Provost Office is being greatly reduced. Some changes make sense (removing IT, etc). Others do not (Faculty supervision). Either the Provost is the head of academic affairs or they are not. If they're not, do away with having a provost. Centralization of advising is a stupid idea. Sure, it will be easy to transfer, but at what cost? The advisors probably won't know the students that they are advising (too many students per advisor), nor will they probably know the programs well enough to make meaningful suggestions to students.

---

It is our position as the Landscape Architecture Professional Advisory Board that the proposed Academic Realignment would weaken the College Of Architecture rather than strengthen it. The departments of Construction Science and Visualization are integral with the colleges and professions of Architecture and Landscape Architecture, Urban Planning

and Interior Design. The synergy and support that each department gives the other is not readily understood by the outsider but is evident to the students and professionals of our respective trades. We ask that a deeper understanding of this connection be sought out by the University and its consultants before moving on any recommendation.

It is certainly true that the Provost's Office seems to have been involved with too many peripheral functions, so reducing their activities to concentrate on academics is, in general, a good idea. I am not thrilled, however, with the idea of removing the Dean of Faculties and the associated workload, since it is the faculty that are the main contributors to the academic success of the university. See my additional comments below.

I've always felt the Provost Office was bloated. And I know exactly why. Now that there's new leadership, maybe that will change.

I'm not 100% sure where the comment belongs, but I'm disappointed the report did not address systemic racism, especially prevalent in the Corps, as well as the fact that this is 2021 and the ENTIRE military is gender-integrated, but the Corps of Cadets continues to have all-male units. What does this teach these students? That it is OK to exclude half our population? That it is OK to embrace male supremacy? Something else? This absolutely needs to stop along with the racism. Come on man, let's get your act together and address these issues.

I think centralizing undergraduate advising could be detrimental to the success of undergraduate students and departments alike. For students, this centralization moves them away from specialized advising that is founded in the field that they are exploring. For departments, this could be a barrier to successful advising of students as well as exposure for smaller departments. Instead, incoming students and undeclared students should have general (or centralized) advising to help them explore career and academic paths. Once declared their advisor should change to someone that is within the department or college.

I really like the idea of an overarching organizational chart for the entire university that is located in one place online. This would give a better understanding of how everything fits together instead of having to research every college/department individually and not seeing how they tie back to the main campus branch

I am writing in regards of the transition on construction science to engineering. This is not right at all. How are you going to change my daughters and other students Career in the middle of their education. A&M had construction as engineering and it failed. Construction is ranked in country and you guys want to move it? This is unexplainable. This is my child's career and other Aggies that you guys are messing with. I unapproved of this. If you guys want to make engineering better find another way. If y'all want Construction Science to be better then help them and give them the funds. Why mess with an amazing career like that when it has been very successful in the college of architecture. My daughter has been dreaming about this for a long time and you all going to mess it up for her and all the Aggies that has the same dream as her. This is unacceptable.

I am new to Texas and applied for many jobs at Texas A&M and yet I only got called for one job, and it was required for degree and or experience. The man on the phone I don't think ever reviewed my experience. And called to tell me HR said I had no experience or degree. He seemed determined that his call was to tell me why I could not be hired. Was it my race? Or my last name? I have experience? I felt he dodged any future questions on hiring minorities for this job. I'm disappointed in what I clearly found he was just hiring who he wanted to hire.

I am concerned with the lack of advisory staff. My student signed up for advise on virtual visit and 2 minutes of the advisor's time.

I am concerned about the recommendation to centralize undergraduate academic advising because it is very difficult already for motivated students to find helpful advice. Academic advising focuses on moving students through requirements on the easiest path possible. While some students may be looking for that path, students who crave academic challenge are underserved. I fear that further centralization will result in even more generic advice and fail to provide good service to the highest achieving students. My freshman attended an honors advising session in the engineering college at NSC. Even within that "specialized" session, he found the advice unhelpful. Students were uniformly advised to repeat math and science classes rather than accept AP credits and move on to more advanced studies. Students were advised to limit their course loads to 12 hours. He went against that advice, took more accelerated math, is carrying 16 hours, and has excelled. He is frustrated that his schedule is not more challenging and plans 19 hours in the spring. His required advising session for spring was equally unhelpful to him. His advisor questioned why anyone would want more challenging classes. He has sought out advice from professors and visited departmental advisors to attempt to find better advice with some success. I can only hope that he will find more connections with other motivated students and engaged professors as he moves into his second semester at TAMU.

I agree with the premise of transferring out of the Provost Office those superfluous units/responsibilities that have little or no relevance to the core purpose of the chief academic officer.

---

I agree with the findings to streamline the Provost Office. This will allow the Provost Office to focus on faculty affairs. However, I encourage the Provost and faculty to find ways to stay informed with student affairs.

---

I agree that the main focus should be on academics. Students deserve a better experience with academic advisement, in other words advisors should be well informed on degree plans and they should provide better availability to the students.

---

Growth has been prioritized over a quality educational experience. The students do not seem to be valued except for the tuition they bring in. I love my school, but things are much worse since the strategic plan to be gigantic started.

---

Get rid of the yell leaders. They are creepy.

---

Dr. Tim Scott is VERY thorough as well as his staff which were a needed avenue for my struggling student which had run into many brick walls upon reaching out to others.

---

Based on the review conducted it would be beneficial to remove many of the current areas of oversight out of the Provost office as they are not directly supporting academic or academic success. I agree with the evaluation and suggestions made.

---

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

---

As a professional academic advisor, I have seen various methods of how advising can be conducted across campuses. I think a certain level of centralization is helpful and necessary, but I also think there is great value in departmental advising that is flexible to meet the needs of the various programs and students. I think the recommendations given in the report were too restrictive, and something in between the current process and the recommended structure would be best. I worked with the Blinn TEAM program for 2+ years and found the Change of Major process at TAMU to be horribly organized. The deadlines are different across campus (even though they have supposedly been aligned recently -- in reality they have not been). Getting a process like that standardized would do a great deal for students and help them not need to go to so many offices to change their major. I also do not think it is a bad idea to possibly implement a freshman/decided/deciding majors advising center that students can participate in for their first year (similar to how general engineering is set up, but for all majors). More research needs to be done about when students primarily switch majors and focus on those timeframes and how to meet those students' needs. The TAP office could be expanded to meet this need for first year students.

---

As a parent of a freshman in honors engineering, we had no concerns for our son's ability to handle the coursework at TAMU. What we did not expect was the amount of pressure these students feel to get perfect grades in order to get into their desired major. We were also unprepared for the challenges engineering students have in getting into classes, finding a place to study in the engineering buildings, and scheduling advising appointments. It is frustrating to hear TAMU talk about accepting more engineering students to meet a 25,000 student goal, given the lack of availability of resources for existing students. Providing a sound education for existing students should be the priority. TAMU has tremendous academic resources but the accessibility is poor. The excessive number of students even makes it difficult for many students to join a club. There is a major crowding issue on the College Station campus that seems to be impacting the educational process and resulting in a dwindling percentage of students who can graduate in 4 years (60%). Student population growth may need to be halted until this can be addressed. I would like to see an urgent care model in student health services on campus, given the lack of resources available in the BCS community for this very large campus. Students with chronic conditions can plan ahead and likely would do best having an off campus physician but students who are suddenly ill need to be assisted in getting quick care - for their own benefit but also to help prevent a widespread outbreak of a contagious illness on the country's largest public university campus. At this time, students who are ill may be unable to get themselves to an off campus clinic or ER and prevention of illness spread is critical in a dense living community. I really hope that TAMU has an emergency plan for medical care, should there be a catastrophic event because the system is already overtaxed and no one wants to be the one who can't get life saving measures when and if they are needed. During a pandemic, I am happy to know that online learning options (recorded classes) are available should my child become ill or if the threat level increases. However, outside of a pandemic, I do

---

not like the idea of online only classes. I was surprised to find out that my son will have two online-only classes next semester.

---

Agree. The Provost's Office has been a dumping ground. Many of those operations should be cancelled. We need to ask: Why do we need this item? How much money could we save by deleting many of these activities?

---

Agree with the changes. Much needed. Some external optics - Every email I receive that shows new leadership appointments of all white older men I cringe. It is now a running joke in my family, which includes two daughters that are current engineering students.

---

Agree with recommendation 1. Do not agree with rec 2. Agree with rec 3.

---

A huge reason students choose A&M is for its traditions. It saddened me to see traditions mentioned as a negative. Students have choice, and if they don't want to participate and respect the traditions of the university then maybe another school should be their choice. Everyone is welcome and welcome to partake or not in the traditions, however traditions shouldn't be change in order to try and appease all groups involved. Please don't fall victim to the current climate in this country and attempt to change what has been part of this institution since it's conception.

---

Reorganizing the Provost's office could be a good idea, providing the workload of other units aren't dramatically increased. In the near future Banks will be calling the shots and weakening the provost is one way to gain more or less total control.

---

Among the list of units to be moved to the VP for Academic and Strategic Initiatives is Diversity & Inclusion. However, the proposed organizational chart does not show a Diversity & Inclusion Office, but it does include a VP for Diversity. Yet there are no units reporting to the VPD which raises multiple questions about continuity for some of the the Office for Diversity's current functions that do not seem to be accounted for in the proposed unit reorganization. For example, under this reorganization, what will happen to the President's Council on Climate and Diversity and the funding support it provides based on its evaluation of each college's annual Diversity Plan Accountability Report? Since 2013, the Galveston campus' IDEA initiatives have turned almost entirely on the funding support provided through the PCCD's evaluations. What unit(s) might sustain this work of holding colleges accountable for providing climate and equity initiatives? While the proposed and existing recruitment and retention offices (existing ADVANCE, proposed Faculty Recruitment and Retention for faculty and the proposed Emerging HSI office for students) obviously address recruitment and retention, climate and equity provide the foundation for success in both. What will be the accountability mechanism for climate and equity within the proposed structure? Would this fall under the VP for Diversity's responsibilities? The proposed structure is an unusual one in comparison to TAMU's peer institutions.

## Q45 - Please provide your comments related to Faculty Affairs:

### Faculty Affairs - Faculty

Please provide your comments related to Faculty Affairs:

The intention might have been to elevate faculty concerns, but faculty members I've spoken with see the proposed change as an effort to limit their concern. They see it as a deterrent. Everything we say from the President to the Vice-President, and faculty will be worried about retribution. The faculty need an independent Dean of Faculties and Vice-Provost. In the past ten-12 years, that office has been nothing but a Vice-Provost. The Provosts, in other words, captured the DOF. Faculty need and deserve an advocate who is not in the President's cabinet.

No opinion.

no special input

Rationale 1 for creation of a new VP of Faculty Affairs position relates to "much needed infrastructure to better support faculty appointments and tenure and overseeing workflows and committees." How will potential changes to the infrastructure impact the professional schools who have college-based Faculty Affairs offices coordinating with the main TAMU DOF? What impact will the focus on faculty pipeline strategies/outreach, for example, have on affiliate (non-university employed) clinical faculty who hold appointments within the College of Medicine? Affiliate clinical faculty with appointments in the COM are valued members teaching our learners in undergraduate medical and graduate medical education. It would be helpful to have a faculty member (maybe starting in an ad hoc position) who is familiar with affiliate clinical faculty issues to be involved in the discussions of potential changes in the faculty affairs infrastructure. While affiliate faculty will not have any say on issues related to TAMU-employed faculty, at least knowing the policies/procedures that would enhance university-employed faculty appointments/promotions/retention, etc. could help in refining and/or streamlining similar offerings and resources for affiliate clinical faculty who hold an academic affiliation with Texas A&M. Such knowledge could lead to an exchange of learning about the needs of affiliate clinical faculty (both unique and in common with university-employed faculty) with members of TAMU outside of the COM.

None

This section is incredibly short and unable to be evaluated fully. I appreciate the focus on retention and on addressing racial representation among the faculty. But there is no evidence in this section that shows this realignment will be successful to those stated goals. In fact, the emphasis on faculty of color is not represented in the organization chart, which is lacking a diversity office/coordinator/officer. Most research on institutions shows that without an empowered position such as that, diversity initiatives will fail.

Curriculum still belongs to the faculty. The value of the APT faculty must be kept toward the success of our University for academic integrity and excellence of our students

Someone who oversees faculty retention and Recruitment and oversees the tenure process seems like a good idea.

While it sounds good to have something like the Dean of Faculties functions higher up in the President's "Cabinet" the reality is DoFs usually come from the faculty and have much institutional memory. I would propose that DoF be chosen directly by the Faculty and would be democratically empowered to be an advocate for faculty and not have to balance the boundary between administrator and faculty as they address sensitive issues.

Moving the Department of Visualization to the new School of Visual and Performing Arts makes sense.

I worry about the loss of shared governance and feel that it is critical to allow faculty to continue having a say in the operations of the university.

Again, eliminating the Dean of Faculties appears to be the nail in the coffin of any shred of faculty governance. Creating a senior administrative position adds more administrative bloat and eliminates faculty voices.

I worry about the myriad ways in which this report consolidates power in the President's office at the expense of faculty governance. I believe that faculty governance and the academic freedom it helps ensure are the lifeblood of a public university. Without those things as guiding principles, I have a hard time seeing how the university maintains some

degree of independence from political winds and produces knowledge accessible to all.

---

The report's critique the DOF offices was unnecessarily mean spirited. The DOF offices has worked tirelessly to support and educate faculty, especially APT faculty. I suggest the DOF, or faculty affairs, be located under the Office of the Provost. While agree that processes for tenure, hire and promotion could be streamlined, this is the nature of academia. If APT faculty are to garner respect, they must be positioned through mechanisms of shared governance. I am not unfamiliar with a more "corporate model" of employment --- and in some ways I would welcome that! Faculty should be promoted, retained, evaluated and rewarded based on equal foundations --- be it research, teaching and/or service. The emphasis on research has taken it's toll on teaching and service to the detriment of our students. At other institutions, such as University Kentucky, a faculty member can elect the percentile distribution of their effort in advance, and be evaluated on that effort. No faculty member should have 'step-down' from a tenured position simply because they are student focused and love teaching! The simple notion of 'stepping down to APT' creates a class-divide and affects climate. The CTE currently supports faculty with knowledge that is grounded in best practice. It should not be merged with IT or subsumed under student success. How the Faculty Senate elects its representatives is none of the President's Office business.

---

1. There are huge disparities in faculty salaries within departments (e.g., ECEN) which should be proactively addressed.
2. "Temporary" administrators like department heads receive an extra stipend which is supposed to end when they return to just a faculty role, but many times the salary bump continues, contrary to university policy.
3. It is vital that dual career support be provided to APT faculty candidates as well as as TTF: especially in engineering disciplines there are relatively few highly-qualified APT faculty candidates so they are very hard to hire, and dual career support can tip the balance. (The DoF office refused.)
4. Rather than mandating 50-50 APT-TTF Faculty Senate ratio, directly reward Faculty Senate service, e.g., with a 1-course reduction in teaching load. This will attract more TTF, who currently are often told by their departments to minimize university service and focus on research to gain tenure and promotion.

---

The report stated there is .."a lack of clear, proactive, faculty development". This seems to be shortsighted relative to the recent efforts in the Office of the Dean of Faculties and the CTE to promote faculty success through evidence based approaches to faculty development [redesigned New Faculty Orientation, redesigned New Academic Leader Orientation, new Transformational Teaching and Learning Conference, redesigned Roadmap (for pre-tenure faculty), new GPS (for APT faculty pursuing promotions), new Got Tenure, Now What? (pursuit of full professor), new Faculty Conversation Cafe, new Mid-Career Faculty Learning Community, new Academic Leadership Academy, new APT to Lead, new Faculty Mentor Academy, new Leading a Mentoring Culture, new IDEATE learning community and IDEALS learning lab (promoting scholarship of teaching and learning for faculty), new Presidential Transformational Teaching Grant, and redesigned Department Head Development Series] (\*note, "new" or "redesigned" refer to since the investment in a focus on faculty development in 2017). These programs are gaining momentum and are quite well received by the faculty. No doubt that an institution the size of TAMU can benefit from more and different forms of programs as well. But my feedback is that it would be a shame to lose this momentum, the work climate benefits, and the institution specific feedback incorporated across the development of these programs.

---

The Dean of Faculties should not be eliminated, but should remain as it is. This office is an unbiased resource for all faculty, and a vital point on information and guidance. To dissolve it is an indicator of the disenfranchisement of faculty. This may be of particular resonance for female faculty, or faculty of color.

---

I am extremely concerned about replacing the Dean of Faculties (and the surrounding structure) with a VP. A VP is not subject to the same appointment/replacement/review procedures as a Dean and instead reports directly to the president and serves at the pleasure of the president. In addition to removing the guarantee that the person in charge of faculty affairs is an academic, it also seems like this change will gut any semblance of shared governance that the university still has.

---

In connection with my role as senior associate dean of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

---

Concerned that so many of the places that have academic functions moving into an administrative window. Will there be discussion of how the roles and responsibilities of how these would be met in a new configuration.

---

In the last few years, I have been impressed by the range of faculty professional development offerings targeted at all tracks and ranks. I would hope that this trajectory (and attention to all tracks and ranks) will be continued.

What specific dissatisfaction with this current position gives it a supposed negative reputation on campus? This report does not give me enough to side one way or the other on this move.

Creation of VP for Faculty Affairs with budget authority is a good move. But we need to make sure that this new person plays well with Provost, VPR, VP for Diversity, and CFO.

It is unclear from the report what the responsibilities will be for the new Vice President of Faculty Affairs. It reads very much like the current Dean of Faculties. It is unclear who will be responsible for CAFRT and grievances.

We should keep DOF and strengthen it to protect faculty rights including APT faculty.

How will eliminating the Dean of Faculties position and moving its functions to the VP of Faculty Affairs affect the processes for promotion and tenure, and faculty development leave? Will these processes truly be more efficient and transparent? How will the VP for Faculty Affairs work with the Office of the Provost and the VP for Research?

Good idea, but I think should stay in the office of the provost or makes sure the provost office has inputs on the tenure and promotion matters. DEI efforts are more than just for faculty, it is students and staff as well. I think creating a VP for DEI would be better at showing the universities seriousness in DEI

☐ While it may be an admirable goal to elevate the dean of faculties position, many faculty do not see it that way. Since that position is deeply involved in the promotion process for all faculty, whether tenure track or academic professional track, faculty believe it should be closely aligned with the provost's office. To move it without clear guidance for how the promotion and grievance processes will be handled and to what degree the provost will be involved in those processes is problematic. Furthermore, faculty believe they should be involved in the search for the person to fill a position so critical to their well-being.

I have no faith/trust that a newly-created VP of Faculty Affairs will actually do anything to enhance faculty hiring, retention or promotion. It sounds like one more "good old boy" reward position vice one that will actively promote the faculty. Was the faculty ever polled on it (not just a select few, I mean the entire faculty body)? Will the faculty have any actual voice, or is this simply another fait accompli? Pretty sure I know the answer...

As long as the functions are moved there and not lost, it makes sense to me.

If you are trying to follow what peers are doing, then it does not make sense to move Faculty Affairs (however it is organized) into the president's office. First, this is not what our peers are doing. As far as I can tell, there is no such office in the president's office. They are all located within the provost's office. And that makes sense--this office is about academics and thus should be in the office that is the highest academic office. Second, moving the position into the president's office would make it a cabinet position and allow it to be a position solely appointed by the president. This would be a terrible move not only for the optics (optics still matter) but also for the implication that this position is not one that represents faculty. If there is an issue with how the office is currently operating, why not just state that rather than reorganize with extreme upheaval. Also... wow did you get some things wrong about what the DoF office does and does not do. And wow were those comments about the office uncalled for.

This concerns me since there is no SAP requiring involvement of the faculty in selection and retention of vice-presidents. Without that clarity, this move could be problematic and the faculty have no input.

The key feature of unit that reports directly to the President regarding faculty affairs is that the individual in charge must be a person that has come up through the faculty and achieved the rank Full Professor. They must also have some administrative background, but not necessarily a background of Department Head or Dean. Many times individuals in these positions lose touch with the faculty. Not a good thing.

On the face of it, this seems like a good idea. But, faculty affairs also needs to include research and not just HR/administrative matters.

See above.

See comments on Provost office above. Faculty affairs should remain under the provost, period. Having an untenured, presidentially appointable and fire-able person in charge of promotion and tenure and all manner of important faculty issues simply is not appropriate. Dean of Faculties office should be maintained as an arbiter and interpreter of university and system rules and an advocate for faculty. The report states that the 'reputation of this office (DOF) is not necessarily positive'. That's just a silly statement- made without evidence. Maybe this office has upset a few administrators by enforcing university rules in a pro-faculty way.

The MGT report fails to address the burning need of the university to address lack of diversity at Texas A&M. While efforts had improved to recruit and retain Latinx faculty, it has failed visibly to make similar progress for Black faculty, especially. The report acknowledges this. But recommendations will not remedy this. DEI should be a priority and its administrator should report directly to the President and Provost. Moreover, the report does not address the complexity of "diversity" nor reflect an intersectional understanding of diversity as related to race, gender, sexuality, class, and ability. The "programs" such as Africana Studies, LMAS, and WGST should receive greater support, including department-level status. These programs are intersectional and interdisciplinary. Compare to universities that inspire us, A&M has starved and marginalized those programs. Greater visibility and status for such programs will aid in recruiting and retaining the diverse faculty who will represent and serve our great Texas population.

I do not support the creation of the new V.P. for faculty affairs because as I state in my previous response, the new reporting structure creates vulnerabilities for faculty regarding tenure and promotion. The new S.A.P. 03.02.99.M0.02 making the rounds already consolidates way too much power for initiating changes in academic structures in the hands of the president. I believe that a direct report such as the V.P. for faculty affairs would further consolidate power in the President's office for faculty matters such as the ability to hire, grant tenure and promotion, and fire faculty as part of the President's new duties to "recommend organizational structures" and to "make changes in the academic structure" of the university. There needs to be a separation here.

More thought is needed to make sure this is the correct path forward.

Does the newly proposed Vice President of Faculty Affairs replace Dean of faculties? If so, I'm fine with that.

As a faculty member, I am very concerned about the elimination of a Dean of Faculties and the relocation of faculty affairs under the president's office. The Dean of Faculties has sometimes represented faculty even when in opposition to a university president. This consolidation of power robs faculty of that support and voice.

I worry that the Dean of Faculties position will lose some of its autonomy in representing the faculty if the change is made to a VP position.

Faculty related academic issues should not be centralized in the President's office. Faculty need to have a separate - faculty-led - set of processes to oversee tenure, hiring, promotion, and recognition.

If done right, this can be a welcome change, but it is important to have someone with an academic background as a Vice President, as opposed to someone with a career exclusively in administration. Otherwise, it will be hard for this change to garner trust from the very faculty this VP is supposed to work with. The current office of the dean of faculties degenerated in the last several years to an ineffective compliance checker, neglecting many cases of abuse and discrimination against faculty and failing to promote retention and diversity.

None

The Faculty Affairs Office provides a valuable and essential service to oversee the academic function of the University. While the President has the final decision, the President's office also has many other responsibilities both operational and strategic. This makes sense that academic matters reside in a separate office that has a certain level of autonomy. This is crucial in faculty matters including tenure / promotion, academic freedom and other issues of self-governance. The faculty are a critical stakeholder at the University and need an office responsive to our input and perspective.

I agree with this recommendation (pg 5): "Given the ever-changing landscape of expectations for teaching, research, and service, it is of particular importance to provide the faculty a platform through which they can voice concerns and engage in discourse with senior administration. The creation of a system that supports faculty development and recognition and the ability for them to provide more direct feedback to the institution is vital to faculty retention." To expand upon this, APT faculty are in a precarious position, and even moreso at Qatar, where there is no job security past one year. It affects job confidence, performance, and ability to be honest with the leadership when one's job can easily be non-renewed. Teaching contracts should be multi-year for stability, retention, and job satisfaction.

This has already been implemented

No matter what recommendations from the report are ultimately accepted and implemented, the protection and continued support of ACADEMIC FREEDOM for faculty, particularly those who do work that goes against the status quo or dominant narratives (e.g., critical race theory), is absolutely critical and something that must not be compromised.

faculty with its formal recognition of Academic Professional Track Faculty (APT) in 2009. Since that time, the consistent

messaging has been that we (tenured/tenure-track/non-tenured faculty) are all faculty but contribute to Texas A&M in different ways. Retaining a single Faculty Senate representative of all Faculty is in the spirit of this commitment. Having two separate Senates representing various factions of Faculty not only seems to violate the spirit of a single Faculty serving the university but would seem to only serve to weaken the voice of the Faculty as a whole. Comments in the MGT report over the need to ensure that the Faculty Senate is representative in terms of the general proportions of tenured/tenure-track and APT Faculty are valid. However, the Faculty Senate has been aware of the need to maintain this balance; in fact Faculty Senate Speakers have recently addressed the need for the Senate to remain a representative body. At present the proportion of these two groups in the Senate is generally-reflective of the Faculty as a whole.

I repeat my comments on elimination of the Dean of Faculties position here: Recommendation 1: I hate to see the Dean of Faculties Position go. A good Dean of Faculties can focus on faculty issues (tenure, promotion) and provide independent advice to faculty concerning how to deal with problematic Department Heads and Deans. I would be reluctant to take my concerns about a biased or bigoted Dean or Department Head to the Vice President of Faculty Affairs, who reports directly to the president. Fortunately - my college and department have a great leadership team. But if we had an alcoholic dean or department head (it has happened), our best option would be the Faculty Ombudsman - a person who has no influence over major decisions. Moving the Aggie Honor Council to Student Affairs takes the process of addressing plagiarism and cheating out of the hands of the faculty and the Academic Units, and reinforces student perception that faculty are equivalent to 'teaching staff'. Cheating and plagiarism have evolved and will continue to evolve as the internet evolves. Faculty may have to change the way we teach and assess students in order to preserve the quality of education at Texas A&M. For this to happen, the Aggie Honor Council should stay in the Faculty Affairs side of the University. That said, I think the Aggie Honor Council needs to be able to hire more staff - it's rather unfair to increase the size of the student body without increasing the size of the Aggie Honor Council and then criticize them because they can't handle cases quickly enough.

I find this deeply troubling. I will begin by saying that I have found the DOF office, especially that under Dr. Lupiani, to be very responsive and supportive of faculty. To remove the responsibilities currently carried out by the DOF yet another level away from the faculty whom they serve, raises many concerns. I'm afraid that this won't "elevate faculty" so much as it will distance from faculty those who have direct impact on some of the most significant aspects of faculty life. Also, will this new VP be chosen from among the faculty? Those who serve at this level in university systems are sometimes NOT faculty members who understand the research, teaching, and/or service that are faculty responsibilities. Furthermore, they may not understand the different faculty tracks (tenure stream, APT Faculty, either Adjective track or Lecturer).

None

None

The report was compiled with mostly alumni responses to the surveys and thus may not reflect what most faculty experience. I would recommend that the segment on faculty affairs be revisited with a targeted survey to all faculty prior to any actions being taken.

I recognize that there may be concerns on campus about the effectiveness of the office of the dean of faculties (I held that position from 2016-2019). Texas A&M is one of a handful of universities nationwide that has this unique office as part of its administrative structure and I would be disappointed to see it closed. The dean of faculties has two important roles, (1) to promulgate the academic expectations of the provost as they relate to faculty performance and behavior, and (2) to act as faculty advocate in many areas. I have spoken with many prospective faculty and administrators during their interviews and many have told me how the presence of a dean of faculties was a factor in their eventual decision to accept an offer from the university.

I totally agree with the statement "Realign several academic units to allow for focus on mission, increase student success, and better meet student needs/ " I support the changes. On Recommendation 1 VP Faculty: It is a great idea to relocate this office to the President office. But, I is not clear how the chain of communication would work. Will a request move from faculty to Head to Dean to Provost and then to VP Academic. This sounds like a long chain and will be counter productive. Could it be directly from Faculty to Head to VP Academic Affairs' ?

The report minimizes the role of the Dean of Faculties office. It not only deals with tenure and promotion issues but also advocates for faculty, an issue that requires knowledge of the university, its functioning, and balances work concerns with issues of academic freedom. The re-furbished Faculty Affairs office seems more like a Human Resources office

without the advocacy function.

---

Creating a "Faculty Affairs Office" seems like it will be in support of faculty development. On the surface, this seems great. However, specifics on how faculty will benefit are lacking and creating new administrative positions is never a good idea. We currently have a Dean of Faculties and the Office of the Provost can sufficiently address faculty and student issues (because they are often interconnected) just fine without new administrative units. More reporting will not make us better, it will just produce more paperwork and distract us from our actual goals. Remember the Faculty Evaluations Systems launched by the Karen Watson? That was a disaster, failed to produce any useful metrics and was a complete waste of faculty time and effort. We already have a system of evaluation, specific to the needs of the individual colleges. We need to have evaluation of "performance analytics" that match our roles, which are all very different. The faculty senate is not a conduit for faculty concerns as suggested by MGT. The idea of "self-governance" is a fallacy. It needs to be dissolved and a new system installed that truly engages and represents the faculty (not a bunch of "senior" faculty who have nothing better to do). They should not be "advisory" to the president, but rather should work closely with the Office of the President to make strategic changes to improve the TAMU experience for students, faculty and staff.

---

Something like a Dean of Faculties to in part advocate for faculty in cases of CAFRT etc. is a necessity. typically they have come from our own faculty ranks and appear to serve as a buffer between faculty and the highest levels of administration. Making the Dean of Faculties a vice president would destroy even the appearance of a buffer.

---

The preservation and strengthening of an independent Dean of Faculties office is essential to protecting the academic freedom of university faculty, which is at great risk by the proposed restructuring.

---

Taking away all faculty issues from the Provost office does not seem like a healthy or legitimate approach from a governance perspective. The Provost office should be overseeing faculty affairs. The President has to be far-sighted enough to realize that she will not be President forever and so it does not make sense to consolidate so much power in the President's office which might be very difficult to undo in the future. This consolidation creates potential for undue conflict or perceptions of a power grab.

---

Again, I worry that creating a direct voice to the president's cabinet for faculty affairs would also mean that the president would have even more control over faculty affairs and bias and conflicts of interests would be very difficult to overcome.

---

no comment

---

Disagree with moving faculty issues out of Provost office and into a new VP position. We need shared governance in terms of choosing the VP for Faculty Affairs (like we do for Provost) if they are handling P&T. Potential problems with moving faculty issues to VP: a) Lose faculty input and voting? b) No longer a direct line to president; not dealing with faculty issues, c) A VP does not represent the faculty, but represents the president, d) Needs to be a faculty member, e) How will this affect the tenure process?

---

It is unclear to me whether this recommendation will benefit or hurt faculty needs. It is being proposed as if it will help them, but I'd trust the opinion of the Faculty Senate on this matter over an external group. In my opinion there is a bit of ignorance throughout this report about what faculty needs actually are. Most faculty--to the extent they have a choice--choose their institution by the structure, prestige and research capacity of their job. To pretend these things are about the underlying structure of faculty affairs, gardens, performing arts centers and not about whether one's department is misplaced in the wrong College (or at least in a College structure that is dissimilar from every other comparable institution) is problematic in weighing of faculty (and to some extent student) priorities.

---

Centralized Advising may work well but there has to be close connection to advice for faculty and department representatives with a deep knowledge of curriculum.

---

The title "VP of Faculty Affairs" suggests that the position could be filled with a staff member who has never been a tenured full professor. This is unacceptable. It is not clear where the position of Faculty Ombudsman would reside. Placing it here would entail a conflict of interest.

---

No comments.

---

o Finding/Recommendation/Rationale #4 : Cushing Memorial Library & Archives is not a museum, nor should it be. • In a report that champions centralization of resources across campus, the dearth of research on Cushing is blatantly apparent. o The Libraries have centralized both the preservation and cataloging of Cushing collections into the

preservation and cataloging units within Evans Library in recent years. o While Cushing does have some artifacts that are not “traditional” library materials, the vast majority of their collections are traditional print and audio-visual library materials. Moving Cushing under a new “cultural center” would require hiring separate librarians and conservators with the knowledge to catalog and care for those collections. o The Libraries has a state-of-the-art, nationally recognized preservation lab that Cushing would no longer have priority access to as an “outside” client.

---

The Dean of Faculties originated as an office for faculty support. Over the last decade it has morphed into a provost-support office. I agree the DOF can be eliminated. In response, however, I would urge that the faculty ombud be given an expanded mission, particularly a more active fact-finding mission rather than merely an advisor on University rules and processes.

---

Recommendation #1: Create a new Vice President of Faculty Affairs position Comments: This should be the Provost’s office who should be a Vice President. See comments regarding the Provost’s office. There should be a separate office for student academic success.

---

I'm unconvinced that having a VP of Faculty affairs is an improvement relative to a dean fo Faculty affairs, although some reorganization of functions might be useful. I typically think of the Provost and Deans as managers of the academic side of the University. I am concerned that if too much institutional responsibility is placed into one office that this office will loose flexibility.

---

Creating the new Office of Faculty Affairs that does not report to the Provost seems to be creating the possibility for miscommunication and conflict with Academic Deans. The report states that "new VP of Faculty Affairs will be better equipped to focus on faculty pipeline strategies, outreach programs, financial incentives, and marketing approaches." However, these strategies would be more successful if they were undertaken at the college level as well as the university level, taking into context the various college and departmental cultures. The MGT report failed to convince that moving this unit out from under the Provost Office would not simply move the current issues to a new organizational line and create additional barriers to working collaboratively with the Colleges.

---

Can anyone explain to me how will new VP for faculty affairs appointed by the president and serving at her pleasure "elevate faculty to have a direct voice in the President’s cabinet?"

---

DoF as it has functioned in the past has had some workflow problems, I agree. This new VP of Academic Affairs would be critical for faculty. Does it report directly to the President? What kind of autonomy does it have to ensure academic freedom and the obligation that upper administration allow faculty a meaningful share of governance. With all due respect to the Faculty Senate, a body in which I have served, it does not seem to be as effective as the MGT report makes it out to be in terms of influencing decisions made at the Chancellor, President, and Provost level. I strongly believe that this office needs to be invested with some autonomy.

---

Very good plan.

---

I assume this is where I might comment on our Dean of Faculties and the role of governance. I have served on CAFRT, and I have close friends and colleagues who worked for the DOF office over the years. I think we have had honorable colleagues work in good faith there in recent years. Previously, CAFRT seemed like a meaningless exercise, and our reports were irrelevant, and final decisions had little to do with our tedious work. I think the DOF office should be empowered and supported, and not denigrated. I fear that undermining the office gives more power to the Provost and upper administration, deliberately undermining faculty governance and participation in oversight. Moves like this could systematically erode our academic freedoms and undermine our status as an AAU institution.

---

On page 18, the last paragraph concludes that the new strategies offered by the new VP of Faculty Affairs will "translate to an elevated student learning experience." The document does not make clear how the strategies will translate to an elevated learning experience.

---

Very opaque and difficult to determine how this proposed change will affect faculty. Please, please stop changing P&T and APT promotion standards and SOPS.

---

Recommendation #1. Creating a new Vice President of Faculty Affairs is somewhat concerning. Traditionally, the Provost is the chief academic officer for a university. They are, in one interpretation, unbiased. Having a Vice President of Faculty Affairs means this person will be in the cabinet of the president. TAMU already has many interims; we need stability in case a new president comes in. I am concerned that the VP of Faculty Affairs will be biased. The characterization of the Dean of Faculties is unfair. I am sure the same reputation exist among the probation offices across campus, or the Aggie Honor System Office. I am new to TAMU, and I feel very supported in terms of faculty development programs. Now, I

will say these faculty development programs are not well attended, but that has nothing to do with the Dean of Faculties.

Creating a new VP for Faculty Affairs, if the overall number of administrators is reduced, will likely improve us.

Dean of Faculty office needs to be preserved and its autonomy enhanced. Proposed reorganization timetable does not track with faculty workflows. Decentralization of current system operationally helps with recruitment.

Good news on the recommendation to continue Faculty authority over all classroom related activities as we continue to take many kids coming in academically challenged and growing them to wonderful graduates. Workforce management at it's finest. Concerned about that 20% of faculty over 65. We have the same problem in industry where Boomers are hanging on and those following are a smaller group and not getting to develop key skills in their mid-years. We need a solid and enforced mentorship program throughout the university to help here. Teaching is probably a more resilient area in this respect since we are all lifelong learners. Also, the digital mindset and move to online are challenges being addressed anew by the younger crews. Finally, need to get some better employment assurances in place for APT/PoP professors. Even rolling 3 year contracts would be an improvement.

Three things struck me as I read this part of the report. 1) The proposal to create two new administrative positions seems to me to be a move in the wrong direction. Lord knows TAMU have plenty of bureaucracy already in place. That is one reason Dr. Banks had this survey/study done in the first place; to search out best practices and efficiencies, etc. I don't say this about bureaucracy to be critical. But, I feel pretty strongly that the university offices already in place could surely adjust their organizations and activities to cover the functions these paid surveyors wrote need to be added. Strongly recommend the powers that be consider using the office/agencies in existence moving forward. 2) To provide full disclosure, I have two degrees from A&M; BA in history - '76; Ph.D. in education - '03. Thus my comments come from my sincere belief in Aggie principals and the uniqueness of Aggieland. But, such beliefs don't just materialize. They need to be trained into folks. Really think their ought to be an orientation for new faculty and staff hires that hits upon our values and traditions. Part of this orientation should include a brief on the Aggie Honor Council. Possibly some colleges already do this? I know the Bush School does not. I expect that is the state of things across most of the campus. Strongly recommend such a program be adopted at the university level. 3) My third and last point for the Faculty Affairs section of the report is related to point 2) above. It deals with traditions of the University. The Sanders Corps of Cadets Center has a very nice collection. It could be expanded into be a traditions - history centered museum for the University. The Memorial Student Center offers much to students and visitors. My suggestion would be to build upon what we already have, expanding and enhancing collections, venues, and topics of interest.

It is unclear to me how the Vice President of Faculty Affairs position will differ from the current Dean of Faculty position.

NC

Eliminating the Dean of Faculties position is positive. The VP for Faculty Affairs must hold a tenured faculty position at the university. Not having the VP for Faculty Affairs report to the Provost is a weakness.

It is not clear to me the fate of essential offices including the Center for Teaching Excellence in this reorganization. CTE has a clear and essential role in faculty as well as student success. I encourage the University to ensure CTE's role and visibility is retained at a minimum but better yet, further enhanced in any reorganization for faculty affairs.

Faculty affairs stay with the office of the provost.

Clarity from DOF would be welcome. The report actually helped me understand better the struggles they've had. Recruitment, hiring, promotion, tenure processes have been clarified but need further clarification - particularly for APT faculty.

I am concerned about the evidence base substantiating the recommendations made.

Support Recommendation 1. As part of restructuring the provost office, the new VP for Faculty Affairs office will have a focused mission.

Recommendation #1: "Create a new Vice President of Faculty Affairs position" should NOT be instituted because it will remove the faculty's direct line of communication with the Provost via the Faculty Senate by adding another administrative person between the faculty and Provost. A Vice President of Faculty should NOT be instituted because removing a directly line of communication between faculty and the Provost will make faculty concerns, which are already low on the Provost and President's priorities list, even less heard. This recommendation will further promote the

feeling that faculty are low on the Provost and President's priorities list.

---

Vastly overdue. Kudos for moving ahead on changes.

---

1. None of these recommendations lead me to believe that there will be any focus on fair and objective processing of faculty grievances. This is a problem for faculty morale as well as for our standing among peer institutions. 2. Changing the name from Dean of Faculties to VP of Faculty Affairs does not mean that everything will be solved. The focus should be on examining the processes in the current office, focusing on best practices from other institutions, and use of more recent data than a 2000 paper which demonstrated only that money could help solve development problems, not that centralization is the answer.

---

The Dean of Faculties Office has been less than functional over the past decade. Yet again, this is not because of its organizational structure. Rather it is because for the past decade the positions have been filled by individuals whose primary mission was to serve the TAMU System, not the faculty, not TAMU,

---

I like the old Dean of Faculties.

---

I do not know anything about it

---

Good news that the Dean of Faculties position is to go. I liked the way this restructuring was proposed.

---

It's not clear who between the Provost and the VP of Faculty Affairs gets a vote on tenure cases. Also, this new VP needs to be a tenured faculty member, not a staff person with no experience as a faculty member

---

Elevating Faculty Affairs to a direct report to the university president is a meritorious proposal, if it results in more transparent and tenure and promotion process that is driven by excellence not, regrettably, micropolitics of mediocrity. This ties to the other element that is currently lacking -- the ability and training for talent management. So the creation of Faculty Affairs would ideally support colleges and units in talent management, which currently is woefully lacking and could be standardized across the university. The creation of four Associate positions with clear and coherent portfolios will streamline procedures and provide the necessary clarity for faculty as to who and how the office works. I wholeheartedly support this change. I also agree with the proposition to restructure faculty senate to represent more the faculty ranks. While I appreciate the efforts, the misalignment of rank within the senate has been highly problematic. I would suspect that the university would have to provide mechanisms to incentivize other ranks to engage; but that detail would have to be further investigated.

---

During the Young administration the role of Dean of Faculties was muddled--does it represent faculty interests, serve an additional mechanism of administrative control, or serve as a liaison b/t faculty and administrators. That role needs to be clarified.

---

N/A

---

I do not agree with the creation of a Vice President for Faculty Affairs. As of now, decisions related to faculty (particularly the most important one: tenure and promotion), has been mediated by the Dean of Faculty and the Provost. Moving such decisions directly under the office of the president may indirectly weaken tenure at TAMU. Another important issue is that the recommendation to eliminate the DOF position and move faculty affairs under the office of the president does not require that the Vice President for Faculty Affairs be a Tenured position subject to approval by the faculty. Anything less than that will be unacceptable, in my view.

---

1) Creating a new VP of faculty affairs to help with recruiting, hiring, rewards etc. overseen by the President's office may build more bureaucracy and hurdles that every department will have to jump to even hire lab instructors which will create delays and productivity. This will also encourage a top-down approach and result in micro management. Faculty may lose their voice without the Dean of Faculties. If this office should be created, it will be best under the provost's office.

---

I prefer that these functions be managed within the Provost's office.

---

As stated earlier, I especially like the creation of a VP for Faculty Affairs. Such moves work to unpuzzle a complicated web that is the current reporting structure in the Provost's Office, which currently reflects the skillsets of past employees and challenges from a generation ago.

---

This, again, seems fairly distant from where I'm sitting. However, a focus on reducing the administrative load on faculty

in the reform of Faculty Affairs would be beneficial.

---

Faculty Affairs should remain with the Provost.

---

1) Creating a new VP of faculty affairs to help with recruiting, hiring, rewards etc. overseen by the President's office may build more bureaucracy and hurdles that every department will have to jump and faculty will may lose their voice without the Dean of Faculties. This will encourage more of a top-down approach.

---

I am concerned about moving this much power over faculty to a VP. In essence, this move places all faculty hires etc, under the the Office of the President--something that until recently was a mere formality after being approved at the Dean, Dean of Faculty, and Provost levels.

---

I think these changes are fine, IF the changes result in FEWER administrative positions. I see the org chart with 4 Associate Vice Presidents. Why not make it 2?

---

I see no clear area for consideration of faculty that have consulting or have produced companies that relate to their intellectual property associated with the university. Revision of this office provides that opportunity.

---

I'm not sure that trying to increase the performance of a department supporting faculty would be achieved by eliminating the current office that supports faculty and adding that workload to another's position. That seems very counterproductive. Why not give the dean of faculty's office the support they need to actually carry out their goals and mandate? Especially since the report doesn't mention retention as a goal for the VP of Faculty to consider.

---

Regarding Recommendation #1: Create a new Vice President of Faculty Affairs position: I find this to be an interesting recommendation with the potential benefit of elevating the position with a direct line to the President, and therefore giving faculty more direct access to the President.

---

I am concerned about the absence of a Dean of Faculties. The promotion & tenure process is one of the most important processes undertaken at the university. Careful thought about how that process is to be preserved and strengthened is of critical concern.

---

No Comment

---

How will the faculty be heard in matters as crucial as faculty hiring, tenure and promotion, faculty recruitment and retention, development leaves, credentialing, and awards? and to whom does the new vice-president of faculty affairs (if it the same as new vice-provost for faculty affair) will report and take orders beside, I imagine, the president? The elimination of a dedicated Dean of Faculties seems to put faculty on a shorter leash from the top. Crucial issues will be left to an ever higher and exquisitely political administration that will be ever further removed from the academic world. Who will be this person, what kind of professional profile? It seems to me way too much power for one position. Times such as our requires a strengthening of democratic and pluralistic tool within public academia, not their authoritarian centralization. This is not a matter of administrative consolidation, I am afraid.

---

Creation of the new VP of Faculty Affairs seems to allow for the consolidation of responsibilities related to faculty and provide a new avenue for faculty input in the President's cabinet.

---

Recommendation 1 is meaningful but also ADVANCE can be under VP for Diversity.

---

Recommendation #1: Create a new Vice President of Faculty Affairs position This appears to be a good idea.

---

Many universities only value their faculty once they have a job offer from somewhere else. We all have to play this game of applying for jobs elsewhere and use a job offer to leverage promotion or raises. I hope this new office will create pathways for lectures and research professors to transition to tenure-track lines. Once people have a job offer from another institution, it is very hard to retain them. This could be prevented by simply creating a clear pathway for faculty to transition into tenure-track lines.

---

Again, as new faculty, I am insufficiently familiar with the operation of Faculty Affairs to provide useful comment here. I remain eager to learn all the ins and outs of this aspect of the university as I proceed through my time as an Assistant Professor and then through the tenure and promotion process.

---

Although more attention should be given to faculty affairs, the Provost should continue to oversee this area as is the case at other peer institutions. Rather than creating an entire new bureaucracy, a Provosts Office that deals with undergraduate and graduate education and faculty affairs should be easily manageable and effective while keeping bureaucratic costs and inefficiencies down.

I think this proposal seems fine. Having been a faculty member at multiple universities, I always thought the structure here at TAMU was odd. The former dean of faculties office is something I'd never seen before. That said, the proposal seems like just eliminating one position (DoF) to create a new office that basically serves the same function as the eliminated office. But if folks in the upper admin see things differently, I'm cool with it.

---

Is this redundant with the function of the Dean of Faculties? Can that office simply become this office?

---

My main concern is that the VP position for faculty affairs will be occupied by a faculty member, rather than someone from outside academia. Not sure how this could be enforced.

---

Recommendation 1: I support creating the position

---

A high quality faculty is what defines a world-class institution. Do not be surprised if it takes several years for faculty to trust this new system. Your success will depend greatly on the personnel chosen to fill these positions. I am not convinced the previous system was so dysfunctional that it required this level of change.

---

See my first comment on Provost Office.

---

While it may be reasonable to have an office separate from the provost to handle non-academic faculty matters (alternative work locations, maternity leave, disability accommodations, etc.), academic issues should be with the chief academic officer (the provost). If you are seriously contemplating moving the academic functions to this office, then the person needs to have a similar background to the provost and needs to be selected in a similar way, with plenty of faculty input so that shared governance is respected.

---

The comments about the Dean of Faculty office were reprehensible. In my opinion, one of the most effective and caring administrative units on this campus was the Dean of Faculty. Over the past 7 or so years, they have initiated explicit guidelines for tenure and promotion. They have offered various workshops and programs to facilitate faculty success.

---

The creation of a Vice President for Faculty Affairs is an excellent recommendation. The rationale that greater focus of the Provost's Office could be placed on our graduate education missions and doctoral research once the office no longer has such a broad faculty affairs responsibility. The centralization of academic advising should be approached carefully and rolled out in a gradual manner. If academic advising is broken, even if for a short period, it would be an educational pandemic if the rubber is not where the tire meets the road.

---

This document says that changes are "much-needed" but does not provide any data to back this up. It would be great if they would cite their sources?

---

The removal of the Dean of Faculties to a VP of Faculty Affairs is particularly concerning. This concern stems largely in the context of promotion and tenure, and just who will fill the role of VP of faculty affairs. How will promotion and tenure be handled? Will the Provost remain involved? Will it be a requirement that the VP of Faculty Affairs be a faculty member? What will this mean for shared governance? I am concerned that this move will even further limit shared governance on the TAMU campus. Notably, this is evident in how this report was compiled and just how little say faculty had. We were given a survey that seems highly unrelated to the context of the report here. Concerns of arguably the biggest stakeholders, current students and faculty, do not seem to be well represented as there was no meaningful consultation of these groups during the discovery process. This move of Faculty Affairs to the office of the president makes that seem less likely in the future. It will be critical that protections of tenure, and care about the future of junior faculty are addressed or else TAMU is risking a loss of one of its most valuable resources. That being the diverse and talented faculty from across units.

---

Removing the DOF position removes a layer of advocacy for the faculty to the administration. A VP of Faculty Affairs is not independent of the president's office as it should be.

---

We need a Dean of faculties. The lack of one will severely impact our recruitment and hiring. It is also not mentioned who will handle grievances. The VP for faculty affair sounds like a potential lawsuit waiting to happen if faculty do not have avenues to grieve.

---

A new VP for Faculty Affairs needs to have some requirements attached -- they should themselves be a faculty member, otherwise this might result in less shared governance.

---

For the Department of BIOLOGY --&gt;Fail rate (DFQW) in BIOL 111 reduced from 40.7% in 2015 to 11.2% in 2020. Improved success and retention for ALL life science majors --&gt;First year retention of Biology majors at university for same time points increased from 83.9% to 95.9% (&gt; TAMU, 94.3%). --&gt;Learning outcomes measured in year 2 improved. Confirms that gains in 1st year were NOT a function of grade inflation --&gt;First year retention for Biology

majors is now equivalent for all student groups (1st gen, Pell recipients, underrepresented minorities) -->Number of BS/BA degrees awarded on upward (+41%) trajectory (207 in 2018-19 to 292 in 2020-21 and 2021 is not yet done) -->Graduation of 1st gen students on stunning climb (>+80%) (53 in 2018-19 to 95 in 2020-21 and 2021 is not yet done) -->UG Biology majors are more diverse (56% underrepresented minorities) than TAMU as a whole (42%) -->Number of UG majors increased 57% since 2016 (from 1238 to current 1942). This growth rate compares to 12% over the university as a whole.

I agree that there are issues with the current Office of the Dean Of Faculties. But much of the effectiveness of this new structure will depend on the individuals in it. Simply moving the current DOF staff over with new leadership will not resolve matters. Individuals need to be chosen for their strong knowledge of processes.

The Dean of Faculties office has been a joke for many years. Problems brought to them are handled by either the "good ol' boys" approach or simply ignored hoping it will go away.

The proposed shift will "give faculty a platform through which they can engage in discourse with senior administrators". It is completely unclear in the report what that means exactly, how that will happen given the large work load of the VP of faculty affairs in the new org structure, or even if the VP of Faculty Affairs would need to be a faculty member.

In my opinion, Faculty Affairs should report to the Provost.

None

Recommendation #1 ((Create a VP of Faculty Affairs): Seems like it's already being implemented. I hope the consolidation of power won't compromise shared governance.

This is a re-org that I would support as, IMO, the faculty development is/has been fragmented

100% behind this. One important faculty retention issue to consider is how to reward continuing contributions. Currently, faculty have three levels of promotions, and once someone is promoted to full, then the incentive to burden ratio becomes nonrewarding. The career and compensation ladder ends for faculty upon reaching full professor status (not forgetting or dismissing honors and awards), and the only way to obtain a significant salary advancement is to look elsewhere. contrast this with staff and administrator roles, who have 10-15 steps in their career ladder, starting at entry-level. Simply put, retention efforts must consider the diminishing monetary returns for faculty to perform beyond expectations once the opportunities for promotions are limited or come to an end. Also, the dual-career program is a travesty. Hopefully, this will receive much attention under the new structuring.

A suggestion to create the office of VP for faculty affairs may streamline the promotion and tenure process and faculty recruitment and retention. My biggest concern, however, is allocation of the startup funds. As of now 33% of a startup for a new faculty is typically allocated by the Provost's office. The report does not provide any details on where the money will come from in future. Is there a plan to provide a budget for this to the VP of Faculty Affairs? The report mentioned closer collaboration with the institutes. This is certainly welcome. Elevating the role of the institutes is a good strategy, but only to a degree. The institutes should not be in a position to dictate to the departments the new faculty hires. With the uncertainty related to the startup funding I fear that this may be the case in some situations. This is very dangerous and counter-productive. Please note, this warning is coming from a persons who is both the member of the Cyclotron Institute and the Department Head. The departmental faculty should always have the main and the final say to determine directions and areas for future hires. This is the only way we can stay at the cutting edge. This hires should be driven by science proposals, from the bottom up, not from the top down. If institutes get an oversized say in this process (because of the startup allocations, for example) it may lead to further compartmentalization of the departments, which would be counter-productive in the long run.

The justification for change is unclear. It would be simpler to provide the Dean of Faculty office additional resources rather than reconstruct and alter reporting path.

Professionalize the organization. Prevent the hiring of Texas A&M faculty--we need more diversity.

A more prominent place for faculty affairs is welcome. I am concerned however about the implementation in maintaining the faculty role in evaluation, tenure and promotion, hiring, etc.

While I would like to give this report a more thorough critique, faculty have only been given two weeks to respond. Aside from not being enough time to carefully consider all of the proposals' ramifications, the timing is suspicious, with the report being released to faculty during one of the busiest times of the semester. Perhaps this was simply

coincidental, but it feels as though the plan is fait accompli and that our input is merely for form's sake. This is particularly unfortunate given that some of the stronger recommendations in the report are those that would strengthen shared governance. For instance, the report correctly points out that Academic Professional Track (APT) faculty are not proportionally represented on the Faculty Senate. Similarly, the report points to a lack of professional development opportunities, a problem that is system-wide but that is felt more acutely by APT faculty. These are issues that do need to be prioritized. Sadly, the MGT Report doesn't really give many concrete recommendations for how these deficiencies are to be addressed. Instead, we are left to infer that these will fall under the responsibilities of the new VP for Faculty Affairs. That's fine as far as it goes, but the way this plan is being railroaded through makes the report's calls for strengthening governance ring a bit hollow, especially when contrasted in all the ways, implicitly and explicitly, that the report calls for giving greater power to the President. Finally, the report states that, "[g]iven the ever-changing landscape of expectations for teaching, research, and service, it is of particular importance to provide faculty a platform through which they can voice concerns and engage in discourse with senior administration." This is perhaps the most ironic statement in the report given that the "ever-changing landscape" is due almost entirely to the constant change in senior administration. Absolutely nothing in the report addresses how senior administration can be stabilized, something that would make the landscape faculty have to navigate far more stable. Shared governance indeed!

Eliminating the office of the Dean of Faculties is an excellent idea. That office has not attracted the brightest and the best and it has been a barrier to progress, generally speaking. A focused office of faculty affairs, not taking on an ill-defined role of faculty advocacy, will likely be more focused.

With a campus this size, a Dean of Faculties seems like the only way to provide oversight for faculty affairs aside from primary administration. The report points out that the Provost's office is "too large, hindering its ability to provide more individualized assistance and serve the needs of faculty and staff." If the DoF is eliminated, and this role is absorbed into the Provost's office, this seems antithetical.

External Affairs Suggest that Continuing Education be associated with the Graduate School and/or health/vetmed/pre-professional school for multiple academic and economic reasons. May also wish to consider expanded potential for executive education opportunities. Provost Org Chart – left column under Assoc Provost -OGAPS needs to maintain strong connection to DOR.

I am most concerned about moving faculty affairs out of the provost's office. It is Comments on the Dean of Faculties office were shocking. As a junior faculty member, I've found great support from that office for professional development and preparing materials for tenure review. It is not clear how the new structure will improve on faculty development.

I don't understand the rationale for the recommended changes. Where is the data?

Unclear how faculty would have a voice through the VP for faculty affairs that they do not have now. How will faculty reach this person? How will this person represent them? Faculty oversight is proposed to move to the VP of faculty affairs. Does this person have to be a faculty member? Do faculty have input into their hire or appointment? Could very easily result in short circuiting shared governance particularly around hiring and firing.

in recent years, the Dean of Faculties office has more or less ground to a halt; reports and plans are sent up for approval and disappear into a void. I have served on several committees chaired or initiated by that office and they have never come to any conclusion or indeed made any recommendations. Anything would be better the current situation

Instead of weakening/eliminating a Dean of Faculties, a strong advocate for the faculty is needed. Yes, a small administrative and bureaucratic portfolio, but a greater advocacy role.

In my Department there isn't "the ever-changing landscape of expectations for teaching, research, and service." We hire bright people and the department head and other faculty make expectations crystal clear for tenure, advancement, and for raises. How is the Faculty Affairs Unit going to be different from the Faculty Senate?

The elimination of Dean of Faculties role removes a faculty advocate. It's not clear that new VP role reporting directly to the president will provide a strong voice for faculty issues, particularly when an issue conflicts with the president's agenda. A separate, independent faculty advocate must be maintained.

This could be done well or poorly. Planning is key. Faculty and staff feedback will be important.

The reorg of the faculty affairs seems ok

I firmly believe that Faculty Affairs should be under the Provost, not a Vice President.

This seems like a great idea, having a separate office for faculty affairs should lead to more investment in our community of faculty members.

The Dean of Faculties has done an excellent job of faculty and department head development and I hope this will continue under the new alignment.

Having Vice Presidents report to the President on issues such as faculty recruitment and retention, hiring, promotion and tenure, etc., rather than reporting to the Provost Office, seems like a bad idea to me. There should be an advocate for the faculty, the role that the Dean of Faculties once held, and academic issues should be routed through the Provost.

While I think Faculty Affairs has been demonized a bit more than is reasonable, it has been more of another impediment to overcome in recent times, rather than being seen as a place intent on helping faculty succeed. But part of the nature of FA is to also uphold the high standards of the University, so it should be expected that FA will do some things that are not appreciated. Nevertheless, a fresh start for this area and elevation to a VP level will likely allow a 'fresh start' and progress to be made. I am supportive.

It appears that essentially the HR duties of the DoF have just been reassigned with a higher title - this could help address some of the employee relations and management issues in the colleges if this new VP actually has authority to address issues (rather than being a peer to Deans and merely providing guidance that could be - and was often - ignored).

It is unclear how the change in Provost and VP will affect faculty governance in faculty promotion and review. Shared governance over promotion and the curriculum is the hallmark of great universities.

I wonder if the elimination of the Dean of Faculties Office and the creation of the VP for Faculty Affairs is merely renaming of the same office and could be accomplished by redefining the role of the Dean of Faculties without all of the logistics in creating a new position?

This position and change from the Dean of Faculties does not really seem to make much of a change, or the benefits of the change have not been well communicated. This is one of the shortest sections, so more rationale would be appreciated. What are the actual issues here? Why are these the solutions? There is almost no research to back up the statement, so a solid case for the change has not been made clear.

The elimination of Dean of Faculties role removes a faculty advocate. It's not clear that new VP role reporting directly to the president will provide a strong voice for faculty issues, particularly when an issue conflicts with the president's agenda. A separate, independent faculty advocate must be maintained.

Replacement of Dean of Faculty by VP of Faculty Affairs seems to be a positive change.

There is a general concern that power shifts away from faculty towards the president's office. I would like to see administrators understand that they work for the faculty, not the other way around.

I appreciate the proposal involving the new Faculty Affairs office (and the corresponding positions). As a Department Head for the past 6 years, I definitely see potential value to the proposed restructuring. Indeed, I would have interest in being considered for a position in this new office. I believe I have valuable expertise and experience in the related activities (as an HR Professor, former DH, various college and university-level committees in which I have served, and passion for these activities) linked to tenure & promotion, faculty review, faculty hiring, budgeting/strategic planning, recruitment & retention... and would be quite interested in taking on a new responsibility and challenge to help elevate Texas A&M.

Faculty Affairs needs expanded support and more direct contact with faculty. The tenure process in particular is not effectively integrated with departmental administration.

Will this new Faculty Affairs unit be responsible for raises? Will they be able to argue that (as happened with the current pandemic) that faculty who spent their own money, utilized their personal electronics and equipment and homes in order to continue the mission of this university - would this new Faculty Affairs unit be able to compensate the faculty and staff in this instance? And since this VP for Faculty Affairs will be directly under the president, how much independence will there truly be? Also, how will this protect academic freedoms and ensure that all faculty and staff can speak freely without fearing repercussions? Also, given that DEI efforts will be split off, how will FA be recruiting faculty and staff that are more representative of Texas as a whole?

The main idea of the report, if I understood it correctly is centralization to make more efficient use of resources. It is true, that by reducing number of governing bodies one can save some money, but it is not true, that use of resources becomes more efficient. Centralized administration in my experience slower, more rigid and less understanding needs of faculties, simply because they do not have time nor ability to look into details of each case. At the same time been in

control of big and diverse division one can't have enough background in all. Absence of ability to make decision locally often slows down resolving of many questions and initiatives. More fragmented structure is harder to control on high level, but more functional and more flexible locally, thus overall often outperform centralized one. I am not sure centralization in case of the university will actually help or would it to the contrary slow down and have negative impact at the University. At the same time big changes are always difficult and tend to create disfunction of all divisions. In my experience it is always better to use existing structure and gradually transform it towards better future than change the structure, lose all functionality and then try to make it work. Unfortunately, I witnessed the latter scenario many times, and it never been successful.

The remarks about the DoF office were petty, gratuitous, and unprofessional, which raises questions about why they were included. Was it to cast aspersions on the office and its current associate deans (the dean stepped down last month) so that the office could be wiped clean? Why still the need include comments that were clearly not vetted and simply raised suspicions about the integrity of the report? I don't in general have a problem with the move to a VP for Faculty Affairs, but as I say below, the devil is in the details. Who will be the VP? Who will be the associate VPs? Questions arose at the faculty senate meeting about whether these positions would even be held by faculty. It is true that most universities have a faculty affairs office rather than a dof office. I thought the assignments of the various tasks to the various associate VPs in this new configuration did not always make coherent sense. I did find alarming that the word "grievance" was nowhere to be found in the report. Will these not exist anymore? That certainly cannot be the case, so which office would handle those?

Having an office focused on retention and recruitment is a good idea. My concern is that it will be generic and focus on the things we are already known for (Engineering, Animal Science) and other disciplines will be neglected. This office would have to be huge to cover all majors.

Elevation of the DoF-office to VP of Faculty Affairs would be useful.

The DOF was not an effective position, so I support replacing it with a VP of faculty affairs. This places the corresponding responsibilities within the chain of command.

Please broadly implement the VSP retirement program. Our College and Department are choking from the large number of tenured full professors who are not engaged, have minimal teaching responsibilities, and do not have active research programs. The salary burden these older faculty have on the College/Department is staggering and dramatically impedes our overall mission and ability to plan for the future. Please help address this issue.

Faculty Affairs, including hiring, promotion, annual reviews, title and workload expectations (teaching, research and service), grievances, and academic freedom should be housed within a single structure. The risk otherwise is significant confusion and even greater disruption caused by competing priorities/directives.

Having a faculty affairs office is important and will allow faculty to communicate more effectively. My only concern is that typically only the most loud voices are heard and those do not necessarily represent everyone.

I am not a big fan of current Dean of Faculties for a number of reasons. I am not sure if proposed VP of Faculty Affairs will fix this, but I think a change is definitely warranted in this area.

See comment above Re: Tenure and Promotion

It is extremely important that management leadership of tenure, promotion, and other faculty matters should be chosen through processes that include significant weighting of faculty input and that they be individuals who themselves have been academics and understand the nature of academic life for faculty.

The reorganization of the Provost's office and the elimination of the VP for Faculty Affairs raises serious concerns about the tenure and promotion process. Will this VP and Provost come from an academic background, with a deep understanding of academic life? This is potentially one of the most serious and vexing recommendations in the report, from a faculty point of view.

The move does not strike me as substantial, except for them reporting to the president rather than provost.

Again, it is "what is not being said" that is far more important than what a questionnaire can capture. The message to faculty is, "don't make waves."

No comments

Shifting this unit's leadership from a politically weak Dean of Faculty within the Provost's Office to a VP for Faculty

Affairs reporting (I assume) directly to the President has \_the potential for\_ this leader to advocate more effectively regarding faculty concerns about P&T, hiring practices, and so on with the President (and perhaps Provost?). Good outcomes here depend heavily on the process for selecting this leader, and his/her reputation and efficacy as a faculty advocate; faculty will NOT be happy if this VP is perceived as answering first to the university president and not to faculty's interests, if and when those interests collide.

This is a brilliant elevation of the support of faculty development and support. While I do not share the negative portrayal of the Dean of Faculties Office, I do agree that elevating this function and consolidating some of the responsibilities from the Provost's office are very effective recommendations.

I am highly supportive of the changes to proposed changes to enhance faculty affairs. Removing the DOF and creating a VP for Faculty Affairs is a good move.

I generally agree with recommendations made although too much centralization impairs the ability of departments and colleges to manage and market their programs. The last PWH review also suggested centralization and as a DH I did not feel the move of advising, marketing, IT, and facility management was helpful. People were hired to advise students with little to no understanding of our fields and support services became a significant issue, and that was just consolidated to the college level. Moving to university-wide centralization may save money but will likely further reduce services to students and faculty.

I support the creation of a new VP of Faculty Affairs, as long as there is dedication to support the growth and development of faculty.

I respectfully disagree with the assessment to consolidate HLKN under the SPH. Thanks!

Universities need to undergo substantial changes that reflect the changed needs and goals of the 21st century. But those changes are precisely in the opposite direction to those recommended in this mindless document. Examples: (1) The old model of a combined model of Arts and Sciences persists by inertia, but in our closest peer institution — the University of Texas — it was abandoned years ago because it is a mess. The University of Texas College of Natural Sciences, <https://cns.utexas.edu/>, can focus on the teaching and research needs of real science departments, instead of having an administrative muddle with sociology, English literature, etc. mixed in. These other disciplines have different needs for which separate administration is required. Furthermore, the important interdisciplinary work involving both physical and biological sciences is impaired if Biology is removed from the College of Science. (2) The idea of centralizing control of student counseling, IT, etc. REDUCES effectiveness and is essentially dehumanizing. Our student counselors currently know students and their needs, as human beings, in detail because they are in close interaction to them. The idea of decentralized counseling of students is nightmarish.

Recommendation #1: Create a new Vice President of Faculty Affairs position Creating yet another high-ranking administrative office will only increase the administrators to faculty ratio. It will suck up the resources needed by the faculty to actually do the University job (teaching, research, service) to yet another layer of administrators. A much much better way to allocate these resources would be to give them to the individual departments.

The comments in the report about the Office of the DOF are unfair. In particular, the office has made great strides in recent years to provide professional development opportunities for faculty. Even if the unit is relocated, the fact remains that all of the processes handled by the DOF will continue to be necessary. Moving these things to another location (or another report line) will not change much or save money, as the same number of people will be needed to do the work. Faculty Affairs should be part of the Provost portfolio given that the Provost is the highest academic officer. There is no clear explanation for why this should be a VP for Faculty Affairs rather than a Vice-Provost for Faculty Affairs. These roles are typically done at the provost level at peer universities. It's not clear how having a VP for Faculty Affairs will "elevate faculty to have a direct voice in the president's cabinet." The only person in the president's cabinet would be the VP for faculty Affairs. The primary role of CTE is to provide workshops for faculty (and instructors). For this reason, it makes sense for CTE to remain with Faculty Affairs.

It is not clear to me that creating a faculty affairs unit will increase support for faculty or that it addresses the concerns raised in the report about the Dean of Faculties.

I agree that moving the Dean of Faculties model to a VPFA model would be a step in the right direction.

More mentoring and training for new faculty is sorely needed.

The rationale for moving Faculty Affairs from the Provost's Office to the President's Office seems unclear. It's not as

obviously harmful as moving research away from the provost, but it doesn't seem to make any sense.

I agree that a "one stop shop" should be created, rather than having the extra layer of Dean of Faculties.

Recommendation #1: AGREE: I view the old DOF office similar to the Provost's office in that it was too large to be highly efficient and effective, and therefore was slow to react. I'm open to this proposed plan.

I support all recommendations. I would add that a strong effort needs to be made to ensure that the office places its primary focus, value, and protection on the needs of faculty. In the past, the office had a heavy focus on protecting the deans and upper administration priorities. This office should be a strong advocate for the faculty.

No Comment

Faculty affairs should remain in the Provost office. Merely moving it to President's office will overburden the President. If improvements are needed, and constant improvement is part of any good system, improve the office where it now stands in the Provost's office. Centralized student advising across most or all disciplines will lead to disastrous errors in student progress with students who took the wrong courses needed to delay their graduation to fill gaps. Curricula change often and following the right path is difficult. Academic advisors should be dedicated to the programs they serve.

None

The suggestion to create a VP of Faculty Affairs is excellent. A&M has been trying to recruit minority students for 20 years without acknowledging that College Station is not an attractive location. What faculty have observed in the last 3 years is "retention" is interpreted by Administrators as removing academic rigor and faculty are being pressured to pass every student. When I arrived a faculty member who 'blew the curve' in a survey course and had a disproportionate number of As and Bs would be counseled. Today the students have far worse writing, reading comprehension, and analytical skills and yet in one undergraduate survey taught by an adjunct there was a 3.9 (out of 4)--which meant every student received an A. Instead of being counseled, the Assistant Professors (vulnerable because they need tenure) were told this was an 'outstanding instructor.' Most of them are quite cynical and have resolved to pass everyone

The hiring and management of faculty under the Provost is fine, but the HR functions associated with faculty pay need to be managed better. Workday expects everyone to be 12 month employees and it is awkward and difficult to use and set up for 9 month appointments or for undergrad and grad student employment.

I'm disappointed in the elimination of the dean of faculties position and would like to see more info about how the VP of FA can fill the role that DOF was filling,.

Larger is not better. My experience is a flat organization works better when it's smaller. Large structured org chart type companies fail often because too many managers and not enough workers to produce things. In this case the product is students not administration.

The lack of representative balance for academic professional track (APT) mentioned in the Executive Summary needs to be a priority. There are significant inequities created by the present institutional culture. APT aren't adequately represented in decision processes that affect us. APT have a different context from tenure stream and that context matters. We teach large classes, some of us without graduate assistants, yet it is demanded of us to innovate in our teaching practice. I have a PhD in curriculum & instruction from Texas A&M. Innovating in my teaching practice is not a challenge for me. The system in which I teach, however, is.

Seems fine again as long as it does not result in more upper admins

I'm very confused by discussions of the new VP having responsibility for evaluations and promotion and tenure. So he will be totally disconnected and out of the chain of faculty to department head to Provost but still responsible for these? Where is the faculties significant input as a body in the shared governance involved in making these weighty decisions. I don't mean two weeks to comment I mean real discussion and involvement of our representatives.

Establishing a faculty affairs office is a good thing. Faculty need to be involved in charting and developing the terms of reference for such office.

Again a quagmire for appointments, re-appointments, and credentialing.

I do not have an issue with removing the Dean of Faculties and having many of these functions moved under a Vice Provost for Faculty Affairs. I also agree with centralization of HR to include faculty.

Be mindful not to create too many positions. This will cost us. The chart on p18 is a bit disorienting. The report fails to mention that the DOF will be eliminated. Am I understanding this correctly?

I support the idea of doing away with the Dean of Faculties Office and replace it with a reorganized unit within the VP for Faculty Affairs and Strategic Initiatives.

I believe TAMU in the long term will have problem with talent retention. Many younger faculty members seem to move out of B/CS area because they miss urbanism and want to be part of a more forward-looking community. Yes, we have Castlegate and other faculty housing communities, but they are far away from the core of B/CS. It feels at times as if there is segregation between faculty (who are majority international), the rest of the town (who live in old town Bryan), and students (who live across the street from campus)! We need to think of ways to bring in world-class people here and more importantly, keep them here for a long time. Otherwise, we will have to resort to "in-breeding" and hire from our those of our graduates who cannot afford to go to other places. There must be a strong "dual-career" program and even stronger schools in the area. There needs to be better transportation modes and highways that connect us to the rest of the world (outside the Brazos valley).

There is no mention of minority affairs as it relates to the faculty. How is TAMU going to recruit and retain minority faculty members. The state is 38% Hispanic and 13% Black yet the colleges do not remotely represent those numbers. Additionally, clinical faculty and PhD faculty should have completely separate tenure/promotion obligations. What contemporary methods are being put in place to mitigate these differences? how can clinicians publish, do research, and be on the clinical floor at the same time. It's difficult... overwhelming. What is TAMU doing to give promotional equity to clinical faculty that spend 100% of their time on the clinical floor?

## Faculty Affairs - Staff

Please provide your comments related to Faculty Affairs:

No comment.

Creating a new VP for Faculty affairs doesn't actually help the Faculty here. This is a bad move, even from the point of view from a staff member.

Continuing education really needs to be elevated and centralized on this campus. I know the provost's office has worked hard to reinvigorate continuing education, but I feel like we can do more as a university.

Faculty Affairs moving from under the Provost to a cabinet level position gives faculty direct access to President rather than going through the Provost. However, faculty affairs may need the Provost as a filter because there is a lot of faculty and more than likely a lot of issues. The new VP will need to be adept at seeing through the noise and strike a careful balance.

The recommendation to provide better infrastructure to support faculty will be greatly appreciated by all.

It makes some sense to move faculty affairs under the executive. I have heard some faculty who have concerns about how the promotion and tenure process would work. But these issues can be worked out, I think. Separating the Center for Teaching Excellence from the rest of faculty affairs creates some new possibilities (especially since it would align under Student Success). It might have the unintended effect of diminishing the value of teaching for tenure track faculty and reinforcing a division between tenure track and academic professional track faculty. It may seem as though the Center is being oriented away from faculty development for faculty success (i.e., for career development), but faculty development for student success makes a lot of sense to me. I'm enthusiastic about whatever new possibilities potential realignment might bring.

No comment

I have concerns related to weakening the overall authority of the Provost's office, given that we're at a Research I institution and the faculty are an integral part of our strength and reputation. By taking out faculty affairs from the Provost's areas of oversight, you risk weakening shared governance. I worry that this will cause decreased faculty

satisfaction and, thus, issues with recruitment and retention of top talent.

More discussion and information is needed to better understand how this will be implemented.

The Dean of Faculties needs to be in the Provost's Office and embedded in the academic mission of the university.

In general, I concur with the recommendations on faculty affairs. That said, there are four new assoc. VP positions created to support this role which seems excessive.

No Comment

I support all recommendations.

No comments.

While I believe dedicating more resources and leadership to Faculty Affairs would be beneficial, I don't believe moving it away from the Office of the Provost would be. I believe this will cause confusion and is a sharp contrast to the organization of Faculty Affairs offices at peer institutions. With so many other offices/departments moving out the Provost's Office, I believe Faculty Affairs should be housed there and will receive the attention it deserves.

Per my argument above, I suggest Faculty affairs remains under the purview of the Provost.

If the University believes that renaming the Dean of Faculties position and doing some restructuring would be beneficial, it may be worth looking into. Eliminating the position as a whole (without properly restructuring) would be detrimental to the University. As mentioned in the report, the current Dean of Faculties handles many high-level issues and it is of utmost importance that these responsibilities are still able to be accomplished.

Make Faculty Affairs an office UNDER the Provost, not it's own office. As a staff member who also holds a faculty title, I feel that this proposed move undermines the status of faculty at A&M.

I have not real opinions on Faculty Affairs changes. I am not involved with those processes.

While this sounds like an interesting idea and could be very useful if implemented well, there doesn't seem to be much specificity to this section. The report states that "This newly reorganized unit can further focus on faculty recruitment and retention as well, including special attention to assist growth, recruitment and retention for faculty of color," but fails to give any tangible plans for how they will accomplish this. And if your goal is to recruit more diverse faculty, what does that mean specifically? Will this office actively recruit faculty of color in historically under-represented roles? In concrete terms, how will this proposition improve things for faculty?

None

I agree with moving CTE into a provost-level office and no longer part of DOF. But I wonder what is the difference between CTE and the Office for Academic Innovation? They both are working towards improving student success? CTE work without the LMS (LMS agnostic) and Office for Academic Innovation (OAI) is promoting the LMS. Why cant these offices be together? Seems redundant in my opinion. OAI and CTE both do have Instructional consultants and instructional designers. Can't these staffs be combined and then move the OAI IT helpdesk to Department of IT. So that everyone (staff, faculty, students) has a one-stop-shop that can answer their IT and LMS questions and needs. Currently, OAI only has less than 10 staff members (who handle LMS needs) which is not sustainable for them. Combine this office with CTE and Helpdesk central. This office has a large turnover rate, I have seen >8 staffs member resign every 4-6 months and they seems having a hard time getting staff to work for them.

Moving Faculty Affairs from the Provost office is of significant concern given the Provost is the recognized Chief Academic Officer of the institution and faculty are an essential element of the educational/academic mission of the institution. The position can be elevated to a vice president level position, if this is the goal, and still have the position reporting to the Provost and Executive Vice President. Faculty are charged with the oversight of all matters pertaining to the curriculum offered across the university. Thus, separating faculty affairs from the Provost office would be adding an unnecessary structural divide between the two entities that are responsible for academic matters.

The MGT report attempts to focus more resources on faculty by creating a new unit called the Vice President of Faculty Affairs that reports to the President. Again, this is where I believe the MGT report is partially correct. Do additional resources need to be granted to faculty? Yes. Do they need to be removed from the purview of the provost? No. The

Dean of Faculties needs more resources dedicated to it to support the needs of faculty. There are too few people being pulled in multiple directions trying to meet these needs. I agree that the title of Dean of Faculties should be eliminated, however, the responsibilities should be transitioned to the Vice Provost of Faculty Affairs and Interdisciplinary Initiatives. I propose that this position be changed to just the Vice Provost of Faculty Affairs. In addition, I believe there should be some additional leadership assigned to oversee areas of this office such as Asst/Assoc Provost for Tenure and Promotion, Asst/Assoc Provost for Faculty Recruitment and Retention, Asst/Assoc Provost for Faculty Awards and Honors, and Asst/Assoc Provost for Interdisciplinary Initiatives. Together these units would be built out to provide the additional support faculty need. Currently, the Dean of Faculties has an employee who essentially has three jobs, he's the Associate Dean of Faculties, Chief of Staff, and Director of International Faculty and Scholars. Essentially, we have one person doing three full-time jobs. Yes, if that is what we are requiring of our faculty and staff to meet the administrative needs of the university then service will be greatly lacking. As I have mentioned this unit should stay under the purview of the provost. The structure suggested by the MGT report does not ensure that this VP of Faculty Affairs will remain positions among faculty members. The very title of vice president does not require you to have a doctorate or to serve as a faculty member, the title of asst/assoc/vice provost does indicate that you have the academic credentials to lead faculty. By removing this unit from the provost you change the essential qualifications needed to garner the respect of faculty to perform this work. If we would like to continue to recruit world-class faculty, we need to provide them with an administrative structure that is familiar and consistent with our peers but responsive to the needs of faculty.

---

None at this time

---

Not clear instructions at college level, but we are working to improve this. Would be nice for them to use Workday as portal instead of interfolio, but I don't know their reasons for choosing interfolio.

---

I teach a class at the university as a part-time assistant lecturer, and I think this change is much needed. The only way to improve faculty quality is to make a streamlined process to pay, hire, and retain great faculty or instructors. This cannot be left up to individual department heads. It needs to be someone's focus not everyone's part-time job. Educators will focus on educating over their administrative work. Also, the policy that was effective Fall 2019 where part-time lecturers only get paid once at the end of the semester is not great. I typically get paid 2-3 months after a semester ends. I essentially, work for five months before I am paid. I have no idea if this is a college of ag policy or a university madidate, but it is absolutely a barrier. Thankfully, I am not in dire need of that money; however, I could not imagine being a masters or PhD candidate that relies on that money as their only source of income. You have got to pay people in a timely manner, end of story.

---

The data used by MGT to be able to refer to the Faculty Senate was exceedingly outdated. While historical data could be included in building a case, data used to make decisions and recommendations should be current. Faculty would not accept information older than 5 years for research.

---

It seems improbable that the percentage of faculty 65 years or older you state is correct. Possibly true in some departments but not overall.

---

No comment

---

I do not know enough about this section to comment.

---

The Office of Dean of Faculties has always been a voice for faculty. Over half of the positions within this department are held by staff. In lieu of this office becoming Faculty Affairs, my hope is that the staff running these programs would be allowed the opportunity to receive equitable compensation in terms of other HERCs and industry. Additional Program Directors should be incorporated in this new scheme. In particular, the Dual Career Program Coordinator should be re-assigned the title of Dual Career Program Director.

---

As a non-faculty member, my understanding is the Provost is often dubbed as 'the first among equals/peers'. I equate that as Tenure & Promotion, which is proposed responsibility of new VP for Faculty Affairs position. The Center for Teaching Excellence (CTE) contributes to the faculty/instructor development across all campuses and rank of faculty/instructor. In my opinion, this may be the best fit for CTE in the proposal. CTE could/should/would maintain influence and impact with the student/academic success mission.

---

It is my assumption that none of the main authors of the report have ever had a career in academics. Yet they were tasked with reorganizing a University for the purpose of giving more power to the President and the system and less to

others. Most major universities understand that major decisions about running the university should be made in tandem with faculty not imposed by the administration. Where do you envision A&M in 10 years - do you aim for a University of Michigan or a just another Texas University. Look at what just happened to Florida where the administration mixed politics and faculty freedom. Major PR nightmare and assault on higher education.

---

I support the suggestions in the report

---

I concur with the recommendations of the study

---

I don't see anything in this section I think I could provide meaningful feedback for.

---

If faculty report to the Provost, why should they be separate?

---

There is nothing said here about Discipline. There have been issues with professors doing things that bring shame to A&M and our system. Sure recruiting is great. Sure retention is great. But when a professor does things that bring disrespect to the school that needs to be dealt with. The report ignores this. That is a shame. We cannot recruit great talent in faculty if we allow faculty that does things to bring shame upon the school to stay. You get a better faculty not only from recruiting the best but weeding out the bad.

---

None

---

I do not have experience in faculty matters to speak to this section, except to say that it seems to be a large (and expensive) division to manage and support 5000 people. Perhaps putting some specialists in the HR department could help streamline this.

---

Faculty members need to be held accountable from an individual level and department level. Some department heads do not actively control their faculty and allow them to get away with many things i.e. IT related issues

---

I agree with the proposed restructuring.

---

Yes to all of this.

---

(same; as a staff member I don't think I have any relevant comments here)

---

NA

---

I worry about the structure of Equity, Diversity and Inclusion in terms of diversifying our faculty. If there is not support from a DEI office, in our case the Office of Diversity, I am concerned in our support in recruitment and retention efforts.

---

I actually really like a lot of the way this has been written up.

---

The proposed Faculty Affairs Organization is a good idea as it provides the needed support the DOF office has needed for some time. The FAO proposal further identifies the need for support to carry the workload the DOF office has been carrying for many years. The DOF office should be commended instead of recognized as not necessarily positive throughout campus, with concerns about timeliness, fairness of decisions, unnecessary bureaucratic requirements, and lack of clear proactive faculty development programs.

---

I agree with creating VP of Faculty Affairs position to focus on recruitment, support, and retention of faculty. Happier faculty should equate to a healthier, higher quality student experience.

---

I don't work with Faculty Affairs to provide feedback.

---

I agree with the statement: " There should be a significant investment in strategic recruitment efforts that recruits the \*best and brightest students\* from underrepresented areas of Texas and surrounding states by increasing outreach programming, leveraging connections with the Aggie network, and increasing scholarships." This should be regardless of race, creed, culture, ethnicity, age, sex, gender, etc.

---

NA

---

I definitely agree with needed input from faculty at all levels. And I love the idea of a path to retirement for tenured professors, as well as giving the President the ability to start that process of winding down.

---

Internal promotions for staff especially to faculty titles is difficult and involves navigating political waters. There is a gender discrepancy in currently hired faculty members in certain institutes.

---

Rec #1 – create a new Vice President of Faculty Affairs position • Additional clarity is needed to understand the “Budgeting & Finance” organization within this faculty affairs office and how this is unique for faculty affairs and separate from the other business/finance organizations shown in the proposal to have a direct line to Finance.

N/A

I think it is always a good idea to focus on retention and upward mobility/career growth from within the University.

Reorganization of the Dual Career Program is suggested. As a participant in this program, I was shocked at the lack of insight, professionalism and assistance. This program actually caused more of a hindrance to my gaining employment at TAMU than assistance.

No comments

How can you take so much freedom from the departments that have worked so hard and for so many years at hiring, P&T, awards?? We pride ourselves on recruiting the very best candidates that we can during hiring seasons. It gives us the chance to show off our ratings and display how great a department we truly are. The VP of Faculty Affairs doesn't know (or seem to care) how great we are because apparently someone thinks they can do it better. We will essentially lose our voice in the entire process if these tasks are taken away from the departments. So many tasks will be removed from the staff that assist the department heads!

No comment.

Why are some faculty allowed to bully, harass and intimidate others but because of tenure, it is not touched. Makes for a poor work environment.

The report does not make it clear what would happen to the current organizations located in the MSC.

Vice President for Faculty Affairs elevates the position in the organization to one of deserving status, but I'm having a hard time understanding how this position wouldn't report to the Provost, who is the chief Academic Officer (at least currently). One thing to consider, would the new Faculty Affairs take over the hiring of Deans and other Vice Presidents, what we call Executive Searches? Will the Provost still provide the lead on these searches or will that come from the President? It's that Executive Searches would also be handled by the Faculty Personnel box in the report's HR recommendation but it's not clear, so clarification is needed. In my opinion, the university should develop its own faculty recruiting strategy and employee professionals to staff it and head-hunt year-round. AABS successfully have done this on behalf of the Provost for several years and has a model that will work very nicely if leadership would like us to share.

Will these duties be centralized from college-level faculty affairs?

Yes, change is needed. The faculty hiring process is too tedious and slow with the numerous "portal" that must be used. My preference would be to move faculty recruiting back into Workday. Workday has been successful with staff hiring to ensure all approvals are in place before someone begins work. We need to ensure faculty recruiting and hiring is appropriately approved before an employee begins work assuming their hire is approved. When faculty recruiting was in Workday, it flowed through the appropriate channels to ensure the approvals were complete.

Since I am not a full-time faculty member, my knowledge of these areas is limited. However, it appears that the only true change is the name of Dean of Faculties to VP for Faculty Affairs, with a reporting line to the president. This does not seem to align with best practices or what our peer institutions are doing. While peer institutions may have different names (dean of faculties, vice provost for faculty affairs, etc.), the majority of their reporting line is to the Provost, who is typically the chief academic officer and includes oversight of faculty.

CLARIFYING THE TRANSITION OF THE UNITS OF IMMIGRATION SERVICES FOR FACULTY & SCHOLARS (ISFS) There appears to be an inconsistency in the MGT Report regarding the proposed realignment of the office of Immigration Service for Faculty & Scholars (ISFS). On page 11 of the report, the office is moved under the VP for Academic and Strategic Collaborations. However, on page 17, the report indicates that immigration services for faculty stay with the VP for Faculty Affairs. ISFS however, does not appear under any of the propose organizational charts. This inconsistency maybe because the ISFS office contains two units: (1) the Unit of Immigration Employment for Faculty and Researchers, (2) the Unit of International Visiting Scholars. Both units operate separately and independently within the office. 1. The Unit of Immigration Employment for Faculty and Researchers, is devoted exclusively to securing the appropriate

immigration employment status for faculty members and researchers. This unit of the office serves and facilitates the needs of the academic departments in the recruitment, hiring, and retention of faculty and researchers. The immigration employment specialists that work in this area interact constantly with department heads, principal investigators, and faculty supervisors throughout the hiring process in order to: - Comply with federal regulations and laws - Prepare the supporting documentation dossier - File the appropriate immigration petition with federal authorities to allow for employment The Immigration Employment unit of the office provides an important function in the retention of faculty and researchers via the sponsorship of their permanent residence. The specialists in this unit are highly trained in federal immigration employment and Department of Labor regulations. They function as a team in the analysis, preparation, and filings of the petitions. The unit of Immigration Employment for faculty and researchers is not programmatic in nature. It does not interact with students nor is it involved in student activities. The support provided by this unit to faculty and researches is through their employers, the academic departments, and pertains to their immigration status exclusively. It operates like an in-house legal team and has direct contact with The Texas A&M System Office of General Counsel and outside counsel. Therefore, we agree with the MGT report that the unit of immigration employment for faculty should remain with the VP for Faculty Affairs as it is actively involved in the recruitment, hiring, and retention of faculty and researchers. This ensures that this highly functional and efficient team remains in the forefront of the overall academic hiring process. 2. The International Visiting Scholars Unit, administers the J-1 Exchange Visiting Program of the U.S. Department of State. This unit of the office is purely programmatic in nature. In addition to facilitating the J-1 documentation for visiting scholars, this unit focuses on outreach, social activities, community involvement, and the wellbeing of the scholar population. This unit is not involved in recruitment, hiring or retention. Instead, this unit ensures that the visiting scholars have a meaningful experience while at Texas A&M University. The International Visiting Scholars Unit utilizes a separate software management system, than the Immigration Employment for Faculty unit. Interestingly, the J-1 Exchange Visiting Program at Texas A&M University hosts both students and scholars. The student side of the program is already housed with the office of International Student Services. Therefore, it makes sense to unite the J-1 Exchange Visiting Program under the leadership of the VP for Academic and Strategic Collaborations as proposed in the MGT Report. Conclusion Based on the foregoing, we suggest that the inconsistency in the MGT Report be clarified to reflect what we believe would provide optimal operational efficiency: Immigration Employment for Faculty and Researchers Unit should remain with the VP for Faculty Affairs, and the International Visiting Scholars Unit to be moved to the VP for Academic and Strategic Collaborations.

---

I like the more intense focus and more representative APT participation/consideration across key university organizations and bodies.

---

None

---

Since I am not faculty, I don't have much to add here. I will note that the Faculty Senate forum to discuss this report generated an unusual amount of activity and negative feedback.

---

Not enough insight to comment.

---

Agree fully

---

I am not a faculty member so do not have any specific comments to add.

---

No comment other than to say faculty and shared governance are critical components of this institution. There are some exciting things in this area.

---

No issues seen with the report recommendations on Faculty Affairs.

---

I agree with so much of the report about this.

---

If the proposed realignment of colleges/departments takes place, this introduction of a VP of Faculty Affairs is a necessity. The task of recruitment, hiring, professional development, etc. is too much for department heads to handle alone - thus historically leading to inefficiencies in the offices of department heads.

---

There should be some type of Department similar to the Dean of Faculties. That unit keeps everything related to Faculty hiring, and Promotion and Tenure organized and in order before it goes to the BOR for final approval. When mistakes are made, the DOF is able to catch it, before it leaves their office. Which, helps the Faculty Member up from Promotion and/or Tenure have a stronger case.

How does creating a new position change the dynamics of the duties? The current situation seems it would just be moved to another spot.

No comment

No comment - I am not faculty and do not have notable feedback for this item.

I do not have familiarity or input on this area.

If the Provost is the primary academic officer, Faculty Affairs should logically report to the Provost.

I agree that there needs to be a VP of Faculty Affairs.

None

None

All good.

This seems reasonable, although I do not understand what a VP of Diversity would do with no units subsumed beneath them.

The Dean of Faculty previous office was a burdensome office and didn't really represent the entire faculty body. They did not represent the growing number of Professors of Practice (or non-tenure track faculty) and the value they can add to the campus and students.

This reporting structure seems like an elevation in the handling of faculty support services. Removing immigration services, which provides immigration to non-immigrant staff, too, will focus the office on the needs of ALL faculty.

No input to provide

I am not familiar with faculty affairs as much, but the report offered solid arguments for the proposed changes.

No Comment.

Increase credit for faculty outreach to promotion and tenure process. The current criteria discourage faculty from engaging in outreach.

Summary: Realign Faculty under the Presidents Office. Perhaps the Presidents Office will be able to instill a sense of greater responsibility to the University than the Provost was able to. Most Faculty I have encountered believe the University exists to further their needs rather than the belief that they are here to serve the greater needs of the Institution.

Moving DOF to a Vice President of Faculty Affairs promotes strong Faculty relations. I would ensure the department receives plenty of resources, and has a strong partnership with HROE due to the nature of employee relations.

this would make the unit beyond large and programs will get lost

I don't think creating this new position actually helps students.

I bristle a bit at a Vice President of Faculty Affairs position - SIMPLY because the staff is often overlooked. The previous administration started by talking a good game but ultimately failed to include staff in a meaningful way (evidence of this can be found in the 5-year strategic plan [called the DECADE of Excellence - which is terrible] where staff and the services provided by staff are largely ignored). If this position or department is created, they need to be well and fully linked to the operations side of the house and include the staff considerations that come with expanding the student and faculty populations. Please review the growth in each of these three groups over the last 15 years. Do better.

Sounds like a good plan. Dean of Faculties office has been inconsistent.

While This does not directly relate to me anymore, my time as a student showed that many departments on campus do not care about the quality of classes being taught by faculty. If the Office of Faculty Affairs is to help manage faculty recruitment and retention it should listen to student feedback about current faculty and ensure the faculty that is being retained also are of quality and not just showing up for a paycheck. In my experience with the business school, one professor was with the school for 30+ years but hadn't updated his lectures in at least 4 years and just used the same

online lectures and auto-graded tests with no office hours that he actually showed up for. It was not until enough students started failing/dropping the class that he was forced to retire. This was with everyone that I talked to that had this professor leaving a bad review there was enough of a warning that this was a problem but was ignored by Mays administration. This is one instance that occurred on campus with many similar stories just like it. If A&M is serious about having "high-quality faculty" it also needs to have a way to review current faculty that is independent of the colleges which this office could and should be.

"The Vice President of Faculty Affairs will focus on administrative duties related to the recruitment, hiring, professional development, and recognition/reward of faculty, and will work with the Provost and Deans to assign resources for faculty positions and retention." This process needs to be peer reviewed as much as possible however should also receive a larger 365 perspective added to it. Faculty member interactions with staff and students should be added to reviews of faculty members.

- Recruiting people who are leaders in their respective fields must continue to be a priority for the administration. Without a talented faculty, everything else falls apart.

Faculty Affairs has needed an overhaul for years. There are faculty members in every department who are no longer productive or beneficial, yet are collecting enormous salaries and taking resources from departments. Faculty reviews are a joke and everyone, including the faculty members, are aware of that. Recruiting and retaining a diverse faculty won't be possible until there are shifts in the process and mentality of faculty on campus. There are still many departments and colleges that operate out of the "Ole Boy" club.

I agree with the recommendations outlined in the report for Faculty Affairs.

I don't really have any comments about Faculty Affairs as I am a staff member. However, I believe that the faculty should have proper representation and should be treated fairly.

I am not educated on the organization enough to make a suggestion but again I think that talking with the staff about how there team functions would be beneficial.

N/A

The statement that 20% of the faculty being over age 65 seems to be presented in a negative fashion. Maybe we should celebrate that 80% of faculty is under age 65.

-

I have seen my share of problems with the Dean of Faculties office. They are slow to respond and can be inconsistent with their message. I also do not believe that any Title IX decision that has been filed against faculty by a staff member should be decided by the Dean of Faculties or a VP for Faculty Affairs. That provides significant bias.

I agree with the changes being made.

If the DoF position is eliminated, I would hope that something akin to VP for Faculty Affairs is created. This is a huge component that needs its own office to handle hiring, promotion, etc. Having staff there that I can reach out to with questions is a must for proficiency at my position.

I fully support all of the recommendations provided by MGT as it relates to Faculty Affairs. I do not work in that arena but the recommended solutions appear to address the reported findings.

No Comment.

I am not in a position to provide good insight into these changes.

I only receive emails and have not had any interaction with this office.

No comment.

I will leave academic areas to the academics. Finance is really a service function to enable proper resource allocation and budgeting. We need to know the mission so that we can enable success through proper allocation of financial resources.

n/a

N/A

I do not have the expertise or knowledge to address this other than having the world's best faculty is essential to our core purpose.

Stated in finding #1 is, "The reputation of (the Dean of Faculty) is not necessarily positive throughout campus, with concerns about timeliness, fairness of decisions, unnecessary bureaucratic requirements, and lack of clear proactive faculty development programs." I would hope that a reorganization of the provost's office and faculty affairs would entail us taking the idea that faculty recruitment and hiring is COMPLETELY DIFFERENT than the hiring of non-faculty and throwing it out a 10-story window. There has to be a better way to manage parallel, non-complementary "DoF portal" and Workday processes. If a faculty hiring gets stuck somewhere and delayed, it's probably sitting at the Dean of Faculty review and approval step...but don't call HR because they'll say they aren't involved in faculty hiring and can provide no assistance whatsoever. If we're going to consolidate/centralize HR and we believe faculty recruitment and hiring processes can and should be improved (and thus overall service provided to our deans, department heads, and faculty improved), let's take a long hard look at why we have parallel systems in place within the DoF and HR to recruit and hire faculty.

Giving "faculty a platform through which they can engage in discourse with senior administrators" sound like a very positive goal. I'm not sure funding an entirely new position for this is the right way to achieve that goal.

These recommendations seem to be good for the faculty and their tenure here. Also will help recruit better faculty in the future when positions come available.

None

no opinionCOLlaboration would

No comment.

No objection to recommendations.

A focus on faculty recruitment and retention is a good thing. It is important to have diversity: diversity of our backgrounds/ethnicities, etc., AND diversity of thoughts/opinions to bring about worthwhile discussions to create a cohesive, not divisive, environment for our students, staff and faculty. Diversity also includes being inclusive of the disabled community, and this is oftentimes overlooked. If striving to have more representation in line with our societal demographics, one in five faculty or staff will likely have a disability. (Food for thought.)

I really appreciate acknowledgement of scholarship contributions of those over the age of 65. It's about time.

No issues, made sense.

N/A

Long overdue.

I agree with a support the recommendation made by MGT.

N/A

AGREE WITH ALL FINDINGS

I agree with the findings in this section.

## Faculty Affairs - Student

Please provide your comments related to Faculty Affairs:

---

N/A

---

N/A

---

a. I think that a focus on faculty and staff is essential to the success of students both academically and otherwise in areas from ensuring there are enough professors to keep up with enrollment to ensuring staff are competitively paid.

---

Don't combine liberal arts and sciences

---

Why not invest more in retaining faculty and graduate students by increasing graduate student pay and cut back on the number of Vice Presidents this campus has. Adding more bureaucracy does not improve how the campus functions; it only makes this more confusing.

---

none

---

None, agree with the MTG Report.

---

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

---

n/a

---

I think the office of recruitment will be just another office that does nothing tangible. The Hullabaloo U program is providing the necessary retention without an entire office. Additionally, I think that focusing on recruitment and associated initiatives, like 25 by 25, show that the university is only interested in increasing income through student tuition and printing degrees. Initiatives focused on recruitment mean putting more strain on programs and therefore lowering the quality and effectiveness.

---

Please remove [REDACTED] She is so mean. She humiliated me in class and I couldn't help it but to cry. She shouldn't signal students in class. She isn't even my teacher but I heard she is the boss of my instructor. Other students say that I am not the first one and it occurs a lot.

---

N/A

---

None

---

These changes make sense. Our faculty is massive and a direct network to meet their needs and also giving faculty a say in the cabinet is very good.

---

Moving engineering advising to be general is a poor plan and will lead to students being improperly advised. Engineering advising should be department specific so advisors are well informed on the huge range of classes that vary in material and difficulty wildly, which their students they are advising will be taking.

---

Please fire people that discriminate based on a different race or gender. Please do not hire [REDACTED] and hire people based on qualifications. [REDACTED] are perfect examples that have the ideology of white

supremacy.

don't know enough to have an opinion

TAMU Faculty senate should prioritize the Aggie values of Excellence and Selfless Service over any proposed demographic requirements that could possibly detract from laser focus upon the ability of a faculty member to be an effective senator. Trust the faculty that have been selected and hired to work for the university to elect a senator based on the content of their professional character and not the color of their skin or gender.

Please don't do the plan. It's not a good plan. We don't like the plan.

Hire more faculty so their responsibilities can be spread out. Currently they have too much going on to effectively pursue every duty assigned to them. Provide faculty with training on how to effectively lecture. Most seem to have no formal training in how to teach a class, resulting in them teaching the same way they were taught. As a result most classes are structured much the same way they were decades ago.

Good.

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

Faculty Affairs seems flawed at such a fundamental level, that it might as well not exist. If the university won't listen to professors who are concerned about their own safety from having to teach during a pandemic, then what is it good for besides filling out payroll and resolving disputes over food being stolen from the communal fridge.

Good

Faculty affairs seems alright, just nothing too drastic should happen

N/A

Please don't change anything.

Faculty Affairs should stay in the Provost's office - they are the driving force of the University and deserve to be treated as such with seats at all the important tables, not pushed into an obscure department. The proposed Vice President for Faculty Affairs does not appear to actually have any accountability to faculty. They should be driven by and responsible to the needs of those who do the main work of this university, not serve as a top down directive of informing faculty about changes and allocating resources to them. Their role needs to be flipped as their responsibilities are way too big - they should exist as an advocate for faculty to administration and support center rather than an administrative oversight.

I can tell there is a whole mess in faculty affairs because no one wants to help each other.

If you think faculty affairs should report to the president directly then you should agree that the university-wide Diversity Equity and Inclusion post should report to president too.

The Faculty Affairs supports service for faculty across A&M.

Not a faculty member, so I do not have much knowledge or experience with this office. As long as their current needs are heard and considered, I am fine with the proposed changes.

I have heard that advisors are stretched thin in the college of Liberal Arts, why not try and hire more and work on new advertisement and fundraising opportunities for college of Liberal Arts. It is said that very intelligent individuals head A&M University, so why not come up with a proposition to raise money for the college of Liberal Arts without stripping the sole identities of different colleges by merging them.

I want to recommend if you can have the syllabus available a couple of days prior to the start of class so that we can come prepared. I do not like the sudden changes to schedule due dates that occurs throughout the quarter and without sufficient notice. Also, is it possible to reflect this in other sites like Canvas and Achieve? I talked to my instructor that I see inconsistencies in due dates and it causes confusion. My instructor told me that it is out of his control, and it is the Coordinator that is in charge and the Coordinator is the one that has control of the websites. I'm fine with deadlines but I do not like the confusion, and sudden changes. It has hurt my grade twice because of the insufficient notice with

changes. I see it a lot in my Organic Chemistry class. I see it once in a while with my other classes, but it would be nice that dates are set in place, and best at the beginning of the first week. Also, I recommend if professors can grade work within a week or two after the deadline. In one of my classes, I have not even received a single assignment returned to me with a letter grade. The teachers are nice, but it is nerve-wrecking to not know my performance in the class.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

None

N/a

Providing a VP of Faculty Affairs would allow autonomous decision-making in regard to the faculty which is a positive effect.

The faculty do such a great job in being present for all the students. They are involved so much with the students also as a TA i see how much work goes on in the biology program to make it the best it can be.

Regular Faculty are underpaid, while the administration and Vice Presidents are severely overpaid.

I disagree with the requirement of all teaching professors to have Masters degrees. Some of the best teaching comes from the knowledge which the APT Professors pick up from years in the industry. Real life, hands on, teaching, in my opinion, is much more effective and important than purely a theoretical education.

None

The fact that they want to minimize the amount of advisors we have and make all students go through those same advisors, sounds completely mad.

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be it's own department.

I don't agree with the changes for the department of biology joining the biomedical sciences department.

Recommendation #1 would be beneficial, specifically with recruitment and retention for faculty of color. I think that it would also be important to focus on growth and recruitment for younger faculty, as many faculty members are near retirement.

Tamu should stay and operate the same. No changes.

Our department needs to think about the report seriously. The MFA program is relatively weak but both MS and MFA can be strengthened when they can complement each other.

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

n/a

The VP of faculty affairs calls into question how shared governance would work at this university. This seems like a veiled attempt to take away tenure from our professors.

The faculty affairs are up to the task of meeting the useful information as expected. They help in dissemination and taking care of the students as required.

No comment

n/a

I agree that the bureaucratic nature of the office could impose issues of timeliness in addition to fairness of decision-making. I would propose that to combat this, the faculty within a given college are entrusted a greater role in making such decisions. The faculty are often more informed on the strengths and weaknesses of peers and should be given a large role in deciding who will be promoted, tenured, and newly introduced to the department. This would shift some responsibility away from the dean of faculty affairs, hopefully making him more efficient and promoting cohesion in showing greater value for the opinions of current faculty.

no comment

N/A

I think the structure right now is working and adding too much internal reconstruction will cause a fall of a great college.

Department of Chemistry organization is in shambles. Faculty/staff/office personnel organization are very incompetent, especially office staff for the teaching labs [REDACTED] is rude, condescending, and makes the lives of those who work with her difficult. She has a track record (10+ years) of being incompetent and abrasive, yet no one higher up in the department (chair, vice chair, etc) will do anything.

As a student I have no real comment

I am a student in the Political Science Department. I love the idea of merging it under the Bush School of government. My feedback is that I would love that it be done soon enough so that my degree can reflect that it is with the Bush School rather than under the College of Liberal Arts. Thank you!

Again, there is not much information dispersed about faculty affairs to students, and I may go so far as to say there is not even much given to student workers or TAMU staff. Sentences and degrees are passed down without reason or concern for the opinions of those they affect.

N/A.

Howdy, My name is [REDACTED], and I am a member of the Aggie Class of 2024. I am also a proud student in the Construction Science Department. I would like to provide my feedback in this report about the proposed changes that have been discussed in the MGT report. When thinking about the proposed move of the Department of Construction Science I had a lot of questions as I know several of my classmates had. Would Construction Science become an engineering tract, would we be able to keep all our professors (including those without PhDs), would our head of department change? My classmates and I have been discussing our thoughts on the report circulating back to these and other questions. When I first opened the MGT report and started reading about the changes proposed to Construction Science I was shocked to see how little of the article was dedicated to supporting the conclusions drawn. I was also shocked to see how many students were listed as respondents in the first pages of the report. Out of 500,000 people, only roughly 1,000 students had a voice in this report. Furthermore, I do not know of one Construction Science student who was interviewed in the preliminary survey. How can this be? When thinking about this topic, I thought about what it means to be a student at Texas A&M. I thought of our core values: Respect, Excellence, Leadership, Loyalty, Integrity, and Selfless Service. How does this report fulfill any of these values for COSC students? I have felt betrayed over the last few days with the lack of information and transparency that has been afforded to my classmates and myself. We are proud to be Aggie students. We are proud to be in our department. I came to A&M not to blow off and waste four years of my life, but because I wanted to do something with my life. Construction Science has thus far exceeded my wishes in all ways pertinent to my desire to be a Contractor. I have felt the value of my education in ways I know other students at different Universities and Colleges know nothing of. I have seen the application of my skills readily in my life, and I have grown to appreciate even more than ever the Aggie network and its spirit. How does the proposed move value the Leadership exhibited by professors who might lose their jobs if the change happens? How does the change exhibit

Loyalty to students who might find themselves in a forced change of major after working for years for their degree? How does this move value Selfless Service to the students of the Construction Science program who came to Texas A&M expecting to receive what was offered from the program? And how does this move represent Integrity when many students have voiced the concern that COSC numbers are simply needed for the Engineering program 25 by 2025? "The primary mission of the Department of Construction Science is to prepare students for successful careers and future leadership roles in construction and construction-related industries." I have seen this mission at work in my own education while here at Texas A&M. "In our department, we treat students like family." I have been thoroughly pleased with the Department of Construction Science and the skills I have been taught thus far. The program has aimed to prepare me for the workforce and to exemplify the Aggie Core Values. It is true that the program is equal to none. The sheer size of companies who are so readily willing to hire Aggie Construction Science students reinforces this point. I mean no disrespect to engineers or the College of Engineering, but the parts that have been so far the least helpful for the development of my skill set have been those classes in my major that most resemble engineering classes. That is not what my classmates and I came here to learn. The report said, "Moving the Department of Construction Science to the College of Engineering will enhance the educational experience and research potential for faculty and students in both organizations." I, personally, and a large portion of Construction Science students cannot see that being the case. Please take this into serious consideration. Thank you.

Construction Science is a unique field that does not belong in the College of Engineering. Construction needs all the business classes as most of us will go onto to control construction project finances. Also, most of the structure classes we have now are way too advanced for even the jobs we enter. Engineering classes will provide absolutely no benefit to Construction students entering the general contracting world. The college of engineering and what Construction Science teaches are two separate things that should not be included together. Engineers job and construction do not mix even on a jobsite as engineers don't build actual buildings, construction guys are the ones on the job building buildings.

---

no comment

---

One thing that I hope goes into effect regardless of the propose Faculty Affairs restructuring is better oversight on tenured professors and how well they are teaching. There are several professors my friends and I have had who are not good - sometimes to a concerning degree. They'll make racist and sexist statements in class and even though we put that on their evaluation forms at the end of the year, nothing comes of it because they have tenure.

---

N/A

Don't have any

---

As a Dance Science student, the proposed Performing Arts facility sounds fantastic. We have concerns however as far as how this facility will actually be used, and whether or not these proposed implementations will actually be completed and done well. There are certain structural needs that must be in place in facilities in order to safely house dancers that are different from what is required for theater - would these things be taken into consideration when building this new facility?

---

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

---

The College of Science SHOULD NOT be consolidated with the college of Arts.

---

The recommendation to consolidate into four large colleges is alarming and saddening. I desperately urge the university to reconsider the benefits of smaller colleges, particularly in regards to student retention and recruitment, faculty and student wellbeing, diversity, and research. As a geology student in the College of Geosciences, I speak for myself and my peers when I say this will remove the main reasons students come to A&M for geosciences. When searching for colleges in high school, I originally ruled out A&M out of fear of being swallowed up in a large school. Upon touring the campus, the familial culture of the College of Geosciences, the small class sizes, administrators who know you by name and are willing to bend over backwards to help all endeared the A&M to me. What was unthinkable became my first choice. Many of my peers chose A&M solely because of this. By removing this significant benefit, you will be losing a large portion of prospective students resulting in a lower overall caliber of student recruitment regardless of your efforts to better it. Now a senior, I love the College of Geosciences administrators and advisors, having been able to build personal relationships with them that the large colleges cannot boast. If we are merged, many of these stellar administrators will be laid off or overburdened by the addition of many times more students and a wide-even hodge-podge- collection of majors. We here in geosciences can trust our advisors to know us, our personal goals and struggles, and know they will do everything in their power to help. Not so in the other colleges. In the College of Engineering, for example, advisors do not even know the students faces and the relationship is stiff and cold. I have known many engineering majors struggle to get help in applying for classes, learning of resources etc. because their advisors are so overworked. Merging will only exacerbate the struggles of the larger colleges while dragging down the smaller. This lack of support will inevitably lead to higher dropout rates and mental health struggles. Students like me will feel more isolated, not less. We identify not just with the university as a whole, but as a college with its own unique culture that will be lost with a merge. This move will also harm diversity. It sounds counterintuitive at first, considering the College of Geosciences long struggle with diversity. I make this claim primarily in regards to scholarship. Geosciences is a college with lots of funding due to our important research and participation in IODP. We pull in well more than our weight, especially compared to the arts. The college takes a significant amount of grant money brought in by professors to aid in scholarship and facility development. For our professors, it makes sense that this money is taken as it will be fed back to their own students and facilities. If it is shared with the liberal arts, which brings in much less money despite its larger size, the cut of money being fed back into researching, funding earning students in the College of Geosciences will be harshly reduced, resulting in a lasting decline in productivity and therefor income. Scholarship money is already spread thinly in our college as it is, and it is a significant help to those students who can get it, particularly minorities. If we merge with the Colleges of Liberal Arts and Sciences, our money will be redistributed away from us as we are a much smaller number, yet more prolific college. Our scholarships will be reduced further to accommodate this reduction, pushing poorer students and minorities away from the geosciences when we should be striving for the opposite. Additionally, the merge into a College of Arts and Sciences will hurt the image of our colleges. When I hear arts and sciences lumped together, the first thing that comes to mind is weak science. Is that what we want our university to represent? Prospective science and geoscience students want a college tailored to them and their needs. Think also of the college specific Living Learning Communities (LLC). These, specifically the Geosciences LLC as I was a member and peer mentor of it, strives to welcome students, give them a community of students with similar interests (the geosciences) and teach them things that are useful to know in their fields. An English major wants to learn aesthetic writing while a Meteorology major needs to unlearn that from high school and learn technical writing. Research, job

searches, interviews, types of classes are all vastly different. LLCs are able to specially design their courses to best help their specific students. The LLCs and colleges know this and tailor their resources accordingly to best fit their students. This helps both the students and recruiters in promoting our familial image. Loss of high quality applicants could even lead to the loss of IODP, a major source of pride and income in the College of Geosciences and unique to us in the entire western hemisphere. Even risking its loss would be irredeemable damage to our image and recruitment. Art and science are both noble fields, but are too different to reasonably combine. One or the other will suffer as what is beneficial to the arts will harm the sciences and vice versa. Are such minimal benefits as the convenience of a few upper administrators really superior to the wellbeing of faculty, staff, and students? Has a single person wished their college was larger and less personal? I think not. There are other ways to insure consistency of values across the colleges without merging that will not result in lower enrollment, fewer scholarship opportunities, higher dropout rates, worse mental health and community. Reducing spending is no use if it results in an even larger loss of income. Because of my strong love for this college and university, I beg you to reconsider.

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

I do not have comments for this.

The report is correct that faculty retention is extremely important. Students prefer to work with the same professors for extended periods of time.

Investing in minorities and expanding diversity programs is much needed in today's climate. Also like the performing arts center idea, since there is also a dance program on campus

none

N/A

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

N/A

Faculty retention should be prioritized and the proposition to provide a clear succession path should be implemented.

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

N/A

Make it easier to complain about crappy professors and TA's. Assign someone to take that information provided by students and actually be able to do something about it. Shouldn't matter if the professor is under tenure, priority should be helping the students not helping themselves.

N/A

Just remember you are representing the Texas A&M University, you have to adhere to the values, ethics and views of the University' current students and Alumni. Not the other way around. You're not representing the University of Texas or any of their systems

## Faculty Affairs - Former Student

Please provide your comments related to Faculty Affairs:

I agree with ALL of the recommendations in the report on this topic. Hiring and evaluations of faculty must be improved to ensure all A&M System campuses--especially the main one in College Station-- hire and retain faculty who WANT to

be part of the A&M culture, not just "have a job" or just conduct research, only. They must be willing and able to teach regularly, engage with students often. If they are opposed to our culture and our history, they can do so at any other fine university.

---

Improved focus on recruiting, developing, and recognition of faculty is a positive move.

---

No significant opinion on this point. Please just try to keep decisions on faculty & staff merit-based (which is not equal to seniority-based), and try to limit how much politics plays into any decision making (on either side).

---

Get to what ails Texas A&M - PC. My son, an honor student and Commanding Officer of his Corps squadron. took a course in African Studies. He expected a liberal bent - there was such a bent, But the liberalism went too far. He had to write a research papers, but was limited by the faculty member as to what references he could use. All the allowed references were very biased in their point of view. This is not right,

---

needs reorganization

---

faculty should be held to the highest of standards. all professors should be reviewed based on teaching assignments and whether they are fulfilling them adequately. too many faculty, particularly those who also do research, are not doing their job and the students suffer.

---

This MGT survey was an abomination. Pushing the narrative further to change the campus and overhaul it to be another run of the mill university. What gives Texas A&M it's strength, power, and future, are the very things that make us unique. Curious how none of the universities we were peer/compared to are even in Texas. These comparison universities are beneath us, or different entirely, in the same manner as milking a cow vs milking a bull, and the complaining that your milk tastes differently. Cherry picked data to justify hitting Texas A&M with a banhammer and to alter the university, remove it's identity, entirely. People say that what we identify as matters, well Texas A&M identifies as Texas A&M, and if you refute that, you're a bigot and are dismissing the lived truth of A&M. Yes the College of Engineering is huge, as it should be. Advising is decentralized, governed by each major, as they should be. You'll never have a one size fits all approach, and trying to shove the university and it's respective colleges into a "big box store" feel, as this report would suggest, destroys the very fabric of what makes us Aggies. Trying to shove in 25,000 engineers by 2025 risks diluting down the degrees or simply put, dumbing down the curriculum to pursue more students. Additionally, merging the College of Fine Arts and Sciences, as many smaller east coast schools do, does not make sense nor enable either entity the ability to perform as unique and necessary institutions on their own. If you wish to improve the university, might I recommend cost saving initiatives like never paying for another such a slanted and asinine survey again. Perhaps considering cutting the University Administration's salaries by 10% as well. Speaking of cost savings, DO NOT outsource student on and off campus transportation. The current model makes sense, and such outsourced services at other universities always ends up being more expensive in a matter of a couple of years than any immediate cost savings might hint. You will pay more, get less, and be confused as to why... Why was this even an option? Look at what happened with outsourcing dining services. Pursuing diversity over meritocracy, over talent or the outcome, is a fool's errand. Diversity should be cultivated organically and naturally, not forced and mandated. Diversity is great, but chasing metrics and numbers over anything else and rejecting the notion of assimilation while encouraging the students to celebrate what separates us is not healthy. Change for the sake of change simply to change and virtue signal will not yet results, will not bring us together, and will not continue the ability of A&M to be a natural melting pot. Let talent speak for itself, and let those who wish to join A&M do so freely. The desire to erase campus landmarks to resemble west coast university appeal also does not sit well with me. Remarks about the Corps of Cadets being "too Caucasian" is not only insulting to our diverse group of Cadets but a surface attack on the Corps' rich history and selfless service. Creating more commissioned officers to the US Military than all the service academies combined should tell you that the Corps has the ability to form the talent, respect, and love for each other that is required in a military environment. The Corps of Cadets, and the College of Engineering, are fine examples of successful melting pots creating cohesion and powerful leaders. As they say, Highway 6 runs both ways. If faculty, administration, or students, do not like Texas A&M, they are free to leave whenever, and can go attend or work for a university more aligned with their emotional support needs. Those who wish to be Aggies will be Aggies. The University has thrived for a century and a half being run the way it is... Forcing us to change to be similar to UCLA or Maryland will destroy our identity. I say this as a First Generation Aggie, who came not from wealth, but a family of poor immigrants, refugees, and poverty. As the first in my family to go to college, A&M represented everything I aspired to pursue and be. I took on tremendous debt to break the cycle of poverty in my family. Texas A&M was the beacon to freedom, and it still is. The desire of the MGT survey

however risks undermining that legacy for the Boogeyman fighting game of "equity" and "diversity and inclusion" while throwing out the University as we know it. I strongly believe the MGT Report offers the chance/opportunity/paper thin justification to radicalize and change the University to better suit the political leaning aspirations of those who dislike Texas A&M.

---

I concur with the report findings.

---

Howdy, My name [REDACTED]. I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for [REDACTED]. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, [REDACTED]

---

My, and I believe that of most Former Students, sincere fear is that our faculty may divert from their accredited subjects to expound upon the current leftist trends of "wokeism" and or Marxism in the classroom. Their personal feelings should be left outside the door as they impart only their professional knowledge to students.

---

Question is vague, as a former student I interacted with faculty but can comment on their affairs

---

My daughter is a second generation Aggie and her experience is way different than mine on the 90s. She had great professors but also some really bad ones that seem Unengaged with poorly written and executed syllabus' and ignore student emails or requests for office hours.

---

Online classes need to end. Hire more faculty to support the student body population or don't admit as many students. Students want to be in classes. We pay too much money as orients not to have our kids sit in class rooms.

---

The new VP of Faculty Affairs needs to ensure professors and teaching staff are held accountable for academic and teaching standards expected at a world class university (this includes timely grading, response to students and actually meeting with students during office hours). Professors/teaching staff with poor performance, two semesters of unsatisfactory performance reviews and continued negative feedback from students should be disciplined up to and including termination, regardless of tenure status. Professors/teaching staff who are not interested in the well-being of students should be encouraged to transfer to other institutions or retire/resign.

---

The comments I made regarding the Provost Office also apply to Faculty Affairs.

---

Agree with most recommendations

---

I generally agree with the proposed creation of VP of Faculty Affairs that focuses on recruitment and retention of qualified faculty and undergraduates. However, I would hope that the new VP remembers the office goals and objectives and does not simply use this position to grow his / her "empire."

---

Recommendation #1: Create a new Vice President of Faculty Affairs position. Disagree. The duties outlined in the report should be the responsibility of the Dean of Faculty. A New VP position would create another layer of unneeded bureaucracy.

---

As I stated earlier, I support the creation of a VP of Faculty Affairs that reports directly to the President.

---

I like the idea of a VP of Faculty Affairs

---

Tenure system needs to be abolished which would eliminate the early retirement system for many faculty members. During my years as a graduate student too many courses were self taught with the professor doing little preparation. Isn't the reason for graduate studies to get exposed to the knowledge of learned professors. It just doesn't happen. The concept of Academic Freedom merely allows tenured professors to indoctrinate rather than educate.

---

In sports, you may have good coaches, but the team's success is largely determined by the athletes recruited and how they are developed and kept happy. This reorganization would go a long way to accomplishing the same thing with our key "players"- those who teach and research. They will have a more organized and effective information flow to the president's office.

---

The new post of VP is a positive for faculty as stated in the report provided the department works closely with the Provost office and the Academic Deans.

---

No opinion

---

No comment as I am not totally cognizant of the issues.

---

No comment.

---

a. Recommendation #1: Create a new Vice President of Faculty Affairs position. i. Finding 1: Disagree. The current position of Dean of Faculty can perform these functions without creating another new position or layer of "oversight" between the President and faculty.

---

I support these recommendations - at least on paper. A&M should be a great place to work. We need to give top notch support to make that happen. Where the rubber will meet the road will be to put outstanding people in these positions. And don't just leave them there if they are not delivering outstanding service, resources, etc. to faculty. Get the right people in place and empower them to do their job.

---

We didn't realize there was an issue to retaining or replacing faculty. We're not sure some of the 'diverse' professors you're seeking will want to live in College Station

---

It is very positive that there is a recommendation and initiative for succession planning and talent development. This strengthens an organization, strengthens individuals, motivates individuals, and would translate to improvements to the students education. I have expertise in leadership development and a number of tools to use for the such. If you are interested in talking to me about this. Please let me know.

---

Architectural faculty should profess design by team!

---

Hire faculty that believe working at Texas A&M is an honor and privilege. Not a job. Professors need to help students succeed, but that can't be done with huge classes. A&M should pride itself on small class sizes and not just running students through the mill. There is absolutely no evidence that A&M is going in this direction.

---

These appear to be sound recommendations but again.....a lot of emphasis on diversity rather than qualifications.

I disagree with this recommendation. Removing faculty management from office of the Provost and Dean doesn't make sense. I agree the function should perhaps be elevated, but rather than a VP, create an Vice Provost position with functions specified.

Definite improved recommendation. A VPres to ride heard on strictly faculty affairs and management makes sense.

needs to go.

Agree with recommendations

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvard and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

Faculty is always difficult with smart individuals and financial department turf wars present. Reorganizing to give a unified voice without other things crowding the time management needs to give to the situation is a good thing.

Recruitment and retention of quality faculty is important. However, faculty members who are using their position to promote a personal agenda should not be allowed. There are numerous unofficial reports of students being treated unfairly because their personal beliefs do not align with the professor's personal beliefs. Please understand these students are afraid to speak up.

I'll defer to the faculty on this question. Whatever can make their jobs easier and better, I support.

Professors should be held to the highest standards of conduct – it is not appropriate for our professors to talk about murdering or having dreams of killing members of our government. This happened a few years ago and the professor remained on the staff. It is not acceptable regardless of your political affiliation. Professors should lead by example and uphold our Aggie culture and values.

None

No specific comments.

I do not disagree with the report's findings and recommendation for Faculty Affairs.

The threat to the university's moral and conservative reputation. From an outsider looking in, the biggest threat seems to be coming from the faculty. This great university cannot allow subversive influences from its faculty, even in the name of free speech. Employees have a responsibility to their employer to avoid actions that are detrimental to the company. So should it be with the university, even if it is a proponent of free speech. Subversive actions/comments against the university should be met with harsh repercussions. Deal with them as General Earl Rudder would have. The employment application could include the question: "How strongly do you support the U.S. Constitution?" (on a scale of 1-5). Anything other than a 5 response should warrant additional interrogation/investigation or at least be used as a hiring

discriminator.

The recommendations with respect to creating a VP of Faculty Affairs are needed and appropriate. It is unknown whether efforts to provide a faculty platform could be incorporated into the functions of the faculty senate, but it could be a possibility. It seems appropriate and necessary to promote objectives with respect to tenure and faculty advancement. While I strongly support succession planning it is my understanding that diversity in faculty from other academic institutions is also important and necessary. Anecdotal feedback from faculty I have interactions with have confirmed existing struggles with excessive bureaucracy and slow decision making. (Including frustration with meetings and committees to plan for meetings and committees.)

The administration is better qualified than I am, but many of the recommendations make sense to me.

Na

Faculty at Texas A&M definitely need more support, especially those in disciplines that are not engineering, sciences, or education, which is frankly all the school managed to invest in previously.

Support VP of Faculty Affairs & think faculty should be supported, heard but , a big but... they are to teach, explore all sides ... give our young people chance to think & form their own opinions. Who screens, hires & monitors classrooms? What kind of faculty do we want to attract? Who is making those decisions?

No comments.

As a former faculty member, this new structure seems like it might be more responsive and effective in continual strengthening of faculty supporting the TAMU mission.

If the faculty and administration believe that these changes benefit the operation of the university then these changes should be implemented.

I think it is vital to build trust with faculty by devising more ways for them to be heard and build trust with leadership

The Journalism degree should be kept under the department of communications as the two disciplines provide complimentary instruction for students wishing to pursue promising careers in media, advocacy, public service, and corporate affairs. I fear the lack of a focused journalism degree will diminish opportunities for students wishing to pursue such a major at TAMU and look to other schools such as UT or UH that have dedicated journalism programs. I minored in journalism and went on to attend the Bush School where I graduated in June of this year. I find my journalism background very helpful in my career as a Public Policy consultant where I worked with tech firms such as Salesforce, AWS, and AT&T to build out their government affairs framework. The practitioners, professors, and administration within the communications department are well-versed in curriculum related to media, communications, and journalism and, I believe, the best to be teaching the subject at this university. Please keep the journalism degree under the department of communications so students can receive the top-tier instruction needed to pursue the career of their dreams.

I hear from current students of professors that are "forced" to teach classes they don't want to and how it shows in their lack of effort to educate the students. I find this very concerning.

The erosion of Texas A&M culture due to the erosion of faculty that graduated from Texas A&M is alarming.

Mostly seems like consultant speak for reorganization. IS there really a problem that needs to be fixed?

As stated in my comments submitted in the Provost Office section, the unabashed pursuit of diversity goals is not what Texas A&M needs, nor will it result in improved rankings or greater achievements of its students. Instead of focusing, "...special attention to assist growth, recruitment and retention for faculty of color" why wouldn't Texas A&M prioritize finding the best possible person for a given position? The stark and blatant goals of pursuing faculty with a certain skin color instead of the best person for the role isn't a respectable step towards improvement...it's racism, plain and simple.

To pretend that an appreciable portion of students would perform better at school if only there were more faculty of their race is to infantilize both the students' maturity and their intelligence. Texas A&M must be a bastion against the creeping tribalism that has overrun so many other universities and institutions, driving them to ever broader action in order to appease different stakeholder groups created by the very actions those institutions took in pursuit of increased diversity. Texas A&M students don't need this type of educational and interpersonal coddling from their school administrators, they need to repeatedly hear the truth: they are welcomed as individuals into the Aggie Family, their racial and ethnic particulars are not what defines them, and they are all seen as equals in both their potential level of achievement and their personal responsibility for their own actions.

I concur with the recommendations in the report and believe there must be greater focus on hiring and retention of diverse faculty.

Uninformed, so no comment.

I do not have enough personal experience of knowledge to comment on the study's recommendations in this area.

N/A

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts.

The new organizational chart looks as if more positions are being created. Is there a real need for more positions?

Recommendation #1: Agree, but with oversight. This is a very powerful position and is ripe for abuse. There needs to be a structure that encourages hiring and promotion based on merit and student satisfaction not DEI metrics. Liberal activists that degrade our history and culture (which already embraces diversity of race, gender, ideas, and speech) should NOT be in charge of hiring and promotion.<sup>89</sup>

The faculty and the students are the university. The administration neither creates nor disseminates the new knowledge on which the reputation of the university depends. It is necessary to free the faculty from the constraints of a top heavy administration and the restrictions of academic boundaries in order to increase dialogue and creative intersection among the diverse disciplines resident within the university community.

Again, with the mention of diversity, hiring faculty of color, and changing demographics. The office needs to focus on hiring faculty that have obtained status in their fields, are qualified to teach, and will bring prestige to the university. Color of skin does not matter. The office also needs to focus on recruiting students who can handle the rigor of the university, not water down traditions, or wish to change the culture. Admit students who want to be there and are qualified, despite the color of their skin or the culture they come from. As a latina woman I am sick of hearing that people will recruit me to fill a quota. Recruit me because I am worthy.

More progressive nonsense.

It seems we have a high turnover rate and very low training for faculty. I agree, we could strengthen our faculty by naming a new VP of faculty affairs and have them report directly to the President. Here again, if we hire Aggies, they

will never want to leave because they have Aggie Pride and want to make the university the best it can be. I also agree we need to work on retention and development. I would, however, look at why we have some tenured professors who are an embarrassment to our great university and yet they still have jobs. This reflects poorly on Texas A&M. There needs to be stricter control on professors that are constant agitators and who defy school policy and the law. Those folks give our school a bad name and discourage good professors from applying.

20 new units??? Does the president really need a new cabinet member? Are we not doing any of these tasks already? Why was the current organizational chart not included? This study uses a lot of words, but doesn't appear to tell the current story, just criticizes it.

No comments

My wife is a faculty member at a Big 12 school, and helping the development of faculty is very important. Different departments vary widely in what they offer - and woe be the faculty member on the outs with his or her department. So, the new Faculty Affairs section will be helpful

A&M is unique, and I am certain the faculty would like more input into certain aspects, but I also believe there has to be some balance. From previous years there is a strong feeling of loss of some of the conservative nature of the school and faculty.

None

A&M has grown so large over the years and it appears we cannot keep up with the growing number of students. Students cant get into classes. Not enough classes. Not enough staff to support all the classes. Impossible to get into see an advisor. And advisors often are not giving correct information. Over the last several years we have seen staff members who are not upholding our core values. Their behavior is an embarrassment to the University. Faculty needs to uphold the values just as students do. When hiring faculty, hire staff members who support A&M values and traditions and culture. Not those that want to fight the system and divide the campus.

Faculty and staff should most definitely have a clear path to progress through their careers whether just starting out or tenured to retiring. Having a department that focuses on academics is critical. Research is great and I am sure bring in the money but faculty need to be trained on how to EDUCATE not just read a power point and create exams. The 2 year institutions have great faculty who focus solely on teaching. They are not beholden to money from grants or producing set results from research... maybe there is a lesson there. Train faculty with PhDs to teach; that training can come from the faculty affairs division that was recommended sort of a center for teaching and learning... then we can produce students that have learned more... because they are taught with better faculty. This can be an innovation in the education program....

In this case proposing the addition of 2 more VPs to the TAMU leadership is difficult to understand from a cost perspective. The fact that one position will essentially replace the Dean of Faculty is a plus. The addition of yet another VP over faculty affairs for additional overhead is a concern. The argument for the need of the position with respect to the duties on the position is persuasive. However, the recommendation to "sunset" outdated programs should also be followed, along with as assessment of the value added of all VP positions. The response to this report should not be solely to increase overhead positions at the university without also reducing overhead in other areas. This doesn't need to be a net-zero proposition, but considering the cost of tuition (I'm also PES donor and an Aggie parent) and the services I've seen students receive the last 7 years, I'm not in favor of solely adding overhead without any benefit to academics.

Want too much power

Reorganization to give the faculty a greatly missing voice is needed. Communication is greatly lacking as is support of the faculty.

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

None

I appreciate the suggestion of overseeing all departments in the spirit of financial efficiency.

In favor of a VP of Faculty Affairs to improve communication and feedback. Historically, the relationship between university level faculty and students has been odd and disjointed to say the least. There's a definite disconnect. This

must change, so that the typical warning given to most incoming freshmen regarding how to approach a professor should no longer be necessary. Approaching and communicating with a college professor and his/her staff should be much like a student approaching high school teachers and administrators. Professors are notorious for pushing their graduate student as the liaison, the intermediary, the go-between. So, if this new position VP of Faculty Affairs will also improve how professors choose to connect with students, communicate better with them and be approachable, I'm definitely in favor. Obviously the majority of what was written regarding this new position was at the hiring, retaining level from the top. Please do not forget about that professor/faculty member and his/her students and communication that must improve.

---

No comment.

---

NA

---

We need to do a better job in the College of Engineering with providing better quality faculty and incorporating more professors of practice into the faculty. Students are generally not getting a good practical experience. There has to be a way to separate research from teaching. In some cases you may have researchers that are good teachers but my experience and that of my daughters is that it is very rare. The College of Business seems to have figured this out well. There also needs to be more transparency during registration as to who will be teaching the class. If this is done, you will see very quickly who the poor teachers are as the students will avoid them like the plague based on past ratings and reviews. I have also gotten this feedback from interns that I have hired. The curriculum is lacking in the application side of the theoretical.

---

The only problem I have is when qualified professors come to the school from different parts of the country and do not get the vibe of the university. It's unique and filled with really smart kids. They are coming from areas that are filled with overwhelmingly liberal mindsets. I'm ok with this as I believe discussions should be robust but I am not in favor of making this into NYU or UNC or Berkeley. The whole....the Corps is too male grated on my nerves. Women are in the Corps. We had our first female commander who was incredible. Is the faculty encouraging all types of members to apply?

---

I have become extremely concerned with the "radical", public statements and positions of some faculty members - particularly those in the last few years which seem to incite hatred and tear at the fabric and public reputation of our university. I would expect there to be provisions for better background checks and for more prompt disciplinary action when the actions of a faculty member (or student) are deemed detrimental to the mission and reputation of the university. Please continue to recruit and retain world class professors and faculty...and do a better job of marketing/highlighting them as a great and positive asset. Also...please continue to expand and promote real, practical faculty recruitment and initiatives like "Professors of Practice". From my own experience - the lessons I learned from professors (and lecturers) with real world industry and commercial experience were far more valuable to my own professional success than ANY single pure academic/theory class I took.

---

To retain the best of a diverse faculty, and to preserve their experience and knowledge, there should be a system for retention of knowledge and best practices, in order to allow the faculty to pass along the best of their experience. Plans should be put in place for faculty development (in the professional sense). Establish a faculty/staff (career) life cycle model based on developmental milestones rather than calendar points. Develop a strategy for faculty regeneration and replacement.

---

Faculty needs to be held accountable when they call for going against the principles of Texas A&M University. When faculty goes against the core values or code of honor, having tenure should not matter. Last summer when an anthropology professor called for the destruction of campus property he should have been fired. When he told his students to wear a hat inside the MSC he should have been fired. As a former student with no current ties to the university except being a football season ticket holder, if I am aware of these things I know darn well the upper powers with authority know these things as well.

---

Teach and do not indoctrinate. Honor A&M Heritage and Tradition above Woke and so called diversity.

---

N/A

---

I agree with the recommendations in the report.

Just moving people & positions over from the Provost, are all these positions still needed or consolidated? So it is hard to see how many people currently report to the Faculty Affairs position. There needs to be care in not increasing overhead/people or a lot of new positions. Sadly this report does not include #'s of people involved and is too general, in my opinion.

XXX

The faculty and staff seem to be pretty much satisfied with things (70% +/-). If it ain't broke, don't fix it.

Faculty members should focus on their academic area. Aggie grads, and I hope most current students, are willing to listen to arguments for cultural change at A&M of all types - from faculty members and student alike. However, these discussions should develop as "food for thought and considerations for change" and should not degenerate to activities that bring negative attention to the A&M campus.

Recommendations sound logical.

Agree with assessment, not enough freedom to express their ideas.

The organizational charts were incomplete this section. I am not sure where the immigration services for faculty and scholars will go as the office is placed in two different places in the report. The office should ideally be under the VP of research where it can coordinate with the export control office to ensure that the university is following the export control and immigration regulations properly. The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit?

The recommendations seem appropriate.

None!

In the area of recruitment, MGT emphasizes the need to diversify faculty demographics in order to achieve demographics that mirror those of the state. This over emphasizes racial and cultural diversity at the expense of diversity of ideas, which would bring real educational value, and cannot be achieved by focusing solely on race and cultural background. Additionally, we should focus on academic excellence above all other criteria in hiring, with a true appreciation for A&M's unique culture as the next most important consideration.

See below.

Texas A&M has some of the best educators in the world. These recommendations will strengthen that.

Approve of suggestions.

None

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

The college of Architecture needs to hire more industry experienced individuals to teach, and pay these people a salary competitive with the private sector. Also, when I was a student there seemed to be drama between the faculty at the College of Architecture. All of the personalities are needed in order to provide the students a well rounded education. Construction science must remain with college of architecture. VIZA could move to new college of arts and sciences, but a program specifically for architectural visualization and rendering should be created in its place within the college of architecture.

N/A

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

---

n/a

---

I approve the recommendations.

---

We had a son who graduated from the University of Virginia and the mentoring of their faculty was something that amazed me and still causes us to support their work with today's students. It made me remember a couple of profs that really helped me during my senior year. I hope that strong, solid bond still exists between faculty, its academic codes and commitment, can emerge as one of the strengths of Texas A&M as well.

---

No specific comments on the Provost Office.

---

Faculty is awesome

---

As a Former Student, I'm shocked that the University has allowed a small number of radicalized faculty to hold a megaphone for all faculty. All across America, businesses have standards by which employees may not promote hatred or violence. Even current students are held to those standards. The University should hold faculty to the same standards.

---

There seem to be some worthy recommendations. However, the MGT authors seem not to understand the history nor the transcendent greatness of TAMU as a land grant institution! We are not a liberal college nor do we want to be! So to imply that we are trying to convert us is NOT where we want to go! to suggest that we are lacking in this category is rubbish! What we need to concentrate on is fixing the radical left's influence in that College! And, the Faculty Senate has a "say" in these affairs but they do NOT decide! Since they were the only cohort mentioned at the beginning of the report is insulting and totally unprofessional! Same of MGT!

---

The report states "focus on faculty recruitment and retention as well, including special attention to assist growth, recruitment and retention for faculty of color". There is no stated provision for disciplinary authority.

---

After reading the repor it is hard to know how to comment on it. It looks to focus on restructuring in ways that the average former student may not be able to evaluate.

---

I resent the independent actions, comments, publications of any professor, no matter what level, without the prior approval of their employer, TAMU & the President. All of us should have respect for the traditions of TAMU.

---

Focus on your people and success will come. I completely agree with using resources to further advancement of staff because that will directly translate to student success.

---

I know we're a huge university, but I am surprised and bothered to learn the faculty has not had a direct line of communication with leadership. The recommendations are sound.

---

Dean of Faculties is a dinosaur position. This change is both progressive and can eliminate an outdated structure with conflicted goals and objectives.

---

Professors should be the advisors of students, when you have others in that role it is the least effective. Faculty hate it and students do as well.

---

Same comments as provided to the Provost Office.

---

As a Former Student bus driver for Texas A&M, this is the only capacity in which I can speak to Faculty Affairs (though I did attend a Faculty Senate meeting once as a member of the Student Senate). I drove buses across 3 calendar years and had over 1500 hours behind the wheel under the TAMU Transit department. When the SWOT report spoke of department siloing and unclear leadership I immediately thought of this branch. The students are ok, but some of the senior leadership at Transit as well as the veteran (full time) drivers have some sketchy things going on. There are inconsistencies with how staff is punished when they fail to perform, and that's not getting into the weirdness that some of them have (see linked news story, from when I was driving and was using the restroom in question - <https://www.kwtx.com/content/news/Ex-AM-employee-arrested-on-charge-of-hiding-camera-in-restroom-510078841.html>).

---

What would this new VP position do... the bureaucracy at this school is plenty big as it is.

---

Don't take good jobs and pensions from the citizens of College Station.

---

This group needs to vigorously defend the right of free speech by faculty

---

Having never been an employee or faculty, I can't really comment.

---

Please review professors who are agitators. Those who do not represent Aggie Core Values should not be on campus. Acceptance of all points of view must be adhered to on a public university campus. One may not agree, but they cannot work to silence opposition.

---

The center for teaching excellence should follow the faculty to the new VP for Faculty

---

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

---

Recommendation #1: Create .... Agree, the faculty needs a voice at the highest level.

---

Please make sure you have checks and balances to prevent Marxist or Socialist professors from preventing free and open dialog for our students to learn.

---

Faculty affairs. Over the last 40 years my Former Student eyes have witnessed an increased employment of left leaning professors. They seek catch words like equity and equality. They thrive to recruit philosophies and theories which reflect them. Our faculty members have no understanding of conservative ideals. And thus they find our thoughts foreign and strange. Our faculty members want our Former Student monies, an endless stream of our treasury they seek. Do they give back? No. They want more liberal failed ideals. Do we need more diversity? No, we need to accept students who seek our conservative ideals and tradition of loyalty. Do we need a stronger Faculty Senate? Absolutely not. We need employees who understand the term "Yes, Sir". As long as they accept our money and support, we the Former Student require their loyalty to what has served us a lifetime.

---

If this saves money, implement it.

---

From my perspective there is a REAL disconnect with the faculty. Over the past several years my conversations with faculty members has been concerning regarding the first priority of Texas A&M - the students. I've routinely been told that "research" is the core focus of A&M and that the students are a "necessary" requirement. Respectfully, the students should be the PRIMARY focus of all faculty, staff and administrators. Research is indeed important and A&M plays a vital role in providing cutting edge advancements in R&D. This said, most students attending A&M are interested in learning life long skills and WORKING outside of academia. I would opine that the success of the Association of Former Students is based on A&M's historical investment in teaching life long skills of these former students who now contribute back to A&M. If A&M continues on the trajectory of being what one professor told me "the Harvard of the South" then the University will be losing the "long game" of a core value - "students first".

---

I definitely believe that there are improvements to be made to improve faculty training and feedback within the university, but I don't agree on centralizing it too much so that you have people from say the College of Liberal Arts trying to tell the College of Engineering what they should be training on and how they should run things. For instance, emphasis once again in this report is placed on "color" of professors meaning the color of skin that someone else deems as NOT having the color that they want and think is under represented. I haven't ever seen a report at an ALL black university stating that they need to include more white faculty, or an ultra liberal university stating that they need to

---

find more conservative professors to better represent the demographics of the state. By the way, I didn't see in the report the political diversity needed amongst professors because there aren't enough conservative professors. You definitely do need more conservative minded professors especially to represent the political demographics of Texas being over half conservatives here. If you think that student political demographics should be representative, then professor political demographics are definitely fair game and one of the most under represented groups.

Many of the faculty at the university need to be terminated immediately. Teaching of anything CRT related, race biased, etc. needs to stop. We need quality teachers that are not part of the lunatic left. We need teachers who teach facts, not their political viewpoints. If they don't like A&M's culture, they should feel free to go somewhere else. Do not create anymore groups to support faculty. This is a waste of taxpayer and former student money. We do not need additional committees. We need less. Address individual issues as they arise. Professors should not be focused on their own self-interests.

I have no comment on this other than it looks like the new organization will allow this part of the organization to function more efficiently moving forward as it will not be reporting into multiple directions or leaders.

Good

It is a bad idea to create a VP of Faculty Affairs.

No faculty should work within the system who is known to be anticapitalistic, anti-American, politically or racially divisive.

I like this recommendation as well as it seems like it will improve work flows.

Effective faculty management and attracting younger faculty is critical to ensure top-tier learning opportunities.

Don't go woke!

Proud that faculty tends to become better and better

My perception is that the Faculty Senate is too powerful and is not that good of a reflection of the sentiments of the majority of the faculty.

You need to balance the workloads so that women Professors have an equal opportunity to succeed.

There are a lot of politics involved in the Faculty Affairs which polarize the hiring and retention efforts. This is reflective of the condition of the state of politics on a national basis. Many of the various Colleges within the University system are comprised of more conservative thinking and values which conflicts with the normal bias of the majority of Academics Professionals on a National level. This is reflected in hiring and retention at every level. Equality across all levels based on Merit and not equity charts will make the TAMU System better academically and in all Research. We want the BEST not to be the top of the "equity" charts.

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

Can't comment.

I already hear enough wining out of faculty. They need to remember Highway 6 runs both ways and that they are at Texas A&M, not some liberal cesspool. If you think the new item will address that, great. Otherwise don't waste taxpayer money. This is also another paid position when all we hear about is how much money you don't have.

n/a

Agree

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

None

Yes, Profesional development is needed along with cultural sensitivity training

---

I don't understand the issue enough to have an opinion here.

---

The color of a persons skin should never be relevant in hiring decisions. Good faculty members want to work at the best college. If TAMU focuses on being the best college, the right people will want to work there. We have to drop this motivation to hire people from certain demographics. If you're the best, nobody cares.

---

With high demand for more faculty/high profile faculty, changes that provide more support for our faculty could be a differentiator towards acquisition and retention.

---

Earlier this year I submitted an application for a Professor of Practice position in the new Environmental Engineering Department which had formerly been under the Civil Engineering Department. A third party web portal was used to collect most of the application and reference information. I had been in contact with the Civil Engineering Department as a C.E. graduate in 1982 and P.E. in 1987. I had also been in touch with [REDACTED] [REDACTED] I felt I had both a strong application as well as very strong references. Through the formal process the communication with candidates was almost nonexistent. My references were not contacted. I was not interviewed either by phone or in person and I was sent an email that other candidates were stronger and that I was no longer in consideration for the position. I certainly know nothing of the other candidates or who eventually was placed in the position. My feedback here is my extreme disappointment with the process and communication. I am concerned about the DEI agenda swinging too far in one direction. The University is moving quite far from its past culture and is beginning to alienate a significant sector of the former student population. This dilutes and weakens the Aggie Network which has been one of the most compelling factors in attracting the best students to the University. Os Guinness' recent book titled "Last Call For Liberty" uses a term to describe the evolving U.S. culture as a "cut flower civilization." If we cut our flower from its roots (in his case he is referring to the Judaeo Christian roots of our nation's founding) the flower may look nice in a vase for a while still but that flower will wither and die for having been severed from its roots.

---

Recruiting students is important, but recruiting faculty is more important.

---

N/A

---

Faculty could be a huge champion of Sustainability and Environmental Protection for A&M Operations. They are not. Sustainability should be woven into ALL A&M planning and activities. Also, are they willing to be open and honest with themselves when their Teaching effectiveness scores based on anonymous student feedback are low?

---

Like

---

Ensuring a ratio of represented faculty through things like shared governance makes sense.

---

Faculty members should be able to clearly speak English in order to instruct students. Professors may be at TAMU for their own research, but they have to be able to communicate effectively with students.

---

See comments on merger of colleges

---

I agree. I think this is a position that could greatly benefit the staff at TAMU, allowing someone to oversee development opportunities, which only in turn makes TAMU better.

---

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

---

Ideas for change should come from the faculty, not an outside consultant that doesn't understand A&M's identity. Increase pay above inflation to keep talent. Even if tuition has to rise, people understand rising costs due to wages in today's times.

---

Liberal faculty have no purpose at A&M.

---

No further comments. Not enough information to agree/disagree with recommendations made

---

None

---

Do not want A& M to become tu.

---

Don't create more vice president positions. The titles are meaningless and honestly kind of bizarre, they don't actually mean anything and only serve to make your school more expensive. Trim down your bureaucracy, you don't need to add more administrators you just need to work smarter. That shouldn't be too difficult for aggies, right? Take pride in your work.

The staffing issues at A&M seem to fit the larger narrative of the modern American and Texan workforce, and the general recommendations of investment in retention and quality seem well intended to address some aspects of the issue. There does seem to be a disconnect of detailed implementation from a rebranded office (as it appears on the surface at least) to the established issues of bureaucracy. The briefly mentioned issue of undergraduate superiority also stands to be a deeper issue for recruitment and retention. More investigation and investment may be made to prioritize graduate education- as a collaborative foundation for research that motivates quality faculty. Otherwise it seems mismanagement is only part of an issue where faculty find better opportunities for their interests elsewhere.

None

Faculty Affairs should be a service department for the individual academic institutions to assist them in recruiting and retaining faculty and not become an all-powerful dictate to force professors onto departments. Diversity is key to continued excellence in teaching however, qualifications should not be weakened to achieve this end.

There should definitely be better support for faculty and staff. TAMU deserves to have the best and it seems strange that retention could be an issue for a place we all love.

Get rid of the Chinese spies and cut back on overseas students. China is our primary adversary so please stop educating them in S&T. You're educating America's enemies

Attracting and keeping highly qualified and motivated faculty is key to having an outstanding university. Additionally, a clear pathway for growth in a career is important in keeping well qualified professors.

I may have misread this portion of the report, but it appears that TAMU is expanding the org and structure. Those may be needed, but do not like seeing unnecessary growth in governance or administration.

None

I would like to reinforce that traditional values should not be abandoned and that our Great University should not fall further into the trap of educating our future leaders with what many across our nation are being force fed. It is important in creating leaders who will follow traditional (and moral) teachings.

Any actions that develop faculty, especially those seeking tenure. During my academic years, I had many faculty staff, in various courses across differing topics, that needed teaching and soft skill development. Especially the ones having tenure.

Faculty are an underutilized brain trust. They are put on committees to handle menial largely beauracratc tasks and are ignored in creating direction for the University.

Too much emphasis from the faculty on tenure and keeping their jobs surfaced in the survey. Obviously important to them, the key goal should be providing education to students whose lives they are impacting.

Get rid of Alvard. He is an embarrassment to the university.

There does appear to be a need to address (and possibly centralize) certain faculty affairs issues, such as termination, performance assessment, and future needs.

I will leave this section for comments by A&M faculty.

Agree with the reorganization suggestions.

Faculty are people, just like students and formal students. Keep a good level of communication for & with them. Don't play favorites.

This seems like a logical step, however I'm assuming each Dean would have final say of those employed with each college. I can see some "one size fits all" issues when it comes to the requirements of each particular set of faculty.

No r

More development is needed for facility.

Agree with recommendations

---

none

---

N/A

---

No opinion.

---

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

---

Faculty should not push their views on students, they should let students to think for themselves

---

Supporting faculty and encouraging retention is crucial to A&M's success. This new dept seems like a good step.

---

I believe the Faculty Affairs needs to address, not only recruitment and retention of faculty, but also training the faculty on HOW TO TEACH TO STUDENTS, unless it is the last item combined with workshops. I didn't see that at all in the list of responsibilities listed: faculty hiring, tenure and promotion, faculty reviews, faculty recruitment and retention, dual career programs, immigration services for faculty, ADVANCE, GURI/CRI programs, faculty honors and awards, faculty development leave, faculty records, faculty credentialing for accreditation, and training/workshops.

---

Maintaining the balance of power and input among faculty, university staff, current students, and former students is first and foremost important. NOTE: Yes, Texas A&M is a conservative school. It is a unique school among public universities, and that is it's greatest strength. Texas A&M should NEVER aspire to be like Harvard, Princeton, USC, or any other liberal, 'woke' college. Faculty often are at the core of this 'wokeness'. The Faculty should ensure ALL points of view are welcomed...even ones we don't agree with.

---

In general this is a good idea, however it should not overrule the needs/decisions of the Colleges/Departments in faculty needs and recruitment

---

The faculty should love the values and traditions that make TAMU unique, special, and authentic. If they do not, if they promote propaganda rather than a free exchange of ideas, they should be removed from the faculty because they are ipso facto no longer educators.

---

Sometimes the best faculty are hated by academics. Corporate raiders for example win in the real world but aren't mentioned by academia as legit. Students aren't prepared for the dirty real world.

---

I believe the aspirations related to faculty affairs are nice. However, I believe as a former student that I prefer my instructors to have been the best qualified and most accomplished for their position irregardless of inclusivity. A&M needs to remember that in its wokeness. I noticed faculty priorities 3. elimination disparities 5. Refocuse Aggie culture.....through the years and growth as your own chart has evidenced by Latinos alone disparities have quickly aligned. And there is no Texas A&M without the culture. So if these are faculty focuses before.... 6. Improve collaboration, 7. Increase student engagement. 8. Expand professional development 9. Increase community engagement..... Texas A&M needs NEW faculty.

---

Stop promoting/prioritizing the jab

---

I don't have a strong opinion here, but I do think the recommendation listed to create a VP of Faculty Affairs has potential to help TAMU faculty.

---

I support the creation of a VP of Faculty Affairs. Acquiring and keeping the best faculty is essential, ultimately, to students' academic success, and their success in their subsequent careers. I strongly, strongly support investment in cultural centers.

---

I agree with the proposal of the new position given my comments under the Provost section.

---

Totally Agree

---

None, I am not qualified to comment

---

As changes are considered in this area, it is critical to insure A&M attracts and maintains the very best faculty possible.

---

Benchmarking other institutions can be helpful, but it can also lead to perpetuating ineffective policies. And just because a policy is in use elsewhere does not guarantee it will improve A&M.

---

Less focus on diversity. Focus on merit and alignment with TAMU conservative values and school traditions.

---

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

---

Sounds alarmist, ". . . more than 20 percent of the university's employees are currently over 65 and possess enormous amounts of institutional" . . . that's probably always been the case; and no different than other organizations.

---

Efficiency makes more sense - like these recommendations

---

An excellent idea and frankly surprising it does not already exist.

---

We should keep our conservative background in teaching our students. A & M has become a great teaching facility due to hard work by former students. Just look at what former students have accomplished.

---

I think if we are replacing an outdated position and not just creating a new one to shift work, this is a reasonable recommendation. I also think the cost of an education keeps increasing, and as such, we need to be conservative with the number of administrative positions.

---

This is an idea that should be adopted at all Tier I institutions to help inspire best possible benefits for faculty - I strongly support doing it at TAMU.

---

Professors should not use their position with the university to express their political opinions.

---

**MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.**

---

Faculty Affairs - I would assume any professor tenured or not to be out on notice for inciting destruction of property or harassing others with different political views. It is far too common for those on the Left to "use" being a victim to destroy those who simply don't agree or share their opinions. These faculty who cannot tolerate an opposing view should be fired or given leave to decide if they want to be activists or professors.

---

None

---

The proposed Faculty Affairs org chart seems excessive at first, but is most likely needed for several reasons. The chief reason being quality recruitment and training. This due to the fact that 20% of the faculty is over age 65.

---

Don't be afraid to teach truth. The fear of persecution should not be the driving force in regurgitating falsehoods and party agendas. Lies that are accepted by the masses are still lies. Teach students how to do their own research instead of just being a group who believes everything they are told/read. This will create true learners, true education, and help preserve a society worth living in.

---

Knowledge sharing and cohesion among ALL faculty is important for inspiring and retaining professors. Sharing knowledge will also bring unity to the student educational experience. More communication is always better.

---

Not sure that the centralization is the best move here. Different departments have different needs and if the right leadership is in place the organization should be fine

---

The only finding here is to hire another administrative person (VP level)? That seems highly suspect that there are no other recommendations in this area. Reading the rationale it appears to give lip service to diversity and to lean buzzwords like "workflows". I would like to see more specific emphasis on elevating faculty to compete in the digital landscape. Brick and mortar schools are important but they are losing ground. My experience with A&M's online education is that it is laughable in comparison with other, 'lesser' universities. Much of that has to do with staff.

---

I'm about to have two children reach college age. As I dreamed of them becoming aggies one day in the past, I'm now concerned that the campus is no longer a safe place for conservative students. The college's actions on masks, vaccines, asking students to report on other students and other political issues show a clear slant in the leadership of the college. What the hell has happened to Aggieland?

---

Always ahead of the trouble time.

None

Extreme focus on politics and research at the expense of the student.

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. [REDACTED] [REDACTED]

In consideration of a new VP of Faculty Affairs position, careful attention should be made how promotions are dispensed among faculty, carefully scrutinizing the equity of such moves, especially among disproportionately benefitted demographics.

None.

Attracting top talent faculty to A&M represents a challenge to most universities. A&M's reputation for being somewhat conservative within a state that is somewhat conservative may be a contributing factor considering that academics trend towards a more liberal point of view. I would decide which colleges of study have priority and funnel the resources to those colleges. Having the right faculty in place, whose values align with the culture of the university is important. Also, having a core team of top talent is important. A&M has the resources, it is about effective deployment of those resources into the colleges where we want to see growth.

Please do not focus efforts on DEI. This is a red herring that does not provide a effective solution to obtain the most qualified and knowledgeable faculty, but focuses too much attention on a staff member's gender and skin color. Universities should be dealing in analysis of facts, application of scientific and mathematic formulas, and expansion of knowledge. These things are color blind and are not gendered. DEI denies some opportunity while opening doors for others who are less qualified but might fit some agenda of "inclusion." As a minority myself, I view DEI efforts as an extension of affirmative action policies that should have ended already.

I am concerned about trying to conform the faculty to a "standard", consisting of "underrepresented" people. Faculty need to be hired and tenured according to ability and talent and experience, not because they meet a profile need of some misaligned expectation.

I think the proposed changes here are adequate and beneficial for the faculty.

## Faculty Affairs - Other

Please provide your comments related to Faculty Affairs:

N/A

Agree with recommendation 1.

NA

It would appear that more local professors are needed, given that many classes are not offered in person because there is not adequate staffing or facility space available.

As with other aspects of the reorganization, how the Galveston campus is situated within the proposed Faculty Affairs structure is unclear. How does the current Chief Academic Officer role and/or the Office for Academic Affairs at TAMUG

align with the proposed structure?

The proposed new VP for Faculty Affairs and the organization of that unit is such a welcomed and needed change. I really like that "The new VP for Faculty Affairs position will elevate faculty to have a direct voice in the President's cabinet. This change will foster a transparent and direct line of communication and collaboration between faculty and the institution. This position will work closely with the Provost's office and Human Resources to develop and implement faculty development, leadership, and retention programs."

n/c

Professors need to make themselves available for office hours and student questions. More in-person classes are needed.

I cannot believe that my current students have some of the same professors that I had 30 years ago. I agree with the report that A&M needs some urgent reform in hiring excellent and diverse educators.

none

I spent almost 30 years in the Dean of Faculties Office so the changes there are of primary importance to me. I am happy to see that there is the possibility of more financial resources and more personnel being allocated to that office. It has been underfunded for years given the important role assigned to the unit. One question I do have though is if the head of faculty affairs is elevated to a vp position how does that affect the position of the provost who is the chief academic officer and still must approve recommendations for tenure or promotion, going on faculty development leave, etc. Is there a solid line or a dotted line between those two administrators?

The DOF office is not a popular office because it is the center of evaluation, promotion and tenure, discipline, and grievance. These activities are all stressful and tied to emotions and it is easy to point the blame on the inefficiency of operations on them. The DOF office has roughly 12 staff and administrators who are balancing the needs of over 4,000 faculty on campus. The report did not refer to any of the current programming and faculty support that the DOF office provides including faculty workshops, faculty conversations, department head leadership development, professional development, and ADVANCE. The work that ADVANCE has done is significant on this campus as it has provided a necessary consistent practice of ensuring professional, unbiased implementations in faculty hiring. ADVANCE has also been an important contributor to the discussions on the impact COVID has had on faculty; developing guidelines for department heads on how to fairly evaluate faculty while we are still operating within a pandemic. Removing the dean of faculties office and creating a new vice president will remove an important function away from the provost office and its mission to provide academic excellence. Faculty are a significant contributor to academic excellence. If faculty are not supported through the provost office and the provost is not a contributor to the promotion and tenure process, there will be a significant hole in the assessment of the quality and effectiveness of how TAMU's faculty are impacting and contributing to academic excellence.

Very disappointed and unhappy that previous administrations have allowed political activists activities by faculty members....especially those espousing radical left-leaning ideologies.

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

No comment.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on

the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering. • Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

---

Restructuring is needed and encouraged.

---

As stated above, I am not thrilled with the idea of removing faculty affairs from the Provost, as there needs to be a "meeting of the minds" between the faculty and the Provost's Office as regards how the academic component of the university (it's *raison d'être*) is put together and operates. However, a direct line to the President's Office might be seen as trying to raise the stature of the faculty and improve relations between them and the administration, although no real rationale is given for the suggestion. There has been much talk about open and shared governance, but little sign that the administration believes it, and TAMU continues to be led by a top-down rather than a bottom-up system. I am surprised that the consultants claim that putting faculty affairs directly under the President is "current best practice" but then quote a paper published in 2000 as their reference (p. 17). I am also amazed that they believe this change will "translate to an elevated student learning experience" (p. 18). Presumably this is supposed to result in some magical way from the new VP position, although how this is supposed to result in hiring higher quality faculty than we do at present is left unsaid.

---

Clean up physics department. So students want to take 207 on campus and not at a community college. Fix math department. How can half the class flunk first test in math 152. Why not teach material better.

---

N/A

---

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

---

I have friends who are faculty, on tenure track but aren't tenured yet. The M.O. on campus is, "if you aren't tenured and you want to be, then you do what we say and don't rock the boat." It's a bully culture and it thrives among groups claiming they are anti-bully.

---

Only responsibility. To ensure fairness in decisions about faculty and perhaps stop student indoctrination, prevalent in humanities and liberal arts.

---

This change will provide for better communication and collaboration between faculty and institution, which is greatly needed. This will help well prepare the faculty in order to provide the students with the utmost academic experience. This will also help the university retain excellent educators.

---

Too Broad a scope, needs a more focused scope of services

---

As parents, we pay a hefty tuition for our students to attend A&M and I believe that a diverse faculty has a tremendous amount of good to offer to the students. With that said, having professors that have an above average command of the English language should be a key component when assigning faculty to teach a course. The stress of struggling to understand the professor only adds to the content stress already present in most course offerings.

---

None

---

Everyone deserves a chance to apply for jobs everyone

---

Keep CRT and DEI out of the classroom. Go back to teaching professors about the traditions of A&M.

---

Do we need another Vice-President? This doesn't make sense unless the Provost isn't trusted.

---

NA

---

## Q44 - Please provide your comments related to Academic and Strategic Collaborations:

### Academic and Strategic Collaborations - Faculty

Please provide your comments related to Academic and Strategic Collaborations:

As the MGT report recommended in Recommendation 4, I believe that there are so many opportunities and potentials at Texas A&M University, in terms of cultural development. As the director of the Institute for Applied Creativity, I would like to promote artistic/creative methods to support education, research, and outreach. Many leading universities in US support art/creative-based education for all subject matters. They all put a high value on arts-related education. Arts accelerate innovation, discovery, and insights through collaborations among the arts, the humanities and the sciences through research, creative activities and technological innovation. Here are some examples. Arts for All at University of Maryland Project Zero at Harvard University I have been collaborating with doctors, veterinarians, anatomists, scientists to introduce artistic practices to help their students to learn complex concepts. "Creative Anatomy" is one thing. <http://softinteraction.com/archives/1372> If the president could support this type of research and teaching, our students will expand their learning a lot and get benefits a lot. I will be happy to put my effort into this direction.

Sticking Cushing Libraries into the proposed Academic 7 Strategic Collaborations without even addressing it in the text is ill-advised. The Cushing Libraries is not a museum, as the report apparently considers it, but rather it is a Library and an Archives and should not be amputated from the University Libraries org structure.

None

Finding #4 - I do love the emphasis on investing in cultural centers and activities. However, it's unclear to me how Cushing Memorial Library & Archives fits in with the other entities listed in the proposed org chart. While Cushing Memorial Library & Archives does hold vast collections related to campus, it also has very particular collection areas and is a place for research.

I see much potential in this office - though I definitely think there are too many items under one leader to be effective. Having both undergraduate recruiting and community engagement together does not seem wise - as the leader will be pulled in too many directions that take a great deal of time. Community engaged research is what I do, and there is no way one office can manage all these items efficiently. That said, I appreciate the emphasis on working in our own backyards, undergraduate recruitment and creating pipelines for more diverse students. Most importantly, the highly successful Texas Target Communities program is hopefully getting the resources and support that it needs. If it is funded and expanded it could be a model for all other universities in the country. That said, Sunsetting other programs is too vague to judge its value or even know how performance of other programs or what counts as these programs will be assessed to determine sunsetting. There is too little detail to ascertain if that is a good move or not.

Appreciate the Academic and Strategic Collaborations presented

PLEASE invest in cultural centers, a performing arts center, hospitality center and Campus gardens!

No Comment

I have major concerns about seeing Cushing Library listed under the org chart for Academic and Strategic Collaboration. No where else is Cushing directly addressed, so I have to speculate on what this means. Cushing is library, not a museum. Based on the org chart it appears Cushing is removed from the larger University Libraries umbrella - museums and libraries are different entities with different purposes. Cushing collects both print and archival material for research and instruction purposes, while we do produce exhibits these are in addition to our active roles as part of the research community. Our exhibits allow us to highlight material in our collection, however they are not the main purpose of the library. A simple way to look at the difference is that libraries are user-driven and museums are curator-driven, libraries focus on documents of our collected pasts and museums focus on artifacts. While Cushing does hold some artifacts these interact with the documents and enhance the collection rather than being the focus of it. Additionally, Cushing as part of the University Libraries is very much entwined with the Libraries. Our budget is under the large library umbrella, our material is order and received by employees in the Library Annex, catalogers from the Library help us process our material, Preservation and Conservation are part of the Libraries not Cushing and they managed the treatment off our

collection, and the list goes on.

---

Shoving everything from OPAS to the Office of Diversity and Inclusion in such a kitchen sink shows there is no real commitment to DEI. The latter should go elsewhere. There are no lines of control/responsibility under "VP Diversity" in the organizational chart. Investing in cultural centers makes sense.

---

This is the time to pour more funding and institutional support into the Office of Diversity and Inclusion. Jettisoning this office into a Huge collective is a step backwards on our commitment to DEI.

---

I want to underscore how significant the VP and Associate Provost for Diversity and the Office for Diversity are for improving the climate for faculty, students, and staff on campus. Having a direct line to the Provost is key in doing the important work of the Office for Diversity, which includes the ACES program, supporting academic programs, recruiting and retaining faculty of color, generating data to support DEI efforts, and the ADVANCE program. Hence, I oppose the relocation of the Associate Provost of Diversity position to an uncertain position under the VP for Academic and Strategic Collaborations. Diversity concerns are a university-level effort that should have a direct line to the Provost. We need institutional leadership in DEI, and the VP and Associate Provost for Diversity provides that leadership to the colleges. The new Office envisioned in the report focuses only on the recruitment of undergraduate students, which will fail without larger efforts at diversifying the faculty. If we want an environment where students of color, and particularly Latinx students as a HACU campus, to thrive and belong, we need to commit to diversity at the highest levels of the administration.

---

I'm confused about some parts of this. Wouldn't AVPA be tied to the proposed School of Visual and Performing Arts, along with Music Activities? Wouldn't education abroad and ISS be better placed under the Provost?

---

I have often thought there should be more focus on community outreach... maybe even a University of the Third Age or a Life Long Learning Institute. (e.g. a set fee where retired persons and community members can attend academic classes and contribute in a scholarly way)

---

I like the idea of investing in the local culture--this is a huge need. However, the University also needs to be aware that one of the major issues here in terms of being an appealing place to live is also its problems with diversity, where faculty of color feel less welcome in the area as a whole, which makes recruitment and retention of these faculty more challenging. While the report mentions this in relation to undergraduate, we need to acknowledge that this problem runs through the whole university. If the University is going to give back to the community, it should also think about more adequately celebrating and enriching this diversity.

---

In connection with my role as senior associate dean of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

---

Love the idea of cultural centers and other options that help improve student quality of life

---

Proposed changes is a good one.

---

If the wish is to make Bryan-College Station more family friendly – a museum of natural history would be appropriate. However, that is not the rationale provided in this report. More importantly, this community already has such a museum, making this recommendation redundant. Destroying local community resources should not be a goal of Texas A&M University.

---

The org. chart in this section shows the Cushing Library under this category. This is perhaps due to an over-emphasis on Cushing's exhibits and outreach program, which are meant to showcase its unique and diverse collections. However, Cushing is a library, not a museum or cultural center, and so it should be affiliated with the University Libraries. Many of its historical and literary collections, such as those pertaining to Texas and the Borderlands, rangeland management and Western Americana, military science and history, Colonial Mexican history, and French and English literatures from the Renaissance to the present era are invaluable but under-utilized resources for serious academic research. If expanded academic programs in the visual and performing arts are to be created as recommended later in the report, why are Music Activities and the Academy for the Visual and Performing Arts being placed under Academic and Strategic Collaborations? Shouldn't these activities tie in with the departments that would be teaching classes in the arts?

---

While I like the idea of this office. I think some of the proposed alignment of departments in here are not good fit. For examples the office of international student affairs should be part of student affairs and not this office. Keeping it within student affairs will make sure that the student needs are well taken care of and the students are not "lost". It also

centralizes all student affairs under one unit.

---

I think the areas moved into there make sense in general. However, OPAS is a student organization and taking it out of Student Affairs would take away the student role. I think a dotted line may be needed there.

---

The statistics about Texas residents are less relevant than the Texas' graduating high school class, which was, as of 2018, approximately 50% female, 49.8% Hispanic, 12.5% Black, and 30% White. I agree with the suggestions in this section.

---

The report rightly identified that the university as a whole does not represent the state's population demographics with respect to race and ethnicity, there are demographic factors where the university lags the state in general as well as in specific degree programs, staff bands, etc. A more comprehensive perspective of DEI and representativeness will benefit the university as a whole. The SWOT analysis clearly identifies the retention of underrepresented faculty as a critical concern. We encourage the decision-making team to consider this issue more directly in the upcoming plan. Draw upon the expertise of Women's and Gender Studies, African Studies, and Latino/a and Mexican American Studies faculty and programs. These interdisciplinary programs address diversity as a part of their existence and are major contributors to the university's DEI mission. Our faculty are experts in DEI topics and are eager to be partners in addressing these issues at Texas A&M University.

---

I find it difficult to understand how so many different functions could be centralized into one unit. Why is Diversity and Inclusion a "Strategic Collaboration"? What, exactly, is meant by "strategic collaboration"? I worry that some of the language used in this report obscures, rather than clarifies, the roles and objectives of the newly proposed units.

---

I am generally in favor of an office of academic and strategic collaborations. However, the current organizational chart seems to jumble together a very broad portfolio of offices that do not necessarily connect with one another in the most efficient manner: Global education, economic development, k-12 programs, student outreach, and most notably the office for diversity. Having the VP for diversity report to another VP will be viewed as a divestiture of DEI efforts by TAMU at a time when the University's image for DEI can not afford to be further damaged. We would be the only university in our peer or aspirant group whose CDO did not report to the President or the Provost. A consulting firm with experience in DEI would have no grounds for advising this.

---

Putting the office of Diversity and Inclusion in this office with OPAS and the Children's center minimizes the importance of DEI on campus and is a very stupid move given our weakness in diversity and inclusion. DEI should remain in a very high level office- the Provost office would be preferable- to show our commitment to these issues at the highest level.

---

In re finding 2 / recommendation 2: I am not certain how you can think through diversifying our student body (very important!) without mentioning plans for dealing with the racism students and faculty face within the BCS community. How will we retain--not just recruit--more students and faculty of color? As an instructor, I have heard many stories about students' experiences of racism (especially from black male students, who have reported feeling profiled and actively discriminated against by many structures within the town) from those students. How do we plan to change BCS such that it better understands itself as an integrated community? Finding 4 / recommendation 4 is great (more arts, more community, all excellent; BCS really lags behind other college towns here. A more walkable university infrastructure and area around the university as well as more public transportation would also help with this)--but again, how can it connect more to rec 2, to making BCS more welcoming to all people?

---

Recommendation #4 (invest in cultural centers and campus gardens) is an excellent idea.

---

Let's be good stewards of our resources. Whenever I read "create a new office," it does cause concern.

---

Good idea but there should be faculty input in what these would look like and accountability mechanisms put in place.

---

Despite the fact that the overall narrative seems to emphasize diversity and inclusion, the "VP for Diversity" seems to have been demoted or, at least, to have lost a much needed visibility. This represents a negative progress towards the goals of the office. "Education Abroad" is misplaced in this office, as it deals with curriculum and high impact learning experiences. It should remain under "Undergraduate Programs".

---

None

---

Absolutely support Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students and Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. In order to retain faculty who aren't from A&M, it is important to provide non-university places where they feel comfortable. The Aggie culture can be overbearing sometimes, especially

for faculty who did not attend school here.

---

I find Recommendation #4 to be unnecessary and to introduce redundancies rather than eliminate them. Despite being a former student and having participated in the performing arts during my undergraduate years as both an audience member and a performer, I see absolutely no justification to spend resources on a performing arts center when we currently have various other spaces on campus that serve these functions already. A campus-associated museum and hospitality center is similarly redundant with the presence of the Memorial Student Center and the Bush Library on campus already. These redundant recommendations are completely counter to the purported purpose of this report (to streamline, eliminate redundancies, etc.)

---

Having read the consulting report several times there are recommended changes that are exciting and transformational. For example, the performing arts center is way overdue for TAMU. Rudder Tower and Theater Complex was constructed in 1969 and still serves as the home of all large performances and no longer meets the current needs of the University. Additionally, it lacks state of the art infrastructure and amenities. Having attended numerous concerts in that venue – it is NO concert hall! Fine arts facilities that would rival the quality of our athletic facilities would make a statement as well as improve the quality of life in the Brazos Valley. Couple first class facilities with a robust music, dance and theatre program will elevate TAMU. These facilities could also assist in recruiting research and teaching talent to TAMU. This commitment will be huge WIN for TAMU!

---

The relegation of the Office of Diversity to the periphery or margins of this recommended (re)structure that was put forth in this report is highly problematic. If anything, this office should be central to all that the university does, particularly in the realm of academic and strategic collaborations. We must move beyond rhetoric and empty statements around the importance of diversity, equity, and inclusion (DEI) and make it a real priority. Making it a priority will involve providing the appropriate structures, resources, and leadership commitment to DEI via words and actions. This will be key if the university is truly concerned about creating a climate and equitable practices, policies, and processes that will enhance the recruitment and retention of students, faculty, and staff from racially marginalized and other historically excluded and underrepresented groups.

---

Recommendation 1: Sending the Office of Diversity and Inclusion to 'Academic and Strategic Collaborations' sends the wrong signal. This unit (Academic and Strategic Collaborations) seems designed for initiatives within the University that involve the community and other groups/institutions outside the University. Moving D&I to this office signals that we either don't have any problems with Diversity and Inclusion within the University (hard to believe) OR, we're happy the way we are and our main difficulty with Diversity and Inclusion is convincing the community and groups outside the University that we don't need to change. (Clearly, given the statistics cited in Finding 2 (3.9% of TAMU students are Black, only 24.9% are Hispanic), this is not the case. It's odd that ADVANCE is being retained within the Faculty Affairs Unit - I suppose because this program targets women faculty - but D&I is being sidelined in Academic and Strategic Collaborations. It does send the message that we are really serious about gender equity, not so much racial and ethnic equity. Recommendation 2: The planned Office of Retention and Recruitment needs to be able to work closely with staff advisors in Colleges and Departments to be effective. We should begin by recruiting Black students from Bryan and College Station and nearby towns, whose parents may work at TAMU and who are familiar with us. Recommendation 3 has no specific action items. Recommendation 4: These are all good ideas. However, I recommend forging links with the existing Brazos Valley Museum, so that we don't undercut or duplicate their efforts. Our campus is ugly. Outsourcing care of the grounds has been a disaster. Our outsourced gardeners plant crepe myrtle and live oak almost exclusively - so that even the crepe myrtles are overwhelmed with epiphytes (aka ball moss) and many of the established live oaks (including the Century Oak!) appear to be dying. We have a Horticultural Department - perhaps we could ask them for advice. It seems sad that this topic comes up again and again (it came up in the Vision 2020 discussions), and we have never taken it to heart.

---

This office was just created in September. There has been no time to find out if it is even effective, much less beneficial. Some of the entities suggested in Recommendation #2 make sense to me: Becky Gates Children's Center; Office of Diversity and Inclusion, External Affairs and Public Relations; Visitor Center; Global and Academic Partnership Services. That said, to argue to centralize yet more academic campus units under this increasingly catch-all office seems problematic. The huge variety of things on the organizational chart for this office really begs the question of why this is ok, but the current Provost structure is too diverse. For instance, if we are to exclusively focus the Provost on student affairs, why put things such as Education Abroad Programs, International Student Services, and Music Activities here? All of these are specific to students' academic lives. Also, does it occur to anyone that specifically separating out

International Student Services separates out International students from the Aggie family? Yes, strengthen our ability to meet these students' needs, but don't somehow set them apart from everyone else; one of the things that these students strive for, is to BE AGGIES. As for recruitment, MGT doesn't seem to understand that students interested in specific fields, will have their questions answered and their interest piqued more by speaking to and being recruited by TAMU faculty, staff, and students in their field than by representatives of TAMU at large. I cannot tell you how many of my students have told me that they came to campus to visit just because it got them out of school for a day, only to decide to come here after speaking to a faculty member or someone associated with the department undergraduate program who excited them about specific classes, programs, or faculty that were in the department. No one at the top of the institution knows the specific fields like those active in the fields. TAMU already has the name recognition, the national reputation, and the identity as one of the flagship schools in Texas. Students know this. They need to know why they want to major in English here rather than at UT. They need to know what separates our Architecture program from that at Rice. They want to know DETAILS that will convince them to come here. Recommendation #3 makes sense, but it provides no specifics about what programs they think the university should sunset. Recommendation #4: Has MGT talked to the Texas Higher-Education Coordinating Board? Since we cannot have Fine Arts programs/degrees, a Performing Arts Center such as envisioned here is not possible. And who's going to pay for museums, performing arts centers? Gardens are already being invested in and developed on West Campus. And removing Cushing Library here???? This shows a complete misunderstanding of what Cushing is and what it does.

None

Regarding recommendation #4: Invest in cultural centers... Cushing Library (singular) is not a museum, it is a research library that houses our special collections, it also serves as the university's archives. While it provides periodic physical exhibits that highlight its research collections, this is a small part of its mission. It does not appear as though MGT understands the role and function of Cushing and how it is tied to the University Libraries as a whole. To pull Cushing out from the Libraries would be inefficient given how much their staff, faculty, and services are intertwined with the rest of the Libraries.

none

The recommendations on academic collaborations are interesting and can influence change. However, breaking up colleges and realigning them may have the opposite effect. Therefore, it is difficult to gauge how this would be implemented.

I am very supportive of the proposal to invest in the facilities that will support the fine arts at the university, including a performing arts center, a museum, and a hospital center. If the latter functions as a visitors center, then it is long overdue as it was recommended in the Vision 2020 report from the late 90's. I would love to see the Performing Arts Center as a feature building on the corner of Raymond Stotzer Parkway and 2818, opposite the proposed site for the new Small Animal Teaching Hospital. This would make a beautiful entrance to the university, showcasing the breadth of its academic offerings. It is unclear to me why the vice president for diversity would report to this vice president. Given the real importance of diversity, equity, and inclusion (DEI) on our campus, I believe it is imperative that this person report directly to the president and sit on the president's cabinet. As shown in the org chart, this is a big step backwards in the university's commitment to DEI.

The placement of the VP for Diversity under the Academic and Strategic Collaborations is an unfortunate demotion of one of the most important issues at A&M. There is no consistency with the rest of the programs in the Office, other than it is seen as an undergraduate service endeavor instead of a university-wide priority.

I strongly feel that diversity and inclusion is a higher priority than any of the other things listed in this section. I would like to see it this office report directly to the VP and provost. We need a DEI office with some power, which can work to make the campus more welcoming.

The most important component of the report is Recommendation 4 under Academic and Strategic Collaborations: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. The importance of the operation and administrative structure of the University pales in comparison to this concern. Texas A&M and College Station/Bryan are extremely unwelcoming to new faculty and staff. Football dominates the culture and leaves little else. There is no easy access to cultural events, and the campus is essentially closed to non-university people. Green spaces on campus are sparse. There is no attempt to anticipate electric vehicles or renewable energy production. The College Station community is separated from the University by a multi lane highways and mainly

consists of run-down shacks, shuttered buildings, bars, fast food, and apartment buildings. Culture centers in Houston and Austin are hours away. Attending evening events there requires overnight accommodations. Those of us from vibrant university/community enclaves are lost here, and our spouses are often dreaming of returning to that better life. My recommendations Immediate (3 years): 1) Plant trees and develop on-campus green spaces – visit Rice University to see how to accomplish this 2) Construct solar panel roofing over outdoor parking areas and provide charging stations for electric cars (maybe start with lot 54) 3) Establish a center for performing arts with easy public access and bring a repertory theater company on site. Perhaps locate it so that the Bush Museum parking can be used. (check out Princeton's McCarter Theater Center for ideas) Mid term 1) Work together with the College Station City Council and renovate the rundown eyesores across University Avenue. 2) Build pedestrian overpasses connecting the University to that area. 3) Work with the Bryan/College Station City Councils to establish a long range community plan which includes green spaces (other than sports complexes), culture centers, public transit and safe bike lanes. Long Term 1) Arrange for frequent passenger train service to Houston, Dallas and Austin with stops that service commuters. (the Bay Area Rapid Transit could be a model).

---

The Academy of Performing Arts is actually a good idea. Might take a long time to develop, but it would have a tremendous impact on the culture of the campus, which is in dire need of improvement. How are the performance arts lumped into Academic and Strategic Collaborations? Shouldn't this be considered "Community Engagement" What academic collaboration exists here?

---

I am not well versed on these issues, but those offices I do know or deal with seem to function reasonably well. Reorganization may be in order, but I am not sure any efficiency will be gained.

---

We presently woefully underperform in our task of providing community outreach and community enrichment. I enthusiastically support the recommendations in the report in that area. Improving this will enhance our ability to fulfill all three university missions, not just service, because our own students will have enriching opportunities and our community will be more attractive to faculty and staff as a place to put down roots.

---

The proposed changes to the arts and culture appear to be well intentioned; however, those resources should be directing through existing academic units that work in those areas (performance, visualization, etc.). Texas A&M is, first and foremost, an institution of higher education and these should be the center of these efforts.

---

The cultural and performing arts center is a great idea that will improve arts and contribute to the quality of life in our town.

---

As noted earlier, I believe Education Abroad should remain in the Provost's Office because of the academic credit often associated with study abroad experiences. I believe the Vice President for Diversity should be elevated and report to either the President or Provost.

---

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens Very much like this recommendation, particularly on the campus gardens front

---

I appreciate the desire to recruit and retain a student population that more closely reflects the Texas population.

---

no comment

---

Centralization may be more efficient but not effective. This can slow down many aspects of research and teaching. Need to look at evidence from past centralization in some units - slowed down processes, lost effectiveness, no clear evidence of cost savings. In terms of advising, strongly disagree with centralization. We need expertise within areas, and we should focus on all students not just those changing major. These changes will turn away students. We lose local knowledge and expertise; students sometimes join PSYC because of advisors. Can add central advising to help deal with changing majors, but current advisors need to stay with units.

---

I think most would be in agreement here that the ends expressed here are good things. I'm not sure the means are the most efficient way to achieve diversity, undergraduate retention and faculty retention. Some of those things are no doubt related to the product the University produces, teaching and research which seem to have less focus in this report. In my opinion there is a bit of ignorance throughout this report about what faculty needs actually are. Most faculty--to the extent they have a choice--choose their institution by the structure, prestige and research capacity of their job. To pretend these things are about the underlying structure of faculty affairs, gardens, performing arts centers and not about whether one's department is misplaced in the wrong College (or at least in a College structure that is dissimilar from every other comparable institution) is problematic in weighing of faculty (and to some extent student) priorities.

The VP for Diversity should be seen as independent. This position means a lot for our image at the national level.

The Office for Diversity should continue to report to the President. Diversity is NOT just an undergraduate recruitment concern.

Is recommendation 3 suggesting less of a focus on Bryan/College Station and replacing that with more of a state-wide focus? It would seem to me that care would need to be exercised here since good relationships with the community are essential. Provision of services not otherwise possible by the community (and I am thinking of the airport here) are vital both to the community but also to TAMU in terms of its reputation statewide and nationally.

On a performing arts center and museums, etc.: It is unclear that the region has the population to support first-class institutions of this sort. Additionally, the Report fails to consider the proximity of Houston and Austin - and their existing resources - as "competitors" to locally-created institutions. Better to focus time and resources on one or two world-class facilities than create a host of mediocre facilities.

I agree that it is extremely important to improve Undergraduate Recruitment. I believe the Pandemic has had at least one beneficial side effect. I co-organize two outreach programs in the Math department: our Summer Educational Enrichment in Math (SEE-Math) for middle school students who are gifted in math which runs for two weeks in the summer; and our Math Circle for students in 5th-12th grades who are gifted in math which runs on Saturdays during the academic year. Before the pandemic, the programs were in person and attracted students in Bryan/College Station and surrounding areas. There were many good students and a few great students. However, having grown up in the local area many were motivated to go away from home and go to the best schools around the country. When the pandemic hit we took the programs online via Zoom. We not only advertised in the local area but also across Texas through the Texas Parents of Profoundly Gifted organization and Nationally through the Davidson Young Scholars program. We even got some students from Canada, via word of mouth. And I got one inquiry from Europe but the time difference became an obstacle. We now have a sizable group of excellent students participating in these programs. These are the students we want to attract to A&M to be our best students. They will not all do Math but they all will do some STEM field. These are not just outreach programs. They are long-term recruitment programs. What I said about the Math programs also applies to the Physics/Engineering Festival and probably other outreach programs around the University. As the pandemic ends, we will probably go back to in person outreach activities. But what will happen to these extremely bright students from across North America? Do we drop them or continue to have some type of online outreach/recruitment programs? But running them costs time and money. These are activities that the new Academic and Strategic Collaborations office should support.

Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students  
Comments: This is a great idea as TAMU student population does not mirror the population of high school graduates who intend to graduate with an academic undergraduate degree. Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens  
Comments: MSC OPAS currently provides external performing arts events and provides excellent training opportunities for students.

Recommendation #1 has a proposed organization chart that displays Cushing Library in the same group as the Art Galleries and OPAS. The MGT report failed to do adequate research to understand that Cushing is not a cultural center/museum. It is a fully functioning library and archives that can not and should not be divorced from preexisting centralized library services. Cushing is integrated into the Library's catalog and search functions, teaching and outreach initiatives, collection development and contractual subscriptions, digitization projects and research support, and more. Notwithstanding, Cushing includes tenure track and APT faculty that are governed by the Libraries evaluation and promotion/tenure criteria. Cushing Library serves a very real and practical role in the research enterprise of Texas A&M. Faculty across the campus and around the world use Cushing's unique collections and the expertise of our library faculty to produce original and impactful primary source research in a wide variety of disciplines. Faculty bring their students to Cushing to interact with one-of-kind collections and artifacts. Librarians have integrated primary source educational opportunities into the TAMU curriculum. Aligning Cushing with cultural activities fails to acknowledge the very real role that Cushing Libraries plays in the active scholarship of faculty and the teaching mission of the university. Do not realign Cushing Library outside of the University Libraries organizational structure. Creating an office on improving recruitment and retention of underrepresented undergraduate students is a positive suggestion. I have concerns that undertaking this effort without a parallel DEI effort to change the campus culture will only result in a negative experience for students of color who come to A&M.

I agree that improving the diversity of the student body and campus community is an area of critical need for the university.

---

In general, we need fewer administrators. Adding another level of management only serves to push those below that level down further and distances the upper administration from issues that are on the ground. The Faculty Senate, CPI are excellent conduits that should serve as the voice to the administration decision makers.

---

I do like the heightened and streamlined emphasis on recruiting students from underrepresented groups in Texas. The university should be doing much better at this than it currently is. However, without a serious outlay of resources, this organizational change will not move the needle. The campus community concerns about DEI are a big deal and need urgency, I believe.

---

Good plan.

---

I collaborate freely across campus. Reorganization has little to no impact on interdisciplinary collaborations, in my experience.

---

Appreciate the focus on improving recruitment and retention.

---

This proposed reorganization change seems reasonable.

---

Recommendation #1. Putting the Office of Diversity and Inclusion in the "box of misfit offices" seems to signal that TAMU does not care about diversity, inclusion, and equity. Recommendation #2. Creating an office of recruitment and retention seems like a good idea. Recommendation #3. The recommendation to subset community-focused programs that do not adequately serve the needs is fine, but I don't know what specific programs they are referring to. Recommendation #4. Coming from 2 universities (Indiana University and Northwestern University) that have strong academic, research, student, and cultural resources, having cultural centers might be good. However, we have an "aquarium," which is an oversize doctor's office aquarium. If invest is to check off a box, I would rather that box be left unchecked. Also, I fear that these cultural centers will not be well attended given the cultural environment of Bryan-College Station and Brazos Valley.

---

Cushing does not belong in this group, it should stay with the rest of the Libraries. The Special Collections portion is research-based for the most part and does not consist of museum artifacts. The Archives portion could conceivably belong to another unit, but probably not this new one. Most university archives fall under the responsibility of the university library. If Cushing is pulled out, would the Cushing faculty stay with Cushing (with or without a teaching mission), or would they remain with the rest of the Libraries? The Evans library provides many services for Cushing and we are tightly integrated.

---

The most important set of efforts are those that address attracting a larger fraction of the best and brightest students in the state, especially first generation and AA students. We have an image problem amongst many Texans in the AA community and this needs to be addressed over time. The "Quest for The Ring" program last spring was highly effective, this program should be taken to scale. It involves "our story" being primarily told by current and recent graduates describing how Texas A&M has changed their lives, the initial audience should be applicants and their families and zoom can be used effectively. These sessions should also address eligibility for financial aid, esp for first gen students.

---

Academy of visual and performing arts is badly needed. It needs to have roots in teaching and research and expression in performance or publication. VP Diversity needs to be preserved as-is or strengthened to enhance hiring and recruitment of diverse faculty. International programs need support at the department and college levels, not in a new high-level office.

---

Really like the consolidation going on here. Some areas are flying high while others are struggling. This allows all access to solid ideas for outreach and marketing. Centralizing advising is needed immediately. I have dedicated advisors for my Engineering Academy and am now on my 8th advisor during my 4 years. This lack of consistency is painful. Better to have a central group educated on our nuances than a specific name. Along with centralizing we need to provide training and support for the advisors as the students need to be able to trust the advice and know the advice is accurate. Though I do like recruiting centralizing here, be careful not to lose that key departmental touch that we have in so many places today.

---

No comment

---

NC

I think the Office for Diversity should have it's own VP and not be housed here. The responsibilities of the Office for Diversity cut across all of the proposed new offices. I would like to see the new Office of Academic and Strategic Collaborations offer funding for faculty who have ideas for high-impact collaborations.

---

Investing in cultural centers and campus gardens is an excellent recommendation. The Office of the VP for Diversity must directly report to the President, not to the VP Academic & Strategic Collaborations.

---

I believe this comment belongs here: Be cautious on having a centralized advisement system for students. I could see how a centralized system for all students not associated with a degree, or in their first 3 or 4 semesters here. But, once they are in a department, the advising needs to be done in house. Better means for tracking what classes that are needed to ensure they graduate on time.

---

Under recommendation #3: Encourage the University to consider the ability to quickly respond and adapt to community needs when considering program/center sunseting. Some programs/centers have extensive networks and relationships that should be considered before removing or adding.

---

I believe we do have issues recruiting some faculty areas. I do not believe we have an issue recruiting students. We may not have the diversity we would like but we do not have an issue with numbers of students wanting to attend. I also believe we do need more green space around campus. However, I do not think we need a Performing Arts center. We currently have indoor and outdoor venues for student and community events.

---

Incorporating international students is a great idea - it will diversify our student population further. If we encourage our Texas students to attend our other campuses, especially international ones, I believe this will result in improved leadership and success for the participating students. Can we also do this more with faculty?

---

I am concerned about the evidence base substantiating the recommendations made.

---

No opinion on Recommendation 1. Support Recommendation 2. Our university will be well served by recruiting outstanding out-of-state prospective undergraduates. No opinion on Recommendation 3. Support Recommendation 4. Top universities should have attractive cultural elements like those proposed.

---

Recommendation #9d. I support the realignment of HLKN in TAMU Health. It seems to be a logical step for the Health Division in HLKN, but not for the Kinesiology Division that included the clinical research in the Center for Translational Research in Aging and Longevity (CTRAL). I propose to convert the Division of Kinesiology to the Dept of Kinesiology and to place this into TAMU Health - College of Medicine. That makes more sense in relation to kinesiology, but specifically for the clinical research in CTRAL. If this is not possible, I suggest that you move only CTRAL to the TAMU Health - College of Medicine.

---

re: Recommendation #4: Invest in cultural centers... Yes, please! This is an issue with faculty recruiting and retention. We need to develop the arts on campus to be more than just OPAS and to provide a greater cultural base for the community. Otherwise, people have to go to Austin, Houston, or Dallas/Fort Worth...

---

No comments.

---

I have deep concerns over moving the small animal veterinary hospital away from the current site next to the large animal hospital. The two hospitals share many common units that would be prohibitively expensive to duplicate - clinical pathology, imaging, administration, disposal of dead animals, administration. This effect would significantly impair those services' availability to the large animal hospital if moved to the proposed location. Furthermore, the return of these buildings to central campus would mean that the large animal hospital would have "non-veterinary neighbors" who might not be so accepting of livestock in immediate proximity. Our large animal program is one of, if not the, very best in the nation. Please don't isolate it from our colleagues in small animal and compromise our ability to deliver world-class care!

---

1. The proposed name of this new unit has not inherent meaning to faculty within the university and will have even less meaning to our outside stakeholders. 2. The success of education abroad programs depends on deep knowledge of majors and programs of study. Skilled staff in Ed Abroad interface regularly with faculty, and moving them to a unit focused on external relations will make it harder for faculty to take students abroad, and will eliminate all the progress that has been made at this university in getting students to have the transformative experiences of going abroad as part of their education.

---

The recognized areas of potential collaboration have been known for sometime. Yet the report's only response is CENTRALIZATION. Collaborations work best when they emerge from the ground up, not from the top down. Respect for academic culture requires understanding the different contexts in which knowledge emerges. Forcing alignments (e.g.,

---

Biological Institute, School for the Performing Arts, etc.) based on a superficial understanding of similarities (i.e., similar names) and structures currently at "peer" institutions is a great example of how to continue to be cowardly on every front.

Regarding McAllen, I share the thoughts of a jr faculty member who does not feel safe sharing themselves. The MGT report suggests "[elevating] the Higher Education Center at McAllen," which I strongly support. However, part of the suggestion regarding how to accomplish this is to "organizationally elevate the existing Assistant Provost at the Higher Education Center at McAllen to provide additional support and strategic direction...." I believe that this is an excellent suggestion in theory, but there is currently a significant issue: the person who is currently in the position of Assistant Provost at the Higher Education Center at McAllen needs to be replaced. [REDACTED] is inept, incompetent, and quite frankly, generally an embarrassment. He does not provide support for the faculty at the McAllen campus and instead treats his staff preferentially. This has led to a toxic work environment in which staff consistently show disrespect towards faculty members, knowing that there will not be repercussions. If [REDACTED] is not removed from his position, then the position of a faculty liaison (or something similar) needs to be created in order to represent faculty needs at the McAllen campus. Furthermore, [REDACTED] repeatedly makes poor leadership decisions and is unable to command respect from faculty, staff, or students. It appears that there have been some questions about why the McAllen campus has not flourished more successfully, and I strongly believe that the weak, ineffective leadership from [REDACTED] is largely responsible for this failure. Furthermore, [REDACTED] does not represent the McAllen campus, nor Texas A&M University in general, well in how he conducts himself at public events, and his written communications are highly unprofessional and communicate very poorly, often requiring multiple clarifications. Overall, if the position of the Assistant Provost of the Higher Education Center at McAllen is elevated as suggested without replacing [REDACTED] in that position, I fear that circumstances at the Higher Education Center at McAllen will become worse rather than better.

I am extremely concerned that Diversity initiatives are being moved to this new department. For one, it is only one of many responsibilities of this office, and does not necessarily seem to share much in common with many of them. It risks, then, being an afterthought of an overburdened office. For another, it does not provide any accountability for departments and units to actually have DEI training of faculty and staff, or to be making concrete efforts at smaller institutional levels. We know that DEI work happens primarily at the individual level, through trainings, better decision making, and more support of students. This is one area where the general plan of this report - condensing power in fewer places - seems to run counter to the actual work that needs to get done. Furthermore, the report seems to think that DEI issues apply only to students, and that they only apply to the number of students that we have at the University. We are hemorrhaging talent as an institution. Students of color leave at astonishing rates. The issue is not getting them here, it is KEEPING them here, in an institution whose core values say they prioritize diversity, but whose traditions and behavior do not. But the same is true of faculty and staff. With little support for DEI efforts, BIPOC faculty and staff seek jobs elsewhere - especially if they have a hand in diversity efforts and see their work unrewarded and unrespected. We need a more concrete accountability structure if we are to change the culture and climate of diversity on this campus. This report does not provide for one.

The idea of moving Construction Science to Civil engineering is not fair to the general public, the Architecture and Construction students and faculty. Construction Science has become the largest department in the College of Architecture. Construction Science needs to work much closer with Architecture, not move further away. The report says you want to strengthen Architecture. Moving Construction away will result in destroying the Department of Architecture not strengthening it ! It is a naive and destructive idea. Is it a way of weakening architecture? There are so many different academic and strategic collaborations proposed how can I comment? Finally the hodgepodge of different architectural designs over many many decades shows a lack of caring about the physical and natural environment and reveals much to the visitor. History is full of missed opportunities. So much money was poured into the campus, and this is what we ended up with because there was no public discussion about creating a campus of high quality design. Will this reorganization result in an improved campus atmosphere for all ? The report should first discuss the overall atmosphere of the campus. That is where the problems are and where we need to start.

What programs are going to be "sunsetting"? Where is the money for the museum, etc. coming from?

I have not substantive comment on these changes other than they seem to modernize and organize how the university engages the community, other institutions, and the state in a coordinated way. I support this, and with the current leadership's experience in AgriLife Extension (Dr. Ballabina), I think that the proposed changes will benefit a broader

population.

---

N/A

---

I have a concern with regards to moving the Office for Diversity and Inclusion under this division. Somehow, I feel that our concern for diversity and inclusion may be diminished by this move. On the other hand, the report speaks strongly about the need to make sure that TAMU is truly representative of the population in the state. So, I believe that the intentions are in the right place, but I am concerned about the message this gives.

---

1) Investing in cultural centers is an excellent idea.

---

I support all of these recommendations.

---

While I agree that combining overlapping administrative units is usually a good idea in an organization, I worry that this unit is too disparate. Continuing Education, the Beck Gates Center, and Study Abroad strike me as too diverse to fit profitably under a single umbrella. What sort of skillset would be needed for the person who leads this unit? It is highly unlikely for a rising administrator (faculty or staff) to have the necessary background experience across such disparate areas as OPAS and International Student Services. I would recommend distinguishing student-education-related areas and placing them under the ultimate supervision of an academic reporting structure, such as one of the associate provosts. This would enable outward-facing community engagement units (such as OPAS, Continuing Education, etc.) to be in a more tailored unit with common goals.

---

I don't understand why the Office of Diversity and Inclusion would be in this part. Unless it's there because you want the cross-connexion with International things.

---

1) Investing in cultural centers is an excellent idea.

---

All these findings and the associated rationale make sense to me, EXCEPT I see 5 Associate VPs? Why so many administrators?!? I think that by looking at the organizational chart 3 would be enough. I will keep repeating that this entire endeavor should REDUCE the number of administrators at TAMU.

---

Moving AVPA and OPAS into the same area could lead to a false understanding that these entities are similar and could merge together to work as one. OPAS has a clear mission of bringing in more commercial performance while AVPA is there to support the creative and scholarly activities of faculty, staff and students who are associated with the arts. This organization is essential in growing the arts on campus and provides an opportunity for artists to seek funding opportunities internally. Students are provided with grant scholarships that support their research and future career goals. Students in the arts need to have this funding support in order to grow as artists as well as students. OPAS and AVPA may end up under the same "roof" but they each need to keep their own goals and mission and should continue to be run as separate organizations.

---

I see no indication of where the LAUNCH program or the science-to-medicine program for undergraduates resides in this scheme. Recruiting undergraduates should include fast-track programs for students from advanced, specialized academies, providing a rapid entry into the job market. Besides recruitment of undergraduates, there should be a clear responsibility and monetary lines for recruitment and retention of excellent graduate students.

---

Regarding Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens: I support this recommendation as a way to improve our local culture and opportunities for education and entertainment, with a benefit of work-life balance as well as recruitment and retention of faculty and staff.

No Comment

---

About the Transfer of the Department of Political Science to the Bush School, primarily to add an undergraduate major and to add faculty and programs to the Bush School. The report points out that perhaps the Departments of Economics and International Studies may find the Bush School to be a suitable home. From the political point of view, the Bush School is not exactly my cup of tea, but I do value the professional competence of the few colleagues I have interacted with. If the political and intellectual space was granted, I dare say that integrating INTS in the Bush School could be a win-win for all involved--at least on paper. INTS is a new department with a far from clear identity. It pays lip service to being rooted in modern languages as its hallmark or distinguishing trait but as a matter of fact is a vanilla mono-linguistic and mono-culturalist (the two often go together) endeavor. Why? Because, studying languages and other cultures

happens to entail some effort and scholarly commitment. At times it is a demanding endeavor. And historically most of INTS students tend to the minimum line of resistance or else they go somewhere else, to allegedly easier or to more 'challenging' studies (such as Political Science with its 'scary' quantitative identity). If the Bush School faculty and administration could acknowledge INTS faculty as peers, not just as acquired language instructors (who have all my profound respect and at times I do teach language, too), then a merger could be propitious. It could elevate INTS profile, provide more motivated students, and in the meantime it would add some actual diversified cultural substance to the Bush School. Undergraduates would have something to gain indeed! Built on a sounder foundation, Bush School would broaden its appeal and perhaps INTS would find its vocation. One thing: if only Political Science were to join the Bush School, I would be concerned for INTS. I fear INTS students would decrease, thus strengthening INTS' race to the bottom in recruitment, retention and academic content.

---

The Academy of Visual and Performing Arts, OPAS, External Affairs Public Relations, and Visitor Center would fit better with the mission of Academic and Strategic Programs. However, some of the other programs listed for incorporation into Academic and Strategic Collaborations focus their support on the needs of only the TAMU community – these include the Office of Diversity and Inclusion, Becky Gates Children's Center, Education Abroad Programs, and International Student Services. A further review of these programs is needed to make sure the needs of the TAMU community are not lost in a transition to new unit. Additionally, Cushing Library functions as a research library of unique collections and would be able to best fulfill its mission by remaining integrated within the University Libraries structure.

---

Reading recommendation 1: Office of Diversity and Inclusion and also Continuing Education fits better (i) if VP for Diversity has a place under president's cabinet as a direct report,; (ii) continuing or any graduate education is left to departments who has the expertise there. Reading recommendation 2: Recruitment can be done by that office but not the retention and advising where the departments who has the key knowledge on discipline play a better role. Reading recommendation 3 and 4: by definition, sounds good but again there is significant funding need which is better spent for faculty, staff and students.

---

There are certainly opportunities for the Sport Management program to work more closely with academic programs and campus units that have similar focal areas. Specifically, the SPMT program and its research faculty have begun to develop relationships with TAMU Athletics and the 12th Man Foundation to serve as a pool of researchers able to conduct research for the Athletic Department and 12th Man Foundation that may otherwise be outsourced to consultant groups. Further, the SPMT research faculty could involve our students at all three levels (Ph.D., MS, BS) in this process to gain practical experience based on their educational level and professional goals. This collaboration can help further the strong foundation created in the Center for Sport Management Research and Education and the various research laboratories housed under the Center's umbrella to engage more sport organizations across Texas, the US, and internationally.

---

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. This would be an excellent addition to the Campus and B/CS.

---

On Recommendation #1: I assumed the position of Director of the Academy for the Visual and Performing Arts in September 2020. Soon after, I led the AVPA Advisory Board in revising the AVPA's Vision and Mission: Vision We envision a future in which Texas A&M University and the wider Brazos Valley is an arts destination—an internationally renowned generator of creative work, people, and scholarship. Mission We harness the transformative power of the arts to foster the creativity of our students, faculty, and community partners, in order to create a robust society. Our mission is to ensure the vitality of innovative, culturally diverse, and cutting-edge visual and performing arts programming and making at Texas A&M University and in the Brazos Valley. These revisions align well with the mission and purpose of the Office of the Vice President for Academic and Strategic Collaborations to "prioritize relationships between Texas A&M and Texas." At the AVPA, we see our purpose in transforming the University and the Brazos Valley into a cultural hub, a place that draws innovative art-makers to ply their craft and enrich themselves intellectually. An essential part of accomplishing this mission, for the AVPA, rests in specifically serving the research and teaching needs of our faculties, since it is these faculties who already have their fingers on the pulse of what is at the forefront of the disciplines they study. The AVPA Director position is held by a faculty member from an arts-focused department, and rotates between colleges every three years. The AVPA advisory board includes equal representation from the College of Liberal Arts, College of Education and Human Development, College of Architecture, and community organizations like the Arts Council of the Brazos Valley. The AVPA is a presenting and granting organization. As a presenter, we work closely with faculty members to program visual and performing artists at the cutting edge of their disciplines. Bringing these artists to campus serves the research needs of many faculty members, and provides high impact learning

experiences for our students. For example, in 2018, we presented *Pancho Villa From a Safe Distance*, an experimental chamber opera by nationally renowned composer Graham Reynolds and director Shawn Sides. In addition to the performance, the composer visited with students in multiple classes to discuss his artistic process as a composer, the nature of devising for the stage, and questions of cultural appropriation and intercultural engagement. This visit directly impacted my research, leading to a conference presentation at a national conference, and ultimately an article, "Spectatorship at the Border," in the peer-reviewed *Journal of Dramatic Theory and Criticism*. Impacts like this are only possible because the AVPA works closely with faculty. As a granting organization, we also require a close relationship with faculty and students. Approximately 1/3rd of our budget each year is disbursed as grants to faculty and students. These grants support a range of projects, including arts research (leading to articles and monographs), art making (on campus and in internationally recognized venues), and curricular innovations. In moving the AVPA to the office of the Vice President for Academic and Strategic Collaborations, it is essential that these activities continue. In order for the AVPA to have transformative effects in line with the goals of Academic and Strategic Collaborations, it must continue to take advantage of faculty expertise in art and culture. All this activity differentiates us in key ways from other units recommended for inclusion with Academic and Strategic Collaborations, especially the other arts organizations, OPAS and Music Activities. Neither OPAS nor Music Activities supports the research and teaching missions of Texas A&M University. Were AVPA to join them as part of Academic and Strategic Collaborations, it would be essential that the AVPA retain its close relationship to arts faculty, and continue to be led by such faculty rather than staff.

Recommendation #4: It would be fantastic to have additional venues for performance on campus, and especially venues that saw their mission as being arts leaders. Beyond the AVPA's programming, very little of note makes its way to Rudder Theatre Complex. As a model for what a forward-thinking performing arts complex could be and do, I recommend looking at The Clarice Smith Center for the Performing Arts at the University of Maryland, College Park, and their annual NextNOW Festival: <https://theclarice.umd.edu/nnf/about-nextnow-fest>. This annual event emphasizes "intriguing" and "inventive" artists and art that "transforms our future." Any new performing arts initiative on our campus must be similarly focused on innovation and the avant-garde in order to be competitive with other arts offerings in the state of Texas. In short, the changes recommended in this section of the report could be transformational so long as they are implemented with a commitment to innovative, challenging, and boundary-pushing art. A new performing arts center is of little value if its programming is not exciting. One other note: It is unclear why Cushing Libraries would be included as part of the Academic and Strategic Collaborations, as it is not, primarily, an exhibiting organization like AVPA, the Art Galleries, etc. Cushing Library is a research library, and that mission should remain unchanged. Having access to its collections as a researcher, and benefiting from its ongoing collecting in a variety of areas has been essential to my research and my teaching. I worry about the ill-effects of turning it away from that research mission.

I am enthusiastically supportive of the recommendations in this section. Anything that can be done to increase recruitment and retention of undergrads from all parts of the state is a worthy investment in my view. Building a campus performing arts center and a natural history museum would go a long way to enrich the cultural experience within the campus community.

This seems like a catch-all initiative. Recommendation #1 seems reasonable as described. The rationale for recommendation #2 is fundamentally flawed. The implication of an applicant pool not fitting the population of different ethnic groups at TAMU is that somehow admissions are biased. TAMU should never discriminate against any ethnic or religious group, thus TAMU admissions should focus solely on admitting the most meritorious applicants. It is evil to admit underrepresented students who are not the most meritorious only to see them struggle and fail at high rates. Student retention is based on their performance in the classroom. Dumbing down curricula or inflating grades to enhance retention damages the reputation of TAMU and devalues the degrees of former students. We should strive to admit meritorious first generation college students using whatever inducements are available. An Office focused on undergrad recruitment should focus solely on providing inducements for increasing the number of meritorious students at TAMU, period. There is not enough detail for recommendation #3 to even know what programs would be sunset or even what this issue is about. I wholly support recommendation #4 as long as the funds used to support these cultural centers does not detract from the academic and research missions of the university.

I think the findings and proposals seem reasonable to me.

support the initiative for student recruitment/retention Rationale #4 \*strongly support initiative to build stronger support/collaborations with community, state, and beyond, especially in regards to investment in Natural History Museum and all the arts. This would be such an exciting and powerful move forward for A&M - we have the resources

to do this very well if the appropriate personnel lead the initiatives (leadership can not be emphasized enough - leadership in this area needs to be carefully considered and vetted so that personal and political agendas do not get involved) I suggest consulting with outside objective parties who do not have stake in the proposal. If people from the region or state start to travel to CS/B to visit such venues this will highly benefit the community at large in regards to local business and hospitality venues. Its a win win for everyone involved - students, faculty, university, community, state of Texas!

Removing the academic advisors from the colleges and centralizing them is a really poor idea. I work closely with students and advisors to assure that the students get what they need. The students have access to the advisors in the same location as their faculty, staff, and undergraduate support personnel. By removing them from the physical proximity of everyone who would need to have that daily interaction, you would be creating a burden on the students to have to go elsewhere, creating inconvenience to faculty and staff, and hindering our ability to serve the students in the major. The report noted that it would be more convenient for change of major students. They should not be the focus here and indeed should be the ones inconvenienced, if anyone should. They are the minority of the students served in any college. Positions and titles can be balanced across campus without the need for physical relocation. The logic is not there.

I support all the recommended initiatives.

1. I have been at TAMU for 24 years, and I have yet to see a marketing program that I felt explained our role as a land-grant university to the average citizen of Texas in an effective manner. We need to do more to explain to Texas citizens how our research benefits them, even if that research is feeding people in other countries. We must do a better, more effective job at making ourselves indispensable to the average Texan. In reference to pages 21-22. 2. On page 20, the report notes that the State of Texas is nearly 14% Black and 40% Latin@/Hispanic, but these minorities make up a much smaller fraction of the TAMU student population. My question is: what are the percentages of the populations of each racial/ethnic group that ACTUALLY ATTENDS COLLEGE? Are TAMU's minority attendance rates similar to the other flagship university in the State of Texas? How does it compare to other land-grant universities? Finally, if TAMU aggressively recruits more minority students, does that not negatively impact Prairie View A&M University and other HBCUs? 3. Re: Finding #4, page 22, try better collaboration with the Brazos Valley Museum of Natural History, the Brazos Valley Arts Council, and Brazos Symphony Orchestra. Good Luck!!!

The recommendation of sun-setting community-focused programs is, I can only assume, purposefully vague. What programs and how they are chosen for elimination should be more explicit to garner meaningful feedback. In contrast, the investments in new cultural centers in very specific, and long-needed at the university and the community. An aquarium would be another great cultural and educational addition.

I love the idea of elevating the Arts at this University and in this community.

Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students : Great idea

Please do not move BIMS and BIOL into the College of Agriculture. The current leadership of the Ag college can't handle what they have right now. So unless these programs want to be marginalized, faculty ignored, and have resources pulled from them and diverted to a Nutrition-related pet program, a move at this point in history would be unwise and very unfair to these programs. Please investigate what is happening in AgriLife/COALS, it is not a pretty picture. Nobody is listening to the screams of the faculty with regard to failed leadership there.

Generally seems fine and potentially useful. It is not clear what programs are seen as ineffective and will be sun-setted. Changes to the Office for Diversity are concerning. The report gives a negative view of diversity initiatives in general and those that have taken place on campus. This is potentially driven by the fact that almost 17,000 former students were involved in the creation of the report and fewer than 2,000 current students were involved. The repositioning of the Office for Diversity is concerning, as it appears the leader of that unit will have less independence and fewer programs than in the past. It also appears that the office will be focused on student support going forward, whereas this office has previously led (and been successful in) faculty recruitment and retention initiatives. There is a lot of evidence showing that the best way to increase the diversity of your student body is to increase your representation of diverse perspective

and backgrounds among the faculty.

---

None

---

Recommendation #2 (Office for UG Recruiting): I am all for improvements in recruiting. The justification and projected outcomes sound great, but the reality is that opportunities for minority students are not going to be improved with this move. Minority and first generation students are not getting a fair shake long before TAMU could become involved. So if we really want to TAMU to look like the demographics of Texas, improve early childcare, increase funding in low socio-economic school districts, pay K-12 teachers more, eliminate the 10% admission rule and allow TAMU to move to holistic reviews. But none of these solutions can be implemented by TAMU. This is a state legislative issue. Recommendation #3 (Sunset community focused programs and establish new community programs): This was extremely vague and I am not for sure how well the consulting group understands the potential role that Extension could serve. Recommendation #4 (Create more cultural centers, etc.): We just built a new learning garden on West Campus and it is awesome. I guess the consulting group never saw it. How sad and disturbing. This is an indication that they didn't really do all the due diligence for which they were assigned.

---

The DEI component is important but very challenging proposition. And I question if this 'goal' runs counter to the (Texas) geographic diversity goals (...from all 254 counties). TAMU has many wonderful cultural opportunities, but the admission prices are not reasonable and affordable... music, plays, in particular. Some good museums but the content needs more frequent 'refreshes'.

---

This is a step in the right direction.

---

I support the recommendation to create VP office of academic and strategic collaborations. It is very much needed.

---

Investment in cultural/performing arts is excellent. It will immediately elevate TAMU to equivalent to all major universities. There is insufficient information given to evaluate how a centralized office for student recruitment and retention would work since departments/units have very different needs.

---

It is very hard to conduct interdisciplinary research and teaching at A&M because of the silo college system

---

No strong views here but it could work well, if staffed by someone of sufficient caliber (i.e. a serious academic with dean-level experience).

---

The recruitment and retention suggestion sounds good but you will need to make sure the people in those positions understand the complicated history of the university and the various demographics around the state.

---

External Affairs Suggest that Continuing Education be associated with the Graduate School and/or health/vetmed/pre-professional school for multiple academic and economic reasons. May also wish to consider expanded potential for executive education opportunities. Provost Org Chart – left column under Assoc Provost -OGAPS needs to maintain strong connection to DOR. Advising. Specialist advisors are amazing and close relationships with faculty are critical. Centralization can disconnect students from the specialist and reduce overall service. Perhaps an office of transfer advisors is needed.

---

I am someone who would benefit, and really wants to see, increased collaborations with the local community. I agree that there is an opportunity to coordinate efforts in this area. I would love to see an office that could help coordinate and facilitate community outreach, engagement, service, collaboration, and research recruitment. While I agree with the stated opportunity for improvement, but have real concerns about implementation and implicit assumptions reflected in the narrative and suggested changes. First the assumption that theaters and gardens and things on campus would improve community connection reflects an absence of knowledge about the local community. As someone who engages members of the local community in research, I can tell you that there are numerous families who have been in BCS for generations yet have never stepped on campus. This is not for lack of pretty things on campus. There is a real history of exclusion and even harm to members of the local community that must be recognized. The way forward will have to include moves from the University to rebuild broken trust. It will involve us going out into the community (not just trying to bring them on campus). I also worry about the definition of community. For me, this includes individuals (and not just local businesses) who live in the areas surrounding the university (BCS). The university must recognize the impact (some good, some bad) it has had on members of the community. I think there is a real opportunity to lend the considerable expertise of faculty at the university to improve some of the most pressing issues facing our local community. From my conversations with community leaders and individuals, it seems clear to me that there are much

more dire needs in our community for which the faculty have expertise and could really make a big difference. I want to see us using our expertise in ways that could help meet the needs that seem to be of critical importance in our community (food insecurity, lack of affordable housing, lack of transportation options, structural racism in our local laws, practices, and policies that serve to further disenfranchise certain segments of our population). It is unclear what community programs should be sunsetted or how they were deemed to be inadequate. Related to the suggestion to engage in more outsourcing (the characterization of prior outsourcing as successful does not recognize the negative impact on workers - many of whom had their hours and benefits slashed in the process) - the service workers on our campus are a critical part of our local community - how are we meeting their fundamental needs? I worry about community needs being tied to things like "enhancing economic development." This language indicates a fundamental mismatch in who is included in the definition of "local community." The wording that "local officials, regional representatives, community members, and current and former Aggies" are the stakeholders of interest also seems telling about who might be included and who might be excluded in these efforts. I think a critical step (that needs to involve members of the local community and faculty involved in community collaborations and engagement) is to clearly define who we mean to serve with these collaborations (who we are including in our definition of local community and all Texans, who stands to benefit, who is included and who is ignored) We also need to acknowledge historical harms and current power dynamics, and conduct a real needs assessment (using rigorous, scientifically sound, and externally valid methods) of the local community.

---

The report gives a negative view of diversity initiatives in general and those that have taken place on campus. This is potentially driven by the fact that almost 17,000 former students were involved in the creation of the report and fewer than 2,000 current students were involved. The repositioning of the Office for Diversity is concerning, as it appears the leader of that unit will have less independence and fewer programs than in the past. It also appears that the office will be focused on student support going forward, whereas this office has previously led (and been successful in) faculty recruitment and retention initiatives. There is a lot of evidence showing that the best way to increase the diversity of your student body is to increase your representation of diverse perspective and backgrounds among the faculty. To really address needs of community around the university, need to define who that community is exactly and work with them to identify needs and desires in that community. Note that there are many power dynamics and historical inequities that can constrain the view of who counts in having a voice from the community. It is unclear what community programs should be sunsetted or how they were deemed to be inadequate.

---

Investing in cultural centers is a good idea. For a university of this size, we are underserved in this area and it is something that can enhance the student experience.

---

Recommendation #3 is reasonable on its face, but is too vaguely written. It is not clear who gets to decide what programs do meet the needs of the community. I support recommendation #4, though I find it odd that the report does not mention the existing museums and university gardens.

---

Same comment as above, except in some cases it will also be important to gather student, community, alumnus, employer feedback too.

---

This proposed plan here seems ok

---

I recommend to include or integrate biological programs (from College of Science), biomedical programs (from Vet School), and kinesiology programs (from College of Education) into COALS. This should be the only move to enhance our national and international competitiveness.

---

I doubt recommendation #4 will bring in huge improvement for the retention of faculties. A museum, a garden, they may be good places to go for a day or two. Compared to the investments from the university, the effects will be negligible.

---

Regardless of how this is or is not implemented, increasing investments in diversity, music, theater, and travel is an excellent idea.

---

The idea that I think has the greatest merit in this entire report is creating an Office for Undergraduate Recruitment and Retention. Leaving recruitment to individual departments places a difficult burden on those departments. How can my department recruit in all 254 counties in Texas? Should I leave some (most) counties out and focus only on the big cities? I think this idea to centralize such activities will result in an excellent economy of scale. "Sunsetting" programs that aren't working is also a good idea.

---

Agree with desire to create an office to promote retention and recruitment. HOWEVER, I would advocate that retention has more to do with what happens at the college/department/major level than what the University can do. If you think

---

creating this office will fix it all, you would be naïve. While I am supportive of enhancing the arts in general at the University, I am not in favor of doing it to the extent called for. The report calls for building of a huge new performing arts centers, saying we have none. What is Rudder Auditorium/Theater/Forum? Isn't it essentially that? Why do we need to spend large sums of money on a 'Bigger Rudder'? I would much rather see that money spent on more needed classroom and research space. Similarly, the report is correct that the Arts are not a major thing at our University in terms of majors and academics, while it is at many large universities. But we cannot be great at everything. To expend very large sums of money on buildings and programs to grow an area that we do not have that much expertise in seems futile. I feel it makes much more sense to spend that money to promote further excellence in the areas we are already good at and want to get better at. I do NOT think this is a good way to spend our money. There is no way we will achieve excellence in the arts at a school like ours without outrageous sums of money being spent and many, many years. That money will go so much further at enhancing what we are already good at and up and coming areas we are gaining traction in.

---

This is one of the areas that makes the least sense - there are recommendations in here that should be (or already are) in other units (i.e., recruitment/retention in Student Affairs) and then lumping University Archives/Special collections in with the Childrens Center seems off - it removes these collection from being an academic resource. In fact, the opposite would probably make more sense - bring the museums (like the University press) to stand with the Libraries which would lend academic expertise to these efforts and allow cross-pollination between curators (book and art - and possibly even historical artifacts).

---

There is the potential for good programs here, but guidelines on implementation are vague. Having worked with many freshmen, I am seeing that many students enrolling at TAMU are no longer "college ready." Many faculty feel they are in a position where they feel pressure to "lower the bar" for success in classes, or cut essential material to help students succeed. We are already hearing that courses at the local community college are more rigorous than those taught here. Watering down a degree from TAMU will have negative implications on the value of our degree and the future success of our graduates.

---

In response to recommendation #4: A cultural and performing arts center is most definitely needed on the TAMU campus that is non-unionized. Rudder is a unionized facility that costs approximately \$7000-8000 per DAY to use, even for TAMU academic programs. While student organizations can obtain a discount, the cost prohibits both university academic programs, such as the Dance Science program, from being able to use the facility for performances. Additionally, community organizations are limited in their ability to use the space which therefore limits the ability for academic and strategic collaborations with the local community. A theatre built in mind for multiple disciplines would enhance collaborations between TAMU programs and community partners. Brazos Ballet and the Brazos Symphony Orchestra are two such entities that would appreciate an indoor and outdoor space for performances and cross-collaborations with the TAMU arts programs. An outdoor open space for performances enhanced by large metal sculptures and gardens could provide an interactive space for multi-disciplinary performances and cultural/ arts events that could benefit the community. In the construction of a Cultural and Performing Arts Center, it is imperative that faculty and staff from all disciplines have an opportunity to be involved in the design and development of the space so that it can properly and safely serve in a correct and functional manner. For example, the stage space should have a sprung dance floor for the health and wellness of the performer's bodies.

---

I also applaud the support of the McAllen Campus. As a contributor to the BIMS program, we are often stymied by bureaucracy as we try to support our fellow faculty in McAllen. Periodically, to get the faculty the resources they need, our department purchases them and carries them down personally as attempts to use the current infrastructure fail.

---

This part of the report covers things we already have, such as a performing arts center and campus gardens. A museum would be interesting, but moving Cushing Library here does not make sense. Folding Cushing into a museum is confusing as they are a working research library and archive and putting them with Becky Gates and other entities that do not function this way is an odd choice. While Cushing does do exhibits of their collections, their main focus is research and to be open to scholars, students, and the community to view the items that they preserve, organize, and make available as research items. A museum and an archive have two different functions and these are being confused here. Brazos county also has a natural history museum over in Bryan, so consider whether or not competing museums are actually beneficial to the community.

---

Recommendation #3 is reasonable on its face, but is too vaguely written. It is not clear who gets to decide what programs do meet the needs of the community. I support recommendation #4, though I find it odd that the report does not mention the existing museums and university gardens.

Recommendations 1--3 seem good. I have concerns about the costs of Recommendation 4.

---

Needs further study.

---

I completely agree that we need to recruit in towns and counties underserved by the university! However, one thing that I noticed was not discussed was creating a do-able financial plan so that these students could attend without going so deeply into debt that they're paying for their undergraduate degree for the next 10 to 15 years! The fact is, that the cost of attending TAMU is a huge factor many students - minority AND majority - and their families are having to take into consideration. I'm very glad to see the emphasis on creating cultural centers and events that can enhance community and get newer faculty and staff involved. From personal experience, I can say that establishing a friends group and a social network gets harder as you age and as your life changes. BCS lacks resources for mature professional workers who still have more decades of work life ahead of them, but are no longer interested in the bar scene. One concern is that it seems like the Cushing Memorial Library would fall under this. Or would it? And if so, why?

---

can't comment

---

All good ideas.

---

Realignment of units is logical and I support these efforts. Recruitment and retention efforts are needed at the graduate level as well as the undergraduate level. In particular, there is substantial duplication of effort in individual programs, colleges and Departments reaching out to the same minority serving-partner institutions concerning graduate recruiting. It would make more sense to have these efforts centralized and coordinated. Investing in cultural centers, performing arts and museums is a fantastic idea and will substantially improve the quality of life experience for students, faculty and staff.

---

These are greatly important and need to be facilitate at A&M. If successful, this will improve the climate.

---

Sounds like an office looking for a function...

---

The unusual bundling of activities will definitely improve relations between the university and the community in many ways (particularly through the performance art center). However, no other public research university of which I am aware folds arts degree programs into a unit focused on community relations rather than arts training. DEI is important in recruitment processes -- but also once students get to campus, and as it affects all faculty, staff, and administrators as well as students.

---

Cushing Memorial Library and Archives is an internationally recognized world class special collections library and is considered to be in the top 10 special collections libraries in the country. If the library's move to another unit is to increase the support of Cushing and elevate it to the level of a research center such as the Harry Ransom Center then it would be well-received, however, if the move is to change the library's primary mission from one of research and preserving documentary cultural heritage for future generations of Aggies and Texans to that of a museum type of organization, then the move would seriously affect its ability to support the mission of the university, its donor base and overall institutional credibility. Cushing is known for its collections that have been carefully and intellectually curated by specialized curators and archivists. Cushing is an active research library and not a museum and its collections support the mission of the university. Thousands of researchers, students and community members on the local, national, and international levels engage with the collections on an annual basis. Its historically rich University Archives are heavily used by donor/alumni groups such as Aggie Moms and the Association of Former Students. The University Archives collects campus history which in turns supports units such Athletics as they develop their own projects to tell their stories and fundraise. The scholarly outputs and new knowledge created from Cushing's rare books, archival and manuscript collections represent an important marker for a Research 1 Intensive Institution. Cushing's exhibits support and promote its collections and there are serious concerns that its relocation from an academic unit to the cultural and arts unit will reduce Cushing to the level of a museum rather than retain its standing in the top 10 special collections libraries in the country. Cushing has a highly productive Outreach program which supports a blog, series talks, guest speakers in collaboration with other campus departments in addition to its popular long-term exhibitions and recently added pop-up exhibitions highlighting the military collections and the Science Fiction collections. Cushing faculty members have consistently published in peer reviewed journals, presented at professional meetings at the national and international levels, and have received grants from the National Endowment for the Humanities, Mellon Foundation, Council on Library & Information Resources that supported the 3D Hotbed Project and Primeros Libros Project as well as

---

grants from TAMU: T3, XGrant, and diversity seed grants. Cushing supports student research in the form of very successful in-house fellows and the now newly created (2021) Don Kelly Fellowship/Internship and collaborations with the history department as seen with the Glasscock Fellows. Cushing also collaborates with the English department to host an annual Science Fiction and Fantasy writing contest. Cushing inaugurated an undergraduate Book Collecting Contest in 2021 and its winners were eligible to compete at the national level for the prestigious National Collegiate Book Collecting Contest; its ceremony is held at the Library of Congress. The Historic Pressroom is an experiential learning center that hosts workshops such as the renowned Book History Workshop and collaborative seminars with other world class libraries such as the Folger Shakespeare Library. Cushing relies on other University Libraries' (UL) units such Tech Services (Preservation, Cataloging, and Acquisitions), the Business Office, HR, IT, and DI (Digital Initiatives) and other system libraries such as MSL for resources and support. Cushing also relies on monetary funding to support projects such a security assessment, new map cases, light-reducing roller shades, new exhibit cases, new tables and chairs for the Mayo-Thomas Room to improve the pedagogical, meeting and exhibit needs of Cushing, new worktables and preservation supplies and equipment. If removed from the UL, on an annual basis Cushing would lose access to at least \$200,000-400,000 in Below the Line Funding -- funds that are needed for its maintenance as a world class institution. If Cushing were removed from the UL, the Preservation Unit would need to move with it as 95% of its work is Cushing related. The UL's Digital Initiatives unit would need to move with Cushing as 99% of the digital projects are Cushing related. The Scholarly Communications unit would need to move as most of their work has been Cushing or archival related. Catalogers produce the descriptive records for material held in Cushing, and these are the records researchers see when looking in the library catalog. At least 2-3 original and copy catalogers would need to move with Cushing in order for Cushing's materials to be described in a timely manner and not impede researcher discovery and access. Of serious concern is facilities management. As a special collections library, Cushing has unique 24/7 environmental conditions and security issues that need to be maintained in order to protect and preserve the cultural heritage assets of Texas. Facilities work at Cushing has to take into account the historic building the library occupies but also special concerns around building climate (temperature and humidity) and the collections housed within. The Library facilities unit is well versed in the needs of Cushing and would need to be shared. Cushing Memorial Library and Archives is considered to be one of the crown jewels of the TAMU system, and it needs to remain its position as a generational source of pride for all Aggies and also its multi-level recognition -- from local to global-- for its collections, faculty and outstanding assistance, access and contributions to research.

---

The Office of Diversity Equity and Inclusion needs to retain its VP status, both for the optics and because it has an important internal role to the university that needs to be retained. Getting rid of the VP status would create exactly the kind of headline A&M does not need.

---

NA because only research dollars and publishing in impact journals are important and rewarded.

---

Recommendation #9c: Refocus the College of Architecture on the core mission of Architecture and Landscape Architecture/Urban Planning is poorly thought out and will damage current departments and the College of Engineering (COE). The Department of Construction Science (COSC) is not an engineering degree nor ABET accredited and moving it to COE will degrade the College and the Department of Civil and Environmental Engineering. Graduates of the Department of Civil and Environmental Engineering will not support COSC being moved to the College and many will protest the idea of creating non-engineering programs within the College as industry expects us to graduate engineering-trained students.

---

No comments

---

Again, there are many valuable ideas here, and Susan Ballabina already is doing an amazing job!! My only input regarding this new office is that the Office for Diversity and Inclusion needs to be a stand-alone office that reports directly to the President. It is critical to center DEI & J both for our reputation as a premier AAU institution and land grant institution, and federal funding agencies will pay close attention. TAMU needs to lead the nation, and this begins with an elevated Office of Diversity and Inclusion.

---

International students are important component of TAMU. Our international services need significant revamping and support. In terms of immigration support, support while on campus, and academic support. Anything that can be done in this arena will be better than what we have. A recognition in the report that international students are important is a good outcome that should be addressed. Elimination of duplication of recruiting efforts is something that needs to be addressed. To often there are competing entities with TAMU recruiting similar areas/towns/cities. A coordinated

recruitment strategy is important. Finding #4 is important, given the diversity of faculty and staff that we hire. Frequently comments refer to the lack of access to cultural enhancement opportunities in the area. Retention of high quality faculty is important.

I have no issue with recommendations but more strategic collaborations and partnerships should be made with industry. We are a land grant university and should be serving the state by strengthening business and enterprise, particularly of businesses based or have employees in Texas. We shouldn't expect the State of Texas or federal government to pay for facilities and research private industry is willing and would provided with strategic partnerships just to increase our federal grant portfolio.

I fully support the development and investment in cultural centers and places/spaces that attract families and talent to the BCS area.

How will the proposed new Institute of Biological Life Sciences be administered and be able to grant degrees? Why is the realignment of of biomedical within AgriLife appropriate? Why the concentration of power \$ and other resources under the AgriLife umbrella an improvement?

I respectfully disagree with the assessment to consolidate HLKN under the SPH. Thanks!

Any major restructuring of the university should draw on the ideas and experience of first-rate people with vision and proven track records of success in relevant areas — not mediocre management types. It would be great to have advice from a committee with business leaders like Elon Musk (moving to Texas!), scientific leaders like Neal Lane of Rice University (in Texas!) — who was science advisor to the President of the United States and also Director of the national Science Foundation — etc. They know what they want of our students who graduate and of the high-quality research done here.

I agree with many of the findings in this session. Especially # 1 and #4.

Recommendation #1: Continue to incorporate other campus units that fit the mission of Academic and Strategic Collaborations. Academic collaborations happen between the faculty. The rest is the administrative collaborations. In order to facilitate academic collaboration, one does not need any special office. One simply needs to make sure that the faculty have the means to collaborate/travel and have time to do so. Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students Recruitment/outreach is done by the faculty, not by the administration. The resources for that must be allocated with the faculty, so the faculty do not have to go around begging for the resources to do one of the core missions of the University. Case in point: One of the very best outreach programs in this University, the Engineering and Physics Festival and related activities is constantly short of funds and constantly has a problem finding the funds for the next event. The university does very little to help, yet there is a proposal to create another administrative office. Sure it is easier to find funds for that. Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens There is nothing wrong with the recommendation itself, but I want to emphasize that the best outreach and recruitment happens when the future/prospective students interact with the faculty who involve in research/teaching at the University. For that to happen the University better spend the resources to support the faculty efforts. This includes the support for the time the faculty spend on these activities. As things usually go the funds to build new gardens will be taken away from the faculty. The net result then will be negative.

The VP for Diversity should not be a dotted line connected to the VP for Academic and Strategic Collaborations. Diversity, Equity, and Inclusion are not limited to campus and community engagements, and I would argue that this is just a small part of what the Office for Diversity is all about. This part of the report is so disrespectful and disheartening to those of us who strive to make this campus a more inclusive space. Texas A&M has several galleries and museums. Bryan has a museum of natural history. The report is inaccurate in stating that these things don't exist.

On Finding #2, which rightly notes the crisis TAMU is facing with regard to diversity, to the entrenched campus climate that can be harmful to minorities, as well as the Threats in the SWOT portion of the document that notes: "Lack of faculty diversity and poor retention of diverse faculty members both at the university and department levels. • University climate not always welcoming, particularly to diverse faculty, staff, and students. Enrollment of diverse students, particularly African Americans, is low. Student and faculty populations do not reflect the state population. • Perception that TAMU history and culture have negatively impacted student body diversity. TAMU has historically been conservative and slow to change regarding diversity issues. Fish Camp is an example of this—there is a lack of control over the content of the camp. The challenges of polarized politics have the potential to threaten core values. " I am

troubled that the only recommendation offered here is to establish an office of undergraduate recruitment. That by itself will do little to encourage retention of minority students, faculty and staff, or to create a more welcoming campus. If the campus culture is not changed to reflect a real belief in the importance of diversity and the need to respect those different from us, then no office will be able to bring in large numbers of diverse students, faculty or staff. This looks like a threadbare attempt to patch over the gaping hole in our campus culture caused by lingering racism and conservatism.

- Seek to retain, nurture existing, and grow new relationships in this area.

This section seemed under-developed compared to the others. It is difficult to tell which programs needed to be "sunsetting." An office to recruit underrepresented students is a fine idea in theory, but it not clear to me how this would complement or replace existing efforts. Is this only for undergraduates? Graduate/professional school recruiting is mostly done at the program level. A performing arts center would be a great addition to campus

Input from outside sources will help to strengthen the entire University.

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens The centers and gardens should be managed by professional staff who can work with faculty/departments to incorporate a variety student engagement experiences. Funding these enterprises should not be the responsibility of departments and colleges; faculty and department heads should focus on academics and research.

This seems to be a bit of a grab bag of offices, but to the extent that I understand why these things are grouped, it seems that the dual career office would also make sense here - this is the office that is essential for recruiting people to the university. The statement to "Sunset community-focused programs that do not adequately serve the needs of the community" seems unfortunately vague and under-described here. Including the Office of Sustainability here seems to be a mistake. Sustainability is not a marketing device for attracting people to the university - it is a core aspect of how the facilities are managed, and needs to be under Facilities.

I am somewhat concerned that too many disparate things are being put into this office.

Agree with the vision, but would like to see a VP of Strategic Research Collaborations either in this office or the VPR's office.

I agree with finding #4 that the university needs to invest in more cultural centers. Although I think the reports overlooks some of the great things we already have (i.e. campus gardens) there could be more done to both promote the cultural activities and places we have, as well as develop new ones. Cultural places (museums, fine arts center, more campus garden-like places) can be draws for the community and contribute to community support.

I find this plan as a positive factor for TAMU.

There is basically no mention of the integration of academic programs in COALS (life sciences) and Engineering into the fabric of the academic and strategic collaborations. This is now and seems that it will continue to be a flaw in the goal of having Texas A&M University be an elite institution. An organizational structure like the one at the University of Florida has a Senior Vice President for Ag, Engineering and Medicine reporting to the president and the academic programs being under a Provost and the research being under a Vice President for Research. This organizational structure allows all components of the institution to work in unison and pull together while maximizing the utilization of resources. Texas A&M now has three camps on the College Station campus and it is not obvious that they are in synch with the overall goals of the flagship university.

A&M has been disgraceful in its lack of support for the community. The students do more with the Big Event than A&M does. There is no community outreach. Compared to schools like Wisconsin, the number of A&M sponsored classes is negligible. The Administration has been ranting about minority recruitment for decades--but sponsor a free conversational Spanish class for faculty? Have retired/current faculty lecture to community organizations?

Promote cooperation between departments.

n/a

Make it smaller.

Seems fine again as long as it does not result in more upper admins

more prominent global partnership and facilitating global strategy is needed

---

The changes here are intriguing and perhaps will be beneficial but, like all things, will depend on the quality of the personnel.

---

Again, be mindful not to create too many positions even if the responsibilities of this office are laudable. How are you going to pay for this?

---

It's not clear what these recommendations will achieve. Appears to be focused on PR efforts.

---

Strongly support the recommendation on creating cultural centers such as a performing arts center, a museum and hospitality center, and campus gardens. You go to every top college town in this country, and there is a few great places for family/kids to spend time in (other than restaurants!). We need museums to teach people about the past, and help them carve a better future. We need performing arts center for world-class artists to compete to get into. We need to go above and beyond the traditional "aggie" mindset if we want to stay relevant in the 21st century world.

---

## Academic and Strategic Collaborations - Staff

Please provide your comments related to Academic and Strategic Collaborations:

---

I generally agree with the recommendations for academic and strategic collaborations; especially with improving cultural opportunities for international students and with recruiting more underrepresented groups throughout our state and surrounding areas. Despite recent pushback on internationalization it is important to continue to build strong ties with with people all around the world; and as a state institution I believe it is critical to offer opportunities for economic and social advancement to as many of our citizens as possible.

---

Academic and Strategic Collaborations: Finding #2, Recommendation #2: Centralize undergraduate academic advising. The rationale provided for centralize academic advising is to provide consistent a streamlined advising experience. I would suggest that removing advisors from their units and the students they support would be contrary to the stated goals of student success. The advisors that support students, should remain embedded at the college/department levels to ensure accessibility and ensure that the advisors supporting the students have program knowledge, know the students they support, and can successfully advise the students based on their major of choice. However, I do suggest that reporting lines of the college's senior advising unit could be changed, ensuring that overall communications, practices, etc. to all units are consistent and ultimately overseen by a centralized office. That is, I believe a change in reporting structure of the senior advising management in units to report centrally, could be beneficial. However, I highly suggest that removing advisors from the students they support would be detrimental to student success.

---

It is unclear who is deciding this "sunset" of "community-focused programs" and what metrics. This should be better communicated otherwise the community and staff support them WILL be even more distrustful of what appears to be reckless change by a new administration. SWOT analyses on this would be helpful as well as strong community and staff buy-in.

---

Coordinated recruitment is essential in bringing the best to Aggieland. It is critical for A&M to understand that its mission is not to just create engineers. It's mission is to provide Texas with Texas, Public Servants, Entrepreneur, Engineers, Artists, and especially Teachers. The teaching profession faces an exodus through retirement and excess for population increase. It is vital Texas A&M create teachers to help fill the impending gap. Community Impact programs will rely heavily on Deans, Faculty, and Staff to find innovative ways to engage the community. Something as simple as: A professor partnering with a local school so a student can earn extra credit. This extra credit would be successfully teaching a 45 min period of instruction covering a lesson they learned in the professor's class. would not only reinforce student learning, and provide an opportunity for discernment. But also serve as direct engagement with future students within the community. A&M has culture/performance arts centers and museums. What it lacks is a series of interconnected parks and gardens that serve as a research and community center. I do not understand the need to separate Cushing Library from the rest of the Libraries.

---

The part about the centralization of advising is unclear, so I am not sure what exactly is meant. Centralization in terms of providing a clear, functional career ladder and standardized onboarding would be helpful for advisors, who can

otherwise be lost and stuck without good leadership. However, if you intend to require all advisors to advise all majors, this would be terrible for both advisors and students. These two parties need to develop a long-term, trusting relationship to succeed. Advisors also need to be able to specialize in one or a few majors.

Tuition is so very expensive already. I don't like the idea of students spending 60-80k for a Visual & Performing Arts degree where they may not have an opportunity to recover the investment and I would be against this. That being said, combining these with the Department of Visualization would be the only reason to create another school. Watching their successes has been amazing but requiring participation in STEM should be a mandate that they would be thankful for later. I had family invest in a performing arts college, only to turn around and require additional education (computer science) when they 'aged out' in NYC.

I am generally in agreement with these recommendations.

Please do not include Diversity and Inclusion into Academic and Strategic Collaborations. I don't see how efforts on DEI can benefit from being a unit of Academic and Strategic Collaborations. Rather, DEI would benefit from getting its stand-alone infrastructure to elevate its importance to the university's mission.

The Office of Academic and Strategic Collaborations continues to be a confusing entity and it is even more so as a result of this report. On its surface it makes some sense but given the reports insistence on mission focus in other areas, the creation of an entire division to control everything from undergraduate recruitment to daycare centers feels very odd. How does International Student Services fit into that picture? This becomes more confusing given the sources cited to support this new division. Nearly all of the sources that include dates are a decade or more old. Others are from non-academic sources such as "Wallethub". It begins to feel like justification of an idea versus research leading to a decision.

While I strongly support the idea in Recommendation #4 that we should "Invest in cultural centers". I have a couple of concerns with some of the recommendations. First, they posit that "TAMU does not have a modern performing arts center to host indoor large-scale events for students and the community". This is incorrect, we have Rudder Auditorium which frequently hosts plays, concerts, and other performances for students and the community. While I don't think it is a bad idea to create additional performance spaces, I found it problematic that they did not know what we currently have on campus. My other concern is in the organizational chart that they provide for Recommendation #4. In this chart, they list Cushing Library as one of the "museums" that would be put under this new organizational structure of cultural heritage centers. However, Cushing Library is first and foremost a library and needs to stay under the same organizational structure as the rest of the University Libraries. While Cushing Library does have archives, manuscripts, and cultural items, its large collection of books is one of its most defining features and is the most highly requested. The University Libraries also rely heavily on cross-departmental collaboration to support each other, as well as the multiple libraries on campus. By removing Cushing Library from this structure, it could seriously restrict how Cushing Library currently operates and the services that they offer.

Visualization should stay in the College of Architecture. Moving the program to Liberal Arts could fracture the program. Viz is a stem major and not a liberal arts major. A performance center is not needed since there is Rudder. The university already has gardens and museums.

I love the efforts to recruit minoritized student populations. I hope, as well, that we are creating a welcoming campus environment that embraces the diversity we promise as part of the recruitment efforts.

Recommendation 2: Create an office focused on recruiting UG. I support this recommendation. Recruiters must have regular communication with colleges and departments and must be trained to understand what it is each of our programs do. Recruitment that ignores some programs, gives out incomplete or inaccurate information, or fails to convey the essence of the academic program in terms of knowledge and skills is ineffective. Recommendation 3: Texas Target Communities should be used as a model of effective, impactful outreach, and resources should be invested in it to continue its work and scale it up. Recommendation 4: Invest in cultural centers ...and campus gardens. I fully support this recommendation. Making Bryan/College Station a more desirable place to live would enhance our ability to recruit and retain graduate students and faculty and would also benefit the BCS community. Currently BCS is not a desirable destination, especially for mid-career professionals because it does not have amenities and feels either like generic suburbia or like College Town, USA. While we're proud to be the home of Aggieland, if we want to attract people to live and stay here, we need to offer more than fun football weekends. I'd love to see concerts from a variety of musical acts, arts-related festivals, and more local restaurants and shops, and better public transportation.

No feedback provided

Love the focus on student recruiting - this whole division should report to the Vice President and Associate Provost for Diversity directly to the President with a dotted line to the Provost. No other SEC or AAU institution buries diversity in the administrative structure.

I am interested and excited by this new area of Academic and Strategic Collaborations. However, I would not include the VP of Diversity in this unit. Centralization of international education under one umbrella is welcome, and we could all benefit from removing the existing barriers and sharing resources. The concerns I have and those of my colleagues are mostly related to the individual charged with leading the centralization of International Programs. What assurances do we have that the individual overseeing these international education offices has experience in the field? Specifically, will leadership put a practitioner of international education with knowledge, experience, and national presence in place instead of a faculty member with little practical experience or knowledge of international education as a professional field? The University would greatly benefit from a professional who understands the complexity and interconnectedness of all aspects of international education. Someone active in organizations such as NAFSA, Forum on Education Abroad, AIEA, IIE, etc. The right person, given the opportunity, could make a significant contribution to our global identity. I am also supportive of investing in cultural centers, performing arts, a museums, etc. If we want to attract and retain talent, we need to offer a community that is robust, modern, and interesting.

No comment

Recommendation 2, to create a dedicated Recruitment and Retention Office is a valuable idea. Recruitment efforts seem mostly to be placed in the hands of undergraduate directors and academic advisors, who are simply not trained in the best practices of recruiting.

I support all recommendations.

No comments.

I think the recommendations to create new community programs and invest in cultural centers are excellent and would be highly beneficial for recruitment of faculty and staff, and would strengthen the connection between the university and the community. I disagree, however, with the suggestion to move the Office of Diversity and Inclusion into this new office. Moving such an important office out of the Provost's Office could convey the message that issues of diversity and inclusion are not highly valued.

Recommendation 2 - I have what I believe and hope may be a small typographical error. Recommendation 2 indicates a focus on improving recruitment and retention. My argument would be that retention is more the purview of student success and student affairs, not linked with recruitment. The academic and strategic collaborations VP has nothing significant in their portfolio to warrant being the center of retention. Traditionally, the concepts of retention, persistence, and graduation have resided in the student success area of most campuses. However, our approach has always been to be inclusive of the role student affairs and enrollment management/recruitment play.

"Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students" is stating responsibilities that were literally stated earlier in the report to be the responsibility of the Provost's office. This also does not sound like it ties into the other responsibilities of the Office of the Vice President for Academic and Strategic Collaborations.

Since the Provost's office is going to be primarily responsible for student success, shouldn't recruitment and retention be there and not in a separate, non-academically related unit? Already prospective students feel that they are being sold a bill of goods regarding their "Aggie experience," and this move would only serve to exacerbate that. Without academic, degree-informed oversight, who knows what an over-zealous recruiter would promise potential students? (A problem that already exists within Athletic recruitment.) I do agree with sunseting programs that are no long relevant to A&M's mission and current standing. Do NOT invest in a performing arts center. That type of program is extremely expensive and the community does not have the bandwidth to support it.

Sunseting and re-establishing community-focused programs is a good idea as long as those programs get replaced after sunseting. Just removing lacking programs is not going to benefit students. Culture centers are a good idea and one that should be implemented.

I think it's a great idea to actively recruit more diverse undergraduates and foster the relationship between the university and the community. I would like to hear more concrete ideas on this front. How would the university go about recruiting from historically underserved communities? Is this about improving the quality and diversity of our student

body, or about increasing enrollment numbers? How will the university go about deciding which community-focused programs to sunset? Will it just be based on feedback from interested parties or will there be a more strenuous rationale behind any decisions? I also wonder if the community doesn't engage with some of these programs because they don't know they exist. My problem with this section is that Cushing Library is incorrectly lumped in with the Children's Center and on-campus museums. This is simply not correct: Cushing is an active research library and home to our archives and rare books. While it often will feature displays and guided tours, it is first and foremost a functioning academic library and not a museum.

Page 19 and 20: Does the incorporation of an Office of Diversity and Inclusion under a VP for Academic and Strategic Collaborations remove the hierarchical structure of the VP and Associate Provost for Diversity from a Presidential direct report? As currently structured, the office gives prominence to the efforts and importance that TAMU places on all dimensions of diversity. While that includes ethnicity and international status (a focus of the report), it also includes initiatives on other dimensions of diversity including gender, sexual orientation, religion, etc. and climate on campus. I feel it is important to keep the prominence of this office, the weight of this office and the focus on all aspects of climate and diversity. This prominence and the TAMU community's efforts have led to the creation of centers such as those found here: <https://diversity.tamu.edu/Resources#resources-all>, as well as to TAMU receiving the HEED award. Page 20: The report states the percentages of various ethnically diverse populations in TX. Would it be better to look at the percentages of the various ethnically diverse populations that are school age? Report cards for school districts, found on the TEA website, give those percentages. They show that the African American and Hispanic/Latinx population of students adds up to 65.4%. These should perhaps be our aspirational goals.

---

Pg. 19. This new unit provides a unique opportunity to address a goal of collaborating and connecting with the larger Bryan-College Station community and the citizens and communication across Texas. What about the communities of the other TAMU campuses that are not in Bryan/College Station. Pg. 20. To ensure that departments and staff have proficient intercultural communication competence (an ability to conduct meaningful, appropriate, and effective communication with others of different cultural backgrounds), training and resources to best support international student populations on their campuses are of great importance. I hope these resources are made available to the College of Dentistry when they are developed. We have had requests for programming that specifically addresses these issues. Pg. 20. Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students Since the majority of the sections above have mentioned recruiting a more diverse student population, it might be helpful to reach out to the College of Dentistry, specifically their Student Affairs and Student Development departments, who have had programs focused on this for decades and have been successful in efforts to diversify their student body.

---

I believe several of the recommendations for Academic and Strategic Collaborations would greatly benefit the university.

- Investment in cultural centers, performing arts centers, a museum and hospitality center, and campus gardens: this is a key area that Texas A&M falls short in compared to every other university of its size. If one visits another major Texas university (UT, UH, Baylor) or SEC school, they will find many, if not all of these things. These are critical to recruitment/retention of students, faculty, and staff, as well as developing culture in a city based around our university. This is badly needed, and I appreciate its inclusion in the report.
- Creation of a new office to improve recruitment and retention of undergrads: This recommendation is in line with what should be one of Texas A&M's top priorities, however it seems a little redundant as this already exists at the university in the form of the Office for Student Success.

---

I'm unsure of the vision for centralized advising. Is the thought to be centralized into one building and would each advisor need to have knowledge of every major, program, opportunity across campus? That's not realistic but I get that impression from the report. I'm also concerned by the non-specific use of the word "MANY" when describing the number of students who change their major. Do we not know a percentage? Is this between one college and another, or within a college? Very different issues.

---

Putting the Vice President for Diversity under the Vice President for Academic and Strategic Collaborations sends a very clear and troublesome message of devaluing this position and the essential DEI-related efforts managed by this office. There are no peer institutions where a VP for Diversity reports to another VP. Given the breadth, scope, and visibility of the position, it should report either directly to the president or to the Provost and Executive Vice President so not to minimize its significance and marginalize the individual's voice.

---

The MGT reports states the Office of Vice President for Academic and Strategic Collaborations “aims to prioritize relationships between TAMU and Texas, particularly the communities where TAMU campuses and programs reside.” I completely support this mission and believe that some of the structure suggested by the MGT report is consistent and will offer great partnerships between TAMU and local and state communities. However, just as the MGT report suggested the Provost Office was too big and lacked focus, I believe they jeopardized the focus of this unit by adding a hodge podge of units that they couldn’t conveniently find a home for or were just trying to remove power from the Provost. In order for this unit to remain on mission and not become the Office of the Vice President for Miscellaneous Programs, I believe better homes need to be found for the following units: VP for Diversity Office of Sustainability OPAS Music Activities Children’s Center Academy of Visual and Performing Arts Art Galleries Cushing Library International Programs I understand that the MGT report does propose a creation of several fine art departments. This will be a great benefit for the Bryan/College Station community, however, until these programs/departments/schools can be created these fine art units should remain where they are currently housed and bring them together once a new school/department is formed. There is no need to dump them in one area for them to eventually be moved to another. It doesn’t make logistical sense. It also only extremely loosely supports the missions of the academic and strategic partnerships unit. If we’re trying to remain focused to deliver organizational excellence, let’s not create units that are essentially the Island of Misfit Toys for unique campus units. International Programs, I agree, needs a Vice President/Provost or Assoc President/Provost to supervise it. In addition, aligning the international programs on campus is essential to their success, however, they belong either reporting to the provost or directly to the president. I would lean toward the provost since the majority of our international colleagues are faculty and students and thus this is the domain of the provost. I would love to see international student, faculty, and staff processing reorganized and made more efficient. Honestly, it’s a mess. As a unit who has to partner with them, they completely lack resources to support the vast number of constituents they serve. ISFS and ISS are always underwater. I came from a university in Illinois where these processing units were centralized and it ran very smoothly. I know it can happen. However, at TAMU, for an organization this size, these units are sorely under-resourced and lack a unified mission and direction.

---

None at this time

---

As part of HSC, even though we are part of TAMU, there are business functions such as paying across campus parts that is still difficult. Processing tuition payments for hsc students on tamu accts and vice versa have to have a work around process.

N/A

---

Recommendation 3 is the only one I can get behind, but who determines what metrics are used to determine if a program is successful or should be eliminated?

---

Some of the departments being moved here make no sense at all, and appear to be moving here just to justify the new position. Specifically International Student Services and Education Abroad would make more sense under student affairs. And it makes no sense at all to move recruitment out from under admissions, as these two departments are literally two sides of the same coin.

---

It is being recommended to move the Becky Gates Children’s Center out of the Division of Student Affairs and to the Office of the Vice President for Academic and Strategic Collaborations although approximately 35% of campus child care centers are under the Division of Student Affairs and 35% are under an Academic Department, while 10% are in Administration & Finance Divisions (National Coalition for Campus Child Care Centers, 2015). The Becky Gates Children’s Center presently has many established collaborations and partnerships across campus including College of Nursing (clinical site), College of Architecture, College of Education & Human Development Project ABC (T3 Grant) & NIH Grant application, College of Engineering (NSF Grant application), College of Medicine, and others. Changing divisions impacts agreements and affiliations. Consider supporting and maintaining established collaborations and affiliation agreements when moving departments with new reporting structures. The mission of the Becky Gates Children’s Center is to provide an exemplary, affordable, accessible early childhood program for the children of the students, faculty and staff affiliated with Texas A&M University. The Becky Gates Children’s Center mission is met by serving students, faculty, and staff at TAMU. The center supports student engagement through transformational learning experiences by using the center as a research, clinical, and observation site as well as providing high impact opportunities for over 50 student employees. The Becky Gates Children’s Center supports both undergraduate and graduate student parents in achieving academic outcomes and by increasing graduation rates. Being student focused is at the core of the center’s mission. If

the Becky Gates Children's Center is moved out of the Division of Student Affairs, we ask you uphold their mission and allow them to continue to positively impact all students at Texas A&M University. In continuing with the mission of the Becky Gates Children's Center the new Office of the Vice President for Academic and Strategic Collaborations addresses the goal of "collaborating and connecting with the larger Bryan-College Station community and the citizens and communication across Texas" and aiming to "prioritize relationships between TAMU and Texas, particularly the communities where TAMU campuses and programs reside" (p. 19). At this time, it is unsure how the Becky Gates Children's Center aligns with the Office of the Vice President for Academic and Strategic Collaborations. The Becky Gates Children's Center has focused internally for over 20 years on the faculty, students, and staff of TAMU. Consider safeguarding the current mission of the center. Campus Child Care Centers such as the Becky Gates Children's Center enrich higher education institutions by supporting a diverse and inclusive body. The center supports academic partnerships and campus-wide collaborations across all disciplines. The center supports a world class faculty and staff by increasing recruitment and retention, being a family friendly environment, and fostering inclusivity with our rich diversity. Many Aggies find a home at the Becky Gates Children's Center. In addition, the Becky Gates Children's Center has obtained outstanding achievement in national and state quality initiatives including health and wellness as well as the new nature-based playground. The center also offers quality educational training opportunities for students, faculty, and staff as well as in-service and pre-service teachers. This center is and should continue to be model school for early childhood education across the state of Texas and beyond. It is imperative to uphold the mission of the Becky Gates Children's Center to provide an exemplary program. This is accomplished through the center's innovation and discovery by leading in child-centered philosophies and pedagogies, including nature-based and anti-bias education, opening the gates to a lifetime of learning for both our future and current Aggies. Lastly, the Becky Gates Children's Center receives important funding from the Division of Student Affairs for Aggie student parents. The center awards \$78,000 annually in DSA UAF funds to student parents. Active student parents receive between \$100-\$175 monthly discount to offset the cost of child care to support student parents' focus on their academic work and graduation. Furthermore, the Becky Gates Children's Center receives \$24,000 annually in scholarship money from The Association of Former Students specifically for lower socioeconomic status graduate students. Continuing funding streams that support Aggie students is imperative to the mission of the Becky Gates Children's Center.

Proposed Org Chart - Cushing Library It is clear that MGT Consulting lacks understanding of the purpose and role of an academic special collections research library and how libraries like these are used to teach students and scholars. Cushing is not a museum but rather a robust research library that lets students interact (touching, smelling, and feeling) with historic books, artifacts, and other rare collections. Museums allow a limited view and little access to materials. Cushing also hold the University Archives, as well as the archives of the Federation of Aggie Moms papers. The facilities managers, catalogers, preservation unit, fundraising unit, and business office within the University Libraries system are intertwined with the infrastructure and workings of Cushing as a unit and as a facility. If the A/C unit breaks (or in any of our facilities) Cushing would need immediate attention that could not wait for days nor weeks to fix due to the rare collections need for climate and humidity control. Our facilities managers know Cushing's needs and quirks that come with being a historic building. Rational #4: I agree that we need a event center for all events. Rudder Tower used to serve as the indoor large-scale events center, but it is VERY tired and needs to be either totally renovated or demolished and re-imagined. (Yes, blasphemous, but I said it.)

---

Recommendation: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students This should include contacting "Stop Outs" or students that started their educational career at Texas A&M and left higher education. These efforts should also help address the definition of academic advising at Texas A&M. Due to territory of efforts, some colleges prevent offices from assisting with reaching students. A clear definition should be established about students being recruited, actively enrolled, and those no longer enrolled. The advising community should focus primarily on those actively enrolled.

---

Report: Relationships between TAMU and Texas; support the education and growth of the larger community/larger Bryan-College Station community and the citizens and communication across Texas Response: The University Art Galleries' mission is to provide educational opportunities for both students and community members and the state. In moving the University Art Galleries to the Department of Academic and Strategic Collaborations, the galleries could be an excellent resource for drawing more visitors to campus and enhancing the reputation of our existing collection of early Texas art. While our team is already committed to this endeavor of making art accessible to the community and

state through our newly formed Texas Art Project, more support and resources could amplify this program to the stature it deserves. It would be my hope this would provide more ways to reach more people through arts education. Public Partnerships/Outreach and External Affairs and Public Relations could possibly be a source of help with our Texas Art Project and a desire to bring traveling art shows and programming to Texas communities. This is a goal for our team, but with limited resources, we don't have much time to devote to this idea. Something not mentioned in the report with regards to moving the University Art Galleries to an academic collaboration area would be to provide us with much needed connections with university faculty regarding programming and curriculum. Most universities have art departments that support their university art galleries. Our small team has to try and make in-roads where we can with faculty, and without support, these relationships often fall through the cracks as faculty get busy with getting published and working toward tenure. A more formal call for the galleries and our collections to be part of every student's well-rounded education is greatly needed. While the Forsyth Galleries has a full-time education curator, the Stark Galleries is in need of this role moving forward. Both galleries could benefit from a review and new strategic planning about the direction of educational programming and what will resonate the most with students and their educational needs. A recent idea in Student Affairs was to band together the arts departments on campus to create a marketing campaign raising more awareness for arts opportunities on campus. This initiative was tentatively named "Enhancing the Arts." A small committee was formed between the Division of Student Affairs, the University Art Galleries, Music Activities, and the Academy for the Visual and Performing Arts. All groups were dedicated to this cause, and I know many would be interested in working together to help promote the arts on campus and in our communities. The group is currently on hold with the recent changes in leadership. One major resource on campus that draws a lot of community participation is the Leach Teaching Gardens. Many entities like museums understand the connection between art and nature and joining museums and galleries under the same umbrella with arboretums and gardens. I'm not sure how it might work based on the university's org chart, but a joint collaboration between the arts and the existing TAMU gardens would seem to be a natural fit and draw for the community. Report: ...particularly the communities where TAMU campuses and programs reside Response: Consider the TAMU System Schools where they also have well renowned arts programs and consider collaborations. Examples include the stellar music program and the Panhandle-Plains Historical Museum at West Texas A&M University, and the art galleries at TAMU Corpus Christi, to name a few. Report: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens; ... campus-associated museums would provide opportunities to educate and share educational assets with the community Response: We already have all of these resources, they're just being underutilized at the moment. With the proper support and direction, the departments being proposed to be moved to Academic Collaborations could be bolstered and become bigger draws for the community. I would suggest investing in the existing resources we have before breaking ground on new facilities. Something to consider is the location of these resources. We have found that having the University Art Galleries in the Memorial Student Center means we get much more foot traffic from students than we would if we were in a stand-alone building. The dilemma is getting community members to come to campus. If our current collective resources were highlighted more and had more programming for the community, then we might get more community involvement. Report: The report is missing information pertaining to marketing for Academic and Strategic Collaborations Response: Where does marketing come into play for this new group and what does the working and reporting structure look like?

I work in the Academy for the Visual & Performing Arts Department and am very excited that AVPA is moving under the new office of the Vice President for Academic and Strategic Collaboration. I agree with the following statement from the report: The areas surrounding Bryan/College Station currently offer a variety of cultural activities and events to enhance the community and support the artists that reside in the region. As the educational leader in this region, TAMU should be the leader in growing this effort. Research shows that cultivating art and culture in a community provides many benefits. Adding arts and culture throughout the community can improve health, safety, and well-being. I have been working for AVPA for over five years and hope this change will open up opportunities for staff advancement, which are currently not available. Currently, this department is understaffed. It has one full-time employee (wearing many hats), a part-time Director (faculty member rotated every three years between College of Education, Liberal Arts, and Architecture.), and one to two student workers. Therefore, I recommend hiring a full-time Director instead of rotating faculty every three years as a part-time Director because their primary role and responsibility are their faculty position. In the current model, AVPA comes second to their faculty job, which impacts their ability to do an excellent as a Director in AVPA.

Top universities in the US are academic institutions centered on education, instead the report seems to want to create a business university for the purpose of money generation based on contracts. TAMU is praised for being cheap and granting degrees in a short period. The ability to attract top researchers and educators is linked to how the University is run and its vision. Again, it appears that the consulting group has very little experience with working at top level universities and was given a task with underlying goals that have not been shared as well as a very tight timeline.

For the college of liberal arts and sciences. Focus on the Department of Performance studies. We have had a BA in Theater and Music before. I feel it was never supported fully by the college of Liberal arts or the University as a whole. To maintain these programs a proper building needs to be in place. the current building was not enough. We would also need many new hires in faculty and staff to insure success. Money for these new academic tracks will have to come from a new budget provided by the University. The current College and Department does not have the monies to do this on their own. If we have a proper performing arts center we can take in ticket sales from Theater, Music and Dance performance to help support these programs. We could also support outside groups to build a community bridge of arts for the Bryan/College Station area.

I concur with the recommendations of the study

Completely agree with Recommendation #1. For Recommendation #2, I agree with the goal and with strategic recruiting, but I do not agree with creating a new office for it. Current PSC and recruiting staff could be trained for strategic outreach programs. My first TAMU full-time position was as an AdviseTX college advisor for Admissions. Assigned to two high schools, I saw first-hand how the built relationship between PSC staff, local recruiters, and high school counselors and college centers increased students wanting to apply to and attend that particular school. If the new office is just a new name and additional programs/training for staff this could be beneficial, but if it would involve completely changing our recruitment model and removing all existing staff at once, it would hurt our relationship and reputation with many high school counselors and college centers. I believe in the importance of remote PSC's and recruiter visits to high schools to increase the number of completed admission files, scholarship applications, and reduce Summer Melt between high school graduation and freshman year, especially in recruiting minority and First Gen students. For Recommendation #3, I agree with the additions but missed what would be sunsetted?

Bryan/CS is great but we have Galveston as well and no mention of that is depressing. And the new Ft. Worth campus might need to be brought in here. It would be nice to mention Relis once in a while as well. Finding 2 is Quotas. Sorry but if you have a goal with a number then you are talking quotas. Recruit all people. they talk about Sun setting. Nothing was listed on what would be sunset. As for "adding more" cultural events is great. The problem is what YOU call culture is not what others consider entertaining. Simply put the people that make these decisions on what to "go get on campus" are the problem as much as anything. In the 80's little G Rollie White had concerts on a regular basis that were extremely popular. But we have a much better arena and we are lucky to an MMA Fight or a Small sports event.

None

Undergraduate Recruitment -Based on the numbers provided it appears that this finding assumes that 100% of current Texas high school seniors are college ready. The national average for college readiness is between 34-40%. It's unfortunate that MGT failed to dig deeper here and utilize relevant data. This finding could have been written by a politician because it relies on the ignorance of the reader. The decision, which has already been implemented assumes that there has not been strategic undergraduate recruitment under the Office of Admissions and ignores the consistent growth in undergraduate applications for the past ten years. It also ignores the fact that in 2020 college applications dropped nation-wide and especially decreased among African Americans due to the COVID-19 pandemic, yet FTIC applications have increased significantly year to year for the past several years, this was not mentioned in the report. Competing for the very best African American and Hispanic applicants must be supported by significant private, targeted, generous scholarship monies. Removing the difficulty of paying for college for these students will bring in more applicants and more confirmations. We are competing against the very universities you cite in this study. Centralize undergraduate academic advising While I agree that the change of major process is too complex and difficult, I am unsure that centralizing advising will solve the problem. This recommendation does not address the barriers created by colleges and departments who do not want students that did not start with them. Has the idea of requiring all FTIC students to be general studies or in a meta major such as STEM, been considered? This model appears to be successful for Engineering and Business, why not build on those successes? My concerns with centralizing

undergraduate advising are below: - Centralize is typically bureaucratic speak for downsize, there are not sufficient advisors now. - There is a potential loss of knowledge base and relationships with the colleges. - There is potential to create advisors who are essentially Jack's of all trades but masters of none.

This office seems to mean well, but MGT seems misinformed as to what some of the included units do. The Becky Gates Children's Center, for example, does not serve the community outside of campus. Families must be associated with TAMU College Station campus, so including it as community outreach is not correct. The Department of Music Activities houses academic classes for students. While their performances are open to the public, the department exists to provide students both performing and experiential opportunities. And to sever the department from its biggest ensemble, the Aggie Band, would affect the staff who all serve students in multiple ensembles. The Academy of Visual and Performing Arts is not a true academy, but their focus is on bringing in cultural guests. They run a calendar and a website for other cultural activities, but have insignificant funding. It would make more sense for VPA and MUSA to remain where they are currently until that day a School of Music is created and have the groups only move once. There does need to be more recruiting of underserved populations, and that should be the focus of this office. Cultural centers already exist and additional performing arts venues are in talks right now. However, no matter what is on campus, the community will not come engage unless the parking issue is resolved. As a long time Bryan College Station resident, I can vouch for friends and neighbors who will not attend functions on campus because parking is too much of an added cost and not convenient to venues. The Cushing Libraries are more research oriented and should remain with the University Libraries, where ever they end up.

It's good to have a central advising office, but do NOT consolidate all. As a former student, having advisors at the college level is important because it creates a one-on-one environment so students can receive individual attention and advisors can speak on an intelligent level about the differences in each program within a college. Having a central advising office that talks about each college and helps with transferring would be nice, but they need to be separate from college advisors. I did transfer majors while in school and got many different answers for the criteria to transfer. I went through the TAPS program and they were helpful but they did not know the specifics to get into each college which would have been nice.

I agree with the proposed restructuring but do not view it as high priority.

The report advocates bringing in various elements to make BCS more attractive to faculty recruitment and diversity. That will be a slow process. Another more efficient solution is to couple the report's recommendations in this area with AWLs for faculty who come from more diverse and cultural centers who don't want to live full time in BCS. I would add here that I am full time staff with no faculty appointment. But recruiting and retaining all faculty is important as faculty turnover generates tremendous trickle down work for staff members.

I have no comments on this section.

I do have experience in admissions and diversity events, and trying to diversify the population at TAMU. Having museums and cultural activities can only help to an extent. Students don't want to deal with passive aggressive racism on their way to the museum. The amenities don't mean as much if they feel like they don't belong in the first place. Also, SO many international students don't have cars, activities should be easily accessible by bus.

As long as my unit is still able to forge useful partnerships with relevant academic units, I don't believe we would be affected by the proposed changes.

I agree that leveraging our different campuses to most effect for research projects and other collaborations is to the best benefit of all in TAMUS.

The central advising office scares me for all future students. The nuances of advising for different colleges/majors I feel is something that is easier learned at the lower level vs trying to consolidate all of those people together. I would also be worried the students would stop becoming "known" to their advisor & become just another number - thus losing any trust they had in that person.

Recommendation #2: Create an Office Focused on Improving Recruitment and Retention on Undergraduate Students Nowhere in this document does the Consulting Company focuses on the RETENTION which is the most important part. This recommendation reflects an old, outdated look at DEI where a cute, nice, neat box is checked without any accountability. Retention strategies and efforts for our Aggies of Color is the accountability part. It is a HUGE missed opportunity and very disappointing. Also, what about the recruitment and retention of graduate students of color? Furthermore, where is the recommendation to promote DEI among all campus community members? There is a serious

concern at the Galveston Campus that DEI funding will be cut. So many wonderful things are happening on the Galveston Campus due to the DEI funding. We have graduate student leaders who are scientists who plan to apply for 1973 Center funds to do a book club with a bent of hearing the work of scientists of color. In addition, we have a graduate student of color who is looking into a case study to see why few marine biologists of color exist and how to change the tide. Our campus also has monthly or bi-monthly programming for the entire community as well as a Anti-Racism Allyship Group that meets bi-monthly with accountability pieces. Each one of these actions is intentional and accountable to the Sea Aggie community here. It is critical to have initiatives with faculty and staff engage in the DEI work needed at our campuses.

On recommendation #3 - sunset inadequate community-focused programs - more information is needed about how these will be identified or which programs are being referred to here in order to give proper feedback. Recommendation #4 - as a public university, it's important to invest in offerings that will attract the public (and prospective students) to campus aside from football games. This sounds like a good recommendation.

I don't work with Academic and Strategic Collaborations to provide feedback.

In response to Rationale #4--How about just making cultural events more accessible (in regard to parking, ramps, auto-open doors, etc) and more affordable for people who make less than \$50,000 a year? If you want more families to attend, you can't charge \$40+ per ticket for events. The museums and art galleries are magnificent, but OPAS tickets, for example, are much too expensive for the average family.

Significant investment in strategic recruitment efforts that recruits the best and brightest students from underrepresented populations across Texas sounds great, but centralizing is not the answer for making this work. Rationale#2 - TAMU is expensive to attend and if we are looking to increase diversity, more dollars must be put on the table to help offset the expense. May need to go back to allowing \$1000 in competitive scholarships per year to allow students to receive non-res waivers vs. \$4000 in competitive scholarships per year.

Finding #2 states that TAMU's Black or African-American student population is only 3.7. As the niece of the 1st African-American to be enrolled at TAMU ( [REDACTED] my son is also a graduate of Mays Business School ('07). As an African-American staff member in the Office of Admissions, I attended TAMU in 1985 and I am from Bryan, TX. I did not continue at TAMU because there was no support system. I did not see very many people who were Black (other than athletes and custodial staff). The problem, as I see it, is that TAMU lags behind in its recruitment of Black students because we do not send Black staff or Black former students to recruit Black students. The Office of Admissions has Black regional advisors and I am the only Black admissions counselor. Yet, we do not utilize Black admissions staff and Black advisors to specifically recruit Black students and their families. When I present the freshman admission sessions in Rudder Tower, I seldom see Black students and their families visiting campus in these sessions. When I do, those who attend the sessions are so "shocked" to see a Black admissions counselor. They tend to migrate towards me immediately! In the words of one mother, "We are so glad to see and talk with you because we didn't see very many Black students while we walked around." Black people have a culture of community. They best identify with people who look like them. They need to hear from the Aggie Black Student Former Network and know that TAMU is a great place to attend school. Recruitment efforts should target the places many Black people attend, i.e., churches, civic centers, HS athletic events in Black neighborhoods.

This is an exciting new investment. It makes sense that all things non-academic and service oriented are housed together. I look forward to seeing how to work with this unit to improve our community outreach and engagement.

We need more simplified pathways to industry and strategic collaborations where such collaborations can be initiated in shorter time periods and university researchers are protected. Right now, an MOU, NDA, MTA takes time and going through multiple channels at A&M to establish these is time consuming

Make sure to include Advisor input regarding student retention. We are on the front lines. We talk to the students. We know what is going on in their lives to make them choose to drop courses and or leave the university. I love the idea of the cultural center and hospitality center. You could get students involved in these programs and office. Students studying museum studies, performance students, hospitality, event management, etc. could have some great hands on experience with these centers.

On page 19, I do wonder about moving the Office of Diversity and Inclusion under Academic and Strategic Collaborations, because I see that office as supporting efforts within the institution to address DEIA issues, rather than focusing on partnerships with the community. Page 20 says "when networks and partnerships are well-rooted, identifying those internship opportunities becomes easier." Based on that statement, would it make more sense for the

Public Policy Internship Program be moved under Academic and Strategic Collaborations, rather than the Division of Student Affairs?

Rec #1 – continue to incorporate other campus units that fit the mission of Academic & Strategic Collaborations • This seems very broad and many of the units listed in the org chart seem unrelated – particularly OPAS, music activities, art galleries, Cushing libraries. Rec #2 – Create an office focused on improving recruitment and retention of undergraduate students Rec #3 – sunset community-focused programs that do not adequately serve the needs of the community and establish new programs to be support the shared mission of TAMU and the state of Texas. • I don't see a list of the programs that "do not adequately serve the needs of the community" – this is very vague. Rec #4 – invest in cultural centers, including a performing arts center, museum, hospitality center, and campus gardens • All these items sound great, but TAMU will need to prioritize time and resources towards the most impactful opportunities in this report. This effort would be welcomed but given all the other departments and existing employees who feel in flux, I would hope all those needs are addressed first.

Community involvement has a big societal payoff (I have seen this work extremely well with open access to K-12 educational materials). Much modern research is multidisciplinary and such initiatives deserve support. Recommendation #4 sounds costly, so societal benefits would need to be weighed carefully. Then again, I might say the same about collegiate sports.

undergraduate students. There should be a significant investment in strategic recruitment efforts that recruits the best and brightest students from underrepresented areas of Texas and surrounding states by increasing outreach programming, leveraging connections with the Aggie network, and increasing scholarships. Centralization will allow enhanced coordination, messaging, and effectiveness while eliminating duplication. Centralizing cannot hide the fact there the university has to do more work on its image that is already out there. We need to make the campus more welcoming and this can be done with department being included and their academic advisors.

As a member of International Student Services staff was amazed to see little consideration was spent on the re-location of ISS into a new division, and more importantly, how little consideration was spent on international students generally. In Rationale #1 of the first Recommendation for Academic and Strategic Collaborations we learn virtually nothing of what led the researchers to their conclusions. For instance it says, "To ensure that departments and staff have proficient intercultural communication competence (...), training and resources to best support international student populations on their campuses are of great importance." What does this mean? How are we supposed to take action on this recommendation? It goes on, "Incorporating an international programs component into this new unit will help support the academic and personal journeys of international students." How will it do this? How is our current approach failing? What are the needs that this component will fill? What services will it provide to students? All this pablum is not accidental. International students simply weren't part of the equation or important to the researchers. If they were we would have gotten something more concrete and actionable than this vague "consultant speak" that fills space but says nothing. This university has incredible programs that draw talent from around the world but once international students are here it seems that they are an afterthought if they are thought of at all. This is a shame because A&M could not operate without them. The more than 5,300 thousand internationals support A&M financially through out-of-state tuition rates at some of our most expensive programs. They keep entire colleges open by the critical work they do as graduate assistants in the classroom, in research, and in university offices. At the moment there are at least 2,284 international students are working to keep vital functions operating. And they're doing it all in the middle of pandemic that is keeping stuck in place thousands of mile away from home. Frankly, they deserve more than to be an afterthought. Everyone at ISS does their best to serve our students. But too often it isn't enough. As I said there are 5,304 international students enrolled, but we only have 7 advisors to talk to prospective students, process their I-20s or DS-2019s, do travel signatures, advise on OPT and CPT, run webinars, take counselling appointments, provide drop-in hours and much else besides. But our commitment doesn't end when they graduate. Even in the pandemic our former students got to work. More than 900 OPT and STEM extensions were processed by our office in 2020. A student who graduates and participates in OPT and a 24 month STEM extension represents a 3 year commitment of services. All this with 7 advisors who work a combined 14,560 manhours. Obviously the majority of those manhours aren't spent processing and advising but even if they were that would work out to less than 2 and a half hours per student per year. We also support students who are constantly sent to us as soon as the word "international" comes out of their mouths, regardless of whether it an issue for our office. This often leads to the "run around" effect which wastes student and staff time. Having all staff in all departments trained and sensitive to the needs of international students, and of their unit's responsibilities toward them would go a long way in providing equitable service to these Aggies. One example of

this; my personal work involves administering the insurance requirement for F-1 and J-1 students and I have spoken to hundreds of GAs who have not been properly educated or onboarded to understand their benefits, which often leads them to missing out in insurance enrollment paid for by A&M and instead must pay out of pocket. In these cases we are lucky if they can enroll in Grad Plan mid-semester and recoup some of those monies via a refund. But that process takes months, leaves students without hundreds of dollars and frustrated. I hope my feedback brings the challenges serving international students into sharper focus because this isn't an issue that should fade into the background. Strong academics won't be enough to hold onto our share of talented students going forward. They are an in-demand commodity and if we don't take care of them someone else will. We need to appreciate that these students help make Aggieland as prosperous and well-connected as it is. We need them more than they need us and it is time that we invest the time, money, and care necessary to manifest that reality. I don't have all the answers but change should include; 1) better employee on-boarding and training. American workplace benefits are strange compared to most of the world, but international students get precious little training or information on what's available to them and often miss out on benefits because they don't know any better. Every department should have thorough trainings not just for new employees but for their business administrators so that they can be familiar with common issues. I cannot tell you how many times a student has had to pay for insurance because their I-20 information was not properly updated or because they did not understand that they had to make a benefit election. 2) Training on what issues are appropriate for ISS and which are not. ISS primarily works on immigration and work status but we are the first stop for questions about Intl Withholding Taxes and any other issue that primarily affects international students. When they come to us we can either go out of our way to help them or send them on another spin of the Run-around game. 3) Expanded support for ISS. As I showed above there are about 7,000 current and former students supported by each advisor. The current staff cannot both keep up with critical services such as document issuance and develop and thrive to grow and provide higher order services. I know our advisors are desperate to have the time to talk to students and go over all their options and advise them on how to reach their goals, but it simply isn't possible to do that right now.

---

If academic programing moves to Academic and Strategic Collaborations unit, what would happens with ResLife Engagement Learning Support, Living Learning Communities, Academic Peer Mentors, hall programming, Hullabaloo U, etc.? Would our staff still be involved as liaisons with this area, just not putting on the programming themselves? Is this unit under student affairs? Currently this is a big part of retaining residents on campus and has a great academic benefit to those living in our residence hall in regards to social and academic performance. Also builds a stronger connection with our department and residents so we aren't just an entity running their dorm.

---

I always support more community outreach by the University, as well as efforts to increase cultural diversity within the University.

---

In the proposed restructure we have International Student Services (ISS), Education Abroad (EA), and what I can assume to be Immigration Services for Faculty and Scholars (ISFS, not named as such in the proposed structure - assuming it's Global & Academic Services). I also see the creation of an Associate VP International Programs. I wanted to be very transparent about my concerns that often plague international education - competence. Far too frequently individuals are placed in positions of authority overseeing international educators with little to no knowledge of the work that we do and how interconnected it is across multiple departments / divisions across campus. I have worked at far too many institutions where the individual overseeing international education initiatives and offices has little or no experience or knowledge of international education. I do agree with the finding that these offices should have a more linear reporting structure and all report to the same person, I just fear that the individual overseeing it all will not be knowledgeable about the work that we do. I simply ask that whomever is designated (or hired) to lead these offices have the knowledge, prior experience, and understanding of the work that we do and supports us in a way that allows us to do the work that we do. Far too often micromanagement is the first go-to in these spheres and, frankly, it prevents us from doing our jobs effectively.

---

Regarding the Organizational Chart that follows page 23: The placement of Cushing Libraries under "Enriching Campus and Community Units" via the VP for Academic & Strategic Collaborations is incongruous. While Cushing houses rare books and special collections; it is a research library. It seems it would be much more appropriate to keep them under the Library umbrella.

---

Yes - build a museum, garden and anything else. Other universities I have been at have awesome arts for families to visit - and it is something A&M should seriously invest in

---

It's not fair to the College or the Departments who will essentially lose their international rankings by being linked with Liberal Arts. There are great concerns that doing this will take money away from the College of Science and their

---

Departments to essentially fund the new departments in the proposed School of Visual and Performing Arts. We deserve to not have our greatness as a department and as a College to be overshadowed by those less great than we are.

---

The University Libraries already has a committee dedicated to broadening Diversity, Equity, Inclusion, and Anti-Racism within the University Libraries. Joint efforts between the University Libraries Diversity Advancement Committee and the Texas A&M University Office of Diversity and Inclusion would be beneficial to all students and stakeholders while also recognizing the agency that the University Libraries has in order to function as an independent entity within the Texas A&M University System.

---

The recommendation is to create an office focused on improving the recruitment and retention of undergrad students. But the other recommendation is to remove the VP of Diversity. A known issue on this campus is the retention of nonwhite students. These recommendations do not seem to align with one another.

---

I also support the recommendation to create an office focused on improving recruitment and retention of undergraduate students. I know that our university has tried (and not necessarily succeeded) to increase our recruitment of black students. I believe that it would be helpful to have an office that is focused on this mission. I also support the recommendation to invest in cultural centers around the BCS area. I wholeheartedly agree that these types of centers would increase the job satisfaction, quality of life, and overall satisfaction of the Students, Faculty, and Staff of our university. I believe that these types of investments would help us to better recruit and retain employees. I would have also liked to see part of this recommendation pertaining to outdoor activities for the community such as a trail system. Studies show that people that spend time outdoors tend to be more satisfied with their life.

---

Let's get really clear on what it means to be a land-sea-space- grant institution and let's keep our focus on that. We are founded as an engineering and agricultural school. As a former fine-arts person myself, I really appreciate the recommendation for #4 but I do not think this is in our scope so no, we should not invest our time and resources into this effort.

---

I'm in favor of sunseting any program that doesn't serve its mission and goals well, as long as no one is let go as a result. Faculty and staff involved in the program should be reassigned.

---

In the past twenty years, I have served on several task forces regarding the arts. An amalgamation of the arts was recommended in all of those task force reports. I think this could be extremely valuable in TAMU's quest to be a Top Tier University. The addition of a performing arts center is particularly exciting. Having such a facility that doesn't sit in the middle of a busy campus, the amenities of a true performing arts center has long been a dream of the arts organizations on campus. Logistical questions, specifically for OPAS, have to do with the OPAS Student Committee and the OPAS Endowments. I assume there will time for those questions if these recommendations are approved.

---

See comments under Student Affairs.

---

Finding #2 - I don't think a whole new office for recruitment and retention is necessary, but when I was in middle school and part of high school (~12-16 years ago) there was a summer program where students of all walks attended for a week and were able to see all of the facilities, learn the admissions process and requirements from the admissions office, learn about scholarships and how to apply, and at the end of the week a scholarship was raffled. The program was eventually ended, but I remember how much that helped, especially for would-be first generation college students. Re-introducing a program like this would be great outreach program. It looks like diversity focus was a huge part of this portion of the report; TAMU has taken strides the past 10-15 years to achieve this goal, and instead of creating offices and heavy focus on minority communities, I think TAMU should continue to highlight and focus its many student organizations such as Society for Black Engineers and MSC CAMAC to better show that students that are considering TAMU are not just being recruited to boost diversity appearances but will actually have places to be involved with people with similar backgrounds. Finding #3 - I agree. TAMU should continue to focus and find new ways to interact with the community on the local and state level. Finding #4 - Investing in a cultural center like in finding 4 would be amazing... the art museum at U. Texas in Austin was a nice attraction the one time I visited.

---

I do believe an office focused on recruitment and retention of undergraduate students, especially students of color is needed and I definitely support that effort.

---

Recommendation 1, "Incorporate other campus units." I generally agree with the incorporation of various programs under this Vice President, including OPAS. I disagree with moving the Academy of Visual and Performing Arts and Music Activities into this organization. The rationale and movement to this VP seems to create a community focused philosophy where the students are here to provide entertainment and art experiences for the community. While this is a secondary benefit, the core purpose of student education and performance experiences must remain primary. As a

former member of the University's Wind Ensemble, performing for the public was great and appreciated, but not the purpose of my participation nor that of my friends. This is a proposed move searching for justification from state and community relationships...simply not a reason to move nor good alignment of purpose. Recommendation 2. "Create an Office Focused on Improving Recruitment and Retention." While this office sounds like a good idea, why would this responsibility not be placed under the Provost. Retention seems especially the purview of the Provost organization under student success. Who is going to be responsible and accountable for recruitment and retention—two different challenges—of students? If two different organizations are responsible and accountable for both, no organization will truly own the problem and you've created structural misalignment that will consume resources, become a time sink, and increase the time required to achieve limited results.

I'm not sure spending money on a performing arts center in this town is needed when you would renovate the existing rudder auditorium and utilize other facilities for the same need. This does not seem to be a good use of funds. We also have an art gallery on campus that could use more focus and funds before building a museum. We also have multiple museums around town already that don't get used.

Rationale #2: Establishing centralized undergraduate academic advising will provide a consistent, streamlined advising experience for students and ultimately improve the student experience at TAMU. Centralized undergraduate advising services will make it easier for students to change majors across colleges and will reduce the number of offices that a student must visit to meet the requirements for a major change. In an effort to continue centralizing services across campus, this centralization effort will allow for enhanced on-boarding, professional development, and accountability of undergraduate academic advisors. It will also create an environment that allows the advisors to work collaboratively with other like-minded professionals to increase additional job growth opportunities and to ensure that position titles and salary are balanced across campus. My Response: The idea that students not needing to visit many offices sounds like a good idea at first, however, there are many downsides to centralizing advising for some offices or even across the board. I have talked with many students who enjoy knowing their advisors personally and also having advisors located right in their own departments, where students are already located for courses. Students feel more heard and cared for by knowing their advisor personally. This is increasingly important now, with mental health issues on the rise. Caring for students education and personal health should be our number one priority. I worry that by centralizing all advising this could be a negative result. I approve of making certain processes easier for students, but not necessarily centralizing advising completely.

The importance of the programs that are being collected in this role are unquestioned, but it is unclear why a new level of administrative oversight was necessary. In general, the language in this section is vague, and the recommendations don't provide enough detail about what is being proposed or why.

How is recommendation #4 not the Memorial Student Center, the Rudder Tower complex and The Gardens at Texas A&M University? The Gardens are an obvious recent addition to campus. Within the MSC, we have multiple art galleries. Additional museum displays can be seen in the Sam Houston Sanders Corps of Cadets Center. The Rudder Tower complex features a 2,500 seat auditorium, a 750 seat theatre and a 250 seat forum, accommodating events of various sizes.

I would love more information on the structure, goals, leadership, and funding structure of this area.

I am excited to be part of this new organization. When reviewing the proposed chart, it does feel like it is asking a lot for one area to achieve. Some of the departments/units do not appear to be a natural fit together.

generally agree

I can see how many of these recommendations would work and make sense structurally. An important thing to understand is how these different areas are currently funded, particularly if they have been funded by students. Units such as the Becky Gates Children's Center receive some funding to offset childcare expenses for students with young children. Access to this support is important to the success of students who are parenting.

I think there are lots of great areas for exciting things in the report here.

I think the creation of an office focused solely on retention and recruitment of undergraduate students is redundant. My understanding of the purpose of the Office for Student Success was that through their programs, retention should be identified as a goal. Maybe their strategic goals (if any) or programs should be repurposed or redesigned to include this. To the point of recruitment, this feels like an admissions role. Recruitment and retention together doesn't feel

connected since one is before and one is after admission to the university. In direct response to recommendation #4 to invest in cultural centers, I believe this only invests in a specific kind of culture and dismisses those that would be best for our students, faculty, and staff alike. I believe we should be creating academic homeplaces, such as a Latinx center. Especially as we approach a student body that is almost 25% Latinx, and nearly an HSI, more spaces need to be created that support rather than just admitting minoritized students. I do not believe that it is best to only create recommendations geared to support "all" students. We need to create programs, supports, and spaces for the students that need support. Disaggregate the retention data and you'll find the student populations that need additional supports and intentional spaces to succeed on this campus. Only mentioning racialized experiences in the report when it comes to retention also feels incredibly deficit-based. Also, just as a holistic note - these sources supporting these recommendations are weak, outdated, misrepresented, or not from scholarly sources.

---

Office of Recruitment and Retention would be a good asset to add to the University.

---

Continue to incorporate other campus units that fit the mission of academic and strategic collaborations We should look at what the state of Texas and our students (current and prospective) need before investing in units to grow larger. Bigger is not always better, not even in Texas.

---

The University Libraries should be at the for front of higher education when it comes to student success. We are the Hub of their Educational resources. I also think that because the Libraries is so unique and has so many faculty, staff and students they serve, leadership should be changed from a Dean to a Vice President of the Libraries, followed by 4 Associate Deans and 2 Directors.

---

Community engagement is a departmental focus to move it to a more central position causes it be less responsive to opportunities and collaborations. These are personal. A relationship has to be cultivated that matches with the departmental and related industry wants and needs.

---

No comment

---

More clarity is needed in regards to the reporting line of the Vice President for Diversity. The proposed organization chart shows a straight, non-hierarchical line between the VP Academic & Strategic Collaborations and VP for Diversity. Exactly to whom does the VP Diversity report?

---

The office that recruits students should be created, however, the university leadership should realize that to do this job at scale well would be served by having many smaller offices and programs that are flexible to meet the DIVERSE needs of underrepresented students and their unique circumstances.

---

Items moving from Student Affairs into the area of Academic and Strategic Collaborations seem well founded and very rationale. Items like music activities, OPAS and Children's Center never aligned well with Student Affairs various goals and missions for students.

---

I support the idea of increasing recruitment from underrepresented Texas counties and creating an office that focus on this specifically.

---

Investing in cultural centers and community programs would be fantastic for attracting and keeping families in the BCS area!

---

Agree with majority of this. Although, we already have a campus gardens so I am not sure what they meant regarding that.

---

Please do implement Recommendation #4 - "Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens" - those are fantastic ideas and we already have existing community efforts there that could be built upon and expanded. Recommendation #3 - Please continue to invest in partnerships and service opportunities with Bryan ISD more and more. That partnership will pay dividends throughout our community and improve our community. Recommendation # 2 - Undergraduate recruiting does need some centralization and improvements - that recommendation makes sense. There needs to be more transparency and communication between TAMU Recruiting/Admissions and the Colleges/Departments.

---

If done well and a good dynamic leader is found it will be an asset to the University

---

Recommendation #4 - The "Cushing Memorial Library & Archives" is not a museum. It is exactly as the name suggests - a research library and home for university archival records. The facility is not suited for typical museum visitation. It provides periodic exhibits to highlight the research collections and enlighten the TAMU community about its history. I have doubts that the consultants examined the operation of Cushing and instead confused the operation which uses

processes similar to a museum.

---

None

---

I appreciate the suggestion for more garden/museum areas. This would definitely help attract graduate students, as they consistently speak about the city as a factor in their decision

---

In the Review Cushing Library is placed under Enriching Campus and Community Units. I wonder if Cushing was included here because of the interest in the arts, art galleries, and museums stated elsewhere in the Review. Cushing Library houses many books and newspaper clipping files. I do not have the facts of how many books or how many museum-type objects, however I think the preponderance is books and collections of papers (an archival function).

---

OUTSTANDING recognition of need to expand our platforms on which to actualize educational offerings and opportunities in the art, music, and culture.

---

TAMU could certainly strengthen ties to the community, particularly for faculty and students of color. I taught in Bryan ISD at one point and many of my students were no more aware of or loyal to TAMU than they were to Texas. The university does not have the impact in the lives of all students in this community that it could, and should, have. Particularly if TAMU wishes to attract and retain faculty, staff, and students of color, efforts to increase community visibility- for ALL members of the community- would go a long way.

---

A shared office on improving recruitment and retention of undergraduate students, especially first gen students would be a positive focus for the campus community.

---

This is a long-time coming. Texas A&M needs to expand its presence in all communities across the state of Texas. As one of two Land Grant institutions in Texas we should have a recognized presence in all 254 counties - much like the original A & M - Agricultural and Mechanical (engineering). Texas A&M should realign itself to the land grant mission and provide for the citizens of Texas. We need to recruit students and faculty/staff that better represent the population of Texas. Additionally, the McAllen campus should be moved under this area - Provost office has shown that it cannot successfully lead this high impact campus. It should be aligned as a community impact program to work with the surrounding Hidalgo county.

---

If all international elements are being drawn together for ease of reporting structure, is it useful to consider bringing some components of the Jordan Institute for International Awareness into the international fold? Jordan does programming for students (which seems like a fit for the MSC programming office, but it also sends students abroad and gives scholarships to some of them. These seem more logically housed in Scholarships/Financial Aid and Education Abroad. There is also a museum in the MSC that may need to be connected to the arts elements added to Academic and Strategic Collaborations. The immigration services for international employees may be well located in a central international office, but given the logic of realigning Human Resources, an argument could be made that these are really employee services that fit better with Human Resources. The unit will take on recruitment of students; consider whether it also needs to have some connection to retention efforts. We will not solve our decades long misalignment with African American students if we concentrate only on recruitment. Also, we have at least 30 years of climate studies that tell us these students feel marginalized. So, having the Diversity Office elevated to report to the president may help with understanding the needs of these families and students. Should University Youth programs be added to Academic and Strategic Collaborations given it is K-12 programs? If this unit has one of the children's centers that exist on campus, should the other one be added, too? One is Becky Gates' and the other is the Charlotte Sharp TAMUS children's center. Also, there are many outreach programs housed in colleges. Is it the intention to move those or have coordination with this unit?

---

No input to provide

---

Collaboration is key to getting things done when it is done well. The current campus environment is fractured a bit, and the report recommendations did seem logical.

---

Creating a focus on retention for undergraduates is a great idea. Has there been talk about the same for graduate students? The graduate students only have the graduate school and they do not do the same as what is done for undergraduates. At one of the graduate and professional forums there were students who commented that they transitioned from undergraduate to graduate and the amount of resources changed completely (see here: <https://www.youtube.com/watch?v=gcD0y1JZmd0>).

---

Cushing is not a museum - it contains huge collections of books and manuscripts. Separating it from the staff support

currently provided by the libraries effectively slashes its operating budget. Instead of a brick and mortar museum - which most students will not visit - provide a more robust learning environment about the university and its culture.

I applaud the idea of creating a focused outreach and recruitment office that offers targeted outreach to prospective students, increases minority recruitment, and increases total applications of new undergraduate students. The Aggie family should reflect the diversity of Texas. I find it ironic that Finding #4/Recommendation #4 focuses on the importance of art and culture, while this report also recommends essentially demoting the university's art- and culture-driving departments to providers of electives for the "big four" programs you view as worthwhile. TAMU already has a performing arts center: the Rudder Theatre Complex. And while gardens are lovely, we don't need more outdoor gathering spaces. Texas is hot. People like to gather indoors. I am also mystified by the recommendation that TAMU found its own natural history museum. Don't get me wrong: I LOVE museums. (If A&M had had a Museum Studies major, I would've majored in that!) But given that this report keeps hammering on the need to refocus on academics, I find the idea that we would prioritize creating a tourist attraction for B/CS community members -- especially when there is already a Brazos Valley Museum of Natural History in Bryan! -- completely mind-boggling.

University collections/museums have a collaborative in place with the other collections/museums/libraries in the community. Several of the museums/collections on campus are not mentioned in the Recommendation #4: Sports museum, nautical archaeology/lab, Biodiversity Research & Teaching Collection (natural history), and the Corps of Cadets Center. As Curator of the Corps Center for 20 years, we have collaborated with other entities on campus in a variety of capacities over the years. At present we have over 15,000 items in our collections, and our exhibits present the traditions of A&M in addition to A&M's Corps and military history. A new natural history museum would seem to be in conflict with the diverse organizations which already exist. I would be thrilled to have our collaborative strengthen and supported rather than just having a new facility built. Also, there already exists the Brazos Valley Natural History museum in Bryan; why replicate one on campus that would be harder to get to? Thank you for understanding the impact museums make: <https://www.ims.gov/publications/understanding-social-wellbeing-impacts-nations-libraries-and-museums> In 2010, I was proud to co-chair the Texas Association of Museums annual meeting in BCS, and to share our community museums/collections/libraries with colleagues from across Texas!

I find this entire area to be remarkably unfocused. Had there been better definition of communities, or objectives this might be a meaningful section. As it is it sounds like an opportunity for the University to become an instrument of social engineering outside of the interests of local communities and their resources.

The only concern that I have is moving Cushing Library under the Enriching Campus and Community units. The perception of the report appears that Cushing would become a Museum which it is not. Cushing Library is an informational hub for researchers, and students in regards to Special Collections. Cushing Library could partner with the idea of cultural centers, but the main function is to provide support to students and research.

Creating a new office designated to the retention of undergraduates doesn't actually work if there are no measure in place to understand why students leave majors and universities. There are no exit surveys if you switch your major and even when you graduate the exit survey is vague on what you thought of the department, what you struggled with, etc.

It seems a great many responsibilities have been placed in this one area. It also seems that many of those selected are programs that serve the greater community and have more nebulous goals and metrics. The Office of Sustainability does not belong where it has been placed in this organizational chart. They have a very active and engaged student internship program for class credit. It would appear that was unknown to those writing the report. Additionally, Sustainability plays a role in attracting and retaining students. Based on the minimal information available, it would seem more suited to Community Impact Programs. I suspect some of the leadership in the College of Agriculture and Life Sciences shared their blatant dislike of the program. I would hope that MGT and TAMU would do their research and attempt to understand the value and importance of this office and their efforts. Over the last several years it has become apparent to me that our diverse student population is disrespected for speaking up for their own rights. I truly hope that moving the Office of Diversity is not an attempt to diminish their hard work or efforts. I believe the characterization of their performance in this report is skewed by the voices of many former students who long for the good old days. This is no longer an all-male, all paramilitary, largely white, and largely Christian university. Indeed, our success has been built on growing and evolving. Former students who would rather defend a statue than the current students who do not look, sound, or believe like them should not be deciding the fate of this office. I can see how OPAS, Art Galleries, and Cushing Libraries might make sense together. Music Activities should not be treated any differently than the Aggie Band. The Corps of Cadets is part of the university, not the UNIVERSITY. Treating Music Activities differently seems both punitive and petty. I have never been a fan of the university operating a childcare center. It if

was tied to research and practical training that might be different. As for Recommendation #4, stating that we do not have "TAMU does not have a modern performing arts center to host indoor large-scale events for students and the community" is ridiculous. We have plenty of spaces for large-scale events, between Rudder Theatre Complex, the Memorial Student Center, and the numerous athletic venues that are UNDER UTILIZED. We don't need more of this space; we may need to use the space differently. I am not opposed to a museum, but when you put that against many other programs here, it does not rise to the top of my list. I hope the intention is not to sacrifice the academic programs placed in this unit for the sake of building monuments to ego.

I was not aware this VP position had been created. It seems too far-reaching for one person. And as for adding performing arts center - we have one. Rudder stands empty most days and nights. And it is centrally located.

all of this makes sense. Increased community development is important.

Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students  
This needs extra support for the Higher Education Center at McAllen as there higher numbers of first time in college students and more families that are lower income. The drive for diversity needs to ensure that areas of diverse individuals have the support to ensure students feel supported and welcomed by Texas A&M University.

•The idea to create an Office focused on recruiting and retention is one of the best in the report. Based on the terminology in this section, DEI is the goal here but recruiting talented students wherever they are should have a higher priority. •The University needs to recalibrate its connection with the Aggie Network and the thousands of Former Students in the world. Texas A&M needs to decide if current students, former students, or faculty is the priority and dedicate time and resources in that direction. It is not clear who is the most important at this time. <sup>[1]</sup><sub>SEP</sub> •Texas A&M has needed a museum for a long time. Of this whole report, this is the most exciting recommendation in my opinion.

Creating a student recruitment & retention office to target specific populations (mainly underrepresented ones) seems like a no-brainer. Becoming an HSI should be an attainable goal, and yet it seems like for several years the university has had trouble meeting the threshold required. I think intentional recruiting strategies and having an office dedicated to this goal make sense. Does A&M want a more diverse student population? Or at least a population that more closely matches the diversity of Texas? If so, then that message is not being clearly articulated through current recruitment and retention efforts. I believe the review specifically mentions utilizing the former student population to assist with recruiting. I think this recommendation makes sense, however, I think comprehensive training and a selective volunteer process will be necessary if the goal is about increasing recruitment for underrepresented populations. By comprehensive, I just mean the training would need to cover a lot of topics (e.g. DEI, A&M specific knowledge, BCS offerings). There seems to be some success in recruiting international students which makes me wonder why more effort isn't poured into recruiting students that live right here. Lastly, I do believe creating culture centers can go a long way in transforming the campus culture (if that is a priority). Their creation will need to be intentional, well-thought out, and marketed in such a way that encourages non-group members to become allies or learn more about the cultures they otherwise aren't exposed to. From most of the A&M climate survey results I've reviewed, it seems there is a lack of understanding about the purpose of and enrichment provided by culture centers/DEI initiatives among the predominant culture on this campus. Addressing this perspective needs to be a priority. Some of the rationale provided in support of enlarging the role of the Academy of Visual & Performance Arts are useful. I think bringing shows to campus that appeal more to the surrounding community and making them more affordable for the community would help secure A&M's role in and influence on the community.

The offices and departments that were mentioned being moved over into this new office make logical sense for the most part. The Education Abroad Programs is the one that stood out as an outlier to me since it would seem to straddle the line of academic affairs. The creation of an office purely to retain and recruit seems a little redundant. We have no problem recruiting students. There are too many undergraduate students at TAMU currently. The issue is that the students who are being recruited and retained are not the students who should be. It would make more sense in my mind to refocus and shift the offices that currently deal with recruitment and retention towards this new goal so the institution can meet its purpose as a land grant institution and match the state demographics which it was created to serve. A performing arts center could be created, there are museums within the MSC, and there is already a campus garden that has been created and is an ongoing project on west campus. I don't understand why the gardens on west campus are being ignored by this.

Recruitment and retention of minority students will not succeed until or unless the university becomes more a more welcoming place for minorities and that word permeates the minority communities across the state and nation. I agree

with recommendation #4 Org Chart - The Office of Sustainability and the Becky Gates Children's Center look out of place with the rest of the groups in that org chart. They could be much better aligned elsewhere in the university's organizational structure.

I agree with the recommendations in the report for Academic and Strategic Collaborations.

No comment on this.

Texas A&M used to host a number of events and concerts in the coliseum and then Reed Arena. These events brought more cultural experiences to the community and engaged those with families. It would be very nice to see more of these types of events return. Recommendation #4 is extremely exciting to read.

N/A

Very insightful. Good luck with making that happen.

The collaboration section is poorly written and not well thought out. It is clear that the people who wrote this section of the report had very little understanding on the role of many of these departments and organizations. Moving Cushing Library under a "Enriching Campus and Community Units" clearly shows that they do not understand the purpose of Cushing Library.

Centralized Advising would not be successful at such a large institution. This would require the advisors to know about other colleges... Basically a jack of all colleges/majors, but specialist in none.. and would hence be a bottleneck and frustration for the students.

I am confused by what you mean by "centralized". If you mean that all the college recruiters (like myself) and Directors of Recruitment (which we are in the process of hiring) will all physically move to a centralized location on campus and will no longer office in our respective colleges...that is a huge mistake. It is vital (in my opinion) for us to remain in our colleges. When prospective students meet with us or attend an information session we present, part of the appeal is that student getting a sneak peek at where they will be one day. Where their advisor will be, where they will have some classes, etc. If by "centralized" you mean that we will just report to /collaborate with the Associate VP of Outreach and Recruitment while still having offices in our respective colleges...that's different.

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. (p.22) I support this recommendation.

I agree with the findings. Our community is a large part of our campus operations and vice versa. It would be nice to see the university giving back to those that make this relationship work.

I agree.

I am all for the addition of cultural centers; however, as an example, the quality of OPAS productions has gone down in recent years. I used to have a hard time choosing where I wanted to spend my money to go to events. Now, I'm lucky if there is one performance I want to see and if I do, it's usually something family-focused, but taking my kids to a play on a school night that starts an hour before their bed time is just not going to happen. If we go down this avenue, you would need to start big with draws that will bring in new crowds, and intersperse these with other budget-friendly events throughout the year.

This is the new unit where I have been moved to. Without any hesitation, I fully support all of the recommendations as it pertains to Academic and Strategic Collaborations! This restructure will provide the much needed support pertaining to undergraduate recruitment of prospective students, especially in the area of diversity. Accountability, metrics/outcomes, eval and assessment have to drive our strategy when deploying diversity initiatives designed to close a variety of gaps in the makeup of our student body.

No Comment.

I am not in a position to provide good insight into these changes.

I only receive emails and have not had any interaction with this office. I do not have

Recommendation 4, while commendable, is going to be VERY expensive and long-term if it is going to be done correctly.

I will leave academic areas to the academics. Finance is really a service function to enable proper resource allocation and budgeting. We need to know the mission so that we can enable success through proper allocation of financial resources.

centralizing recruiters from the colleges and formerly admissions is needed to make strategic enrollment decisions a reality

Growing support of and cooperation with economic development organizations and the community are critical to commercialization of our research and to the University mission as a whole. Suggest that commercialization be housed close to economic development and/or research in the org chart.

I totally understand where this area is going, but would love to see the word "community" evoked in this topic area - while our community relationships are strategic in nature, the strategy is not why we build relationships with those beyond our campus borders.

The report mentioned trying to be the BEST/LARGEST in all Majors/Colleges/Units. If we end up trying to be EVERYTHING for EVERYONE, we won't be good at any of them. Instead we should concentrate on the THINGS we do great and let other colleges/universities provide those areas where TAMU doesn't excel. Again we should NOT try to be everything for everyone. We are NOT known for Journalism... That's OK, other places excel at this. If instead we focus on fewer majors, we will not only EXCEL, but truly have a shot at being the VERY BEST. It just doesn't make sense to be/do everything. It's a fallacy that we can do everything and do it well.

It is essential to collaborate across areas and functions to share resources, knowledge and progress towards the shared mission. Academics should drive all. Our department works extremely closely with Scholarships and Financial Aid, the Registrar's office, Office of Graduate and Professional Studies, Student Business Services, Admissions, Student Success and advisors, including weekly meetings with representatives from these areas so we can best meet the needs of their departments and students.

Under recommendation #4, we already have an amazing campus garden. Not sure how that was missed.

I do not have much input on these recommendations.

None

Recommendation #4 would make it more desirable to live here and I think would help Texas A&M stand out as a more unique place. Parking would have to be a major consideration though, if you have to pay to park to go to the performing arts center or museum that would make it more difficult to have equitable access for the whole BCS community.

Collaborations should be a mission of all universities. TAMU has become a siloed organization which limits infusion of new ideas and talent.

No Comment.

Some of the recommendations to move units under the new Academic and Strategic Collaborations unit do not make sense and appear to make this new unit a "catch all" for units rather than focusing on the mission of prioritizing relationships between TAMU and Texas. The Enriching Campus and Community Units doesn't make sense or show ready alignment with the mission of this office. Alignment with Student Affairs for some of these units shows better alignment given their impact on Student Engagement and Development.

I support recommendation #4 but it is out of place here. It needs to be a standalone unit named "Diversity and Cultural Programs/Initiatives" (or something like that) with its own VP. The organizational chart in current form is confusing. Change "community impact" to "education and career pathways". Change "economic & comm'y dev" to "public & private partnerships". The organizational chart is still confusing.

This area seems to be of vital importance; I especially like the idea of cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. Recruitment of students is super important, as is phasing out sunset programs.

Moving towards a centralized location makes a lot of sense. TAMU needs a "national" image easily recognized and respected globally instead of all of the different entities vying for exposure.

By far the most extensive changes recommended; however, they are must needed changes. Everything from the organization to the suggestions was spot on. I especially liked recommendation #4 in investing in things that also would benefit the community. I do think it might now go far enough. This might not be the correction section with the changes

suggested in the academic realignment, but I've also felt with the amount of land, the vet schools, and TAMUG, that TAMU should open a teaching zoo that would rival San Diego or Columbus. A fully functioning zoo with rotating animals for learning purposes as well as a rehab aquarium could go a long way with the vet school. Also, partnering with an entity like Disney's Animal Kingdom could provide opportunities for vet internships that aren't currently available. Another issue I felt wasn't present here is how can A&M partner with the community to bring more companies to the area to keep Aggie grads in College Station. As stated in the report, the workforce is 20% older and there is a diversity problem. By focusing on building up the community, it would benefit A&M long term. For example, A&M can help bring in more business and development to help grow (and preserve) the Northgate district so it can be more than just bars and a couple restaurants. Adding things like art, performing arts, and bringing in Aggie owned businesses might help. It could emulate a true downtown experience which brings families and individuals closer to campus and the campus closer to the community. I rambled a bit on this one, my apologies.

N/A

Several of these things TAMU needs to get out of the business of doing and focus on delivering education.

I agree with a support the recommendation made by MGT.

Having a greater focus on community outreach when related to the Arts is a strong step. Leadership in these areas should be focused on new trends in Entertainment and Event management. Creative thought should be given to the offerings at OPAS and new performance venues for concerts, events, etc. There is so much going on in the Entertainment World that Texas A&M should be at the forefront, not running behind in offering to the community.

N/A

I liked the continued theme of focusing each Division/Department. Like moving certain functions like OPAS, Art Galleries, etc under this group. One particular focus I liked was on increased investment in cultural centers (like a new performing arts center) and parks/gardens for the campus community (including faculty and staff) to enjoy.

AGREE WITH ALL FINDINGS

I agree with the findings in this section.

## Academic and Strategic Collaborations - Student

Please provide your comments related to Academic and Strategic Collaborations:

In regards to Recommendation #2, Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students: I like this a lot, and it is not secret that it is necessary at times -- especially for some of our minority students. In regards to Recommendation #4, Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens: I love this recommendation, and many other students do as well. I have not met a single individual who is opposed.

N/A

Creating an office for undergraduate recruitment seems like a good idea due to the large amount of students coming into A&M. However, I think the recruiting should consider how the students will contribute to the culture that A&M has distinct from other universities. In my experience, I have too many classmates that do not care about the core values, traditions, or unique opportunities that A&M offers. If this type of student continues to come to A&M, the culture of the university will be diminished over time. I support the idea to create outdoor community gather spaces and parks.

a. The incorporation of student programming areas that have student membership into an office not directly focused on student success is troublesome even before the question of continued student involvement in these areas. OPAS and International Programs are areas of concern as they are currently groups (MSC OPAS and International Student Association, Freshmen Leadership International, and others) that students can join for the benefit of developing themselves co-curricularly as well as provide meaningful action in the interests of students and audiences alike. b. The

creation of an office focusing on recruitment and retention of undergraduate students should be focused on making sure the environment on campus is welcoming to those students, not simply just increasing targeted outreach and total applications as this can provide the metrics for success without actually solving the underlying problem

---

Strongly agree with recommendation for dedicated performing arts center

---

Don't combine liberal arts and sciences

---

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens - serving the community is an important role for the University. TAMU did have a Museum on campus that was disbanded & destroyed in 1959 after an State of Texas appropriations bill that said summed up to 'No State-Funding can be used on Museums at Universities'

---

How does anything in this section help anyone but the donors? I'm not seeing how creating a new hospitality center, performing arts center, museum, and campus gardens will help or even belong in the same category as retention of undergraduate students. If we really want to help undergrads finish their degrees, we need to offer better resources, particularly where it comes to mental health, by increasing funding to CAPS, not adding a bunch of other projects that will not impact students in any way. I think Recommendation 2 in this section is the only one that will directly impact students, and I think that one is actually something that should be done. If there are hiring freezes in place, it doesn't make sense to build hospitality centers and museums.

---

TAMU has seen a great increase in the number of students in the past while its diversity remains less progressive. Thus, an effort to reach out to the underrepresented areas of Texas and surrounding states would be crucial in diversifying the demographics of the students that is more representative and recuperating. Utilizing the campus space to a more friendly spot for the community seems like a good idea that also benefits the members of TAMU.

---

I do not like it and do not think it will be efficient effective or necessary.

---

Although I agree with the purpose of increasing recruitment of minorities, our focus should not be on increasing the overall number of applicants. We should look for high quality applicants, to create the most excellent student body, rather than simply trying to uphold our spot as one of the largest universities in the country. For recommendation 4, is this not what Aggie Park and Rudder Auditorium are for?

---

None, agree with the MTG Report.

---

While I value the process of soliciting and receiving outside constructive feedback, omitting graduate student voices in the body of knowledge MGT amassed to make their recommendations is a glaring omission. As significant contributors among the student body, we deserve adequate representation. I speak as an English PhD. student. In the humanities, GATS function more as junior faculty than the lab assistants found in the STEM fields. We control large portions of our course content and implementation. As a result, we influence several critical metrics important to the university's mission. For example, all our department's graduate students will teach ENG 104 and ENG 210, directly reaching the university's largest population of first-generation students. We do so earning a low pay scale that directly inhibits recruiting the best graduate students available, hampering the inclusive excellence that could further diversify our departments. I will keep my comments to these brief concerns, but I would have welcomed the opportunity to speak further on how we as humanities GAT's contribute to the university's success in these key roles. Therefore, I have issue not with the findings of MGT, but in how they were solicited. Our English department is flourishing by all metrics and inhabits a unique realm that requires careful thought before merging into a college of Arts and Sciences. If that is ultimately what happens, I will embrace it, but I urge for more input from those whose voices were overlooked because we contribute too. Findings may have been different had we been consulted.

---

n/a

---

please please please invest in cultural centers, it will make students and faculty feel seen and will provide enrichment for the community

---

N/A

---

None

---

Many people have made several complaints to the [REDACTED] about the many issues that occur. She is very passive about fixing any issues and she just retaliates. Many students fear that will grade us based on her

retaliation, and not on fairness. They expect us to finish the labs even if the department lacks the equipment to provide us. The instructors warn us in advance that there isn't enough or the correct equipment to conduct the experiments, and the instructors tell us the [REDACTED] is the one that knows about the situation and doesn't fix it. This is the issue of the Coordinator. We ask for her removal of her position. We plan to bring this issue to the System Board of Regents if this issue doesn't get resolved. You ask for feedback to improve this system, but the chemistry department is unfixable because no one cares in the chemistry department.

---

I strongly support the creation of an office dedicated to recruiting. Compared to other universities, Texas A&M has a poor recruitment system. Their advertising efforts are lacking and the tour is poor. Such an office could truly improve these issues. I would also love to see more outdoor spaces be created on campus, like the garden center.

---

The addition of new visual/performing arts departments could have a nice impact on the cultural side of things. As long as this stays separate from the aggie band then this could bring in a good pool of musicians.

---

I believe the A&M should offer emergency management as a degree to its students due to the resources which are located around A&M but the resources A&M have at their disposal. With A&M having some of the largest emergency management resources in the nation. With not only the second largest fire ground in the world located in college station and run by TEEX but also having the Texas Emergency Management under your belt it would be easy to integrate into your system. The school could be at the forefront of emergency management thanks to the amount of resources you have in college station. West A&M may offer the degree but the resources they have near the school is lack luster. Few schools offer emergency management in Texas, and only one being UNT offer it to bachelors. As it has been shown that emergency management is a growing field as many current emergency managers are retiring and the job is changing from people who were just in first responders who worked their way up to people certified and studied the field. Currently with the covid-19 pandemic it has been shown that emergency managers play a key role which A&M can tap into, and offer majors and training programs such as for Emergency Management/Planning.

---

The students need more individual help with advising in multiple areas. Meeting with students and handing them a flow-chart of general information that is available online is not the individual advice we are looking for.

---

I strongly support the recommendation to invest in new cultural centers. I believe doing so would make Texas A&M more attractive to prospective students as currently there is a decided lack of cultural centers in the Bryan/College Station area. This current lack makes the community seem like an undesirable place to attend school.

---

I like the idea for having more fine arts stuff. It says TAMU does not have a modern performing arts center to host indoor large-scale events for students and the community, but Rudder has a huge auditorium they use for New Student Conferences (NSCs) among other things. NSCs are the definition of large-scale indoor events. Also, the Bush library is a museum, too. It also says existing TAMU land should be used to create parks and other outdoor gathering spaces, but they're building Aggie Park out by the alumni center.

---

Recommendation #4 is very good and very needed. A&M's campus lacks the aesthetic appeal of many other campuses.

---

As I am very sure will be commented hundreds of times, restructuring how the current structures of TAMU Diversity and DMS seems to be a stifling practice rather than an aid for underrepresented students. I personally focus on the empowerment of Native American and Indigenous student on campus and fear the students are already being pushed out by the culture that has been constructed to water down the voices of the students that represent the smallest minorities instead of helping and amplifying them. One of the things I think was grossly misunderstood here is that the Commitment to Diversity, Equity, and Inclusion is that we are a grassroots-based university. We have created multiple structures that enable students to step up to the plate and take charge of D&I concepts and ideas. I do believe that Native American and Indigenous students, Non-binary students, and LGBTQIA+ students have been left out in that order of most to least, but we are working tirelessly as a university to ensure inclusion of these people in the dialogue of the University. Native American and Indigenous students hold a very special part of TAMU's history as we sit on lands stewarded and tended to by 7 or more Native and Indigenous tribes or communities, and expropriated the lands to get the University we sit on. Thus, diversity is integrated into our history through the Morrill Land Grant Act of 1862, and diminishing the purpose and structure of the Diversity Institutions at TAMU is a direct attack on how we can retain students and faculty members.

---

Please don't do the plan. It's not a good plan. We don't like the plan.

---

I have found that both inter university and inter college communications are often disjointed. Not everyone is aware of industry night opportunities, resource groups, and job recruiting resources because there is no centralized information

system besides emailing lists.

---

Liberal Arts and both college of sciences have extremally little to provide to each other and generally have different views in teaching styles and grading policies.

---

liberal arts, science, and geoscience should not be combined. absolutely WHY. geoscience and science is fine, but liberal arts and science are complete opposites. the class locations are as far apart as it really gets, and so is the coursework. for degree plans, neither group HAS to take many classes from the other college. So why combine? Exactly. There's not a good reason.

---

Good.

---

Do NOT combine College of Geosciences, College of Liberal Arts, and College of Science. Makes no sense. Keep Liberal Arts separate, they don't even take science classes so should in no way be included in a College of Science.

---

I've never worked with this department in my time as an undergraduate. The fact that its being included in this is honestly ridiculous. It's almost just here so that we might not fill out the next box.

---

The idea of introducing a music major to the university sounds great on paper there is more hindrance to placing the program into place. Firstly, the performance minor at TAMU does not allow the actual performing ensembles to count for the minor. For a music major to be in place, the ensembles at TAMU need to be recognized as academic credit in the minor. The Aggie Band also does not gain any credit towards performance in the university's eyes. Additionally, there is a lack of incentive for performing musicians to come and teach at TAMU when there are better music schools in our state. To have a program, there need to be professors tailored to each instrument so growth can be monitored. TAMU does not have a member of the music staff that plays a string instrument but rather, they all play band instruments.

---

Good

---

These are good improvements, but it sounds complicated for the layperson

---

N/A

---

Consolidated academic advising would be an immense detriment to students, since advising would be reduced to the function of a "call center." Information about courses and departments and degrees would be impersonal and shallow, since advisors would not personally know the faculty, courses, or requirements, as the advising staff currently does. However, having an office devoted to the recruitment of undergraduate students would strengthen the student body and be beneficial to the university.

---

Please don't change anything.

---

If this office is to be created, it needs a narrow and specific mission rather than just collecting all the other programs of this University. The creation of an office that handles community outreach and external affairs is good, and it makes sense to include Music Activities and the Children's Center as well as Study Abroad, because these are services that impact the broader community and require specialized knowledge. However, there are some units that do not belong in this grab bag as they will lose their importance. OPAS does not belong in any new divisions. You can take it out of the MSC over my dead body. It has been a student-run, student-led program since its inception and provides invaluable leadership and life experiences for the students who participate in it. In addition, it provides funding for a lot of MSC programs. It is the pride and joy of all those who participate in it and creating administrative oversight over a program that does such good and is so successful under students is overreach in the truest sense and completely unnecessary. As mentioned earlier, DEI efforts are not a "strategic collaboration," they are central to this University's mission and deserve to be fully integrated into the academic structure, not shoved in the bin of other assorted programs. Similarly, International students need some support and attention from the Provost's office to ensure their academic development is centered in their treatment rather than using them as strategic pieces. ISS is already underfunded and underresourced, and moving it to this backwoods division will make it even harder for international students to get the services they need. The proposed recruitment and retention office appears to duplicate efforts being made in the office of student success and other divisions. I do not understand the creation of such an office when that work is already being done, rather uplift the existing offices.

---

I'm not sure how I feel about combining BIMS with bio in AgLife. I enjoy the atmosphere at VetMed; however, there should be more emphasis and support for BIMS majors with things like hands-on participation/assistance in the animal

hospitals. I strongly support building the Music Program at A&M. Performance Studies has been pushed out at A&M while the music program at TU is commendable. I would like to pursue a minor in vocal music and would greatly benefit from the new changes proposed.

39.7 percent of Texans are Hispanic or Latino, but only 24.9 percent of TAMU students are Hispanic or Latino. This is a very valid point to make in Finding #2 of Academic and Strategic Collaborations. Conversations revolve around reaching HSI designation percentages when really our actual goal should be to reflect the much higher 39.7 percent. A Latinx Cultural Center and Spanish language recruitment materials could aid in narrowing this gap and undoing whatever factors are causing this severe exclusion and underrepresentation. A Latinx Cultural center should be included in recommendation #4. Spanish language recruitment materials and videos should be added to recommendation #2.

I do want A&M to start including new collaborations I can join.

As long as their current needs are heard and considered, I am fine with the proposed changes.

Each college can show support of each other and possibly aid each other. However, an all out merge is not wise. Why not share ideas and help other colleges implement the best things about one college into the next without combining them.

If we switch advisors around and change for departments, it'll be very hard to get the students what they need.

It would be an incredible disservice to the mission and legacy of President George H.W. Bush to merge the Bush School with political science. The Bush School is made of students who have self-selected to join a distinguished alumni population who are dedicated to an elevated, serious life in public service. Two of my favorite things about the Bush School is the small size of the student body and the small, but impactful and important group of former students. Another important point of my selecting the bush school was how prestigious and separate it felt from the main campus. The relationship between the Bush School and the main campus is just as it should be. Similar to Mays. Separate, but together. It adds a level of prestige. If you want to combine Bush with public science, then combine Mays with business administration.

Howdy, As a current student at the Bush School of Government and Public Service, I take very seriously the report to combine the Political Science and Bush School Departments. First, I agree with the report about the success and positive value of the Bush School. I have been at Texas A&M for five years now, a year and a half have been at the Bush School. The professors care so deeply for student success unlike anything I ever experienced on main campus. Moreover, the culture of the Bush School exemplifies the core values of Texas A&M more than any other department or organization on campus. The potential of the Bush School is untapped. The University would benefit greatly from increased enrollment at the Bush School. Also, the addition of undergraduate degrees would be beneficial to the University because of the caliber of student that could be produced. That being said, to merge the Political Science Department with the Bush School proves too great a risk to be carried out. There are multiple aspects of the merger that concern me. First is the culture aspect. Around 80% of Bush School students enter into public service positions upon graduation. I do not know the statistic of the Political Science Department, but I would propose it is significantly less than 80% of graduates. Second, to merge the two programs would endanger the Bush School of losing the best piece about it, it's professors. Although I do not know a lot about Faculty Senates, I do know that bringing in a whole department of tenured faculty to the Bush School who do not share the same care for students could have an impact on the way the school is governed. Instead of merging the political science department, Texas A&M should foster the development of an undergraduate degree program from the Bush School that would facilitate sustainable growth of the school while maintaining the culture of the Bush School. That may prove to be costly for Texas A&M; so, if nothing else, please be very careful in how programs are merged with the Bush School. Please consider the decades of work that have been put into the Bush School to make it such a unique program. It truly is the most special College in the most special university in the world. Gig 'em.

None

The comments made in regard to connecting the community campus and having the campus community be more reflective of Texas are correct.

Academically we have grants, proposals and so much being done continuously. I There is always work to be done and that work being recognized in articles. There is no way to see around the capacity of not only the faculty but "us" the students. Always reaching higher limits because we LOVE our department. The structure, and everything that comes

with the collaborations between other departments. However, that does not mean that we cannot publish extraordinary data and articles with the great minds of the biology department alone.

I heartily support recommendation 4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. I especially support the creation of campus gardens and a performing arts center.

Texas A&M is a STEM based campus. Students who wish to pursue a degree in theater or music can be better suited to go to campuses that can fulfill their dreams, such as Texas State, or The University of Texas. I don't say this to sound harsh, it's just reality. Texas A&M should not lower its standards to meet the needs of diversity. This is NOT a racist comment. Texas A&M already has over 60,000 students, and lowering the standards is not what the university needs. Take the best of the best, nondependent of the color of skin.

I am in support of an office that focuses on undergraduate students retention and recruitment. This should also serve as another method of voice that allows the students to say what could be improved.

General studies students do not lack interest and are qualified for other majors. I think the problem for a lot of us students are that we had too many academic hours to apply for other majors. I find the way that students were described insulting and generalized without talking to students personally.

Categorizing students into a major that they don't want sounds like it'll reduce admission rates, students in high school are gonna stop at nothing to choose their major, they will take A&M off the list that easy.

This report is a joke and needs to be revised like crazy. I disagree with everything that was proposed and think that this report needs to be made more aware to the students. The most absurd thing that this report could have proposed was Rationale #9a. I am a USAR student and am disgusted that the writers described every USAR student as some distraction to the college and does not have qualifications or interest in a college degree program. "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a College degree program, the University Studies program should be unified in the College of Arts and Sciences." This is a shame and disgrace to all of the USAR students. We are not distractions and unqualified, I think whoever wrote this proposal is such.

-I disagree with Construction Science being moved to the Engineering Department. I believe the current program for Construction Science students, like myself, is perfect to prepare us for the future in the construction industry. I believe if Construction Science needed to be pushed out of the Architecture Department, then it should be its own department.

As a student fully enveloped in the humanities on campus, I think investing in cultural centers would be tremendously valuable. This is something I have wanted since my freshman year here, and as someone pursuing a career as an art curator, I've wondered why our campus, let alone Bryan-College Station as a whole, has so few opportunities to get involved with the arts. However, having OPAS and the art galleries as part of the MSC has been a fundamental part of my college experience. The MSC has opened up really special opportunities for students to be involved in processes in areas that we otherwise don't get exposed to. As a member of the MSC Visual Arts Committee (and now Chairperson), I have gotten valuable curatorial and exhibition planning experience in the Reynolds Gallery. Taking OPAS and the art galleries out of the MSC could potentially remove really special opportunities from students, and the MSC has been a home for diversity on campus for decades. Ultimately, I think the student involvement aspect of OPAS and the art galleries remains crucial, and these opportunities must stay available in the same capacity even if they are moved. Taking Cushing Library out of the University Libraries system seems illogical, given that its primary function is as a library and home for archives. I am also a student worker in the Preservation Unit of the University Libraries, and without the direct connection with the rest of the libraries, they would be separated from preservation and conservation efforts, which would be counterproductive as many of the pieces in Cushing's collections are old and need special care. I honestly believe that every part of moving Cushing out from under the libraries would be illogical.

I fully support Recommendation 4, especially the performing arts and cultural centers. Many TAMU students love the performing arts, but the opportunity to participate or go watch is limited compared to other universities. The arts provide a health outlet to express yourself outside of academics. I believe it will be very beneficial.

I do not agree with centralizing academic advising. I find it so beneficial to have advisors specific to my degree plan. I am provided with so many resources and direct guidance for my plan. I would not feel comfortable having an advisor that is not fully devoted to my degree plan.

I think that the college of Science should remain separate from Geoscience and Liberal Arts

Why? Makes no sense. Get BIMS more advisors.

n/a

Recommendation #2 is great! This is exciting because it would help diversify the student body, reaching underrepresented and low-income populations. Recommendation #4 is very exciting. I like the idea of bringing more cultural centers to Texas A&M in order to connect with surrounding communities. Where will this funding come from? Will this be separate from academic funding, or will these funds take away from other areas?

Tamu should stay and operate the same. No changes.

Grow the Money Education department!

Adding gardens and perhaps a performing art center is a good idea, but an Art Center, Museum, and Hospitality Center seem like big wastes of money. I don't want to pay for these things.

AGLS 235 has been an extremely useful and informational course. It has been a top resource in bettering my financial skills as a young adult in college.

n/a

I like a focus on recruiting and retaining students; this is important. We already are investing in green space and space for the community with the Aggie Park. Wasn't this obvious?

They are in good standing.

Transportation should remain under the purview of TAMU. Companies take jobs to extract revenue from their source of funding, which in this case is students. They have limited incentive to keep costs down. Food quality and satisfaction has gotten considerably worse since the outsourcing and prices, superficially, seem to have gotten no better. Passing the buck is the wrong decision; we should continue to improve on this ourselves. It is excellent seeing the all-electric busses around campus now and we are on a good path.

n/a

Combining the Colleges of Science, Geoscience and Liberal Arts would create chaos for the students regarding advising. Since the College of Geosciences has such a personal relationship with our advisors, there is a comfort and familiarity present. The small family feel of Geosciences would be gone and recruitment for geoscientists would decline. Giving the conditions of our modern world we need more geoscientist, so this combination would have a negative impact overall.

I like the idea of building cultural centers like performing arts centers and museums. I especially think that a museum of natural history would be a really cool way to give life to the archives of artifacts that the school has from various disciplines. However, I don't think it's urgent to build any more parks anytime soon with the TAMU Gardens and currently in progress Aggie Park.

I agree that such collaborations are mutually beneficial to both parties involved and we should show continued support of such relationships.

I disagree, this will affect many students and I think it is very poorly thought out

I agree with recommendation #4, as it would greatly improve the health and wellbeing of students on campus, providing more areas of gathering (which would alleviate clumping at the MSC, Zachary, etc.) and provide OPSA with the opportunity of bringing in newer, top-notch Broadway shows.

I think this is a bold change that in the long run will not improve overall cultural or diversity. In plain speak it sounds like a giant waste of money.

N/A

Option 3 is the best option as it allows better networking and allows the college to grow in popularity and success rate.

Recruitment for undergrad should also reach out to high school students to let them know what classes might best prepare them for specific undergrads

I think your collaboration ideas will not work in practice. I believe that putting multiple departments under one umbrella will only lead to a failure in whole. The departments are struggling as it is. To put them together, would only increase

this trouble.

---

REGARDING CONSTRUCTION SCIENCE MOVING TO ENGINEERING: Currently, Construction Science at Texas A&M University is one of the top-rated construction programs in the country. Texas A&M has achieved this by producing students that are ready to tackle anything coming their way in the construction industry. The vast majority of students in construction science go to work for a commercial general contractor after graduation. When working with a general contractor your typical point of contact with the design team will be the project architect, not the engineers. Currently, Construction Science gives a great education that proves knowledge on finance, accounting, management, law, communications, etc. There is a concern that making a move to engineering will alter the core courses that have made Construction Science into the amazing program that it is today. Furthermore, the CIAC is a huge proponent of Construction Science. This is where a lot of our funding comes from and certainly where a large portion of our jobs come from after college as they assist with the career fair every semester. The CIAC historically helps adapt the school of architecture to the ever-changing industry, making the move to engineering has the ability to alter this and could have repercussions. Lastly, a fair bit of Construction Science professors do not have their master's degrees and certainly don't have a doctorate degree. The student body has always believed that this is something that has made this major so successful. Having professors that have true hard-earned industry experience is far superior to having x-years of academic experience. There is a fear that if the move is made to Engineering that the college may steer towards faculty with academic tenure rather than industry experience. Every Construction Science student whether it be past, present, or future will agree that having professors with extensive practical industry experience is far superior to having professors with higher education but lesser field experience. We all hope that Texas A&M will take time to look at all the facts and potential consequences to the school of Construction Science if the move the Engineering is made.

---

I am a student in the Political Science Department. I love the idea of merging it under the Bush School of government. My feedback is that I would love that it be done soon enough so that my degree can reflect that it is with the Bush School rather than under the College of Liberal Arts. Thank you!

---

I must applaud SI and organizations of their focus. As professor adequacy is not standard in every class, meaning that some professors are better than others, it is good to have a standardized review of material for tests and learning.

---

The report fails to specify the sources of funding for proposed investments, partnerships, and offices. Additionally, Texas A&M already has campus gardens. Recommendations for the Office of Sustainability would have been beneficial, as the university's efforts are laughable (public transportation is highly underused and underinvested; there aren't even recycling bins in all of the buildings, nevermind shared office spaces and classrooms).

---

Howdy, My name is [REDACTED], and I am a member of the Aggie Class of 2024. I am also a proud student in the Construction Science Department. I would like to provide my feedback in this report about the proposed changes that have been discussed in the MGT report. When thinking about the proposed move of the Department of Construction Science I had a lot of questions as I know several of my classmates had. Would Construction Science become an engineering tract, would we be able to keep all our professors (including those without PhDs), would our head of department change? My classmates and I have been discussing our thoughts on the report circulating back to these and other questions. When I first opened the MGT report and started reading about the changes proposed to Construction Science I was shocked to see how little of the article was dedicated to supporting the conclusions drawn. I was also shocked to see how many students were listed as respondents in the first pages of the report. Out of 500,000 people, only roughly 1,000 students had a voice in this report. Furthermore, I do not know of one Construction Science student who was interview in the preliminary survey. How can this be? When thinking about this topic, I thought about what it means to be a student at Texas A&M. I thought of our core values: Respect, Excellence, Leadership, Loyalty, Integrity, and Selfless Service. How does this report fulfill any of these values for COSC students? I have felt betrayed over the last few days with the lack of information and transparency that has been afforded to my classmates and myself. We are proud to be Aggie students. We are proud to be in our department. I came to A&M not to blow off and waste four years of my life, but because I wanted to do something with my life. Construction Science has thus far exceeded my wishes in all ways pertinent to my desire to be a Contractor. I have felt the value of my education in ways I know other students at different Universities and Colleges know nothing of. I have seen the application of my skills readily in my life, and I have grown to appreciate even more than ever the Aggie network and its spirit. How does the proposed move value the Leadership exhibited by professors who might lose their jobs if the change happens? How does the change exhibit Loyalty to students who might find themselves in a forced change of major after working for years for their degree? How does this move value Selfless Service to the students of the Construction Science program who came to Texas A&M

expecting to receive what was offered from the program? And how does this move represent Integrity when many students have voiced the concern that COSC numbers are simply needed for the Engineering program 25 by 2025? "The primary mission of the Department of Construction Science is to prepare students for successful careers and future leadership roles in construction and construction-related industries." I have seen this mission at work in my own education while here at Texas A&M. "In our department, we treat students like family." I have been thoroughly pleased with the Department of Construction Science and the skills I have been taught thus far. The program has aimed to prepare me for the workforce and to exemplify the Aggie Core Values. It is true that the program is equal to none. The sheer size of companies who are so readily willing to hire Aggie Construction Science students reinforces this point. I mean no disrespect to engineers or the College of Engineering, but the parts that have been so far the least helpful for the development of my skill set have been those classes in my major that most resemble engineering classes. That is not what my classmates and I came here to learn. The report said, "Moving the Department of Construction Science to the College of Engineering will enhance the educational experience and research potential for faculty and students in both organizations." I, personally, and a large portion of Construction Science students cannot see that being the case. Please take this into serious consideration. Thank you.

There is already a natural history collection, we don't need to create one, just advertise it more, there are multiple art and history displays on campus. Aggie park will create the outdoor spaces that you are talking about and what is Rudder Auditorium if not a large indoor gathering space

N/A

I just want to give a shoutout to College of Geosciences for doing a phenomenal job of recruitment with students. Judy Nunez is the college recruiter, and she is one of THE most personable people in my college. Our college hosts a summer camp for students interested in geosciences at the high school level. GeoX is a week-long overnight camp where you meet current students in geosciences who are your counselors, and you meet faculty in the college. This camp solidified my plans to come to A&M, and more specifically the College of Geosciences. Judy also has an undergraduate recruiting team which I am part of, where we get to share our excitement about geosciences with prospective students and their families. We sit one-on-one with them, which is always a pleasant surprise for the prospective students and families. They typically do a campus walking tour (something I am also a part of), where we do group tours, and then they walk over to O&M and are always surprised in the best way that they get to sit down with the recruiter of the college AND a current student. My first time meeting Judy was a visit to campus as a junior in high school, where I learned about GeoX, and then also got to meet with her and other A&M recruiters at an evening dinner event in Dallas. Judy is awesome, and I want to highlight the fact that she has done a phenomenal job of recruiting whether it be in-person visits, evening events, college fairs, or summer camps.

n/a

The changes proposed in the management report seem as they would do more harm than good. TAMU does a great job as is, on maintaining the cleanliness of the campus, finding and recruiting the students that need to be here, and attending to the needs of its students so one is able to obtain the finest education and achieve excellence through personal growth. I honestly believe with all my heart and soul, all good things go through Texas A&M.

None

There would be no logical way to condense cocsi into COE. The curriculum does not correlate whatsoever and would be the biggest devastation in TAMU history.

This seems odd. Student affairs offices such as diversity inclusion should be under student affairs.

n/a

N/A

I think the COSC department should be moved to Engineering

I believe as a USAR student that this is the worst possible move that can be made. There is also no connection at all between construction science students and engineers. I believe because she failed by having 25,000 engineers by 2025 she is making this move to merge COSC and visual arts into engineering. Then getting ride of my major USAR when I have one semester left to graduate. How will this affect me? Will I have more classes to take? Go in more debt because I

will need to take more classes? Will I graduate later now because of this transition? All around just because you have failed on a promise you made. You CAN NOT take it out on other colleges that are thriving and merge them to engineering to fit your agenda. I can to this school because of its core values. And the first one Respect is being broke by the president by not respecting the college of architecture and COSC. By telling them you know what y'all are going to move/lose majors and y'all can deal with it. That shows no respect to the professors, the councils, and the students in the college of architecture and COSC

---

Just saying, we already have a remarkable performance center in the Rudder Complex. Rudder is centrally located and easy to access. Everyone already knows where it is and how to get there. Unless you demolish the building, you'll have to relegate a new performance center to the boondocks of campus. I'd predict this will significantly drive down student attendance at events. As to why you shouldn't just demolish Rudder: have you seen the place???? Its '70s Modernist decor is perfectly preserved and perfectly tasteful. Don't believe me that the dated trappings are still relevant? Look no further than the Marvel show Loki, which brought back '70s architecture and aesthetics to universal acclaim. Rudder is a work of art which deserves to be cherished. The complex is permeated with warm lighting, both natural and artificial, which welcomes guests in a way that contemporary styles could never match. The bold geometries in the Theater and Auditorium present much to entertain the eye during intermissions, and the complex is bursting with fine art collected from around the world. (Side note: can somebody PLEASE publish a guide to all the art in Rudder??? I'm dying to know the stories behind it)

---

Please keep the colleges separate. It gives such a uniqueness to the University and allows students to have a sense of home when they're in a college of likeminded people. With being in the College of Geosciences, I have been able to form such close knit relationships with faculty and students. I love how small the College is and gives such a home type feel.

---

I especially like Recommendations 3 and 4 of this section. I believe A&M can do even more to strengthen its connection with nearby communities and the state. A&M has the potential to "call to action" a veritable army of current and future students to be positive drivers of change in their communities, in the state of Texas, and in the nation and world at large. I think A&M is already acting on #4 in many great ways with the construction of Aggie Park. I am very excited to see the end result of this project. The incorporation of more natural and recreational spaces on campus as well as the outdoor theatre will be wonderful additions to campus and community life. I believe an Aggie museum would be great as well. I know there are already some museum-like exhibits on campus, such as in the libraries and the Hall of Champions, but not everyone knows about these opportunities to learn about the artifacts and history of our campus. A museum would be a great way to educate future students and visitors and to inspire current and former Aggies. I think it would be neat for part of a museum to focus on demonstrating how Aggies both past and present have exemplified the core values of this university.

---

Providing things to do on campus like visiting cultural centers, museums, performing arts centers, etc would be amazing! College Station is great but I know a lot of people who wish there were more ways we could engage in the community and have more places to visit.

---

I really think the Bush School should expand and include the Department of Political Science, International Affairs, and Economics. I think that that makes more sense than leaving it because by being in the Liberal Arts School, we have to take an extra creative art or physical science which has nothing to do with our degree. I think being placed in the Bush School is a really fantastic idea for these departments because the majors are more related and should indeed be grouped together. I'm an economics major and I feel like this degree would fit much better at the Bush School because many people already think economics is in the business school, not the liberal arts one.

---

I agree that we need a more diverse student body that better represents Texas and the US. However, having an office focused on retention and recruitment would only fix part of the issue. As a campus community, TAMU has a reputation of being racist, homophobic, and very conservative and there hasn't been a lot of action by the admin to fix that. Having a statue of a Confederate general in a prominent part of campus and featuring that statue in our marketing as if it's a source of pride is disgusting. Confederate statues represent idolization of white supremacy, and Sully is no different. Yes, we should have better outreach, but it is pointless if the community is still toxic because that will rightly scare off anyone who was interested. I also agree that we need cultural centers. From a student perspective, it often feels like there's not much to do here besides drinking. The mall is downright depressing to visit, Grand Station is very child friendly, etc. There's overall very little to do here. Anything that would change this and create something that's enjoyable to visit would be nice.

---

I definitely agree with the idea of a performing arts center

I respectfully think that there shouldn't be a merger of departments or libraries.

---

Make Economics go from College of Liberal Arts to May's Business School. Makes more sense.

---

It would be very cool to collaborate with other majors to create art performances...such as with visual arts and instrumental music.

---

Fund the arts please! I'm an Art Minor and it breaks my heart to see that you are not funding the art minor. Growing the Arts at Texas A&M is suggested in the report and you are doing the exact opposite! Please fund the College of Arts and Science! I would like more access to art classes and I also want more students in the future to have the chance to be art minors as well. I know I'm not the only student at Texas A&M that wants to minor in art. Please show us that you value the Art Minor and the Arts by allowing us the funding to hire more faculty, use more classrooms, and more supplies. I truly love this program, please fund it.

---

Combining colleges is bound to cause issues for departments in that such a huge college is not going to be able to properly oversee all departments. A dean of arts and sciences is not going to have experience in every subject within the college and will have a bias. Centralized advising also sets students up for failure in that centralized advisors are not going to know much about your classes for your major. This would cause advising that could actually be flawed.

---

The College of Science SHOULD NOT be consolidated with the college of Arts.

---

I fully disagree with the college of geosciences being cut. This is a ploy to prevent studies about climate change. I have lost so much respect for this school.

---

Investing in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens should be implemented. Efforts to make TAMU a more friendly campus to diverse students should also be put in place. Being a majority white institution, TAMU often lacks cultural diversity.

---

The recommendation to consolidate into four large colleges is alarming and saddening. I desperately urge the university to reconsider the benefits of smaller colleges, particularly in regards to student retention and recruitment, faculty and student wellbeing, diversity, and research. As a geology student in the College of Geosciences, I speak for myself and my peers when I say this will remove the main reasons students come to A&M for geosciences. When searching for colleges in high school, I originally ruled out A&M out of fear of being swallowed up in a large school. Upon touring the campus, the familial culture of the College of Geosciences, the small class sizes, administrators who know you by name and are willing to bend over backwards to help all endeared the A&M to me. What was unthinkable became my first choice. Many of my peers chose A&M solely because of this. By removing this significant benefit, you will be losing a large portion of prospective students resulting in a lower overall caliber of student recruitment regardless of your efforts to better it. Now a senior, I love the College of Geosciences administrators and advisors, having been able to build personal relationships with them that the large colleges cannot boast. If we are merged, many of these stellar administrators will be laid off or overburdened by the addition of many times more students and a wide-even hodge-podge- collection of majors. We here in geosciences can trust our advisors to know us, our personal goals and struggles, and know they will do everything in their power to help. Not so in the other colleges. In the College of Engineering, for example, advisors do not even know the students faces and the relationship is stiff and cold. I have known many engineering majors struggle to get help in applying for classes, learning of resources etc. because their advisors are so overworked. Merging will only exacerbate the struggles of the larger colleges while dragging down the smaller. This lack of support will inevitably lead to higher dropout rates and mental health struggles. Students like me will feel more isolated, not less. We identify not just with the university as a whole, but as a college with its own unique culture that will be lost with a merge. This move will also harm diversity. It sounds counterintuitive at first, considering the College of Geosciences long struggle with diversity. I make this claim primarily in regards to scholarship. Geosciences is a college with lots of funding due to our important research and participation in IODP. We pull in well more than our weight, especially compared to the arts. The college takes a significant amount of grant money brought in by professors to aid in scholarship and facility development. For our professors, it makes sense that this money is taken as it will be fed back to their own students and facilities. If it is shared with the liberal arts, which brings in much less money despite its larger size, the cut of money being fed back into researching, funding earning students in the College of Geosciences will be harshly reduced, resulting in a lasting decline in productivity and therefore income. Scholarship money is already spread thinly in our college as it is, and it is a significant help to those students who can get it, particularly minorities. If we merge with the Colleges of Liberal Arts and Sciences, our money will be redistributed away from us as we are a much smaller number, yet more prolific college. Our scholarships will be reduced further to accommodate this reduction,

pushing poorer students and minorities away from the geosciences when we should be striving for the opposite. Additionally, the merge into a College of Arts and Sciences will hurt the image of our colleges. When I hear arts and sciences lumped together, the first thing that comes to mind is weak science. Is that what we want our university to represent? Prospective science and geoscience students want a college tailored to them and their needs. Think also of the college specific Living Learning Communities (LLC). These, specifically the Geosciences LLC as I was a member and peer mentor of it, strives to welcome students, give them a community of students with similar interests (the geosciences) and teach them things that are useful to know in their fields. An English major wants to learn aesthetic writing while a Meteorology major needs to unlearn that from high school and learn technical writing. Research, job searches, interviews, types of classes are all vastly different. LLCs are able to specially design their courses to best help their specific students. The LLCs and colleges know this and tailor their resources accordingly to best fit their students. This helps both the students and recruiters in promoting our familial image. Loss of high quality applicants could even lead to the loss of IODP, a major source of pride and income in the College of Geosciences and unique to us in the entire western hemisphere. Even risking its loss would be irredeemable damage to our image and recruitment. Art and science are both noble fields, but are too different to reasonably combine. One or the other will suffer as what is beneficial to the arts will harm the sciences and vice versa. Are such minimal benefits as the convenience of a few upper administrators really superior to the wellbeing of faculty, staff, and students? Has a single person wished their college was larger and less personal? I think not. There are other ways to insure consistency of values across the colleges without merging that will not result in lower enrollment, fewer scholarship opportunities, higher dropout rates, worse mental health and community. Reducing spending is no use if it results in an even larger loss of income. Because of my strong love for this college and university, I beg you to reconsider.

---

Stop wasting time on DEI initiatives and start spending it on bringing high achievers to campus, REGARDLESS of their race/class/gender/etc.

---

Combining multiple colleges under one umbrella college is not favorable. Coming from a student perspective, having your own college provides a sense of family and coherence. Taking this away will you not only confuse students but make a lot of the processes we have to deal with ( class registration, advising, tutoring, clubs etc..) more difficult. I STRONGLY urge the provost to reconsider its thoughts on combining colleges.

---

"effectively leveraging programs that touch parts of the community beyond the boundaries of the university's campuses" The geosciences inherently possess a unique sphere of influence that unites all types of people. If you want to serve communities outside of those that house A&M campuses there is nothing that unites us more than the water running underground, or the ranch land and farm land that sustains us, and on the very base level, for the people who can afford to travel, geosciences gives us mountains and beaches we travel to on vacations to revel in their beauty and mystery. If you want to engage and recruit students to come to the university and complete their degrees here, insp

---

I think there should be more tutoring opportunities especially for geoscience classes where there is no TA and currently there is no tutoring available. Also, more assistance to students struggling and who received a midterm grade warning.

---

Recommendation 2 is the strongest recommendation here - I believe increasing the number of applications will make the school more competitive and more highly respected. The size of A&M and current acceptance rate does not demonstrate truly the caliber of students at Texas A&M. More could be done to recruit high-achieving students and students from traditionally underserved or non-represented and diverse groups. Texas A&M could absolutely do more to bring a more diverse group of students to the campus which would benefit the campus community as a whole.

---

I cannot express enough much of a downfall combining the College of Geosciences, the College of Science, and the College of Liberal Arts would be to not those within those colleges, but also Texas A&M as a whole. In the report, it is stated "In addition, there should be significant cost savings by reducing three administrative college structures into one and using those funds to support the new College academic and research mission"; however, these funds would not be distributive where donors want them. Meteorology pulls in the largest amount of funds out of all the other Geoscience majors. Our funding allowed us to conduct research on Covid and it is how Dr. Sarah Brooks helped make the discovery that masks were indeed beneficial in minimizing the spread of covid. The funds given by donors to meteorology specifically have funded the lightning research led by Dr. Timothy Logan to new research on how cities are causing more lightning in urban areas than rural ones. We also have worked hand in hand with NASA, the National Weather Service, and the National Science Foundation on projects dedicated to understanding severe weather during the winter and spring months. It is because of our funding we were able to release a code maroon for a funnel cloud forming by the RELLIS campus and heading north towards Bryan. The tornado was recorded as an EF 2. Us being able to see the tornado from the observatory, which is only well kept because of direct funding we receive, saved thousands of lives because we

could see conditions coming together to produce a tornado. The "significant cost savings" would mean lives lost. Having us combined with the College of Liberal Arts would only benefit the arts. It would completely diminish the degrees in the College of Geoscience and Science because it would be easier for the arts to receive a B.S. If on our degree it says "College of Arts and Science", employers will not take it as seriously. Our degree would not mean as much as it does now since having the word "Arts" in front of science completely turns off donors who have a degree in STEM. In the report, it says "This larger college structure creates a stronger advocacy for the liberal arts education at a STEM-focused university" further implying this combination of colleges is purely for the arts majors. We are a STEM-focused university. Texas A&M started as an agricultural and mechanics school. If someone wants a degree in an arts major they can go to a liberal arts school like the University of North Texas or even Texas University. Texas A&M has the number one meteorology program in the country. Outranking Oklahoma University and Penn State. College of Geoscience, but more specifically meteorology, has the most undergraduate research out of any other college within A&M. In case you haven't noticed, the College of Geoscience also has a radar on our roof. The Aggie Doppler Radar (ADRAD) is the only student-run radar IN THE NATION. NWS relies on us to run our radar in times of severe weather because when their radar goes down, we become their last resort. The closest radar is in Louisiana and cannot reach the university. When severe weather happens and we no longer have the radar because we are now the "College of Arts and Science", we will be up the creek without a paddle in sight. Science should only merge with other science. It makes absolutely zero sense to combine us with liberal arts because this will make the STEM side of the "College of Arts and Science" useless. We will lose our spot as the number one meteorology program in the nation. We will lose millions in funding from donors who don't want to support an arts college because they have a stem background. Our research will drop substantially without adequate funding and opportunities will be lost. We will become a laughing stock to the nation for making the worst decision possible. The only reasonable solution would be to merge the College of Geoscience with the College of Engineering. As a senior meteorology major, I can say we have to do the same amount of work as an engineer. We take the same math, physics, chemistry, and coding classes as an engineer. The only thing missing is having the word engineer in our title. If you go forward with this decision, know that it will be a turning point for Texas A&M. Nobody will want to seek a degree in STEM when their college has the word "Arts" in it. You will lose a massive amount of former student donors and employers will look elsewhere for scientists. Preferably ones who graduated from a College of Geoscience or Science. Not one where arts is also in the title.

I believe that by combining several colleges together isn't necessarily a good idea. Combining the college of architecture with agrilife can impact the students. Agrilife and construction science have a bit in common but I don't see why they should be combined since they don't fall directly under each other. Besides that, find fw hilt and staff is way easier when you have more colleges because students know who and where to go.

I am not sure what this is. This semester has been extremely challenging.

None

I think initiatives like 25 x 25 need to be stopped. I understand the need to grow but it can be done without forcing it. First of all, I feel that the quality of education needs to be first and foremost, not just the number of kids that can be shuffled in and out of the door. Not to mention, the city as well as a lot of campus facilities are already overflowing with students. A&M's reputation is such that without special programs aimed at growing student population that water down A&M degrees, it can be done at a natural pace and still see great results.

none

You should not combine anything

N/A

I think combining the Arts and college of science is not a good idea. The college of science and the majors under it are very different from the Liberal Arts majors. One great thing about the college of science is their ability to be more personal with students and seeing an advisor is very easy. By combining those two colleges I think it would lessen both colleges and their reputations

I kindly prompt you to accept all recommendations. Your office ought to improve.

n/a

Most recommendations seem obvious, and I do not know why we were not doing this before.

---

N/A

---

NA

---

The report does a good job in finding alignments based on missions; however, I do not believe that Academic and Strategic Collaborations office can handle such diverse roles, as has been proposed, for two main reasons: 1. No evidence of their capabilities: Academic and Strategic Collaboration is a relatively new office, there is no evidence that the office can take up such diverse roles as has been suggested. 2. Lack of alignment: The group's original mission was to improve TAMU's presence across Texas, I am not certain if it is a strong alignment for TAMU's international agenda.

---

Combining the College of Science, the College of Geosciences, and the College of Liberal Arts will be taking away resources from the students and faculty of these departments. Smaller groups allow for more interpersonal connections in the workplace. Putting these colleges together will make the workplace larger and give faculty less opportunity to share their voice and to have input in their college. The same goes for students. The separate colleges also give students a strong sense of identity and helps to encourage specific paths of study for a stronger, more specifically trained force of students to be graduating each year from A&M. For me, being a student in the College of Geosciences means a lot to me. I am able to connect with professors, professional opportunities, administration and more because of the smaller size of my college. I also have a lot of opportunities for research, which would be taken away if these colleges were to merge. The College of Geosciences is currently in charge of IODP, which is one of the largest research groups in the nation and brings the most funding for research to A&M. Having to redesignate this funding and oversight will be detrimental to a phenomenal research program that brings so many people from all over the world together here on our campus and on our expeditions. The reasoning for the combination is to bring stature to A&M, which we already have a lot of! The cons heavily outweigh the pros, and as a student, I would love for my resources to stay strong. Please do not combine these colleges.

---

The College of Geosciences SHOULD NOT be combined into the new college of sciences and arts. The current structure should be left as is.

---

I believe it would not be beneficial to combine the college of liberal arts, sciences, and geosciences. If I were a high school senior and was wanting to go to university for geoscience, having the official college of my program be College of Arts and Sciences Would deter me from picking A&M. Combining these schools feels like a dismissal of the individuality of each of their programs.

---

I would love to see increased collaboration across TAMU system campuses and SEC institutions.

---

N/A

---

Just remember you are representing the Texas A&M University, you have to adhere to the values, ethics and views of the University' current students and Alumni. Not the other way around. You're not representing the University of Texas or any of their systems

## Academic and Strategic Collaborations - Former Student

Please provide your comments related to Academic and Strategic Collaborations:

---

Finding #2: In this area, the report critiques A&M over its "lack of diversity" of student enrollment when compared to the population of this vast state, the second-largest in land mass in the country. It urges that we increase student recruitment efforts to ensure an eventual "balance" within our enrollment that reflects the state's diverse population. That sounds great. On paper. But let's check reality. We should not expect or "demand" that students living the greatest distance away from our main campus travel hundreds of miles to College Station. Nor should we expect all students, regardless of color or ethnic background, to be attracted to an extremely large student population (68,000+) and/or the surroundings of Brazos County, a rural community. Certainly A&M can publicize itself and recruit openly and aggressively in all areas of Texas--inner cities as well as its tiny rural communities and state border towns. But we should not

mandate any numerical percentages of enrollment simply to "match" the census demographic reports of our state or even of our country. Instead, we should continue to push to get the best and brightest students we can, regardless of where they live in Texas or the USA. We must distance ourselves from the empty and indeed harmful rhetoric that declares "all students must attend a university to get ahead in life." Far too many people have built and worked for large companies in a variety of roles as well as built and owned their own small business without having college degrees. Many called upon their training in vocational classes from high school or junior colleges or other community trade schools such as A&M has started at our RELLIS campus to get the education they needed to succeed in life. Not all students WANT to go to college or NEED to do so. I am personally aware of several people who said they felt "forced" to go to a university, regretted doing so, and dropped out with an "educational headache" and a lot of student loan debt. A&M should recruit widely, yes. But we should be sure to provide equal time to showcasing our RELLIS efforts along with our main campus. I do wish to note that A&M already utilizes greatly its Aggie Network in reaching out to students. Many of the A&M Clubs based across Texas donate very large amounts of money and time--often working directly with the A&M Admissions office-- to "advertise" the qualities of A&M and an Aggie degree, and to recruit and reward scholarships to their local students. Any efforts to further our recruitment should be channeled in partnership with these many organizations. Recruiting and promotional programs cost money; using existing clubs and their volunteers could help significantly in keeping these costs down so that additional scholarship funds could be given to hardship students and those achieving excellence in their schools. Recommendation #4: I endorse heartily this proposal. Fortunately, I don't believe A&M has overlooked providing a cultural environment for its students, staff and community. We opened the Rudder Center and its auditorium/theaters in 1970 along with the Stark Art Center in the MSC. The MSC has served as a wonderful hospitality center, as has the Visitors Center in the first floor of the Rudder Tower. Our Campus Gardens project launched within the past 3 years. Thanks to additional donations and funding, it will be expanding greatly very soon. The Sam Houston Sanders Corps of Cadets Visitors Center has served us well as a museum of Aggie history, as has the Cushing Archives. I willingly admit that our explosion in student and staff population requires a broader, bigger approach in this area. The plans for the just-opened Music Arts Center (MAC) included a Performing Arts Center (PAC) nearby, but funding limited this project to just the MAC. The Rudder auditorium and adjacent theaters remain heavily booked almost year-round for mostly academic-related programs. Building the PAC adjacent to the MAC should be a priority. Our Fine Arts groups then should have priority reservation rights for this center in order to host concerts by all of our choral and music groups. I recommend a museum to be built on the West campus. The Stark Art Gallery in the MSC would be moved there along with rotating displays from Cushing Archives, the Corps of Cadets Visitors Center museum, the Association of Former Students along with special selections from all of the departments and colleges of the university. Hopefully enough money would be available to allow for growth of this facility. If curated properly, this building could become as big of an attendance draw as is the Bush Library. The then-empty space in the MSC that was the Stark Art Gallery could be used as additional meeting room space OR the A&M Visitors Center in the lobby of Rudder Tower could be moved to that location. Regardless of what goes where in moving out the art gallery, the Visitors Center desperately needs expanding. BUT, once a new PAC is built, possibly that will take reservations pressure off of the Rudder Tower Theater or Forum and visitor videos could be viewed there.

---

Refreshing this important responsibility will be very beneficial.

---

I think most of the suggestions in this section have merit. I would say however that while strategic recruitment of minorities & underserved areas is a good idea, achieving enrollment numbers that perfectly reflect the demographics of the state may not be a realistic goal. I also don't think the recent trend "everyone must have a college degree" is healthy, mentally or fiscally, for everyone. The cost of attending A&M has gone up astronomically since I attended back from '01-'08, and luring in a bunch of students, putting them in massive debt, only to graduate with a general studies degree with no real career path does more harm than good. If A&M wants to connect and impact lives across the state I think finding more strategic partnerships or establishing more 2-year and/or vocational training institutions would be the route to go. These offer more affordable & more readily employable outcomes for those in more difficult economic circumstances. Maybe graduation from these could come with guaranteed benefits like admission to A&M into particular majors, good for up to the next 4-6 years or something, so those individuals could gain experience & income working before deciding if they want to make further investment in education.

---

This should be A&M's sweet spot. We should push for more interdisciplinary professors! I have endowed 4 (one in each of our four departments).

---

To make campus a more welcoming place for underrepresented students, then focus should be on acceptance and

exemplified by leaders doing what is right, even when it is inconvenient or unacceptable to politicians. Recommendation 3 is very vaguely worded and it's not clear what or who this impacts. Recommendation 4 is a good idea.

---

How would moving Music Activities out from under Student Affairs affect students who want to participate in music programs purely as an extracurricular activity and not pursue any academic credit through an academic Performing Arts program? Students participating in groups such as Century Singers, Singing Cadets, symphonic bands, and orchestras typically have not wanted to pursue majors in music or performing arts, but rather participate for the pure love of music and it serves as an outlet for them from the rigors of their academics and provides camaraderie. The way the report is written does not seem to take this into account. Removing MSC OPAS from the student/staff/community partnership envisioned by Mr. J. Wayne Stark in its creation greatly diminishes the student development and leadership training that students receive by virtue of the MSC's learning laboratory structure. When procuring the Bolshoi Ballet for its western hemisphere debut in the 1990's to occur at Texas A&M, it was the MSC OPAS student committee chair and OPAS staff that went to Russia and secured that deal. What a valuable learning experience for that student and all the students who then worked to make sure the debut went off without a hitch amidst great national media attention. If OPAS becomes a sole university staff/community entity with limited student leadership and involvement, it will lose the unique tradition and excellence upon which it was founded. Student leadership, involvement and participation in all aspects of the performances and shows is critical and must remain.

---

If the College of Science is moved into the Liberal Arts, it would dilute the sciences and tend to lessen the emphasis on STEM education at a time when there needs to be more focus. If that move occurs, I will STOP my support through the endowed scholarships I have given and other support of the university as a Legacy Society member.

---

This MGT survey was an abomination. Pushing the narrative further to change the campus and overhaul it to be another run of the mill university. What gives Texas A&M its strength, power, and future, are the very things that make us unique. Curious how none of the universities we were peer/compared to are even in Texas. These comparison universities are beneath us, or different entirely, in the same manner as milking a cow vs milking a bull, and the complaining that your milk tastes differently. Cherry picked data to justify hitting Texas A&M with a banhammer and to alter the university, remove its identity, entirely. People say that what we identify as matters, well Texas A&M identifies as Texas A&M, and if you refute that, you're a bigot and are dismissing the lived truth of A&M. Yes the College of Engineering is huge, as it should be. Advising is decentralized, governed by each major, as they should be. You'll never have a one size fits all approach, and trying to shove the university and its respective colleges into a "big box store" feel, as this report would suggest, destroys the very fabric of what makes us Aggies. Trying to shove in 25,000 engineers by 2025 risks diluting down the degrees or simply put, dumbing down the curriculum to pursue more students. Additionally, merging the College of Fine Arts and Sciences, as many smaller east coast schools do, does not make sense nor enable either entity the ability to perform as unique and necessary institutions on their own. If you wish to improve the university, might I recommend cost saving initiatives like never paying for another such a slanted and asinine survey again. Perhaps considering cutting the University Administration's salaries by 10% as well. Speaking of cost savings, DO NOT outsource student on and off campus transportation. The current model makes sense, and such outsourced services at other universities always ends up being more expensive in a matter of a couple of years than any immediate cost savings might hint. You will pay more, get less, and be confused as to why... Why was this even an option? Look at what happened with outsourcing dining services. Pursuing diversity over meritocracy, over talent or the outcome, is a fool's errand. Diversity should be cultivated organically and naturally, not forced and mandated. Diversity is great, but chasing metrics and numbers over anything else and rejecting the notion of assimilation while encouraging the students to celebrate what separates us is not healthy. Change for the sake of change simply to change and virtue signal will not yet results, will not bring us together, and will not continue the ability of A&M to be a natural melting pot. Let talent speak for itself, and let those who wish to join A&M do so freely. The desire to erase campus landmarks to resemble west coast university appeal also does not sit well with me. Remarks about the Corps of Cadets being "too Caucasian" is not only insulting to our diverse group of Cadets but a surface attack on the Corps' rich history and selfless service. Creating more commissioned officers to the US Military than all the service academies combined should tell you that the Corps has the ability to form the talent, respect, and love for each other that is required in a military environment. The Corps of Cadets, and the College of Engineering, are fine examples of successful melting pots creating cohesion and powerful leaders. As they say, Highway 6 runs both ways. If faculty, administration, or students, do not like Texas A&M,

they are free to leave whenever, and can go attend or work for a university more aligned with their emotional support needs. Those who wish to be Aggies will be Aggies. The University has thrived for a century and a half being run the way it is... Forcing us to change to be similar to UCLA or Maryland will destroy our identity. I say this as a First Generation Aggie, who came not from wealth, but a family of poor immigrants, refugees, and poverty. As the first in my family to go to college, A&M represented everything I aspired to pursue and be. I took on tremendous debt to break the cycle of poverty in my family. Texas A&M was the beacon to freedom, and it still is. The desire of the MGT survey however risks undermining that legacy for the Boogeyman fighting game of "equity" and "diversity and inclusion" while throwing out the University as we know it. I strongly believe the MGT Report offers the chance/opportunity/paper thin justification to radicalize and change the University to better suit the political leaning aspirations of those who dislike Texas A&M.

---

I concur with the report findings.

---

This is a bit out of my lane but my takeaway was the school of journalism should be abolished not expanded. If this were a business(it is) you would close the doors, not throw good money after bad.

---

Howdy, My name is [REDACTED]. I am a Construction Science graduate from the Class of 1997. I write this in the brink of my re-entering the workforce after a 15-year hiatus to raise my children and take care of my elderly parents. I start work for Zachry in five short days. I have always worked in engineering when I was using my degree. I worked for [REDACTED]. In those years, I had to often correct people who thought I was an engineer and explain that "my degree is in Construction Science which is in the school of Architecture". It got old not being able to claim that I was an engineer, even though I worked in the industry. At times, it made me seem less than my co-workers even though my role as a team member was just as important as their roles. So, with that being said, I personally would love to be called an engineer, but I don't know how that plays with never being able to develop from EIT to PE and so forth. It's a missing link. So think about this if you change the curriculum as to how this will be labeled. Would we be Construction Engineers instead of Construction Science graduates? There are many career paths that come out of the program. I know there are many graduates that go to work for construction firms as opposed to the path I chose. Should this be a path within the program, kind of like a minor of some sort? I really would have liked to have obtained a business minor when I was there, but it wasn't an option at the time. Later on, I hired a graduate of the program who was able to obtain that minor. I know things change, and I know that President Banks has been very successful in helping engineering students complete their degrees, more so than people in her previous roles had done. I often wonder if she had been at the helm of the engineering department when I went through A&M if I would have been able to complete my original plan on becoming a Civil Engineer. I was discouraged by my departmental counselor at the time and changed my degree to Construction Science in the middle of my Sophomore year. He told me that, "Some women were made to bake cookies, and some were meant to be engineers." I encountered a couple women throughout my career who also had this same advisor and received the same message. It is refreshing that this mentality is no longer tolerated at the university! My concern would also be for the students who have already begun their Freshman year at the University or within the University system (ie: TAMU Corpus Christi) who were working toward a certain GPA to get into the program if that requirement would be raised in the midst of their efforts which might seem unfair if the bar was changed in the midst of this. Engineering is challenging to a level beyond Construction Science. I hope this degree is still obtainable and a safety net per se for the kids that might not be able to be at Engineering caliber, but still are decent students and have potential to contribute to society at TAMU Construction Science graduates in the future. I might not be able to rightly call myself an Aggie Engineer today. I leave that title to those who cut the mustard, but I have no shame calling my self an Aggie Constructor, and proudly wear my Aggie gold. I know I still have a lot to achieve with my degree, but I hope that if you do change the program, that it doesn't become so elite that a student similar to myself wouldn't be given the opportunity to experience this program. I think that Engineering is the way to go with this degree from my experience, but it definitely shouldn't have an exclusive GPA to get into the program. While the structures classes are rigorous, it definitely doesn't have the math and science components that the other engineering degrees require, and it doesn't need to. I got what I needed to be able to do what I needed to do from the program. Scheduling and cost control courses have been key to my career in project controls. Best Regards, [REDACTED]

---

None

Was difficult to know what collaboration are going on. My son who is now a sophomore has barely stepped out his dorm room due to covid. So this question is vague and inappropriate

Rec #2 - More focus is needed on student retention and successful completion of coursework. Students of lower income (many in underrepresented groups) are at a massive disadvantage in not being able to pay for the outside tutoring services that are required to complete first and second year coursework at a high GPA. A comparison of GPAs for those who avail themselves of on campus tutoring versus off campus tutoring would prove the point of the discrepancy that exists in the "free" tutoring, supplemental instruction and math/science peer support that is included with the University Advancement fees. There's a reason why there is a 50% dropout rate of biology majors and why there are substantially fewer minorities graduating with BIMS degrees. Take a look at the demographics of the University Studies degrees to see where the underrepresented students are pushed. Rec #4 - this is frivolous. If faculty is not interested in B/CS, let them go to another university. A cultural center/museum/performing arts center will do NOTHING to improve the quality of academic life for students (who are paying the bill for these items and for the salaries of sub-standard professors/teaching staff).

Every organization needs to have all supporting organizations supporting the mission and message of the parent organization. This applies across the campus. Anything that attracts faculty and new business to the community needs to be explored.

Academic Affairs As stated previously, I am concerned about the responsibilities that the Provost would have regarding Academic Affairs. I would not want this position as outlined because it is smaller in scope, the problems are ones that often begin long before the university sees a student, and the ability to solve such problems are limited as currently existing in our society. Our Provost, Tim Scott, is fabulous. I would want to change the recommendations of the organization as provided by the consultant before assuming this position. One last item, the objectives of academic affairs should be clearly stated and be consistent with the goal of the university being successful financially and in producing the student A & M defines as a true benefit to the society of Texas, the USA, and the world. We stated the core values he must matriculate, and we stated the student must be able to have a successful return on his college investment with respect to his job and lifetime earnings. The student graduating from A & M must make a positive difference in our world and our society, and for his family and his friends. Academic Affairs must be a positive influence in supporting the student in achieving these goals. On academic and strategic collaboration: On finding number two in the first paragraph, the A&M presence of stating only the states in the Southeastern conference, all 254 Texas counties, and neighboring states is very limited and wrong. It should be to recruit students throughout the entire United States, focusing on Texas, but bringing students in from other states and cultures, as well as recruiting global students, both in undergraduate and graduate school. When they talk about undergraduate students and say the A & M undergraduate student body is not representative of the state's diverse demographics in Texas, the consultant is stepping into an area where A & M excels versus all other schools, and indicates the consultant has not studied his subject matter. Defining number two and the recommendation is poorly analyzed by the consultant. For example, the College of Engineering is number two in women in the College of Engineering student population and we are number two in Hispanics of all engineering colleges in the United States. The only reason we are behind in Hispanics is because Arizona State has more online Hispanics enrolled, but not actually physically attending on campus. As I state later in the summaries, the problem of achieving the percentages of first generation and different sexes and races is related to identifying the real source of the problem. The source of the problem starts in preschool, and then continues kindergarten through sixth grade, middle school, and high school. That is where the problem originates and where one must take steps to correct the problem, at the source. No one ever solves a problem by attacking from the rear. For A & M's College of Engineering to be ranked at the very top for the entire the United States as well as Texas as stated above, and yet the consultant to state the negative statement about A & M as it did, one could conclude that all universities, especially those that have College of Engineering, are all worse than A&M (yet keep in mind that Prairie View A & M is not included in this analysis and yet is 98% black in Engineering and part of the A & M system. This is not an intelligible comment made by the consultant and much of their finding on number two and recommendation is very misstated and represented. We are very proud of the diversity we have achieved at A&M and we will continue to do even better in recruiting to achieve a diverse population in sexes, and race, at Texas A&M as we have in the past. The consultant has not identified the problem. They need to approach it as we do as engineers. What's the given, the required, and what is the solution. You do not solve the solution downstream from where the problem occurs. You must solve it at the source. I believe in finding number four there are many ways to have social activities for the family and children. The idea of cultural centers, museum of our history, are not the sole the answer, but they provide more activities and the

Bush Presidential Library is an excellent example of a major cultural center in CS Bryan that few universities or communities have that was not mentioned. I believe other ideas that would help in the community would be giving athletic tickets to the community such as our soccer team, volleyball team, golf tournaments, track meets, football games, basketball games, etc. We do not have a full attendance at many of our sports, with the exception of football, so there are many tickets to give away. We can do more to give them opportunities there. We have many activities on campus that students and parents alike can attend such as hack a thons, robotics, introduction to Engineering, science, etc. There are many university activities at A & M that high school students and parents could attend and enjoy. We can also recommend selfless service organizations and activities like the big event where we outfit containers for dentist and doctors' offices to send to the islands of the Caribbean and Central America. There are many interactive and selfless service activities at A&M where the local community could participate. I do not understand why the VP of Diversity is shown as a straight line reporting to VP of Academic and Strategic Collaboration. Diversity is not a one person job or one man team. Diversity is a total education and experience activity that must take place in the entire A & M community. A & M needs to be involved in recruiting and organizations like our foundation, working with many large school districts in Texas, and in outreach programs designed to help teach students and let them know about A&M. This can be achieved can be done through the education department, though the engineering department, and other A & M depts etc. all working together. I believe that a single individual, VP of Diversity, shown isolated in this organization chart, is not best organization chart. It shows no responsibility except for themselves reporting directly to the VP of Academic Strategic.

---

I would agree with the creation of a new VP for Academic and Strategic Collaborations, especially if this office not only enhances the original function of TAMU's land-grant status, but also strengthens its sea-grant and space-grant designations to improve State of Texas. We must remember that TAMU was originally developed to serve citizens of the State of Texas.

---

We need to look cautiously at how we proceed in our diversity efforts (this is coming from a minority). I do not want to see TAMU aligned with our government and mainstream american culture in how we view diversity efforts. The mainstream ideas coming from Critical Social Justice directly conflict with our nation's success through capitalism and freedom - the primary reason why people love living here and move here from around the globe. It is good to have diversity and to pursue it, but to push ideas of victim-hood, white privilege/superiority based solely on race is wrong. There are many people from TAMU that come in as first generation and they have many cultures/backgrounds/upbringing experiences. Rather than having a focus solely on race, I think we also need to look at financial standing of families, first gen families, and those students who do not have strong family roots and come in on their own.

---

No discussion of International or globalizing Texas A&M which has been a top priority of the university. Went from having a Chief International Officer in the Provost Office to a new and undefined International Programs office

---

Recommendation #1: Continue to incorporate other campus units that fit the mission of Academic and Strategic Collaborations. Agree with the recent additions to this newly established office. I agree with adding the suggested groups to this office for community outreach and relationships. I would encourage the reduction in the overlapping positions of Diversity and Inclusion that are spread across departments. Fewer positions centralized to this area would create focus on recruitment of a diverse student body and not on new ways to segregate students. Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students If this office is created, prospective students should be recruited for their potential academic success and their desire to embrace the core values of the University. Outreach across diverse communities should be encouraged, but no student should be admitted based on their race, gender, or any other factors beyond merit to succeed at A&M. There is no need to increase overall student applications; that does not appear to be a problem at A&M. Recommendation #3: Sunset community-focused programs that do not adequately serve the needs of the community and establish new programs to best support the shared mission of TAMU and the state of Texas Agree that programs not serving their purpose are eliminated, but concerned about any new programs that would reduce focus on student learning. With a powerful Association of Former Students focused on scholarships, outreach to former students by this Office for any purpose other than recruitment of potential students is a low priority at this time. Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens Disagree with the need for additional centers; we currently have Rudder Tower and the MSC for performances and an amazing TAMU Gardens. There are other more important priorities to focus on.

All of the recommendations made in this section make sense, and I believe would bolster outreach and retention which are critically important.

TAMU is late in addressing the issue of veterinarians for rural areas. Texas Tech is opening a new veterinarian school that addresses the issue. TAMU has been in a position to address the issue and solve the problem for many decades. However, it has had tunnel vision focusing on the urban small animal practice and ignoring the large animal practice.

In my opinion, this is the most squishy section of the entire report. It seems more aspirational than implementational about how reorganization and new offices and structures within the university will actually enhance the profile of the school with the community. For all of the recommendations, I would put a performing arts center, a museum and hospitality center at the bottom of our priorities. However, recommendation #2 resonates with me. We are not fully meeting our land grant mission. For a number of years, I have been concerned with and a better result in our minority recruitment efforts. I wholeheartedly support a proposal for an office that will focus more effectively on the issue and be accountable to the president and the regents. Whatever the structure the real underlying problem needs to be addressed: scholarships. So many bright minority kids desire to come to A&M, get the education and ring, and take advantage of the Aggie network after graduation. But schools across the country give them more complete financial packages and effectively take them away from us. If you have the university commit even more money than what has been proposed in the past two years, the office you desire to create will succeed.

I'm not sure OPAS needs to be moved. I agree minority students should be recruited, but the size of the student population has grown so big that many minority, low-income, and first generation students are intimidated to attend TAMU. They will often choose to attend smaller colleges close to home. Perhaps recruitment should also focus on junior college transfers. I am absolutely against quotas, which would violate the intent of the Top 10% rule, which already limits many private school students from attending. TAMU should focus on education, not parks and museums. These could certainly be town & gown partnerships.

No opinion

Regarding Finding #1: Community Outreach programs is not why A&M exists. This smells like more empire building  
Regarding Finding #2: A&M is already one of the more diverse universities in the nation. it is not the responsibility of TAMU to ensure student demographics are achieved. This track follows the failures of other institutions where we would create degree programs for which no jobs exist, lower the intellectual level of the student body (thereby cheapening the A&M degree value) and worst of all, saddle minority students with heavy student loan debt after achieving degrees with absolutely no value. The gender studies programs that could only be used in Afghanistan comes to mind. That ship has sailed as I recall???  
Regarding Finding #3 & #4: We don't need this and/or it is not A&M's job to do any of this. A&M is already well known. It was famous in the wilds of East Texas in the '60's when I grew up and it drew me in. Communications have improved since then. This is more empire building.

I am a former student with a Bachelors, Masters and PhD all from Texas A&M. I began my association with the Texas A&M University Archives in 1972 as a Graduate Assistant then rose through the ranks to become [REDACTED]  
[REDACTED] I retired as a Professor Emeritus in 2011. The proposed placement of the Cushing Memorial Library under the Vice President for Academic and Strategic Collaborations is a mistake. The Cushing Library is not a museum. It has a few museum items that are typical of donated papers or related to special collections. These are used to help illustrate the various collections. The Cushing Library is a research library that has nearly 340,000 volumes of historical and scientific materials. It also has over 18,000 linear feet of manuscripts. These holdings have been used for over fifty years by researchers to write many books and by countless students for dissertations, theses, and term papers. It has also been an important part of multiple scientific studies. The photographic collection has illustrated numerous books, articles and newspapers. The Cushing Library is a priceless research resource. As depicted in the MGT Consulting Comprehensive Review Final Report, the proposed action of placing the Cushing Library under the direction of the VP of Academic & Strategic Collaborations along with other "enriching and community units" is a travesty! It shows nothing more than a "drive by" observation of what the Cushing Memorial Library is. Again, the Cushing Memorial Library is not a museum. It should remain an integral part of the University Libraries.

I am a former non-traditional student having finished my college degree at Texas A&M many years after I started college. I am also a retired staff member, having worked for A&M for a little over 11 years. I now serve on the board of the Friends of the Texas A&M Libraries because libraries are a passion of mine. With regard to Finding #4/Recommendation#4 in this section, the determination that the Cushing Memorial Library and Archives is merely a museum and thus should be aligned with OPAS, the art galleries, music activities, the Becky Gates Children's Center, and

other "enriching campus and community units," indicates to me that the team reviewing Cushing did not take the time to find out what that library is all about. The Cushing Memorial Library does indeed produce exhibits related to various topics and themes, but the library also houses many special collections, priceless historical materials, thousands of feet of research documents, and, in my opinion, the finest fully restored reading room in the country. To relegate this gem of a library to museum status means having a static items on display with perhaps visiting exhibits, thus destroying the other features that serve the university, surrounding community and the entire state.

---

See below.

Dear leaders, Thanks to you for pushing the MGT Consulting Group report out. We will try to minimize the prose in our review and response. First, our careers required management and supervision of personnel. We never practiced the silo method of management but found cross communication as well as upward communication were the effective tools for superior performance. Team work is when the whole team works together. That being said, we strongly recommend communication among colleges at the university level. Each college can bring added value to other colleges. Faculty can come to understand and appreciate disciplines other than their own. The bonus! No intellectual erosion needed! Lifelong learning critical! It reminds us of how difficult the charge of uprooting place bound students to get them to higher ed! I always used the carrot approach which works for all ages. Travel! Now I have some great ideas for this one!!!! Secondly, we do believe the integration of disciplines is critical; we, however, are not convinced that colleges should be combined. Would the result lead to empowerment or erosion of one or the other. Next, Government Relations! No federal focus? The right team on K Street in DC is critical! Creating beauty and the best takes money. JOURNALISM! Mirror UT and Northwestern! Pick their brains and systems. No institution can exist without journalism, theatre, performing arts, art, music...the arts separate man from beast. Re the workforce in BCS, the Austin Chamber of Commerce under the leadership of former Executive Director for Development and Education (Drew Scheberle) made huge inroads with Central Texas districts to train up the workforce for employability. Partnerships with districts! The system was linked with direct to college enrollment. Drew is now in the DFW but is a hell of a talent. On LinkedIn! Almost forgot! David Schwartz '72 knows exactly how Drew worked it! BTW, if a free training/retreat locale is in the CEHD or any other college, Mike and I highly recommend the H-E-B Retreat at Leakey, Texas on the Frio River. On the web! No cell service! No distractions! Focus! Great facilities in a natural setting in a beautiful part of the world! In closing, build the Kennedy Center for Performing Arts in College Station! Build it, and they will come! Then the airlines will be begging for runways! Respectfully, [REDACTED]

---

a. Recommendation #1: Continue to incorporate other campus units that fit the mission of Academic and Strategic Collaborations. i. Finding 1: Conditionally agree. Consolidating organizational entities which perform similar functions is usually a good idea, and I agree that it is so in this case. However, MGT talks "Bryan/College Station" as the target audience, then shifts to international students in the same paragraph. Which is it? Are you consolidating functions or muddying the waters? As described in this Finding, this office is essentially a marketing organization with management responsibilities. Will it also be responsible for securing "strategic collaborations" such as the recent one concluded with the Army Futures Command? Streamlining or muddying? b. Recommendation #2: Create an Office Focused on Improving Recruitment and Retention of Undergraduate Students i. Finding 2: Disagree. Enrolling students based upon their ethnicity, economic status, sexual orientation, or ANY criterion other than academic merit and desire to attend Texas A&M goes counter to common sense and civil rights. c. Recommendation #3: Sunset community-focused programs that do not adequately serve the needs of the community and establish new programs to best support the shared mission of TAMU and the state of Texas i. Finding 3: Conditionally agree, as long as we focus on recruiting "the best and brightest" rather than the "most diverse" and control spending. d. Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens i. Finding 4: It is not TAMU's job to establish such centers. While they are "nice to have", the return on investment would be difficult to measure and, I suspect, negligible if not negative

---

I support increasing efforts to recruit from all across Texas and to have a University that is open and welcoming to any student from any part of Texas. But simply looking at the overall diversity of the State and comparing it against the diversity of A&M is overly simplistic. 1) To know where A&M is missing out on recruiting outstanding diverse students, you have to look first at the pool of college ready diverse students - not the population of the State overall. How does A&M's student body compare to the diversity of the pool of college-ready diverse students? This information is important because it determines whether A&M is missing or not appealing to diverse students who would benefit from attending A&M or whether the problem is with needing more diverse college-ready diverse students. A&M can help

with either problem, but knowing what to do will depend on why the gap exists. 2) The data in the report contains diversity statistics for A&M's student body overall, but if a large proportion of the students counted among A&M's diverse population are international students and not from Texas, the problem of recruiting diverse students from across Texas may be much bigger than it appears now. 3) I support Recommendation #2. As part of the analysis on how to improve diverse attendance at A&M, it will be important to know why college-ready diverse students are choosing to attend other universities. I am aware anecdotally of good students who wanted to attend A&M, but did not qualify under the top 10% rule and ended up going to places like Oklahoma, Alabama, Arkansas because they were quickly admitted and offered scholarships. Some eventually got into A&M Main Campus, but after they'd already gone fairly far down the road with another school and others were initially admitted to other campuses but not Main Campus and didn't want to wait around to see if they could get in to Main. We need to identify, recruit, and communicate with top diverse student targets relentlessly and make them feel wanted at A&M. Much like many schools have "signing day" for non-athletes, a recruiting program that incorporates many elements of what the athletic department does is key. 4) And then for other students, Main Campus freshman year may not be the only (or even best) option. Attending Texas A&M Galveston can be a fabulous experience. Blinn Team is a good bridge for some students. Having an admissions program that really works with diverse students to help them understand the options and figure out the options and best fit to prepare them for success at A&M is a key part of increasing the diversity of A&M. On Recommendation #4, a performing arts center would be a great addition to the community. I'm not sure how useful a natural history museum would really be, particularly as a single-function building. (But maybe there could be a way to turn the whole campus into some form of a "living natural history museum" with audio guides or an app so residents and visitors can experience the area more deeply. I'm not sure what functions a hospitality center is supposed to provide - the Alumni Center and MSC are the key hubs on campus that I view as providing those functions. These are already highly visible institutions. To the extent that something else is needed, I would suggest either leveraging these resources or adding to them. I'm also not sure what more we need in the way of gardens. We already have The Gardens and the new Spence Park (sorry - not calling it Aggie Park, no one knows where that is). Instead of reinventing the wheel on some and adding duplicative gardens, perhaps more needs to be done to draw the community to what we have and to develop programming to engage the community in them.

---

The proposed Academic & Strategic Collaborations Organizational chart recommends placing the Cushing Libraries in an "Enriching Campus and Community Units". While Cushing does contain museum items, it has thousands of feet of rare books and is a research library that should remain under the university library.

---

Education department's Aggie Term program is very impressive. The problem: one member of education dept staff was extremely late and disorganized in sharing the program requirements in Nov 2021, so my student daughter is scrambling to get all done by Dec 2021 in order to qualify. This staff member needs to be more diligent. SUPPORT the students and share your dept program requirements at the beginning of the semester! Dept controls the info, it's your program. Other staff members shared it to their students properly. I pay you big bucks - please provide customer service.

---

The changes to the different colleges seems sensible. We remember when offering Journalism classes was a 'big' deal. I wouldn't be so concerned that students change their majors. How many of us really knew what we wanted to do for the rest of our lives when we were 18?

---

STEM and Liberal Arts at Texas A&M need to continue to structure their programs around the traditions and culture of TAMU but they need to remain separate colleges. If Liberal Arts is required to collaborate with STEM, LA will lose the identity that makes it different than STEM. It also sends a message to former and incoming students, as well as faculty, that LA is not as important as STEM. The Arts need to be protected because an academic world without art is a cold, calculated, and non-creative one.

---

The words academic and strategic collaboration is the definition of a team profession

---

Why are we "reimagining the mission"? Our mission is as a land grant college. It is not social engineering. Still too much emphasis on diversity. It will be difficult to attract students from "every county in the state" when the state is so large and spread out. That is not realistic. Currently A&M strives to provide a significant number if not almost all of their scholarships to working class first generation students. That is extremely encouraging in recruiting a diverse student population. A&M already provides a number of both cultural and athletic activities that attract a large number of retirees to the Bryan/College Station area and make it an attractive place to live. But the school's job is to educate students...not provide facilities that the local tax base has no desire to fund. Often those who struggle to form social connections are partly to blame. There are thousands of opportunities in the local community to connect to others in,

from volunteer opportunities, churches, neighborhood organizations, etc. They should be encouraged to participate in those organizations.

If recruitment, including support for Prospective Student Centers is in organizational roll-up, it is critical that the PSC are better supported if we are improve in our pursuit of diverse student reflective of our state. The PSC's as of late have been languishing due to limited funding, an aging staff and/or high turnover. These are often the "face" of Aggieland in markets that may not have the mobility to visit College Station - in areas full of diverse students. Limited funding will hamstring PSCs from fully taking advantage of TAMU's biggest asset - our former students - who would happily volunteer and help if needed.

☐ Cushing Memorial Library & Archives: Special Collections Library and University Archives. Cushing Library is not only a museum of archives. Cushing functionally supports the academic excellence of our students and the research needs of our faculty along with the Sterling C. Evans Library and shares resources.

Must consolidate and centralize in order to become more efficient and to overcome the multiple units doing the same job for the different units.

[REDACTED]. In 1989 I earned my Bachelor of Science degree in Building Construction and in 2002 I earned my Master of Science degree in Construction Management. I have worked in the commercial construction and industrial construction markets both domestically and internationally. I firmly believe that it was my education at Texas A&M University that gave me the opportunities and firm foundation that allowed me to build my career. The idea of the Construction Department being under the College of Engineering has been around at least since 1988 and possibly longer. Although there are merits to the idea of having the program under the College of Engineering there are drawbacks as well. I am deeply concerned for both the future students and the Construction department if the move to the College of Engineering is implemented. The College of Engineering is well respected in the academic and professional circles. The Department of Construction Science, however, is far and away the most respected construction academic program in the State of Texas and one of the top tier if not the premier program in the nation. There are many reasons that the Texas A&M Construction Science is set apart from its peers including its student base, focus on construction rather than design, broad spectrum of classes rather a focus on a single discipline and its strong relationship with architectural design. The students that choose to pursue Construction Science are not of the same mindset as those that enroll in Engineering. Construction majors are builders that want to be involved in the field, in the daily interaction with subcontractors and trades people. Although they will work with designers to overcome challenges, they do not want to be designers. They are enthusiastic about seeing the projects come out of the ground and materialize into physical reality from 2D and 3D designs. Engineering students have similar passions but tend to be focused on the design itself and finding the best materials and optimizing the design rather than the construction process. The level of detail in math and science are not the same for builders and engineers. The focus on communications, legal knowledge of contracts and labor law and cross disciplinary training in design aspects are all different. The academic focus of these disciplines is different for a reason and the transition of the Department of Construction Science into the College of Engineering has the significant risk of 'standardizing' the curriculum and forcing Construction Science majors to seek other degrees to avoid the intensive math and science for engineering majors that they will never use in their chosen profession. Likewise, they may be unable to select enough contracts and labor law classes to given them the strong background necessary for working with construction contractors. Lastly, the movement of the construction degree into civil engineering would likely focus the degree on civil and structural engineering and leave out the wide breadth of knowledge required in mechanical, heating ventilation and air conditioning, plumbing and electrical building systems that are just as necessary as civil and structural design for construction majors. Although there are certainly merits to the movement of the Department of Construction Science into engineering for efficiency reasons, I believe firmly the move would hurt both students that do not want to pursue and engineering degree in order to become a builder and it would weaken the construction industry as it would lose the best source of well trained and well-rounded construction graduates.

Recognize, build, and consolidate (under a single office) the various leadership programs such as the Hollingsworth Center for Ethical Leadership (the Corps?) and the Public Service Leadership Program (the Bush?). I think there may be a few other leadership programs at various levels of maturity. I recommend a common Aggie message on leadership, a reduction of redundant leadership programs, "cross pollination" between mature programs, and an eye to growing comprehensive leadership studies.

---

Mostly agree with recommendations

---

PLEASE PLEASE PLEASE PLEASE PLEASE PLEASE keep A&M a CONSERVATIVE school!! Texans need to have that as a choice for their children. There are plenty of other choices if you want a liberal school. PLEASE keep the A&M conservative values in place. This DOES mean that all are welcome; no one is excluded AND A&M keeps the conservative values. My husband and I are Aggies ('91 and '92) and have FIVE A&M Students ( '18, '19, '21, '23, '23) and we are so very sad to see the crumbling of A&M conservative values in recent years. We have raised them to know that ALL AGGIES are valuable and ALL AGGIES are important and you treat ALL AGGIES with kindness and respect. And yet the divisiveness brought by some groups is ridiculously allowed by A&M. The loud, over-the-top, intrusive, disruptive cheering nonsense that is allowed at graduations needs to stop. Parents are prevented from hearing THEIR OWN CHILD'S NAME called because of it. They really have earned that small right to hear their own child's name announced as they cross the graduation stage. Please impose a HEFTY fine on anyone who prevents others from hearing their own child's name called, AND ENFORCE IT. We have even seen parents miss the view of their child crossing the stage because these selfish individuals are dancing and jumping right in front of them. Heartbreaking and WRONG. PLEASE get rid of Alvord and all he stands for. PLEASE look carefully at what Fish Camp counselors are teaching.... Fish Camp grew worse and worse through all our five children's attendance there, and was an unmitigated disaster for our youngest two. If we had more children to go to A&M, Fish Camp would no longer be a part of their experience, sadly. In fact, we wish we could say we still recommend A&M to others when they ask us how our experiences have been with our children there since 2014, when our first went with hope and enthusiasm to A&M. Let's suffice it to say that we are watching carefully and praying that the A&M we know and love will return.

---

There needs to be more conversation in regards to the graduate students. As a former Aggie those resources that undergraduates have is nothing compared to the graduate departments. These students need those same resources and nothing in this report touched on the importance of these students and their academic career.

---

Please see General Feedback

---

RE: Office focused on Improving Recruitment and Retention of Undergraduates I believe this to be critical to the future success of TAMU! However, one major challenge is the "top 10% admittance" requirement imposed by the State of Texas on public institutions. If this office is created, perhaps one of their primary focus areas should be understanding the impact of this state requirement and, perhaps, requesting an exception to lower that number in order to accommodate the goals of the university (similar to UT, who has received this exception for years). RE: Invest in cultural centers This should have been done years (decades?) ago...

---

The idea of centralizing academic advising is a bad one. Advisors need to be within departments. Advisors need to know a department; not a class catalog.

---

Consolidation the externally-focused, partnerships with State and community and those university units who do this makes sense. Cushing Library & Archives, however, is much more than a museum. Yes it holds many of TAMU's precious books and artifacts, and I believe sharing these treasures outside of TAMU is needed. However, the core competencies that Cushing provides are 1) the use of these artifacts in educational study across all TAMU college units and 2) the facilities and knowledge to maintain and protect the treasures and to teach/collaborate with other college units to maintain their collections. There is strong staffing and orientation integration with the Evans Library which will be lost with a separate management structure for Cushing.

---

Arts and science makes sense. Not sure on the visual arts reorganization. I see it in engineering, architecture, and business to promote what the firm does, however I am not sure about dance and performance in a land grant school that is heavy in STEM.

---

One of the main reasons I wanted to provide my feedback is to address the lack of diversity at A&M. I think this is one of the few areas where we as a university fail. I think more engagement with the local community, as well as the state as a

whole, is necessary to facilitate growth of a diverse student body and faculty. Recommendation #4 of this section particularly stood out to me. I have been to other universities in other states and this is one area where A&M is severely lacking. It seems like only football and the Corps are our culture. I don't have a problem with either but I feel it's a hinderance to not invest in other forms of culture. There's no reason we cannot have a state-of-the-art museum of history, art museum, performing arts center, and more. At other universities, these institutions are a driver of community engagement and university recruitment. I would love to see this as a point of focus in the future.

---

It appears one of the main theme's in this area is to better match our diversity with the changing demographics of Texas and make more of a focus on recruiting in underserved communities. Diversity is important but it shouldn't be done at the expense of lower standards to enroll at A&M or just to meet an ineffective quota. All recruits should meet the same criteria to be accepted into Texas A&M. Furthermore, education should not be taught that encourages separating or dividing students by race, gender, or ethnicity. We learn more together than apart. Regarding the proposed org chart, why is the Diversity Leader a VP when all others under the VP Academic & Strategic Collaborations are an Assoc. VP or Senior Assoc. VP?

---

Would definitely be glad to see an improved focus on university and community interaction. As one of the largest employers in the state, the university should take an active role in providing positive images, facilities, programs and benefits to the social fabric of the local community. Recommendations presented here of improving recruitment and retention of undergraduate students in addition to investing in cultural centers are excellent. While natural history museums can easily be filled by university programs, an Aggie museum would showcase in one building all and varied aspects of the university and could be used for recruitment, group activities, educational pursuits, gameday activities and exhibits from around the world.

---

None

---

No specific comments.

---

Finding #1 - Okay, however, "community outreach programs " and the like is NOT why TAMU exists. All of this effort should be WAY down on the priority list. Please do not let this office beat their chests too demonstratively. Finding #2 - I completely disagree with the need for this finding. It is NOT the responsibility of TAMU to make sure these student demographics are achieved. In my opinion, too much of this practice, such as creating degree programs that lead to no jobs in the real world, will water down the intellectual level of the student body and cheapen the value of a Texas A&M Degree. Finding #3 - Okay, but do not let the \$\$ and self-aggrandizing for this get out of hand. Finding #4 - NOT TAMU'S JOB TO DO ANY OF THIS.

---

An office of Academic and Strategic Collaborations would be welcomed, although the scope seems to be rather broad. We do need to promote community involvement both to let the communities know what TAMU is able to provide in terms of graduates and services and to be fully informed of what the communities of Texas need from TAMU. One of the major challenges that TAMU has continued to struggle with is student body diversity which can be addressed through Recruitment and Retention. While the school seems to be making progress with Hispanic students, there are issues with traditional Hispanic families being wary of sending students to a location as far away as College Station, particularly in the case of women. It seems appropriate to assure prospective students that we are willing and able to provide the necessary support to prospective students. In the case of Black students the existing enrollment level does not provide an environment in which there is a sense of community. In many classrooms it is not uncommon to have one or less Black students. We are likely to continue to meet headwinds until such time that we are able to come closer to the statewide population of such students. Perhaps it would be appropriate to create a collaboration with Prairie View A&M to provide opportunities for transfers to TAMU to promote degrees that may not be fully served at Prairie View or other traditionally predominately Black colleges in Texas. I am also aware of limited situations in which students struggle financially resulting in impaired academic performance and drop-outs. It may be possible to create specific minority based financial opportunities. A new performing arts center would be welcomed as well as (potentially) a museum. However, funding for either such facility may be difficult to obtain. In the case of a museum of natural history, I have long been associated with the Houston Museum of Natural Science and would be willing to attempt to facilitate a collaboration in the event that TAMU is interested in such an endeavor.

---

Approve these changes.

---

Na

I think the recommendations offered in the report make sense for this as well. Recruitment should focus intentionally on the best chances at a diverse student body. Additionally, however, TAMU should think about implementing some caps on the size of incoming classes, perhaps by negotiating with the state on automatic admissions standards so that they have room to decide admissions for more students based on more than their place in their graduating class. The BCS and the campus cannot sustain the constant growth, and top 10% rules leave little room for intentional growth. Creating gathering places, including arts centers, is a great idea! Major universities in other states have these things and they only serve to enhance their communities as well as tourism.

Renewed focus on student success is a win. Changing majors is ridiculously cumbersome. Academic counselors are not all created equal. Why do we think 18/19 year olds know their career path?

I support greater emphasis on campus and community engagement and the overall recommendations.

None

You mention retention of Undergraduates, but there are no action items describing how you will do that. It just talks about finding more diverse undergrads.

The suggestion to move ARCO and VISUALIZATION out of the College of Architecture is a setback "to the way it was" of more than 50 years. The built environment is made up of many facets and Design/Landscape/and Construction was the genesis of the present College of Architecture ever since the move from the 4th Floor of the Academic Building to the current site of buildings. The profession of Architecture has changed drastically from the days of a stubby pencil and blank paper on a drawing board. Today's designs prepared for construction are all done in CAD - computer aided design - thus the formation of the Visualization program which is Computer Aided Design on steroids. Even the profession of Architecture has bridged the used to be chasm from Working Drawings and Bid Documents by inserting a piece called "construction management" which really is to provide a watchdog on going over budget and requires the oversight of design through construction. To separate these fields into separate colleges defeats the purpose of teamwork and oversight. In addition, the current trend to "fast track" design-construction makes the two disciplines even more needed to team and work together. While there may be some ARCO focused people who want to obtain a PE, it has been my considerable experience that even with a construction background the road to a real honest to goodness recognized "profession" is still getting a license in Architecture. The same might be said of Visualization as every firm now bases it's drawings and drawing files on computer aided design. Every young intern starts in an Architecture firm on the bottom step of the licensing ladder - which requires CAD skills or that person will never advance toward licensing. As it happens, I personally have an ARCO BS degree and a Master of Architecture and am licensed in Texas #5862 and the NCARB 21,115 and in addition am a licensed Hospital Administrator because the design field of "HEALTHCARE" is my specialty. Granted there may be some in VISUALIZATION that choose to be in Performing Arts - and if so, let them choose that as a focus of interest as they started thinking they wanted to be Architects in the beginning.

Could be beneficial.

As a graduate of the Construction Science program I have concern about moving the program to the College of Engineering. The College of Engineering is focused on the "design" of structures. The graduates of these programs offer their talent to the world by creating the blueprint for how structures are built. The Construction Science students take this blueprint and construct it. Although these processes transition from one to the next; the type of mindset to create each is vastly different. My concern is too much of the theoretical math from the College of Engineering will intrude and limit the ability to teach the process of what it takes to actually build these structures. As a first generation college student I went to Texas A&M as a Civil Engineering major. I never really found my path. Civil Engineering was the closest thing I knew of to what I wanted to pursue as a career. Once I heard of Construction Science it was like a whole new door opened that allowed me to flourish. My grades went through the roof, my career has been amazing and I owe it all to my time in the Construction Science department. My oldest son is set to graduate in May of 2022 in Construction Science. Please continue to let the program evolve and grow but do not change it from it's core principle of focusing on the management process of construction. [REDACTED]

I agree that TAMU, a land grant institution, must serve in the best interest of Texas and Texans, not just focus on its own benefit. Enhancing communities where it has a presence will also raise incentives to aid recruiting and retaining top faculty and staff.

Texas A&M should promote its programs to attract students representing all Texans. The goal should be to make more

students across Texas aware of the educational opportunities and to provide information on how to gain admission and finance their education. Prospective students need to select an institution which fits their goals and in which they feel camaraderie with the community to be successful. If these criteria are met, Texas A&M should not overly worry if the student body does not exactly match the ethnic make-up of the state as factors such as students wanting to remain in their home communities are outside of the university's control.

---

I like the plan to refocus and enhance operations

---

The Journalism degree should be kept under the department of communications as the two disciplines provide complimentary instruction for students wishing to pursue promising careers in media, advocacy, public service, and corporate affairs. I fear the lack of a focused journalism degree will diminish opportunities for students wishing to pursue such a major at TAMU and look to other schools such as UT or UH that have dedicated journalism programs. I minored in journalism and went on to attend the Bush School where I graduated in June of this year. I find my journalism background very helpful in my career as a Public Policy consultant where I worked with tech firms such as Salesforce, AWS, and AT&T to build out their government affairs framework. The practitioners, professors, and administration within the communications department are well-versed in curriculum related to media, communications, and journalism and, I believe, the best to be teaching the subject at this university. Please keep the journalism degree under the department of communications so students can receive the top-tier instruction needed to pursue the career of their dreams.

---

I want to see stronger collaboration with Prairie View A&M University in all genres for students of color inclusion.

---

Collaboration and communication is key to success.

---

Architecture and Planning and Design of the Built Environment are Increasingly Collaborative (Planning, Visualization, Building Architecture, Landscape Architecture, and Building Construction) and if anything Visualization and 3D Design need to be reinforced and eroded by removing visualization and putting it into a Performing Arts school - it is a technical profession.

---

The continuation of a misguided diversity agenda. Please see other comments above. This following position is an issue: "The pool of applicants for undergraduate students is currently not representative of the state's diverse demographics. Texas is the second-most diverse state across a variety of metrics and fourth-most culturally diverse. Texas is 12.9 percent Black or African American, but TAMU's Black or African American student population is only 3.7 percent. Likewise, 39.7 percent of Texans are Hispanic or Latino, but only 24.9 percent of TAMU students are Hispanic or Latino. The university's land-grant mission is to serve all Texans and providing opportunity and access to working-class families and first-generation students is essential to fulfilling that mission."

---

Finding #2 in this section is merely another installment of the same misaligned priorities that I have commented on in other sections. It is an embarrassment that the authors are so brazen in their attempts to argue for demographic parity between the general population and the student population at Texas A&M. No intelligent person could argue that different people (and different groups) can display different preferences; a school, its culture, its educational offerings, its location, and any other number of components may appeal to particular people and deter others. That in-and-of itself is not a negative, and for the authors of this report to assume that a difference in the racial makeup of Texas A&M's student body as compared to the general population is something that must be 'fixed' is an affront to the mission of the school. Texas A&M should pursue the best and the brightest individuals as potential students (regardless of their race), hold them all to the same standards in terms of admittance & matriculation, and serve as a shining example of what can be accomplished when a university truly lives out the credo of color-blindness. Finding #3 and its associated Recommendation & Rationale are so non-specific and nebulous as to be impossible to take definitive action on. My impression is that this is a roundabout way to increase A&M's community involvement in areas outside of the Bryan/College Station region. While well-meaning and worthy of consideration, Texas A&M already provides incalculable benefits for innumerable communities by doing what it does best: producing highly educated citizens of outstanding character who (eventually) leave College Station to improve other communities on their own. To add additional responsibility on the part of Texas A&M to take direct action in the affairs of far-off communities would be short-sighted, draining valuable resources from the university and adding additional layers of institutional bureaucracy, the same type that the report's authors seek to minimize with their extensive reorganization of the Provost Office. As relates to Finding #4 and its associated Recommendation & Rationale, the author of this report apparently values different missions from those that have traditionally been A&M's strong suit. Texas A&M University is not a performance arts

school: we focus on real, tangible, concrete issues that face humanity & society, and dedicate our efforts to addressing said issues. As a non-academic pursuit/hobby for students and faculty, by all means allow interested groups to use existing facilities on campus to share & express their artistic endeavors. But I (and many other Former Students) are resolute in stating that our donations and other University funds should NOT be spent on developing "... a modern performing arts center to host indoor large-scale events for students and the community." As relates to the org chart used after pg. 23 of the report, I reiterate a previously shared sentiment that the lead diversity position on campus should not be at the VP level. A&M's diversity stems from attracting the best & the brightest students from around the country and the globe, without focusing on a particular racial or ethnic makeup of the student population.

---

I think creating this "bucket" is an inspired and inspiring concept.

---

Uninformed, so no comment.

---

I found this topic misleading in relationship to the findings. Regarding diversity of students vs the state population, I feel the study researchers and analysts do not understand the current state legislative restrictions of admission into the state universities -- particularly the University of Texas and Texas A&M. Also, this issue is compounded by the current deficiencies in the state's elementary schools, middle schools, and high schools -- particularly in large metropolitan areas. I AM GREATLY CONCERNED that the study did not address the gender imbalance in various degree programs. I recently was the guest speaker at a graduate degree class in the Texas A&M Department of Agriculture Leadership, Education and Communications (includes agriculture communications and journalism). There were 24 students in the class -- 23 females and 1 male. Later that day, I spoke to an undergraduate class of agriculture journalism students. The class was over 70 percent female. The instructors indicated that this was a university-wide trend. A recent nationally syndicated article by Kathleen Parker (The Washington Post) points out that this is an issue of national concern. This study, and future studies, needs to address this issue.

---

N/A

---

As a former student of Landscape Architecture, sister to a brother who studied Construction Science, and a friend to many Urban Planning, Architecture, and Visualization students, I adamantly OPPOSE the breaking up of the College of Architecture into new departments. The synergies between all of these departments have given me a unique position in my workplace that other graduates from other universities do not have. The cross pollination of Science, the Built Environment, Art, and Landscape are not only required for a robust knowledge in each discipline, but need to be ENHANCED within the College of Architecture. Visualization students need to depict convincing and engaging landscape and architecture as new and exciting environments are explored through creative mediums. Landscape Architecture and Architecture students need the creative energy that Visualization classes provide. Firm knowledge in Construction Science allows designers to create more functional spaces, while close proximity design informs construction students of how the impact of what they are building transcends safety, health, and welfare. As a Landscape Architect, I work with Architects, Planners, Contractors, Artists, and Developers in my everyday work. To remove one from the College of Architecture would provide a weakening of program knowledge across the board, and would not adequately prepare students for the real world. Such a suggestion demonstrates that the University is entirely out of touch with the work that this College demonstrates and the high caliber of performance that these students perform. As a student, the most influential classes I had were classes unrelated to my major as they strengthened my understanding of the breadth of the built, natural, virtual, and cultural environments. Not only would it be horribly inefficient for all of these departments to duplicate their courses, but silo others within funding efforts.

---

Isn't Aggie Park addressing some of the issues?

---

Agree with all recommendations except the divisive race-based metrics. Undeserved rural and urban students should be reached but emphasis on actual racial makeup categorizes and marginalized students. Emphasis should be placed on the unity of the Aggie family and not the differences between people's melanin levels. I highly agree with Recommendation #4!!!

---

Academic collaborations are the only pathway to the understanding and resolution of the enormously complex and interrelated problems of contemporary life. The focus on administrative control and efficiency will only serve to conflict with the need for academic collaboration.

---

Focus on fields of study that tie to real world jobs and opportunities for the kids.

---

I like the idea of collaborating with resources in the towns of the various branches of TAMU. I am greatly concerned with the recommendation to have TAMU mirror our state's ethnicity. Texas A&M should be open to EVERYONE who qualifies and it is. We should be looking at the quality of student and the skillset they add to the TAMU Community. To look at the color of their skin is racism in its purist form. Once a new fish sets foot on the campus of TAMU the only color they see is maroon and we unite under the Aggie color and pride. We need do not need to recruit anyone based on color, creed, ethnic background or sexual preference. Entrance should be colorblind. This is has been my biggest disappointment in my school, that they have insinuated this Diversity, Equity and Inclusion into what should be a colorblind society. Come on Aggies, we can do better. We all bleed maroon !! With respect to spending money to develop cultural arts centers, I think that should be left to the cities of Bryan and College Station. Given that studies have shown such development draws more people/teachers to the area, those cities should invest themselves in this. It's not A&M's responsibility to create these centers. It's not what we do.

Each of the recommendations has the common theme of consolidate & centralize power and control. There is no explanation of the criteria by which old programs will be eliminated and new ones created. For instance, one of the most important community partnerships is through the Agrilife extension office. Would this office be brought under the Academic & Strategic umbrella? Who in the A&S office would be qualified to advise the Agrilife office about it's operations?

The changes discussed here were very exciting. Especially those focused on getting a diverse student population that looks like Texas.

Some of the suggestions may be worthwhile, and I am not sure I am qualified to judge. TAMU has been evolving for years. Part of TAMU and its history relates to its land grant status and charter for service to Texas and its citizens. Much effort has been put in the last years to become world class. I would like to think that the leadership of TAMU can choose wisely as to the adjustments that need to be made without sacrificing that history. We have progressed to a strong position as a university, and I would hope that we can continue to enhance the vision without losing the flavor of the school.

Having worked at large organizations (United Technologies, Monsanto, BP Refining and at a Department of Energy physics research Lab) and it may have been an artifact of my particular field - occupational health but I found, over 45 years, the theme of collaboration to be very difficult to achieve while working very close to extremely diverse co-workers. While it sounds great, this is another fuzzy objective but is a current buzz word that everyone buys into.

Recommendation #4 sounds like a wonderful idea - to have a museum for all the artifacts on campus would be a great opportunity however, it would take the allure of wandering into buildings on campus to explore but it would create a space for students to know where everything was as well as the community and allow for further study. Having somewhere for events would be good as well so that all events would be in one centralized area instead of events being piled on top of eachother and students/staff having to find a way to maneuver around said events. A modernized performing arts center would definitely allow for more upscale events though it would take from the charm of having a performance in a historic place.

None

I do think that several of the recommendations for Academic reorganizations were on point. I disagree with the report in comparing other colleges Liberal Arts programs to A&M and wanting A&M to be more on the front line of a Liberal Arts College. We are known to be a more science, engineering and agriculture university. We do not need to shift to become a Liberal Arts University.

Again, the most important thing about a student coming to Texas A&M should be there burning desire to be an AGGIE and hold the Core Values. I'm all for recruiting from different communities as long as the goal is to have students that WANT TO BE AGGIES! We do not often get the best character in students who come to Texas A&M because they got the best "offer" from A&M, as seen by many photos posted to various social media over the last several years. When you recruit students who are looking to have the best deal vs. the desire to be an Aggie and what that means, you are recruiting to Texas A&M in the wrong way.

Liberal arts and Sciences need to be separate departments. LA deals in subjective reality while the sciences deal in objective truth. Their perspectives on reality couldn't be more opposite or incongruous. Sciences deal in research that is funded by corporations that liberal arts has no way of relating to much less has any business courting for funding. Support for science students will be undermined by this maneuver and the future of sciences at this university will be compromised and eventually cease to exist.

I find the concern over the number of undergraduate applications entertaining. TAMU has more applications than it needs. If the statistics of entire pool of applicants is not representative of the US population that is a problem for recruitment not solved by adding sheer numbers. The recommendation for more parks is also odd. TAMU just added garden space near AgriLife and is redoing Spence Park now. And having attended school at TAMU and then returned 10 yrs later to live in College Station and raise a family, the city needs performing arts space and museum space, not campus. The city is very college centered and everything requires access to campus and parking is a problem. There is also the issue of not wanting your children to be in the same area as drunk or rowdy college students (Northgate or Eastgate) The "city center" development on the south end of town near Graham Road will be much more attractive to families. Cost of housing is also pushing young faculty to Bryan or as far away as Navasota.

---

Recommendation #2 - No. We have a good process in place using the top 10% of high school students and then the review or other admission processes to be admitted into A&M. That 10% is not gender or race based in any way, nor are the other admission applications. If the child has the grades and the standards, they get into A&M- period. To try to adjust the numbers to "increase minority recruitment" is not necessary. A&M is very diverse and we allow those with the grades and standards of A&M acceptance into the University. We also don't need to "increase total applications" as the school is large enough to be a well known University but small enough for the students to get the small-town feel of campus. Do not turn A&M into u.t.

---

No taking away from college a ag

---

I like the ideas of having a combined College of Arts and Sciences and moving visualization out of architecture. I've had a hard time understanding how that fit.

---

I support the findings and recommendations of MGT.

---

Do not make any of these changes. A&M is better than the "peer review" schools so why do we want to lower our standards to meet them? This was a total waste of time and money!

---

None

---

Public universities in Texas have different demographics in their enrolled students vs the demographics of the state, because the K-12 public education that prepares a student for a 4 year university such as TAMU is simply not getting the job done, especially in the inner cities and rural areas of Texas. The University of Texas has demonstrated just how challenging this is, as they have led the state historically in trying to recruit minorities and immigrants decades ago. They are still not there in matching Texas demographics. There are many challenges and the challenges will increase as local districts argue content in classroom, but in 2021 those arguments are far away from the 3 R's of Reading, Writing and Arithmetic (measured along with other metrics by SAT and ACT ). Using your minority groups mentioned--You cannot have TAMU student outreach/recruitment directed at recruiting for the narrowed sole focus of a match of 12.9% Blacks in Texas to 12.9% Blacks at TAMU or 39.7% Hispanics in Texas to 39.7% Hispanics at TAMU. The biggest goals must reside in improving reading, writing and arithmetic in K-12! The improved processes in K-12 will yield the desired results in enrollments at institutions such as TAMU in the years to come. Until Texas public school districts can prepare public school students OF ALL RACES for the rigor of 4 year public institutions, this is going to be a challenge for TAMU unless TAMU lowers standards for admission. Additionally, as one population tries to match demographics of another population, the goals should align as a minimum. With Texas dealing with an influx of migrants from several different countries and with multitudes of different motives, the state's goals may not match any of the public university's goals for the next decade. Texas public ISDs have a huge challenge ahead in education of K-12, starting with speaking English. Matching demographics of a higher education system JUST to match demographics of a state make little to no sense when the state is far behind in K-12 education compared to other states around the country. Texas needs to figure out how to better prepare all students at all levels that will allow them the opportunity to choose a 4 year college and actually be ready for that. I've tutored every grade level of math from kinder to college calculus. Our Texas public schools are still lagging behind in how best to educate all students. That topic begs for complete collaboration between TAMU's VP of Student Outreach/Recruitment and VP of Community Impact. Finally, I'm in favor of cultivating art and culture in BCS to attract and retain people to BCS area. Before this retention can happen, as a minimum, A&M must wake up to the drug activity around the area that is directly connected to our student body and impacting our university and those who choose to move there and stay there. Local news outlets have reported for the past 2+ years the drug dealers being caught and getting a hand slap, and these dealers are rarely born/raised in BCS. They are coming to BCS to prey on our 60,000+ students at TAMU. My hope is the university is working with local law enforcement and the Brazos

County judicial system to encourage more arrests and stricter penalties so that this will stop. BCS will need to gain a reputation among dealers and users of stiff penalties if caught so these dealers will go elsewhere.

More resources should be directed to increasing the diversity of the student body to more accurately reflect changing demographics in Texas. Additionally, partnerships/ collaborations should be made with either the private sector or maybe other universities that are in the larger urban areas of the state. Or allow students to enroll and attend courses remotely. Almost no students stay in College Station after graduation, nor does College Station offer opportunities for internships, etc. in most professional fields. Maybe if TAMU was to have more opportunities for undergraduates to study in Houston, Dallas, San Antonio, Austin, etc. it would demonstrate that Texas A&M is "connected" in the state's urban centers and attract students from more diverse backgrounds that are looking for a more well rounded university experience.

I concur with the report recommendations.

Recommendation #2 doesn't make much sense. Of course we want to recruit the best students, but adding out of state recruitment would be more effective. Instead of the mindset of, "Let's target specific demographics in Texas, mainly minorities to make ourselves feel better about inclusivity.", I'd recommend increasing out of state recruitment to all demographics. Fact is, there's only so many high quality students in Texas and ATM is already a major consideration for them. Trying to dig into this demographic or that demographic isn't nearly as effective as opening up the possibility to out of state prospects. Recommendation #4 doesn't seem to offer enough benefit for the costs it would require. I've never heard anyone in College Station say, "Man, I really wish we had a performing arts center!". The university offers tons of activities for families and older adults. I feel this recommendation should be that our existing facilities, like Rudder, be leveraged to provide more shows and performances. What type of "museum" would actually benefit the community enough to justify the costs? We have an amazing presidential library, a GI museum and probably more that I'm not thinking of. As far as parks and outdoor spaces, I have yet to see a campus that comes anywhere close to the number of outdoor spaces to enjoy as ATM.

I think it needs to be modified. I agree with the need to be more efficient and with a large organization it seems necessary to make it a more coherent, centralized in HR, etc. I'm alarmed by office of inclusion frankly. When thousands of kids want to attend the business school and you are turning them away, it's a problem. We obviously need to increase the business school. More professors, more students, more classrooms. When you have former students like me with their kids attending competitive high schools being turned away from A&M that's a problem. My son got a 35 on the math section of the ACT and did not get in to the business school. He missed top 25% by 3 people. He placed out of over 30 hours. He's attending Baylor, getting a double major with finance and accounting with a masters. He would have attended A&M. With all due respect to Secretary Gates, not considering legacy status is wrong. My husband and I are both Aggies.

To my comments above - please continue initiatives to recruit and attract professors and lecturers with real world industry and commercial experience. The Aggie network of Former Students is FULL of highly successful professionals and executives from all industries. We would be ecstatic to contribute to the strategic alignment with our industries and companies through Boards or initiatives like Professors of Practice where our experience could not only be leveraged, but our passion for Texas A&M could be a true force multiplier to promote and align the great talent and initiatives coming from TAMU. Harness and leverage this better. The pure, brilliant academic professors only impart a small piece of the education required to jump-start, accelerate and sustain the success of our beloved Aggies once they enter the workforce. Consider my comments as willingness and an offer to help this initiative personally!

It seems to me that Academic collaborations and (university) Strategic collaborations are, and should be organized as, two separate structures. The purposes seem different to me. Academic collaborations should exist to share development of the student/educational experience. Strategic collaborations should exist to share the university's research, strategic engagement, and development accomplishments and opportunities, enhancing the reputation of the school in non-academic pursuits. These functions may benefit from intermittent consultation with one another about strategic direction (if it aligns), but should NOT be under one larger umbrella.

Who will lead this effort? It seems to be a made up org that all departments are placed that the consulting firm didn't know where to place them. How does diversity fit? Why here? Where will the budget come from?

N/A

I agree with the recommendations in the report.

I graduated from the college of architecture with a bachelors in Urban and Regional Planning. Our graduate program is accredited but the undergrad program is not...It's been 3 years since I graduated and still no word from college if the program would get accredited. It's a struggle trying to get certifications due to this.

Since this is newly established, in Sept. 1, 2021, this structure seems much too bloated and should be developed over time, not dropped as lump without more discussion and thought about the activities. So it is hard to see how many people currently report to the Academic & Strategic Collaborations position. There needs to be care in not increasing overhead/people or a lot of new positions.

Centralization of some departments should save money and make all departments more efficient... but please take your time in the process. A knee-jerk, ill-thought-out action in the centralization process could take years and \$\$\$ to fix.

#4 as it relates to engagement of the community and building and offering more community-wide events on campus.... I do not see this as the University's responsibility. I think TAMU does plenty for the B/CS communities and that is easy to see to just about anyone who lives/works there. As someone who was born in Bryan, TX when my father was a Masters/PhD student at TAMU, to being an Aggie myself, and now having an Aggie student I fully expect that anything within the arts/cultural area that comes to campus should first and foremost be of interest and marketed to TAMU students. They should have first rights at tickets, at free or reduced prices. I worry about student safety with such an open campus and encouraging more people who are unaffiliated with campus to campus for things like concerts, productions, etc. It is absolutely within the realm of possibility that should TAMU build more spaces to offer these types of events that people would come from hours away taking up hotel rooms, and campus parking spaces from enrolled students and the loved ones that are deeply invested in TAMU making it more challenging than it already is to visit a student or for a student to utilize their campus as they need.

I found this to be a big weakness when I came to TAMU around 2010 seeking collaboration between the statistics graduate program, and the chemical engineering department in order to create masters and doctoral students in chemical engineering with greater analytics skills. At the time the concept was rejected. The University of Texas was much more receptive. Clearly most universities have closed this gap by 2021 but I offered an opportunity for TAMU to be in the vanguard and it was rejected. At the time I came from the Dow Chemical Company with this message. My home university became an "also ran" as we developed candidates for our industry from competing schools.

I'm not sure where this comment goes, but I was an AgEd major and I can truthfully say not one education class I had at A&M helped even a little bit in making me a competent teacher. My academic classes in the science areas helped a lot - since I ended up being a science teacher. Candidates to become teachers MUST learn how to successfully interact with young people of the age they will be teaching. THIS IS THE MOST IMPORTANT SKILL IF ONE IS TO BE A SUCCESSFUL TEACHER. I say this as an ex junior high teacher, junior high assistant principal, high school assistant principal and principal of four high schools (3 as interim) in the Austin ISD. I learned how to deal with this age kid as a tank platoon leader in Korea where almost 1/2 of my platoon soldiers were told either go to jail or enlist in the Army. Of course, not many prospective teachers now have this unique opportunity. Most beginning, new teachers are totally inept in dealing with problematic students in their class. This early difficulty causes a significant number of good prospective teachers to leave the profession that dearly needs good teachers before they have time to develop good classroom management skills.

Recommendations sound logical.

Agree with assessment.

I have some misgivings as to the the development of this office. Specifically, it is not clear as to the exact mission of this organization. The realignment appears to consolidate several support organizations of other entities into this single entity that resulting in a diverse organization with no clear direction.

The report does not provide a cost/benefit analysis of the effect of these changes. In some cases, the offices may need to be moved physically to be in one location. It can be a very expensive proposition with no clear returns provided. Texas A&M University has withered the challenges of the last two years very well. I am not sure why such drastic steps are being asked. What will be the benefit? I do appreciate that the report has recommended creating an International Program office. Having the study abroad office and ISS under the same umbrella will be beneficial to both the inbound and outbound students.

Agree with the reports recommendations.

---

None!

---

Please join the U.S. Department of Labor, Office of Apprenticeship in becoming a Registered Sponsor of Apprenticeship. The benefit is putting Aggies to work earlier in jobs that echo the real world. Apprenticeships can span across every aspect of the TAMU System. A Journeyman's (Journey Workers) completion certificate does not make the graduate a specialist, but would compliment the academic program of which they would have had some control.

---

In the area of student recruitment, MGT emphasizes the need to diversify student demographics in order to achieve demographics that mirror those of the state. This over emphasizes racial and cultural diversity at the expense of diversity of ideas, which would bring real educational value, and cannot be achieved by focusing solely on race and cultural background. Additionally, we should focus on academic excellence above all other criteria in admissions, with a true appreciation for A&M's unique culture as the next most important consideration. The recommendations regarding community outreach, particularly in the area of artistic and cultural outreach, show a lack of knowledge regarding what A&M already offers. MGT says we need a modern performing arts center, and museum spaces, but does not seem to realize that we already have the Rudder Complex, Bush Library, Reed Arena, Corps Center Museum, and MSC galleries. Existing facilities could be improved and/or expanded if not already sufficient for any new programs the university may wish to add, making new facilities an unnecessary expense cutting against the general emphasis on efficiency.

---

Do NOT combine the colleges of science and liberal arts. I specifically chose to attend Texas A&M for both undergraduate and graduate school because the college of science was separate from the college of liberal arts. When I was looking at which university to attend, I looked at schools with a combined college of arts and sciences and there were extra requirements that were not requirements at A&M and that would not have helped me in my current career as a scientist.

---

Centralizing the operational structure Would help improve Academic and Strategic collaboration as well as Faculty morale.

---

The recommendations for change is very warranted. A&M should reflect the diversity of the citizens of Texas.

---

The suggestion to move the Department of Construction Science from the College of Architecture to the College of Engineering ignores the industries that the Department of Construction Science serves. More than 80% of the COSC graduates go to work in the commercial and residential construction industries where the development of a project is lead by an architect, not an engineer. In an increasingly collaborative world, it seems short-sighted to remove the construction students from the architecture students. Further, the unintended consequences of such a move would be significant as what is and has been the strongest construction program in the country gets lost in a college of over 20,000 students. While the consultants may believe this will create academic efficiency, it will damage the industries it was designed to serve.

---

Approve

---

None

---

I strongly advise that Critical Race Theory NOT be considered for curriculum, nor sanctioned, in any form at Texas A&M University. There is also no place on any Texas A&M campus for anti-American political, social or counter-cultural organizations. I ask with gracious humility that all departments, all faculty and staff, at all levels, remember our country was founded as one nation under God.

---

Please make sure that these disciplines are related.

---

First off, I agree with Visualization leaving the College of Architecture. It has always been an outsider within the CoA. Rather than removing Construction Science from the College of Architecture to College of Engineering, the two colleges need to use Construction Science as a bridge between the CoA and CoE. I studied Urban and Regional planning and continued my education with the MLPD degree. I have worked as a development manager in the real estate sectors of commercial, multi-family, and land development since I graduated. Before tearing apart the current structure of the CoA there needs to be an effort to pursue more collaboration and overlap between the degree plans currently located in the CoA, not the other way around. The beauty of the built environmental isn't that every skillset thinks in their own echo chamber, the beauty lies within the communication of ideas from individuals with different perspectives, skillsets,

and experiences coming together to achieve the best case scenario for the built environment. Civil Engineering and Construction Science are two degrees from CoE and CoA that need to work together, stay in their respective Colleges, and serve as a bridge between the other disciplines within both colleges.

Construction science must remain with college of architecture. VIZA could move to new college of arts and sciences, but a program specifically for architectural visualization and rendering should be created in its place within the college of architecture.

N/A

See general comments for more details, but I do not find a sufficient rationale to support any of the proposed changes based on this report.

Advise tweaks that could be made to existing operations and organization to improve productivity and effectiveness. Would be far less costly and disruptive than junking existing...

n/a

I approve the recommendations, especially a venue for combined university and community activities.

I would hope the University sees the benefits of a well-rounded curricula as today's work environment demands more from it's employees and leaders. I worry that the university is becoming way too conservative in its beliefs, messaging and future.

changes proposed to AgriLife look to be good

It would be very tricky to have advisors that cover all areas of campus. Students still need special advisory for their specific college, with the course schedule, etc. Perhaps all advisors could be trained to be able to help with the change of major process to simplify it, yet still have their specialty.

I agree. Especially regarding the retention of students and the support of performing arts / museums.

Very important. Do even more of this.

Some departments such as CVM seem reluctant to work with outside SME

all for these...especially getting student recruiting out of the registrar's office and putting in the office of Strategic Partnerships!!

The report states "The consultant team was asked to identify changes that would restructure TAMU in a significant way to increase effectiveness and transparency and to contribute to overall student success.". If so how does the "Academy of Visual and Performing Arts; OPAS; Music Activities (except for the Aggie Band); Becky Gates Children's Center; Office of Diversity and Inclusion, Continuing Education; External Affairs and Public Relations; Visitor Center; International Programs (new office); Education Abroad Programs; Global and Academic Partnership Services; and International Student Services" perform this increased effectiveness? A university exists primarily for education and not cultural centers.

No comment

I wonder whether the academic requirements for entry students has become out of line because of the race to be "#1" and TAMU has left behind some marginal students who could be better "keepers of the spirit". Thus, I think the mix of students has become unbalanced.

As I agree with the first recommendation, I don't believe that we need an office for student recruitment and retention. Focus on your students and this won't be needed. And I absolutely disagree with removing current community programs. These programs have been around and are tradition. A&M is based on tradition and should stay so.

As a member of the Bryan / College Station community, I love the idea of more community collaboration. I'm also a former OPAS student. Anything we can do to continue bringing these shows to this area is a plus!

None

Performing Arts Center located off the main campus where parking isn't so problematic would be welcomed in the community.

Teach “true history” not get involved in “race baiting, race hustling and other divisive crap.”

---

I was a transfer student, a student veteran, and a 5 year undergrad student. I have a lot to say about TAMU academics, but I think the report sums it up better than I ever could: "Overarching weaknesses identified include the university's unclear and decentralized organizational structure, processes, and goals; limited financial resources to attract and retain talent; exclusive climate and ineffective Diversity, Equity and Inclusion (DEI) efforts; outsourced maintenance; inconsistent communication and transparency from the university's leadership; lack of both operational and student outcome data; and lack of opportunities for faculty to provide input to decision-makers. Limited financial resources to recruit and retain talented faculty and staff means that TAMU is not competitive enough with the marketplace. The faculty review process is not thorough and the push to innovate is lacking." I fully agree with that statement and saw parts of it across my years at TAMU. The only thing I would add is that in my experience, I in my career and in my academics suffered greatly because of 3 things: 1) Mays Business School is too exclusive to accept transfer students; 2) the GPA that I had earned and built at prior schools was completely disregarded, leading to a graduate GPA that was built solely on the hardest courses of the last two years of my Bachelors Degree; and 3) Academic Advisor quality varied wildly, to the point where I would request certain advisors by name.

---

The notion of "establishing cultural centers" is nice, but the University should focus on what it does best. This is not a liberal arts school. People go to Texas A&M for business, veterinary school, and engineering. That's where the reputation comes from. Those interested in performing arts can find many other fantastic schools in Texas and across the nation. Focus on the technical aspects of the school.

---

There should be for now, less importance on increasing student acceptance rates. It is now almost a walk in the park to get accepted into Texas A&M, and that is not going to uphold the quality in education and alumni as it used to be in the past.

---

Don't take good jobs and pensions from the citizens of College Station.

---

Seems pretty straightforward. I don't see any reason why these offices and organizations shouldn't be moved to a place that better fits their mutual missions. For the Office of Recruitment and Retention of Undergraduate Students, I once again see no reason for it to not exist, but it's unclear in the proposal what efforts towards Retention would be made, as it otherwise sounds like just another avenue for advertisement. The improvement of community-focused programs is additionally vague and seems like it would benefit from further scrutiny on a program-basis. Absolutely 100% all for the Cultural Centers. As it stands, much of what A&M has in that regard is on west campus, inaccessible by the great majority of students, and for performing arts the venues are few and far between.

---

Students should be selected based fully on merit and ability to have success at A&M. Setting any ratios to meet or including race as a checkbox should never happen.

---

The biggest thing, regardless of what you do, visualization needs more funding and more independence from the college of architecture. The amount of times we have had to fight the college of architecture to get our needs met was ridiculous. Despite every single person in viz requesting and needing to have extended hours to Langford to complete our projects, we were repeatedly denied and rudely told to leave while we were in the midst of finals week and NEEDED the computers to complete our assignments. The render farm is a vital resource to almost every single viz student and faculty, yet we were denied access to this need after hours (when most of us have the free time to work on our projects). And the lack of funding has forced many amazing professors to resign or retire, while the college of architecture has continued to fund older and less competent professors, without giving us the resources and funding (all of my coding classes were terrible, I can honestly say, I don't know how to code, despite taking 3 coding classes). Until the department of visualization gets more independence and funding, Texas A&M shouldn't have the right to brag about those of us who made it to PIXAR, Dreamworks, etc. The amount of times we have had to fight the university to get the resources to complete our work, made it difficult to focus on the tasks at hand. If you do decide to put viz in the new "Visual and performing arts" college, please make sure that the technical and science parts of viz are kept. If anything viz needs less art and more technically minded people. And make sure there is a focus on helping us FIND A JOB afterwards. As a former student, I felt like I had absolutely no support when I came to finding a job.

---

Change the “Marine Engineering Technology” program at A&M Galveston to an ABET Accredited B.S. in “Marine Engineering” program. This would align Texas A&M with other top maritime academies which offer degrees in “Marine Engineering”. This would also allow graduates of the program more diverse employment options, allowing them to work shoreside in traditional marine engineering design positions. The “Marine Engineering Technology” program

potentially restricts graduates to working in shipboard operations and maintenance roles. This "Marine Engineering Technology" program is more synonymous with a program found at a community college, not a top tier engineering university. Texas A&M University can do better than this.

Recommendation #1: Continue to .... Agree, time to get rid of stove piping. Recommendation #2: Create .... Disagree. Enrollment growth is getting out of hand. Texas A&M has more than enough students and does not need to actively recruit new candidates. Recommendation #3: Sunset community-focused .... Agree, get rid of unnecessary programs. Recommendation #4: Invest in .... Disagree. The campus has sufficient venues to host performance arts, etc.

"Underserved and Underrepresented" are liberal objectives seeking to water down and dilute. Equality of outcome is more liberal faculty thoughts seeking to dilute success and breed contempt. The Former Student population is spread throughout the State of Texas. TAMU has no business trying to "recruit".. Recruiting should be best a function of the former students representatives. We know our local students. We educate the best as far as what A&M has to offer. We encourage those like us to apply and we help them attain local sources of funding. "Finding 4" Extended families. Introverts are introverts. We voluntarily seek out others. Members of the B/CS community are not different. It is not the duty of the University to seek out and engage. "Arts and Culture" excuse me.... bull shit.

There are likely quite a few community engagement programs that can be eliminated to better use resources. I support recommended investment in a museum (possibly propose providing a new home for other museums in BCS). I would also encourage the university to consider doing something unique in regards to culture; specifically I think a museum of fiction, administered by the Libraries and making use of its extensive collection of Game of Thrones and other fiction props and artifacts, along with the expertise of the Department of Visualization, could provide a unique experience unlike any other in America and help BCS tap into an underserved tourism market for fans of fiction (it's a huge but quiet group). I also encourage the university to build a modern performing arts center near the MAC as proposed in the campus master plan. I also fully support the expansion of gardens and green spaces. Aggie Park and the Gardens on west campus are a great start but more can be done. I would propose the formalization of the Northside Housing Mall, the Whitely Park, West Campus Quad, creating a greenspace on lot 23, and the creation of a quad created with the demolition of the Halbouty addition as proposed in the campus master plan. This can be extended throughout campus with more appealing sidewalks (such as military walk), more and larger trees, and more flower plantings to add color to campus. I would also encourage Spence Street, North Houston Street, and Nagle Street to be converted into pedestrian malls as priority projects. This would also alleviate maintenance pressure from transportation services as they recover from the pandemic.

I work in the senior levels of the space industry and have often been surprised by A&M's light engagement given its proximity to Johnson Space Center and being the first space grant university in Texas. Practically the only place I see A&M engagement is in research forums. I know there are space related activities going on across the campus, from receiving the Space Shuttle simulator to AggieSat to the Space Food center to the Bush School, etc. I hope one of the areas A&M looks to better unite and elevate our efforts is the space industry. We can be a much stronger force if the university has better central coordination in this field, as the report suggests needs to be done in other fields at A&M.

Historically, I have led advocacy efforts which steered tens of thousands of dollars towards A&M from my employers and have led recruitment teams to hire Aggies. My commitment to A&M has been tempered by my loss of assurance that A&M is focused on preparing students to enter the workforce. When I attended A&M as a graduate student the Department had professors who had worked in the private sector (in industry). They had PRAGMATIC views of what it means to teach real skills that prepared students for work. Today, most of those pragmatic views have been replaced with academic research. From my vantage point, A&M has lost the "rudder" that made them so unique and special.

I recommend that you direct any and all department heads that oversee any faculty that hold classes with students (i.e. teaching staff/instructors) to review the CVs of those individuals. I recommend that the CVs of those personnel be reviewed for instances where various industry professional organizations appear. (Examples of organizations were emailed to the Office of the President of TAMU.) The intended purpose and eventual product should identify and more formally map, or associate, those industry professional organizations (also known as: certification bodies | such as a trade association or industry-approved testing entity). Thereby creating a networking tool that could be used by students (prospective, current, and former) and faculty. Once this CV review is complete; I believe it possible, and necessary, to then look at internship offices and the Career Center to establish a list of employers that have chosen to interact with the university (again by either internship programs or via the recruitment efforts of looking to hire the graduates of specific programs and/or colleges). The intended purpose and eventual product should identify and more formally associate career potential by highlighting industry professional organizations that are associated with various

academic programs (degree plans or colleges) and then listing the employers that have demonstrated an interest with those programs. The presumption here is that jobs might be found with either the identified employers, their competitors, and/or companies involved in their supply chain.

---

Once again, the recommendations jump straight in to recommending all sorts of new politically left wing programs and outreaches which are in and of itself NOT inclusive of the largely politically right wing demographics of the state of Texas. The first rationale being our increased foreign student presence. From my time at TAMU, the largely foreign student presence is in graduate school and from very affluent foreign families that are VERY well off in their countries and NOT the poor helpless people of these countries that really need the education and help to move up in the world like what the university tries to paint the picture as being. With that being said, the university is well aware of much cheating that has gone on in the research area because of the lack of basic moral values taught in most of those foreign countries. Is this really the global connectedness we need and value at TAMU? Is this really helping out the local community that the university is supposed to serve by increasing our foreign presence? Also, is TAMU really serious in being so exact on its demographic representation matching that number of applicants and students will exactly match the demographics of the state just to say that they did with no other thoughts or reasoning involved? When will we see these attacks on people and organizations as what they are? Why only focus on recruitment efforts of the best and brightest minorities instead of just the best and brightest even if they were to happen to be all white men (NOT saying they are, but just saying what if)? If TAMU is in such desperate need to seek out special groups, then why such a high satisfaction rate amongst the students both now and former? If art is such an important part of the community, then why are only the worst displays of art ever present and so many artists that I know such a horrible example of living a decent life? I have seen art exhibits while at TAMU in the George Bush Library and other spots around campus so why do we need to add a bunch of other places that sacrilegious, disrespectful, and grotesque images can be viewed by everyone as this is the only art that is apparently acceptable today? Being a native Texan myself with over 8 generations of family in Texas, I doubt that any of the native cultural art displays will be anything that truly represents us in this day and age.

---

We need to focus on core teachings and get rid of all CRT, DEI, BLUE, Black lives matter, etc. initiatives in the class room and on campus. These in groups only work to divide students, not bring them together as AGGIES.

---

The report describes it, but this new organizational unit is critical to the success of Texas A&M University, primarily because of our mission of being a land grant university, but also because of our partnership and leadership in many state agencies. My feedback is that leading this organizational unit will not be easy, but will be critical to its success. I see this leader and his/her team playing a critical role in "connecting the dots" throughout the system, university, and agencies on a daily basis.

---

Good

---

The report is slim on audacious ideas. TAMU is at a level nationally and internationally to now move to the next level. Think bigger and bolder! This will take significant investment, but there are many former students who are willing to support plans that will significantly improve our academic standing.

---

Academics for any graduate should be oriented toward the realities we live by and with in the economy, as opposed to ivory tower theories.

---

I think providing community and cultural support will definitely improve students experiences and allow them to find a place where they feel like they can belong, get involved and feel seen.

---

These collaborations across departments would greatly benefit students as they strive for a well-rounded and whole education.

---

Doing a good job in this area

---

The silo mentality is too strong resulting in a lack of collaboration and strategic thinking.

---

Please make an online MBA program.

---

Some very good ideas and suggestions are made which will help the University as a whole grow in a sustainable manner. These should be implemented in a timely manner allowing for adjustment of the existing department heads and new mergers to "mesh" with the least amount of problems.

---

Don't focus on demographics for the sake of diversity. Focus on finding the BEST students to represent our university

---

REGARDLESS of what part of the state they are from or the color of their skin. That is true equality

---

MGT is wrong to recommend centralized command. That's how the Feds operate and it fails miserably. The Marine Corps taught de-centralized command and things got done much better than the other services and the feds. DEI (Division, Exclusion, & Inequity) is marxist and should be abolished from TAMU. Just teach not to discriminate and provide equal opportunity.

---

No comment

---

Not sure why we need community outreach. That is not a function of this school. My opinion is that school was here before any community. The community exists because of Aggieland. Not to say we don't need to play nice with the neighbors, but no need to spend additional monies on it either. The campus is beautiful, better than any 10 other campuses you can pick. Have you been to Austin? Not a great place. I believe any money needs to go to something that benefits the student first, last, and always. Not the former students, not the faculty, unless it is tied to the student body, etc. The Bush school is elevated because it not lumped in with the Poly Sci department. Seems like it elevates Poly Sci more that the Bush school. Not sure I agree that our vet program is not already the best in the nation. Why fix something not broken? Need a new building? Built it. Construction science to the dept of engineering? Good luck. Seems like a good fit, but not sure they will buy into it.

---

I agree with the biological sciences realignment, but the group needs to make sure they understand why the Biomedical Sciences is one of the largest program on campus. I mentor to the students who are both pre-vet and premed from Biomedical Science. Be very careful on how you choose to merge these disciplines without destroying what is already working.

---

My interest in starting a wilderness medicine curriculum has been peaked by a family member. As our society encounters weather disasters with more and more frequency, I continually see the need for medical care in areas with no access to doctors or hospitals. Disaster Day is only the beginning, our university needs more.

---

Seems like a good plan

---

Agree

---

Are the folks that did the MGT report aware of the football teams entrance song at Kyle Field. Laced with MF-Bombs and the N-word? TAMU...The Great Pretender?

---

I agree.

---

I don't understand the issue enough to have an opinion here.

---

100% supportive

---

International campuses are scope creep.

---

N/A

---

None

---

Like

---

This new unit seems like a catch all for anything that "might" connect to the community. I don't think undergraduate recruitment or international student affairs' belongs in this office. I get that it is building partnerships for recruitment and pipeline building but those two functions are and should reside in the Academic Side with the provost. You start as a Former Student from Day One and your success on campus should be informed by where you come from. I think student support services/student success should oversee incoming students because they need to know they students from recruitment to understand how to enhance their experiences from day 1 on campus.

---

Just because a lot of other universities are doing things a certain way does not mean that TAMU has to follow suit. There are a lot of things that work well currently at TAMU. TAMU does not need to become a liberal university.

---

See comments on merger of colleges

---

Wholeheartedly agree with recommendations 1, 2, & 4. I disagree with recommendation 3, though. I feel that A&M already does a great job & that this would be costly without seeing much benefit.

133 page report on consolidation and operational efficiency improvements (more \$\$\$), nothing focused on improving student experience and time at TAMU. Product should be the best experience for students, maybe more focus should be paid to that instead of rearranging groups to save money.

The university shouldn't be run like a business. The report reeks of people trying to come up with a bloated business plan solely because they are being paid to do so and not out of necessity.

This question/comment/category makes no sense as stated. What are you asking?

I would suggest further review into the creation of an office for the retention of undergraduate students. My impression is that Texas A&M is above average in its retention of undergraduates, which would suggest that this would not necessarily warrant a change

I like how we finally have a direction for the other campuses, but they should not be viewed as home base and should be valued as pieces of TAMU, not at the same level as the central BCS campus.

Eliminate the Office of Vice President for Academic and Strategic Collaborations. If you just started it and you're already looking to justify its existence then you didn't need it in the first place. If you improve communications across the branches of your campus you can cut the need for some of these positions. If you focus on the community and actually utilize the Aggie network to expand then you won't have to develop a new system to exploit opportunities for growth. Do community outreach, prove to the local populace that you should be there and that you can help out. If you actually talked to the veteran population from the Global War on Terror then you'd realize that you can utilize the local population to enhance capability without having to result to obese bureaucracy. Not only that, but part of the early draw of TAMU was the fact that it was a big campus that felt small. Go back to that.

Schools should test for the application of knowledge, not its acquisition. Implode the Carnegie unit, thus test for wonderment and imagination. The current Educare educational system was created to make employees obedient and compliant, thus conforming in nature, not creative and not curious. Grades and the current grading processes were not designed to measure what employees are looking for today, grades does not represent courage, neutrality, willingness, acceptance, or reason, it measures compliance, thus compromising the right dorsal lateral prefrontal cortex that governs reason, thus students that graduate are looking extrinsically for someone to save them, instead of them saving themselves, this is how unreasonable behavior where the brain has been robotized becomes reasonable. An Educere model is opposite, here the school is student centric, where enlightenment is the end goal. EduCARE was designed around authoritarianism, it was the idea that systems and organizations can only exist by the authoritarians, thus setting the culture to believe that there is limited power within the system's self regulating mechanisms, the cause of the factory mindset, that to have power, you must fight and take it from another member. The battle is always management vs factory worker, boots and spurs vs the saddles, bridles, and bits. An EduCERE model believes that there is unlimited power within the system's design, here the full participation from its members are welcomed and rewarded. In an Educere model school, the hiring community must be the customer, thus the student is the product, whereas, the school should prepare all students with the intent of the student being empathetic to the hiring community, thus an entrepreneurial environment, thus setting the idea that the student will one day, hire themselves. In this environment, the school is not the producer of the product, the producer of the product is the self directing and self governing enlightened student. Texas A&M should exist to set the stage for the student to be enlightened and awakened to real world challenges, this is not possible within the top/down authoritarian model of an EduCARE educational system.

The general idea and purpose behind the office of Academic and Strategic Collaborations seems well intended and probable to make key impacts on community engagement and extend cultural value of the university beyond generational family tradition. I think this point of balance between tradition and diversity is a much larger cultural issue of the university that deserves more investigation. The result of a relative poor perception of a diverse, inclusive, nurturing environment against a strong unique culture, core values, and traditions and "our people"- though not mutually exclusive on the surface by any means- should be a massive red flag to critically evaluate the cultural climate of the university. For example, the cultural concept of a "two-percenter" implicitly admonishes being different from the prescriptive Aggie identity. Retention and recruitment efforts cannot simply aim to impose a "superior" A&M historical identity on new generations of students; it must be open to evaluating and revising culture, traditions and values. Otherwise the core academic mission of the university remains self-serving for generations of Aggies above all else.

As a student, I also worked for the Office of International Coordination (probably no longer in existence). One of the key takeaways was that there was absolutely no communication and coordination between academic colleges, especially in regard to international research programs and identifying international grants that could assist interdisciplinary overlap. With this in mind, it is important that communication within each of these areas of responsibilities as outlined in the new org chart must be optimized.

If the main takeaway from comments by opponents to Diversity, Equity and Inclusion efforts is their "questions about the effectiveness of resources", then you're probably not paying attention. I'll be blunt: DEI is a poison that is destroying our country and infecting every major university. It is racist, Marxist and divides Americans into competing, intersectional groups. TAMU should have nothing to do with it.

My degree looks better when the University does well. These collaborations seemed to make the departments stronger and seem reasonable.

No liberal arts colleges. They're a waste of money for both the university and students.

As a former student, I would be in favor of reinstating the Journalism department at A&M.

I may have missed it, but saw no reference to corrective/preventative measures that will correct or prevent any involvement between TAMU and communist or otherwise unfriendly countries or their students and scientists. I never again want to see headlines that TAMU is or has been collaborating with such entities.

Not sure if this is the correct category, but will agree that the colleges had too much autonomy during my enrollment. It was difficult to find and discuss with an advisor/counselor on my academic path. Consistency wasn't felt by college (Business) or by academic class (Freshman, Sophomore).

International students have been a vital cog in the A&M system with growing prominence. A&M should create focused efforts to build strategic partnerships in countries with largest young demographics such as India. Some of the peer schools have established offices and hired alumni in important roles but in comparison A&M is quite missing in these countries. I think its a significant gap and the strategic collaborations office should look into closing this gap and taking a leadership position.

I love the idea of investing more in performing arts here. This, along with the new degrees recommended in the next section, will go far in elevating A&M compared to other peer institutions.

I attended in 1983-87 and it is interesting to me that the findings are similar. Supporting local cultural centers and investing in the community would be a positive part of being part of the B-CS community. B-CS supports the university with the residents (groundskeep, building operations, janitorial staff, security, bookstores, cafes, medical staff, etc.) and giving back to them year round would benefit the university. I know I had NO interest in staying in B-CS after I graduated because there were no job opportunities, especially for a woman geologist with a foreign name.

"The new office of the Vice President for Academic and Strategic Collaborations is designed to further TAMU's land-grant mission through a solutions-oriented approach and reimagining the mission to meet current and future needs of all Texans." "This office aims to prioritize relationships between TAMU and Texas, particularly the communities where TAMU campuses and programs reside." "Meeting the current and future needs of all Texans" AND "prioritize relationships ... particularly the communities where TAMU campuses and programs reside." Seems like there are two goals here which are not compatible. Which one is most important to the students? They and their parents and the taxpayer are the customers of this university. "The pool of applicants for undergraduate students is currently not representative of the state's diverse demographics." Again, the statistics quoted in this paragraph have no basis in improving the TAMU and its graduates. What is the demographics if the eligible high school graduates in Texas? I doubt the ELIGIBLE high school graduate demographics is the same as the general population demographics. There are many references to the "communities" that TAMU must reach out to. TAMU should be focusing on preparing students to go out into the WORLD and work. That requires employers not communities. The focus should be on employers. Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. This recommendation only dilutes the resources of the university. I have been hearing this complaint for 50 years. Nothing has changed about the communities. If there are no employers to hire the graduates then they must leave the area. TAMU should focus on its strengths; engineering, agriculture, medicine. Spending precious resources on these will not encourage graduates to stay in the area. Their entire training prepares them to go out into the world. TAMU must recognize that and set realistic priorities.

What does this mean? Perhaps the English Department could provide instruction on writing clear and concise questions.

I don't agree with this statement: "Despite having an Academy for Visual and Performing Arts, TAMU does not have a modern performing arts center to host indoor large-scale events for students and the community. Existing TAMU land is available and should be used to create parks and other outdoor gathering spaces to welcome the community onto campus for events throughout the year." I have attended many performance events, small and large, (plays, concerts, movie showings, musicals, etc.) in both Rudder Theatre and Rudder Auditorium. I don't believe that we need to add yet another building to serve a need that is already met with existing, quality, and centrally located infrastructure. Further, we have the recent addition of the Gardens at TAMU and the new Aggie Park that provide convenient and central outdoor gathering spaces.

I understand the rationale that a land grant public university should extend its resources to all citizens of the state as well as other states and international students. I am behind this 100%. However, if this means that academic standards are reduced to accommodate diversity, then I am reticent to make a blanket statement. I know that UT (where my children are studying) has enrolled a more diverse population and at this point in time, only accepts high school applications at a higher standard (top 6% - rather than top 10%). UT is then considered only accessible by the very top students who have, by association, degrees that are placed in higher regard. (As a former student, this is frustrating for me.) I know there are minority students who fit the bill with regard to academics - and I would hope/suggest that academics be the first criteria, rather than diversity. Collaborations are key to finding and recruiting the top minority students. Bottom line: I would encourage diversity, but not at the expense of academics and the degrees earned at A&M. It is important to maintain the highest standards.

Makes sense to me to restructure this.

It appears the architecture department will be raided by other colleges. There's no rationale that supports how the "new" architecture department would move up in national ranking. However, the students who want the dual construction/environmental design major might have a problem. If the college wanted to improve their ranking, they would provide a 5 year dual B and Masters program like the top-ranked schools—which isn't in the recommendation. Instead of strengthening the Arts program, how about add interior design, a dual ARCH and Structural engineering degree? How about an ARCH and Visualization degree? Or international architecture management? Or arch and business development? Or arch and real estate management? Broaden the horizons of the students there now. For me, it's too late. But I would have killed to have business knowledge when I graduated.

Maintaining a true & open level of collaboration is the key for success. This is critical for staying abreast in each discipline.

I was disappointed to see that the proposed museum would be relegated to that of Natural History. Given Texas A&M's rich ties to U.S. military and state histories, and the continued need to contextualize Sully's statue in Academic Plaza, I was confused as to why the university would not simply sponsor a history museum, with some natural history components. Additionally, the growing field of public history would be well-served with a university museum that could provide valuable interdisciplinary collaboration in preparing students to work in public relations, human resources, funding, and public history.

The goal here would be to highlight partners that would enhance our students value, these that our outside the University itself would seem to help keep students on the cutting edge of skills and technology needed in the work force, while allowing partners access to the A&M brand and the benefits of it.

Improving the cultural opportunities would be a big win for attracting talent.

No comment.

Agree with recommendations

Regarding Recommendation #3: As a community-engaged researcher, I would be interested in learning more about how "community" is defined in regards to "former and future Aggies." Unfortunately, footnotes 18 and 19 are not visible in my pdf of your report, so I was not able to reference these footnotes. In general, however, there seems to be a lack of consistency in defining "community." Is it the "communities around their campus" as mentioned in the text, or the community of "former and future Aggies," as mentioned in the text, or all of the above? Which programs are currently inadequate, and why? I would argue that engagement should not just be for the purposes of "brand recognition" and

"increased enrollment." In contrast, community engagement should be based on benefitting and improving the lives of community members and citizens, as well as building trust and mutually reinforcing relationships between the university and its community stakeholders. When this occurs, brand recognition and enrollments can be indirect goals that are met organically through the development of community engagement. Listing brand recognition and enrollment as the only explicit goals of community-focused goals comes across as self-serving and undermines the true benefits of community engagement. Also, how does this recommendation align with TAMU's role as a land-grant university? Regarding recommendation #4, I highly support! The arts are important and bring community members and alumni to campus for reasons other than just sport events. Campus museums are one of the primary reasons that I visit campuses and take my children to campuses. Finally, I spent very little time outdoors on campus during my student years at TAMU. Some of this was due to the heat (I'm not from Texas), but also due to limited facilities for enjoying outdoor aspects of the campus.

---

N/A

---

The report did not provide a clear justification for specifically moving OPAS out of the MSC structure and into the Academic & Strategic Collaborations bucket. While the concept is clear, the basis for this particular move was not entirely clear to me. As a former student who treasured my OPAS involvement I would just like more clarity on why the change and what it will look like for student engagement.

---

Agree with all recommendations

---

We don't need to pay these consultants to tell us "TAMU has historically been conservative and slow to change regarding diversity issues" (pg110). This is not a "threat", tradition is good. Stop focusing on skin color and focus on character. TAMU does not need to be like every other leftist college campus in this declining nation. DEI is just CRT which is cultural Marxism. DEI is a scam and is dividing us. Get rid of it.

---

A new performing arts center would be an excellent addition to TAMU. I have attended many OPAS productions and while the location of Rudder Center is nice, parking is a very difficult situation and improvements are needed for better productions.

---

How is Office of Recruitment and Retention of Undergraduate Students aligned with the recommendations around Enrollment Marketing and Enrollment Management, that are recommended for completely different organizational units. I believe these should all be kept together. I do think the Office of Recruitment and Retention sounds like a good idea. I do not agree with investing in arts and cultural activities, as a way to retain faculty. If there is time and money left over, totally fine to invest in a performing arts center, but I do not think this should be on the priority list for TAMU.

---

Please keep a broad umbrella...if the goal is to restrict future collaborations to a small subset dictated by a centralized organization. Texas A&M should support and nurture more and stronger collaborations with corporations and small business...this is where students will most likely find their 1st or 2nd jobs.

---

I am not a fan of combining the college of Liberal Arts and the College of Science. These fields can be extremely divergent. A&M is not a follower. It is and always has been a leader. Quit citing other schools. This doesn't mesh for me. No go on theatre and performing arts. Or Journalism. A&M needs to bolster its programs that it is currently offering. I can tell you as a resident of the Panhandle. Texas Tech is building a multi million dollar veterinarian program here. They will be competing with Aggie vets. Lately we've been recommended to out of state vets because Aggie vets our not being educated sufficiently technically or surgically. Another example. Aggie engineers. Where are you? My husband graduated under the Zachry program. He was an amazing man in his time. But his company is no more. You need to invest in those Aggie Engineers! It is what A&M used to be known for...no longer. I am personally a College of Agriculture grad. Class of 96. Back in our day, we would kill to get that degree from A&M....it was the best. It's not anymore. People don't say that. Adding a program to a vast number of programs and not doing well at the ones you already have, I mean the ones, the core ones you started the University with that are still in demand today. That is not wise.

---

Stop promoting/prioritizing the jab

---

No specific comments here.

---

Improving undergraduate recruitment and retention: I understand this, as well as other efforts to address DEI, is a source of great contention. That's completely understandable given TAMU's historical focus on and bias toward straight white men. However a review of the current demographics of Texas alone, much less the rest of the US, tells a very

different story. In order for A&M to continue to be relevant, it is essential that both faculty and students (at every level) reflect what we all see and experience in the real world. One of the main purposes of a university is to prepare a person to be successful in the real world. I would argue that interacting with a mix of people, representing the mix of people they'll see in their careers and neighborhoods after they graduate, is great preparation.

---

no comment

---

Our university needs to be focused on recruiting students who are highly qualified academically and have a broad range of personal experiences and interests. The selection process needs to be based on these factors, primarily. Overemphasis on building "diversity" robs our university of being based on meritocracy. Obviously we can't be "colorblind." This should be considered but not as a primary factor. We diminish the individual by tying their admission to their color and not to their "personhood" and academic achievements. There's been an enormous amount of effort in litigation and laws that has really not accomplished what is needed: a system of admission based on the best, most well-rounded young people.

---

Agree but not much is said about undergraduate student retention - what will be done to retain the students that have to leave or encourage the students to come back. Transfer and Re-admits today do not find out about their spring (January) status to return until end of fall semester - that is just way late (especially when they have applied in August). Need to find residence etc. My son '23 was affected during the pandemic and we forced him to leave school (still in good standing) but there were no follow ups from engineering or student affairs to get him back.

---

Having everyone in large organization moving together, as a team, is a very worthwhile objective,

---

Please do not let Texas A&M become Portland State (<https://bariweiss.substack.com/p/my-university-sacrificed-ideas-for>). DEI efforts are largely political and aimed at destabilizing cultural norms in favor of "multi-culturalism." Do everything in your power to keep any DEI efforts from metastasizing into a full blown revolutionary spirit at Texas A&M. Diversity is great. There should be a diversity of viewpoints on academic campuses. DEI is not about ideological diversity in many places. Academic freedom and institutional excellence are sacrificed when DEI is made the primary ideology driving decisions and conversations on campus. Texas A&M is uniquely positioned to model academic freedom of speech and ideological diversity (unlike our rival in Austin). We exemplify the best of America. Let's keep it going.

---

Efficiency makes more sense - like these recommendations

---

See above

---

First of all, I think further diversifying the population of students at Texas A&M is wonderful, and recruiting resources should absolutely be dedicated to that purposes. However, I hope that those efforts are geared towards finding qualified applicants, and not just diversified applicants, as education and moral qualities should still be at the forefront of admission. Second, I do not want to see any future alumni donations I make spent on a campus garden, as I do not see how that will contribute to diversifying our school or community.

---

Bryan-College Station would benefit tremendously from cultural centers. It's a real weak spot of the region and A&M's resources and influence could go a long way.

---

none

---

MAKE MASKS MANDATORY. SHOW SOME COMPASSION TOWARDS YOUR STUDENTS.

---

TAMUS has a wealth of programs and services. This new department will benefit all constituents.

---

Don't be afraid to teach truth. The fear of persecution should not be the driving force in regurgitating falsehoods and party agendas. Lies that are accepted by the masses are still lies. Teach students how to do their own research instead of just being a group who believes everything they are told/read. This will create true learners, true education, and help preserve a society worth living in.

---

I am also the parent of a now-Former Student and one current student. I think that having some centralization of counseling services for students, especially when they want to look at a major change or are looking at perhaps a minor or a dual degree in another discipline, would be very nice. I also think that it is critical, however, that the adviser with whom a student works needs to be well-versed and -acquainted with the student's major college and its requirements and processes. I would hate to see the academic counseling services become some bureaucratic, mindless operation that produces more harm than help.

---

Conservative recruiting for professors/staff would be of the utmost importance. The CORE values A&M projects need to be lived out without being concerned with race, creed, etc. When you look at recruiting a certain type of student, however, it does show bias toward those who are underprivileged, and leaves out the students who are working hard, and earned a chance at admission, and yet discriminated against because they don't meet the minority quota section. Quotas are discriminatory. Hospitals do not recruit that way, and kids on the playground don't play that way.

---

Fine as presented

---

Quite unclear how finding #1 relates to academic and strategic collaborations in any way the material benefits most students. On finding #2, is there any concern that this will create confusion with admissions efforts? It, again, appears to be more important to hit diversity standards in this recommendation than to truly capture the best and brightest. I agree on finding #3... If you are 'in' then you experience engagement, if not, you have a tough time, even living in College Station. Finding #4... This seems counter intuitive considering the rising cost of education... I hope I see a recommendation, at some point, that encourages taking a broader view of higher education to acknowledge that there are many more people to engage if one adds more digital and online presence.

---

One of the items that, while not addressed in the report, but should be reviewed, is the naming convention of a particular department - The Department of Agricultural Economics. As a former student working in the non-agricultural financial services industry, I have found that the name of the department has been a detriment to my career - and have been aware of this same issue with other students. Other universities have been very strategic in this renaming of similar departments to better align with the true nature of the work and research - with a particular use of the nomenclature 'Department of Applied Economics'. I have brought this concern to the attention of the previous department head - who noted strong resistance from the leadership within the Department of Economics in the College of Liberal Arts (also of which I am a former student).

---

I agree with the Department of Journalism recommendation. However, I would take it one step further. As a Communications major, I felt at a disadvantage to my peers at TU since they can specialize their Communications degree within their own College - Moody College of Communications. Within this college, they have BS in Advertising, Communication and Leadership, Communication Studies, Journalism, Public Relations, Radio-TV-Film, and Speech Language and Hearing Sciences. So I would suggest making the department of Communications and the newly formed department of Journalism its own college to allow students to narrow down their "communications" degree and compete with other Texas school who have their own College.

---

The best farewell gift from A&M after graduation is having a meaning job to serve and give back to society.

---

As federal funding becomes a smaller part of the research funding, the TAMU system needs to look at industry partnerships to bring in research money. This also means that typically indirects charged on grants will go down unless TAMU changes how they budget these items. Indirect charge % should NEVER be a line item on a budget going externally to an industry partner unless specifically requested. Factor it into the cost of all the other items.

---

Non existent. No significant or consistent partnerships with the business community hiring the student.

---

Really don't need to work on recruitment, but retention, especially in the form of MERIT BASED FINANCIAL AID is vital to the continued health of A&M academics. Simply graduating as many as possible, relying on the Aggie Network, dilutes the value of a degree to the rest of the world. Cultural centers and programs would be welcomed by most current and former students, staff, and faculty. This would also tie in nicely with expanding the emphasis into the arts and potentially journalism.

---

May I suggest the input that the geosciences career fair invites companies that are actually hiring? I am at a loss as to why the Geology and Geophysics department believes it is acceptable to hold an already sparse career fair with numerous companies that aren't hiring. That is like going to a restaurant that doesn't serve food. I believe this is emblematic of the department in general, little to no focus on career prospects. My impression is that the department teaches the same recycled curriculum from last century while believing the false premise that an oil company will pick up the slack and hire graduates for the sole reason of having a degree from TAMU. I understand if this was true in the past but times have changed and this is no longer the case. As you can see from the drastic declines in Geology and Geophysics enrollment at TAMU, people are starting to realize that a geoscience degree mostly qualifies you to be a fry cook at Arby's. Regards, [REDACTED]

---

Agree wholeheartedly with Recommendation #2. Special focus will need to be made on retention of under-represented

students, and should be considered also on a college-by-college basis with respect to general workforce populations.

I am surprised at Finding 4. With the various activities and performances on campus, College Station is a great college town for retirees and visitors to find events of interest to them. If faculty and staff are unable to find these, the question must arise of how involved in campus activities they are. This seems to be more of a communications problem than a physical structure issue. There are beautiful flora on campus. A collected map may be the solution. The campus does not need a museum of natural history (I was just at Texas Tech). This can be better handled through the two municipalities. A Fine Arts Center, however, is a worthwhile consideration. If Rudder is no longer fit for this purpose, its use should be re-evaluated. If expansion or additional buildings are needed to permit students to engage in fine art education, this makes sense.

Creation of a College of Liberal Arts & Sciences will diminish the value of a hard science degree from TAMU. While we love well-rounded Aggie grads, replacing 6 hours of chemistry classes with 6 hours of art or literature classes is not in their - or our, as those who hire Aggie graduates - best interests. Adding 6 hours of art or literature to an already long and rigorous degree plan is equally ill-advised. Putting liberal arts faculty at the head of the college of science is a recipe for accelerated faculty attrition and will hurt your ability to attract world-class scientific talent. I've seen this before, with disastrous results. I'd hate to see it at TAMU. Journalism is a dying field. Media design, production, etc. is not. TAMU does not need a college of Journalism.

Top notch academics otherwise A&M would not be such a top notch college.

Removal on non-related electives and PE courses from degree requirement. As a neuro-divergent former student, I am aware of the student attrition issue for extremely bright neuro-divergent students across the nation in colleges. The requirement to take classes that do not interest or relate to what the student wants to achieve places a huge burden on neuro-divergent students in completing their degree requirements. Also, it imposes a financial burden on all students as college students suffer a debt problem. This also reduces the time it takes for students to get the needed degree for their profession. It took me over 5 years to get a computer science degree because I also had to work throughout college. If I was able to only focus on my field of interest, I could have completed my masters as well in the same period of time. A more focused education benefits all students as they enter the work force because the barrier of entry of knowledge and experience in their field is so high.

I think that this will help students grow.

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens sounds like a waste of investment, money, time, and resources

## Academic and Strategic Collaborations - Other

Please provide your comments related to Academic and Strategic Collaborations:

Cushing Library is a RESEARCH facility and should not become a "museum" with static displays encased in glass and unavailable to students and researchers.

N/A

Agree with recommendation 1 except the incorporation of the Office of Diversity and Inclusion. Agree with rec 2. Agree with rec 3. Agree with rec 4.

NA

How does the Office for Diversity align with this office's "aims to prioritize relationships between TAMU and Texas, particularly the communities where TAMU campuses and programs reside"? Since the Office for Diversity primarily addresses inclusion, diversity, equity and accountability within the institution, it isn't clear how Academic and Strategic Collaborations' external emphasis aligns with the OFD's current work and mission. Further, though investing in cultural centers and similar institutions enriches the entire campus community in College Station, are there Galveston corollaries for such investments? Were the surrounding communities for both the Galveston and Qatar campuses interviewed to

determine their needs and relationship to their respective institutions? The Galveston campus faces many of the same challenges as the main campus where the surrounding community's cultural resources are concerned.

I have been reading numerous posts that some departments don't have a solid student advising system. Students are waiting up to 4 hours and being turned away if they try to talk to them about a graduation plan.

This is one of the more complex recommendation and my question is; are these recommendations full tenable? Here are few specifics I would recommend be considered. - The Becky Gates Children's Center must be closer to supporting our academic early childhood education students and priorities in the College of Education and Human Development. Thanks to the Board of Governors and university administration we have simultaneously made significant faculty and research investments in early childhood education, plus cultivated a very positive collaboration with the Charlotte Sharp Children's center and the public, private, partnership. Bringing these three (two learning centers into our academic program) forms a powerful and high impact learning opportunity to our students and a real focused opportunity for the College of Education and Human Development. - Finding #2 and recommendation #2 are really important and continuing focus our Byrne Student Success Center.

Love "Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens!"

n/c

My company is reaching out to each major College or Agency in order to start the slow process of building relationships, gaining visibility, and then moving to investments. So these findings seem to support a "mission" that would positively impact our mutual success.

none

Recommendation #4: Invest in cultural centers, including a performing arts center, a museum and hospitality center, and campus gardens. Cushing Memorial Library Archives was not mentioned in this section; however, it seems to have appeared on this section's organization chart.

I want to provide the following feedback and information about Cushing which was missing in the report: Cushing has an integral role in the academic mission of the Libraries and the land-grant framework to provide education, programming, and initiatives across campus with a focus on primary resource research. Understanding and participating in primary research is critical for every student on this campus. The University Libraries has been striving to provide primary research in its information literacy program. Though open to the public, Cushing is not a museum. The collections are used and available to everyone. Cushing contains over 337,000 volumes and approximately 18,367 linear feet of manuscript materials. Cushing houses the University Archives, manuscripts, and rare books as well as maps, LGBTQIA+, Science Fiction and Fantasy, Texas, Africana, Gender Studies, and Colonial Mexicana collections. These collections are for the purpose of academic research and instruction. These collections are purchased to be used for active study, research, and as teaching tools. Donors for the University Libraries donate to the Libraries as a whole. There are some donations that are targeted to one of our specialized collections or a specific library building. But all donations come in under the University Libraries name. Detangling donor agreements if Cushing is removed from the University Libraries will be a logistical and legal issue. University Libraries also have strong relationships with donors who donated to other colleges and departments on campus. We are often the chosen location for a donor after they are dissatisfied with the ways another department or college has handled their gift. We can anticipate unhappy donors if Cushing is removed from the University Libraries. Cushing's personnel consists of 4 staff and 13 T/TT and APT faculty members. These individuals are enough to keep Cushing open M-F 8:00 am - 6:00 pm and cover the curation needs of the collections. However, Cushing cannot sustain itself on their personnel alone. There are 9 units in Evans Library, over 50 individuals, who provide necessary operational support to Cushing. Cushing would not be able to function without this level of support. Evans Library is able to provide the support as we have centralized our functions for the purpose of efficiency and effectiveness. Cushing does not have a budget. They rely on 4.5 million dollars of endowment funds, just \$600,000 of which is spendable funds. Evans provides the necessary funds for payroll and benefits, collection acquisitions, facilities projects, preservation, cataloging, digitization, and more but does so with the understanding and belief that Cushing is an important integral member of the Libraries organization and mission. With 13 TT/T and APT faculty in Cushing, I am unsure of how these individuals would retain faculty status if moved to a non-academic reporting line. The proposed Academic and Strategic Collaborations reporting line is not part of an academic hierarchy. There is only 1 administrative position amongst the 13 faculty members. All other faculty members

are non-administrative. Cushing is a vital part of the University Libraries and is supported because Cushing adds tremendous value to the academic mission of the University Libraries. If removed from the University Libraries, it will need substantial investment and time from the proposed Academic and Strategic Collaborations. It is not a piece that can be removed and stand up on its own. It will be costly. I am happy to see the cultural interest in Cushing; though, I want to emphasize that its function is grounded in academics and research with global scholars using our collection to further their research. Over the past decade, the University Libraries have approached previous University Administrators and The Foundation to support efforts to elevate Cushing's academic mission. We were told it was not a priority. I am excited about engaging with the University Administration on how we can keep Cushing within the University Libraries for its academic purpose and further promote and elevate it as a campus destination.

PLEASE invest in cultural centers, performing arts, museums, and campus gardens. As a young family in the community it would be amazing to have more access to these things and would likely retain our family in the area longer. It would be especially helpful for these events to be affordable and accessible and friendly to young kids. My husband, father, and I all work for Blinn and TAMU, and we have 3 kids under 5. We are always looking for things to do as a family, and I would love to expose my kids to more art and culture. We love going to the Leach Teaching Gardens and would love if that were even bigger than it is. My dad has personally served on faculty hiring committees where candidates have been swayed to accept offers from other universities due to the lack of community assets in the BCS area. We need this to continue to attract good talent!

Strongly recommend more participation from current and former industry leaders at all levels of A&M's organization...administration and teaching....especially former students...

As a retired TAMU: tenured faculty member; masters program coordinator; endowed professor; research center associate director, University Grievance Committee chair, faculty senator & College of Architecture faculty senate caucus leader, I have carefully reviewed and reflected on the MGT/M+CG Comprehensive Review Final Report dated 19 October, 2021, and find its recommendations both sound and compelling. Their adoption and implementation by President Banks holds the real potential to enhance Aggie student, staff, faculty, and alumni well being.

No comment.

- Impact to curriculum – Concern that core engineering curriculum hours may take the place of current courses tailored to producing the very best well prepared construction professionals, including the right mix of finance, accounting, management, law, communications, etc.
- Loss of interdisciplinary collaboration with architecture students – the majority of COSC graduates work in the vertical building industries where projects are led by architects (not engineers).
- Impact to the type and character of students we recruit – if admission requirements for COSC students are raised to the standards for engineering students there is a possibility that we may lose “blue collar”, “1st generation” and “make it happen” students. Did you know 24% of the current COSC students are 1st generation minority students?
- CIAC's influence may be scaled back – for many decades the CIAC has influenced the department to adapt to fit the ever changing environment of our industry. The College of Architecture has welcomed and encouraged CIAC's influence on the department, but other universities where the construction department falls within the College of Engineering have strictly limited the involvement of a CIAC. In addition the CIAC supports the department with financial contributions each year that may be re-directed in the College of Engineering.
- Impact to the faculty – Many of the best COSC faculty members are former industry members who do not hold doctorate degrees. There is concern that the College of Engineering may steer toward faculty with academia tenure and certification rather than industry experience.

I am all in favor of increasing the relations between the university and the local population, but does everything have to be done on the university campus? We already have three theaters; what additional facilities are needed for the performance arts center that is recommended? No details are given. Similarly, there are several museums locally, as well as art galleries in the MSC. Do we actually need another museum on campus? What would it showcase? Again, there are no details. It seems to me that there is potential to expand the existing Brazos Valley Museum, rather than build an additional one on campus, and that this might be a better way of integrating TAMU with the local community. Certainly performing arts can be greatly expanded. When I first arrived in College station, there were regular performances by students that were advertised widely and drew local support. Now, I have no idea what, if anything, is being done in this vein. I have spent time at Louisiana State University, where there is a thriving music department as well as a very good stage performance department. As a result, students put on numerous concerts, often as part of their final degree, and stage shows. This also comes under the Academic Realignment section of the report. As I have not been involved directly in student recruitment, I cannot really comment on the suggestion to establish a specific office for this purpose.

Students either come to TAMU primarily because of family ties, or because they want to study a specific subject and we have managed to convince them that TAMU is better than elsewhere. This requires members of the individual departments, who know the requirements and can give personal anecdotes, to be able to speak to potential students, rather than centralized office personnel who do not know how each department operates.

Professors who don't respond to student emails and/ or calls MUST be terminated. Of my son's 4 professor's only 2 responded to my son and Dr. Scott's communications....an absolute sham when our money pays their salaries. The pandemic along with social media have really brought this wide spread issue to light across many different majors/depts.

In my previous experiences as a program officer with a large Texas-based private foundation, I, and many of my colleagues in the foundation community, were always curious as to why TAMU did not seem engaged in important matters concerning the state (education issues , in particular). TAMU appeared too closed and insular for an institution with such status and potential. The new Academic & Strategic Collaborations unit, and its proposed responsibilities as articulated in the report, provides TAMU a significant opportunity to appreciably engage important external constituencies. In my view, this is a major advancement toward leveraging TAMU's intellectual and community service/engagement horsepower to bring it on par with what I see as Texas' most engaged university--UT Austin. The VP appointment was a superb choice!

Make sure students have advisors and required minimum meetings per semester

N/A

My only comment here is that any additional focus on student recruitment and retention must be backed by additional scholarships and financial aid programs. The college-aged population right now is highly aware of how expensive a college degree is, and no amount of restructuring, focusing on underrepresented areas, or leveraging connections will change the reality of high tuition costs.

You should try establishing an online version of Texas A&M similar to Purdue University Global, University of Maryland Global, Colorado State University Global, and University of Arizona Global. This way you can establish Texas A&M programs that are accessible worldwide so anyone can be an Aggie. I originally wanted to go to Texas A&M but I decided to take an ediscovery program at Texas A&M International since it was online and less expensive. If Texas A&M offered online Associates, Bachelors, Masters and Doctorate programs like the ones at Purdue, University of Maryland, Colorado State University, and University of Arizona, I would be more interested to attend Texas A&M along with thousands, if not millions of other prospective students.

The gap between what's being taught in college classrooms and what's going on in the professional world seems to be ever-expanding. Which is probably why trade schools are growing exponentially. For example, some people don't want to sit through a class on Medieval Philosophy and Ballroom Dancing as a requirement for a construction science degree. For me personally, what I was being taught in the classroom and in design studio had almost nothing to do at all with real-world professional architectural practice. I would like to see more classes taught by professionals in their fields. Not someone who's been a professor their whole career and merely read about something in a book.

I think the college needs to remain separated. For starters it is already next to impossible to get into the college of engineering with excellent scores and grades. Also the college of engineering does not allow you to go into a specific major until after your first year. A&M has a very high ranking for both colleges, why rock the boat and change now.

Ag has centralized advising and computer support...this has been bad for students, faculty and staff...administration never understands the impacts of consolidation of services since their needs are always given priority. Faculty are reporting problems getting served and the inability to develop sustained relationships with particular computing staff members. Advising needs to be as close to the students/depts as possible...in RPTS my home dept, advising was a key strength developed through personal relationship between faculty, staff and students. Again, A&M is a huge place, centralizing will only make it seem bigger.

This segment seems like a waste of money.

TAMU is surrounded by other system member agencies in College Station yet there seems to be little effort in collaborative research and education efforts. Particularly looking at the areas of emergency preparedness and response it seems like a greater partnership between TAMU, The Bush School, and TEEX could open many doors. Specifically while there are emergency management, fire administration, and criminal justice degree programs in the broader TAMU

system very little effort has been given to bringing those programs closer to one of the nation's principal training venues at Brayton Fire Training Field. Furthermore since TDEM is now a system member working together to further the amount of qualified emergency management practitioners in the state would only further aid the system as a whole. Beyond the system there have also been numerous fire service studies conducted by UL/NIST with the University of Illinois and Illinois Fire Service Institute, why not get involved in this lifesaving research when TAMU and TEEX are literally across the street from one another.

Having three Aggies in the family get educated in this institution within a span of thirty years, I most definitely agree that it's time for more diversity and opportunities for minorities in order to reflect the Texas population.

See above for the provost comments

None

Why does TAMU need to expand the liberal arts offerings such as fine arts and journalism. Shouldn't Texas A&M focus on the A & M of agriculture and mechanical? Let other schools focus on liberal arts and A&M should not have to literally be jack of all trades.

I think you need to clean house or educate your staff.

I was a student there and I feel that there are no paid academic advisors to the students. I had EXCELLENT ADVISEMENT IN THE LATE 80s. We do not need a college student advising our student. A paid professional or advisor to accurately guide and ADVISE is needed. My son made poor choices based on other students advice.

This is an excellent idea and could further much needed collaboration on campus.

Let's have students in person in classrooms with real professors. Online learning is not what college should be about.

Excellent

## Q41 - Please provide your comments related to Academic Realignment:

### Academic Realignment - Faculty

Please provide your comments related to Academic Realignment:

I am very supportive of the idea of creating a Department of Journalism. It is long overdue and you are wise to propose it. The low graduation rates in the last two years are related directly to the constraints created by having to work with a University Studies Degree, with having only three faculty, and without a School of Communication and Journalism. When Communication took over the Journalism program, it was in some disarray. There were only two dozen students so that accounts for why there couldn't have been more graduates. There weren't any students to graduate. In the short two and half years of association, the number of students has almost tripled. There hasn't been enough time to see those students graduate. Please don't let two years of data define the accomplishments of the association of Communication and Journalism. A School of Communication and Journalism continues to support the excellent synergy between these two programs. We salute the forward thinking leading to the restoration of the degree in Journalism. By taking the next step now and putting the two programs together in a School of Communication and Journalism, Texas A&M University will step up to the next level to be on par with other well known programs in the State and with other peer-programs nationwide. We want to stay together and we will continue to do great things together for the students and citizens of the State of Texas.

I am troubled that the report said that ten or twelve of our peer institutions have a College of Arts and Sciences, which means we should have one. I see no rationale, no appreciation of the complex intellectual and administrative needs of the proposed individual colleges. Even within Liberal Arts, opinion is divided. It might be productive to realign colleges and departments. I am completely open to thinking about that. But any kind of a realignment cannot even be imagined without faculty and deans at the helm. Frankly, the proposed merger appears as an effort to throw three together three colleges for which the administration has little use.

I like the proposal of relocating the Department of Visualization to the new School of Visual and Performing Arts. This will be a great synergy to a lot of collaborations among art-related departments at Texas A&M. The Department of Visualization has lots of limitations within the College of Architecture. The Visualization Department is unique and should have lots of supports from the College but the current college is not flexible to creative/experimental research activities. The ITS always sets constraints related to using the system, network, etc. Many times we had to give up things because of a lack of support and constraints. However, I also have a big concern about how this proposal will be realized. I really hope we will have a good support university (financial, spatial...etc.), and the transition will be smooth. I am the director of the Institute for Applied Creativity (IAC). I became a new director starting on September 1, 2021. I am a faculty from Visualization, and the IAC is under the College. If I move to a new College, will the IAC move with me or do I lose the institute? I believe that the IAC should move with me to the new college.

I believe the idea of a School of Arts is misguided, and the idea of putting Visualization into this school shows a misunderstanding of what has made the Viz program so successful. Rather than the envisioned "infusion of STEM" into other art fields, doing this is likely to kill the technical side of Viz; I expect Viz would lose some current faculty and be unable to recruit strong technical faculty in the future. More fundamentally, I don't see an Arts school as a priority, given the woeful lack of resources in other existing areas. I think the idea of building up Journalism is extremely poor. Journalism as a field of work is dying, not growing, and students really interested in this field already have a route to a degree. I would like to know how many of the 492 journalism graduates from UT and UNT last year got jobs in journalism. I imagine it is a small percentage, making me wonder why we would be looking to further flood the market. If I am incorrect, and there is a surprising demand for journalism majors that I'm unaware of, I retract this.

The Libraries would lose its independence and ability to serve the entire campus with equity if placed under another college. The Libraries is intended to serve all patrons, faculty, and departments with equity, and it would not be able to fulfill its mission within one college. Additionally, the Libraries is not a Library School and does not have the personnel or capacity to switch to offering Library Science degrees.

There seem to be many things in the report not supported by quantitative data or the type of documentation that would be expected in peer review. Certainly the biological sciences continue to rapidly evolve and realignments should be

periodically considered. However, additional realignments will likely be needed in 10 and 20 years, so that's one reason to proceed carefully. I think that removing biology from the College of Science is damaging. Overall, the report seems to be written to what I perceive as vice Chancellor Stover's wishes, as opposed to balanced input from the broad community of stakeholders. The proposed Arts and Sciences colleges will suffer in many respects. Due to the 3-4 differing cultures represented, there will need to be a broad layer of Associate Deans and probably more bureaucracy as opposed to less. As a pilot, the merging of the College of Geoscience and the College of Science could be carried out.

I believe strongly that removing the Construction Science department from the College of Architecture would be a dreadful mistake.

Finding #6 - Librarians at Texas A&M are already teaching in courses via collaborations with the instructors across many, many disciplines. We do not have a dedicated 'library' course, but we work with instructors to integrate information literacy in courses. The description of developing a degree program in library science seems to misunderstand the function of library science programs. Universities that have library science programs are focused on educating and developing more librarians and archivists. These programs (and their faculty) exist apart from the campus library and their faculty & staff. Though sometimes the campus library faculty may teach occasional courses in the library science program, the library science program faculty do not work in the campus library. It is unclear from the report if the development of the degree program would result in recruiting specific library science program faculty, but in order to be a competitive program the university would need to consider that. Additionally, the library market is fairly saturated, and if the university is serious about beginning a library science program, it should conduct a deeper analysis of the market. A bachelor's in information science could be valuable, but may compete with already existing degree programs at the university. My second concern with this is that this finding also suggests merging the University Libraries with the new College of Arts & Sciences. Currently the University Libraries collect and make accessible materials for ALL of campus, and controlling our budget allows us to make evidence-based decisions about our subscriptions, collections, spaces, personnel, and other resources. Putting the University Libraries under a single college could hamper these efforts, either in actuality or in perception. The faculty and staff of the Libraries work hard to be a hub for ALL, and the optics of a single college reporting structure is not ideal.

This section has sweeping changes. I appreciate the emphasis on building a stronger performance environment and highlighting arts in the area. This is definitely needed. But, the creation of 4 gigantic colleges and then leaving the others as very small raises concerns about how funding and resources will be distributed. There is no discussion of how Dean's of these various smaller colleges - Architecture, Bush School, Mays, Education - will be able to operate within an institution dominated by 4 gigantic colleges. Further, I don't see how having those gigantic colleges supports students. The evidence is mixed in the report as to what comparative universities have along these lines. Furthermore, these smaller colleges are not just applied as is commented in the report or should not be focused solely on putting out very specific workers for Texas. All these colleges do fundamental science. The emphasis for what will become a second tier of small colleges doing "applied work" will degrade the ability to attract strong faculty (who ALL do research) and thus weaken those educational programs for students. I, in fact, am one of those faculty who may choose to seek employment elsewhere if the emphasis on research is taken from our college. It seems some of these suggestions were made without adequate understanding of these colleges. For example, the description of the college of architecture is wholly inaccurate.

First, I want to make anyone reading my comments aware that I am a first-generation Aggie, an alumnus that graduated with a Master of Science in Building Construction in 1983, worked in the construction industry for more than 40 years, a senior lecturer in the Department of Construction Science and I am pursuing my masters in Construction Management in our Department currently. My comments relate to the last two sentences of Finding #9, "There are three Colleges (Veterinary Medicine, Architecture, and Education) where a renewed focus on mission is needed to meet the needs of the state and position themselves to increase in national rankings and reputation. Four actions are recommended to address these issues and refocus education and research activities appropriately." This Finding boils down to a generalized statement that affects the College of Architecture and that resulted in "Recommendation #9c: Refocus the College of Architecture on the core mission of Architecture and Landscape Architecture/Urban Planning" and this recommendation was defined as "To assist with more focus in Architecture and Landscape Architecture & Urban Planning degrees, relocate the Department of Construction Science to the College of Engineering and the Department of Visualization to the new School of Visual and Performing Arts in the College of Arts and Sciences" And lastly the last paragraph of, "Rationale #9C The Department of Construction Science is nationally recognized as a top program by the construction industry. There are significant connections between this department and the Department of Civil

Engineering, Department of Mechanical Engineering, and Department of Engineering Technology. Also, research connections with the RELLIS campus and the Center for Infrastructure Renewal provides avenues of collaboration with the Texas A&M Engineering Experiment Station. Moving the Department of Construction Science to the College of Engineering will enhance the educational experience and research potential for faculty and students in both organizations." So, what has been done is summing up the entire Construction Science Department in less than two hundred and fifty words, for a program that Martin+Crumpton Group LLC obviously knows nothing about and could really care less. For a program that has continued to grow and improve over several decades of time. Well I want to tell whomever reads this report that I have asked alumni, I have asked professors, I have asked students, I have asked persons in the construction industry, if they had been asked to participate in the initial survey and I could find none. The only person that I know that participated in the report was the Dean of the College of Architecture. The results of this report are a death sentence for the program that I attended as an undergraduate, I participate in as a CIAC member, I participate as an alumnus, that I currently work at, that I currently attend as a master student and that I love dearly. This report states that "The Department of Construction Science is nationally recognized as a top program by the construction industry." This statement in itself should merit the question, why change what is great? The department is great and probably the best in the United States! I do take great exception to the next statement, "There are significant connections between this department and the Department of Civil Engineering, Department of Mechanical Engineering, and Department of Engineering Technology." I have worked in this industry for over forty-five years and this is not a true or factual statement and instills the fact that whomever wrote this report knows nothing about the Department of Construction Science! The architects that we work for or with are the ones that work directly with the engineering companies. I also know that the engineering school already has a Construction Management and an Architectural Construction degree. I am assuming that these degrees will address the construction companies that work with the engineers directly. I was even told by Exxon recruiter that they are now come to our career fair because engineering is no longer producing students that have the ability to cost, or schedule, or manage their build projects. I have addressed this with my heart, going out to our students that are already treated like second class citizens by the engineering students. What is it going to be like if we move from Architecture to Engineering, will the entire department be treated like second class citizens? What will change, will we be able to work as we have with the College of Architecture in not trying to make architects out of our students, but to be allowed to teach them what they need to be successful contractors? I love Texas A&M, but I love the students more. I hope that wisdom will prevail in doing right by the Construction Science students. I will let others quote the statistics, but some time the heart and logic behind what is planned must be taken into consideration. Based on my comments, I would hope that the Department of Construction Science will be allowed to remain in the College of Architecture and that the University provide needed support to help improve the College of Architecture to the expected levels. If the college fails then look at assimilating the Department of Construction science into the College of Engineering. Let's remember the quote from Stan Marek '69, Marek Brothers Systems, Inc. "Our Aggie grads are second to none, and the quality keeps getting better." Thank you for allowing me to express my thoughts!

the most offensive part of the report was calling the incredible students that are University Studies Students - unqualified for a major within a college. This is absolutely untrue. To force this into a college of arts and sciences only is not bringing this program to its greatest potential. One of the greatest parts of this report is the idea of ARTS - although, i am not sure this is the home...a College of Arts and Sciences. Maybe this could be part of the College of Architecture. it could be a College of Art, Architecture and Construction. the performing and visual arts would blossom. It there would not be a tenure concern for faculty across a college that ranges from science to art. What makes the Department of Construction Science as successful and to have climbed to the top construction science program in the country was it's separation from the College of Engineering. What has made this program successful will not be successful within the College of Engineering - the character of the student will not be the same student within the College of Engineering.

Regarding finding #2 as a member of the visualization department I see AMAZING opportunity HOWEVER I am concerned as the mechanics of putting something like this in place. Right now, as a department, we have new leadership, we lost a lot of full professors to retirements, leaving gaps in expertise - to be successful we would need to approach such a change with careful thought to the structure and leadership organization. I believe we would need 1. a large injection of funds to recruit AND retain existing faculty 2. Ample resources including SPACE 3. Engagement from industry and the community 4. LESS burden on faculty and staff than currently exists 5. A clear path to tenure and promotion I also wonder why move Viz out of Architecture at all - why not strengthen the existing interdisciplinary

collaborative environment and establish new departments for performing arts HOUSED in COA VIZ exists BECAUSE of Architecture - we have the potential to elevate COA - with renaming and rebranding but keep the existing four departments and add more.

---

Academic realignment is best left to faculty. You wouldn't have MBAs do a reshuffling of cardiovascular surgeons. Why reshuffle departments that already know what they are doing?

---

1. While intrigued about the implementation dynamics, the emergence of a super college is not likely to work well. The benefits of standardization, especially advocated by APTF, are obvious; however, the mixing of college cultures would probably paralyze any dean trying to manage this. The idea that a Art/Science College would be a major quad-legged of stability assumes Agrolife and Engineering are willing accede their special status. 2. Im particularly worried about losing the "Geoscience" culture, and for better or worse, the college maintains a green/environmental attitude that isn't apparent anywhere else on campus. They have a positive and necessary focus (for the Earth's future) and I doubt it can survive the transition. 3. The cherry-picking around Architecture and Bush School programs are odd; we had a Journalism department and it imploded; library services are hard to situate and most librarians are not tenure track, so not sure they would excel in a large college.

---

The proposed academic realignment is highly disruptive and as such has the potential to significantly undermine the research enterprise of the university. Moving the Biomedical Sciences Undergraduate Program from a home in which it has been highly successful has the potential to disrupt the recruitment of Aggies to the health professions schools. Currently the BIMS undergraduate program provides over half (55%) of the Aggies currently accepted to medical school and 45% of the Aggies accepted into dental school. A significant reason that this program is successful is that it is taught in a professional school by professionals (DVM, MD, and other doctorates that require licensure) who also have PhD degrees. This is critical for providing the mentorship students need for successful applications to Texas professional schools. Changing this model has the potential to lower the recognition and reputation of the program. I write this as a former BIMS student. I do not teach in the BIMS undergraduate program. Current BIMS students also feed into the current research and graduate programs within the College of Veterinary Medicine and are a key component of our research success. If the BIMS undergraduate program is moved, it is crucial, to ensure success of future students, that it includes a significant percentage of instructors with DVM, MD, and similar degrees. The proposed movement of the libraries has the potential to significantly undermine the accreditation of the degree granting programs within the university. An independent library system, belonging to no single college but to the university as a whole, is absolutely crucial to our success when we are compared to peer institutions during accreditation processes. We currently have a world-class library that serves as a repository for federal government documents as well as serving as a resource at the state level. Moving the library into a single college will create significant confusion during accreditation visits and undermine our ability to successfully compete with peer and aspirational institutions.

---

Of all components of the MGT Report, this section was the most nonsensical. The proposed College of Arts and Sciences would become quite large, the College of Education would be split in half, the College of Engineering would grown even larger, while the tiny College of Vet Sciences would get a new building. There is no clear logic with respect to why any of this is necessary.

---

The report failed to mention the sizes of the peer-institutions that house their schools of liberal arts and sciences in a combined college. This recommendation makes no sense for Texas A&M. I attended a large private university and graduated from The College of Liberal Arts and Sciences. They split into two colleges, Science and Liberal Arts after I graduated. It has remained that way for over 30 years, even after undergoing a deliberate contraction. A public institution I also have a degree from, has a College of Natural Sciences as well as a College of Liberal Arts, despite being much smaller. That school has eight colleges that are balanced in size including Veterinary Medicine and Biosciences. I think that aggregating colleges sets up an imbalance among the goals and practices within that college as the requirements for tenure would be very different for a science faculty and an arts faculty. Resources will always be given to the more financially-successful sciences faculty at the expense of the arts faculty. Keeping biology faculty in the College of Science can help to prevent any perceived need for realignment.

---

Recommendation #1: Combine the College of Liberal Arts, the College of Science, and the College of Geosciences to create a new College of Arts and Sciences. This recommendation is motivated by the finding that a majority of peer institutions have colleges that combine liberal arts and sciences, and that such a combination will provide stronger advocacy for liberal arts education. This would mean that my department, Atmospheric Sciences, and the other departments in the College of Geosciences would become part of a much larger college. If the recommendation is accepted, it would still be worth preserving some aspects of the shared scientific culture of the geoscience departments

by forming a School of Geosciences within the larger college. The four geoscience departments, Atmospheric Sciences, Oceanography, Geology & Geophysics, and Geography, all share long-standing teaching and research-related collaborations that are worth preserving and nurturing. These departments have also invested considerable effort in the recruitment of undergraduates to the geoscience degree programs, and maintaining that strength in the new college structure would be important.

I think that the realignment towards a college of arts and sciences is not sufficiently argued. There may be cost-savings and, especially, that other universities have this alignment is not adequate motivation. A related issue is the suggestion to detach Biology and Political Science (perhaps Economics and International Studies) as well: what kind of normal college of arts and sciences is left? On the other hand, I very much support the idea of developing performing arts on our campus. The cultural environment is not only poor, it is markedly poorer than when I arrived here 35 years ago. I agree with the notion that students should have these outlets available as a part of a normal education. While some of us may wonder how to obtain the funding necessary from other ongoing programs, I hope they will be made the focus for solicitation of support from alumni, etc. The suggestion that we centralize advising is a silly one. Our departmental advisors struggle to understand the courses we teach, as it is; if realigned, there would be much more misinformation. Surely there is an easier way to facilitate alteration of majors, etc., although I welcome the philosophy that motivates it.

Although the rationale for all these changes seems to be efficiency, it is never stated how much these changes will save and how they will do so. Also, the costs of the changes on the functioning of units smaller than colleges is not even mentioned. This assumes that moving units around the organization will have no negative impacts whatsoever, which is not an assumption a large private company would ever make, so why is it made in relation to a university? Why is there no explanation of the problem that these changes are supposed to be addressing, and no mention of how much would be saved? Merger of Soc Sci with Natural sciences: leadership must recognize both types of work as equals. It can't be led by someone using the natural sciences way of doing things as the 'norm'. Also, social sciences do not want to become service teaching departments. The functions of DOF currently include advocating for faculty. Where can grievances and advocacy be effectively carried out in the new Faculty Affairs Unit? This move could backfire if it is not recognized that there are areas where morale is poor.

In relation to recommendation #6 under Academic Realignment, there are some recommendations concerning the Libraries that many faculty within the library support -specifically related to providing class instruction - but, the report also includes recommendations that make clear that the consulting agency is unaware of the governing ethics and best practices of the librarian profession. On the instruction front, within the Libraries is a unit focused on providing critical literacy instruction, Learning & Outreach, this unit has clamored for the opportunity to provide for credit information literacy courses and is well developed to do so. This unit would also be able to organize librarians from other library units who also wish to provide for credit instruction. Not all of our library faculty desire to provide for credit instruction and nor should they, in order to become traditional faculty instructors, librarians would need to have large portions of their defined responsibilities reworked. In our current setup, 60% of our time is credited to "Librarianship." Librarianship encompasses a large workload including, instruction (yes librarians already spend a ton of time guest teaching!), reference and consultation (which is just one-on-one instruction), collection development and management, cataloging and metadata, digital projects, etc. If the librarians are redirecting their time to traditional, credit instruction that workload will still exist and need to be managed. Librarianship is a profession, managing a library takes professionals. An inaccuracy in the report I would like to highlight is that the Libraries, Writing Center, and tutoring services have a long-standing collaboration and do indeed regularly work together – which the report suggests we do not. The Writing Center is literally located inside the libraries and situated in a learning commons style space that tutoring is offered out of! I have major concerns on removing the University Libraries independence as an entity and placing us under a specific college. This will create a bias, whether it is just perceived or a reality, that the Libraries provide preferential collaboration with the college they are housed under. The University Libraries faculty are interdisciplinary with subject expertise that cross all fields of study at the university. In addition to placing the Libraries under a college, a recommendation has been made for offering a BA in Library Science – to put it bluntly this is a cruel degree to saddle anyone with, a Library Science BA does not prepare an individual (nor credential them) to work as a librarian and many MLIS programs prefer their students to have their undergraduate degree in a specific discipline which would develop their knowledge in support of the area of librarianship they are looking to enter. Additionally, Texas does not need another library science program, there are already three accredited in the state and a number of un-accredited programs. My suspicion and fear, is that this report is the first steps towards removing tenure and even faculty status from the

Librarians. The Libraries are an integral part of the university and having faculty (and tenure!) status places the Librarians on equal footing with our professional colleagues across the university. The University Libraries has one of the highest scholarly outputs in the field and our faculty are nationally and internationally recognized for both our research and service. I understand that it is easy to “other” Librarians because we don’t provide traditional instruction at the university and as a college don’t generate revenue through enrolled students. However, through our collaborations and guest instruction we elevate the education of Aggies, we bring a strong skillset to interdisciplinary projects, and we collaborate with and provide instruction to our faculty colleagues from across the university advancing research and grant projects.

It would be sad to see Mays Business School lose its identity when it has such a strong reputation with successful and recognized programs.

I am a tenured Associate Professor in the Sport Management (SPMT) program in Health and Kinesiology (HLKN). I have been at A&M full-time for 23 years, and taught as an adjunct for almost 10 years prior to that. By service time, I am the senior faculty member in SPMT. I have been here throughout the struggles and accomplishments of building what we believe is the best SPMT program in the country. I must start by saying that I am surprised, and extremely disappointed, that our Division has been recommended to be transferred to the School of Public Health but not a single one of our 20 faculty members was interviewed before the recommendation was submitted. I wonder if the consulting group even recognized our program as a member of HLKN, had any interest in learning about our program, or just assumed that only the Health and Kinesiology programs were located here due to the name of the Department. I would have expected someone to reach out to us in order to learn about, and understand, our Division. We are the largest strictly SPMT program in the country, and are clearly in the top five along with our aspiring peers: The University of Florida, University of Massachusetts-Amherst, and The Ohio State University. Other programs could argue they should be among that group, but these four are clearly head and shoulders above the rest in reputation among the over 400 SPMT undergraduate (NASSM, 2017) and 272 Master’s programs (NASSM, 2015). We currently have 650 +/- UG students, 150 +/- MS students, and 20 PhD students. In addition, we provide classes for 200+ minor students. We have recently revamped our new curriculum in the UG program based on feedback from numerous sport organizations who hire our students. We believe it is the best curriculum in the country to prepare students for employment in the industry. Among our target employers are all the professional sport organizations in Texas, as well as numerous college athletic departments and conferences. A recent survey demonstrated that almost 20% of the A&M Athletic Department employees have earned a SPMT degree from our program. I am concerned that placing us in the School of Public Health would harm our reputation. I am concerned about our students’ job opportunities in sport when trying to explain their degrees came from a School of Public Health (which has no connection to SPMT). I researched where SPMT programs of our aspiring peers were located in their respective campuses. Only 20% are located in Departments associated with Health. The majority are in Colleges of Education or Business. The other three top programs are located in Education (FLA and tOSU) or School of Management (UMass-Amherst). The results: Location of SPMT Programs in Aspiring Peer Institutions

Institution	College	Home
Florida State U.	College of Education	Ohio State U.
College of Education	U. of Florida	Health and Human Performance
U. of Illinois	Applied Health Sciences	U. of Massachusetts - Amherst
Isenhardt School of Management	U. of Michigan	School of Kinesiology
U. of Minnesota	College of Education and Human Development	U. of North Carolina
Chappell Hill College	Arts and Sciences	U. of Texas
College of Education	UCLA	School of Management
Education 4	Management 2	Health / Human Performance 2
Arts & Sciences 1	School of Kinesiology 1	

Indicators of Program Excellence: Employment Opportunity/Placement: Among our peers, we have probably the most outstanding list of approved internship sites, such as the NFL, NBA, MLB, MLS teams, College Athletic Departments, the NCAA, College Athletic Conferences, U.S. and sectional Golf Associations, sport marketing outlets, and many more. In this regard, we are preparing the citizens of Texas to find suitable jobs in their chosen fields, in compliance with our mandate as a state flagship school. We also have a significantly diverse pool of students and faculty. International Impact: Due to our connections internationally, we have created an incredible array of partnerships with sport organizations. During the past 14 years of international education abroad programs, we have been able to create partnerships with these and other organizations: • Adidas (where we visit their home office in Herzogenaurach, Germany) • Red Bull (we are the only educational institution that they host in their home office in Fuschl am See, Austria) • International Paralympic Committee in Bonn, Germany • Bayern München soccer team in Munich (the 10th most valuable sport franchise in the world – we are the only educational institution that they host in their headquarters) • Deutsche Sporthochschule Köln, the largest sport University in the world, where we participate with their SPMT program in a reciprocating workshop each year Faculty Accomplishments: Two of our 10 tenure track faculty members have been awarded the highest honor

in our international association (North American Society of Sport Management). Six of 10 are Research Fellows in our professional associations. Numerous faculty have received teaching awards from the College, University and Association of Former Students, as well as the George H.W. Bush Presidential Library Foundation. Student Volunteer Opportunities: Organizers of athletic events regularly, and consistently, seek our students to volunteer in events such as both College Football Playoff championships, Men's and Women's "March Madness" championships, Cotton Bowl (13 consecutive years, which includes making marketing presentations to the Board of Directors after the event), numerous events on our campus, etc. I must admit that I am not familiar enough with the organizational structure of A&M to suggest where we might be a good fit. What I do know is that there seems to be no nexus between a SPMT program and a School of Public Health. I would be concerned that our peer institution colleagues would see this as a message from A&M that our SPMT program is not valued or supported in a manner befitting our reputation. I would hope that we can engage with the consultants to determine a fit that might be appropriate. Of course, I would argue a Department of Sport Management would be the best solution to allow us to further enhance our international reputation. In summary, I am primarily hopeful that our placement in the University does us no harm. We have labored long and hard to build the best program in the country, and I am hopeful that we will be able to continue to be recognized as such. I do not believe entry into the School of Public Health is that location. Finally, let me extend my appreciation for the opportunity to submit my thoughts about the draft report.

---

With academic realignment I can see the connection in some of the recommendations made. My concern falls with HLKN having the suggestion of moving to the School of Public Health due to a small overlap in degrees. I recommend that HLKN should become a school of its own due to the size of our department and the infrastructure we already have in place with 4 main divisions: Health, Kinesiology, Sport Management, and the Physical Education Activity Program. These 4 academic programs are tied together for a reason because

---

Although I do not oppose in principle the Merger of College of Science, College of Geosciences, and College of Liberal Arts, with inclusion of University Libraries and (proposed) School of Visual and Performing Arts... it is difficult to provide feedback on the recommendations when so little is known about the structure of the proposed College. What is the timeline? How would it be organized? What would reporting chains look like? It would seem important to me that the different components (Humanities, Social Sciences, Geosciences, etc...) of the new college were given an associate-deanship to represent their interest and work directly and closely to the Department Heads...among other things, to make sure that the different disciplinary expectations and methods for research and teaching would be still protected in the context of tenure and promotion considerations and beyond. Also it seem important to me that the centralization does undermine the principles of faculty governance and academic freedom. As faculty member on International Studies, I strongly oppose the idea of moving INTS to the Bush School and I want to emphasize that the strength of our department depends on the fact that our student receive a strong humanities based education in critical thinking, reading, and writing. The key of the success of our cooperation with the Bush School lies with the profound differences and independence of the two units and a merger would negatively affect students' preparation.

---

Why is bigger better? The main rationale for this realignment seems to be that bigger is better. It isn't clear how creating a College of Arts and Sciences will create stronger advocacy for liberal arts education at TAMU. A School of Visual and Performing Arts is a good idea, but the Department of Visualization certainly doesn't belong there. Regarding journalism, this is where the consultants clearly did not do their homework. Journalism has thrived since rejoining the Communication Department, and most newer journalism programs are housed in Schools of Communication and Journalism (e.g., USC Annenberg). A stand-alone journalism department makes no sense whatsoever.

---

I am not convinced by the rationale for the merger of the Colleges of Liberal Arts, College of Science and College of Geosciences. Even with peeling off certain departments from the existing colleges, this will become a mega-college, and it's unclear how this will work structurally in ways that will promote the projected big cost savings. There are serious concerns about how tenure and promotion, awards (like FDL) and funding would work in this new structure. The restart of a Department of Journalism is a high cost (and ironic, given our past dissolution of the department) proposition. Provide funding for new lines in English and Communications and work out the requirements for a journalism certificate or degree without the expense of a new department, especially one in a discipline that is changing daily. I support a School of Visual and Performing Arts, but I am really uncertain that cost savings in other areas will fund this worthy and expensive venture.

---

The move toward a College of Arts and Sciences makes sense in the context of peer institutions. My strongest hope is that the leadership understands the strengths offered by the humanities and social sciences, which has not always been the case at other institutions I've worked for with a similar organizational structure. I am worried that some of the

recommendations are just poorly researched. For example, Journalism has been growing significantly since being taken over by the Department of Communication, which is evident from the data of enrolled majors (rather than looking at outdated data about graduates). The recommendations seem to be made in a manner that is detached from the best evidence, from the history of the program, and from the demands of key stakeholders who are actually involved. I worry that a similar overlooking of history is at play in the recommendations about Performance Studies, which has only just begun its process of developing as a strong academic program beyond performing arts.

---

p. 25 Recommendation # 2: create a School of Visual & Performing Arts within the proposed CAS. While the Visualization Program in the College of Architecture may have been 'limited' in its growth, those limits are imposed by enrollment caps and faculty, not by its presence in the COA. The CAS context with a new School of V&PA does not necessarily offer more faculty lines, studio spaces or incentives to grow the program. The new CAS would love to have the Viz Program since few of their majors are growing and VIZ is a growth program. The limits to VIZ are from leadership and administration and classroom and faculty availability, not from its presence in the COA. p. 32 Recommendation # 6: Merge University Libraries into CAS and create new Dept of Library Science Reference was made to the University of Oklahoma's Library Science undergrad and grad degrees. Having been a faculty member for 9 years at OU and Chair of the Library Advisory Committee for 5 years, I can state from experience that having faculty lines in the University Library is not recommended. If TAMU wants a new department of library science, then create one. The primary issue at OU was that tenured faculty in the University Library were slow to adapt to changing library standards and roles. The Dean of Libraries was able to hire new younger staff with the vision, skills and enthusiasm to create a new University Library. The tenure library staff were not participants in that new vision at all and were most often recalcitrant and complaining Luddites to the process. p. 36 Recommendation #9a: move University Studies degree to CAS It is unclear why the consultants would consider University Studies majors to compromise the 'focus' and be a 'distraction' from the College of Architecture's mission. The purported connection of the Core Curriculum to University Studies is unclear and not real. Every student adheres to the Core Curriculum, regardless of major. The University Studies in Architecture students in the COA are delightful, smart and enjoy their courses. I've taught many of them and see no reason why their academic home should be moved to CAS. Unless CAS doesn't have enough to do? Then that is a staffing issue for the CAS, not University Studies majors. p. 37 Recommendation # 9c / Rationale # 9c: the inability of the Department of Architecture to improve its rankings has nothing to do with the other departments and majors in the College of Architecture. The inability of the faculty to accept leadership and change is the issue. For nearly 15 years, the Dept. of Architecture had interim department heads because no search for a new department head was successful i.e. the faculty didn't want to accept anyone who might foster change in the department. Don't use that situation as a rationale for blaming 'lack of focus' on the College.

---

I am providing my feedback based on the direct knowledge, experience, observations, and understanding of TAMU and TAMUS I have gained from administration, education, research, and engagement. I have structured my response around five areas of concern. Area of Concern No. 1 As I learned when I first became dean, one of the pillars of strength of TAMU has been the "strong college model" under which the university has operated to date. This is reinforced by the fact that, despite the changes in leadership at the president and provost levels, TAMU in general, and the COA specifically, have been on a steady trajectory to the highest levels of student success (currently, the highest student enrollment, with 73,284 students in Fall 2021), faculty excellence (especially in research expenditures, with \$1.13 Billion in FY2020), and impact to the State, the Nation, and the World (as a land grant, sea-grant, and space grant institution). Given these successes of TAMU, and after reading the report thoroughly, objectively, and in detail, and based on what the consultant team was charged to do – "...to identify changes that would restructure TAMU in a significant way to increase effectiveness and transparency and to contribute to overall student success...", I have two initial questions, for which the consultants do not provide an answer explicitly in their report. These questions are: Ø What are some of the specific drivers that prompted this "high-level, comprehensive review of... the organizational structure of central offices at the executive level and administrative units at the college level..." at TAMU? Ø What is currently so broken at TAMU that merits the magnitude of the sweeping and significant changes recommended? Area of Concern No. 2 Based on my direct personal experience and professional opinion, I have serious concerns about the rigor, depth, breadth, objectivity, and quality of the findings and recommendations of the report. The consultants' make the assertion that "...over the course of three months, the consultant team conducted more than 60 in-depth interviews with key university leaders, strategic surveys of university deans and vice presidents, faculty and staff, current students, and former students, and in-depth research to identify best practices and trends in higher education through a peer review of more than 20 leading universities." Personally, I completed one survey by answering a limited number of generic questions, which, in

conversations with colleague deans, we all agreed we're not at the level we expected a consulting firm to use, and as a result, the value of the responses would be limited. Then, the survey was followed by a request for a video interview, which I eagerly accepted so I could provide meaningful input to the consultant team and a real in-depth view of the full scope and context of the COA. Unfortunately, I was very disappointed and disturbed that the interview was conducted by a young intern without too much experience, who had recently graduated from Purdue, and who attempted to educate me on what a SWOT analysis was. This makes me wonder: Ø If the quality of the data collected from me is any indication, how can I have confidence that the consultant team's findings and recommendations will be beneficial for the university at large if taken as a whole? This is troubling for me, especially after seeing the magnitude of the sweeping and significant changes recommended, in some cases without supporting evidence or meaningful analysis within the specific context of what TAMU is all about today, its history, and what it took to get to this point, and where it has been heading as an institution for many years.

Area of Concern No. 3 The recommendation to dismantle what the COA is today by taking out the two unique differentiator programs, Visualization and Construction Science, is based on an erroneous, superficial, and stereotypical interpretation of what these two programs are, and reinforces the point made in my previous question: there is no substantive rationale, no supporting evidence, and no consideration of what the COA is all about today, its origins and history within Engineering from 1905 to 1969, and particularly its evolution, and growth over its past 50 years after the College was founded in 1969. In its current disciplinary configuration, the COA does not have peer institutions that bring together the same disciplines that the College does in the way it does it. The full scope of the COA includes over 170 faculty members from a diverse range of disciplines, over 3,200 undergraduate and graduate students, and over 80 staff members, and more specifically:

- (1) 17 undergraduate, graduate, and doctoral academic degree programs, within four departments (Architecture – ARCH; Construction Science – COSC; Landscape Architecture and Urban Planning – LAUP; and Visualization – VIZA)
- (2) Five research centers (the Center for Health Systems and Design – CHSD; the Center for Heritage Conservation – CHC; the Center for Housing and Urban Development – CHUD; the CRS Center for Leadership and Management in the Design and Construction Industry – CRS; and the Hazard Reduction and Recovery Center – HRRC)
- (3) Three institutes (Institute for Applied Creativity – IAC; Institute for Sustainable Communities – ISC, which is now a campus-wide effort under the Environmental Grand Challenge; and Texas Institute for Technology Infused Learning – TITIL, which is a campus-wide multi-college effort)
- (4) Two special programs (the Colonias Program – COLP, and the Texas Target Communities Program – TTCP, which started in COA and now is a part of Public Partnership & Outreach in the Office of the Vice President for Academic and Strategic Collaborations)
- (5) Full occupancy in four buildings (Langford A, B, and C, and Francis Hall located at the TAMU campus), partial occupancy in three buildings (Scoates Hall and the Emerging Technologies Building – ETB, both located at the TAMU campus in College Station, and COA North at the Perry Building located in downtown Bryan), and a presence at the TAMU Higher Education Center (HECM) in McAllen, TX, where a B.S. in COSC is currently being offered
- (6) Several laboratories and research groups/units addressing specific knowledge domains (located at the TAMU campus), and a research laboratory presence within the Energy Systems Laboratory – ESL (located at 7607 Eastmark Drive in College Station), and at the Center for Infrastructure Renewal – CIR (located at the Texas A&M System RELLIS Campus)
- (7) A woodshop and maker spaces (located at the TAMU campus in College Station), complemented by two hands-on research/education/ demonstration facilities, the Automated Fabrication and Design Laboratory (located on a 7-acre site and a 14,000 sq. ft. facility at the Texas A&M System RELLIS Campus), and a future Construction Field Laboratory (with several facilities to be located on an 8-acre site, also at the Texas A&M System RELLIS Campus)
- (8) Several study abroad programs throughout the world, including programs in Italy, Spain, Germany, England, and special programs in various countries

What makes the COA different and unique compared to other colleges of its type, and what makes it be a valuable asset as it is for TAMU, the State of Texas, our Nation, and the World, is not the perceived core mission of individual disciplines as indicated in the report, but rather and more importantly, the diverse yet cohesive nature of interdisciplinary collaboration that comes together in delivering the highest quality of life for people, the highest quality of place where people live (in the built, natural, and virtual environments), and the highest quality of human endeavors (what people do in a place within the social environment), through what the COA offers through its portfolio of academic programs. Individual rankings in the disciplines housed with the college are not relevant to the real value the COA brings to the professions it serves across the complete life span of the built environment: from urban planning & design; through architecture, landscape architecture, & land and property development; to construction and facility management, through the students it prepares, the research of its faculty, and the communities it serves and with which it engages through practice, outreach, and service. Based on these facts: Ø The report states that "...there is an opportunity for university investment and positioning the College of Architecture to become the best in the nation with

unmatched impact. To do so will require investments in new faculty and an innovative education and research facility by the university administration..." So, why couldn't TAMU make the recommended investments in new faculty and a new facility, as the College was already planning to do before this report came out? In fact, the College was ready to change its name to the College of Built Environments (CBE) to account for the scope of our contribution to the Built, Natural, and Virtual Environments. Ø Similarly, why couldn't TAMU in general, and specifically the College of Engineering, leverage the solid foundation that Construction Science has already established over so many years through the high caliber of its graduates, combined with its stellar reputation within leading the Construction Industry, particularly in Residential, Commercial, and Institutional Projects, and make an investment in developing Construction Management courses, minors, certificates, or articulated programs for students interested in other sectors of the industry like industrial and heavy civil construction? As a point of reference, Engineering was able to create the Architectural Engineering (AREN) Program with the full support from the College of Architecture, so why can this approach not be emulated with Construction Management for Engineering Projects? Furthermore, as the report notes, there is already a close alignment and collaboration among faculty and students with the Center for Infrastructure Renewal and with the approved Construction Field Lab at RELLIS. Ø Finally, the unique nature of Visualization, which fuses art and technology, stems from its origins within Architecture and the subsequent emergence as its own discipline through the infusion of computer science, creating an unparalleled collision of STEM and the Fine Arts. Today, Visualization is more than animation in movies (e.g., Pixar) and games (e.g., Electronic Arts). What is gained by cutting its roots and extracting it from the College in which it was born, and where it has grown, matured, and evolved? The COA and Visualization have always been supportive of the Arts, and they even have considered themselves as the home for the visual arts at Texas A&M, and other types of fine arts. So, why couldn't TAMU consider instead, bringing into the COA the recommended School of Visual and Performing Arts? This would elevate, accelerate, and consolidate the presence of the Arts at TAMU while creating an unparalleled learning experience for students, research opportunity for faculty, and a focal point for creative industries. Concern No. 4 The recommendation to reassign University Studies to the College of Arts and Sciences is completely misinformed: "To ensure that each College focuses on its mission and are not distracted with students who do not have the qualifications or interest to enroll in a college degree program, the University Studies program should be unified in the College of Arts and Sciences." This statement is quite offensive to all our students in the COA who are in the USAR program. Students from this program have transitioned effectively into the four departments as a change of majors, and upon graduation, into our graduate programs as career change students. Ø Our College answered the call when the University Studies program was imposed on all colleges. We have nurtured and protected these students and have been in the process of elevating them in many ways, particularly to ensure that they have the best learning environment and experience, and to develop a sense of belonging. In fact, they could be a full department of their own in the COA based on the number of students we have. I would never refer to them as distractions, as unqualified, or as uninterested. Concern No. 5 Overall, I am concerned that in their overwhelmingly strong push to centralize every aspect of the functional areas and academic units at the university, the consultant team is not considering that TAMU already has been there, and it did not work. The diversity of the colleges and the core soul of TAMU requires contextualization and personalized attention to its diverse constituencies, which a centralized command and control approach cannot deliver, as it is obsolete in the era of industry 4.0, IOT, distributed intelligence, interoperability, modularization, miniaturization, rapid agility, scalability, adaptability, self-organization, emergence, innovation, customization, and intra- and entrepreneurship, among other trends in business and academia. I could go on and on, but I think I have made my concerns clear, and I welcome the opportunity for dialogue or further discussion should you consider it necessary. In closing, whatever decisions are made and actions are taken, I have respect, trust, and confidence in your knowledge, experience, and character, so I know that whatever the outcome of these recommendations are, I will be ready to support you in any way I can. Ø So, my final question is: in moving to the future, why would TAMU take several steps back and continue to be compared to other institutions, instead of building on what makes it great, and leapfrog forward?

---

If I will have to grade this MGT report on Academic Realignment, I would give a B. The discussion on the benefits and costs of each recommendation is completely missing, which is the essential criteria for the decision. For example, recommendation 1 suggests combining the college of liberal arts, the college of science, and the college of geosciences to create a new college of arts and sciences. What is the benefit/cost of this action? Finding #1 suggests that many other institutions house liberal arts and sciences and it will lead to one of the largest undergraduate programs. What is the advantage of having a large program? Rational 1 mentions that "this larger college structure creates a stronger advocacy for the liberal arts education at a STEM-focused university." How much? How strong will be? How many more students

will decide to come to TAMU even if they get admission to UT-Austin? The report should at least suggest how does this changes high school students' preference on TAMU or how much US new ranking will be improved. And then what are the costs of merging? The report does not show any numeric values of benefits and costs and it is really hard for me to decide whether each suggestion is good or bad.

While well-intentioned, merging CLLA, COS and COG will be difficult, and the rationale is not clear. Speaking as someone trained in an Arts & Sciences college, I'm not opposed in theory, but I am extremely concerned about implementation, in multiple respects. New departments in journalism and library and information science will be costly; the former is not needed, and the latter is not feasible. It's important to move stepwise so as to manage costs and wear and tear on employees who are already exhausted from COVID and uncertain about their future. Therefore: if we go forward with the merge, we focus only on that, with no other changes, so as to give ourselves time to develop and tweak a new administrative structure, bylaws, T&P processes, etc. After that is in place, we can reconsider recommendations re. moving departments in and out of CLLA and establishing new departments or units (such as the School of Visual and Performing Arts).

I disagreed with the "Recommendation #9d: Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health and Kinesiology" due to a number of reasons. First, the Department of Health and Kinesiology (HLKN) includes health, kinesiology, sports management, and pedagogy division. None of the School of Public Health in the U.S. includes the majors as kinesiology, sports management, and pedagogy. It appears that the Company does not understand the history and field of Public Health. Second, School of Public Health needs to get the CEPH accreditation, which requires a high number of faculty to obtain degree from Schools or Colleges of Public Health. KINE has over 100 faculty and most of them did not get a degree from Schools or Colleges of Public Health. Consolidating HLKN into the School of Public Health may make the School of Public Health lose the CEPH accreditation, which is bad for TAMU and students. Third, the salaries of faculty members at School of Public Health are much higher than HLKN. For example, an assistant professor's salary at School of Public Health may be \$10,000 more than an Associate Professor's salary at HKN. Consolidate HLKN in the School of Public Health will need to raise the salaries significantly for over 100 faculty for equity issue. This will increase the financial burden of TAMU. Fourth, although the MGT report argues that there is very similar between Department of Health Promotion and Community Health Sciences (HPCHS) at School of Public Health and Health Division at HLKN, this is not true. The graduate degrees at HPCHS are applied and practitioner's based degrees - Master of Public Health and Doctor of Public Health. Most of graduate students are part-time students. But, the graduate degrees at the Health Division are research-based degrees – M.S. and Ph.D. Most of graduate students are full-time students. Consolidating the health division at HLKN into HPCHS will lose the research capacity. Moreover, the Health Division at HLKN has about 1,500 students, many graduate students, and 20 faculty. The number of faculty and students and even the funding are much higher in the Health Division at HLKN than HPCHS at School of Public Health (only 5-6 faculty and are short of funding). HPCHS also has lots of problems, such as administration and student recruitment. This department has changed the name for at least one time. Their current Department Head is internal and is also the Department Head of Environmental Health. It does not make sense to ask a well-function division to merge to a small department. Lastly, consolidating the HLKN in the School of Public Health will make the college (CEHD) as the smallest one at TAMU. The CEHD has a good ranking based on the U.S. News. Losing HLKN faculty (over 100), students (over 3,000), and funding will lower the ranking, which is not a good thing for TAMU.

I strongly advise against moving the University Libraries to a division under the proposed College of Arts and Sciences. The central location of the Libraries is integral to them providing necessary services and support to our faculty and students. It also appears as if the report writers erroneously assumed that the Libraries are an academic unit that awards degrees (such as the MLS or BLS), which is not true in the slightest. It also makes little sense to have the Libraries budget be part of the College of Arts and Sciences when a significant portion of their budget is part of Acquisitions. The cost of materials for Engineering and the medical sciences, which are not part of the proposed College of Arts and Sciences, are significantly higher than the acquisitions related to the arts and sciences. In terms of the proposed College of Arts and Sciences, I'm actually not against it as I come from a liberal arts background, but I do worry that many of the social sciences and humanities (which form a core in such colleges) are not actually in the proposed College. It seemed like the much of the organization was based on achieving equal-sized colleges as opposed to considering what the actual mission of a College of Arts and Sciences would be. This is something that I'd like to see much more conversation on before moving forward.

I am not opposed to the combining of Liberal Arts and Science as I feel it will highlight inequities and provide opportunities for interdisciplinary collaborations. With that said, I think the report has an antiquated view of what the arts; it is aligned surprisingly with the THECB --- they view arts as the "aesthetic and pleasing elements of life" ---- this is putting arts and humanities back 50 years! Don't you know we dissolved the Journalism program a few years ago? I laughed out loud when I read the need for it in the report. Libraries belongs and supports everyone. I do not support it being bundled under A&S. The one major bureaucratic problem at this university is the INABILITY to cross disciplinary divides and teach/research/innovate using the diverse knowledge that exists. We have built impenetrable silos with some colleges/depts verdantly defending turf and words like leadership. entrepreneurship, culture etc. This needs to be solved. Why pick on Biology? Why not pick on Engineering? Why not pick on the Corp? From experience teaching form both these units, these too have many flaws.

Good plan if you eliminate lots of redundant administrators, but just window dressing if you add another layer (e.g., a superdean of Arts & Sciences but nothing changes below).

To move the DEI to a non-academic unit would be disastrous for minority students and faculty. One cannot recruit to a non-specific unit. As reflected in demographic numbers, the draw of TAMU as a whole for minority students is declining steadily. To move Diversity matters into a non-academic portal would weaken an already declining constituency of both faculty and students. Support, both financial and personal, must be provided by Texas A&M to students and faculty of under-represented groups.

Merging the colleges of Liberal Arts and Science will likely be a way to systematically underfund the departments within these colleges by creating a "College of Service Teaching". It will not surprise me if the units currently doing stellar research in these colleges start to have significant retention problems with their star research faculty and are left only with service teaching. I also find the justification for the combination of the colleges to be spurious -- the report points to many universities where they are combined, but they are typically that way for historical reasons. I see no reason why you would \*choose\* to combine them at this stage nor do I see any examples of universities that have chosen to make this change recently.

It is strange to me, as a professor who studies and teaching Writing and Rhetoric, that writing is not mentioned at all throughout this document. Writing is central to the mission and success of the university as a whole, and undergirds Recommendation #3. This is a huge part of what we teach in the English department (and our friends in Communication), and yet our attempts to support writing across the curriculum and the disciplines has not been consistently supported or recognized. Likewise, our basic curriculum is engaged in teaching information literacy. Please invest in and expand what we are already doing rather than creating programs from nothing to fit a perceived national need. We are poised, for instance, to create a more widespread program in technical and professional writing that could serve for both information literacy and advanced writing both for majors and nonmajors alike. In that regard, I would be fine with a merger into a College of Arts and Sciences as long as it produces more opportunities for collaboration rather than increased oversight, especially since those in the Humanities will often lose out to those in the Sciences. I should also note that I am in favor of Recommendation 9a: as someone who did a "build your own major" at the University of South Carolina (graduating in 2009), and who has assisted at least one student through the program here, I can say that our current program is less than satisfactory. The program needs to be more deliberate on the part of the student rather than a kind of "garbage" major for those who switched a major too many times. I think bringing it into a College of Arts and Sciences could do that, but won't necessarily. So I think we'll still need to think about what to do with that major.

In connection with my role as senior associate dean of Texas A&M University School of Law, I, along with the dean of the law school, prepared a memo containing the law school administration's response to the recommendations in the report. The dean will share that memo with the president and COO of the University.

The merges encouraged here do not seem to reflect the history and structure of our colleges. Much more deliberation with stakeholders and communication of what goals these sort of alignments are supposed to meet would be needed. Libraries serves the whole university and would be best continued serving outside of a particular college.

[REDACTED], I was surprised to read finding no. 2 (pp. 25-27) . As you may know, in 2014 as a result of an external APR we were asked to phase out our BA in Music and Theater degrees to create a singular interdisciplinary degree in Performance Studies. Recommendation #2: Establish of School of the Visual and Performing Arts with a new department in music, performing arts, and the fine arts, and relocate the Department of Visualization to anchor this new school is a laudable goal and one that I would welcome. However, I wish to remind the administration WHY the BA in Music and Theater degree were phased out. It was simply because we didn't have the faculty, budget,

and resources to build up the program so that it was competitive with peer affiliate institutions. If A&M decides they wish to go this route, I would certainly volunteer to serve as Music Department Head, but I would humbly request that a working group carefully assesses the findings of the 2014 APR report to assure that we don't make the same mistakes again. In short, we will need to hire many applied faculty and be granted a more generous budget in order to put together a proper calendar of musical events. Over the last few years our budget has been cut to the point where we need to seek co-sponsorship through the AVPA and the Glasscock Center simply to present a modest series of colloquia and artistic events. I would also urge A&M to consider the following: Two of the most prestigious musical schools in the USA (UT-Austin and Rice) are within 90 miles of A&M. Moreover, these institutions are located in thriving cities (especially Houston, which has been described as a "dream" place to work as a freelance musician). If A&M wishes to create a Department of Music, we will have to exceed the offerings at both of these institutions in order to entice prospective students to cultivate their musical careers in Bryan/College Station rather than Austin or Houston.

---

Housing Health & Kinesiology within the College of Education is not unusual in higher-ed (for example, UT-Austin houses Kinesiology & Health Education within the College of Education.) Moving the Health & Kinesiology department into the School of Public Health would reduce the College of Education and Human Development by nearly 50%. There are concerns about the impact a reduction of that size would have on other departments in the college. For example, the Dept of Educational Psychology is currently ranked #14 in the country by US News, along with several top ten ranked online master's programs. Special Education is ranked #16. In 2020-2021, the Department of Educational Psychology was the 2nd and 3rd largest producer of certified Special Education teachers and Bilingual Education teachers in the state of Texas, respectively. All of these rankings could be impacted with a college reduction of that size.

---

The apparent plans for the Bush School are misguided. The MGT Report had many positive things to say about the Bush School. Unfortunately, the strengths of the Bush School will be seriously undermined if the MGT Report's proposal to integrate the political science department into the Bush School is adopted. The Bush School, from the start, has prepared its graduate students for careers in public service. It has been quite successful in pursuing this noble mission. The Bush School's research enterprise is focused on the application of theory to practice; it is problem driven; it is about how to determine what is to be done. Political science prepares its graduate students for careers in academia. The political science research program is focused on the development of theory, with little if any regard to the application of theory to practice and the determination of what is to be done. Political science as a discipline has gone off the rails. Many Bush School faculty educated as political scientists came to the Bush School to escape political science and its deeply embedded dysfunctionality. Forcing a mediocre political science department upon us would be a betrayal. That is not what we signed up for. If the president wants more from the Bush School, if she wants to build on its strengths, she should engage the School's faculty in, for instance, a discussion about how best to develop an undergraduate program, or craft a public policy and/or public administration PhD program. The president would find our faculty most receptive to a constructive discussion on these fronts. Forcing political science upon us would be counterproductive. It would not be a constructive way to proceed.

---

To Whom It May Concern, My feedback centers on the proposal to create a new Department of Journalism within a College of Arts and Sciences. I approach this recommendation having served as the previous head for the Department of Communication where I spearheaded the move of the USLA-Journalism program from the College of Liberal Arts to the department in fall 2018. I am committed to the development of journalism at A&M and support the idea of developing a new Department of Journalism. Yet, I think the current recommendation does not go far enough and that there is a bolder more innovative initiative that could simultaneously elevate the status of journalism at A&M and integrate existing centers of excellence at the university is warranted. Specifically, I would strongly support a bold initiative where a School of Communication is created, in which Journalism is one department. Specifically, a School of Communication that has Departments of Journalism, Communication, Interactive Media & Visualization, and Strategic Communication & Public Relations would provide a better structure that would encourage interdisciplinary research and teaching. Such a school could be housed in the new College of Arts and Sciences and could serve as a center of excellence. The puzzle pieces are already in place as the work by members in the Department of Visualization would fit well within a school of communication. This type of organizational structure is present in several universities across the country including the University of Colorado-Boulder, University of Kentucky, and the University of Miami. A school with these kinds of departments offers exciting possibilities to integrate communication, journalism, and information technologies in ways that fit the emerging media and communication landscape. This kind of organization offers exciting possibilities for alliances with other units across campus that could focus on data journalism, artificial intelligence and communication technologies, gaming and its relationship to health communication intervention, and much more. I would support an

interim move to rename the Department of Communication the Department of Communication and Journalism. Communication and Journalism are closely intertwined at the curricular level. Moreover, the department has worked hard since 2018 to develop the journalism program. We have tripled the number of JOUR majors from 22 to approximately 65 in three years, basically tripling the number of undergraduate majors in journalism. We have created strategic relationships with organizations such as 12th Man Productions and launched new initiatives such as the Diversifying Journalism Conference. These kinds of accomplishments seem neglected in the MGT Report and deserve notice. Simply, journalism has greatly benefited from the move to COMM. A more detailed proposal is provided by Dr. Hart Blanton (Head, Department of Communication). I support the development of journalism program at Texas A&M and would simply encourage a bolder innovative vision that develops journalism along with a School of Communication. The development of a School of Communication at A&M would provide an innovative move to develop communication, media, and journalism research, pedagogy, and practice at A&M. [REDACTED]

---

The report indicates that combining the College of Liberal Arts with Science "would be comparable in scale to those at our peer institutions and the second largest College at TAMU", but would smaller colleges, as they are now, provide opportunity for more intense and effective student support? Might reorganizing current procedures or departments within the separate colleges by providing more faculty-training on advising and/or assisting with student needs be more functional than merging colleges, which increase size but may create more opportunities for students to get lost in the sheer number of student supports that would swarm one college? My understanding of the University Libraries is that they each serve particular functions. Might merging them negatively impact these different target areas?

---

I have read the "Comprehensive Review and Final Report" for MGT Consulting for TAMU. I will only respond to sections that pertain to my job position. I am a Professor in the College of Veterinary Medicine and I will focus on the recommendation #9b Refocus the College of Veterinary Medicine on the core mission of graduate education and invest in the construction of a new Small Animal Hospital. To accomplish this, the Biomedical Sciences Program will be moved to the Institute for Biological Life Sciences and a focus on small animal care and research will be expanded through the construction of a new Small Animal Hospital. Replacing the Small Animal Clinic with a modern facility is well overdue and required if we are to remain competitive at a national level. However, deconstructing the BIMS program is extremely misguided. For perspective, I have taught in the BIMS program for over 20 years. In fact, I think I am in a unique position regarding a flagship course in this program. As a student at TAMU, I took Genetics 301H and as a faculty member years later I taught 301 and 301H to COS and COALS UG students. About 20 years ago, as the BIMS program grew, I was asked to teach Biomedical Genetics 320 in the BIMS program. These two genetics courses, 301 and 320, are very different and not repetitive in much of the material. I know, I have taught both courses for a couple of decades. If you put all UG science students in a singular 300 level genetics course you will do a terrible disservice to both pre-medical and non-medical students. Regarding the BIMS program, this program is the most successful program in the State of Texas for placing TAMU UG students in professional medical programs. The CVM administrators, faculty and staff are very proud of what we have built with this program over the last two decades and this plan to deconstruct a very successful program simply seems wrong. The College of Veterinary Medicine clearly has the major responsibility to produce veterinarians, but we also have major roles in developing and preparing UG students for professional medical schools and, working with clinicians and conduct research projects that benefit human and animal species. From a national perspective, the TAMU CVM is highly successful in its mission of UG education, professional education, and veterinary related research. The plan outlined in this report will destroy this successful program and still not place more veterinarians in rural Texas counties that have a shortage of both large and small animal vets. There are much better ways to increase the coverage of veterinarian medicine across Texas – your current plan, as outlined in this report, will only destroy a very successful program, and not address the needs of rural regions of Texas where most veterinarians cannot make a living due to the limited opportunities to practice their profession.

---

As long as eyes are not off of faculty and student excellence the realignment does not matter.

---

I appreciate the effort to increase effectiveness and student success. Unlike for industrial corporations, such large-scale reorganization operation on a prominent academic institution like Texas A&M should be mandated, however, by a clearly articulated list of clearly identified long-term strategic visions of academic excellence in both teaching and research. Unfortunately I could not find anything as such. Texas A&M has over 60 thousands students but it is also an important land-, sea- and space-grant research institution. In this MGT Report, the Finding #1 in its "Academic Realignment" compares TAMU to other "peer institutions" only by name, form and size, not by its functionality. The

downsizing as given in Recommendation #1 does not give any justification on how this realignment could accomplish any strategic vision on whatever academic research excellence. For example, out of the strategic vision of then President Earl Rudder, College of Geosciences was created in 1965 and since then Texas A&M has become an international flagship institution leading geoscience programs such as IODP. Climate change and energy transition are clearly identified as an international urgency and priority in this century by all countries including the United States. But they are not even mentioned in the MGT Report. In this regard, the role of College of Geosciences should be strengthened rather than diminished. Without the identity and the focused leadership of the College of Geosciences, Texas A&M will soon lose its strength and international prestige to other peer institutions in geosciences.

---

Texas A&M is twice the size of the “peer” institutions cited in this report. Texas A&M is a mammoth institution, with incredible loyalty shown by current and former students. It is a true testament to Texas A&M that it has managed this – and this success is because students come to an enormous university and find a home within a smaller college. It is within these smaller colleges that true loyalty and tradition are established. In a smaller college, students work and learn in an environment where students have a shared mission. Administrators in our current colleges have the ability and knowledge to flexibly support disciplinary needs. An enormous, disparate college will result in reduced communication between departments and college leadership, an inability to respond quickly to changing landscapes, and increased bureaucracy. While Engineering and Agriculture are large, these colleges at least have a shared mission – and shared knowledge necessary for student success. A CAS has no shared mission, no shared culture, no shared programmatic needs. One of the rationales for combining three colleges is that these colleges teach the majority of the core curriculum courses. This suggests that the true purpose of combining these colleges is not to elevate the disciplines, but simply to combine all of the colleges that “serve” engineering and agrilife. Texas A&M will be able to return to its founding state and once again become “Agriculture and Mechanics.” The College of Geosciences graduates the largest number of geoscience students of any institution in the country. The College is composed of programs and centers in addition to its departments that create a college with a reputation that brings international recognition to Texas A&M. This will be lost with a merger to a CAS. IODP, in particular, will be lost to another university, without the College of Geosciences support that NSF requires. Our ability to attract faculty and students to our undergraduate and graduate programs will be diminished. The College of Geosciences focuses on key issues to the State of Texas, including energy, environment, climate change, and the energy transition. The departments that focus on these issues work together with the centers and programs that are associated with the college. Texas A&M will no longer be looked to for leadership in these areas – the obvious place to go will be the Jackson School of Geosciences at UT. Our ability to provide leadership in these areas, especially during this time of energy transition in our state and country will be vastly diminished. A balanced approach to the energy transition will not be represented in the research institutions of the State of Texas. Recommendation #6 Is there evidence that Texas needs another program in Library Science? Further, it is unclear why the Dean of the Library becomes the Associate Dean of Arts and Sciences. In no other place in this report is a specific individual/job title already determined. How many Associate Deans of Arts and Sciences will there be? Will there be one for each former college? Recommendation #9 University Studies - What if a University Studies major would like to be an engineer or focus on areas elsewhere in the university? Moving University Studies to a specific college defeats the purpose of the University studies degree program.

---

- The report did not justify the rationale for moving the BIMS program to the proposed Institute of Biological Life Sciences. The benefit of moving it to a new administration unit does not outweigh the risk of decreasing the quality of this highly successful program under the current administration.
- The plan about how the BIMS program would be administered is also very vague, further raising deep concern whether this is a well-thought-out plan. What is the plan for CVMBS faculty/staff teaching in the BIMS program to move to the new institute? What about faculty who teach in each of our BIMS, DVM, and graduate programs?
- Basic and applied research is essential for CVM's national reputation. The plan didn't discuss how to promote it.
- The CVMBS has utilized its human, space, and fiscal resources carefully to tightly integrate its responsibilities toward its professional, undergraduate, and graduate curricula. How would these resources (especially assigned classroom and laboratory spaces) be administered if BIMS is moved out of the college?

---

Opening of School of Performing Arts is an excellent idea and I am fully supportive. Combining Science and Geosciences might be good but I really cannot understand why combine science and Liberal Arts. It will be a very difficult merger since these two areas are completely different and evaluation and promotion of faculty will be very difficult. In addition, these two fields in general have different priorities. Combining Bush School, Political Science and International Studies is a very good idea and I am very supportive.

Many institutions have a College of Arts and Sciences, so the concept is not entirely outlandish. However, this structure is often used at smaller institutions, or for colleges limited to undergraduate students. Given the size of Texas A&M University, and the graduate programs in the separate colleges, such a combined mega-college would probably be an administrative and logistic nightmare for whoever is the dean. It is good to see the visual and performing arts being taken seriously as avenues for study, and a better re-alignment of courses (for example, Dance with Theater Arts) would be welcome. That said, a “conservatory” type program in Music might not be approved by the Texas State Board of Higher Education since there are similar programs elsewhere in Texas. The current “Performance Studies” program leans heavily towards popular culture and the place of the performing arts in society, thus being more like the social sciences than the fine arts. Any attempt at enriching these programs would require hiring new faculty; the existing Performance Studies faculty would not be adequate to pass accreditation. The Bush School should retain its separate identity. The University Libraries (including the Cushing Library) must continue to exist separately from any college, because they serve all colleges. Apparently the consultants confused the TAMU Libraries, a hub of resources and services available to all TAMU students, faculty, staff, and affiliates, with a School of Library and Information Sciences, which prepares people to become librarians. There are 3 LIS schools in Texas accredited by the American Library Association; another such school might not be approved. Moreover, the faculty in the libraries perform functional services to the TAMU community at large. Instruction librarians teach students how to utilize databases and other library resources in their studies, but they don’t teach the students how to be librarians themselves. Much of the research and scholarship generated by library faculty focuses on the practical aspects of librarianship, thus contributing to student success. If a decision is made to have classes in librarianship, new faculty would need to be hired, as the University Libraries are already short-handed in terms of both faculty and staff, and cannot accommodate teaching credit courses in addition to their existing workload.

---

I found this part of the report very troubling. It felt like only some colleges were picked out. The suggestions are not also coherent. For example, how has the university been served with the small colleges was not addressed. Small colleges doesn't mean inefficiencies. Also not all the colleges were examined, does that mean that those colleges not examined are the perfect model to be followed and have no inefficiencies? More concerning to me is the proposed merger of the college of Geoscience, this college serves the university a lot more than the report dared to address. The international ocean discovery program, housed within this college is the single largest federal contract to the A&M system. The reason why (TAMU) are the operator of the program is because we have a College of Geoscience. Something that the Geoscience community of A&M values and is a major attraction for recruiting faculty. We have been the operate since 1985 and it would be a shame to loose this opportunity to UT Austin or Oregon (who would likely bid for this if the College of Geoscience is merged). Eliminating the program, will definitely make us loose this very significant financial partnership that is valued at about 50 million USD/yearly and only expected to grow as our interest in ocean discovery expands. This is one major miss of this report, as it failed to provide any cost value analyses of what a proposed merger might add/benefit the university or what we might be losing. Additionally, creating a big college doesn't provide any financial incentives as multiple associated deans would need to be hired, thereby eliminating any cost savings. The university library should stay an entity on its own. It supports more than just one college, aligning it to a college now makes the head of the library report to that dean, thereby limiting the effectiveness of the library. The head of library should report to the provost not a college dean. If we want to align it to a college, then create its own college. The library is very essential to the advancement of research on any serious university campus and should not be tossed around or put under a table. It is a an academic pillar on its own.

---

The value of a library is in the community that it creates through collections, services, and facilities. It is a curated environment that fosters student success and research innovation. That curation activity, librarianship, is an educational and academic activity equivalent to non-librarian faculty and requires the protection of faculty status and representation within campus governance. In order to best serve the campus community, the University Libraries should remain independent from a specific academic college. The Libraries' operations and collection development should be free of bias. Additionally, as the report notes on page 124 under, Library Peer Institution Review, the administrative leadership of the Libraries is typically a dean or titles with Provost. Changing the administrative leadership to an Associate Dean will severely impact recruitment to top talent. While it was great to see the acknowledgment of the Libraries' place within information literacy education, we are a lot more than that. Our research is important to the field of Librarianship. Library research follows a researcher-practitioner model far more than it does research from Library or iSchool faculty. The library faculty at Texas A&M are some of the top in our field and are advancing our understanding of libraries, their role in education, and their place in how we present and describe knowledge. The University Libraries are valuable as a

library, a central point of our community, and that is not something that can be subsumed by a mega-college.

---

I am a faculty member at the Bush School and would like to offer two points for consideration as we strive to broaden the visibility and influence of our college. (1) We should carefully evaluate proposed recommendations in light of their impact on the quality of our degree programs, and (2) We should involve all key stakeholders in this process. I agree that we have the programs and the physical capacity at the Bush School to educate more TAMU students and to streamline some of the administrative processes involving an expansion of our college. However, I hope that before we implement any recommendation, for example, merging with the Political Science department as proposed in the Comprehensive Review Report, that we first carefully study the implications of these expansion options on the degree programs and the costs and benefits to our mission, core values, and stakeholders, including donors. While the Bush School academic departments overlap with some areas of study in Political Science, our missions are very different. We prepare our students for professional work in the areas of service and our degree programs, co-curricular activities, faculty and staff all work together toward that end. What impact would this merger have on the curricula of all programs involved? What would we stand to gain or lose? What are our peer institutions doing, and what can we learn from their experiences and input? How do we best position ourselves academically and administratively to implement changes we have chosen to embrace? I believe that the more methodically we prepare for changes recommended in the report, and the more we involve our stakeholders in those decisions, the more likely we are to succeed. No matter how logical or advantageous a proposed plan may be, its success will be determined by the people who have invested in its creation and implementation. In sum, I hope that a more in-depth study of options involving input from all key stakeholders would weigh the benefits and costs to the university and the colleges in question before implementing any specific recommendation.

---

☐ The proposed merger of the Colleges of Liberal Arts, Science and Geoscience: As a graduate of a College of Arts and Sciences where humanities and sciences have co-existed in harmony for 150 years, I'm not opposed to the concept of a college that embraces those diverse disciplines. However, in a university with a tradition of separating those entities, I believe any merger should happen slowly and after buy-in from the faculty involved. This is too significant a change to occur without faculty involvement in every step. Serious shared governance requires it. ☐ Creation of a Department of Journalism: I wholeheartedly endorse the expansion and elevation of journalism education at Texas A&M University. However, I think there's a better way to do it: through a new Department of Communication and Journalism. Journalism finally found a home three years ago in the Department of Communication where it was embraced and enjoyed new levels of support. The result is the number of journalism majors has tripled in three years and the department has supported major initiatives to recruit high school students for the program. The synergies between communication and journalism are bearing fruit through new collaborations, and organizations across campus – from 12th Man Productions to The Battalion – have been building new partnerships with journalism that provide exciting opportunities for our students. Consequently, I believe – as a faculty member in the program – that journalism education would be best served in a new Department of Communication and Journalism.

---

It is very clear that this report has been tailored to recommend whatever the President wants to do, consequences be damned. I would not be at all surprised if the Deans of the affected schools are already interviewing elsewhere.

---

Most of what was named made sense to me. I don't think that Sport Management (currently part of HLKN) should move to TAMU Health. It is more of an event and business function, making it better aligned in RPTS in the College of Ag (with Events) or in Mays.

---

As Head of the Department of Economics, I convened four meetings of our faculty to discuss the MGT report recommendations. The Economics faculty voiced **\*\*universal support\*\*** for joining a new College of Arts and Sciences. To briefly summarize our extensive discussion, we believe that the Department of Economics is well-positioned to bring a strong quantitative social sciences department to a new College of Arts and Sciences. The educational and research goals of the Department of Economics are well-aligned with other departments that are being considered as members of a new College of Arts and Sciences. Our department equips undergraduates with critical analytical and technical skills, it supports both fundamental and applied research that is published in the very best academic journals, it generates prestigious external funding, and it trains graduate students for tenure-track positions at R1 universities. (Over the 2016-2020 period, we are tied for 1st among our peer and aspirant peers in the number of tenure track R1 placements.) Moreover, the Department of Economics has very similar high rankings in our discipline as other departments in the current College of Science. The experiences of other leading research universities also lend support to the belief that a successful department of Economics is best located with other fundamental, discipline-based departments in a College

of Arts and Sciences. The data show a strong precedent at other leading research universities for high-ranked departments of Economics to be housed in a College of Arts and Sciences. There is no such precedent for high-ranked Economics departments to be situated in a policy school. Overall, the Department of Economics faculty believe that our strengths, ambitions, and academic values are best-aligned in a new College of Arts and Sciences. I would be happy to share details of the faculty discussion with the Presidential leadership team.

---

If you want to support the humanities (liberal arts is just a bad term these days), then support them. Don't bury them in a college that will be dominated by the STEM fields. Give the humanities (liberal arts) better leadership. The leadership from 2010-2020 has been dismal. JLB was brutal and incompetent, and then more brutal because the faculty called out his incompetence. Bravado and brutality are not the same things as actually being competent and part of being a competent leader is people wanting to follow you. Contrary to his protests, he did not have standards--he had a bar that he used to get rid of or punish people who he did not like; he happily lowered his bar for those he needed. Pam Matthews was a self-loathing humanities person who barely got her own second promotion. She did not support research in the humanities. The rules that were developed in the college under Jose only serve to punish the faculty in that college--a 16% salary buy out for courses?! Humanities people do not have salaries like that! And they do not get grants that have those kinds of buyouts included. These are kinds of details that need to be addressed. So if you want to support the liberal arts--and ANY good university with its salt, land grant or not, engineering focused or not, needs a solid program in the liberal arts, then support the liberal arts. Take the necessary steps that will address the lack of support: better leadership, especially leadership that will get rid of the bad department heads, will support awards (external and internal), etc. That said, the consolidation of colleges will not necessarily be bad--but wow will this be big. But you are going to need excellent leadership and a complex structure comprising associate deans to represent the diverse disciplines. I can't speak to the biologists, but I'm not really sure why they need to be moved out of the college of science. Are they not a science?

---

The schools mentioned as having a college of arts and sciences created those pre-WWII. Have any been created since that time? The cultures have changed a lot in the last 100 years.

---

Arts and Sciences, Engineering, Agrilife, and Texas A&M Health. Finding 9d. A major recommendation in the Academic Realignment section is to move Health and Kinesiology (HLKN) to the School of Public Health. Rationale: "The Department of Health and Kinesiology (HLKN), located in the College of Education and Human Development, and the Department of Health Promotion and Community Health Sciences (HPCHS), located in the School of Public Health (SPH), have similar program offerings. HPCHS and HLKN have attempted to differentiate their degree programs for several years with little success." HLKN has approximately 3600 undergraduate students, with only around 130 students in the Community Health program (HLKN) that may be considered to have some overlap (a small amount) with the Public Health degree programs (HPCHS). HLKN consists of a three divisions, Health, Kinesiology, and Sport Management. The physical activity program (PEAP), the Huffines institute, and the new Coaching Academy, are three other components of HLKN that are interconnected extensively with the Kinesiology and Sport Management divisions. PEAP itself touches 8000-10000 Aggies from other colleges every academic year. Other than Community Health within HLKN, the finding 9d and rational 9d statements make no mention of the other components of HLKN. Moving HLKN to SPH would decimate the College of Education and Human Development (CEHD). According to finding 9d, CEHD has lost focus on its main core mission of producing educators for the state and nation. I think Texas's change to on-line teacher certification with any BS or BA degree deflated CEHD's main core mission. Fewer and fewer students felt it was necessary to go through CEHD in order to teach. Not much CEHD can do about that. Let us push that aside and get back to HLKN. If HLKN is moved, it is important to keep the department intact. If it is moved to Texas A&M Health, a better model would be to make HLKN a school itself: School of Health, Kinesiology, Human Performance, and Sport Management. The SPH seems to have financial issues, as do many components of the proposed Texas A&M Health leg. The placement of a strong multidisciplinary department under the weak leadership (this is why they are not doing well) of the current SPH administration may well destroy the department, thereby not benefitting Texas A&M Health. A better approach is to setup HLKN as a school and model the SCP after HLKN. Also, move the small overlap of degrees into HLKN and out of SPH because of its issues. Some individuals in HLKN want the department moved, if it must be moved, to Agrilife. I disagree with this move. The best alternative to SPH is to move all of HLKN into the new college of Arts and Sciences. HLKN does science/research, all three divisions. We are not the traditional hard sciences, chemistry, biology, physics, etc., but are more like the newly emerging sciences of Psychology and Neuroscience, yet we contain aspects of biology and chemistry, in the form of exercise physiology at the cellular and systems level, and contain aspects of physics and neuroscience, in the form of biomechanics and motor neuroscience. We also hold the only arts/science degree on the

campus. The Dance Science program requires students to have the same core science education as all of our majors in HLKN. This core science program is integrated into the science of kinesiology and the art of Dance. Thus, Dance Science should not be moved (recommendation 2) and should stay with HLKN. As a last point, HLKN should be set up as its own School in the proposed new college of Arts and Sciences. Overall, all the features combined into HLKN would make is strong school consisting of Art and Science components within the new college of Arts and Sciences.

---

I am concerned about the lack of transparency about the changes that will be made in response to this recommendation. It seems like the decision to make the changes will be made first before any discussion of what those changes will be takes place. It may only be in the discussion of what the changes will be that objections or concerns may become aware to people, but it doesn't feel that those concerns will be given sufficient weight because the decision to make the changes has already been made. I think campus leaders should provide detailed plans for how they will implement the changes and allow faculty and other campus members time to respond before the overall decision to make the changes is made.

---

I would prefer that the new combined college be called the "College of Sciences & Liberal Arts." There is a strong sentiment among faculty that the only reason for the merger was to remove the word "liberal" from the college name. Keeping the term "Liberal Arts" is a more accurate for departments in the college (as opposed to "Arts" alone, which is more a description of the "Performance Studies.") I would like there to be a creation of a college Computing, which could include GIS and, Viz Lab, and other relevant departments. I like the idea of a Performance Studies school, but I disagree that the Viz Lab should be its anchor. I am not sure the creation of a department of journalism is a good idea with so few graduates currently. Rather, I think the communication department should be strengthened to bolster their support of students in journalism. I do think that the addition of UG students to the Bush school is a good idea. I disagree with recommendation 9a. It would be useful to also have the university studies to also be able to happen through the college of engineering. The MTDE department is now too strict with whom they are allowing entry. (e. g., MTDE is refusing to admit a student to study Engineering Education in relation to public policy, This student graduated with a perfect 4.0 in technical communication (BA) as well as a perfect 4.0 from an M.A. in public policy from our Bush school because neither of those are a BS nor MA.)

---

I'm concerned about the level of restructuring that would need to happen in the College of Education and Human Development if the Department of Health and Kinesiology became part of a different college. The report does not consider the level of disruption to degree programs and existing collaborations and whether there may be long-term consequences for the shift this may cause in careers. Also, this leaner College of Ed may not be as competitive with those of other universities as it is now, which could in turn affect our ability to recruit top faculty and graduate students as well as attract research funding.

---

Report Recommends: [Recommendation #9d]: " Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health. (...) Refocus the College of Education and Human Development on the core mission of producing educators and move the Department of Health and Kinesiology ... to appropriate units" (p. 38). -The majority of faculty within the Division of Health Education in the HLKN Department believes this recommendation is ill-suited, given that the Division of Health Education contributes significantly to the College's focus on "producing educators". -The Division of Health develops/trains Health Educators with degree options that allow for TEA teacher certification and enable students to sit for the nationally accredited Certified Health Education Specialists. -Undergraduate degree options are: BS in Health Education (with an emphasis on Allied Health) or a BS in Community Health. All graduate degrees are in Health Education (and not Community Health). - Health Educators and Community Health/Public Health Workers are specifically identified by the U.S. Bureau of Labor Statistics (BLS) as distinct occupations. Each training program has its own, unique certifying agencies. For health education programs: the National Commission for Health Education Credentialing, Inc. (NCHEC); for public health programs: the Council on Education for Public Health (CEPH). -Re-alignment of the HLKN department with the SPH would contribute to REDUCING THE FOCUS of the College of Education and Human Development on its "core mission of producing educators", by eliminating one of its vital education-oriented programs - and detracting from the capacity to attract potential students. -Moreover, even if a move to SPH is imminent, resources still need to be invested to articulate differences and ways to capitalize on the strengths in the BS in Health and Community Health degrees and avoid the duplication created by SPH's BSPH. The BS in Health and Community Health need to be intentionally maintained and keep a focus on health education and promotion with responsibilities and competencies, different from what one would find in BSPH preparing professionals for Epidemiology, Health Policy, and Environment and Occupational Health. -If the move to SPH is Imminent, it will be important to acknowledge the specializations that exist

between Health Education and Public Health. An effective way to communicate these differences would be to change the name from School of Public Health to the School of Public Health and Health Education. Report claims: "Program growth in each academic unit, specifically in the Community Health and Public Health degree programs, often appears to continue to create new conflict, course offerings, and program expansions in the other (...) however, this duplication of program offerings is an inefficient use of resources, confusing for accreditation and program evaluation" (p. 39). -While the report suggests HLKN and SPH experience duplications that might be confusing for accreditation and program evaluation, it fails to acknowledge the origins of the perceived overlap: The BS in Health Education began with the establishment of the College of Education in 1969. The SPH's BSPH was established in 2014, proposing to duplicate courses that aligned with the Division of Health's already-established professional preparation programs and degrees (which prepare school health teachers, community health educators and the health workforce). -If there is competing demand for students at the undergraduate (or graduate) level, it would seem wiser to capitalize on existing pedagogical resources already in place in the Health Education program (in HLKN). It would also seem wiser -- in lieu of moving HLKN to the SPH -- to capitalize on the forces driving enrollment in the Health Education undergraduate and graduate programs at a rate two-thirds higher than that observed in the SPH. Counter-Recommendation: Move the smaller unit of HPCHS at SPH into the HLKN Department. If the move to SPH is imminent, it will be important to acknowledge the specializations that exist between Health Education and Public Health. An effective way to communicate these differences would be to change the name from School of Public Health to the School of Public Health and Health Education. From both a budgetary and efficiency perspective, it is more feasible to move the smaller HPCHS from the SPH into the HLKN Department, given the Health Education Division's history, scholarly productivity, national prominence and leadership role within the HLKN Department, the College of Education and Human Development, the University, and nation-wide. Moving the HPCHS department into HLKN would cost less and would allow the HLKN's Division of Health Education to maintain its independence and leadership role within the profession of Health Education, thus contributing to the College of Education's focus on developing professional educators of various stripes.

---

This alignment should not be carried out until there has been feedback from all levels of those affected: administrators, faculty, staff, and students. There needs to be a clear plan if this is to be proposed. For example, will there be separate T&P processes for the sciences and humanities? Will interdisciplinary programs gain prominence like they have at the University of Michigan, which has a Department of Women's and Gender Studies and a Department of Afroamerican and African Studies. Embedding changes like these into the plan would likely increase the support of the plan from faculty in the College of Liberal Arts.

---

My comments are focused on "Recommendation #9d: Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health and Kinesiology." While I certainly agree that the HLKN and CEHD missions are not aligned and moving the department elsewhere would allow the college to more effectively focus on producing educators, moving all of HLKN to Public Health would not be ideal or appropriate for the same rationale often suggested in the report for changes to other departments and colleges. In fact, moving all of HLKN is seemingly based upon the notion that each division in HLKN is similar, with shared research, teaching and service behaviors and outcomes. HLKN is large enough to be its own college at some universities, like the University of Florida, and our divisions are very diverse. This is definitely the case with HLKN at A&M. Making the argument that the Health and Kinesiology divisions should move to Public Health makes sense for a variety of reasons. However, suggesting that Sport Management, PEAP or the Coaching Academy should be moved there as well does NOT make sense at all. Since I have been a faculty member in Sport Management for the past 20 years I would like to comment specifically on how moving HLKN as a unit would affect our division. The Sport Management division has been quite successful across all metrics since our inception, despite not being congruent with our department or college. It is widely held that we have the best PhD program in the country led by well-known and respected scholars, our online masters program has been ranked #1 and our undergraduate program is one of the most desired degrees on campus. Housing sport management with Health and Kinesiology was historically done based on the belief that its roots were in physical education (same with Kinesiology). However, our discipline has evolved to something very much different than physical education. The same is true for Kinesiology, neither of our disciplines fit with PE or education. In fact, sport management specifically focuses on business principles within the sports industry. Our research, theories, teaching, consulting, job training, professional development and other facets of what we "do" is all based upon business elements, functions and principles. We are training our students to get business jobs in the sports industry and our research is similarly focused. While we are named sport management at A&M, we should be called Sport Business (this is the case at several universities) based on what we are and do. The sports industry is heavily influenced by marketing, arguably

moreso than management as a whole. While I am sure that my colleagues have commented on our many additional strengths, it is important to note that we have managed to achieve these successes despite being housed in a college where we simply don't belong. This is because we have strong faculty who have worked very hard to build our programs and a large number of students who honestly love learning about and working in our industry. Moving us is an EXCELLENT idea and would potentially make our division even stronger. However, where we are moved is quite important and there are options that are much more ideal than what was suggested in Recommendation #9d. For instance, the most logical place we would fit best is Mays college of business. While there are barriers to such a move, this move (without question) is where we fit best. Such barriers include college of business rankings metrics, which seem to be the most used rationale for placing our programs elsewhere. This is especially true for larger, more comprehensive R1/AAU universities. Nonetheless, what we do aligns very closely with Mays. If there was some way to overcome these barriers and place sport management (or a portion of it) within the business school then our program would immediately become the number one program in the world. The potential development of a center of sport marketing similar to the one at the University of Oregon could accomplish the same goal listed above with fewer disruptions. I believe funding such an endeavor would be much more likely if housed at Mays. Besides Mays, sport management would align exceptionally well with RPTS. Many of us collaborate with RPTS faculty on a variety of research and teaching projects and our curriculum certainly is similar. We focus on the sports industry while RPTS focuses on recreation and tourism business. There are obvious synergistic possibilities should we be aligned with RPTS. This one makes the most sense to me based on the barriers to placement at Mays. Sport Management could also be well served by being placed in the College of Arts and Sciences. However, for various reasons this seems like the least best option of the "good" options for our division. Finally, it is my contention that placing sport management with HLKN and moving the division to Public Health, or keeping us in the College of Education isn't ideal for anyone involved moving forward. We would be better served going with HLKN than staying in the college. This is especially true given the feedback we have received regarding where the interim dean would place us. It makes no sense for our division to stay in CEHD and it would only serve to undo years of successes by aligning us with another non-congruent department. Placing sport management at Mays or RPTS makes sense across every important metric listed in the report and both would certainly make it possible for our division to flourish even more than we have to this point. Sending us wholesale with HLKN to Public Health and especially keeping us with CEHD would have the opposite effect.

---

I did not find a compelling case in the report for creating a mega college of Arts and Sciences. To say that more than half of our peers have such colleges does not, in itself, present much of an argument. There's also a difference between a university that has always had a college of arts and sciences and a university that is shifting away from Liberal Arts and Science Colleges to a combined unit. There is going to be a very steep learning curve and it's hard to imagine how exactly such a large bureaucratic shift will go smoothly. I don't have a problem with the idea, in theory, but I see little evidence that MGT understands the way the colleges currently work. For example, we used to have a Journalism department and a conservatory. Does MGT know this history? Nothing in the report suggests that they looked very deeply into even the recent past of TAMU.

---

If you read the proposals from Dr. Tim Lightfoot to make HLKN a School by itself, this is the best way for HLKN to achieve success and get the most out of HLKN. We are set up in such a way that it would require little effort and almost no additional funding. As for overlap with the School of Public Health, there is only a tiny amount of the department that has this. It would be easy for either HLKN or the School of Public Health to take on the one overlap and have the other move on. If a School of HLKN is not possible (even though it is best for HLKN) then the second choice would be wherever we go to have HLKN stay together as much as possible. While the School of Public health is a possibility we would also fit nicely in the School of Arts and Sciences. Please give some serious consideration to HLKN becoming its own School. It is the best way for HKN to not only continue to make its mark in the world but to allow us to reach our full potential.

---

There are rational arguments for a number of the alignments proposed but there are smaller elements within them that don't quite make sense. I love the idea of University Studies having a home department. Although I do not have any expertise in this area, moving health and Kinesiology to public health does not register with me. I would guess that health and kinesiology majors tend to pursue degrees in education or in fields where have a degree in education does not interfere with employment outcomes.

---

The reasons for merging Liberal arts and sciences aren't clearly elaborated. Just because something will be bigger (which seems to be the primary rationale here) doesn't make it better. The fact that these colleges are less powerful has less to do with their size than with the fact that they don't have a state agency associated with them and don't have vice

chancellor powers like Ag and Engineering do. Until that gets fixed, it doesn't matter how big Liberal arts and Science are. Regarding the Biology department move- I don't see how this is a problem as long as Biology is moved as a unit and remains its own independent strong department. Comments that the Biology department is underperforming are just incorrect frankly. There are foci of real research strength in Biology that it would be unwise to irritate or disband (circadian clocks comes to mind, loss of several very well funded faculty and strongly entrepreneurial faculty). Also, I've never heard of a college without a biology major- seriously, breaking everything up into like bits actually is BAD for collaboration across focus areas..... something that this report purports to support. Furthermore, the reason for creating an institute for life sciences is easier collaboration???? It makes absolutely zero difference to this faculty member what department or institute other faculty that I might like to collaborate with are in - changes like this have zero impact on the ability to collaborate. What would have an impact on the ability to collaborate are subcontracting issues between different TAMU entities that cause faculty a lot of time and busy work to work out. This has nothing to do with institutes- and everything to do with how \$\$ move in this place. This will NOT be solved by creating a life sciences institute. If someone had actually talked to faculty about barriers to collaboration they might have learned this.

---

I agree that HLKN Community Health should be realigned under SPH Health Promotion. The SPH Department of Health Promotion & Community Health Sciences (HPCHS) covers all and more content covered by HLKN and is in need of additional faculty to help teach courses. Combining the current faculty under HPCHS would strengthen SPH and reduce overall TAMU student confusion and greater misunderstandings outside of the university regarding the degrees. As a faculty member within HPCHS, I do have concerns of stability of my position, however, I still believe the realignment is the best move forward for the university.

---

Finding 1: "This larger college structure creates a stronger advocacy for the liberal arts education at a STEM-focused university. This advocacy is a value in recruiting faculty in the arts, humanities, and social sciences which are often underrepresented at STEM-focused universities." This statement seems promising in theory, but a lot happens in these two sentences. How do we guarantee that the arts, humanities, and social sciences are advocated for when they lose their grounding as a specific school in an admittedly stem focused university? Finding 2: A school of the arts is promising, especially if better connected to a broader culture within BCS. However, where is creative writing in this relationship? Finding / Recommendation 3 (Dept. of Journalism): This seems deeply misguided. There are already spaces within the university--Communication and English, particularly--that are dedicated to the questions of writing, communication, and literacy. Much of the issues covered in the rationale are the foundation of the field of rhetoric, which faculty in both Comm and English study. Why not reinvest in these departments rather than create a whole new department? Where would students find jobs after college--though local news is important, journalism is a very very hard field to break into; there simply aren't many jobs. Reinvesting in departments like English and Communication in order to allow for more resources for more teaching of writing and communication seems like a way to help reach the goals of this finding in a way that is more practical (and cost-effective!)

---

While there is nothing intrinsically problematic about merging the College of Liberal Arts with the Sciences, as many universities (like the University of Michigan) elsewhere have shown, this only works when resources flow equitably between the units. The processes of "centralization" envisioned by the report may threaten the integrity of the Liberal Arts as a vital part of the university. I worry that it is a start to a process to revert to an earlier era of A&M when the Liberal Arts were understood as performing a secondary service to the other colleges. As employers continue to observe, Aggies tend to manifest parochial horizons compared to students from other universities. The Liberal Arts are crucial to fostering global citizens for the 21st century.

---

In-depth assessments of the impacts of the recommended changes on the research, teaching, and service missions of the university should be conducted when evaluating the recommendations. For example, how the changes will impact interdisciplinary research and education, in the College of Architecture, if two of its departments, Departments of Construction Science and Visualization are moved out of the College of Architecture?

---

I remain unconvinced that the realignment of Liberal Arts and the Sciences into one college makes the Liberal Arts stronger. Texas A&M is a STEM heavy institution. The first letter of the STEM acronym is Science, so it is a far-fetched notion to argue that Science in a STEM heavy school is a way of giving the arts and humanities heft. I am also unconvinced by the supporting evidence provided in the reports by way of peer institutions. Context matters, and the the peer institutions provided come from places where there has traditionally been strong support for the arts and humanities. That is not the case at Texas A&M, and it is not the case in the current political climate of Texas or the Board of Regents. If A&M were truly interested in becoming the #1 flagship university in Texas, not just in terms of size but in actual quality, depth, and breadth of education and opportunities for a wide variety of students, it would do better to

build up both sides of its house and invest in the arts and humanities, as well as the performing and fine arts, as strongly as it has with the STEM side. By providing investments in resources and faculty lines, upgraded facilities for students--the classrooms and equipment in most arts and humanities buildings are abysmal compared to the technology in the ENGR buildings for instance--, and leadership positions for faculty in the arts and humanities, as well as the performing and fine arts, A&M would give weight and visibility to the other side of campus and truly have a shot at being the most prominent flagship in the state as an institution this is outstanding in both STEM and arts, humanities, and other creative fields. I am also disturbed at the decimation of the College of Architecture, as well as the fact that the University Libraries are being asked to do something other than library sciences.

---

In theory, I anticipate no problems with a combined college of Sciences and Liberal Arts as long as GREAT CARE is taken to make sure there are people at high positions who understand both. It could be a disaster to have a dean's office full of scientists making decisions about faculty and departments in the Liberal Arts. I also believe that the Visualization Department is not a good fit with Architecture and would be better served with departments like Performance Studies, English, and Philosophy, as the study posits. Keep in mind, performance Studies is NOT the same as Theater Arts/Music and has a very different mission. Performance Studies could compliment Performing Arts, but should not be seen as synonymous and, in fact, would probably function best as separate departments--one (P Studies) is theory, analysis, and philosophy based. The Other (Performing Arts) is practice based. Also, the ability of a Department of Music or even Theater to get first rank graduate students and faculty will be hobbled by the fact that TAMU is not in a major urban center, something usually seen as a must for students/faculty who have any competitive choice in the matter. The coordinating board at the state level will also likely have a say in contributing millions of dollars to creating a huge Department of Theater, Drama, and Dance considering UT Austin's strengths in those areas. With this in mind, any efforts to create a world class theater arts/music conservatory is doomed to failure absent a Herculean level of financial and institutional commitment. That said, A&M DOES need more in these areas than it currently has. It also needs a larger Film Studies component, something that could easily grow if faculty and facilities are increased/expanded and that could continue to function within a Department of Performance Studies (even films without actors are "Performative Acts" on the part of their makers), or it could be connected with Visualization.

---

College of Science + Liberal Arts combination: This seems weakly supported. Many excellent institutions have separate colleges, for example among our vision-2020 peer list UT Austin, Georgia Tech, Minnesota, Penn State, and Purdue follow this model and they are doing very well. I also count 4 of the top 10 institutions for enrollment as having separate Arts and Sciences, so it is not clear that a combined super-college is the best structure at TAMU. The stated goal of having a college with increased stature focuses solely on liberal arts students and faculty, but it seems likely to be at the detriment of science faculty and students. Elevating the stature of liberal arts education is an important issue but doing so at the cost of breaking apart the working structure that now supports teaching and research in the sciences not a good bargain. A further comment, this brings back memories of the elimination of the Research Foundation during the conversion to SRS. RF was a well-functioning organization, whereas the formation of OSRS turned it into an organization with unhappy staff with large turnover, unfamiliar with research operations. I personally experienced missed proposal deadlines/incomplete submissions due to inexperienced staff, and it is only by good fortune that I did not lose my funding at that time, this could have been an end to my research career. Our peer institutions with large Arts and Sciences structures have had this structure for some time and it works well for them, but it does not follow that larger is better is a good structure for TAMU; a sudden changeover is likely to bring bad results. Regarding the move of Biology to Agrilife: I was also unconvinced by this argument. I found that the largest 6 universities all have biology in the science or arts and sciences structures. I gave up investigating after that. Biology is not my area of expertise, but to me this is an indication that biology is an important element of science as well as technology. To elevate biology requires more investment, but to combine biological sciences with the larger agrilife operations I expect would be the end of biology as a science at TAMU, rather than leading to its growth and viability.

---

These recommendations would also be highly disruptive--careful evaluation of the pros and cons should be performed with input from key stakeholders.

---

Finding #5: "Splitting the program between three colleges creates confusion for students about appropriate majors and creates barriers to changing majors which results in increased time to graduation." - I disagree with this statement. Where is the evidence? "There is also internal competition for resources such as faculty hires, facilities, grants, duplication of current faculty members areas of interest, which hinders the ability of faculty members to collaborate and contribute to advancing research and student success." - I disagree with many of these statements (e.g., faculty hires, facilities, duplication of current faculty members areas of interest). This just is not true in my 30+ years of experience in

the Biomedical Sciences (BIMS) program. Also, our current BIMS students (housed in CVM) are extremely successful, currently! I feel it would be a mistake to merge BIMS with Biology. If BIMS must move out of the CVM (which I strongly feel it should not), Health Sciences makes much more sense than Biology (or Agrilife for research).

The report suggests that the Economics Department might like to be put under the governance of the Bush School. I strongly disagree with this suggestion. The Econ Dept is currently under Liberal Arts and would move to be under Arts and Science. Arts and Sciences is a better placement for the Economics Department. There is only one university that I am aware of (Georgia State University) that has the Economics Department solely located within a Policy School. Normally, Economics Departments are housed in Liberal Arts and Sciences across most universities in the U.S. Such placement is better aligned with the research-heavy focus of Economics.

As a faculty member in HLKN I focused on the section relevant to my department and immediately noticed the errors of the key evidence used to support MGT's recommendations. Several other HLKN faculty with more "inside information" and historical knowledge of my department submitted their feedback. I couldn't do a better job than them, therefore, I won't address the specific errors in the report regarding my department. However, I do wonder how many errors are in the rest of the report. Overall, the errors in the report indicates, either, (1) MGT is incompetent at assessing and evaluating, or (2) they were asked to produce a narrative to support a specific agenda. Either way, I can't help but think deception and dishonesty were used to create the report. If a student handed this to me, I would be compelled to submit an honor violation for fabrication. I am open to the possibility that the recommendations could be great for TAMU and HLKN. However, the non-transparency of the process, up to this point, leads me to distrust the actions of those in power at TAMU. I don't know President Banks, but I appeal to her honor to truly "follow the data", I expect her to be wholly truthful to TAMU's faculty, staff, and students, and I hope she has the humility to acknowledge the missteps she has made throughout this review process.

I'd like to thank MGT for their hard work on this report and their efforts to help us make TAMU an even greater institution. I'd also like to thank President Banks for the extra week to make comments. The time allowed me to schedule a sufficient number of listening sessions that I believe every faculty, staff, or student body member who wanted to discuss the report with me had the opportunity to do so. It also allowed me to speak with many of our Advisory Board members and passionate supporters of the Bush School who asked to have a conversation about the report's recommendations. The comments below are my own thoughts, but are almost entirely supported by the views I heard in those meetings. The fundamental recommendation in the report related to the Bush School is to merge the department of Political Science (Poli Sci), and potentially other departments (Econ, IS) into the college. I don't know the forcing function that would require Poli Sci or others to be reassigned. While the report references comparator universities that do not have Poli Sci in their College of Arts & Sciences, I believe there are a number of Colleges of Arts & Sciences around the country that actually do include political science departments --- it's a social science. I believe the Poli Sci department is a high performing unit. They have a strong undergraduate program and maintain a very clear focus on their excellent PhD program. I don't believe they need to come to the Bush School to be successful. In fact, I think the majority of their faculty feel it would impact them negatively. So, from my perspective, I've tried to think through whether it would be beneficial to the Bush School to have them on board. The remainder of my comments come from that perspective.

1. The culture of the Bush School -- its fundamental belief in, and focus on, public service should never change. It's the reason President Bush allowed his name to be used in the first place and it's the principle ingredient in the success we've enjoyed over the first 25 years of the college. By the way, the Bush Family, represented by Mr. Neil Bush, Chair of the Bush School Advisory Board, reinforced this with me in a phone call last week. He asked that I let you know the family fully endorses this paragraph.
- b. Instantly adding one or more departments, with a large numbers of faculty, staff and students who don't necessarily share that same focus will certainly create risk to that culture. Our execution/integration plan would be heavily focused on trying to mitigate that risk. But no one should assume that we can culturally integrate a large department, or several large departments, into the Bush School without fundamentally impacting who we are and how we're seen by external audiences, including potential students and faculty members. Virtually all of our current students tell me they chose the Bush School because of that clear focus on public service.
- c. We produce public servants ... that's what President George H.W. Bush wanted the school to do. The cornerstone program must remain the professional degree programs (Masters Degrees) for those wanting to go into public service or advance in public service. Simply adding to our Masters Degree offerings with additional faculty and a larger student population would be my ideal outcome (think the Kennedy School at Harvard). Adding a small PhD program for those

who desire to return to/continue in public service would also be a great addition at some point. d. But, I do understand that the Bush School has been heavily subsidized by the university since its inception, so, if adding undergraduate degrees, and the accompanying tuition/fee structure that comes with them, is seen as a necessity by Texas A&M, I would love to do that within our own departments. We can do it "in the Bush School image," keeping the focus on public service and the rights and responsibilities of citizens, states and nations, as well as the policies and interactions of governments. This is actually very different from political science, and would take resources for additional faculty members and staff, but we could do it in a way that best preserves our culture and in a way that will make TAMU proud. e. If the final decision is that we will incorporate another department into the Bush School, we will accept that challenge gracefully and embrace our new colleagues. We'll integrate them as well as it can be done. I think that's what President Bush would want. As a final note, if that is the ultimate decision, I would still like to pursue adding undergraduate degree programs in our existing departments. I think it would increase enrollment even more, and better balance the school for the future. But that would require resources we don't currently have. (-: Thank you for the opportunity to comment!

---

If the College of Liberal Arts becomes part of a College of Arts and Sciences, there will be a lot of education to be done to make sure that faculty in different parts of this unit understand the work and standards of their different disciplines. And the university needs to work on its appreciation of the work of the humanities (woefully unconsidered in the MGT report). That's where all those critical thinking skills get developed.

---

MPA programs usually are major money making enterprises, but it seems that the Bush School does not fit this description. The solution to this problem of making the Political Science Department join the Bush School without any consultation with leadership or faculty from that department is an odd fix to this problem. It puts in jeopardy a top-ranked PhD program with an excellent record of placing their students in tenure-track positions at R1 programs.

---

The recommendation of moving HLKN in the College of Education and Human Development (CEHD) to the School of Public Health (SPH) warrants further investigation. Although there are some overlapping in the degree programs, HLKN has a distinct focus on education, training, and coaching. HLKN prepares future educators in physical education, sports, and leisure, which is better aligned with the mission of CEHD than SPH. Instead of moving the entire department of HLKN to SPH, it makes more sense to move certain degree programs in HLKN, such as Allied Health, and Community Health, to SPH.

---

[REDACTED] the proposed academic realignment of the College of Education and Human Development does give me a bit of concern regarding our "Child Professional Services" degree concentration program - an area that has seen exponential enrollment growth over the last few years. Based on direct feedback we have gotten from students and information about the type of fields that students are entering into after graduation, we recently went through the process of redesigning our degree plan to match the career and occupational interests of this specialized cohort (as many USEH programs do) Right now in C.A.R.S. we are adding in minors related to Youth Development and Health, held an informational meeting for all students in the program to update them on the changes, and there is genuine excitement and momentum in this group over what we have structured. However, as USEH programs require students complete coursework for two minors (one inside the college / one outside the college) not only does this realignment throw our plans into chaos but it also might have similar impacts in other units that offer USEH as well. In our case, the Health minor is in Health and Kinesiology so if that department moves into the School of Public Health, then this no longer fits the USEH model, unless there is latitude given on where the minors can come from. I think those affiliations need to be considered and looked at as there are degree plan requirements at stake that will require programs to redesign and resubmit into CARS (not a fast process) and cause students to feel like the linearity and direction of their coursework is in transition and flux.

---

Combining several colleges into one is not without precedent. However, I am not sure that this will strengthen the current programs. In fact, there is a potential to dilute and weaken them with fewer leadership opportunities for faculty. The current location of the Visualization program within the College of Architecture has served that program well. The culture of the architecture studio, etc. has been a positive aspect. I believe such a move will need to continue to foster the relationship with architecture (study abroad programs, exchange of ideas, sharing courses, etc.). However, if this change potentially strengthens the visualization program, it can be a positive for expanding the creative programs in TAMU. It should be kept in mind that visualization is both a creative and technical program. The students take calculus, physics and computer programming, for example. I do worry this technical depth may get lost in this change. This needs careful thought and buy in from the faculty. Moving Construction Science into the COE is very concerning. This degree is not calculus-based and thus the common freshman year and the associated rigor is not in line with Engineering. I believe

this would position Construction Science with a disadvantage while causing issues with the current Construction Engineering and Management focus in the Civil & Environmental Engineering Department. I am not sure how this could be managed in a way that is beneficial to all those involved.

---

- We are better aligned with NSF as a separate College of Geosciences. NSF separates Geosciences into its own directorate. This has allowed us to facilitate the massive IODP contract through NSF.
- There is no evidence presented in the report showing any tangible benefit from merging the College of Geosciences with the College of Science and the College of Liberal Arts. Only half of the peer institutions have merged Colleges of Arts and Science. Another Land Grant university, Penn State, keeps their geosciences college separate from the College of Science.
- Having a separate College of Geosciences shows TAMU's commitment to the fields most likely to gain from the likely increases in funding that are on the horizon for both improved understanding of and mitigation of climate change.

---

Not at all in favor of the proposed realignments. Liberal Arts would lose its identity and impact were it to merge with Science. It makes no sense to move Biology out of the College of Science.

---

Organizational change should always be considered to optimize efficiency (including, for Texas A&M, the importance of teaching, research, and faculty, staff, and student happiness & satisfaction). Central to organizational change is a sense of urgency creating a cause for action. Also of primary importance is buy-in from key stakeholders and people knowledgeable about the pros and cons of change (and who can evaluate the J-curve intelligently (short-term inefficiencies sacrificed for long-term efficiencies)). Combining the various departments should not be done based on survey results or by comparisons with other universities. As was alluded to in the surveys of peer institutions, there are a variety of ways to run universities and there has not been an established go-by on consolidation or separating colleges and departments that has shown to be markedly optimum vs. the alternative. The changes proposed should be evaluated based on the leadership of the effected departments. For many, I don't see any sense of urgency or even long-term benefit of changing - noting that benefits in this report are vague => it is often not clear if the benefits are financial, stem from efficiencies or current waste, or something else. As one example, moving Construction Science to Engineering is a difficult fit. The technical requirements are simply vastly different from Engineering majors. Admission into Construction Science via High Schoolers applying to the competitive Engineering College will be difficult.

---

We had a Journalism Department and it was decided by their own faculty that we could still have a Journalism program designed as a cross-disciplinary program, dispensing with the additional administrative expenses of a separate department. The MGT report does not acknowledge this relevant fact. The additional changes in this regard could still be worked out without the creation of a new department. This would be a good opportunity to place the Dept. of Biochemistry alongside with the other science departments, where it belongs.

---

I am concerned about Recommendation #6, which merges the University Libraries into the College of Arts and Sciences as a Department of Library Sciences. I believe that the Libraries are more effective as an independent unit for the following reasons: 1) The MGT report recommends centralizing several campus resources to achieve greater efficiency. The University Libraries are already a centralized resource, and I believe that moving the Libraries into a specific college could lead to decentralizing that resource. Enclosing the Libraries organization within the College of Arts and Sciences could lead to perceptions of increased library service, support, and resources for that particular college. My concern is that perceptions of bias or increased support for one college could lead to the desire for college-specific libraries for the other colleges - effectively moving the Libraries to a decentralized model. As a centralized resource, the Libraries can benefit from economies of scale, negotiating journal subscriptions, database access, and other resources to serve the entire campus community. Decentralizing the Libraries could mean that purchasing access to these resources could become even more expensive and could lead to decreased access to needed research resources. Further, these resources all need constant maintenance and support from a variety of library departments, from the electronic resources librarians who work with vendors to the IT staff who support proxy servers to the instruction librarians who teach students how to use them. Keeping these support resources centralized is important from an efficiency perspective. 2) The Libraries serves the entire campus community. We provide resources for, teach workshops for, and collaborate with every unit across campus. Some colleges, like the current College of Liberal Arts, have more visible connections to the Libraries, as departments like English and History commonly need access to books. However, colleges like Engineering commonly need access to databases like EngNetBase, Compendex, and Web of Science, which constitute a substantial portion of the library budget. The Libraries, as a shared campus resource, needs to be able to continue to support the varied needs of the entire campus. My concern is that placing the Libraries, and its resources budget, within one of the colleges could lead to decreased resource allocations for the other colleges. This could affect faculty research, teaching, and even accreditation of some programs. 3) A number of the faculty librarians at the

University Libraries teach, or have taught, credit-bearing courses. Because the Libraries has not been a credit-granting institution on campus, librarians sometimes teach or co-teach courses for other departments, such as ENGL, FYEX, ESSM, and the College of Pharmacy. Many librarians would welcome the opportunity to teach credit-bearing courses in topics such as research methods. Although I think moving the Libraries into the College of Arts and Sciences is concerning for the reasons listed above, there is precedent on campus for departments outside the academic colleges to teach credit-bearing courses (e.g., ASCC, UGST). Allowing the libraries to become a credit-granting organization on campus could be a way to accomplish the goal of librarians teaching credit-bearing courses and supporting student research skills. However, the practice of running a major research library, including managing subscriptions for thousands of electronic resources, circulation of thousands of print materials, cataloging electronic and print materials for discoverability, requires the full attention of many of our faculty librarians. Further, it is important even for those librarians who do teach classes to maintain a balance between teaching small groups and supporting larger campus needs. A teaching librarian can provide in-depth research methods training, but only for a limited number of students. However, our teaching librarians commonly collaborate with faculty in other colleges in order to embed research methods content in their courses. In this case, a librarian might work with the faculty member to design a research-based assignment, create and embed library research tutorials in Canvas, provide a guest lecture or series of guest lectures to students to help with their assignments, and meet with students outside of class to help with questions. In this model, the faculty librarian is closely involved in the classroom, but is able to work with multiple classes simultaneously to provide research methods training to a larger number of students. Transitioning the librarians to teaching only credit-bearing courses (rather than a mix of credit-bearing courses and guest lectures), and to teach only their own courses (instead of partnering with the disciplines) would be likely to result in less support for faculty and students in the other colleges, and fewer students trained in crucial research skills such as database search strategies, citation management, conducting literature reviews, and conducting systematic reviews. This would affect both the teaching and research missions of the university, with the research mission particularly affected by the change in support for graduate students. Although I think the campus would be better served by the Libraries remaining an independent (and thus neutral) unit on campus, I support the recommendation to create a learning commons in the library. The second floor of Evans already includes the Writing Center and the Academic Success Center's Tutor Hubs, and is well positioned to be come a fully-fledged learning commons space. Librarians have worked on joint programming and outreach with the Writing Center, Academic Success Center, and Math Learning Center and have fostered relationships with those units that would allow them to work together to support students from a variety of majors.

---

**Recommendation #8: Improve research organization at TAMU-Health** Unanimous Consensus Response from the Texas A&M Institute of Biosciences and Technology (IBT) to the MGT Consulting and M+CG Comprehensive Review

Background: IBT investigators reviewed with interest the MGT and M+CG report summarizing major findings and recommendations for reorganization of several components of Texas A&M University (TAMU). Of particular interest to IBT investigators were the recommendations made to improve the research organization at TAMUHealth and the creation of pathways for advancement and acceleration of early-state health knowledge and products toward translation to clinical practice and commercialization. Six specific recommendations (pages 34-35) were made including: 1) the reconfiguration of the IBT to better focus on advanced research and development leading to clinical trials, 2) the consolidation of some of its components, 3) re-alignment of the Center for Innovation in Advanced Development and Manufacturing (CIADM) with the newly established research and development team, 4) a specific focus on therapeutics, including small molecules and biologics, 5) enhanced coordination with Engineering Health to support development of devices and nanomaterials, and 6) leveraging the anticipated opening of TAMU space in the TMC3 complex during reconfiguring in order to maximize productivity, and attention to a geographically dispersed research faculty across TAMU-Health. Assessment: The proposed reorganization of the IBT was received favorably by IBT investigators. Efforts to continue to advance research and development efforts sharply focused on human health and the creation of new knowledge, devices, therapies, and technology closely align with the vision and strategic priorities established by the IBT in its strategic roadmap for 2019-2022. The IBT vision, articulated in our strategic plan, is to become a leading institute for translational biomedical research and education, with a mandate to grow the research portfolio with a focus on translational and clinical programs, enhance educational excellence with a renewed focus on biotechnology and commercialization, promote visibility and recognition and interactions within the world-renowned Texas Medical Center (TMC) and beyond, expansion of strategic alliances and improvements in organizational effectiveness. Significant advances have been made toward achievement of these priorities. IBT investigators unanimously agreed that the recommendations made in the report build upon ongoing efforts and provide an excellent opportunity for sharpening

and advancing the Institute's focus on translational and clinical programs. We also endorse the need for structural reconfiguration of the Institute in ways that facilitate evolutionary maturation of research programs. To this end, we have already begun discussions to evolve the Institute from its current traditional hierarchical structure into a matrix-based organization where investigators are deployed into programs within the translational and clinical ecosystems that align with funding priorities and that maximize collaborations with the public and private sectors. The goal of this new model would be to afford our talented investigators flexibility in joining multiple programs in ways that are complementary to their research expertise and interests. Each programmatic area would be led by a senior faculty member with expertise in that particular domain and the Institute would be reconfigured into two primary divisions: a preclinical therapeutics research & development division and a clinical therapeutics research & development division, each with a set of supporting core facilities. We envision that the talent currently available at the IBT would allow launching of five major preclinical therapeutics programs focused on cancer (led by Rod Dashwood), immunobiology (led by Yubin Zhou), antimicrobial therapy and resistance (led by Julian Hurdle), neurologic and neurodegenerative diseases (led by Tom Kent), and cardiometabolic disorders (led by Jiang Chang). These research programs would be supported by a roster of facility cores led by Cliff Stephan. Three major programs within the clinical therapeutics division will include cardiology (led by Jiang Chang), precision oncology (led by Ken Ramos) and neurology (led by Tom Kent). New hires already recruited to the Institute will expand coverage to the areas of pulmonary medicine and clinical pharmacogenomics. Co-leaders for each of the above-mentioned areas will be identified to establish continuity of leadership and enhance cross-disciplinary overlap among programs. These clinical programs will interdigitate with the preclinical division within the Institute and with other researchers throughout TAMU to facilitate and support activities focused on the longitudinal development of small molecule, biologic and nano therapeutics, biomarker discovery, bioinformatics, devices, and nanomaterials, with the goal of transitioning to human clinical trials in these programmatic areas. The preclinical and clinical research divisions will be supported by a Biotechnology and Commercialization Services Core that aligns closely with CIADM to support clinical therapeutics programs toward optimum clinical, regulatory, and commercial trajectories, including quality assurance and design control strategies for devices and biomaterials emerging from faculty within the Engineering Medicine program. IBT investigators consider it an inadvertent oversight that the MGT Consulting and M+CG report did not recognize that faculty within the IBT and its Centers already hold primary academic appointments within the Department of Translational Medical Sciences of the College of Medicine (COM). This arrangement allows faculty members to work closely with colleagues in other COM departments and affords an opportunity for COM faculty to seek joint appointments designed to facilitate collaborations. As such, the Department of Translational Medical Sciences already achieves the integration of research interests envisaged by the recommendation that the Centers for Epigenetics & Disease Prevention (EDP) and Infectious & Inflammatory Diseases (IID) be moved to existing departments within the COM or be developed as standalone departments. Faculty members within these centers have strong and well-funded research programs focused on translational research and therapeutics research and development, with most of them being pursued through collaborations with multiple institutions within the TMC and other institutions of national stature (Table I). All IBT faculty members, including those in EDP and IID, view the Department of Translational Medical Sciences as their logical home department. It is also important to note that at the present time, IBT investigators hold faculty appointments in other TAMU Colleges, including the Colleges of Agriculture and Life Sciences, Engineering, Pharmacy and Science. Thus, IBT faculty do not support the recommendation to relocate two of IBT's successful translational research groups, as this would detract from the integrated and coordinated goal of refocusing research programs on the development and application of novel therapies and devices for the improvement of human health, with multiple existing clinical collaborators and projects embedded in TMC health systems. Recommendations: As implementation efforts and timelines are created to activate the recommendation presented in the MGT/M+CG report several elements should be kept in focus: 1. Expansion of translational and clinical research and development efforts along with significant realignment of the CIADM and their existing quality assurance and manufacturing expertise, will require creation of new core resources and infrastructure not currently available. These include but are not limited to a Biotechnology and Commercialization Core, a Clinical Research Office, a Pharmacokinetics and Toxicology Core, a Data Analytics Core, and a Medicinal Chemistry Core. The latter should be developed in collaboration with the Colleges of Pharmacy and Science. Such commitments will require aggressive recruitment of new talent and appropriate financial support to ensure sustainability of programs. 2. The realignment of CIADM with the Houston-based translational and clinical programs should explore development of appropriate infrastructure to support Good Laboratory Practices and Good Manufacturing Practices for biologics. 3. The reconfiguration and renewed focus of the IBT will involve modification of

associated programs, such as graduate and postgraduate education, and expansion of clinical research training offerings.

4. A Strategic Leadership Team led by the Executive IBT Director and involving key stakeholders across TAMU-Health and other TAMU units should be constituted to guide the implementation phase of elements within the report directly impacting translational and clinical research programs. Conclusions: The renewed impetus toward translational and clinical sciences and the advancement of cutting-edge science aligns with the aspirations and priorities of the entire IBT community, including its investigators, students, trainees, and staff. The reorganization effort is well positioned to further enhance the national and international impact of TAMU research and development programs. This exciting and timely endeavor will leverage world-leading expertise within the IBT and the TMC, as well as facilitate convergence and synergy between TAMUHealth and the research and educational mission of other colleges within the TAMU System.

Table I. Current Translational Research Programs of Faculty in the Centers for Epigenetics and Disease Prevention and Infectious and Inflammatory Diseases. Title: Current Translational Programs of Faculty Affiliated with the Centers for Epigenetics and Infectious/Inflammatory Diseases Investigator (Center): Translational Research Project (Collaborating Institution)

Kurt Zhang/Jia Li (EDP) Nipple aspirate fluid biomarker analysis for breast cancer patients (Walter Reed Army National Medical Center) Clinical trial of gallotannins for diabetes prevention (TAMU) Cardiac toxicity of cancer drugs (IBT) Childhood obesity cohort in Hispanic American of south Texas and maternal diet intervention (UT Health) Obesity clinical research center (TAMU) Leng Han (EDP) Hypoxia-targeted therapy (MDACC) RNA-based therapy (MDACC and UT Health) Immunotherapy (Oregon Health Sciences Univ) CAR Therapy (MDACC) Immune Related Adverse Events (Vanderbilt) Nancy Huang/Li Guo/ Jia Li (EDP) Epigenetic signatures as diagnostic and prognostic biomarkers in the clinic to guide pediatric brain tumor treatment (Texas Children's Hospital) Prognostic value of epigenetic modifications (5-hydroxymethylcytosine) in hematological malignancies (MDACC) Drug-controllable system to modulate CAR T-cell based immunotherapy (MDACC) Interaction between modifiable environmental stress and genetic defects in clonal hematopoiesis (Baylor CoM) Therapeutic targets to promote tissue repair following cardiac injury in clonal hematopoiesis with high risk of cardiovascular disease (Baylor CoM) Novel therapeutic strategy to target peripheral T cell lymphoma arising from mutant RHOA (Baylor CoM) Rod Dashwood/Praveen Rajendran/Jia Li (EDP) Hereditary colorectal cancer (FAP) patient adenomas for epigenetic endpoint analyses (MDACC) Fresh colon cancer FAP patient biopsies for organoid culture and epigenetic drug/therapeutic combination screening (MDACC) RNA-seq datasets from Lynch Syndrome and FAP patient colon adenomas for epigenetic gene signatures and novel leads (MDACC) Human colorectal IHC and TMAs for antibody fragmentation analysis in colon and duodenal lesions (UT Health) Adenomas, adenocarcinomas, and matched normal samples for immune targets and endpoints (MDACC) Randomized controlled trial in men presenting for biopsy of the prostate for epigenetic signatures modified by BSE intake (Oregon Health Sciences Univ) Adenomas and normal tissue biopsies from screening colonoscopy patients, cruciferous vegetable food frequency questionnaires, broccoli sprout extract (BSE) intervention (Oregon Health Sciences Univ) Magnus Hook (IID) Pulmotect Inc. a clinical stage biotech company was co-founded by Dr. Hook (MDACC) Analysis of S. epidermis in clinical isolates (MDACC and Duke University) Study of staphylococcal diseases (Duke University) Xiaotong Song (IID) Translational development of novel viral vectors for therapy and vaccine development for infectious diseases and cancers Co-development of retrovirus-based CAR-T cell therapy for liver cancer (Texas Children's Hospital). Co-development of retrovirus-based CAR-T cell therapy targeting HER2-positive cancers (Texas Children's Hospital). Developer of oncolytic vaccinia viruses and founder of Icell Kealex Therapeutics, acquired by Ansun Biopharm in 2020. Engineering novel adenovirus vectors currently under commercialization discussions with CG Oncology Inc & Horizon Biotech, Discussions with TMCi accelerator to launch a new startup for the commercialization of novel adenovirus & retrovirus-based technologies Julian Hurdle (IID) Discovers new therapeutics for bacterial infections (Baylor CoM), aided by a program studying correlations of antibiotic resistance with clinical outcomes A retrospective study of patients in Texas Medical Center hospitals was recently completed, showing how antibiotic resistance hindered therapeutic success. Building on these seminal findings to develop molecular diagnostics to improve treatment selection for patients with clostridia diarrhea (Univ of Houston) A T32 co-mentor, and oversight committee member, of the Training Program in Antimicrobial Resistance (Gulf Coast Consortium) Dekai Zhang (IID) Immune system responses in prostate cancer with access to clinical samples (Baylor CoM) Studies of the role of Toll-like receptors in breast cancer (MDACC) Targeting innate immunity against viral infection leading to the creation of Pulmotect, Inc (MDACC) Margie Moczygemba (IID) CPRIT-funded high-throughput flow cytometry core facility at IBT where we perform compound and drug screens for cancer drug discovery in the Texas Medical Center. We have investigators from MDACC, Baylor CoM and IBT who use our core facility to investigate diseases such as acute myeloid leukemia, colorectal and breast cancer. (MDACC, Baylor CoM) Yu Xi (IID) Study of microbial contribution to colorectal cancer aided with analysis of preclinical and clinical

samples (Baylor CoM, TAMU, MDACC) A T-32 mentor as part of the Training Program in Molecular Basis of Infectious Diseases (UT Health and Gulf Coast Consortium)

---

Support all of the suggestions here

---

The combining of Liberal Arts and Sciences into one college is very concerning. Just because other universities have done so does not mean it's a good idea. The two are disparate in research, and thus will create more bureaucracy to ensure there are associate deans from both the existing colleges to speak the language of the faculty they represent, defeating the purpose of consolidating much of the existing bureaucracy. Developing the largest college does not make it more competitive for funding against the others- it makes it more competitive within the college itself among the expanded set of departments. Additionally, they are all physically distributed across campus. The rationale of a 4-legged stool is a hollow one- there is no need for reorganization when the College of Liberal Arts already has almost as many departments as the College of Engineering. Combining Science and Geosciences makes much more sense, but there's not much to throwing in Liberal Arts as well, other than to remove its voice on campus. Clearly, these three colleges want to remain heard on campus in representation and appreciated in equal amounts of current funding. Faculty in Liberal Arts fear funding/research cuts, an increased teaching load, reduction in faculty, and unequal performance evaluations.

---

As an Academic Professional Track faculty member who teaches numerous different courses for the Biomedical Sciences program, I strongly disagree with the suggestion (Recommendation #5) to move the BIMS program out of the College of Veterinary Medicine and Biomedical Sciences. The BIMS program is flourishing largely due to its intimate connection with this College. It is unclear how the BIMS program would be administered in the proposed Institute of Biological Life Sciences, but if this connection of distinguished CVMBS faculty and researchers to undergraduate students is severed or lost, it will negatively impact future BIMS students and eventually the BIMS program itself. I have a unique perspective on this subject, as I was a BIMS undergraduate student myself and now teach for the same program that I earned my degree from. I have seen firsthand from both sides (as a student and as a faculty member) the significance of the connection between CVMBS and BIMS. I was strongly impacted in my BIMS undergraduate career by my exposure to lectures from leaders and experts in their fields - most of whom were CVMBS faculty. Now, as a faculty member teaching for the BIMS program, I intentionally cultivate similar exposure for our current BIMS undergraduate students. I have both directly observed and personally experienced the significant positive impact of the intimate connection of CVMBS (and its faculty and resources) on the BIMS program and its students. In short, the BIMS program will be negatively impacted if it is removed and disconnected from CVMBS. Additionally, despite that both have "bio" in their names, a degree in biology and in biomedical sciences are significantly different from each other and attract significantly different students. It is true that housing the two majors together would allow students to switch between them more readily, but this is a huge change in an attempt to solve a problem that does not exist. In my experience from both the student side and the faculty side of this situation, students are not typically attempting to switch between these two particular programs, as they overall have very different focuses. Biology focuses broadly on life sciences while Biomedical Sciences rigorously prepares students for professional school programs. These two programs have different focuses and attract different types of students with different goals. It may be viewed as redundancies that there are similar courses taught by both, but I can attest from personal experience that these courses are not the same and cannot (and should not) be combined. For example, I have taught both GENE 302 and BIMS 320, and despite both being undergraduate genetics courses that are generally considered interchangeable in degree plans, they are significantly different courses with different focuses and purposes. Specifically, BIMS 320 is focused on the applications of genetics to medicine and health care professions rather than general genetics knowledge (as GENE 302 is), which is appropriate for and relevant to pre-professional-school undergraduate BIMS students. These two courses are not redundant but instead serve different students with different educational needs, which only emphasizes the point that Biology students and BIMS students are distinct from each other and generally have different goals and therefore different needs that two separate programs are required to meet. In truth, if the BIMS undergraduate program must be moved out of CVMBS (which I believe would be a grave mistake), it seems that moving the program to Texas A&M Health would be more appropriate, considering that the BIMS program is intended to attract and prepare highly motivated students seeking preparation for professional schools in healthcare-related fields. On a related note, the implication of Recommendation #9b is, quite frankly, offensive. It implies that the Biomedical Sciences program is a distraction for the College of Veterinary Medicine. On the contrary, CVM built Biomedical Sciences into the immensely successful program that it is today in order to support its graduate and professional education programs. This means that the BIMS program is, by

extension, an integral part of that "core mission" and should be left in the College of Veterinary Medicine. The program is, in fact, so integral and significant to the College that "Biomedical Sciences" was incorporated into the official name to become the "College of Veterinary Medicine and Biomedical Sciences." As such, a suggestion to remove the BIMS program from College should not be made lightly. In short, there seem to be many potential negative impacts of such an upheaval and no particular cause or justification to impose such a monumental change.

---

I would like to provide feedback on the merging of Bush School and Political Science Departments, and the potential merger of Economics and International Studies to this new school. As a professional school, the Bush School has and will always have different objectives from the Political Science and Economics Departments. It is true that there is a clear overlap between interests of Bush School and Political Science. This creates the incentive to avoid redundancies by merging them. There are some important costs that may not be offset by the gain that is obtained by reducing this redundancy. The standing of the University depends on the strength of its programs. When one looks at the rankings of universities, there is a strong correlation between the general ranking of universities and the rankings of Political Science and Economics Departments. This means that for a university to be strong, it needs strong Political Science and Economics Departments. On the other hand, there is only a weak correlation between the general ranking of universities and the ranking of its school of public affairs. The top public affairs school (US News ranking) in the country is Maxwell School (Syracuse University); Indiana University, U. of Southern California, U. of Washington, and U. of Georgia, all have schools of public affairs in the top ten of this field. These schools are all far from being top institutions at the national level. This reveals that having a top school of public affairs, does not lead necessarily to a better standing of a university. Thus, if the merger of Bush School and Political Science goes through, extreme care should be given to preserve academic independence and academic standards in the Political Science Department. The Bush School Success is measured by means of the success of their Master's program. This is a reality that our University cannot change. Schools of public affairs mostly produce Master graduates and thus their success is usually measured with respect to this item. The success of the Political Science Department depends on the quality of publications of their faculty and the placement of their doctoral students. This will go unnoticed in the national standing of the Bush School. Thus, if the Political Science Department has no academic independence and becomes another branch of the professional school, in time it will veer towards a services unit for the professional school and will lose the prominence it has now. This is a cost that will likely not be compensated by the higher standing of the Bush School. The same applies to Economics, with the further note that there is little overlap between the academic interests of faculty in the Bush School and the Economics Department. The Department of Economics at Texas A&M has found national prominence in the fields of Behavioral/Experimental Economics, Theoretical Econometrics, and Applied Microeconomics. It also counts with well consolidated groups working on Macroeconomics, Industrial Organization, and Theoretical Economics. None of these fields are of interest to a public affairs unit. This is obvious when one observes that out of the Top 28 schools of public affairs in the Country (Bush School and above), only two house the economics department. I could not find meaningful statistics to make a judgement about the International Studies Department. I am not familiar with this field. In summary, Political Science should be given academic independence should they move to the Bush School. The Department of Economics should not move to the Bush School. This department will likely keep thriving in the new Arts and Sciences School. It will also be a keystone joining together the sciences and the liberal arts with which it has strong ties.

---

**Centralized Advising** This is a naïve recommendation that lacks any depth of thought or understanding. I found irony in the cited example in the report for two reasons. That process for changing majors is the one that was recently dictated out of the provost office in conjunction with that academic success center. Prior to that centralization, the student just had to go to the major that they wanted and apply for admissions. The second irony is changing majors is such a small amount of what professional advisors do on a daily basis. Advisors spend much more of their time helping student matriculate, helping them with career decisions, pointing them to available resources and perhaps most importantly are the people that are on the front line in identifying mental and anxiety issues. I am a big believer in centralizing advising at the College level. It is reasonable to expect people in that office to understand the programs within that sphere. Expecting an advisor to have any understanding of programs ranging from dance to nuclear engineering is ridiculous. Additionally, our advisors serve on program academic affairs committees and assist in recruiting student. They provide a constant for the students. By engaging in curriculum development, they ensure that desired changes align with University graduation requirements and more importantly they know why things exist in curriculum. If advising was as simple as portrayed in the report, I would have written an algorithm years ago! **University Studies** This is the section of the report that is grotesquely inaccurate, obviously based on perceptions and completely devoid of fact. Having served

on the working group that developed and implemented this program. They are NOT a distraction calling them “students who do not have the qualifications or interest to enroll in a College Degree program” is blatantly false and insulting to those students. The consultants should be required to retract that statement and apologize to the students. They are student in good standing in our university, were admitted to our university and will graduate just like any other student at TAMU! These students are AGGIES just like every other student / major at TAMU! We should never tolerate any degrading any cohort of our student! SHAME ON THE CONSULTANTS AND SHAME ON US FOR NOT DEMANDING THE REMOVAL OF THAT STATEMENT! These students are enrolled in TAMU and meeting the same graduation and matriculation requirements of any student at TAMU. These students are an asset, particularly in the College of Architecture. The most recent graduation salary survey for the College of Architecture has those student with the second highest starting salary of \$53,819 ( <https://aggiesurveys.tamu.edu/public/ReportResults.aspx> ), as compared to the \$41,600 for Visualization, the lowest. Please look at that survey and you will find out there is a real demand for those students in the workforce. The University Studies students have not been a distraction, in fact they have been a compliment to the professional programs in the College of Architecture. Of the 423 Masters student in the current cohort, 43 of them, or 10% came from University Studies programs with others from USBU and USVM. These students have provided a reliable pool of domestic graduate student, which has been essential considering all the visa issues of the past several years. To set the record straight a little history into the origination of that program is obviously needed. The University Studies program came into being to assist students who were blocked from advancing toward graduation by program-imposed roadblocks. For example. many programs had 2.5 GPA requirements to move into the upper division classes. A student with a 2.4, would be in good standing in the University but could not make progress toward degree. In addition, at that time, there were over 5,000 students in General Academic Programs, which did not grant any degrees. These were all students in good standing but were being blocked by arbitrary barriers from moving to degree completion. University Studies was created to help these students. Most Colleges were opposed to this concept, were forced to create them, and reluctantly began these programs. As the student became integrated, people began to see them as good students and their potential. Many of the students in the program arrive at University Studies after having “bounced around” majors and colleges. The flexibility in the University Studies programs allows for expeditious completion of the undergraduate program and into the graduate program to meet their professional desires. This is often the fastest and least expensive option. For example, a student wants to be an Architect and has 60 hours from a variety of majors. Because of the sequential nature of studio classes, the student would need 4 more years to complete the undergraduate degree and 2 more for the masters for a total of 8 years to qualify for professional registration. With University Studies, the student could complete the undergraduate degree in 4 years and start the 3-year career change program. The student would complete their professional goal with 1 less year of college, saving tuition dollars, but more importantly enter the work force a year earlier. Just a year less college overhead and the extra year of work could be easily worth over \$100,000 to the graduate. In the University Studies Program (USAR) with good advising we can prepare them for this program. With University Studies out of the College of Architecture, the student will not get the needed preparation and concentration, eliminating this huge benefit. The USAR program is not a distraction, we have 2 advisors who help the students and in most instances are enrolled in existing courses. Additionally, the study abroad requirement has given faculty the ability to travel abroad, teach classes and advance their research, all of which is positive and will vaporize if USAR is removed from the College. This recommendation will be devastating for thousands of TAMU students!! Removing Construction Science from the College of Architecture Construction Science has its beginning in the College of Engineering, where it was for likely around 20 years. That program left Engineering and was moved to the College of Architecture, because Architectural Construction (ARCO at the time), was focused on project management of buildings and not the engineering of buildings. While it is 50 years later, the same holds true. The College of Engineering already has a Construction program in Civil Engineering that is apparently focused on infrastructure projects, where the teams are led by Civil Engineers – so this logical. Given that the primary focus of Construction Science is on building construction, where the teams are led by Architects it is a natural expectation for those two professions to be collocated. A review of the faculty credentials will show that most have management backgrounds in primarily commercial and residential construction. I would encourage you to look at how TAMU procures buildings to see the obvious connection between Architects and Constructors. In the TAMU procurement process, the Architect and Contractor are selected at the same time. The engineers are subcontractors to the Architect. The Architect and Contractors are on the project from day one to day last. The engineer, since they do not have construction administration responsibility, are disengaged from the project at likely 25% construction complete. There is virtually no symbiotic relationship between the engineer and contractor in Commercial Construction.

The Construction Science Program is THE major pipeline of talent for the commercial construction industry in Texas. Within the College of Architecture, they have been given their own identity and have thrived to become a model program in terms of size, quality, and industry support. In the College of Engineering, they will get them closer to 25 by 25 but will be one twenty fifth of the population and will disappear. The things that make the program successful such as semester away and the Industry Advisory Council will have difficulty with Engineering Admissions and common first year. They will be forced to fit that model or be relegated to “second class citizens” within the College. They will be in a no-win situation. If the desire is to strengthen the existing Construction Engineering program, there are better ways to make that happen then destroying Construction Science. The research collaborations that have been recently established can continue and be enhanced. Additionally, there is NO curricular connections between Engineering and Construction Science. The Construction Science program follows the Business School curriculum and is much closer tied to business than engineering. The business and law aspects are more connected to the profession than the design aspects of a College of Engineering. If you feel compelled to extract Construction Science – put it in the Business School! The program also has the most recognized Industry Relations operation, which will not survive in the College of Engineering. Construction Science has the largest Department Career Fair at TAMU, they will be lost in the massive, centralized Engineering Career Fair. Additionally, many of the companies are supporters of Engineering and Construction Science, if they are together there is no reason to support both – a net loss of donor dollars to TAMU. This change is a very bad idea!

**Moving of Visualization to Arts & Science** The Visualization program today is the result of demand driven changes. This program began as the Visualization Lab with the idea of using visualization techniques to do virtual walks through buildings. At that time this required powerful computing power to manipulate rudimentary images. The “Hollywood Crowd” saw what we were doing and saw the potential in the movie industry. When the Visualization Lab was made a standalone Department there was the conscious decision to focus on film-making which aligned with the credentials of the initial Department Head. Over time the things that once took million-dollar computers can be done by a teenager in their bedroom. This technological shift was a driver in recent hires to focus more on data visualization and applying those techniques to other fields and professions. For example, could field of vision be enhanced with VR goggles help people with impaired vision see better. Things like this can change a persons life! While there is lots of press about the connections between the gaming industry and Disney / Pixar. The Former Students directory lists only 24 graduates since the mid 90’s that are currently with Disney / Pixar. There is only 1 former student listed at Electronic Arts, one of the most substantive gaming companies. A conscious decision was made several years ago not to increase the size of the program, because of the limited job opportunities and low starting salaries. This program attracts some of the brightest and best students to TAMU and fills before any major. The incoming student have dreams of being animators, but that market is very small, and they often end up at ad agencies. The curriculum gives the student the option to pursue technical skills or classical art skills. Most of the student prefer the classical art skills at the expense of learning technical skill / programming. This severely limits employment potential at graduation. The new Department Head was challenged to increase the technical rigor of the program to open other avenues in data visualization and process animation. These changes will be more difficult in an art program when the real need is science and computer science. Please dig deeper into this change – things are not always as they appear!

**Combining Arts & Sciences** This is obviously well intentioned and will reduce the Dean count by two, it likely would not yield much of a savings and do more harm than good. Will this be the end of tenure for many Liberal Arts Programs? A College T&P committee made up of Chemist and Physicist with multimillion dollar research grants serving with a Literature professor who has spent their life studying the writings of a single person is the definition of dysfunctional. I have served on the AFS Distinguished Achievement Awards Committee for research and witnessed this firsthand. How do you compare a person with a multi-million-dollar research agenda in the Sciences with a person from a field that provides little or no research funding? It is a very difficult conversation to get serious consideration with such divergent fields. I worked in one of these Colleges early in my career it was totally dysfunctional.

---

I strongly oppose the suggestion of creating a College of Arts and Sciences. Natural Sciences and Humanities have completely different cultures. The fundamental differences in approaches, methodology, and evaluation of research and creative products in natural sciences and humanities seem to be obvious even from a child of elementary school ages. Even in high school humanities and science departments come separately, while in such a large, renown, and since. engineering research-oriented university as Texas A&M, the College of Science departments, playing a crucial role in the teaching of service courses in Math and Sciences, is very research-oriented and consist of world experts in their fields from all over the world, while the Liberal arts departments are more focused on the instruction of core curriculum only. In this way, the merit criteria for a successful faculty member from Colleg of Science and Colleg of Art are completely

different, and this effect significant differences in the tenure evaluation, hiring procedure, and also in hiring needs in those Colleges. Unifying these Colleges you assume that people of one academic culture and system of professional evaluation will take an important part in the fate and strategic planning of people of completely different academic cultures and systems of evaluation. This does not seem to be logical at all and I expect that after such a merging it will be inevitable to have Vice Deans of Natural Sciences and a Vice Dean of Liberal arts with their own offices, two separate College-level committees on the tenure and promotion of members of the department from science departments and members of liberal art departments so that there will be no any optimization of staff, vice versa additional useless unifying offices will be created on the top of the existing one and the existing one will be just renamed. Overall, the tendency to centralization never proved to optimize the budget and make things more efficient, but lead to more bureaucracy and a lack of competency and personal responsibility for decision making, so I do not quite understand why we need to do all this. I spoke with people from other universities (for example from Iowa State), where the College of Art and Sciences was created and I only heard a negative opinion on this with exactly the same concerns I brought above.

---

Although the realignment of some colleges could be a good thing for the university, I'm hopeful that leadership will take a more careful look at certain recommendations to move/merge colleges, departments, or programs and allow ample time for any such transitions to take place if it is ultimately decided it is best for the university. For example, the recommendation that the Department of Health and Kinesiology (HLKN) be moved wholesale from the College of Education and Human Development and be merged with the School of Public Health (SPH) does not seem to have been well thought out or did not take into account the diversity of program offerings. There are myriad program areas in HLKN that are highly productive and might not be best served by merging with (SPH) (e.g., sport management), but instead, would be better off either staying in CEHD or perhaps moving to other colleges across campus. But regardless of what changes are eventually adopted, it would make sense not to rush the process. It would seem that a Fall 2023 as opposed to a Fall 2022 implementation of such transitions would be more realistic, and quite frankly, fair to the faculty, staff, and students who will be impacted by it.

---

Forgive my cynicism, but I read about the circus in the papers every day. I've been wondering when the university would get around to something like this. The Academic Realignment proposal gives TAMU a plausible rationale to sink an academic unit with the word 'Liberal' in the title. The wise heads in Austin who currently make the laws and allocate funding for education in our state must get apoplexy every time they see or hear that a 'College of LIBERAL Arts' exists at Texas A&M. This is a clever way to fix that problem. I'd like to think there is a grown-up, rational reason for the proposed realignment, but I'm dubious there is one. As for the effectiveness of the proposed merger, who can really tell? The MGT report people do not give us much to go on here. I suppose organizationally and financially to may make some sense to streamline some operations. And a new College of Arts and Sciences would create a second juggernaut to stand alongside Engineering. Will a giant CoAS make for better research and teaching, and happier staff, students and faculty, in the long run? How that happens is not fully explained.

---

I wish to voice my concern over the loss of identity of Geosciences in the planned College of Arts and Sciences. Therefore, I believe it would be beneficial to retain GEOSCIENCES AS AN IDENTITY in any newly formed College. My rationale is as follows. Being a small College, Geosciences has worked hard over the past 50 years to develop a unique cohesive and identifiable identity beyond simply an aggregation of its four academic departments and associated centers. The college has already consolidated academic advising in the college, has in the past year launched a (1) Geosciences focused recruiting center and (2) and Geosciences focused career center. Both of these serve students across our college. Losing them would negatively impact our future, current and former students across the Geosciences. The College has also been forward thinking in regards to interdisciplinary academic programs. The College has created highly successful undergraduate (Environmental Programs) and graduate (the Master of Geoscience) programs at the College level that are serving our current students well. These programs are contributed to by all academic units in the College. How these programs would be sustained in the long run without some focused Geoscience area in a large College of Arts and Sciences is worrying. In conversations with leaders of our college's student organizations, the importance of the college's small size and the familiarity it brings was identified as important both for recruitment and retention of students. This is a major selling point of our College and has been important in our success with high impact educational practices.

---

My overarching concern with regard to the Academic Realignment recommendations is that all of the peer institutions listed are much smaller than Texas A&M. The College of Arts and Sciences at any of these institutions is a lot smaller than ours would be. At a time when we are struggling to retain our ability to treat each student as an individual, to treat each student as part of the Aggie family and invest in each student as a person - preparing them for the next step in life -

we need to strengthen Departments and Colleges as academic units where students know us and where we know them. Lumping liberal arts, science and geoscience into one massive college would have the effect of making us another one of those big blowsy (anonymous) state universities (Arizona State with higher humidity and trees). Recommendation 1. It would be a sad to lose the College of Geosciences, which provides a unified and cohesive focus on key Texas, national, and global issues such as climate change, environment, resilience, sustainability, and the energy transition. Losing the College of Geoscience at Texas A&M would leave UT Austin as sole operator of a Geoscience college in the State of Texas, and allow that institution to dominate in these key areas. The College of Geosciences was created in 1965 under President Rudder, and since then Texas A&M has become an international flagship institution leading geoscience programs such as IODP. Without the Identity and the focused leadership of the College of Geosciences, Texas A&M will soon lose its strength and international prestige to other peer institutions in geosciences. That said, it would be nice to enable more collaboration between colleges in undergraduate and graduate teaching. The EEB program, which takes in faculty from Liberal Arts (Anthropology) Geoscience (Geology and Geophysics, Oceanography) and Science and AgriLife is an example of a strong and innovative interdisciplinary graduate program at TAMU that cuts across College and Department boundaries. Finally, implementing this recommendation while removing the Dept. of Biology from the College of Science will weaken all of the collaborative teaching efforts that might become possible in a College of Arts and Sciences. Recommendation 2 - I would be in favor of this recommendation - but it will take money and not too long ago, we dismantled the performing arts focus of our Music Department. I don't like the idea of spending money to rebuild what we recently dismantled. Recommendation 3. I would not be in favor of this recommendation. 10 or so years ago, we dismantled our Dept. of Journalism. I don't like the idea of spending money to rebuild what we recently dismantled. Where will these people get jobs? I note that in the past 3+ years, KAMU-FM has become increasingly right wing (e.g. the weekly show with Rep. Pete Sessions, who voted against certifying the 2020 Presidential Election). The times I have listened to this show, it was not non-partisan. I assume KAMU-FM has a Board of Directors and that this show reflects the preference of the local community. Based on recent changes in their programing, I would be concerned if KAMU-FM were linked to an academic department at this university. Recommendation 4. no comment Recommendation 5. Create an Institute of Biological Life Sciences. Surely other schools (Cornell University?, Iowa State?) have Biology Departments in the College of Science and biological departments in their Colleges of Agriculture. This will weaken the proposed College of Arts and Sciences and I'm not sure it will have the desired effect of raising the profile of Biology at Texas A&M. Recommendation 6. no comment

This is a nightmare scenario. I will begin by pointing out that the peer institutions that MGT lists in the beginning of this section are known as Liberal Arts Institutions. The liberal arts are among the strongest departments in these institutions; they are valued by their STEM counterparts. At TAMU, that is not the case. Historically, it is an agriculture, engineering, and military school. Until well into the 20th century, the liberal arts existed only to support those other programs; degrees in the liberal arts were late additions to the university degree offerings. To argue that the "larger college structure [a college of arts & sciences] creates a stronger advocacy for the liberal arts education at a STEM-focused university" seems asinine given the unique history of TAMU. A more likely scenario is that the liberal arts, especially the humanities, will be minimized, underserved, misunderstood (particularly in terms of the nature of humanities research), and undervalued. The liberal arts likely will, once again, become service departments for other programs. Equally problematic is the reason that the report gives for creating this mega-college; it basically says that bigger is better. I beg to differ. As for a school of performing arts, has MGT ever heard of the Texas Higher-Education Coordinating Board? They have made it abundantly clear that such a situation will not approved or tolerated. This recommendation, perhaps more than any other, makes one seriously question whether MGT understands anything about our context here and compromises the rest of the report. The recommendation about journalism is nearly as bad. We had a department of journalism until approximately 2003 or 2004 when it was eliminated. The reasons for eliminating the department were not particularly popular, but the point is that MGT doesn't seem to even know we have this history. Equally problematic is the reasoning for creating the program: people don't trust media anymore and if we build it {a department}, they will come. Merge the libraries into the new college of arts and sciences and create a department of library sciences. Once again, I ask, has MGT talked to the Higher-Education Coordinating Board? To the faculty and staff of the TAMU libraries? I seriously doubt it.

1. Moving the Department of Health and Kinesiology out of the College of Education is a great move and welcomed universally within our department. It has been a bad fit for a long time and the last two academic program reviews strongly recommended the move as a #1 priority. Thank you. However, 2. The Health Education group and the Kinesiology group, likewise, have very little in common and function independently. There is virtually no argument from

anyone in the department that the Health Education group fits well in the School of Public Health but Kinesiology does not. Our training is physiology, biochemistry, genetics, nutrition, psychology, neuroscience and the like and would struggle to find common ground in Public Health. It would be an improvement from the College of Education but the same problems would exist. 3. If Kinesiology was set up as a department, we would be competitive on the TAMU campus as one of the better departments in terms of funding, students numbers (1200 UG, 60+ grad students) and faculty (~30). Without the dilution of the Health and Sports Management group, we will likely be the #1 program in the country which will be only the second #1 program at TAMU ever. 4. If you examine our natural collaborations, you will see that Agrilife is the most dominant connection. We have collaborations in Engineering (obviously not a good fit) and in Arts and Sciences. 5. Our Sports Management program also has little in common with Kinesiology or Health and has a natural fit with Tourism and Rec Management Department in Agrilife. 6. Our Physical activity program is essentially an extension program of the Kinesiology group and could mirror extension programs in Agrilife. Please look more carefully at the Department of Health and Kinesiology as we no longer fit together. The realignment is a tremendous opportunity and I think the suggestions I am making would be in the best interests of TAMU, the colleges and our faculty. I am excited about these changes and I hope they make everyone stronger.

In the report, "there could be other units interested in merging with Bush School due to the ..., such as Economics or .. " As an economics professor, I am NOT in favor of the merger. One potential advantage of the merger is that Bush school may provide a better exposure of the economic policy research. However, I do not think our policy research lacks exposure. Several faculty members' research in our department has been featured at NPR, Dallas Morning News, etc. My own work on China is seen at New York Times, Wall Street Journal, Bloomberg, Business Week, Economist Magazine, Financial Times, and others. What lacks is the policy research itself. Vast majority of economics research is more fundamental with no clear policy implications, and thus may not be appreciated enough in a public policy school. So I see no obvious advantages but potential disadvantages for the merger. If more policy studies are desired from the university's point of views, a better way is to incentivize the department (and the faculty).

Recommendation #9D: Consolidate HLKN into SPH As a member of the health faculty, I, along with my colleagues, oppose the movement of HLKN and our health education division to the school of public health on the grounds that (1) it is not in the best interests of our faculty nor our students, (2) it detracts from our ability to attract new students, and (3) the information that supposedly justifies the proposal is inaccurate. Report claims: "Program growth in each academic unit, specifically in the Community Health and Public Health degree programs, often appears to continue to create new conflict, course offerings, and program expansions in the other (...) however, this duplication of program offerings is an inefficient use of resources, confusing for accreditation and program evaluation" (p. 39). While the report suggests HLKN and SPH experience duplications that might be confusing for accreditation and program evaluation, it fails to acknowledge the origins of the perceived overlap: The BS in Health Education began with the establishment of the College of Education in 1969. The SPH's BSPH was established in 2014, proposing to duplicate courses that aligned with the Division of Health's already-established professional preparation programs and degrees (which prepare school health teachers, community health educators and the health workforce). Additionally, in spite of what the consultants said, there are very few overlaps between HLKN and SPH, with only ~ 150 students out of ~4000 in HLKN affected. The consultants also argue that putting HLKN with SPH is common in other Universities and provide 15 Universities they note as Peer Institutions. Several incorrect assumptions are made in the MGT listing, including misclassification of some of the Institutions as our peers, and miscategorization of several of the programs. Most importantly, the Consultants fail to realize that just because a College/School has "Health" in the title, does not make it a School of Public Health. In fact, of the 15 examples provided, eight of them (53%) do not include Public Health (Oregon State, University of Illinois, University of Utah, Central Oklahoma, Iowa State University, Miami University, University of Nebraska at Omaha, and University of North Dakota were all incorrectly classified). While there are some parts of HLKN that are contained in SPH around the country, many units like HLKN are in their own School/College structure (e.g., University of Michigan). If there is competing demand for students at the undergraduate (or graduate) level, it would seem wiser to capitalize on existing pedagogical resources already in place in the Health Education program (in HLKN). It would also seem wiser -- in lieu of moving HLKN to the SPH -- to capitalize on the forces driving enrollment in the Health Education undergraduate and graduate programs at a rate two-thirds higher than that observed in the SPH. Report claims (erroneously): "The overlapping degrees are the Bachelor of Science in Public Health, Master of Public Health, and Doctor of Public Health within HPCHS, and the Bachelor of Science, Master of Science, and Doctor of Philosophy in Community Health at HLKN" (p. 38). The health-related Master's degrees offered in HLKN are MS in Health Education; the one offered at the SPH is a Master of Public Health degree. HLKN offers a Ph.D. in Health Education (not Community Health as claimed in the

report). SPH offers a DrPH. Assuming these degrees are redundant reveals unawareness regarding the nature and function of these titles: both the MPH and the DrPH are practitioner-oriented degrees -- appropriate for professionals working in state or federal-level departments of health and/or health care providers focused on practical applications of public health principles. MS and Ph.D. degrees are research and scholarship-oriented degrees -- appropriate for professionals seeking to research, develop, and disseminate new knowledge, as well as for scholars critically assessing knowledge development and ethical implications of applying research-based innovations/knowledge. Report claims: "One of the primary reasons to move HLKN to SPH is that SPH's Council on Education for Public Health accreditation will not allow SPH to eliminate degree programs or to offer joint programs" (p. 39). A recommendation to dismantle one of TAMU's largest academic departments because an accreditation program does not permit another solution is disingenuous. The rationale is invalid, given that several other peer institutions have CEPH accreditation for their Public Health programs while simultaneously housing other units similar to HLKN's Division of Health Education. One such peer institution - which the report failed to list in Appendix 3 -- is The University of Texas at Austin. UT-Austin houses both undergraduate and graduate degrees in Health Behavior and Health Education in their Department of Kinesiology and Health Education -- within the College of Education -- while also offering a BS in Public Health; at the same time, the UT School of Public Health offers MPH, DrPH, and PhD degrees (alongside non-degree certificates and programs). Other peer institutions having the same model as TAMU (Health Education programs outside SPHs), with concomitant Schools of Public Health and their degrees include: the University of Alabama Birmingham and University of Florida. Counter-Recommendation: From both a budgetary and efficiency perspective, it is more feasible to move the smaller HPCHS from the SPH into the HLKN Department, given the Health Education Division's history, scholarly productivity, national prominence and leadership role within the HLKN Department, the College of Education and Human Development, the University, and nation-wide. Moving the HPCHS department into HLKN would cost less and would allow the HLKN's Division of Health Education to maintain its independence and leadership role within the profession of Health Education, thus contributing to the College of Education's focus on developing professional educators of various stripes. HLKN is a large department and has approximately twice the number of faculty in SPH (113 HLKN vs. 60 in SPH) and approximately four times the number of students as SPH (3,975 HLKN vs. 1,180 SPH). Putting HLKN into SPH will be akin to a bottleneck approach. Adding HLKN to a tightly regulated School -- with accreditation standards to satisfy -- will be difficult to say the least. OR I would recommend that HLKN be moved under the TAMU Health umbrella and established as an independent School of Health and Kinesiology. Faculty within the HLKN Health Division that want to move to SPH should be allowed to relocate, given that SPH has previously hired several HLKN Health division faculty, while HLKN Health faculty that want to stay in HLKN should be allowed that privilege. Moving HLKN as a School under the umbrella of TAMU Health, would strength TAMU Health, would cost little, and would maintain the strength of HLKN. There will certainly be Health faculty that would like to transfer to SPH, but there are also a large number of Health faculty whose research and education programs do not fit into the SPH model. Lastly, this action -- creating a School of HLKN in TAMU Health -- would allow SPH to continue to pursue its destiny as a Public Health focused educational entity. Given that HLKN is currently administratively and financially structured like a School this action would not increase costs and inefficiencies.

The recommendation to relocate HLKN to SPH is based on faulty and incomplete information, making the conclusions both inaccurate and inappropriate. Health education and public health are distinctly separate in terms of credentialing, career trajectory, and curriculum focus. The degrees offered \*do not\* overlap, and the health division within HLKN has a rich tradition dating back to its inception in the 1960s. (Consequently, the recently created BSPH patterned their program after the well-established and successful BS HLTH.) The Division of Health should not be subsumed into a smaller, newer, less-successful program. Furthermore, several aspirant peer institutions successfully structure their programming to accurately distinguish between health education and public health. In fact, The University of Texas at Austin, ostensibly the priority aspirant peer for TAMU, offers health education degrees within their College of Education and public health degrees within their School of Public Health. The following points justify and support the need to retain the Health and Kinesiology Department as an integral academic unit, correct erroneous information offered in the report, and provide a counter-recommendation. Report Recommends: [Recommendation #9d]: " Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health. (...) Refocus the College of Education and Human Development on the core mission of producing educators and move the Department of Health and Kinesiology ... to appropriate units" (p. 38). Response: The majority of faculty within the Division of Health Education in the HLKN Department believes this recommendation is ill-suited, given that the Division of Health Education contributes significantly to the College's focus on "producing educators".

The Division of Health develops/trains Health Educators with degree options that allow for TEA teacher certification and enable students to sit for the nationally accredited Certified Health Education Specialists. Undergraduate degree options are: BS in Health Education (with an emphasis on Allied Health) or a BS in Community Health. All graduate degrees are in Health Education (and not Community Health). Health Educators and Community Health/Public Health Workers are specifically identified by the U.S. Bureau of Labor Statistics (BLS) as distinct occupations. Each training program has its own, unique certifying agencies. For health education programs: the National Commission for Health Education Credentialing, Inc. (NCHEC); for public health programs: the Council on Education for Public Health (CEPH). Re-alignment of the HLKN department with the SPH would contribute to REDUCING THE FOCUS of the College of Education and Human Development on its “core mission of producing educators”, by eliminating one of its vital education-oriented programs - and detracting from the capacity to attract potential students. Moreover, even if a move to SPH is imminent, resources still need to be invested to articulate differences and ways to capitalize on the strengths in the BS in Health and Community Health degrees and avoid the duplication created by SPH’s BSPH. The BS in Health and Community Health need to be intentionally maintained and keep a focus on health education and promotion with responsibilities and competencies, different from what one would find in BSPH preparing professionals for Epidemiology, Health Policy, and Environment and Occupational Health. Report claims: “Program growth in each academic unit, specifically in the Community Health and Public Health degree programs, often appears to continue to create new conflict, course offerings, and program expansions in the other (...) however, this duplication of program offerings is an inefficient use of resources, confusing for accreditation and program evaluation” (p. 39). Response: While the report suggests HLKN and SPH experience duplications that might be confusing for accreditation and program evaluation, it fails to acknowledge the origins of the perceived overlap: The BS in Health Education began with the establishment of the College of Education in 1969. The SPH’s BSPH was established in 2014, proposing to duplicate courses that aligned with the Division of Health’s already-established professional preparation programs and degrees (which prepare school health teachers, community health educators and the health workforce). If there is competing demand for students at the undergraduate (or graduate) level, it would seem wiser to capitalize on existing pedagogical resources already in place in the Health Education program (in HLKN). It would also seem wiser -- in lieu of moving HLKN to the SPH -- to capitalize on the forces driving enrollment in the Health Education undergraduate and graduate programs at a rate two-thirds higher than that observed in the SPH. Report claims (erroneously): “The overlapping degrees are the Bachelor of Science in Public Health, Master of Public Health, and Doctor of Public Health within HPCHS, and the Bachelor of Science, Master of Science, and Doctor of Philosophy in Community Health at HLKN” (p. 38). Response: The health-related Master’s degrees offered in HLKN are MS in Health Education; the one offered at the SPH is a Master of Public Health degree. HLKN offers a Ph.D. in Health Education (not Community Health as claimed in the report). SPH offers a DrPH. Assuming these degrees are redundant reveals ignorance regarding the nature and function of these titles: both the MPH and the DrPH are practitioner-oriented degrees -- appropriate for professionals working in state or federal-level departments of health and/or health care providers focused on practical applications of public health principles. MS and Ph.D. degrees are research and scholarship-oriented degrees -- appropriate for professionals seeking to research, develop, and disseminate new knowledge, as well as for scholars critically assessing knowledge development and ethical implications of applying research-based innovations/knowledge. Report claims: “One of the primary reasons to move HLKN to SPH is that SPH’s Council on Education for Public Health accreditation will not allow SPH to eliminate degree programs or to offer joint programs” (p. 39). Response: A recommendation to dismantle one of TAMU’s largest academic departments because an accreditation program does not permit another solution is ludicrous, at best, and disingenuous at worst. The rationale is invalid, given that several other peer institutions have CEPH accreditation for their Public Health programs while simultaneously housing other units similar to HLKN’s Division of Health Education. One such peer institution - which the report failed to list in Appendix 3 -- is The University of Texas at Austin. UT-Austin houses both undergraduate and graduate degrees in Health Behavior and Health Education in their Department of Kinesiology and Health Education -- within the College of Education -- while also offering a BS in Public Health; at the same time, the UT School of Public Health offers MPH, DrPH, and PhD degrees (alongside non-degree certificates and programs). Other peer institutions having the same model as TAMU (Health Education programs outside SPHs), with concomitant Schools of Public Health and their degrees include: the University of Alabama Birmingham and University of Florida. Counter-Recommendation: Move the smaller unit of HPCHS at SPH into the HLKN Department. From both a budgetary and efficiency perspective, it is more feasible to move the smaller HPCHS from the SPH into the HLKN Department, given the Health Education Division’s history, scholarly productivity, national prominence and leadership role within the HLKN Department, the College of Education and Human Development, the University, and

nation-wide. Moving the HPCHS department into HLKN would cost less and would allow the HLKN's Division of Health Education to maintain its independence and leadership role within the profession of Health Education, thus contributing to the College of Education's focus on developing professional educators of various stripes.

As stated above, the realignment recommendations should probably be revisited by President Banks and a team within the University. Some of the recommendations related to the University Libraries, College of Education and HUMAN Development, Business, Health Sciences etc all have pros and cons and the report fails to acknowledge the cons. The power of a large thriving entity like Texas A&M University is in the ability of the organization to still feel like a small campus for the students who come into study here. That small campus feel is derived from the local support and relationships students build with the faculty in their programs and colleges. Thus, a more centralized approach will further put distance between the student and those that promote their success here. My research team has made transformative contributions to the State of TEXAS schools and beyond. The research has garnered millions of dollars in funding and has been featured by the What Works Clearinghouse and has made superb impacts on children across Texas. We hope that these would be featured as we move forward in recognizing the positive effect that we have had.

I have questions about the role of the Department of Performance Studies within a School of the Visual and Performing Arts. If the University created a Department of Theater, Drama, and Dance within the School of the Visual and Performing Arts they would have to hire many new positions to staff a conservatory style program. So, how would Department of Performance Studies fit within that? Would the department function as the research branch of a Department of Theater, Drama, and Dance? I would like to hear more about what the University envisions the role of Performance Studies within a Department of Theater, Drama, Dance in the broader context of a School of the Visual and Performing Arts. Additionally, the University of Texas at Austin has a conservatory style program. How would Texas A&M compete with a well-established program like this?

In my role as [REDACTED], I will comment specifically on the proposal to move the Biomedical Sciences (BIMS) undergraduate program out of the CVMBS. First, I respect the president's expectations that our college must focus on our core missions. I also respect her concerns that the BIMS program sometimes may stretch human and other resources in the CVMBS, competing with the college's DVM and graduate programs. And yes, we do struggle sometimes with bottlenecks that may preclude some BIMS students from moving through their studies in a timely way. On the other hand, the BIMS program, with CVMBS as its long-term academic home, has an excellent record of attracting first-generation and under-represented students into a large and academically rigorous program that prepares them well for health profession education. Many students are attracted to the BIMS program because they can study in a highly ranked professional college (CVMBS). In our opinion, the one health focus of the BIMS curriculum provides a very fertile educational environment for undergraduate students who may still be deciding which health profession to choose. There are many aspects of the proposed Institute of Biological Life Sciences, in which BIMS would be located, that are unclear. Is this based on the Cornell and Michigan models in which pre-professional students would take a basic year of biology and then track according to their career preference? Would CVMBS faculty who teach in the BIMS program move to the new institute? What about CVMBS faculty who teach in the BIMS, DVM, and graduate programs? Does the proposed move of BIMS include our BIMS graduate program, or just the undergraduate portion? Over the course of many years, the CVMBS has utilized its human, space, and fiscal resources carefully to tightly integrate its responsibilities to its professional, undergraduate, and graduate curricula. How would these resources (especially people, and assigned classroom and laboratory spaces) be administered when BIMS is moved out of the college? Providing tailored advising for pre-professional students requires extensive experience so that the students can complete their required coursework in a timely manner. We are very concerned that a centralized advising process may be significantly less effective for the BIMS program and may lead to worse bottlenecks. It is our impression that a pre-professional program (BIMS) housed under Agriculture will be significantly less attractive to prospective students interested broadly in the health sciences than a program housed in one of our professional schools. Lastly, let me share an anecdotal story. [REDACTED] I attended a dinner a few days ago (November 10) on campus, honoring one of this year's Sterling Evans medal winners. The awardee has given many scholarships to the university and asked that students who are present and previous recipients of these scholarships be invited to the dinner. Seated at our table was a current first-year veterinary medical student from California, who had come to BIMS because of its reputation; a BIMS student in the Corps of Cadets and in the Aggie Band who intends to be commissioned into the Air Force after attending medical school and specialize in orthopedic surgery; a BIMS student who intends to be a pediatrician; and lastly, a BIMS student who intends to go to dental school. They were a very impressive group of young women with strong career goals and a high level of excitement about their future opportunities. If BIMS is to be

moved from the CVMBS, it will be critically important not to lose the momentum that has been gained from many years of commitment to academic excellence. Our college is deeply committed to the continued success of the BIMS program, wherever it may be housed. We look forward to being closely involved in ongoing discussions about its future.

---

I am concerned about the combination of the College of Liberal Arts, the College of Science, and the College of Geosciences. Given different academic cultures and needs, this would be hard to manage efficiently. Take tenure and promotion as an example; publication and funding requirements are different between art and science. This might eventually lead to creating additional sub-committees (for each of the original three colleges) and cause additional faculty's time and effort. The rationale stated in the report is also brief and hard to evaluate for such a big decision. Regarding peer institutions, the report merely shows the number of institutions with/without combined college. It would be important to analyze the pros and cons of combined colleges, as observed in these institutions. Besides, it is unclear how the merger of liberal arts, science, and geoscience would be an advocacy for liberal arts education and help recruit faculty in the arts, humanities, and social sciences.

---

Agree with the statements on page 3 on reassignment. Particularly the following: Realign several academic units to allow for focus on mission, increase student success, and better meet student needs. However, there is a one major omission in the whole report - there is no reference to energy, environment and economic wellbeing of the society. Texas A&M is a powerhouse of engineering, geosciences and finance for the oil and gas sector. This sector is changing rapidly and moving into broader energy transition fields. Most academic institutes have already changed and are changing rapidly. There will be significant funds available from private and public sectors to carry out these energy and environmental related works. We need to realign our departments and centers to meet public demand and students needs and make research and teaching funds available at Texas A&M. This should be looked at seriously, otherwise we will be left behind and lose students to other Universities.

---

I am in the College of Geosciences. I am concerned about the loss of specialization that could result from this move, and how this loss of specialization might impact our ability to get the bigger Federal Grants. Our College's independence intrinsic to its success at getting grants for programs like the IODP program. I agree that there are some advantages to combining the colleges, but I'm not at all sure that they outweigh the risks. It is already difficult to recruit faculty who are at the forefront of this field. One of the reasons I chose this position (less than one year ago) is the reputation of the College of Geosciences as an independent, specialized entity. I don't think that I would have chosen it, or even applied, without that.

---

I believe that this was long overdue, especially as it pertains to Life Sciences. The proposed mergers/movements will finally catalyze the campus life sciences community, which has long been siloed and suffered from unnecessary inter-college competition. I can see these changes strongly enhancing both recruitment and programmatic/faculty visibility.

---

It is essential to have an estimation of the net increase or decrease in administration, faculty, and staff positions associated with the reorganization. a. Just because our "peers" do something a certain way, doesn't make it better. I agree that certain Colleges could be managed more effectively. However, creating large complex Colleges with a student body the size of A&M could completely dehumanize the College experience. We must make sure students have an immersive, engaged experience and that doesn't happen when they are treated like herding cattle. b. Faculty should drive the creation of departmental or college mergers. Never administrators. If the faculty in the target departments/colleges are in agreement that the merger is beneficial to the mission of the university, then it should proceed. If not, then the faculty should offer other paths for improving efficiencies and enhancing the experience of students. c. Biology is not Biomedical Science. The fact that MGT doesn't know that is troubling. The BIMS program trains undergraduate and graduate students for professional career programs (DVM, MD, PhD, etc.). A broad-based, unfocused program is likely to fail to prepare students for the requirements of those professional programs. The classes are best taught by those the students are seeking to become. The merger of BIMS and Biology entity is called an "Institute", why would it not be a new college or Department. That's just confusing. Why would it not include Animal Science? Entomology? All the other "life sciences"? It could work, but would again require the extensive input from faculty to see where synergies exist and how best to serve the students and research faculty. d. Recommendations for TAMU Health seem necessary, but would need to consider the research focus of these faculty (who likely took the job due to the low teaching load) with the consideration of having them teach undergraduate biology...I'd guess you see a huge exodus from the College of Medicine. e. The refocus of the BIMS Program is obviously huge for us. The logistics of this are hard to even imagine. The faculty that teach in graduate, undergrad and professional programs would be difficult to manage. f. The changes for McAllen could be a good move. However, I'm not sure the Assistant Provost at McAllen should be considered for "elevation" or "elimination". The latter would seem like the correct move, then restructure

under new leadership. g. McAllen and CVMBS program at VERO are similar, without a connection via faculty face to face interaction with the main campus, the students and faculty at these sites will falter and may never reach their full potential.

I am not convinced that bigger is better, either in terms of economics or our educational and research mission. Many of the arguments used in the rationale, such as 'another University does it this way', seem specious, as the same argument could be made either way. The combination of those colleges would certainly bring in lots of subvention funds as they offer quite a few large required courses, but that is true with or without merging. Some of the other suggestions, such as a school of visual and performing arts would be attractive. A department of Journalism was dropped recently as 'communications' became the more popular term. Institute of Biological Life Sciences (is there another kind?) sounds interesting as a concept but too little information is presented for real evaluation. The library must serve the whole institution so in my opinion, should remain as an independent entity. University Studies became at the urging of then President Gates who championed the concept that exceptional student should be able to 'design their own degree' so should not be limited to a single College!

Thank you for reading this: You are the only one who can align units appropriately for TAMU, end this faculty and student suffering, and let them thrive and contribute instead. Merge the practicing artists from Dance and Performance Studies with the Department of Visualization, expanding it to become a Department of Arts and Technology within the College of Arts and Sciences, and use the remainder of the Department of Performance Studies faculty and infrastructure to unify the college's existing Interdisciplinary Critical Studies programs. This will address the conspicuous gap in TAMU's arts offerings in a way that appropriately aligns with TAMU's values, strengths, and resources. Here is how and why it will work. Although MGT cites Performance Studies as a model curriculum for the arts, Visualization has a much more appropriate and proven model. The Department of Visualization is nationally recognized for merging art and technology successfully, whereas Dance has struggled with its curriculum split between dance courses and pure science courses (it's more science than dance), and Performance Studies heavily stresses criticism instead of creative practice. The Visualization major requires 28 VIST and ARTS courses, which is comparable to nationally prominent programs that enable students to create new products. In contrast, the Performance Studies major requires only 7 of its own courses, only 1 of which focuses on creating performance (and it focuses on logistics and analysis more than developing skill). The Performance Studies curricula at the undergraduate and graduate levels can instead serve to unify the college's Interdisciplinary Critical Studies programs because of its interdisciplinarity, breadth of elective requirements, and significant overlaps with those programs, both in faculty and subject matter. Several PERF faculty are already affiliates or cross-appointees with Critical Studies programs: Africana Studies, Women's and Gender Studies, and Religious Studies (including its long-time program coordinator). The PERF MA has courses focused on identity, globalization, gender and sexuality, government, religions and spiritualities, community and social life, and ethnography. The Critical Studies program for Latino/a and Mexican American Studies would benefit from the PERF courses on Latin-American culture and on the culture of Latin America. Even the PERF MA course on technology explicitly focuses on "social and political formations," which is a concept from critical theory, common to all these subjects. Course offerings in the PERF BA take on similar topics, though they only appear in the catalog as open-topic seminars. The rest of the courses in the BA catalog are arts-credit courses for non-majors or holdovers from the now-closed majors in Music and Theatre Arts that have withered in the current configuration. Most Performance Studies faculty, those who author books and articles as their primary output, will be well-suited to combining with Interdisciplinary Critical Studies rather than with practicing artists. Whereas an outsider might assume that a Department of Performance Studies would study the performing arts, it actually focuses on analyzing culture as if it were a performance, for example, how one "performs" one's gender and ethnic identity through choices in appearance and behavior. This aligns with many dictates that have defined the department in its current state, including "Thou shalt not do performance" (as a past ombuds officer under the provost paraphrased the policy), a dean (who was also a former vice provost) declaring artistic practice to be "a mistake that won't be made again," an associate dean of faculties stating "If you want to do practice, go somewhere else" (this past October, in a presentation to the department), and the most recent performance technology faculty hiring committee stipulating that applicants must not be expected to have any skill in using technology, just talking about it. The bifurcation between artists and critics in the Department Performance Studies has created tension for faculty and confusion for students, such that it has had 8 changes of department head in 10 years—including 3 heads from other departments, 2 failed searches to fill an endowed chair, and numbers of majors that have steadily fallen since replacing the Music and Theatre Arts programs, now approaching the state threshold for closing Low-Producing Degree Programs. Realigning by bringing the critical theorists together and, separately, by bringing the arts practitioners

together will remedy this tension and pool assets appropriately for the greatest effectiveness. The few faculty in the Department of Performance Studies who are practicing artists, a remnant from the now-closed programs in Music and Theatre Arts, already have significant overlaps with Visualization faculty. Both have faculty who have presented work in the International Symposium on Electronic Art; the adventurous new Conference on Computation, Communication, Aesthetics, & “X”; the International Computer Music Conference; Springer’s Lecture Notes in Computer Science; the National Conference on the Beginning Design Student; conferences under the umbrella of the Association for Computing Machinery; and the Generative Art international conference—a subject (1) that has recently been picked up by Forbes in discussions about cryptocurrency and (2) in which we employ (and underutilize) one of the world’s foremost scholars. Mutual students of these faculty have presented work in the Ammerman Biennial Symposium on Arts and Technology, the International Society for Improvised Music conference, and the Electric La-Tex festival of multimedia art by Louisiana and Texas university students. Both departments have faculty who have shared students, collaborated on projects, co-taught courses, and have sat on graduate thesis and capstone committees together. There have also been several collaborations between faculty and students from Visualization, Performance Studies, and Dance. Additionally, the long-standing Small Ensembles course, a holdover from the Music program, is well-equipped to coordinate interdisciplinary student performances. It has hosted performances of dramatic opera scenes and a laptop ensemble in the past, and it often deals with technology in its ensembles that explore contemporary music. To some, the existence of a Department of Musical Activities under Student Affairs suggests that musical practice is “just for fun.” The fuller picture is that “FUN music is just for fun” and that intellectually engaged artistic practices are worthwhile academic pursuits that challenge students, allow them to grow, and equip them to make unique contributions to society. To illustrate the difference in academic rigor: Whereas band, orchestra, and chorus programs have several students performing the same parts in parallel (e.g., all sopranos sing one soprano part, and all cellists play one cello part), in Small Ensembles, each student is responsible for one unique part within the performance. Surely Texas would value students who are capable of making something new rather than only criticizing the work of others or reciting them in unison with a large group. Rather than creating traditional majors in dance, music, theatre, and visual art, which are already covered well by UT, UNT, and Rice, likely would not be approved by the Texas Higher Education Coordinating Board, and would exacerbate the ethical issue of pouring graduates into overflowing audition lines, a new major in Performance Technology—using technology in innovative ways through interdisciplinary live performances that leverage dance, music, theatre, and visual art together—would complement the current major in Visualization and would prepare forward-thinking, 21st-century creatives by leveraging the relocated faculty appropriately and by building on existing overlaps in subject matter: The Department of Visualization already offers instruction in sound design and multimedia art, and many of its courses deal with movement (in animation and film as well as in human–computer interaction) as well as writing, design, and performance for animation and film. A curriculum focused on technology-based performance would also provide a better alignment of subjects for dance students, compared to their current curriculum, which is split starkly between dance courses for dancers and kinesiology courses meant for hard science majors. Further, the Department of Visualization is a proven place where practicing artist faculty can advance in their careers at TAMU. Whereas the Department of Performance Studies issued a unanimous “no” vote for promotion despite recognizing a strong artistic practice, other faculty artists know better than to try for promotion, and both Dance and Performance Studies faculty have had to back out of collaborations in order to focus on activities that critical theorists and kinesiologists (respectively) would appreciate in annual reviews, the Department of Visualization has successfully assessed and developed faculty artists up to the full professor level. There is already strong evidence that such a degree program will succeed within the right unit. Although the Department of Performance Studies ultimately closed its Minor in Performance Technology, this was because (1) students who would have been interested in Music or Theatre Arts at TAMU went to other majors or other universities after those programs were closed, (2) the department decided to discontinue events such as the internationally visible Fresh Minds Festival of audiovisual art (originally established through the provost’s Tier One Program), and because (3) “We don’t do that anymore,” as the department’s Promotion and Tenure Committee and Executive Committee jointly informed one tenure candidate in a formal meeting on the topic. Nonetheless, while it existed, the Performance Technology program produced very many high-impact student experiences and achievements in interdisciplinary art, including many internationally visible and competitive accolades and many collaborations with Visualization and with Dance. This program is described in a published book chapter (<https://bit.ly/perftech-chapter>), and its students’ achievements are documented in a 5-page “student cv” (<https://bit.ly/PerfTechStudentCV>). The initiative only failed to survive, despite its wild successes, because it was in the wrong department. The echo of its success remains in the fact that the department still uses images and text from that

past era to lure in new students, for the department's own survival. As a concluding case study, a 1994 conference paper describes the first collaborations between Music, Visualization, and Computer Science at TAMU (<https://bit.ly/ComputerMusicPaper1994>). Since that time, Visualization thrived and produced cutting-edge creatives while Music and Theatre stigmatized artistic practice and have struggled for almost three decades now. Reorganization as I describe here will bring TAMU's strengths and values into proper alignment and allow its faculty and students to thrive and become a beacon to illuminate the future. This is an exciting, viable, and, in part, already proven way to address the issue of TAMU's arts offerings brought up in MGT's report. Thank you, deeply.

---

The realignment is a great risk to the gains that existing departments in the College of Liberal Arts have achieved at Texas A&M University. An independent unit for the liberal arts is essential to insure that processes, procedures, and resources are preserved to serve faculty and students in a college who academic areas fall outside of the historical mission and traditional priorities of the university. The proposed removal of Political Science diminishes the academic standing of the college. The creation of a library studies department duplicates existing programs in the region and places a faculty unit who was hired primarily based on their abilities outside of the classroom into a teaching department, which is not a proper way to establish a new department. And the introduction of a department of journalism undermines related work in existing departments (including communication and English) and shift the focus of the liberal arts toward a vocations track.

---

While the College of Science and College of Liberal Arts have a distinct identity, it is possible, given examples at highly ranked universities that a College of Arts and Sciences could be a good thing for the university, and in heightening the stature of the colleges as a combined unit. However, any good College of Arts and Sciences have Departments of Economics and Political Science at their heart as they marry together the social issues with the quantitative rigor seen in the sciences. All good universities have this model, for instance University of Michigan, UNC, UC Berkeley, Duke, University of Florida, Northwestern, University of Chicago, UC Davis, Ohio State etc. The Bush School has a very different focus than Political Science and Economics, which is to train leaders of the future and is going a fine job in preparing students for a future in public service with its Masters program. The idea of starting an undergraduate program and moving some quantitatively and academically inclined departments into it would lead it far from its distinctive identity and public policy focus. No good university has a College of Sciences without a Biology department. It would be a major setback not just to the College but also the university if Biology is moved to AgriLife. The location of these three departments: Economics, Political Science and Biology are essential to setting up the College of Arts and Sciences to succeed, and to remain competitive in recruiting faculty and attracting students. Much of the report is focused on creating efficiencies. Thus, founding a new Department of Journalism seem counter to that objective, particularly given that such a department was closed down 20 or so years ago. We have a great Department of Communications, and perhaps it makes sense to direct resources towards it so they can develop a better thought-out Journalism major. Given that we live in the age of social media and instant media creation, the Department of Communication is already equipped to prepare our students with the necessary tool to create stories in conjunction with other units.

---

I would like to specifically address the movement of the departments in the current college of Geosciences into a College of Liberal Arts and Sciences, specifically the department of Geography. I see the new college as a natural home for geography, which traditionally serves as a bridge between the natural and social sciences. In addition, I see a huge opportunity for two additional actions to strengthen the Department of Geography and to allow it to better bridge the social and physical sciences in this new department. First, I would like to suggest that the Department of Landscape Architecture and Urban Planning be combined with the Department of Geography. In addition to drawing together faculty with similar research agendas, this would meet two specific interests: a) the Hazards Center is currently in LAUP, but this is historically a primary domain of research within the field of geography, linking understanding of environmental change to social vulnerability. b) Both departments currently have undergraduate and graduate programs and courses in geographic information systems, a merger would reduce competition for students and allow for a stronger degree program. Many universities across the country have combined geography and urban planning departments, maintaining graduate degree programs in both. These mergers, most notably at Arizona State University, have increased the reputation and rankings of these degree programs. Second, I would like to suggest that the current interdisciplinary environmental programs degrees in the College of Geosciences be moved into the Department of Geography. It was initially located within the Department and the Geography continues to do most of the teaching in this growing degree. This will allow for centralized oversight of the program, supporting its continued success and growth.

My feedback will be primarily concerned with elements of the study that directly impact the College of Architecture. Since I came to TAMU in 1975, Art has always been a part of architecture. Without art, architecture is engineering. One of the many strengths of our College is the integration of Art into all of our college disciplines. This integration makes our College of Architecture unique. Removing our art program (Viz) would do great injustice to the decades of work by many of our colleagues to establish art in architecture at TAMU. Don't do it. Equally disturbing is the further proposed cannibalizing of the College of Architecture by moving COSC to Engineering. The largest of our departments would certainly help Engineering's 25 x 25 goal, but would do great harm to the students in both architecture and construction. These fields need to be together to facilitate interaction in the academic setting. The overlap between these programs is essential to mirroring the work environment following graduation. The idea that all University Studies programs be housed together is also not well thought out. The University Studies in Architecture degree is selected by students for the precise reason that all of the College of Architecture coursework is available to them. Many go on to advanced degrees in multiple COA majors, because they picked the College of Architecture, not Liberal Arts. This robust program also supplies approximately 50% of our study abroad students. These students help to place the College of Architecture in the top % of students studying abroad at TAMU. Learning from other cultures is essential to our academic mission. What is the rationale for destroying this program? We have worked for decades to have the best study-abroad experiences for our students- including pioneering programs in Italy since 1982.

---

While it would be lovely to have a School of Visual and Performing Arts on campus, I am uncertain that the benefits would be worth the very high cost of implementation. While I support development of library science degree programs, I do not believe there is much to be gained from moving the University Libraries to the new College of Arts and Sciences, especially where our libraries are already highly ranked and effective. Because the BIMS programs are critically reliant on faculty in traditional veterinary medicine departments, it is not at all clear to me how these program will continue to function if they are removed from the college.

---

Pertaining to Recommendation #4: Bush School & Political Science At one time, the Political Science Department at Texas A&M included a Masters program in public administration. That continued until a year before the Bush School opened, when the public administration program in POLS was closed, in anticipation of re-opening as the new Bush School of Public Service. When the Bush School opened in the Allen Building, the Political Science and Economics Departments were both moved from the main campus to that building, though both of those departments continued their academic missions as parts of the College of Liberal Arts. That physical arrangement continued until January of 2020, when the latter two departments were moved out of the Allen Building to make way for the Bush School to eventually take over the entirety of that building. Both separations – the academic one separating public administration from POLS, and the physical separation of POLS from the Allen Building – were presumably predicated in part on the understanding that public administration/service and political science have two very different missions. While sharing an interest in politics and government, public administration/service (e.g. the Bush School) is a professional program with a mission of preparing future public servants (i.e., government employees) while political science (e.g. POLS) is an academic/scientific program with a mission of preparing students to better observe, understand, and conduct research on government and politics. At the graduate level, the former equips students to take employment in government and other venues for public service, while the latter equips students to conduct research and prepare successive generations of students to conduct research for a better understanding of how politics and government operate. While the two fields clearly overlap in their interest in politics and government, their missions are very different. Those who were involved in the earlier separations undoubtedly understood that important difference. The mission to produce government officials is best housed in a professional school, while the “science” of politics is better housed in a College of Liberal Arts (or perhaps even better, in a College of Arts and Sciences). Political science is, after all, a scientifically-oriented discipline, and a professional training school for public service is not. What the professional school may consider as merely tangential to its mission is the central focus of political science. It would appear that this distinction is lost on those who developed the justification underlying Recommendation #4, as is evident in its argument that “it would not be advisable to continue to invest in faculty lines in both units given the significant overlap in area of study.” Indeed, it would be advisable to invest lines in both when the missions of the two units are so different. To “merge” the two units now would be to unnaturally wed those two very different missions into one academic unit. While this would not be a unique merger, the reality is that in other top-quality institutions of higher education, it is certainly not the norm. For instance: the Kennedy School and the Department of Government are separate units at Harvard, the LBJ School and Department of Government are separate units at UT-Austin, the LaFollette School of Public Affairs and the Department of Political Science are separate units within the College of Letters and Sciences at the University of

Wisconsin, and the Princeton School of Public and International Affairs and the Politics Department are separate units at Princeton. While there are also examples where political science and public affairs programs co-exist in a common "school," neither unit at North Carolina State University is currently ranked nationally, and while the public affairs program is ranked #1 at Syracuse, the political science program there is ranked #50. At the University of Georgia, public affairs is ranked highly (#9) but political science is not (#41). The current POLS at Texas A&M is a well-recognized, highly respected Ph.D.-producing department of political science, currently sharing a ranking of 28 (and aspiring to be "top 20") among major universities in U.S. News and World Report, with its American Government program sharing a ranking of 21. While separate from the Bush School, it has supported the Bush School's programs in various ways over the years. Arguably, it has been better able to do so as a separate department than would have been the case as a subsidiary program within the Bush School. The argument for merger seems to be that the Bush School would benefit from POLS' prestige among political scientists, its Ph.D. program, and the large numbers of undergraduates it teaches each semester. In return, POLS would somehow benefit financially. What would the university get? Unfortunately, the net cost of reconfiguring POLS' curriculum and faculty to accomplish a different mission could well be the POLS Department's loss of prestige and hence its ability to maintain a first-rate, scientifically-oriented Ph.D. program. For these reasons, my strong recommendation is that the Department of Political Science should remain a component of the College of Liberal Arts (or, potentially, a new College of Arts and Sciences) and administratively separate from the Bush School. Another alternative, which would presumably aid the university's objective of reducing college-level redundancy, would be to place both Political Science and the Bush School as separate units within the College of Liberal Arts (or College of Arts and Sciences, as the case may be). If POLS were to be somehow combined with the Bush School, however, it would best serve the university's interests to give POLS the status of an autonomous department within that combination, with a charge to maintain its current mission.

---

Recommendation #4: Elevate and expand the Bush School of Government and Public Service to be a highly visible... I think the Economics program with its goals is more aligned with Liberal Arts. The primary interest of the program is to produce researchers for research institutions and think tanks. Not all sub-disciplines in Economics inform public policy but are more fundamental in nature. For instance, Econometrics is concerned with methods, Micro Theory, Macro Theory are concerned with formulating models that can approximate people's behaviors. If housed in a public policy school, all these sub-disciplines will be marginalized. In addition, peer departments are not housed in schools of public policy. And public policy schools are not evaluated based on the criteria that Economics programs are.

---

I don't see the justification for the realignment of Liberal Arts with Science and Geoscience. There was no cost-benefit analysis for any part of this report. I also don't understand how we can "lead by example" if we are constantly looking to what peers and other institutions do as the standard for how we should operate our university.

---

I think it looks bad for the University to dissolve a Geosciences College during a time of climate change and associated hazards for the communities. Alternatively, I would suggest to pool all geoscience research activities that are currently spread out over several colleges and reinvent the College of Geosciences to represent a "one-stop shopping" outlet for all things climate change (causes and responses). I see geosciences research in agrilife as well as civil engineering and even architecture, but there are probably others as well. We should try to be forward looking and respond to the needs of the society and there will be many associated to climate change.

---

In terms of a new College of Arts & Sciences: Unclear how this will affect many things, because no input sought from leadership or faculty. Arts: Would be good to improve the arts at A&M (art, performing art, music). Biology changes: Incorrect conclusion from report that Bio is underperforming. No clear reason for this based on research disciplines.

---

The SPORT MANAGEMENT (within the Dept. of Health & Kinesiology) Division was not directly mentioned in the report, but based on the information provided in the report it appears that the consultants and some within the university may not know about our Division and Academic field. First, we want Dr. Banks and the university leadership to know who we are, and what we do. The Sport Management Division (SPMT) here at Texas A&M houses three degrees (Bachelor's, Master's, and PhD), all of which are nationally and internationally recognized to be among the best in the world. - Undergraduates – The Texas A&M Univ. SPMT program is one of the largest in the country, and has great interest from both majors and minors at the university. We have one of the best internship programs, and have built very strong relationships with many sport industry organizations...from professional sport franchises such as the Dallas Cowboys, Texas Rangers, and San Antonio Spurs, to our own Texas A&M Athletic Department, to international sport organizations such as Bayern Munich soccer team in Germany. - NEW undergraduate curriculum – the SPMT division just underwent a multi-year assessment, and re-development, of our undergraduate curriculum, based on both internal and external/industry stakeholder feedback. We believe our new curriculum is innovative and unique, and creates a learning

environment that puts students at the forefront of industry preparation! - Master's Program – with both in-residence, and an online, programs, Texas A&M SPMT is also one of the largest Master's Sport Management programs in the country, and is consistently ranked as one of the best programs in the world, which brings students from all around the world here to College Station to study. - PhD Program – one of the best, sought after, and respected Sport Management Doctoral programs in the world, due to having some of the most accomplished and recognizable academics and researchers in our field. Two of which have been recognized with the top honor within our academic society. - Center for Sport Management Research and Education – our research lab is continually engaged in some of the most cutting edge research in our field, along with advising sport organizations on policy development within sport, and bringing in world renowned speakers to meet with our faculty and students. Overall, we believe that these activities, programs, and relationships, are us to fulfill our mission of preparing students to be industry leaders, global citizens, and to be the best Sport Management program in the world! Finally, regarding the academic realignment, we have gone through similar reviews in the past...and there can be cases made that we could "fit" well within a few departments or colleges (Business, Education, RPTS). However, due to the distinct and unique nature of our field and the sport industry, there have also been cases made that we do not perfectly "fit" within those same departments and colleges. Either way, we, the Sport Management Division here at Texas A&M, fill a very unique and valuable hole, both in the university and in the industry, and we believe that we will continue to be a successful, and world-leading program!

---

While I am not opposed to creating a new College of Arts and Sciences, I have concerns that the sheer size of such a college would pose significant managerial problems. The report does not address the issue of how to successfully integrate all the units. I think that more work needs to be done to clarify the functioning of this new college and ensure that every department within the new college is well-integrated with the goals of the college. It is critical that the departments see the value of this significant change and support this move. Unfortunately, the report does not provide sufficient details about the benefits of such a change to reassure the departments that this change would result in clear benefits. I think that most departments are concerned that the size of the new college would introduce severe competition for resources. The leadership needs to reach out to the individual departments affected by the proposed realignment to discuss how the departmental research and teaching goals would benefit from these changes. The departments need reassurance that the new college will provide new opportunities and resources rather than create more problems and fewer resources. I find it concerning that my department's leadership seems to have no idea how these proposed changes will affect us and, in particular, our ability to continue improving our reputation of excellence in research and teaching. It is hard to be excited about the new College of Art and Sciences without more clarity. As a member of the Economics department, I am also alarmed by the suggestion that we join the Bush school. I firmly believe that such a move will be detrimental for both the new College of Arts and Sciences and my department. It is simply impossible to imagine an excellent liberal arts education without economics. In fact, you will be hard-pressed to find serious research universities and well-ranked economics programs in which the Economics department resides in the Public Policy school. Economics spans a much more extensive research area than public policy and introduces students to critical analytical skills that should be part of a high-quality liberal arts education. I also do not think that economics would easily fit with the objective of the public policy school, which is more focused on public service training and less focused on academic research. While there are a few economics faculty whose research may fit well with the public policy, this would not be the case for the vast majority of the economics department. Some of our most successful research faculty work on basic research and applications that are not easily integrated with the Bush school but fit well with the broad objectives of the liberal arts education. I hope that the leadership will carefully consider the pros of such a move before relocating to the Department of Economics.

---

This is probably the most troubling aspect of the report in my opinion. In evaluating each one of these suggestions, a good guideline is the following: are there successful universities that follow the institutional structure suggested by the report? There are a number of Universities that use the Arts & Sciences model, my undergraduate institution, Ohio State follows this, I could see some advantages to this system. There are few Universities that house their Political Science or Economics Departments in their Policy School. I can literally count them on one hand. Syracuse and Georgia State are not peers of our Econ Department. While Syracuse does have a strong Policy School, they essentially house all social sciences in that school which is very different from what is suggested here. In our current situation, many economics faculty are ill fit to work in a policy school. It will bring down both the department and the Policy School. In my opinion there is a bit of ignorance throughout this report about what faculty needs actually are. Most faculty--to the extent they have a choice--choose their institution by the structure, prestige and research capacity of their job. To pretend these things are about the underlying structure of faculty affairs, gardens, performing arts centers and not

about whether one's department is misplaced in the wrong College (or at least in a College that is dissimilar from every other comparable institution) is problematic in weighing of faculty (and to some extent student) priorities. I would like to see more support of the libraries. They have had their budget slashed dramatically since I've been here. Most of my students undergraduate, masters, and graduate have no idea on how to find an ejournal article. They generally just scrape unpublished earlier version off the internet. I'd like to believe they could improve the libraries but I'm not so sure.

I support merging Geosciences, Sciences, and Liberal Arts into one college of Arts and Sciences. The structure and placement of the proposed Institute for Biological Sciences is unclear. Will both Biology and Biomedical Sciences be officially within the College of Agriculture? I support moving the Biomedical Sciences major out of the College of Veterinary Medicine. It should eventually be subsumed under the Molecular and Cell Biology major offered by the Department of Biology. It makes sense to have a one or two semester introductory program for all life science majors comprised of math, chemistry, biology, and physics as well as an introduction to the different life science majors on campus. Incoming freshmen who place out of those courses could, upon achieving a 3.5 or better GPR the first semester immediately move into their preferred major. The quandary is how to handle entry to Biomedical Engineering (which Biomedical Science is often mistaken for) and to the proposed Community Health/Public Health merged major.

The realignment plan to me feels like something that would best fit a large generic university as opposed to being a plan that takes a specific focus in expanding opportunities at Texas A&M. Colleges such as Architecture and Education become more purely certification-driven operations losing academic breadth. Difficult students (academically) and difficult departments are all bundled together and thrown into the College of Arts and Sciences. A major observation to me is that this seems to reflect an old-fashioned vision of education and its organization--one that would have been equally appropriate for application to universities in say the 1960s or earlier. In particular, I am struck by the continued fragmentation of computationally related disciplines into separate organizational units. Visualization shares a common core and interests with Computer Science (indeed if I am correct it was developed by Computer Science connected faculty in the 1990s). It's not a new idea any more but other schools have brought together computing-related units under a single umbrella with great success (consider Georgia Tech). TAMU is better than some in that a way has been found to handle Computer Engineering collaboratively rather than separately, but departments such as Visualization, Information and Operational Management, and Mathematics also share core interests with Computer Science. The current proposals to create new degrees in Data Science Engineering and in Computer Information Engineering Technology also overlap with this interest area. And the proposed degree in Library Science creates another. Many Library Science programs have transitioned to instead being Information Science programs, and these definitely have broad overlap with core research areas currently in Computer Science and also in Visualization. It would seem more forward-thinking to me to examine structures that could create a cross-cutting School of Computing, perhaps at the same time retaining the linkage of the programs to their current departments and colleges. Perhaps the models of Agricultural Engineering, Architectural Engineering, and Genetics could help here.

o Finding/Recommendation/Rationale #6: ¶ Any feedback on the Libraries from former students >5 years removed from their time on campus should be thrown out, no matter if it is positive or negative because our services, materials, and spaces are constantly evolving to meet student needs. The Libraries moved to an online catalog in 1988; therefore students prior to the 1990s will have a concept of the libraries with the antiquated paper card catalog and "traditional" reference services. Our Libraries now offer a plethora of electronic resources and services in addition to physical items and embedded course librarians. ¶ The goals and objectives of a library in-and-of-itself are different from those of an academic unit. The library serves the WHOLE campus, and not just one academic unit, no matter how large and how central that unit is. Merging the administration of the library into a specific college risks subordinating the goals and objectives of the library to those of that academic unit. Even if those goals are not subordinated, there will be a perception and/or expectation from the other colleges that there is. ¶ Transformation of the position of "Dean of the Library" to "ASSOCIATE Dean" is a significant down-grading of that position and, by implication of the centrality of the library itself. Contrary to the report, the trend has been the opposite direction a few years ago, turning the head of the library into a DEAN or CIO position, reporting directly to the Provost or President rather than to the head of a specific academic unit. ¶ Although the proposal treats them as if they were, "Library Science" and "Information Science" are not necessarily synonyms, though they are (under some definitions) closely related. By emphasizing the former over the latter, the proposal limits the scope of the proposed Department's mission in ways that may be counter-productive ¶ Requiring library faculty to teach courses in a newly created library science degree program would not "elevate their position as experts", but rather it would decrease opportunities for their research and service to their profession. Our faculty librarians are experts in their fields and we disseminate our knowledge through librarianship, research, and

service on campus and throughout the world.

My article

statistics exceed 52,000 reads, I've been interviewed for library science courses, and I've been involved with the development of emerging library technologies nationally and internationally. ¶ In the Library and Information Studies (LIS) field, the terminal degree is a master's degree. A BA is not sufficient for most librarian positions and a PhD is only needed for those teaching in LIS programs. We have 3 library schools in Texas. This is 2 more than most states have. Using the University of Oklahoma as a model for TAMU Libraries shows both poor research and blatant ignoring of the library models from peer institutions listed in Appendix 3. Our libraries are ranked #1 in the SEC and #6 Academic Research Libraries nationally.

I am a political science professor; I'm not at all opposed to merging the Department of Political Science (DPS) with the Bush School. At the same time, the Report itself did not make a case for the merger. First, the Report laments a "duplication of focus" and "overlap in the area of study" between DPS and the Bush School. The authors of the Report are seemingly unaware of the distinction between a unit that studies a phenomenon relative to a unit that aims to train practitioners. The Report mentions, for example, training diplomats. Which is one focus of the Bush School. In contrast, the International Relations scholars in DPS \*study\* diplomats and diplomacy. The difference is as between a Vet School and the discipline of Zoology. Or between Engineering and Science. There simply is not an "overlap in the area of study" between DPS and the Bush School. The other fields in political science intersect even less with the Bush School. Secondly, the Department of Political Science is the highest ranked program in the College of Liberal Arts. (I believe Its most recent USNWR ranking among doctoral programs was #25. Its field in American government and politics has been ranked as high as #18 in recent years.) Yet the Report lavishes attention on the needs of the Bush School for undergraduates and doctoral students. Again, let me emphasize that I am not opposed to the merger, it seems as likely to produce a stronger DPS as is the department's continuation in the College of Liberal Arts (or in a new College of Arts and Science). Yet the Report focuses no attention on making this strong Department into a top Department. When considering the merger focus should be had on an academic version of the Hippocratic oath, "First, do not harm!" It would be ill advised to risk sacrificing the highest-ranked Department in the extant College of Liberal Arts merely in the hope that the sacrifice \*might\* improve a lower-ranked public affairs college. If the merger proceeds I would suggest that a case needs to be made regarding how the merger will improve the academic quality and visibility of the Department of Political Science as well as how the merger might improve the Bush School. (And, again, it is very possible that such a case supporting DPS-side of the merger can be made. It's just that the Report itself does not make that case.)

I do not think merging Science and Liberal Arts is a good idea. Bigger is not necessarily better. I don't think a Dean coming from the humanities will understand the culture and concepts of the sciences and will tend to just count papers and not look at content and quality. The same for a Dean from the Sciences not being able to properly appreciate the Arts. I have no problem merging the Geosciences into Science. I would also think moving Computer Science from Engineering to Science would be a good idea. There may be a few other departments which would also be appropriate for Science. I do not think it is a good idea to move Biology out of Sciences. There is a continuum from Math to Physics to Chemistry to Biology which is not complete if you cut off one end of the spectrum. The biological departments in Agriculture or Health are more applied. They are related to Biology like Engineering is related to Math, Physics and Chemistry. Biology does not belong in either Agriculture or Health. It is the foundation of both.

1. Creating the new Institute of Biological Life Sciences (IBLS) by combining Department of Biology and Biomedical Sciences does NOT make any sense. Institute of Biological Life Sciences should be more "basic" life sciences based. If to create IBLS is a must, then the combination should be the following departments ALL together: Biology, Biochemistry and Biophysics, Entomology, Ecology and Conservation Biology, and Plant Pathology and Microbiology. Merging these departments together will make more sense as the new Institute of Biological Life Sciences. "Biomedical Sciences" is a bit out of line. 2. By the same token, May Business School should also merge together of Departments of Agricultural Economics and Rangeland, Wildlife and Fisheries Management, since all of these together are Economy, Business, Management all related. 3. The same way, Agricultural Leadership, Education, and Communications should merge with Department of Communication and Bush School of Government. 4. Biological and Agricultural Engineering should go to College of Engineering.

Recommendation #1: Combine the College of Liberal Arts, the College of Science, and the College of Geosciences to create a new College of Arts and Sciences. Comments: The "four-legged university" structure has some allure. Engineering and Agriculture and Life Sciences also have research and experiment stations and extension arms in the TAMU system making each dean also a Vice Chancellor. The Arts and Sciences dean would not hold that title. I didn't

see any reference to the Integrated Ocean Drilling Program (IODP) housed in the College of Geosciences. This program is the largest federally-funded program at TAMU. NSF might consider that IODP is not valued by TAMU as highly as it is being located in the College of Geosciences. Only 12 of 19 peer institutions use the Arts and Sciences model. Therefore, a significant number find an alternative organization desirable. Oregon State has a College of Earth, Ocean and Atmospheric Sciences and University of Washington has School of Oceanography. Comparisons should be made with other universities that offer Oceanography and Atmospheric Sciences before the combining the College of Geosciences with the College of Science and College of Liberal Arts. There would not be a significant cost savings as the current administrators retain their base salaries when returning to the faculty. The staff could have a reduction in force (RIF), however, many of the staff would need to be retained to serve the needs of the new much larger college.

Recommendation #2: Establish a School of Visual and Performing Arts with new departments in music, performing arts, and fine arts, and relocate the Department of Visualization to anchor this new school. Comments: It is unclear what a "School" is in the university structure. The Bush School is one example and that has a dean. Recommendation #3: Establish a Department of Journalism Comments: There previously was a Department of Journalism and it was disbanded. A restoration of a Journalism Department is a welcome idea. Recommendation #4: Elevate and expand the Bush School of Government and Public Service to be a highly visible and accessible part of the university portfolio through significant investment and a merger with the Department of Political Science. Comments: Has the Texas State requirement for 6 hours of political science being considered in this merger. Recommendation #5: Create the new Institute of Biological Life Sciences which will contain the Department of Biology and the Biomedical Sciences Program. Comments: How does the Institute fit into the university structure?

I am in the College of Geosciences, so I will comment directly on the proposal to merge the Colleges of Geoscience, Science and Liberal Arts. One of the most disappointing features of the MGT Report is the lack of justification for many recommendations. For example, the main argument for merging these Colleges is that many of our peer institution have this structure. According to the report "more than half of our per institutions house liberal arts and sciences in a combined college". It makes no mention of whether this combination provides some advantage as compared to the institutions with different structure. I believe that separate Colleges offer an advantage and are a strength, not a weakness. The MGT report does not consider important differences between A&M and peer institutions, one such difference is simply size. The report discusses the University of Michigan but does not indicate that the enrollment at UM is approximately 50,000 with 31,329 undergraduates and 16,824 graduate students. In contrast TAMU has a total enrollment of 73,284, with 53,876 undergraduates and 13,257 graduate students. The enrollment at the College Station Campus is 67,133. Such large numbers are consistent with more academic units given that managing such a large unit will likely result in a loss of efficiency. The College of Geosciences was created in 1965 and, since then, Texas A&M has become an international flagship institution with leading geoscience programs such as IODP. Without the identity and the focused leadership of the College of Geosciences, Texas A&M will soon lose its strength and international prestige, particularly as compared to other peer institutions in geosciences. This includes UT Austin which would become the sole operator of a Geoscience College in the State of Texas. I am unconvinced by the argument that this merger would provide significant cost savings. The MGT makes no quantitative estimate that can be reviewed. I suppose that some staff positions may seem redundant and could be cut. However, I doubt that one individual will be able to handle the workload of three, and one of two things may happen. Either the staff in the office of the newly created combined College will grow to be roughly equivalent to the size of the three college administrations added together, or more work will be shifted onto the individual departments. If administrative functions are shifted to individual departments, these units will either hire additional staff (if possible), or more faculty time will be devoted to administration. In my time at A&M, more administrative burdens have been shifted to the faculty. As far as I know we have no way to measure the costs associated with the resulting loss of faculty productivity. Finally, our students recognize the benefit of having a separate College of Geosciences. They are convinced that this adds value to their degree. I have yet to talk with a student who believe that the merger of these three Colleges is a good idea.

The Department of Biology is thriving in the College of Science, with an inspiring strategic plan and an extremely positive research trajectory. It teaches a majority of biology-related courses to Biology and Biomedical Science majors, and the College of Science teaches a majority of non-biology-related courses to these undergraduate majors. If the Institute for Biological Life Sciences is formed, it should be housed in the College of (Liberal Arts and) Sciences, where the Department of Biology should also be housed.

1. As we embrace "diversity", it is not just including people from diverse backgrounds but also diverse specialties and talents. Converging everything into FOUR large units/colleges (AgriLife, Engineering, Arts and Sciences, and TAM Health)

is NOT the way to be diverse. It is more like returning back to more than 50 years. Are we going to further merge back to "Agriculture" and "Mechanics" as the "two large units"? 2. Realignment of Biology Department and Biomedical Sciences (BIMS) do not even make any sense at all. Biology is part of "Science", as the focus of Biological Research/Education is mostly in "basic science" as its orientation. Thus, BIOLOGY should remain in the College of Science. As for BIMS, the Education/Research emphasizes pre-clinical and translational aspects of biomedicine, including both human and veterinary medicines. 3. If Academic Realignment involves "moving" existing faculty members and their research laboratories in new/another buildings, this is completely wasting money, time, and resources. As faculty members, we have way much better things to do (e.g. getting research funding, educating/mentoring graduate students, teaching undergraduate students, and academic services). Moving a research lab requires a lot of time, money, resources, and people energy completely wasted for nothing. It is unclear WHY TAMU wants to move faculty members from their existing departments/lab locations to other buildings/places for "realignment".

The recommendation (#6) to merge the University Libraries into the newly created College of Arts and Sciences is highly detrimental to the research and educational mission of TAMU. This organizational structure does not exist at any other university in the United States, and for good reason. It effectively signals that the Libraries are beholden to serve the college in which they organizationally reside, rather than their role as the the hub of discovery for the entire campus community. This has real consequences. It could even impact accreditation for departments and degree programs, as accreditors often visit with the libraries to ensure that our services and collections are in alignment with the needs of the curricula. If the library is merged under a specific college, accreditors could call into question the ability of the library to support a disparate college. The irony of this recommendation is that throughout the MGT report, there is a desire to centralize campus services for greater collaboration and effectiveness. The University Libraries is one of the only truly centralized services on campus. Decentralizing the libraries does considerable harm to our reputation as a service provider on campus and to our reputation in the field, which would impact our ability to recruit and hire the talent in our field. Our programs and collections are nationally recognized, ranking #8 nationally in the Association of Research Libraries report amongst public institutions. Merging the Libraries would cause real concern for our ranking in the future. The report has a fundamental misunderstanding about libraries. There is a very distinct difference between a functional university library system and a School of Library Science. They are not the same entities, do not have the same goals, and exist as separate structures. The report points to the School of Library and Information Studies at the University of Oklahoma as a model, one of the lowest ranked programs by US News for library degrees (#31 of 55 nationally). The MGT report also fails to recognize that OU also has a fully functioning library system that is in no way attached to the iSchool. It is a very unwise decision to start an iSchool at A&M. Schools of Library Science have declining enrollment nationally and are designed to educate future librarians, typically small cohorts of graduate students, who will go into the practitioner field of librarianship upon graduation. There are already 3 library science programs accredited by the American Library Association in Texas, all of which have declining enrollment. In addition, there are several other programs that are non-accredited in Texas; the market is already saturated. Furthermore, iSchools do not do the work of educating the general student population about information literacy, as indicated by the MGT report. This is done by practicing librarians in University Library organizations. It is clear that MGT consultants did not have a background in libraries and failed to do even a basic level of research before issuing their recommendation. Information literacy instruction is the role of practicing librarians that work in the functional libraries at universities. This information literacy work is already being done at A&M. From FY18-FY21, the TAMU Libraries have provided instructional workshops, tours and orientations, and research instruction guest lectures to over 137,595 attendees in almost 4,000 sessions. These sessions have been embedded in every college on campus and in campus units such as the Pride Center, Multicultural Services, Hullabaloo U, Fish Camp, and more. Librarians have been involved in the student success movement since its inception. In Fall of 2021, there are 8 library instructors currently teaching 12 sections of FYEX101 (Hullabaloo U). It is also intentional that the University Libraries is choosing to embed information literacy throughout the A&M curricula and co-curricular experiences. Information literacy is constructed and contextual within the norms of the disciplines in which the researcher/learner is working. The information skills needed for an Engineer are not the same as those needed for a Historian. It is difficult to divorce information literacy from the context in which the information is created, sought, and used. Therefore, the embedded nature of librarians within the whole of the university curriculum, across departments and units, is mission critical to student success. This is why stand-alone, non-disciplinary information literacy courses can be less effective than imbuing information literacy content into courses within a degree plan, a strategy already at play at A&M. Information literacy also happens outside of the classroom in

the experience of doing research and using the libraries as the campus hub of intellectual curiosity and the associated collections, programs, and services. Moving the libraries exclusively into the classroom experience without acknowledging all of the co-curricular ways in which library services support the whole learning experience is misguided. Moreover, if the current library faculty were moved into a library department that was dedicated to the education of future librarians, who would do the work of providing information literacy instruction to the 70+K undergraduate students? In order to have both a Library Science degree program AND a fully functioning library university library system, TAMU would need to invest considerable resources in the additional hiring of library and informatics faculty. The recommendation that the Fine Arts are underserved at TAMU is correct. It is not what we are known for as an academic institution. It would be wonderful to see an investment in the arts. However, these are notoriously expensive programs to run which does not seem to be in alignment with the report's overarching goals. The recommendation to create a School of Journalism is not based in evidence based research in higher education. There has been a national decline in journalism schools across the nation. The report uses the need for media literacy amongst the general population as a rationale for the new school. This is a false equivalency. Educating a handful of students who choose journalism as a major will have no impact on the media literacy of our general student population.

---

Recommendation #1: Combine the College of Liberal Arts, the College of Science, and the College of Geosciences to create a new College of Arts and Sciences. The team that prepared the report seems to operate under the assumption that centralization is always better. They seem to have skipped their business management 101 classes which show with many examples how centralizations and mergers can hurt organizations. Centralization may work well if the units are united by specific common goals and operating methods. This is certainly not true in this case. One could equally merge liberal arts with engineering or vet school or business school. The merger won't be beneficial for the students as there is little overlap in courses and the change of majors from liberal arts to sciences is rare. The argument of reduced staff does not apply. The office of the new super-dean won't be able to lead competently all disparate units. One will have to maintain subunit offices. The bureaucracy will only proliferate. The argument that some other universities have such colleges is simply not serious. Those colleges were created decades if not hundreds of years ago when they made more sense and their mission was primarily teaching. They might want to split now, but they are wise enough not to fix something which is not broken. Why don't we follow the same wisdom and stop wasting money, people, and resources on hurtful bureaucratic games? Recommendation #2: Establish a School of Visual and Performing Arts with new departments in music, performing arts, and fine arts, and relocate the Department of Visualization to anchor this new school. Performing and fine arts were never our strength. Those areas are strong in other Texas universities. We at Texas A&M have our own strengths and areas of excellence. Why don't we invest in those, instead of creating mediocre programs? I doubt that there is shortage of artists and musicians in the area and they cannot find enough places to study. Performing and fine arts are delicate disciplines and it may take decades and enormous resources before they are grown from current poor level to a decent level here. I don't see any rationale for spending these resources. Recommendation #5: Create the new Institute of Biological Life Sciences which will contain the Department of Biology and the Biomedical Sciences Program. This is simply ridiculous. Agrilife as a college has very different goals from the department of Biology. Faculty in these areas have no barriers to collaborate already and they can decide to group a new center or a new institute at any time, without wasting resources for administrative relocation of different units. Such things should originate from the faculty and dictated by the needs of education and research. Do you people seriously think that you know better?

---

I am mostly ambivalent about the merging of colleges proposed by the report. As someone working within Liberal Arts, I have appreciated the sense of possibility that exists within the current make-up of the college to build a unique identity that can more readily align with the 21st century shifts in education, society, and leadership. Because of its relative youth compared to other Liberal Arts or Arts and Sciences colleges at peer institutions (like the U of M example cited in the report), there is more flexibility that allows for growth and innovation in the Humanities/Social Sciences than would be the case at institutions whose programs are perhaps a bit more calcified in terms of the vision they offer. But it may be possible to preserve this dynamic of the current Liberal Arts set-up within the framework of an Arts and Sciences if the structures and processes of realignment do not wind up stifling the forward-thinking and creative visions of the merged units. I myself have benefited tremendously from my own undergraduate education that allowed me to gain exposure to the study of science, social science, and humanities, all of which have played a formative role in my educational, professional, and personal growth. My biggest concern in a realignment is making sure that the expected pay-off is clearly articulated (how exactly will this improve the institution?) as well as being mindful of the challenges that the realignment process will entail (will the short-term pain be worth the long-term gain?). My prior experience at a

peer institution that underwent a change in the academic calendar has taught me that a lot of the brunt of a drastic institutional change is shouldered by those staff and lower-level administration who pours so much of their time and energy into keeping the university running on a day-to-day level, and that having to coordinate and implement institutional changes can lead to burnout and depleted morale among some of the most valuable contributors to the operation of the institution. As for the recommendation about expanding the Bush School, there does not seem to be much enthusiasm within International Studies for merging the existing program with the Bush School. The department does serve as a pipeline for students to go on to do graduate programs at the Bush School, but the organization and mission/vision of the department promotes other potential directions for students to pursue, including Business, Law, and Public/Global Health.

---

I would like to comment on the proposed merger between the Political Science department and the Bush School. I see the advantages that this potentially offers. At the same time, there are some issues that I think would need to be addressed in order for this to be successful. It would be critical, in my view, for the Political Science department to maintain its autonomy. This would mean that the faculty currently in the department would remain there, rather than being divided up and placed into the two departments that presently exist in the Bush School. It would also be important for the Political Science department to be able to maintain control over its PhD program, which is nationally ranked in the top-25 according to US News and World Report. In addition, commitments that have been made to faculty as far as teaching loads and research support should be honored if the merger happens.

---

Thank you for the opportunity to read and respond to the MGT report. I gained important insight from the report and in general, agree with realignment to increase efficiency, productivity, and consistent evaluation. However, there are several inconsistencies that I believe need to be addressed. The report states that “most peer institutions do not have a stand-alone biology department”, which is not accurate. While the specific name of the department may vary (e.g. Department of Molecular and Cellular Biology), almost all peer institutions have a biology department in the College of Science (or Arts and Sciences) with Cornell University being an exception. The selection of Cornell University as an example is not well justified. It is not clear how a smaller private university (with a public College of Agriculture) relates to a large public university. Further research is needed to determine the potential repercussions of this move. The proposed restructuring of the Department of Biology in the new Institute of Biological Life Sciences in the College of Agriculture and Life Sciences is also not well defined. Having a broad and collective Department of Biology is an advantage as it creates novel collaborations, increases the breadth of knowledge gained by undergraduate majors, and is a version of the academic centralization that the report consistently promotes. Moving the Department of Biology to the College of Agriculture and Life Sciences could ultimately lead to decentralization of the Department of Biology and effectively be counter-active to the proposed mission. The use of comments during interviews to define underperformance of the Department of Biology does not hold up to academic standard. Quantifiable metrics, such as the low fail rate of 1st year students (11.2% in 2020), high retention of first year Biology majors (95.9%, which is higher than the TAMU average of 94.3%), 57% increase in awarded degrees over the past 5 years, marked increase in research awards (>\$21M), and high diversity (16% greater than TAMU average) indicate that the Department of Biology is one of the top performing departments on campus. The Department of Biology is in the early stages of a strategic plan to build upon this momentum and become one of the premier biology departments in the country. The strategic plan will further increase the upward trajectory that the department has already created. While there may be some historic context to the Department of Biology’s perceptions throughout the university, it appears that comments cited in the report are outdated. The MGT report would greatly benefit from a more rigorous assessment. The Department of Biology has also helped create a new Neuroscience major, which has exceeded enrollment expectations and is a powerful recruitment tool for the university. The position of the Department of Biology in the College Science (or Arts and Sciences) is critical to the implementation and growth of this degree. Substantial changes to the Department could impede this new and exciting major, as well as other initiatives within the College of Science.

---

The MGT report contains some interesting and even exciting suggestions, and also some ideas that may not be workable. My comments on the proposed academic realignment reflect my role as a faculty member in the College of Geosciences. I can see benefits of the proposed realignment to form a College of Arts and Sciences (I earned my Bachelor’s degree from a liberal arts college and my Ph.D. at a land grant university organized on the Arts and Sciences model). Under the proposed arrangement, for example, our university core curriculum would probably function better than at present; and certain departments would potentially fit more comfortably into a combined college than in the more narrowly focused colleges where they currently reside. The success of the merger would depend on its implementation. The critical thing is to honor the integrity of disciplines and existing departments, as well as their

historical development at TAMU. Indeed, the Arts and Sciences model inherently emphasizes the traditional academic disciplines as distinct from the less formal and/or applied academic programs housed in the other colleges, and this means that if implemented well, a combined college could elevate the status of the conventional arts and sciences disciplines, and hence of the entire university. Each of the existing academic disciplines is important and worth veneration, so let's make sure that all the existing departments are transferred intact to the new, larger college. A related and equally critical consideration is to carefully handle the interdisciplinary degree programs in the existing colleges, and to fully understand their history and linkages with the academic departments. In the College of Geosciences, for example, the interdisciplinary programs are primarily linked to and sustained by a single department (Geography, which is where they originated). The integrity of these linkages must be maintained to ensure the continued primacy of the traditional arts and sciences disciplines, as well as the future success of the supporting department(s) and interdisciplinary programs. A third consideration is that, if the university decides to move ahead with the proposed academic realignment, it should resist pressures to do it halfway. If we're going to do it, let's do it well. A watered-down approach that, say, only combines two colleges instead of three, or only moves departments around within the existing framework of three colleges, would create something messier than what we have now, without producing the benefits that could result from the single large college of Arts and Sciences. I probably cannot imagine all the arguments that might be advanced to pursue only parts of the proposed merger. But I would encourage the administration to move ahead with academic realignment only if it is committed to fully implementing the new College of Arts and Sciences. (One caveat: it's not clear to me that the library actually fits within the proposed structure, so my comments apply to the regular academic programs). As with all faculty members, I have some reservations about how the implementation of the MGT proposals will play out. These reservations stem primarily from the fact that the MGT report looks a bit carelessly assembled. Surprisingly, MGT overlooked major issues such as IODP and implications for its continued funding. Much of the report appears quite shallow, in fact. I am surprised that the university did not adopt some type of approach that would have yielded a more thorough portrayal of the nature of this university. Given the lack of depth exhibited in the MGT report, I am concerned that implementing the proposals will expose many unforeseen complications that will disrupt the functioning of the university. If the disruptions are too severe, the damage to our productivity and morale will outweigh whatever benefits might accrue from the changes. I am not writing to oppose the changes. I simply would urge the administration to thoroughly consider the reason that current structures exist, whether it is truly imperative to alter them, and, if so, how to execute the changes in the least disruptive manner. This will require a more thorough review and consultation with faculty, staff, and other stakeholders who have relevant expertise. If deeper study suggests a way to implement the changes in a minimally disruptive way that will enhance the university, we should move forward. But we should also be prepared to abandon the proposals if it seems that they will be too disruptive. The question to ask is whether the potential gains will be great enough to outweigh the disruptions that will inevitably occur. Thank you for considering these comments.

---

This was among the most surprising recommendations. This seems like a throwback decades to centuries. In looking when Michigan, Florida, and Rutgers established their similar colleges it was 1840, 1910, and 2007, respectively. These are Universities specifically mentioned in the report. This does not appear to be a forward looking recommendation that acknowledges the challenges Texas is experiencing, currently. I came to Texas A&M to be part of the College of Geosciences, which is was one of the few in this country. More have emerged in the past 20 years that recognize the need to address climate, energy, and natural resources, and the corresponding community resilience needs and challenges and private and government responses to these challenges. I acknowledge there is some need for some in our college community to update approaches and technology, refocus and direct research issues to societies major challenges, improve student job training, and create more focus applied problems that explicitly relate to issues of concern for the State of Texas. Removing a college dedicated to a discipline that has so much potential for the state would be a serious loss for the University. I would agree with advice to restructure, refocus, and build out the college to emphasize more direct benefits to Texas. Merging the College will dilute the focus on societal issues and only will serve to isolate faculty who will go their own way instead of lead with a unified vision of how Geosciences can benefit Texas. This also leaves UT Austin Jackson School of Geosciences as the only premier geoscience entity in the state of Texas. These flagship universities have different foci, as do our similar colleges. Losing one of the flagship colleges of geosciences, pushes all the focus to them, which will not benefit Texas A&M or the state of Texas. Establishing a Department of Journalism is a great idea. I look forward to the engagement of that Department across the University. Refocusing the College of Architecture to a 'core mission' appears to, again, not acknowledge the changes to society and that these departments have expanded well beyond their traditional boundaries to benefit society. Refocusing risks

losing the innovation that is sparked by engagement with other parts of that college including Construction Science and Architecture. I think the college as it is, is an innovative mix that is already successful and has much more potential.

Political Science should not be merged into the Bush School, but should remain with other social science departments. The recommendation is based on a superficial understanding of the departments. The Bush School is a Professional School; the department of Political Science is an academic department. The Bush School excels at training students for careers in government and placing students into those positions. Part of what makes the school so effective is its laser focus. Its focus enables it to attract faculty to support its mission. The Political Science department, meanwhile, is one of the ranked departments in the College. A merger with the Bush School would weaken the focus on what supports the doctoral program's ranking, an academic-focused research oriented faculty. A merger will also have negative impacts upon undergraduate students. As a department that offers classes in the core curriculum, remaining with the College would allow for better coordination of core curriculum classes, more facile creation of learning communities because cross-college coordination is not required, and more timely graduation by not outsourcing part of the core curriculum. Cooperation and opportunities for students do not require a merger (a 3+2 between the departments already exists, for instance). If this merger must take place the most negative outcomes can be mitigated, and the academic (versus professional) nature of the resultant school preserved, but locating it within an expanded College of Arts and Sciences which is what takes place in all other AAU peer and aspirant peer-institutions.

I will confine my comments to a few of the changes with which I can speak with greater personal knowledge. Merging Liberal Arts with Science and Geoscience could work, on paper, but would need tremendous care to do well. Without such care, it will simply result in more inefficiencies and likely result in a diminution of the humanities-centered units. An A&S College would need internal administrative structures such as Assoc. Deans heading Divisions within the College of like-minded scholarly profiles: Science, GeoScience, Social Science, Humanities. For example, the first three are article/grant disciplines in scholarly production; the latter tends to be composed of book disciplines without much external funding at all. I worry about how P&T would work in such a varied college. Such a merger would need to not relegate those units with much higher core curriculum teaching profiles (Humanities units) as second-class units within a first-class college. This will require a lot of intentionality and care and collaboration. A bigger college of A&S should make collaboration with the smaller colleges (Education, Bush School, Architecture, etc.) more formal at the College level. I don't regard the diminution of the Library to a department in A&S as a positive. It seems adding such a big teaching mission (a BA/MA/PhD in Library Sciences) is a lot to ask while they continue to provide all the services that all scholars need from them. Will there be increased resources for that? I see the School of Visualization and Performing Arts working out particularly well with donors, though it seems the Aggie Band should be a more formal part of it. If the Bush School is not part of the "4 legs of the stool" then why fold two of the top performing units in Liberal Arts, POLS and potentially ECON, into it? Doesn't that diminish A&S by making it shorter than the Engineering leg of the stool? I believe it is a problem that Engineering does not appear to lose anything in the MGT report. When President Banks addresses this report, she should strongly consider explaining what changes Engineering may experience. Perhaps it's just a perception problem, but it clouds whatever good points these reorganizations may have (and they do have a more than a few).

University administration should present a clear timetable as well as clear goals and objectives for the implementation of various aspects of the plan. This is especially true for the large and complex task of merging multiple units into a proposed College of Arts and Sciences. The administration must provide an outline of a rational process for the creation of the new College, including a reasonable timeline. Faculty and staff at all levels must be involved in this process in meaningful ways. The creation of such a College includes a wide range of issues, including: administrative structure; reporting chains; processes for tenure and promotion, annual review, and the like; College policies and by-laws; financial resources and funding; salary equity; department metrics; facilities; etc. etc. The university must clearly articulate how any newly formed College will contribute, specifically, to the research success of faculty in the unit. (The report, as a whole, is almost silent on how any of the academic realignments serve to improve faculty research.) How will vastly different units, with significant funding differences (natural sciences and humanities), work together? How will the university ensure that the humanities and social sciences will have an equal role to the natural sciences in shaping the future of the new College? All of these elements will be critical to launching a national search for a prominent Dean, who should come with significant experience leading a comparable College of Arts and Sciences. The university should actively seek to identify a major donor or donors for the new College. The creation of this College holds much potential and exciting opportunities for interdisciplinary work and student engagement; however, it must be a thoughtful process that engages all stakeholders, including faculty, staff, and students. I can only reiterate the above comments regarding

any potential academic realignments that would involve the Bush School, including moving departments from the College of Liberal Arts (Political Science, Economics, and/or International Studies) to the Bush School. In addition to all of the administrative issues noted above, any realignment here needs to understand fully what work is being done in these departments. How would these departments benefit from being located in the Bush School as opposed to the College of Arts and Sciences? How will their research and teaching missions be strengthened? All three of these departments include a wide-range of faculty and teaching that do not wholly mesh with the mission statement of the Bush School. Will the departments remain intact? Will the committees formed to implement any such realignment be drawn from faculty with real knowledge of these departments and what they do?

---

AgriLife Science would be a better home for the Department of Health & Kinesiology.

---

I understand the financial benefit to move undergraduates out of the HLKN department in CEHD over to public health. The state pays more "per head" for each undergraduate in public health than it does for CEHD undergraduates (a solid statement about the value the state places on training educators, to be sure). But public health does not have the infrastructure in place to take on these undergraduates, and it will be comical watching them panic and hire new faculty and open adequate space -- all new expenses -- in this attempt to accommodate these programs. Further, I recommend that public health take on the full cost of the Human Clinical Research Facility, and the CEHD should be compensated for all the money it spent on developing this facility. We invested in it, and now another entity will be taking on potential earnings. This is blatantly unfair.

---

MGT Consulting/M+CG Comprehensive Review Response to Final Report The following points justify and support the need to retain the Health & Kinesiology Department as an integral academic unit, correct erroneous information offered in the report, and provide a counter-recommendation. ● Report Recommends: [Recommendation #9d]: "Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health. (...) Refocus the College of Education and Human Development on the core mission of producing educators and move the Department of Health and Kinesiology ... to appropriate units" (p. 38). ○ The majority of faculty within the Division of Health Education in the HLKN Department believes this recommendation is ill-suited, given that the Division of Health Education contributes significantly to the College's focus on "producing educators". ○ The Division of Health develops/trains Health Educators with degree options that allow for TEA teacher certification and enable students to sit for the nationally accredited Certified Health Education Specialists. ○ Undergraduate degree options are: BS in Health Education (with an emphasis on Allied Health) or a BS in Community Health. All graduate degrees are in Health Education (and not Community Health as erroneously stated in the report). ○ Health Educators and Community Health/Public Health Workers are specifically identified by the U.S. Bureau of Labor Statistics (BLS) as distinct occupations. Each training program has its own, unique certifying agencies. For health education programs: the National Commission for Health Education Credentialing, Inc. (NCHEC); for public health programs: the Council on Education for Public Health (CEPH). ○ Re-alignment of the HLKN department with the SPH would contribute to REDUCING THE FOCUS of the College of Education and Human Development on its "core mission of producing educators", by eliminating one of the College's vital education-oriented programs. ● Report claims: "Program growth in each academic unit, specifically in the Community Health and Public Health degree programs, often appears to continue to create new conflict, course offerings, and program expansions in the other (...) however, this duplication of program offerings is an inefficient use of resources, confusing for accreditation and program evaluation" (p. 39). ○ While the report suggests HLKN and SPH experience duplication that might be confusing for accreditation and program evaluation, it fails to acknowledge the origins of the perceived overlap: The BS in Health Education began with the establishment of the College of Education in 1969. The SPH's BSPH was established in 2014, proposing to duplicate courses that aligned with the Division of Health's already-established professional preparation programs and degrees (which prepare school health teachers, community health educators and the health workforce). ○ If there is competing demand for students at the undergraduate (or graduate) level, it would seem wiser to capitalize on existing pedagogical resources already in place in the Health Education program (in HLKN). It would also seem wiser -- in lieu of moving HLKN to the SPH -- to capitalize on the forces driving enrollment in the Health Education undergraduate and graduate programs at a rate two-thirds higher than that observed in the SPH. ● Report claims (erroneously): "The overlapping degrees are the Bachelor of Science in Public Health, Master of Public Health, and Doctor of Public Health within HPCHS, and the Bachelor of Science, Master of Science, and Doctor of Philosophy in Community Health at HLKN" (p. 38). ○ The health-related Master's degrees offered in HLKN are MS in Health Education; the one offered at the SPH is a Master of Public Health degree. ○ HLKN offers a Ph.D. in Health Education (not Community Health as claimed in the report). SPH offers a DrPH. ○ Assuming these

degrees are redundant reveals ignorance regarding the nature and function of these titles: both the MPH and the DrPH are practitioner-oriented degrees -- appropriate for professionals working in state or federal-level departments of health and/or health care providers focused on practical applications of public health principles. MS and Ph.D. degrees are research and scholarship-oriented degrees -- appropriate for professionals seeking to research, develop, and disseminate new knowledge, as well as for scholars critically assessing knowledge development and ethical implications of applying research-based innovations/knowledge. 1. Report claims: "One of the primary reasons to move HLKN to SPH is that SPH's Council on Education for Public Health accreditation will not allow SPH to eliminate degree programs or to offer joint programs" (p. 39). ○ A recommendation to dismantle one of TAMU's largest academic departments because an accreditation program does not permit another solution is ludicrous, at best, and disingenuous at worst. ○ The rationale appears invalid, given that several other peer institutions have CEPH accreditation for their Public Health programs while simultaneously housing other units similar to HLKN's Division of Health Education. ○ One such peer institution - which the report failed to list in Appendix 3 -- is The University of Texas at Austin. UT-Austin houses both undergraduate and graduate degrees in Health Behavior and Health Education in their Department of Kinesiology and Health Education -- within the College of Education -- while also offering a BS in Public Health; at the same time, the UT School of Public Health offers MPH, DrPH, and PhD degrees (alongside non-degree certificates and programs). ○ Other peer institutions having the same model as TAMU (Health Education programs outside SPHs), with concomitant Schools of Public Health and their degrees include: the University of Alabama Birmingham and University of Florida. ● Counter-Recommendations: 1. Move the smaller unit of HPCHS at SPH into the HLKN Department. ○ From both a budgetary and efficiency perspective, it is more feasible to move the smaller HPCHS from the SPH into the HLKN Department, given the Health Education Division's history, scholarly productivity, national prominence, and leadership role within the HLKN Department, the College of Education and Human Development, the University, and nation-wide. ○ Moving the HPCHS department into HLKN would cost less and would allow the HLKN's Division of Health Education to maintain its independence and leadership role within the profession of Health Education, thus contributing to the College of Education's focus on developing professional educators of various stripes. 2. Establish the Department of HLKN as a School under TAMU Health. ○ See proposal and rationale provided in the feedback by other faculty members in the HLKN Department.

Re: Recommendation #9d (pg 38): Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with HLKN. The Center for Translational research in Aging and Longevity (CTRAL), well known of its advanced human clinical research expertise and success on campus but also nation and world wide, has been incorporated into HLKN after its move to TAMU in 2012. Prior to 2012, CTRAL, its faculty and several research staff members have always been affiliated with a medical school (college of Medicine: University Arkansas for Medical Sciences, Arkansas Children's Hospital, Maastricht University Medical Center ) due to its nature of human clinical research in diseased populations. This has been of benefit for both CTRAL and the clinical faculty of COM as joined interests in clinical research fields resulted in strong collaborations leading to novel human clinical research ideas and projects funded by NIH and foundations. Collaborations already exist to some degree but expansion is often limited due to the different affiliations and operational structures. A more formalized collaboration between CTRAL and COM will also boost the patient recruitment potential in the Bryan/College Station area.

I am an Assistant Professor who started in Political Science in Fall 2020. It was certainly a difficult time to begin my career on the tenure track, but I was so relieved and impressed by the kindness and generosity of my colleagues. Even amidst the many challenges and obstacles of moving to a new institution and prepping courses during a pandemic, I was very happy to be at Texas A&M and in the Political Science department especially. I have extraordinary research assistants in our excellent PhD students, with whom I have already published an article on Covid-19 and voter turnout in Brazil. I am closely engaged with scholars across the university and in Agrilife related to my research interests in water security, environmental politics, and natural hazards mitigation. I have received two large NSF grants - I am lead PI on one of them - to study these topics in marginalized communities in Texas. I have learned a lot from an undergraduate student who was in my course in Fall 2020 and is now pursuing a directed research project with me. All of these things make me excited to be part of the Department of Political Science at TAMU. They are also the reasons that I am very concerned about the recent consulting report, in particular the recommendation to move the Department of Political Science to the Bush School. I have many close friends and colleagues at the Bush School, and I greatly respect their work. It is an excellent school. I even hold a master's degree from UC San Diego's equivalent of the Bush School, and my work and publications are interdisciplinary and policy-oriented. These experiences make me keenly aware of the significant differences in the missions and actions of the two departments. I explicitly chose to join a Department of Political

Science in order to pursue research with a clear grounding in disciplinary work and contributions. I want to teach political science to undergraduates, and I want to mentor PhD students pursuing dissertations in political science. I had competing offers when I made my choice to come to TAMU, and one key factor was the academic research focus of the department, its generous support for my fieldwork and original data collection, and its 2-1 teaching load. I would be happy with an outcome where the Department of Political Science joins the Bush School, remains its own autonomous department, and honors the terms of my and my colleagues' offer/promotion letters. I have great colleagues and community in B/CS, and I want to stay. However, I am very concerned that, if the department does not remain autonomous and if the new arrangement involves reneging on any of the terms of my offer letter, then the aspects of my job at TAMU that bring me such fulfillment will be gone. Thank you for your consideration.

---

A merger/collaboration between Political Science, Economics, and International Studies could work well for all units concerned. The Bush School would instantly obtain thousands of undergraduate majors, but also a significant number of new MS students especially in Economics, and two highly regarded Ph.D. programs in Political Science and in Economics. There are concerns of course. The Bush School would be asked to swallow and incorporate two large and relatively strong academic departments, and this will change the Bush School in some ways. The Political Science and Economics and International Studies groups would be asked to integrate with the Bush School's more policy-oriented and practice-oriented faculty. The Bush School is currently organized into two departments by area of focus, whereas the Political Science and Economics Departments are organized by academic discipline (and should remain so organized). But there are complementarities between all these units and faculty, and there would be increased opportunities for interdisciplinary work, which is already a hallmark of the Bush School. It also seems that POLS and ECON and International Studies are all slotted to face large changes in any case, whether moving to BUSH or moving into a large College of Arts and Sciences, so the momentum behind 'staying in place' is less of a factor in this decision.

---

Great idea in creating a College of visual and performing arts. So much about what we hear regarding journalism seems to suggest that the industry is in need new vision or direction. Perhaps we need an alternative to Journalism. The idea of combining Political Science and Bush School makes lots of sense. I am not sure what the implications for the change to the College of Vet Medicine would be for McAllen. Moving Construction Science to Engineering is wise, although the concern might be weakened in a college that includes a powerhouse like Engineering.

---

It would be a mistake to merge the Department of International Studies with the Bush School, or any other academic unit at A&M. International Studies is a department that houses three separate and distinct degree programs (International Studies, Modern Languages, and Classics), and our mission does not align with that of the Bush School. International Affairs and International Studies are not the same thing, and should not be combined simply because the word "international" appears in both.

---

Dr. Barteau, VP for Research Office did a fairly good job bringing all of the Associate Dean's for Research under one umbrella. We all meet on a monthly basis. The COVID TEMAGS teams meets monthly. Respectfully, I do not believe that A&M-Health needs a separate Assoc. VP for Research. The A&M-Health ADR's know each other and we have long collaborated with other researchers in our fields without Dr. Ken Ramos who seems to be focused on finding funding for his research priorities at IBT. Dr. Ramos should have the sole title---"Director of IBT" and perhaps he might have time A&M's basic science interests at the Texas Medical Center. Dr. Ramos and IBT should fall under the Dean for the College of Medicine. I believe the SPH degrees hold much higher value than Human Development's Community Health degrees for A&M graduates. This change makes sense. Texas A&M Health-School of Public Health would merge with the Dept. of Health & Kinesiology and result in the merger of two separate cultures, missions, and faculty. This will take much stronger leaders than are currently available at either College. Obviously the SPH will require a much larger building

---

Recommendation #1. Coming from 2 universities that do have a College of Arts and Sciences (Indiana University and Northwestern University), as well my partner being an Assistant Dean of Curriculum and Policy for the Indiana University College of Arts and Sciences, I can see creating a College of Arts and Sciences might be good. Recommendation #2. I am concerned about establishing a School of Visual and Performing Arts. For one, I don't know if this school will have many students in their program. Two, how will resources be reallocated to create such a school? Performing Arts implies that there will be school-based opera, ballet, symphonies, orchestras, performances, plays, etc. Does TAMU have the capacity to do this? I like the idea, but I'm worried about the resource allocation and success of the school.

Recommendation #3. I'm concerned about resource reallocation in creating a new Department of Journalism.

Recommendation #6. The University Libraries serve everyone. I am concerned that a University Libraries into the College of Arts and Sciences will mean those outside of that college will not be able to access library resources.

Recommendation #9d. I am in the Department of Health and Kinesiology, specifically in the Health Education Division. I

agree that there is duplication, and Kinesiology is often a department within Schools of Public Health across the country. However, I would like to know how the transfer to the Department of Health Promotion and Community Health Sciences will impact tenure/promotion, pay, teaching load, research account, research/grant resources, etc.

Counter-Recommendations: 1) Move the smaller unit of HPCHS at SPH into the HLKN Department. From both a budgetary and efficiency perspective, it is more feasible to move the smaller HPCHS from the SPH into the HLKN Department, given the Health Education Division's history, scholarly productivity, national prominence and leadership role within the HLKN Department, the College of Education and Human Development, the University, and nation-wide. Moving the HPCHS department into HLKN would cost less and would allow the HLKN's Division of Health Education to maintain its independence and leadership role within the profession of Health Education, thus contributing to the College of Education's focus on developing professional educators of various stripes. 2) Or move HLKN as a School under the umbrella of TAMU Health, would strength TAMU Health, would cost little, and would maintain the strength of HLKN. There are a large number of Health faculty whose research and education programs do not fit into the SPH model. Lastly, it would allow SPH to continue to pursue its destiny as a Public Health focused educational entity.

Having undergraduate courses in information science, maybe even a program, is an idea worth considering. The University of Tennessee's School of Information Sciences has a successful undergraduate program that could be used as a model. However, their courses are taught by the SIS faculty, most of whom have PhDs. Very few of the librarians at A&M have a PhD. I'm also not clear as to whether all librarians would be expected to teach. We have 50+ tenured and tenure-track librarians, and 30+ non tenure track librarians. It's hard to imagine enough courses for all of us to be teaching, especially those of us who chose librarianship because it does not involve teaching. The Libraries should remain its own free-standing unit as a direct report to the Provost and retain its head as Dean of the Libraries. The Libraries services and programs are for the entire university and serious thought should be given to the consequences of the Libraries reporting to any academic dean. The conflict of interest, especially the perceived conflict of interest, of an academic dean supervising the Libraries would damage the Libraries' neutral role. As the Libraries' materials budget would be under the purview of an academic dean, the faculty in the rest of the colleges would certainly wonder if we are favoring "our" college in purchasing decisions. Without new funding the Libraries will have to implement a major journal cancellation effort in a couple of years. How would the Libraries ever be viewed as making impartial judgments in such a situation? If the academic dean did remain hands-off on such decisions, would any faculty member outside that college ever believe that would be true? In a time of severe cuts, which any university could face in the next few years, would that academic dean truly be able to resist looking at the Libraries' budget lines to forestall cuts to other departments under his or her control? Putting the Libraries under any college would be a disservice to both the Libraries and the University as a whole.

Let me state this simply. The Chemistry Department is very strong. Strong departments are hard to build but easy to destroy. Any strong department is going to be fearful of change. Whether justified or not, that fear can cause substantial short-term problems, particularly for recruiting and retention, whatever is ultimately decided for Academic Realignment. A few months uncertainty can cause harm that will take many years and a lot of resources to rectify. So you need to get on top of this.

The fusion of the colleges of Liberal Arts, GeoSciences and Science is a multi-edge sword. If the right leadership is put in place and admin savings are used to make investments in the faculty, then this is promising. If a new dean is brought board with a \$ package that includes a major initiative in the arts, I believe this would do much to put salve on the concerns that the humanities and liberal arts will suffer from this merger. There will likely be few painful years with stress in some faculty members who have trouble with that 4 letter word "change". Moving the vis lab out of architecture is not obviously a win. This program has thrived and gained national recognition where it is and it is the strongest thing going in Architecture. An alternative approach would be to build other elements of Architecture and keep this signature program where it is. The expansion of the Bush school to have an undergrad and PhD program is a wonderful idea. Not sure on the library ideas, but I think this has a good chance to work well within a year or two. The goal to improve research operations at TAMU-Health are great, but need to be coupled with an aggressive faculty recruitment effort. If a cluster hire was made with centered on a superstar with a substantial NIH program, we could begin to build some signature program that would help bring more solid more researchers.

1. I am in favor of having an academic department with Journalism in the name, specifically the Depart of Communication and Journalism. Journalism has had a long and varied history at TAMU. Once the dept. was eliminated, journalism studies was put in the dean's office in Liberal Arts. It did not thrive there, and several years ago the Department of Communication proposed to move JOUR to COMM where it is starting to grow again. The MGT report

stated there have not been many JOUR majors graduated since move to COMM. That is a misrepresentation as we now have more JOUR majors than Liberal Arts ever did and we are expanding the curriculum and attracting more students. Renaming Communication to the Department of Communication and Journalism is win-win for journalism, communication, and in line with this realignment recommendation. This also sets the stage for establishing a SCHOOL OF COMMUNICATION AND JOURNALISM in the foreseeable future. 2. I am in favor of merging Liberal Arts and Sciences. As a communication scientist, I think we might get more support for applied and basic social science research and education in an Arts and Sciences college.

---

College of Liberal Arts needs to maintain autonomy of its research and teaching mission, and grow new rhizomes between the other colleges through strategic initiatives. The visualization unit is a great way to help create these new connections. Department of Journalism was disassembled due to poor research performance as an academic department. Without a research focus the new entity will create a high visibility program without the benefit of top-quality research talent. Bush School merger with Pol Sci is an incongruous match with conflicting objectives (impartial scholarship vs. government service). Biology is its own field of research which needs to remain autonomous from biomedical sciences program. Library science needs to migrate to an information sciences college, not into Liberal Arts or college of arts and sciences.

---

Fan of Art and Sciences consolidation. Please proceed. Too many benefits not to do this immediately. We need to include some enhanced/targeted training in Math and Physics for the Engineering students. I understand not putting Applied Sciences in engineering like Northwestern as this makes that department too big, yet we have several ASEE papers regarding the Fall 2018 curriculum redesign highlighting the ongoing math issues. Physics is better, although we need some curriculum retargeting in 216/217 lecture topics. We need a Engineering track in the Math/Science/Art college to focus on the specific skills engineers need developed. Jazz improv is a great mirror for building problem-solving skills, and we need to actively pursue keeping engineer musicians going in college to continue to develop this bridging skill set. Always wondered why construction science was not placed with the Civil Eng crew. Proceed immediately. Leave journalism to UNT and tu. We can't do everything and I expect this to be the most contentious of all the changes presented. I don't foresee much benefit to Texas A&M as a whole here. Building a performing arts program to rival UNT and tu will be tough in BCS, yet this is something that I believe that BCS will support, considering the success of First Friday in Bryan and the Round Top activities just down the road.

---

Fully and strongly support the expansion of the Bush School, whether combined with Poli. Sci. and Economics Departments, e.g., or growing it from within. We at the Bush School should have had a Ph.D. program long, long, long ago. Pretty hard for a policy school to move into the front ranks of academia when it does not produce Ph.D.s. I think we as professors got comfortable and, yes, lackadaisical in our attitudes. It is high time we stepped fully up to the plate.

---

COLLEGE OF LIBERAL ARTS AND SCIENCE Whether the proposal to merge the College of liberal arts and science is beneficial remains unclear. After reading the report, only negative aspects emerge. For instance, bigger structure is less efficient, dean expertise will be less aligned with more departments, very diverse department sizes, financial gain unclear, inevitably more administration duties at the department level... The report is surprisingly lacking data supporting the recommendation. Listing "peer universities" with merged colleges is far from being convincing for many reasons: what makes them peer? Their university status or colleges of liberal arts and science? How their sizes compare with us? Did they ever split or they stayed together since their creation? Do we have information on recent merge at other universities (e.g South Carolina)? But most importantly, why having similar size colleges would be beneficial for individual departments, the colleges, and the university? The report should be sent back to MGT and ask to do a better (scientific) job. To be convincing, the report must be supplemented by more convincing data, more detailed findings and rationals.

---

I do not see the rationale behind incorporating performing arts into Liberal Arts and Sciences. Liberal Arts and Social Sciences are already all in the same college (College of Liberal Arts). Fine and performing arts are completely different fields - students have different needs and faculty have different career paths. One could think of incorporating sciences and social sciences, and arts and liberal arts. Many different ways of restructuring could be proposed. While I do see synergies between liberal arts and social sciences - think history and economics - the link between performing arts and social sciences is much weaker (if there is any). The examples in the report link fine arts with STEM, which, again, would suggest yet another restructuring, i.e. physical sciences and arts on one side, and social sciences and liberal arts on the other. I am strongly opposed to incorporating Economics into the Bush school. This was suggested in the report. While I appreciate the interdisciplinary nature of the Bush school, economics departments are not usually part of policy schools, and if this happens to the TAMU economics department, it will reflect badly on the department's national and

international reputation. Why create a Department of Library Sciences? Is there student demand for a degree in library sciences? "Faculty-librarians will have faculty status in this new department." What does this mean? Isn't this a waste of resources? What is the rationale behind this?

TAMU should have a College of Arts and Sciences. Excellent suggestion. Personally, I'm thrilled to be part of this realignment. Regarding the observation that TAMU lacks "applied" arts, and the suggestion that the Department of Performance Studies merge its faculty and academic programs with a School of "Visual and Performing Arts" in A&S: Performance Studies is an interdisciplinary humanities field, distinct from applied arts (not a poor shadow of applied, conservatory-style arts training programs). The MGT report is understandable, but perhaps was not aware of a decision TAMU made in 2014 to do away with applied BAs in music and theatre. The creation of a non-conservatory BA in Performance Studies began with an Academic Program Review in 2014. Contra the MGT report, the 2014 APR concluded that the Department's \*lack\* was academic rigor (not applied arts courses). At the time of the review, the Department had an applied music BA and an applied theatre/drama BA. However, the APR recommended dismantling the applied degrees and creating a single BA in the academic discipline of Performance Studies. Quoting from the APR report: "much of the challenge of this 15-year-old department is to combine what were formerly two programs and two disciplines [music and theatre] into one integrated whole." The APR recommended: "a common vision of the department as a whole, rather than a tenuous balance between a Music Department and a Theater Department under one roof." Notably, the APR's aspirational peers were Stanford, UC Berkeley, and NYU (very high-level institutions nationally) rather than regional Texas universities (which the THECB oversees to avoid programmatic duplication). More precisely, the APR \*criticized\* the Department for its emphasis on applied instruction, its conservatory model at the BA level and praised its academic MA. At the undergraduate level, the applied aspect was perceived as a liability in a liberal arts environment: "the undergraduate department weighs heavily on its practice instruction (acting, theater tech, instrumental and voice lessons), whose teaching responsibility also falls into the hands of instructional faculty. This condition has both scholarly and ethical implications. In the scholarly dimension, it creates a department with an emphasis on a conservatory-based model of education that constrains the potential benefits of a liberal arts B.A. degree." The Department complied with TAMU's mandate to create "a plan for integrating Music and Theater into the new BA in PERF" and a "teach-out plan for current majors, including the date the current programs will cease to accept new [music and theatre] majors." The then Dean called the idea of a new academic BA in Performance Studies "innovative and distinctive", and rejected any suggestion of keeping the existing BAs in music and theatre. The Department promptly and in good faith dismantled its BAs in theatre and music in 2014-15. The 2014 proposal to the Coordinating Board (which forbids duplication of programs) stated: "Creating a single BA in Performance Studies brings this Department's academic mission in line with the original vision of the Department when it was formed in 1999. The original proposal envisioned an environment for 'stimulating creative and research work' defined by 'faculty and curricular interaction' (p. 1) and 'cross-fertilization of interests' between music and theatre' (p. 7). A BA in Performance Studies returns the curriculum to its original mission as an academic department by orienting the department around the discipline of performance studies, which focuses on the study of performance as social and cultural practice. The synthesis of music and theatre in a Performance Studies BA positions Texas A&M to be a unique undergraduate program not only in Texas but in the U.S." This vision of collaboration does not match that of conservatory-style BFA/MFA programs. The proposal continues: "The proposed BA also brings the undergraduate program in line with Imperative 4 of Vision 2020: 'Texas A&M University needs visual and performing arts programs freshly conceived and fitted to the university's distinctive competencies.' Further, the proposed BA is fitted to Texas A&M's increasing investment in interdisciplinary research, articulated in the Vision 2020 Precept: 'Encourage and facilitate interdisciplinary scholarship.' [... ] a freshly reconceived BA would allow for the kind of serious, interdisciplinary research at the undergraduate level currently missing from the conservatory style programs in Music and Theatre." In short, in 2014 TAMU decided it did not want conservatory-style arts programs. In less than 4 years, the Department completely realigned its curriculum, faculty, research, and mission to comply with the 2014 mandate. The Department is now doing something unique in the state, not duplicating other (conservatory, professional training) programs. In a sense, recreating music and theatre departments is moving backward. Performance Studies belongs with Interdisciplinary Studies in the pursuit of academic research, teaching the analytical skills and critical thinking valued at TAMU, and creating challenging (non-professional) experimental performance work. Many students want to explore the arts but do not seek professional training -- they deserve a place at TAMU and Performance Studies provides it. Many faculty members in the Department of Performance Studies are exceptional scholars (2 were Rothrock Fellows in 2021), and would welcome this opportunity to work and collaborate with allied faculty members in humanities and social sciences. Noting that the CLLA has several

interdisciplinary minors, US degrees, certificates, and majors, one idea is a Department of Interdisciplinary Studies including Performance Studies within it. In addition to the synergy among interdisciplinary faculty, such a department could also help streamline and centralize administration. With enthusiasm for the proposed realignment, and creation of a school of fine arts, Performance Studies as humanities research discipline should continue to make scholarly contributions to a College of Arts and Sciences, especially if situated in an Interdisciplinary Department.

---

The university should provide financial stability in any academic realignment.

---

I think all life science units should be placed within the College of Ag and Life Sciences, rather than to create an "institute". I don't perceive what is achieved by placing existing units under the umbrella of a new institute?

---

What is wrong with the current set up? While there is room for improvement, any changes will produce new problems, some unforeseen. (1) This may lead to our being one large college of service teaching, with fewer resources for science and math; (2) This could increase bureaucracy due to being such a large college; (3) Having a dean of the college whose expertise is far from mathematics or science could make it difficult to function as a coherent unit, and some based this concern on their experience at other universities.

---

Finding #6 Merging the University Libraries into the new College of Arts & Sciences and create a new Department of Library Sciences. The consulting group fails to understand the role faculty librarians and the purpose of Library Science programs. Library Science programs teach students to function in various roles within libraries in various settings (academic, K-12 schools, public, special, legal, medical, government, corporate, etc.). Within academic libraries associated with colleges and universities, librarians specialize in a variety of roles that require knowledge and expertise (gained through coursework and experience) of the publishing industry; licensing of digital products, databases, and other resources; management of departments within libraries; information literacy; and knowledge of database content, platforms, and search strategy development in a variety of disciplines (sciences, social sciences, humanities). Additional areas of specialty include archives & manuscripts, special collections, maps and state/federal government resources, digital humanities, and preservation. All of these specialties support the research, teaching, and student learning and success on campus and beyond. Universities where librarians have faculty status (tenure track) – allow for the discipline to move forward, to grow, to evolve, to develop best practices (in the scholar practitioner model). Research and publication is where faculty librarians share or collaborate on these best practices with peers across institutions, across the nation, and internationally. Our librarianship is our “teaching” equivalent. Subject librarians are often embedded in the departments to which they are assigned (to various degrees) – providing information literacy instruction primarily to the introductory, writing and communication intensive, and capstone courses in the undergraduate curriculum as well as providing more in-depth, individual research consultations to graduate students working on course projects, theses/dissertations, and publications. Library Science programs accept students into the master’s program (terminal degree) from any discipline because the profession needs librarians with educational backgrounds in the sciences, mathematics, computer science, engineering, health sciences, social sciences, business, communication, humanities, etc. The only people getting PhDs in Library Science are those who plan to teach at a university with a Library Science program. An undergraduate degree in Library Science (which is offered at one institution that I know of) is not a practical degree if you intend to work in an academic library – which requires a master’s degree accredited by the American Library Association. Librarians do not typically teach credit-bearing courses at most universities unless it is a general 1-credit hour (or no credits) information literacy course usually offered to freshmen. Starting a library science program within the proposed College of Arts & Sciences would not fly as that would never be accredited by the American Library Association – there must be PhDs teaching courses in the program – none of our faculty librarians have PhDs in Library Science. I believe the consultants must be equating library science (called Information Science at some schools) with information literacy instruction. These are two very different things. The subject librarians are already teaching information literacy within departments (as they are requested by faculty in various departments). There are roughly 61 Library science programs offered at universities across the country (the state of Texas is unique in that it has 3 of these programs). These programs enroll roughly 200-300 students per program in each master’s degree cohort. The University of Texas just launched an undergraduate program, but I believe it is merged with some are of computing sciences. It is not designed to graduate students who will go on to work in university libraries. I do not agree with incorporating the library within the proposed Arts & Sciences College. Our librarians support all disciplines on campus. Where would the librarians with science, engineering, mathematics, computer science, geosciences, health sciences, medicine, and agriculture go? Promotion and tenure would be handled through disciplines that do not understand librarianship. Where would budget/finances go? – currently handled by the Interim Library Dean’s position. We need leadership who

understands library budgets and finances. Where would the University Press report to? The Writing Center is housed within the library – not sure what more integration there could be. Years ago, we explored having a reference desk next to the Writing Center on the second floor of the library, but the trial period proved that was not the best use of our limited staffing. Most university libraries have moved to an appointment or on-call model for reference; most see more "traffic" (or usage by students) through online chat (which is usually more convenient for students). Most of our research consultations (appointments) are done over Zoom. This was critical for our distance education students before COVID-19 - now more students are making use of Zoom for these appointments.

---

I do not believe International Studies belongs at the Bush School of Government. However, if the Bush School of Government will offer new undergraduate degrees, faculty in International Studies could seek a partial appointment at the Bush School of Government (25%) to facilitate Bush School undergraduate course offerings. The new College of Arts & Sciences should consolidate by and set up for success by a Dean who has experience doing this job. That individual should be an external hire. Otherwise it will feel like a hostile takeover. Departments will need to shape the Dean's advisory committee and be permitted to maintain their teaching loads and standards for tenure and promotion.

---

The Biomedical Sciences program is of highly quality and impact. The strength of this program comes from its integration into the College of Veterinary Medicine & Biomedical Sciences. The rationale for moving this program to an Institute in AgriLife is not clear.

- It is unclear how the BIMS program would be administered in the proposed Institute of Biological Life Sciences, which also includes the Department of Biology.
- o Would CVMBS faculty/staff who teach in the BIMS program move to the new institute?
- o What about faculty who teach in all three (BIMS, DVM, and graduate) programs of the college?
- o If the BIMS undergraduate program has to be moved out of CVMBS, a move to Texas A&M Health would be more appropriate than AgriLife.
- Does the proposed move of the BIMS program include our BIMS graduate program or just the large undergraduate component?
- Over the course of many years, the CVMBS has utilized its human, space, and fiscal resources carefully to tightly integrate its responsibilities toward its professional, undergraduate, and graduate curricula. How would these resources (especially assigned classroom and laboratory spaces) be administered when BIMS is moved out of the college?
- Providing tailored advising for pre-professional students requires extensive experience so that the students can complete their required coursework in a timely manner. A centralized advising process may be significantly less effective for this program.
- Highly ranked colleges of veterinary medicine are important contributors to biomedical research in human health, in addition to their core mission of promoting animal health. The constraint of routing proposals only through AgriLife would affect the college's research trajectory significantly.
- Our college is deeply committed to the continued success of the BIMS program, wherever it is housed. We look forward to being closely involved in discussions about its future.

---

Don't try and do too much too quickly.

---

The possible merger between the Department of Political Science, Bush school and International Studies is an excellent idea which will improve and enrich the educational portfolio in social sciences and its quality. There are many overlaps in terms of the fields and topics among these different departments and this merger not only will create a synergy and increase the competitive advantage of our university but also complete a big gap that exists currently in social sciences and humanities.

---

The possible merger between the Department of Political Science, Bush school and International Studies is an excellent idea which will improve and enrich the educational portfolio in social sciences and its quality. There are many overlaps in terms of the fields and topics among these different departments and this merger not only will create a synergy and increase the competitive advantage of our university but also complete a big gap that exists currently in social sciences and humanities.

---

I am an Assistant Professor in the Political Science department, and have concerns with the proposed move to the Bush School. The draw of Texas A&M as a professor is for it to be an elite PhD granting institution. Particularly keeping the department as an elite PhD granting department covering all subfields of political science is of primary importance. This raises concerns with the move to the Bush school as it is a policy school which does not currently cover American politics (which is very distinct from public policy), political theory, or formal political methodology. While there are certainly some complementarities between the Bush school departments and political science, even beyond being a PhD vs MA granting department, our general research and teaching objectives and focuses are difference. Hence, it would seem that the best way to make a merger work is to allow us to retain our department structure, covering all the major political science subfields (with maybe Public Policy and Public Administration, which may better belong in one of the Bush departments). Our faculty should not be split up into the present departments in the Bush school, which would

lose the comprehensive political science education we currently provide. Second, the mission of the Bush school departments (training policy professionals) is very different than the mission of the Poli Sci department (training elite undergrads and future academics), and as such, we believe that if we are going there, there should be other academically inclined departments with us. This way we are not isolated in college-level decision-making with the other departments focused more on their masters students and policy. Economics moving over with us would make the most sense, as i) the Bush School already employs a number of economists (in fact, almost as many as they employ political scientists), and ii) we already have a good working relationship with them within Liberal Arts. Without them moving as well, the political science department will always be at a disadvantage to the pre-existing majority in the Bush School. Finally, I am uncomfortable with how much the consultants do not understand the differences between a policy school and political science. Most of this has already been alluded to above, but public policy and political science are completely different fields. There are overlaps to be sure, but just as there are overlaps between poli sci and econ, poli sci and philosophy, poli sci and stats, etc. Our research focuses are different, and even if we had MA students, or they had undergrads/PhDs, their focuses would be different. To say that there is no room to invest in both without addressing this overlap is fundamentally misguided. Moreover, we are a higher ranked department than economics, and the Bush School is full of economists as well as people with Political Science PhDs, but calling us out as having to be merged without them seems pointed at us for political reasons. It creates fear that staying at A&M will mean that political science will always be treated as 2nd to the Bush School.

---

Much of this area of the report reads like it is trying to find justification and support for forgone conclusions. The part about the Biology Department underperforming is a joke. By any objective criterion, whether educational or research, Biology is one of the top life science departments on campus. It makes no sense to claim that the combined colleges of Science and Liberal Arts would be strengthened by combining enrollments when the enrollment of Biology is simultaneously proposed to be moved to COALS. Logical inconsistencies such as this plague the entire report. Simply reporting that some other college does things differently is not a justification for anything, especially in light of the fact that whether these different arrangements work out well for them. To use Cornell, a weird mix of private and public institutions, as a role model for a land-grant school seems off the mark.

---

My hope is before any realignments or introductions of new programs are considered is that any implementation team conducts a thorough review of curricular offerings. We have been told many times that we cannot have overlap with other colleges and departments, which on the surface makes sense. However, this often results in duplications. Realignment offers a unique opportunity to revisit curriculum, potentially clean/clear duplications, and open opportunities for cross-discipline electives that will result in well-rounded students/graduates as well as foster faculty/staff collaboration.

---

From my read of the report, TAMU is moving to "super colleges". If that is the case, why would TAMU keep very small colleges, such as Education & Architecture, as stand alone entities? College of Education & Human Development (CEHD) is currently the 4th largest College at TAMU because they have the Department of Health & Kinesiology (HLKN). HLKN is the largest academic unit at TAMU, representing ~60% of CEHD. Should HLKN be removed from CEHD then CEHD would become the smallest or one of the smallest colleges on campus. If TAMU is going to large super colleges, then everyone needs to be rolled into one of the 4 pillars suggested by the report. Recommendation #9D: Consolidate HLKN into SPH HLKN needs to be moved out of CEHD. There is near universal agreement across HLKN that we should NOT be in CEHD. The last two academic program reviews (2009; 2015) for HLKN have both recommended HLKN become its own standalone school. While the report suggested placing HLKN in the School of Public Health (SPH), I don't believe this is the most thoughtful approach given the context of HLKN and SPH. WHY SPH IS NOT THE BEST PLACE FOR HLKN: (1) At the undergraduate level, there is little to no overlap between SPH and HLKN. SPH has a school-wide undergraduate degree - they do not have an undergraduate health promotion degree. Overlap is more perception than reality. When you get into the weeds you see that Health Education and Public Health are two separate fields each with their own certifications and job assessments. (2) While there are about 5-6 accredited SPH across the US that do contain a department of Kinesiology, this is a rare set up as there are roughly 70 accredited SPH in the US. Thus, only about 8% of accredited SPH in the US have a department of Kinesiology in the school. Moreover, NO (0%) accredited SPH have a unit such as the Physical Education Activity Program (PEAP) that is currently housed in HLKN. PEAP is intricately tied to the Kinesiology Division of HLKN, teaching all of their 198, 199, and 223 courses. If accreditation is a driving force for moving HLKN to SPH, then how would accreditors view this huge addition to SPH and how would they treat this addition? (3) Currently, HLKN is the largest department at TAMU. HLKN is far larger than SPH. I don't understand how a smaller unit would be absorbing HLKN. In HLKN, we have distinct, yet conceptually and programmatically tied units that are

quite different than the prescribed units in SPH. Consequently, I recommend making HLKN its own school within the TAMU Health brand/structure that is being created. The academic college most like HLKN across the country is the College of Health & Human Performance at the University of Florida. Though not a large college, they are extremely efficient and productive. HLKN is currently structured just like UF's HHP. Moreover, HLKN already has the administrative and financial structure of a stand alone School. HLKN has a Department Head who essentially functions as a Dean, and Division Chairs who essentially function as Department Heads. Thus, this action would not create additional administrative glut. It would align HLKN with similar philosophical and curricular programs in TAMU Health. Further, this action would not cause disruption and possible accreditation issues that putting HLKN – a department with over twice as many faculty and four times as many students as SPH – would cause by inserting them into the SPH. Lastly, making HLKN a School in TAMU Health would not only strengthen TAMU Health, but would align clinical research facilities and entities in HLKN (e.g., Human Clinical Research Facility, Huffines Institute of Sports Medicine and Human Performance, and Thornton-McFerrin Coaching Academy) with partners in TAMU Health. In summary, make HLKN an independent School under the umbrella of TAMU Health. This move would strengthen TAMU Health, would cost little, would maintain the strength of HLKN, and prevent disruption in SPH.

---

First thought: We are TEXAS A&M UNIVERSITY! Why do we need to be like other universities? However, if you do decide to consolidate colleges I have a few questions/comments. 1. Where does Mays Business School fall under? 2. Where does the College of Education fall under? 3. Where does the School of Law fall under? 4. Health and Kinesiology was mentioned however it comprises of more than just Health and Kinesiology. It includes Health, Kinesiology (including Dance,) Sport Management, Physical Education Activity Program (PEAP,) Thornton-McFerrin Coaching Academy, and Challenge Works. Wherever Health and Kinesiology goes they (ALL of the ABOVE) should stay together. 5. As mentioned in the Academic and Strategic Collaborations section I do not think we need a School of Visual and Performing Arts. There are other schools in the state that have a school with those programs. 6. Again, there are other school in the state that have a school with a Department of Journalism. 7. A&M Health???? This one is going to be interesting.

---

I think combining into a College of Arts and Sciences will give the involved colleges a greater voice than if they do not combine. It will require P&T committee members to better understand the demands of faculty in other areas of expertise. I love the idea of a Visual and Performing Arts school - encouraging people to attend their performances may improve the culture and increase student longevity. The Bush School needs to be more visible, it makes sense to merge with PolySci. I support the general biology idea. TAMHealth faculty could add to the teaching of the undergraduates assuming it is acknowledged and compensated.

---

I am concerned about the evidence base substantiating the recommendations made.

---

Support Recommendation 1. Given that Texas A&M is so strong in agriculture and engineering, having a very large college with a strong, focused identity in arts and sciences will give that part of the university an appropriate profile. Having a College of Geosciences has always seemed unusual and inefficient to me. Support Recommendation 2. This is the right place for a variety of programs that have not been well organized in the past. Along with the proposed new performance venue, these changes will focus this part of the university and set it on an excellent course. No opinion on Recommendation 3. Support Recommendation 4. The Bush School is a strength of our university, and this elevation and merger will help its growth and prominence. Support Recommendation 5. Combining these two related programs makes sense. Support Recommendation 6. This will support the new college. No opinion on Recommendation 7. No opinion on Recommendation 8. Strongly support Recommendation 9a. The College of Arts and Sciences is the appropriate place for this program. No opinion on Recommendation 9b. Support Recommendation 9c. A small, highly-focused college is appropriate for architecture. No opinion on Recommendation 9d.

---

Regarding, "Finding #6 - Skills in acquiring, evaluating, and using information are necessary within the undergraduate education framework and position students for academic and professional success as well as participating in society as informed citizens. TAMU's faculty-librarians are well-suited to teach students these skills, as the librarians already teach students these skills through library consultations." Yes, I 100 percent agree with this statement. All types of literacy skills, digital, media, civic, and information, are necessary at all junctures of an education pre and post undergraduate studies, and librarians should be utilized to teach students and all partners on campus. Please note that we want to work together to do this and much more. Librarians also play a critical role in assisting and partnering with faculty on their research, specifically in the publication and scholarly communications process. The Libraries should remain independent from being absorbed into a college on campus so that we can fully support all disciplines on campus. Please take the time to understand all that librarians do to educate and partner in teaching and research. A good example is how we

helped the campus transition from in person classes to online classes in a short turnaround pandemic.

---

Recommendation #9a – Reassign the University Studies Degree program exclusively to the College of Arts and Sciences. Though University Studies seems like a broad and general degree, it is actually a specific degree within each college. The degree's core is the area of concentration within that college. It is a false statement that students enrolling in University Studies "do not have the qualifications or interest to enroll in a College degree program" (p. 36). Students enroll in the University Studies – Leadership (USAL) degree in the College of Agriculture and Life Sciences (COALS) because they receive a robust education in leadership that allows them to be competitive when seeking management and leadership positions upon graduation. The ability to focus their leadership degree with two minors that support the context in which they hope to work is also attractive to our students. They come to USAL with excellent qualifications and maintain strong GPAs while enrolled. They are enormously successful in the workplace upon graduation, entering fields that include sales and marketing, management, and the military. USAL graduates work in both agricultural and non-agricultural contexts. The core curriculum plays little role in the University Studies degree, negating the reasoning for reassigning it to the College of Arts and Sciences. The focus of this degree is the area of concentration (students refer to this as their major) and the two complimentary minors. Keeping the USAL major in the College of Ag and Life Sciences, specifically the Department of Agricultural Leadership, Education, and Communication is best for the students and for Texas A&M University. The USAL major, and the instruction and experiences students gain from being in the ALEC department, produce Aggies who embody the RELLIS core values. Respect: Courses offered in ALEC and ALED, as well as high-impact learning experiences and interaction with college leaders, show students that life is a large learning organization. Sometimes you lead, and other times, you follow but all of us must work toward the idea of the common good. USAL students learn how to respectfully engage with their peers, professors, college faculty and staff when opinions differ. Excellence: Students should stay in COALS and ALEC to learn leadership because we ARE the leaders in agriculture. A recent study (Andenaro, 2021) found the ALEC department has the number five leadership program in the nation and is ranked number one in colleges of agriculture and life sciences. As the department who was the first at TAMU to offer leadership theory courses, and have, subsequently, produced thousands of Aggies who credit ALED and USAL as their foundation for excellence in leading organizations, the content experts in leadership are housed in ALEC. Leadership: History has shown that pockets of leadership programs pop up at many levels of TAMU, but the ALEC department is the only one that lasts. Our decades-long history with educating and giving leadership high-impact experiences for our students speaks volumes. ALEC faculty are recognized as experts in the fields of leadership theory, leadership personality and traits, followership, critical thinking, and ethics. These essential leadership skills, found in COALS, give students an advantage once they graduate. Students learn to lead, follow, and work in teams as their curricular and co-curricular activities work together. Loyalty: Some USAL students come into the program wondering why the leadership program is located within the college of ag. After their first course where this is explained, they remain loyal to the program and the college and defend its placement. USAL students learn they are part of something bigger than themselves and work hard to be an ambassador for the program. When a former leadership faculty member passed away this summer, former USAL and ALED students came out in force to celebrate the legacy of Dr. Joe Townsend. They attended his funerals and donated (quite willingly) to the Dr. Joe Leadership Fellows Program to continue the legacy of building strong leaders. Integrity: USAL students learn that the Aggie Code of Honor is not just a statement, it is an ethical way of leading. ALEC and COALS provides opportunities for these students to learn the importance of integrity through their ethics course and activities. Industry leaders are guest speakers in courses and share their experiences with integrity, the battles of integrity, and what happens when an organization loses that credibility. These experiences are unique to the ALEC and COALS student experience. Selfless Service: As a student leader, USAL students learn the important lesson that selfless service is not thinking less of yourself, but thinking about yourself, less. This occurs in our personal leadership development course where personal values are discussed and analyzed and implemented throughout the leadership curriculum. In our ethics course, values-based leadership and altruism are discussed and put into practice.

---

I am a professor in the Department of Political Science, and so my comments are directed toward the issue of Academic Realignment. I would like to thank the MGT team, President Banks, and others for the opportunity to provide feedback, and for undertaking such a challenging venture. My comments will address the proposed merger of Political Science with the Bush School. I have, for years, recognized both the mission and the wealth of talent within the Bush School. Having written many, many letters of recommendation for students to enter its various programs, I believe the MGT team under-estimated the extent to which students are aware of the school and its mission. While I agree that the

school and the political science department share some commonalities, I do not believe that there is the degree of overlap that the MGT team noted. There certainly is some; personally I have had working relationships with at least two Bush School scholars. But each of our focus is quite different; policy training is distinct from hands-on empirical research, and the political science department is very much an R1 department, well known and respected in the broader discipline of political science. I believe that at a bare minimum, if merged with the Bush School, that we do so as an autonomous department within that school, in order to best facilitate our recruitment of graduate students (and faculty), and the placement of matriculating PhDs. Do I have specific concerns? In no particular order, I would list them as follows: 1. What will this do to the political science major and curriculum? Would we become a department of "minors" like Georgia Tech (an inappropriate model to follow). 2. How would this merger affect hiring, annual reviews, tenure, post-tenure, etc.? I think I speak for many of my colleagues when I say there is excitement at the possible opportunities this presents, and great concern about the future solidity and reputation of an esteemed department in the larger field of political science. Thank you for the opportunity to provide feedback. [REDACTED]

Re: Recommendation #2: Establish a School of Visual and Performing Arts...As noted below, the Department of HLKN is a strong and appropriate home for Dance Sciences. While there is certainly collaborations between our Dance Instructors and other performing arts, our program is scientifically based (thus, the name Dance Sciences). Most importantly, students in Dance Science often come into this program b/c it is affiliated with Kinesiology and offers opportunities for post-graduate study in PT, OT, etc. The majority of Dance Science majors will not become professional dancers, but will further their careers in movement-related sciences. Alignment with other arts programs will not allow this type of career movement. ++++++ Recommendation #9D: Consolidate HLKN into SPH Executive Summary of my responses: Context: I have been a faculty member for 32 years in Depts of Health/Kinesiology in three different Universities in four different Colleges with seven different Deans, [REDACTED] been a member of a Dean's Search Committee for CEHD in 2014-2015, have been a member of Kinesiology program external review teams (including for one of the examples that MGT Consulting used), and have previously written feasibility/implementation documents for programs in Athletic Training, Physical Therapy, and a Department of Public Health (that became a School of Public Health). In short, YES, HLKN needs to be moved out of CEHD for a wide variety of reasons. Externally conducted program reviews of HLKN said this exact thing in both 2009 and 2015 (these reports are readily available). Additionally, in 2016, only about 25% of HLKN-like programs were housed in Colleges of Education (according to the American Kinesiology Association). The problem is where to put HLKN, especially given its wide-ranging curricular/philosophical base. The School of Public Health (SPH) was suggested as a location for HLKN by the MGT Report. However, SPH is not necessarily the best place (see extensive rationale/justification for this statement below). In particular, despite what the consultants said, there are very few overlaps between HLKN and SPH, with only  $\approx 150$  students out of  $\approx 4000$  in HLKN affected. Additionally, 8 out of 15 of the examples of HLKN being housed in SPH provided by MGT are incorrect and misleading (e.g., the University of Utah's Kinesiology programs are in the College of Health, BUT there is no Public Health in that College; see below for the correct list). While there are some parts of HLKN that are contained in SPH around the country, many units like HLKN are in their own School/College structure (e.g., University of Michigan). Our external program reports in 2009 and 2015 noted this fact and recommended that HLKN be made a School (or a College). Given that HLKN is currently structured - both administratively and financially - as a School, this action would not increase costs and inefficiencies at TAMU, and would align HLKN with similar philosophical and curricular programs in TAMU Health. Further, this action would not cause disruption and possible accreditation issues that putting HLKN - a department with over twice as many faculty and four times as many students as SPH - would cause by inserting them into the SPH. Lastly, making HLKN a School in TAMU Health would not only strengthen TAMU Health, but would align clinical research facilities and entities in HLKN (e.g., Human Clinical Research Facility, Huffines Institute of Sports Medicine and Human Performance, and Thornton-McFerrin Coaching Academy) with partners in TAMU Health. Thus, I would recommend that HLKN be moved under the TAMU Health umbrella and established as an independent School with title to be determined later. Faculty within the HLKN Health Division that want to move to SPH should be allowed to relocate, given that SPH has previously hired several HLKN Health Education Division faculty, while HLKN Health Education faculty who want to stay in HLKN should be allowed that privilege. In summary, moving HLKN as a School under the umbrella of TAMU Health, would strengthen TAMU Health, would cost little, and would maintain the strength of HLKN as well as preventing disruption in SPH. The following text provides rationale and justification for this recommendation which is based on much more solid literature and current practices than the recommendation from MGT (who are not experts in HLKN). ++++++

Rationale/justification for above statements/recommendation: Question 1 - "Should HLKN be moved out of CEHD?" The answer to this question is absolutely 'Yes'. When CEHD was formed  $\approx$  61 years ago, it made sense for HLKN to be added since much of HLKN academic offerings at that time focused on pedagogy (the precursor for HLKN was founded about 20 years earlier than CEHD). Today, very few of HLKN's academic offerings focus on pedagogy (less than 5%). In support of this conclusion – that HLKN should be moved out of CEHD – are the two externally-led program reviews of HLKN in 2009 and 2015. Both reviews' number 1 recommendation was that HLKN be moved out of CEHD, either into a stand-alone college or into a school within a different college. I would point the reviewer to those reports for both extensive justification and rationale for this recommendation, but in particular, note that few collaborative research projects exist between HLKN and the rest of CEHD indicating very little scholarly overlap, and that few of the HLKN academic programs require/suggest coursework from other departments in CEHD. Question 2: "If HLKN should be moved, where should HLKN be moved and in what form?" This is a difficult question for three reasons: 1) HLKN's academic and research programs cover many different disciplines; 2) Nationally, there is no consensus where a unit like HLKN should be placed; and 3) HLKN is a very large academic unit comprised (as of this writing) of four academic divisions, 113 faculty members, and  $\approx$ 4000 students in its academic programs, plus almost 10,000 students/semester served through its PEAP division. In the sections below, where to move HLKN is addressed by first responding to the erroneous justification from MGT Consultants and then considering other potential locations/forms for HLKN (and in a brief manner!) The MGT Report Recommended 'consolidating HLKN into the School of Public Health' with the following rationale (paraphrased): Consultant Point 1: "There is overlap between programs in SPH and HLKN." As noted in the consultant's report, there is an appearance of overlap between some programs in SPH and some in HLKN. There are two issues which provide clarity in this situation: 1) how much overlap exists in the larger context of the student base of the departments?; and 2) why does this overlap exist? 1) How much overlap exists? In reality, very little. It should be recognized that the program that overlaps – primarily Community Health – is a small program in the Division of Health Education in HLKN, comprised of about 150 students (out of a total of 4000 students in the entire HLKN Department). There was some overlap in the undergraduate programs (four courses), but the recent effort to eliminate overlap was largely successful, unlike how the consultant's report described it. Efforts by a HLKN/SPH committee removed the undergraduate overlap and as such, there is virtually no overlap between the SPH's School-wide Bachelor's degree and the Division-wide Bachelor's degree in HLKN. There is overlap in the Community Health programs. This overlap largely exists because SPH hired HLKN faculty to duplicate the HLKN programs. Whereas the Community Health program has existed in HLKN for decades (the department is  $\approx$  82 years old), the overlapping programs in SPH were formed relatively recently when the Health Science Center (HSC) was a separate entity and overlap was not a concern. Further, there are numerous example (Univ of Texas-Austin, and Univ of Florida being two) where significant health programs are in other Colleges with Schools of Public Health in other locations in the University. A point that needs to be emphasized is that just because a program has Health in its title, does not make it a Public Health program. Thus, in summary, there is little overlap in the educational programs between SPH and HLKN, and where overlap exists, it is relatively small and is due to duplicative actions initiated by SPH in recent years. As such, given the size of HLKN, this rationale does not justify moving the whole of HLKN into SPH. Perhaps a small number of faculty and students should move into SPH to remove the Community Health overlap, but not all Health Programs. Alternatively, it would be easier for SPH accreditation-maintenance purposes for HLKN to absorb SPH than vice-versa. Consultant Point 2: "HLKN can charge more money for its offerings if moved into SPH." This argument deals with CIP codes and, certainly superficially, it appears that moving HLKN into SPH would allow for differing CIP codes which would result in the University netting more money for course offerings. However, there are two caveats to this rationale that would negate the consultants' conclusion that moving into SPH would result in more financial resources for HLKN: Caveat 1) In the current financial budgeting model of the University (historical model), HLKN would not receive any increase in funding due to a change in CIP code. IF the University adopted the long-rumored activity budgeting model, HLKN would receive more money from CIP code changes. However, adoption of an activity-based budgeting model has been rumored for at least five years, with no change happening. Thus, at present, it can be assumed that HLKN would not receive more financial support from a CIP code change. Caveat 2) From reading state funding documents, it appears that to qualify for the CIP codes that provide "71% more funding" would require that a large number of HLKN faculty have degrees in Public Health. As it currently stands, of the 113 faculty in HLKN, there are very few (less than 10) that have any degrees in Public Health – in fact there is only one (1) faculty member in any other HLKN Division (other than Health) that has a degree in Public Health. Thus, it does not appear that the large majority of HLKN courses would qualify for different CIP codes to increase funding. (Frankly, given the progressive nature of our past leadership, if changing CIP codes would have increased funding, we

would have done it already.) Consultant Point 3: “This arrangement is done in other Universities (list of 15 pg. 129-130)” The consultants argue that putting HLKN with SPH is common in other Universities and provide 15 Universities they note as Peer Institutions. Several incorrect assumptions are made in the MGT listing, including misclassification of some of the Institutions as our peers, and mis-categorization of several of the programs. Most importantly, the Consultants fail to realize that just because a College/School has “Health” in the title, does not make it a School of Public Health. In fact, of the 15 examples provided, eight of them (53%) do not include Public Health (Oregon State, University of Illinois, University of Utah, Central Oklahoma, Iowa State University, Miami University, University of Nebraska at Omaha, and University of North Dakota were all incorrectly classified). However, the majority of the Universities listed as peer institutions by MGT are, in fact, NOT PEERS (University of North Dakota? Really?). To provide a better sense of where HLKN units are located in our true peer institutions, the location of the Kinesiology/Health Departments in the 64 AAU Universities was pulled from their websites for comparisons. While the full dataset is available if needed, a quick summary shows that departments with some aspect of HLKN are put in many places within the University. Location of Dept (either College or School) Number % of total No Kinesiology program 26 40 Public Health (specifically) 4 6 Education 8 12 Arts and Sciences 8 12 Health 6 9 Kinesiology 5 8 Medicine/Applied Health 5 8 Undetermined 3 5

Additionally, that the same diversity of location exists for Sport Management programs. In a smaller data set of peer institutions (all AAU Universities), Sport Management is located in Education (4), Management (2), Health/Human Performance (2), Arts and Science (1), and School of Kinesiology (1). The diversity of college locations reflects on the diversity of academic study areas within HLKN. More importantly, it can be seen that inserting HLKN into a School/College of Public Health is not the norm for HLKN locations. In summary, there is no justification for inserting HLKN into the SPH. Question 3: So, where should HLKN be moved? There are a variety of places in the University where HLKN could be moved to, where the students could progress with their degree plans and the faculty could continue to be successful. But there are at least two considerations that should be involved in the decision: 1) Where will HLKN have a chance for College/School leadership?; and 2) Where will HLKN be welcomed without major restructuring of the organization’s academic framework? Point 1: Where will HLKN have a chance for College/School leadership? In the last 12 years, HLKN has consistently been denied a seat at the table when it comes to leadership of CEHD. I personally witnessed during the last Dean search (over a 2-year time-period), three qualified candidates (out of five that interviewed) that had HLKN backgrounds and were the number 1- and 2-ranked candidates in the search (remember, the search was conducted twice). These top candidates were skipped over in favor of hiring an Education candidate. Further, when a call recently went out for input on the Interim Dean position in CEHD, in spite of multiple nominations, a Senior HLKN leader – that actually had more leadership experience than any other on the Dean’s staff - was not even given the courtesy of a call or consideration. As such, in the past 12 years, of the seven or eight senior leadership positions in the College (Dean, Assoc. Deans and Dept. Heads), HLKN has held at most only 2 of those spots and more recently – the last three years – had only 1 spot. HLKN makes up over 50% of the faculty of CEHD and almost 60% of the CEHD students, yet, has had only 14-25% of the leadership representation. Thus, it is critical that wherever it is moved, that HLKN has an opportunity for representative leadership in the school/college. Given that the SPH is tied tightly into accreditation standards, these accreditation standards would eliminate HLKN faculty/professionals from holding the Dean’s position in SPH. If HLKN is moved into SPH, we’d find ourselves in the same situation we are in in the CEHD in regards to a lack of leadership opportunities and a lack of representation at the highest level of the School, in spite of being the major entity in the organization. Point 2: Where will HLKN be welcomed without major restructuring? As noted above, HLKN is a large department and has approximately twice the number of faculty in SPH (113 HLKN vs. 60 in SPH) and approximately four times the number of students as SPH (3,975 HLKN vs. 1,180 SPH). Putting HLKN into SPH will be akin to a snake trying to eat a cow. Adding HLKN to a tightly regulated School – with accreditation standards to satisfy – will be difficult to say the least. Additionally, and maybe most importantly, there will be significant costs associated with moving HLKN into the SPH structure. As two examples, contract lengths for faculty in HLKN and SPH are markedly different with all HLKN faculty having 9-month contracts, whereas SPH faculty have longer term contracts (either 10- or 11-months). Additionally, the average salary of SPH faculty is markedly higher than that in HLKN, and this disparity will represent a financial challenge for SPH. Moving HLKN into a larger college, such as Arts and Sciences or Agriculture Life Sciences would be less of a shock to the College System than a move into SPH. While potentially appropriate, and supported by organizational structure at other AAU Universities, unfortunately moving HLKN to Arts and Science or Ag Life Sciences also takes it away from Health-related programs at TAMU, and the tie of the HLKN Clinical Resources to TAMU Health. Lastly, it might be suggested that HLKN be dismembered and its component parts be shipped to different locations. This action would have many ramifications for students, faculty, and history of TAMU.

As noted earlier, HLKN in one form or another, has been on campus for  $\approx 82$  years. During that time, HLKN has developed academic programs related to the health and well-being of our students in numerous ways. Additionally, and most importantly for this report, the Divisions and programs in HLKN are intertwined both academically and financially. Untangling these academic and financial interdependencies will be difficult to say the least. Therefore, in summary, moving HLKN as a whole department into a present School/College can be done, but would be difficult and potentially very costly, leading to my recommendation. Recommendation: Establish a School of HLKN under TAMU Health: One of the suggestions from our program reviews in 2009 and 2015 was to establish HLKN as a School/College. Again, in comparison to our AAU peer institutions, this is not unusual. For example, University of Michigan has a School of Kinesiology, as does the University of Minnesota. The University of Florida, Penn State, University of Utah, and Purdue have Colleges of Health and (something else) where Health and Kinesiology are prominent (without Public Health being involved). In short, setting up HLKN as a School/College would not be an unusual organizational arrangement. Efficiency and cost have been the rationale in the past to not set HLKN up as a College. However, setting HLKN up as a School under the TAMU Health umbrella, would involve little to no additional cost. HLKN is already set up in a School structure, with four divisions and appropriate administrative positions, with robust student bodies and academic programs. Further, moving HLKN under the TAMU Health umbrella as a School would satisfy current academic accreditation requirements we have in our MS in Athletic Training, as well as accreditation requirements on the horizon in Exercise Science areas. Additionally, setting HLKN up as a School under TAMU Health would tie HLKN's Clinical Research resources such as the Human Clinical Research Facility to the health science center and would expand opportunities for other professionals in TAMU Health that they do not presently have. In summary, moving HLKN as a School under the umbrella of TAMU Health, would: a) strengthen TAMU Health; b) would cost little; c) would prevent disruption in SPH; and d) would maintain the strength of HLKN. There may be Health Education faculty that would like to transfer to SPH, but there are also a large number of Health Education faculty whose research and education programs do not fit into the SPH model. Lastly, while there would have to be agreement on an appropriate, inclusive name, the action of creating a School of HLKN in TAMU Health, also would allow SPH to continue to pursue and strengthen its destiny as a Public Health focused educational entity without the costs and distraction of trying to swallow an entity that is many times its size.

Overall, I largely agree with the main findings and observations reported in bold text on the first 5 pages of the document. My main point of disagreement is with the following statement "A coherent, strategic academic organization centralization and targeted realignment of academic units would greatly enhance operations and unit focus." Implicit in this statement is that centralization better facilitates and improves the performance of academic units. Such a statement is not necessarily true, and it follows that recommendations built on such an assumption are not necessarily going to achieve the stated goals of enhancing operations and unit focus. One of the recommendations that stems from the above statement is to merge some existing colleges into a new College of Arts and Sciences. The missions of some of the current Colleges are complementary, but not as neatly aligned as one would expect if the new college were to successfully implement a realignment of focus. The College of Geoscience currently hosts one of the largest federally funded projects in the TAMU system, the International Ocean Discovery Program. It is not clear that the TAMU system would retain IODP if such a merger were to happen. This would have a strong negative financial impact on the University as a whole, and would greatly reduce our standing as a leader in Earth Science. The College of Geoscience has a Vision that includes specific focus on "energy resources, weather and climate variability, natural hazards, geospatial science, and observations of the Earth's systems". These issues are of critical National, Global, and Societal importance. The College of Liberal Arts prepares students with skills in "communication, critical thinking, collaborative and creative problem solving, commitment to diversity, and cultural sensitivity." While such skills are highly valuable and complementary to the mission of the College of Geoscience, they are not tightly linked to the mission of the College of Geoscience. Realigning the foci of these units diminishes both of their potential contributions to the State of Texas, US, and World. Geoscience remains a critical aspect of our current and future success as a civilization. It is the foundation for the exploration and allocation of resources (water, energy, materials), guides our strategy to mitigate negative impacts of climate change, and informs economic and societal issues such as increasing hurricane and weather-related destruction, coastal resiliency and fisheries, and much more. TAMU is unique in the US as one of the few Universities with a College of Geoscience. UT Austin also shares such a designation, but no other University in Texas does. Eliminating the College of Geoscience would allow UT Austin to attain sole position as the State Leader in Geoscience, including all related aspects. TAMU would be unwise to allow this to happen in the midst of climate change, growing water insecurity, and the Energy Transition, as it would relinquish any possibility of becoming a leader on these topics.

The report highlights the need to improve how we train faculty and staff to become leaders, emphasizing the “lack of professional development opportunities along with clear succession planning in the operational units”. As a member of the College of Geoscience, I agree and can attest to the general lack of training currently provided to early career faculty to allow them to assume leadership positions later in their careers. I also see that many leaders within the College could benefit from additional training. Such training would allow them to help the College hone its mission, and more effectively reach our research, teaching, and outreach goals. My recommendation is that the University invest in the structures and academic units that exist, rather than reorganize the structure so that we are more similar to the structures of other institutions. Texas A&M is unique, and should not attempt to follow the lead of others in this instance. As stated in the report, one of the main reasons to pursue this reorganization is to follow other institutions. Don't follow – Lead. Please invest in the current structure. Let's leverage our existing strengths, and achieve a better connection to TAMU G by helping the College of Geoscience realign and better achieve our vision. There is so much potential in this College, if it could be better integrated with IODP and the coastal connection in Galveston. I may be an early career faculty member, but I and many of my early career colleagues have a strong vision and desire to elevate the standing of the College of Geoscience. Help us do that, and help us elevate TAMU.

---

Recommendation #1: "Combine the College of Liberal Arts, the College of Science, and the College of Geosciences to create a new College of Arts and Sciences" should NOT be instituted because it will weaken the Colleges of Liberal Arts and Geosciences. The College of Geosciences must be maintained as an independent college for several reasons: 1. Federal funding agencies (e.g. NSF, NOAA, NASA, DOE) are pushing for funding "Earth System Science" projects that integrate several of the geoscience fields to pursue research addressing some of the globe's biggest problems including climate change and water resources. TAMU is currently well positioned to obtain large "Earth System Science" grants, including Cooperative Institute funding, because these fields are already integrated within the College of Geoscience, which promotes collaboration across geoscience fields. 2. Geoscience research and training is unique compared to other STEM fields because it requires working in the field to observe and collect data on the Earth System. The College of Geoscience maintains several world renowned field going programs that are critical for recruitment and retention of students (undergrad and grad), faculty, and staff; for promoting diversity, equity, and inclusivity; and bringing in research funding. The College of Geosciences must remain independent to ensure funding for field work is maintained at the college level. 3. Maintaining a College of Geoscience demonstrates to the national and international communities that TAMU values the incredibly important work done within the college and aids in recruiting top students, faculty, and staff. 4. The NSF funded International Ocean Discovery Program (IODP) is housed within the College of Geosciences and totals more than \$350 million over five years, making IODP the largest federal research grant currently managed by Texas A&M. A critical part of negotiations with NSF for maintaining IODP at TAMU is the specific and unique infrastructure, staff, and expertise within the College of Geosciences that are required for running such a large, complicated program. Combining the College of Geosciences with other colleges will significantly weaken TAMU's ability to renew the IODP contract when the current contract ends in 2024. The academic realignment recommendations together appear to focus largely on strengthening the Colleges of Engineering and Agriculture and Life Sciences at the expense of other colleges. Together, these recommendations will take TAMU back in time and limit the scope and impact the university will have on education and research in Texas, nationally, and internationally. TAMU has made great strides in expanding its influence beyond the original foci of the university and reconsolidating back to Engineering and Ag will reduce its national and global standing.

---

I have a few comments about the proposed realignment that moves the Department of Political Science into the Bush School. I found the report vague in terms of details about the realignment, so I want to make some suggestions about what I, as a political science professor, would like to see in this situation. 1. Political science should remain an independent department within the Bush School. What I mean by this, is that there should be a Department of Political Science, with its own Ph.D. and undergraduate programs. We are a top 30 department in our field and our mission of research and graduate training is fundamentally different than the professional training that occurs within the two existing Bush School departments. I think it would be a mistake to tamper or abandon our excellent and well-ranked department by merging it into the existing Bush departments. As I understand it, the Bush Dean, the current Bush faculty, and the political science faculty are largely in agreement that maintaining political science as a separate, research-focused department with its own unique Ph.D. program is the best arrangement for all the involved faculty. 2. Including economics as its own separate department in the Bush school also makes sense. Adding political science and economics as two, separate and distinct departments in the Bush School will make the Bush School a top place to both train policymakers (existing departments in Bush) OR student political economy at a top research level (Political Science

and Economics). I think these two parallel missions are complementary and will raise the profile of all involved. 3. A new joint Ph.D. program among political science and economics or among all four proposed departments could be an interesting and fruitful collaboration, but it should not come at the expense of the existing Ph.D. programs in political science and economics. I took this job with the explicit interest in training Ph.D. students in political science, please allow me to continue this part of my job. I love doing it. Overall, I think moving political science into the Bush School is a reasonable change, but only if we maintain the Department of Political Science as a separate department. This independence within the Bush School will allow us to continue our mission of conducting cutting-edge social science research and Ph.D. training. Likewise, I trust the University will support some of its highest-ranked departments by supporting the missions of political science and economics.

---

I find it odd if not contradictory that the libraries is being placed under a particular college; in this case the proposed College of Arts and Sciences. The library is a cross disciplinary department on campus that serves every single department, faculty, and student on campus and beyond. To put the library's budget, organization, and priorities in the hands of a dean of another college reduces the impact of the library's ability to help in moving forward the university's mission and goals. The "look" of this makes it appear the libraries would only serve the departments within Arts and Science. The placement of the libraries in a department could cause issues with resource allocations; not only with staffing but with the materials budget which then could affect a college's accreditation and ability to create new programs while sustaining current ones. The moment a questionable decision to move funds that directly impacts non-College of Arts and Science departments, there will be mistrust of how those decisions were made and calls of bias on the new dean's part. To reduce the current dean's position to that of Associate Dean would negatively affect that position's ability to lead, strategically plan, and create opportunities for the library to innovate and lead. The library is a large department with hundreds of staff and faculty. It is a leader in taking risks, innovation, and research/service in its field. It takes a dean's focus to bring this all together and manage/lead this department on a day to day basis. I don't think we'll get that time nor leadership from a Dean of Arts and Sciences whose attention is spread across multiple departments. The libraries needs to remain Switzerland; tied to no single department as it serves the needs of all teaching and research needs of TAMU's faculty and students; no matter what department they reside in. No other peer institution has this type of structure.

---

The proposed academic realignments are not bad. What is troubling is that certain things are being proposed without any knowledge of the history behind past actions that explain the dearth of certain academic programs like journalism, music, and theatre. But this is where the working groups and implementation groups will be critically important. I would recommend in the strongest terms caution and deliberation as we work through things. The College of Arts and Sciences is an attractive idea. It just needs to be done correctly and this may take time: 1.5 to 3 years for full implementation. Here is my recommendation: Name in spring an acting dean of the Arts and Sciences, who would form an advisory group to help her/him to create the college over spring 2022 through summer 2023. (A shell college in essence, with the acting dean working on bylaws, tenure and promotion, annual review guidelines, administrative structures, support offices, etc.) This person would be one year only and would oversee the search for a permanent dean, who would begin in fall 2023. Keep the existing colleges as they are at the minimum through the fall 2022 semester so as to get through tenure and promotion. Begin transitioning in spring 2023. In the new Arts and Sciences College, four divisions: Arts and Humanities (with Visualization), Social Sciences (with Geography), Natural Sciences and Mathematics, Geosciences; along with University Libraries, although I would prefer it to be housed under the provost to make clear to the academic community that the libraries are a university entity. A department of Library Science could certainly be housed in the college. The shell college and acting dean may actually take a little longer, and a start-up date may be fall 2024. But much better to do it right the first time.

---

The business of running a University Libraries that serves every academic unit in a University would be impeded by also running a School of Library Science. There are no Schools of Library Science, that I am aware of, that are housed within the University Libraries (or vice versa). They are always separate units. And a Bachelor of Library Science is an ineffective degree - the science of library and information sciences is made most effective through background disciplinary knowledge that librarians bring to their career. No job calls for a Bachelor of Library Science, so the creation of such a degree would be a disservice to the students who sought it. Housing a University Libraries within any College would negatively affect its ability to serve the other Colleges. This organizational structure would necessitate de-centralizing library services to the Medical Sciences and Business, who already have a library facility serving them which is run by the University Libraries. To effectively serve those disciplines, the facilities should break away from the Arts and Sciences. Should the University Libraries, as a whole, be transferred to Arts and Sciences, those libraries would not function well.

Likewise the vital services that our many Engineering and Agri-Life colleagues receive from the currently independent University Libraries would suffer if those services were delivered through the filter of Arts and Sciences authority. They do not have library facilities that could de-centralize to serve them, so service to those disciplines would likely suffer greatly. Libraries provide research-based instruction on extra-curricular research skills, lifting up the quality of research, student success, and output of any University. Faculty librarians conduct research that increases the understanding and effectiveness of our services to the University and our profession, and we serve our University and our profession by leading in high quality high impact ways. Libraries must remain centralized discipline-independent entities that can serve the entire University. Should a Library School be desired, please take a look into the incredibly costly mistakes made recently in the failed attempt at Texas Tech to do the exact same thing MGT proposed here (that is, trying to launch a library school within the library, during a time of great organizational change).

---

1. In general, the idea that academic realignment should be directed from the top down is anathema to the long-standing principle that the faculty govern and control curriculum. While it is possible that there might be some realignments possible, this approach to mandating that realignment flies in the face of how academia differs in important and worthwhile ways from the corporate world. 2. The notion that a program like Viz will be just as successful if it is moved whole-cloth to another college with different priorities and different academic needs is untenable. And the notion that by creating a new department of journalism that trust in the news will improve is naïve. Journalism schools are struggling particular as media are rapidly changing. Jumping into this world without a clear understanding of what resources will then be taken away from successful programs here at TAMU makes no sense. 3. The Biomedical Sciences major is not a biology program, and it should be housed in a college that understands health professions, in which the CVMBS has a long history. It is NOT confusing for students who know their careers are in the health professions, as evidenced by the number of students who matriculate every year. In fact, it is a major pipeline for medical and other health professions programs in the state of Texas. Using a successful program to bolster a less successful one (Biology) is counterproductive and will without a doubt dilute the success of the BIMS program. In addition, it is an integral part of the College of Veterinary Medicine and Biomedical Sciences, such that taking it out of the college will threaten the success of one of the highest ranked Doctor of Veterinary Medicine programs in the country and a highly successful research endeavor. Many faculty in the CVMBS are integral parts of undergraduate AND graduate AND professional education and pedagogy as well as research activities. Taking away one of the pillars of the college's success looks like a move designed to make the college become less successful, and the notion that the CVMBS is only focused on graduate education and small animal care is inaccurate and underscores the lack of understanding of what the college does and how important all the parts are to the whole. 4. The recommendations about moving the libraries into a new college will not result in the successes predicted in the report for a number of reasons. As an example, librarians are embedded in the DVM curriculum, and it cannot absorb any more for-credit courses – the proposed solution of adding for-credit library courses from a new department of library science cannot be implemented in the lock-step professional curricula. I foresee that this move will lead to LESS teaching of the needed skills, and we cannot eliminate what they teach, because what the librarians from MSL teach supports DVM competencies at the program level, and these competencies are assessed by those professional program accreditors (which are completely separate from other university-level accreditations and which are required for TAMU to graduate veterinarians who can be licensed anywhere). I also foresee that moving the libraries to a new college and taking away their administrative power will lead to a lack of understanding of the needs, and will result in the Dean of the College of Arts and Sciences making decisions about what resources our faculty will have available with no understanding of what our needs are. Instead, I believe that any changes to the libraries should be studied and analyzed much more deeply before any decisions are made, since the consequences are likely to be much farther-reaching than can be predicted. In addition, there is no need for another library school for the state of Texas, which means that any such school is likely to fail and then be shuttered, leaving the libraries high and dry and NOT available to support our faculty and students.

---

It makes very good sense to move Visualization out of Architecture. Their original mandate was to visualize buildings and landscapes in collaboration with architecture and landscape architecture. However, they have moved (very successfully) in a different direction and no longer fit in Architecture. It also makes good sense to move Construction Science into Engineering. The Landscape Architecture programs are consistently in the top 10 in the country, and it would be good to raise the status of the architecture programs as well.

---

Why so little discussion of either Engineering or Agriculture? Why not break them up into more manageable sizes that focus on "core missions"? Why no discussion of the continued harm to the University to have the agencies tied to particular colleges? Why no discussion of the waste of resources on the acquisition of a relatively unrecognized Law

School or the renovation of the football stadium? This was not a deep look into creative ways to realign the units of the University in a manner that would allow TAMU to lead the Nation; rather it was a disingenuous review, the result of which will be to continue to centralize TAMU in a manner that would allow it to more easily controlled by the BOR and the Chancellor. To ensure that we will continue to follow on every front. Bigger is not better. Better is better. The suggestions regarding the College of Architecture are a case in point. The college is poised, after much discussion, to change its name to more accurately reflect what it has been for at least two decades (e.g., College of Built Environments, College of Constructed Environments, etc.). Its value is in its unique amalgam of disciplines. To recommend the removal of Construction Science to Engineering and Visualization to the College of Arts and Sciences reflects a remarkably shallow understanding of either the College in particular or the profession of Architecture generally. Its core mission is the creation and study of habitable human environments, built, virtual and natural. Finally, to suggest that the University has invested significantly in the College over the years yet has seen no increase in its rankings is ridiculous. There was a modest investment in late 80's that created the Viz Lab and a less than modest investment in late 90's. Everything since then has been dribs and drabs. And the System/University has continually postponed the hiring the new Dean for about 5 years, effectively hobbling further innovation.

---

- With the to-be-created Institute of Biological Life Sciences being housed within AgriLife, how will the strong ties between the College of Veterinary Medicine and the TAMU Health Sciences function? For example, many Biomedical Sciences (BIMS) students are attracted to the pre-medical aspect of the BIMS degree program and would not consider themselves AgriLife/agriculture-oriented students. [MGT Report: Recommendation #5, pgs. 30-31]
- how do you envision the proposed placement of the Biomedical Sciences Undergraduate Program and the Department of Biology being more successful through the to-be-created Institute of Biological Life Sciences, and then primarily housing that Institute within AgriLife than within Texas A&M Health? [MGT Report: Academic Realignment Recommendation #5, pgs. 30-31]
- Where will faculty who teach in the Undergraduate program be adloc'd, paid, and officed? [MGT Report: Academic Realignment Recommendation #5, pgs. 30-31]
- How will we assign faculty who teach in the Undergraduate BIMS programs in addition to the DVM professional program? Where will they be adloc'd, paid, and officed? Will there be joint appointments? [MGT Report: Academic Realignment Recommendation #8 & 9b, pgs. 30-31]
- Will the salaries for faculty or portions of faculty who are no longer teaching in the CVMBS, salaries of Undergraduate BIMS advisors and administrators, and undergraduate student fees/differential tuition relocate with the Undergraduate BIMS programs? [MGT Report: Faculty Affairs Recommendation #1, pgs. 17-18; Academic Realignment Recommendation #5, pgs. 30-31]
- Where will Undergraduate BIMS advisors and administrators be officed? [MGT Report: Provost Office Recommendation #2, pgs. 14-15; Academic Realignment Recommendation #5, pgs. 30-31]
- How will VBEC classrooms be scheduled? As they are now? [MGT Facilities Recommendation #1, pg. 50]
- If all of the CVMBS research runs through AgriLife Research, will the TAMU VPR continue to provide support for CVMBS faculty? Or will all support outside of the CVMBS come from AgriLife Research? [MGT Report: Finance and Business Administration Recommendations #4 & 5, pgs. 63-64]
- Will we need to drop the "& Biomedical Sciences" from the name of the college? [MGT Academic Realignment Recommendation #9b, pgs. 36-37]
- Our college already has an IT direct reporting line to University IT (Kris Guye as Executive Director of CVMBS Information Technology & Assistant Chief Information Officer) so how will that position and the college IT unit function moving forward and where will they be housed? [MGT Information Technology Recommendations #1-2, pgs. 72-74]
- Where will the college facilities team be re-located with the restructure of University Facilities Management? [MGT Facilities Recommendation #1, pgs. 50-51]
- Is there a timeline for implementing changes proposed in the management report?
- - We have a diverse research portfolio in the CVMBS (supported by foundations, NIH, USDA, NSF, DoD, NIEHS more NIH T32s than other colleges, etc.), so there is concern with routing all proposals through AgriLife as some research is pretty far from the AgriLife core mission. Will this polarization of indirects impact our relationship with the Division of Research, whose support we require for comparative medicine, research development, core support, research administration, startups, and so much more?

---

One of the recommendations here is to combine the College of Liberal Arts, the College of Science, and the College of Geosciences to create a new College of Arts and Sciences. Combined with the recommendation of moving Biological Sciences primarily to AgriLife, this will constitute a major change with far-reaching impacts. Such a major decision should involve discussions with all relevant stakeholders, and should not be based on the recommendation of an external firm with limited knowledge about the traditions of Texas A&M and the inter-connectedness of the different programs. No clear rationale for merging the three colleges is provided in the report other than a vague promise of cost-cutting. A proper cost-benefit analysis for recommending such a major change is entirely missing. It is mentioned that some of the peer institutes use this combined model, but it is not made clear if they always had that model or if such a merger took

place in the recent past. This is an important question in my opinion: are there recent precedences of such a major overhaul among the peer institutes or beyond? A large number of the service courses offered by the department of statistics primarily involve students from Bio Sciences. Moving Bio Sciences to a different college would significantly affect differential tuitions, and has the potential for a huge adverse effect. There is no related discussion to be found in the report. While I am not a biologist, it seems really strange to find a separate home for Bio Sciences than the college of science.

The ideas of finding a new home for construction science and visualization are intriguing. Though there is great potential in these particular programs being housed in engineering, perhaps if they had started in engineering originally, the report might have suggested building stronger collaborations with architecture. The synergies for these programs between colleges is a strength. However multiple logistics need to be considered in the realigning of resources, faculty, facilities, class offerings, course assessment means and methods, collection of student work, ensuring employment opportunities, etc. If there is unilateral support from architecture to suggest these programs have the greatest potential for growth and strength by moving to engineering, maintaining multidisciplinary collaborations, and ensuring credit is given to those who were instrumental in establishing these programs will be an important step towards successful implementation. On another note, the Construction Science industry has been a vocal, and financially supportive network. Their loyalty has been tested over time and can be most directly witnessed in at the COSI job fair, one of the largest, most impressive collection of multinational companies eager to hire Aggies. Thought and deliberation will need to be given to ensure these important lifelines are maintained and cultivated. Construction courses are taken by multiple programs and thus, regardless of where the program is housed, thought will need to be given to how the program and its faculty can help to support the ongoing accreditation assessment requirements for subsets of students required to meet Student Outcomes specific to ABET and to other accrediting bodies.

I am a faculty in the College of Science. I do not want to see Liberal Arts and Science merged into one college. There is nothing in the MGT report that justifies this organizational change. "Other universities are doing it" and "the resulting college will be big" are not valid reasons. Yes, TAMU is distinctive in not having a College of Arts and Sciences, but distinctive in a good way. When I decided to come here, a College of Science operating as its own entity was definitely a positive factor. The organization is effective as it is: our deans are close enough of our disciplines to be understanding of the research endeavors of almost every faculty --- as a result, they are in a position to make informed strategic decisions. I also believe that this organizational change will weaken Science at TAMU. Thus, I do not see the advantage of a College of Arts and Sciences to attract students: in all likelihood, students interested in liberal arts will prefer UT Austin, and, if TAMU Science is weakened, students interested in sciences will also prefer UT Austin (who incidentally have a separate College of Natural Sciences).

This study has been long overdue. It is too ambitious and is being rushed. It lacks a sensitivity to the students and faculty and staff. It is much too grandiose and will further centralize too much power in one place. It is out of touch with the students and faculty.

There are many elements in the MGT Plan that are constructive and others perhaps not, but I will focus only on Recommendation #1 of Academic Realignment: merging the Colleges of Geosciences, Liberal Arts, and Science. I fail to see the logic in combining Geoscience, Liberal Arts, and Science. The motivation - balance the numbers - is weak and does nothing to improve the stature of the programs. The plan basically distills the sum of human knowledge down to health sciences, agriculture, engineering, and everything else. Except for the addition of Health Sciences, the optics are that Texas A&M is going back to 1876, when the school was A and M and service courses. If this is plain to me, it will also be clear to potential students and faculty recruits. While folding Geoscience into Science and Liberal Arts has administrative advantages, the disadvantages outweigh the advantages. Below I discuss my concerns regarding the proposed merger. Development. Putting the College of Geosciences into a College of Arts and Sciences dilutes and diffuses pursuit of donations from geoscientists in the oil industry. People like the late Dudley Hughes have deep ties to Department of Geology and Geophysics and the College of Geosciences. A dean who is an Earth scientist has a cultural advantage in soliciting funds compared with a Dean who is a sociologist. While an associate dean or department head could interface with donors, they do not have the same clout. We have been told that the biggest donors have been approached for buy-in, but I would not be surprised if most of the donors to the College of Geoscience are against combining the three colleges. Collaboration. There is a much collaboration within the College of Geosciences. We have several interdepartmental facilities including the Stable isotope Geosciences Facility, the Williams Radiogenic Isotope Geosciences Facility, and the Center for Atmospheric Chemistry and the Environment. Furthermore, the college creates opportunities for interaction - committees, meetings, and College-sponsored programs (e.g., Environmental Programs) -

that often lead to research proposals. For example, I have written several successful proposals with faculty members in Oceanography (I am in Geology and Geophysics) that has brought over a million dollars to TAMU. IODP. The Dean of the College of Geosciences is the administrative head of IODP. With the formation of the College of Arts and Sciences, who will be the administrative head of IODP? NSF and especially the scientific community would not accept anyone but an Earth scientist in that role. This action might provide an opening for our competitors to wrestle IODP away from TAMU. How will a merger address problems of recruitment (faculty, graduate students, undergraduate students)? The GMT Report touts the increased stature of a College of Arts and Sciences based on its size (Rationale #1). If size were prestigious, TAMU would be among the three top universities in the country, but as we all know, size is counter to prestige, giving the impression that numbers are more important than quality. To be honest, Rationale #1 is an insult to our intelligence. Perhaps it will benefit Liberal Arts, but it will just dilute the prestige of the sciences. Proposals: 1) Expand the Colleges of Liberal Arts, Sciences, and Geosciences. If balance is the goal, move some departments out of CLEN and COALS and into COLA, COSC, and CLGS. For example, Ocean Engineering could move to CLGS, and Ecology and Conservation Biology, and Biochemistry and Biophysics, could move to CLSC. 2) My second proposal, a more serious one, is to maintain the coherency of the College of Geosciences by establishing a School of Earth and Environmental Sciences. The name change is deliberate, an effort to distinguish ourselves from the Jackson School of Geosciences at UT. This action has several advantages. First, it would maintain TAMU's reputation as a destination for Earth Science research and education. In 2019, we were #1 nationally in Earth Science graduates. Unfortunately, being #1 in quantity is not the same as #1 in quality. Second, it would provide an administrative home for IODP. And third, if handled correctly, it would provide a unique naming opportunity that would provide the funds needed to truly make TAMU preeminent in the Earth sciences. A pitch could be made that this is an opportunity to "save" the College of Geosciences and provide a counterpoint to UT's Jackson School. Think big! I am not against change when justified and managed correctly, but we do not want to make changes that degrade the quality and competitiveness of the institution. I hope that will not be the case.

---

The idea of merging Political Science with the Bush School doesn't make sense. The Political Science Department is highly ranked nationally and internationally in every reputational report, including a very recent one that ranked it number 13 in the world. If the proposed merger occurs, many highly qualified faculty will move on and it will become difficult to recruit new faculty members of similar ability. So please give this proposal serious reconsideration.

---

I had no problems with the merger of Geosciences, Science and Liberal Arts. Although it wasn't mentioned, it should make research collaboration and teaching across those former colleges easier (for instance, Environmental Studies/climate change of interest to all those colleges). I was concerned about the Performance Studies proposal, since that was explicitly designed not to follow a "conservatory model", but overall boosting theater and performance on campus is a great idea. It seems very awkward to merge Political science back with the Bush School. I also was concerned that Education and Architecture were significantly weakened under these proposals. From what I understand, the Health Sciences needs a lot of realignment to bring it into organizationally into line with TAMU; so these proposals seem like a good idea.

---

What is a School? Since the new School of Visual and Performing Arts will be in the new College of Arts and Sciences, a School isn't a College. What does a School do (besides add bureaucracy)? Moving Construction Science to the College of Engineering will work for the faculty in that department, but will radically alter the undergraduate population of that department. Currently students in Con.Sci. take Math at a lower level than engineering students. Students who don't feel comfortable with engineering math will lose the possibility of this major. Also, Con.Sci. students will now have to take programming and chemistry as part of the common first year in engineering, requiring a shift of 6 credit hours in the degree plan (eliminating upper level courses.) If it is decided Con.Sci. doesn't have to participate in the common first year of engineering, then other engineering departments will also want to opt out. And students will ask why they can't go directly to a major. This would be a mess.

---

As a faculty members of almost 20 years in Geosciences, the proposed realignment will directly change the day-to-day operations of the next 20 years of my career. Overall I support the framework for structural change as it opens new opportunity for the university. My concerns are only with the implementation processes and final configuration and operational integration. I will comment, of course, first on the closure of Geosciences, and then comment on the other proposed changes. 1) Creation of College of Arts and Sciences: I support the closure of the College of Geosciences and the integration into a larger College of Arts and Sciences for the reasons outlined in the report. Our university suffers from silo-ing effects; and in an era of collaborative, interdisciplinary, and convergence science, we NEED to have faculty similarly housed to institutionally support the collaboration in teaching and research. Geosciences offers a good

model for how small colleges operate efficiently -- the business services and centralized advising and academic affairs are run professionally and efficiently. I hope that it can be a model for the new College of Arts and Sciences. I DO NOT support, under any circumstances, the creation of a new Department of Geosciences or a School of Geosciences that is composed of all the current units. The housing of these units in Geosciences is historical, reflecting more institutional path dependencies than intellectual cohesion. Perhaps it would be advisable to integrate Atmospheric science, G&G, and Oceanography into an Earth Sciences Department but as I will outline below there is an opportunity to integrate the Department of Geography into a more effective and larger unit in the new College of Arts and Sciences. 2) I support the proposal to create a School of Performing and Visual Arts and Department of Journalism as described in the report. But this brings up the issue of the two departments left in the College of Architecture. Here is an opportunity that the report seems to miss. Rather than keep a very small College of Architecture, which seems to counter the efficiencies that are gained by creating a large College of Letters and Science, the university would benefit from the following: a) Close the College of Architecture. b) Move the Department of Architecture into the new College of Arts and Science; merge faculty in landscape architecture in the Department of Architecture c) Merge the remaining Urban Planning/Hazards Center faculty with the Department of Geography to create a Department of Geographical Sciences and Urban Planning. These units have had increasingly overlapping students, teaching and research yet as different units, it leads to competition not collaboration in many instances. This is a logical move because it is not uncommon to have urban planning and geography in the same unit (eg. see Arizona State University [<https://sgsup.asu.edu/>]; University of Toronto) and it would be unique to any flagship university in Texas. The teaching and research synergies and efficiencies would create a large department on par with the other sized units merging into the CAS, provide coordinated programs that will benefit students who can draw on unified programs, particularly in geographical information sciences (GIS), and environmental, hazards, and sustainability programs (which are all currently in geography AND urban planning). If this realignment was implemented, the research synergies will offer new opportunities and better coordination for student offerings, AND support external research proposals that are currently more difficult to develop as faculty are across units. 3) Bush School and Political Science integration. I do not support the removal of one department to the Bush School if the creation of College of Arts and Sciences would be implemented. Policy studies is not political science. I think this would effectively dilute the existing strengths of political science, create attrition of good faculty, and undermine the precise objectives of the creation of a College of Arts and Sciences. That is, if the university is to consolidate and create a CAS then do it, and don't remove a critical and foundational discipline like Political Science. Of all the suggestions, this one is the most ill advised, odd recommendation, and contrary to the overall logic of the report. Moreover, the rationale seems odd as it was asserted rather than well argued that there is a real need to make this change, and I am still unclear why the Bush School needs elevation even after reading the report. 3) No comment on changes in life sciences. 4) The explanation and reason for merging University Libraries does not fully justify the change. IUL supports the entire university and therefore, to be housed in one college seems to counter the idea of centralization. Therefore, I would not support this radical shift. 5) No comment on proposed changes to medical sciences and vet med. 6) University studies to new CLS makes sense within the overall logic of the proposal. I strongly believe it will help with the "major change" issue and support the new College to enhance offerings for interdisciplinary opportunities within this framework. IMPLEMENTATION The report does not address the important details of implementation, particularly of the academic realignment. In the next stage of change, it would be critical for the Office of the President to lay out the pathway to change -- what are the mechanisms of integration, dissolution, harmonization and conflict resolution that will necessarily be part of the process. In addition, is the university willing to invest in consultants to support the needed support of faculty and staff to make these shifts. Institutional culture change is hard, and often, best served by the thoughtful and careful intervention and guidance of consultants expert in these shifts. With the creation of a new College structure and integration of other units, it is necessary to pull invest financial resources so support any transition to make it smooth. TAMU will need to have a team (plus external consultants) to manage carefully faculty and staff talent - because in the end, this kind of disruption runs the risk of bleeding human resources. That is, TAMU will run a high risk of losing the best talent and losing all the resources invested in that top performers thus far. We would be poorer for it. Even if it could be built back, that would potentially take years.

Combining the Colleges of LBAR, Science, and Geoscience holds a great deal of promise for all three. Departments in the sciences are less effective at communicating their mission and successes to multiple stakeholders than one would like. This is partly structural—neither has a system that is similar to the (admittedly incoherently structured) Engineering Communication department in the College of ENGR—but it also results from limited resources for these tasks. During

the Young administration LBAR became the center of “wokeness”, largely abandoning the Renaissance/liberal ideal of bringing multiple perspective to bear on social/cultural/political issues. Emblematic is the previous dean’s decision to appropriate the “Aggie Agora” project, which provided multiple perspectives in a public venue, and summarily eliminate it. As a result, of this shift, conservative and moderate students (and those interested in “fair and balanced” analysis), especially in required Core Curriculum have become afraid to speak out, much less become engaged/involved in discussions. Junior faculty have felt strong pressure to alter their research trajectories, project designs, and data analyses to conform to the dominant ideology. Combining LBAR with field that are committed to discovery more than ideology, and data more than conformity, will not eliminate these abuses, but it might moderate them. Re-creating a Department of Journalism within the College of Arts and Sciences is a curious suggestion. The report provides no indication that the consultants are aware of the rationale that President Gates used when he decided to eliminate JOUR, the existence of similar programs in other parts of the university (in the College of AgLife at the undergraduate level and the College of Vet Medicine at the Master’s level), or the massive costs that would be incurred in trying to match the program at UT-Austin (the only rationale offered in the report). The UT program currently has 10 JOUR tenured and tenure-line faculty with PhDs (A&M’s has none); 8-10 faculty who do not have PhDs but who have significant publication records in academic journals (A&M has none); and a significant number of people in positions that we would label “Professors of Practice.” Moreover, its electronic media program (an area specifically mentioned by the consultants) has state-of-the art technology, costing millions, which is updated regularly, at comparable costs. This also is true of JOUR programs in our peer institutions—Missouri, North Carolina-Chapel Hill, for example—and aspirational programs—Northwestern, Penn, USC, UCLA. Without a massive infusion of funds, A&M JOUR might come to equal programs at Sam Houston, TX State, or NTSU, but not major research institutions.

Thank you for the opportunity to offer feedback regarding the recommendations offered in MGT Consulting's report dated October 19, 2021. I am a Former Student and part-time faculty member. I teach for the College of Architecture (COA) Department of Construction Science (COSC). I have a Master's of Education in Instructional Technology and I am the VP of Business Development and part of the senior leadership team for a large construction firm in Houston, TX. Since the majority of my time is spent in professional practice, I bring a different lens than some of my faculty colleagues that have spent their entire career in academia. Regarding Recommendation and Rationale #9a: I find it a bit harsh to refer to the University Studies students as, "...do not have the qualifications or interest to enroll in a College degree program..." and the inference that these students would be a distraction to a College's mission. From my experience, some of my past and present USAR students were predominantly transfer students. They wanted to get into a particular COA program, but for some reason when they transferred in - there wasn't room, so they were advised by their assigned advisor to go USAR until their desired program had an opening. I would assume that would be the case across all of the University's 18 colleges. Due to that fact, I don't think it would be wise to dump all of those students into one University Studies pool. Regarding Recommendation and Rationale #9c: I'll admit it - as someone who teaches for the COA Department of Construction Science and someone who is employed by a large construction firm - I am extremely proud to be a tiny part of the #1 Construction Science program in the nation. My practical mind can't help but think, "If it's not broke...don't fix it." It would be a detriment to change something that is so successful and on the track to become even more successful. My main concerns about moving COSC to the College of Engineering (COE) are as follows: - DEI - currently 24% of COSC's students are 1st generation college students. Many of those students speak Spanish at home with their families. As you know, there are many demands and pressures that come from being a 1st generation student. If COSC moves to COE, it may give potential COSC students the impression that our program is too hard. We need our Spanish speaking COSC students to make it to professional practice. There is a huge need for HUB (Historically Underutilized Business) contractors, as well as a huge need for Spanish speaking professionals out in the field. - Increase in Rigor - 1st generation students aren't the only ones that worry about rigor. Several of my past and current COSC students have transferred into the COA program due to the fact they couldn't meet the academic demands of Civil Engineering. - Increase in Tuition - COE's tuition is higher than COA's tuition. This will be another issue that will deter potential COSC students, especially those 1st generation students that find it daunting to pay COA tuition rates. - Interdisciplinary Learning - the trend for interdisciplinary collaboration in the A/E/C industry is huge and much needed. Removing COSC from COA will hinder students ability to cross pollinate in class. There are many industry professional studies that have been published that prove that when there is a high level of collaboration between architects and general contractors, projects are much more successful: projects are finished on time and even early; less change orders are generated; and the Owner gets a better design and better performing building. Apart from those concerns, do I think COSC could be successful if moved to COE? Perhaps, if allowed to continue to operate under its current structure

that makes the Department and program so successful. The things that make COSC so successful are the following: - Current Leadership - Dr. Patrick Suermann has provided excellent leadership. He has assembled a leadership team and faculty that continually strives to maintain and exceed expectations, but most importantly helps build and support successful COSC graduates that will continue to give back to their University and continue to improve the Construction industry. - COSC's Construction Industry Advisory Council (CIAC) - not only provides financial support, industry intel, and robust recruiting and support of our COSC students. - COSC's Curriculum - our curriculum is the right mix of theory and hands on/applicable knowledge. Far and away, TAMU COSC students are more prepared for industry day one after graduation. - COSC's Faculty - COSC employs several APT professors that bring years of successful real-world experience into their instruction. The ability of COSC students to learn from those that have applicable knowledge is invaluable. These faculty members are providing a huge value and enrichment to the COSC student's education. Thank you again for the opportunity to share feedback. I want nothing but the best for our University. I feel confident that you and your team will consider all feedback offered and act in the best interest of our beloved University as we continue to strive for academic excellence and carrying on the Spirit of Aggieland.

---

I don't really see how putting the Bush School as part of the political science department makes sense. It was once part of the political science department and split off for a reason. The report seems to focus on the MPIA department, ignoring MPSA, and on the political science professors, ignoring the economists, non-profit, and management professors. It is true that some economics and political science departments are PART of either a university's business school or policy school (Georgia State, for example), but it is really unusual to have a policy school be a subset of a political science department. If they'd suggested that both economics and political science become part of the Bush school instead of part of liberal arts that would have made more sense to me, though I'm not sure that those departments would approve of such a move.

---

I am somewhat neutral with regards to the merging of the colleges of Science, Liberal Arts and Geosciences. In principle, if done right, this could create a very strong college. However, some colleagues in such colleges have expressed strong concerns and worry about the merger. I think that the establishment of a School of Visual and Performing Arts is a right move and it would make TAMU a more complete university. Personally, I LOVE the concept of STEAM (Science, Technology, Engineering, Arts, and Mathematics) as a new identity for TAMU and I hope that this becomes a major theme in the future. I also agree with the suggestion to merge the Bush School with Political Science and expand its reach to UG education. I agree that the Bush School can (and should!) become a leader in the nation. While I am neutral-to-supportive with regards to many recommendations for merging departments, programs, colleges, I am completely opposed to dismissing faculty because of this merger. Tenure should be protected and consideration should also be given to non-tenure track faculty.

---

It would be preferable if the College of Geosciences was converted into a "School of Geosciences" when it was merged into the College of Science and Liberal Arts. We should also take the opportunity to re-think the title of the school. Perhaps School of the Environment or School of Climate and the Environment would better represent what we actually do.

---

1) Creating an Arts and Science College is a good idea as it is done in many universities. 2) Establishing a school of visual and performing arts is an excellent idea as it will add the much needed culture and diversity hopefully, the student population will match the State of Texas demographics. 3) Establishing a teaching institute to unify teaching in the life sciences is probably ok, but this teaching institute and Department of Biology is best housed in the Arts and Sciences for several reasons - a) Biology teaches the life science portion of the first year curriculum to all life science majors [biology and bims make up 69% of the majors and all other life sciences put together in agriculture college make up 31%] b) Both Biology and BIMS curriculum consists of all general science courses (biology, chemistry, math, stats and physics) in the first year and not agriculture courses; c) Biology also runs a very successful BioFirst program geared towards helping first generation biology majors who are enrolled in the first year science courses in cohorts by working with Math, Stat and Chemistry departments. This cohort scheduling will be impossible to keep up if biology is removed from Science. The success of this program with data (not cherry picked) is available for everyone to see ; d) Biology's achievements in the past few years has been outstanding given the scarce resources and investment made by the upper administration. With the limited faculty and staff here is a long list of achievement - i) Fail rate (DFQW) in BIOL 111 reduced from 40.7% in 2015 to 11.2% in 2020. ii) First year retention of Biology majors at university for same time points increased from 83.9% to 95.9%. iii) Number of BS/BA degrees awarded on upward trajectory (207 in 2018-19 to 292 in 2020-21). iv) Graduation of 1st gen students is on the upward trajectory as well (53 in 2018-19 to 95 in 2020-21). iv) Number of UG majors increased 57% since 2016 (from 1238 to current 1942). v) Biology also brought in >20 mill \$ in research dollars

in 2021 alone. Unfortunately, none of the real numbers were captured in the report which is an enigma in itself. Real scientists do not support perception or cherry-picked science. The department has been on the upward trajectory (numbers speak for themselves - both in research and teaching dollars the department brings) and dissolving it now or placing it under college of agriculture will not only create more chaos, but loss in faculty and more importantly revenue - which I am sure is the driving force here.

I concur with recommendations #1-3 and #5-9. However, for recommendation #4, I believe it would be more effective (particularly in relation to recommendation #1) to consolidate the Bush School into the new Arts and Sciences College. Ultimately, the Department of Political Science should remain in an Arts and Sciences College. I concur with all other recommendations.

My name is [REDACTED], I am a tenured Professor in the Department of History, and I am happy for my thoughts to go on record and be identified with me. I inherently like the combination of Liberal Arts and Sciences. It is a common combination in universities around the world for good reasons. These are disciplines that have a great deal to learn from each other, work well in combination, and, together, can better serve the goals of the more professionally-orientated colleges, such as Engineering and Business to create well-rounded, critical-thinking graduates. I have heard stated on many occasions that an engineering degree is becoming the liberal arts education of the twenty-first century. This cannot happen at Texas A&M, however, unless liberal arts is better-integrated into the university. Combining the colleges of Liberal Arts and Sciences is a potentially viable path forward, not least because together they account for the vast majority of core curriculum and foundational courses for students across the university. My own experiences, both as a faculty member and [REDACTED], and more recently as a teaching fellow for inclusive excellence with the Center for Teaching Excellence (in which almost all of the other fellows are from STEM fields), have continually taught me how much humanities faculty members can learn from STEM education. STEM fields seem more attuned to the value of taking risks--learning as much from failures as from successes. The humanities, which are extremely risk-averse by comparison, would benefit from greater exposure to this mindset. I know have benefited enormously as both a teacher and researcher. Moving POLS and potentially ECON to the Bush School strike me as a sensible move. They long shared the same building, and students would benefit from the combination of the resources and leadership. I am lesser familiar with Biology's situation but I admit to having been long baffled by the number of different departments that teach biology on our campus. My concerns are for potential half-measures in any organization. Combining the two colleges, pulling bio, POLS, and ECON, and then stopping there could leave the new college as little more than a husk of its former selves. However, making those changes but adding visual and performing arts as described in the proposal would enable the new college to blossom.

I have concerns about the proposed movement of the Biomedical Sciences program out of the College of Veterinary Medicine & Biomedical Sciences. 1) Our college has faculty that teach at the undergraduate, professional, and graduate levels. Some teach at two levels and some at all three. Where will the undergraduate classes be taught under this new arrangement? This will potentially create logistical problems if faculty have to teach in two different locations on opposite sides of the campus. 2) Our college is highly invested in a Biomedical Sciences graduate program completely separate from the professional veterinary program. What happens to it? 3) How would this new Institute of Biological Life Sciences be administered?

My comments are centered on the proposed realignment expanding the Bush School. I appreciate the comments that the University should seek to expand the success of the Bush School and wholeheartedly agree. With that said, I do not think that expansion has to be done by bringing the political science department into the school. The mission of the Bush School focusing on public service is unique. It is what President Bush envisioned, what drives our faculty, draws students to us, and inspires our engaged donor base. Further, embodying public service as a noble calling underscores our unique faculty team made up of academics and practitioners. Incorporating such a large college into the Bush School would fundamentally transform this unique environment away from its core mission of public service. Alternatively, capitalizing on those groups involved in the Bush School family- faculty, students, and donors- I would recommend incorporating their thoughts on how to appropriately expand the current reach of the school. The Bush School and all those involved are Aggies and public service minded individuals who will always answer the call. Internal ideas faculty have voiced include expanding the school to include an undergraduate component, creating joint masters programs with Ag, Engineering, Cyber, health care, etc. There is a way forward together. The one point that should drive change is the goal to improve. The Bush School is doing great work, and I believe we can grow, but it needs to be done with the mission that has made us great thus far.

The report recommends wide-ranging changes across the entire university. Change is always difficult, but sometimes it is beneficial and can provide efficiencies once people become accustomed to the changes. In that spirit, my concern is that changes be made in ways that maximize the benefits of the change and minimize the losses so that the university as a whole, and individual units, can perform at the top level needed to achieve the university's missions of teaching, research and service. My comments pertain primarily to the recommendation to move the Department of Political Science to the Bush School, and also the suggestion that the Department of Economics may want to move to the Bush School as well. I recall that the original proposal, or bid, to get President Bush to place his Presidential Library at Texas A&M included a proposal to build a school of public service that would truly be an academic school. Moving the Departments of Economics and Political Science to reside in the same building as the new Bush School was part of what made President Bush decide to have his library and school at Texas A&M. I presume that this proposed change is related to that historical motive. The move would enhance the Bush School by expanding the faculty to include a large number of additional faculty with international research reputations, as well as junior scholars who are rising stars in their fields. It would also bring to the Bush School teaching experience from the PhD to the undergraduate level, and associate a very large number of undergraduate students, as well as a well-established PhD program in political science within the school. But to achieve those benefits it will be imperative to maintain the ability of the Department of Political Science to provide excellence in PhD education, and in Bachelor or Arts and Bachelor of Science education and maintain its research status as one of the top ranked Political Science Departments at public universities – which is of course integrally related to providing the highest quality education to students: PhD students and undergraduates. Toward that end of maximizing benefits to all groups, I think it is imperative that the expanded Bush School maintain a separate Department of Political Science, and also a separate Department of Economics if they opt to move. A multi-department structure within the school will allow excellence to be provided by the differing programs that work with different constituencies, maintaining and continuing to build each department's current areas of excellence in research, teaching, and service. For example, the enlarged Bush School encompassing multiple departments can be envisioned to create synergies (e.g., in visiting speakers, conferences, opening up opportunities for students from the graduate program in one department to take some courses in another department in the school, and research collaboration between faculty and graduate students, potentially including undergraduates and thus providing them with additional high-impact learning experiences). However, combining all of these diverse faculty from departments with different academic orientations into a single department in the Bush School, or into the Bush School's existing departments will not facilitate such synergies, or maintenance of the excellence in research and graduate programs that already exist. Such a large entity would be too large to manage effectively. In addition, the training needs for MA and PhD students differ greatly, as do the curricular needs of the various undergraduate degrees. For these reasons, a larger Bush School, that includes more departments could be envisioned to create synergies that produce research and curricular opportunities that will enhance excellence for all the departments in the school. A single, extraordinarily large department (more than 100 faculty if the Bush School and Department of Political Science were combined into a single department, and more than 140 faculty if the Department of Economics is added) would detract from the centers of excellence that already exist. It is important that this move should be organized to enhance the excellence of programs, enabling all the programs to further build on their existing areas of expertise, which will enhance the reputations of individual departments and collectively the reputation of the School and of Texas A&M University.

---

There are undoubted benefits in efficiency and making Colleges a reasonable scale. I have concerns that Arts and Sciences make poor bedfellows since they operate in very different ways and contexts. Combining Science and Geoscience makes a lot of sense (in fact, since I'm very new, I didn't realise that they were separate). My concern is that an incoherent bundle of diverse disciplines in a new College of Arts and Sciences would be difficult to manage and may end up being less efficient. This is not to say that I think that it's a bad idea, merely that it must be done with care and with the expectation that there will be some teething problems.

---

(I do not know if this is the correct space). I am a bit concerned about the merge of three colleges under the umbrella of a College of Arts and Sciences. Columbia, the university where I come from, has such a college, but the departments in the humanities are much larger than here and so can play a significant role. Texas A&M is notoriously much stronger in the sciences than in the humanities, whose weight and importance will be further limited. The dean of such a super-structure will obviously prioritize the demands of larger departments with which no humanities department can obviously compete.

---

The proposed move of Biology out of the College of Science (or College of Arts and Sciences) is extraordinarily ill-advised. The opinion that Biology is performing poorly is unsubstantiated, should not have appeared in the report, and

should not have been considered as a rationale to move it. Indeed, the data show a strong upward trajectory for Biology in the College of Science. I think this upward trajectory would have been seen with virtually any objective metric that could have been applied when preparing the report. I think a stronger case can be made to make a Division of Life Sciences while keeping Biology and its signature undergraduate programs in its current place with Science. I say this having earned my B.S. from Cornell University in Biological Sciences as an undergraduate in the College of Arts and Sciences. As a faculty member here, I think that the positioning of Biology in the College of Science has produced an extraordinary strong cohort of Biology Majors. These are among our best and brightest. Furthermore, the lower-level service courses that Biology is responsible for teaching are performing extremely well and continue to improve. New grant awards, and the attraction of gifted new faculty, are other areas where it appears Biology is more appropriately considered stellar than cellar. I see no compelling case made in the report to move Biology. Resources can be directed to Biology in a Division of Life Sciences (comprised by units in multiple colleges) to greater effect than by moving Biology out of Science.

1) Creating an Arts and Science College is a good idea as it is done in many universities. 2) Establishing a school of visual and performing arts is an excellent idea as it will add culture and diversity and match the State of Texas demographics. 3) Establishing an Institute to unify teaching in the life sciences remove duplication is probably ok but the department of biology should head the Institute as Biology teaches the life science portion of the first year curriculum. The Institute is best housed in the Arts and Sciences as the curriculum follows the science courses and not agriculture courses. 4) Biology also runs BioFirst program geared towards helping first generation students who are enrolled in science courses in cohorts by working with Math, Stat and Chemistry departments. These ties will be hard to keep up if removed from Science. Biology's achievements in the past few years. 1. Fail rate (DFQW) in BIOL 111 reduced from 40.7% in 2015 to 11.2% in 2020. a. Improved success and retention for ALL life science majors 2. First year retention of Biology majors at university for same time points increased from 83.9% to 95.9% (> TAMU, 94.3%). a. Learning outcomes measured in year 2 improved. Confirms that gains in 1st year were NOT a function of grade inflation b. First year retention for Biology majors is now equivalent for all student groups (1st gen, Pell recipients, underrepresented minorities) 3. Number of BS/BA degrees awarded on upward (+41%) trajectory (207 in 2018-19 to 292 in 2020-21 and 2021 is not yet done) a. Graduation of 1st gen students on stunning climb (>+80%) (53 in 2018-19 to 95 in 2020-21 and 2021 is not yet done) 4. UG Biology majors are more diverse (56% underrepresented minorities) than TAMU as a whole (42%) 5. Number of UG majors increased 57% since 2016 (from 1238 to current 1942). This growth rate compares to 12% over the university as a whole.

I teach an upper division class (BIOL 319 -Integrated Human Anatomy&Physiology I) every spring, fall, and summer and have done so for about 15 years. It is a big class that typically enrolls a diversity of majors (Biology, Health, Kinesiology, Nutrition, and people of other majors intersted in medical school, nursing school, physician assistant school, dental school, pharmacy school, etc). According to my own tally, a total of over 11,00 students earned a final grade in BIOL 319 during the 2020 academic year. The course has grown in enrollment since I first started and I believe that a lot of the course's success has to do with the excellent support that the Department of Biology as it is currently maintained in the College of Science has provided. We have worked hard at fine-tuning the infracture necessary to support the course and in organizing and making more efficeint the teaching of not only the lecture but the laboratory portion of the class that relies heavily on a talented full time lab coordinator, and many dedicated and knowledgeable teaching assistants and laboratory instructors. BIOL 319 also owes a lot to my ongoing and productive interactions with my fellow APT (Academic Professional TracK)faculty collegaues in Biology, all of whom I work extremely well with and have the greatest respect for. My concern is that the proposal to disassemble the Department of Biology in the College of Science and reconstitute it in the College of Agriculture would have a very high probability of unintended consequences that could negatively impact the continued success and development of BIOL 319.

There is very little hard evidence or documentation for many of the findings listed in the report. As a member of the Department of Biology, I do not understand the basis for the statement that the Depatment of Biology is underperforming? What are the criteria for making this judgement? In terms of our teaching mission, the Biology Department teaches fundamental courses that are taken by many students from many majors across campus. For example, in Fall 2020, >5,000 undergraduate students enrolled in BIOL courses. About 2,800 of these students were enrolled in Introductory Biology (BIOL 111 and BIOL 112). Faculty in the Biology Department have work very hard and been successful at finding ways to improve student success and retention, while still maintaining rigor in our courses. In my almost 30 years in the department, I have been part of discussions of course content, discussions with other departments to try to coordinate course covered, development of new courses, including a capstone course. We have

also developed a Biology Honors program that seems to be attracting even more of the best and brightest high school seniors to Texas A&M. Our focus in improving student academic success hasn't been limited to our own majors. Between 2015 and 2020, we achieved a dramatic decrease in the percentage of students taking BIOL 111 who earned a D or F, or dropped the course. This higher academic success was seen across all the life science majors who take BIOL 111, not just Biology majors. The improvement we achieved was the result of many semesters of faculty working together to try different strategies, figuring out what worked and didn't work, and then incorporating those strategies across all the different sections of the course. The Biology Dept. faculty are also successful at research by the objective measures of funding (approx. \$20 million is expected to be received in 2021), papers published (>200 papers published in peer-reviewed journals from 2019 to present), number of graduate students, and undergraduate student involvement in research. Some of this success is due to the strong interactions between faculty and students within the department. The diverse research areas represented in the department is a strength. The home for Biology Dept. should be in the College of Science or a new College of Arts and Sciences.

---

The rationale provided for combining the College of Science and College of Liberal Arts is specious and not particularly persuasive. It is not obvious why a larger college would lead to better advocacy and recruiting for liberal arts, nor why it would reduce costs. In my own experience, my decision to come to A&M was due to the reputation of the department and not about the size of the college to which it belongs. Also, there are no cost savings projections or any resemblance of a quantitative analysis to support these claims about cost savings. It seems that the opposite would be true in the short term (merging two colleges into one is not a small task). Also, it is not convincing to say that we should make a move because others are situated like this. It is entirely possible that current structures at peer institutions were developed over time without a clear strategic rationale. I'm more interested in hearing about specific details about the types of programs and initiatives made possible by such a move. However, there is only a vague wording that cost savings will allow for reinvestment in research and other programs. It seems that such a drastic, and costly, reorganization should have some very strong justification backed with cost projections, clear strategic justifications backed by sound research, and quantitative analysis. I don't see it.

---

I think that the creation of a College of Liberal Arts and Sciences is an move that will help to elevate both existing colleges to the level of Ag and Engineering. I am perplexed by the creation of an Institute for Biological Life Sciences (is there another kind?) and the move of the Department of Biology to this institute within the College of Agriculture. The lone example given (Cornell) is not what our peers are doing, and in fact, after discussing it with Cornell folks, is something that they wish they had never done. To have a College of Liberal Arts and Sciences without Biology is unheard of. A better option to remove the stated redundancy in undergraduate programs would be to move BIMS to the new College of Liberal Arts and Sciences within Biology. Most of the first two years of these students are spent in biology, chemistry and math anyway. I am also deeply concerned regarding the statements about biology being an under-performing department. I am curious what data was examined? Using what metric? An interview with someone? For an institution of our size, the department should have nearly 100 tenure-track faculty, yet despite attempts to grow and acquire resources, they've been limited to about 50. What they've done given the resources available to them over the last 7 years is pretty amazing. They are on a terrific trajectory to become a rising star among peers given support in the new College of Liberal Arts and Sciences. I fully support the creation of a School of Visual and Performing Arts and including and expanding the Department of Visualization. I find it humorous that we are recommending creating a Department of Journalism after getting rid of it about 10 years ago; something we should not have done. The Libraries should not be made into a department. They are central to the functioning of the university.

---

The MGT report contains some interesting and even exciting suggestions, and also some ideas that may not be workable. As a faculty member in the College of Geosciences, I will focus my comments on the proposed merger of three colleges to form a College of Arts and Sciences. I can see benefits of this proposal (I earned my Ph.D. at a land grant university organized on this model). Under the proposed arrangement, for example, our university core curriculum would probably function better than at present; and certain departments would potentially fit more comfortably into a combined college than in the more narrowly focused colleges where they currently reside. How successful the merger might be would depend on its implementation. The critical thing is to honor the integrity of disciplines and existing departments, as well as their historical development at TAMU. Indeed, the Arts and Sciences model inherently emphasizes the traditional academic disciplines as distinct from the less formal and/or applied academic programs housed in the other colleges, and this means that if implemented well, a combined college could elevate the status of the conventional arts and sciences disciplines, and hence of the entire university. Each of the existing academic disciplines is important and worth veneration, so let's make sure that all the existing departments are transferred intact

to the new, larger college. A related and equally critical consideration is to carefully handle the interdisciplinary degree programs in the existing colleges, and to fully understand their history and linkages with the academic departments. In the College of Geosciences, for example, the interdisciplinary programs are primarily linked to and sustained by a single department (Geography, which is where they originated). The integrity of these linkages must be maintained to ensure the continued success of the supporting department(s) and interdisciplinary programs. A third consideration is that, if the university decides to move ahead with the proposed academic realignment, it should resist pressures to do it halfway. If we're going to do it, let's do it well. A watered-down approach that, say, only combines two colleges instead of three, or only moves departments around within the existing framework of three colleges, would create something messier than what we have now without producing the benefits that could result from the single large college of Arts and Sciences. I probably cannot imagine all the arguments that might be advanced to pursue only parts of the proposed merger. But I would encourage the administration to move ahead with academic realignment only if it is committed to fully implementing the new College of Arts and Sciences. (One caveat: it's not clear to me that the library actually fits within the proposed structure, so my comments apply to the regular academic programs). As with all faculty members, I have some reservations about how the implementation of the MGT proposals will play out. These reservations stem primarily from the fact that the MGT report looks a bit carelessly assembled. Surprisingly, MGT overlooked major issues such as IODP and implications for its continued funding. Much of the report simply appears quite shallow. I am surprised that the university did not adopt some type of approach that would have yielded a more thorough portrayal of the nature of this university. Given the lack of depth exhibited in the MGT report, I am concerned that implementing the proposals will expose many unforeseen complications that will disrupt the functioning of the university. If the disruptions are too severe, the damage to our productivity and morale will outweigh whatever benefits might accrue from the changes. I am not writing to oppose the changes. I simply would urge the administration to thoroughly consider the reason why current structures exist, whether it is truly imperative to alter them, and, if so, how to execute the changes in the least disruptive manner. This will require a more thorough review and consultation with faculty, staff, and other stakeholders who have relevant expertise. If deeper study suggests a way to implement the changes in a minimally disruptive way that will enhance the university, we should move forward. But we should also be prepared to abandon the proposals if it seems that they will be too disruptive. The question to ask is whether the gains that could be made will be great enough to outweigh the disruptions that will inevitably occur. Thank you for considering these comments.

---

I think the new College of Arts and Sciences is such a great idea. I really do. I only hope that the investments in humanities and liberal arts that are mentioned are made in full. TAMU does not have Area Studies programs or institutes. We need a good journalism department and so many other things that are mentioned like visual and performing arts. The success of this merger of the colleges will hinge on the STEM disciplines not bulldozing over the humanities and liberal arts. Disclosure- I am a biologist rooted firmly in STEM and I want this change to happen! I am a biologist in ECCB and founder of the EEB PhD Program and serve in the EEB leadership. I desire and welcome the proposed creation of the Institute for Biological and Life Sciences or whatever it will be named. I think it probably hurt some feelings to call out the Biology Department as underperforming, especially since they have been hiring Assistant Professors and key to the success of EEB through their ability to give TAs to our top EEB recruits. Anyway, it is true that BIOL has seriously under-performed in my opinion, tends to lose its rising stars. In my experience, BIOL hid behind College of Science as if that automatically made them superior to all the other great biologists on campus (ugh). That's just an example of why all this came out in the report. I believe it is a great recommendation and solution to get the biologists under one umbrella. It will help all of the departments involved and enhance our interdisciplinary programs in EEB, GENE and others. A suggestion: Why not have one program for all the grad students in this combined Institute? It could be the EEB Program. Thanks. Note on Political Science and Bush School- My understanding is that the fields of Political Science are quite distinct from National and Global Policy activities. Good luck with that arranged marriage!

---

The College of Arts and Sciences would allow for the arts to have a voice within the university system as well as within the community. Over the years many faculty and their families have left TAMU and the B/CS because of the lack of arts and culture within the community and university at large. As someone who directs the Dance Program on campus, visibility has been one of our biggest hurdles to overcome. The arts on campus are currently separated into three colleges: The College of Education and Human Development, The College of Liberal Arts, and the College of Architecture. This structural and geographic separation has made it extremely difficult for prospective students to find us and to develop and create collaborations between the art programs on campus. Over the years, I have been able to work collaboratively with colleagues across disciplines, but it has been much more difficult than with other collaborations within my own

college. This is due mainly to the geographic separation of the arts as well as the lack of funding within colleges that only have art programs as one small part of the larger college. A College of Arts and Sciences would give the arts a strong and visible voice on campus. It would send a strong message to the university and the community that the arts are important and can benefit individuals and groups beyond performers on a stage. The recommendation of a School and Visual and Performing Arts and a Performing Arts Center is a bold and strong statement to support the arts at Texas A&M University. A statement that is long overdue. This new school and center has the potential to put TAMU on the map in a much larger way. Not only to bring performances to the community, foster collaborations between faculty and students, develop strong and well sought out academic programs, but to finally have the last piece in the puzzle to bring TAMU into the top tier list of outstanding, impactful, and culturally enriched universities. This is something we who have been here know, but because the presence of the arts has been masked we continue to be left off the list. This is our opportunity, our time. With the development of the new School of Visual and Performing Arts it is essential that the departments within the new school are brought together under one roof, within one building. The separation of the arts can no longer exist. We have existed this way in the past because of how each of the art areas evolved but NOW is the time to bring us together. This will allow us to:

- develop degrees that will cross art disciplines
- foster collaborations among faculty, undergraduate and graduate students
- create interdisciplinary performances
- offer a wider range of performances for the community and university
- Bring equity to all areas of the arts
- give the arts visibility within the community and university so people know we are here and learn what we are doing.
- allow prospective students to find us easier because there is a College of the Arts and Sciences AND a School of Visual and Performing Arts!
- Give the arts a strong voice from a Dean that understands and supports the arts so can better help serve the needs of the arts on and off campus

In the process of creating this new School it is important that a committee be formed with representation of ALL the art areas so that discussions can occur to decide the best way to move forward, not only for the university, but for each academic program. It is important that all arts areas have an equal voice in this process. It is important that the arts have time to come together to discuss the best way to move forward with a merge such as this. I believe that the departments within this School need to have EQUAL representation for ALL the art areas. Based on the current curriculum I could see the following structure for a School of the Arts:

- Department of Dance (house all 3 dance program with an additional MFA in DSc)
- Department of Performance Studies (house current degrees with an additional PhD in Performance Studies)
- Department of Visual Arts (years back the College of Architecture discussed having a visual arts degree)
- Department of Art Media and Visualization (house Viz and Film with an additional minor/major in Visualization and Dance or Dance Technology)

Additionally, each of the current disciplines in the arts have built their programs to be strong, cutting edge, and has put TAMU on the map within each of the art disciplines. For example, the dance program has three degree options; a dance minor, a university studies degree and a B.S. in Kinesiology: Dance Science. We have built a strong presence in the dance community to not only be the first program in the U.S. to offer a degree with a focus on dance science but is known within the dance science community as the BEST in the nation. To dismantle it to create a performance, BFA, program is unthinkable. A BFA in Dance, is the most common dance degrees in the state and we have already been told (in 2010) that the coordinating board of the State of Texas would not support this type of degree from TAMU. The question at the state level that we would have to overcome is why another BFA in Dance within the state. That need is already being served. However, TAMU is in a perfect position to make a B.S. in Dance Science where we would be the ONLY one in the state. This need is essential to the dance community. In the UK, there are degrees in Dance Science at the undergraduate, masters and PhD level. In the U.S. there are only 15 programs that have a certificate, minor, or B.S. in dance science. Through the Kinesiology degree we have already made a significant impact in this area and are respected by colleagues and leading organizations in this area (for example, The International Association for Dance Medicine and Science). Dance Scientists are needed to serve as physical therapists, doctors, athletic trainer, dance educators, and therapists for dancers and other artists. BFA's across the nation are changing their degrees to include courses in anatomy for dancers, injury prevention and care, somatics, and other dance science based courses. However the U.S. lacks degrees to serve this need. This is why internally as a dance program our goal is to build an MFA in Dance Science so our graduates can be the ones who are teaching these courses within BFA programs across the nation. It is essential that the art areas have a voice and are allowed to provide evidence to why their programs should be allowed to stay within their focus. We know that by moving to the College of Arts and Science (an amazing fit for a dance science program that combines the name of the College it is housed in - art and science) we will have to change our degree from Kinesiology. We are ready and willing to move forward with a B.S. in Dance Science. I believe Performance Studies has similar beliefs on the importance of maintaining their identity and have made a similar impact within the performance

studies community. I have collaborated with faculty in visualization many times and could absolutely see an opportunity to develop a degree in Visualization and Dance. This would be another area where TAMU could be cutting edge and offer something that is not readily available but is needed within the arts. In regards to the Department of Health and Kinesiology my feeling is they are stronger together and should be able to continue as one department. There is much cross over, especially within Kinesiology, PEAP and Sports Management. There are courses in each of these divisions that cross over in numerous degree plans. Untangling this would be difficult, create a lot of overlap and not be beneficial to the students in these areas. I can see the move of the Health Division to the School of Public Health but also ask, what if the Department of Health and Kinesiology "absorbed" the School of Public Health?? I personally think an option for the Department of Health and Kinesiology (or at least KINE, PEAP, and SPMT) move to the College of Arts and Sciences. I think this move would be more beneficial to the students and foster additional collaborations within these departments. Our department has always struggled in the College of Education and I know that KINE faculty have had difficulty receiving grants because they were not in a College of Science. This would solve that hurdle which they have been fighting for years. I also think it would bring greater visibility to the department in regards to prospective students seeking out degrees in this area.

---

The establishment of an Institute for Life Science, combining BIMS and BIOLOGY, and housed within the College of Agriculture and Life Sciences is a huge mistake. Although aspersions are cast on Biology, Biology is not underperforming - see below for data on Biology Performance. Biology could absorb BIMS (BIMS having created near-duplicate courses), but it should remain in the College of Science. I have seen this move to incorporate Biology into the College of Agriculture ever since 1986, when Charles Arntzen, Dean of the College of Agriculture, wanted it to occur. It is primarily political and based on student credit hours and TA assignments managed by Biology. Furthermore, separating my lab and my teaching from the College of Science would be a mistake. I currently teach Biology 430, Biological Imaging. Major components of that course involve physics and biomedical engineering. It is part of an Informatics minor in Biology. Informatics is closely associated with Math and Statistics. It has been proposed as a foundational course for an interdepartmental program in imaging shared by biology, statistics, math, and physics. I have written the textbook for the course, *Imaging Life*, (to be published this year by Wiley) with this in mind. Separating Biology from the College of Science would have a negative effect on the future of the course. My lab does basic science in plant cell biology. Although I have just started a company founded on the discovery of pre-emergent herbicide with a potential market in the billions of dollars, and received NSF funding for this project, the intellectual property (owned by TAMU) was generated not through applied investigations in weed or crop science, but through novel understanding of the cell biology of plants. In addition there are several projects in the lab which, although they may have application in the future, do not have immediate application. I do not believe that being in any segment of the College of Agriculture and Life Sciences would benefit these other projects. I currently enjoy the collaboration and collegiality of several other faculty in Biology and I sense that, were Biology to be combined with BIMS in the College of Agriculture, that Institute will be primarily to consolidate undergraduate pre-medical teaching. Those less involved in pre-med courses might be sent to other programs in the College of Agriculture, where the performance and upward trajectory currently enjoyed by the Biology Department would not be found and weakening my current connections with current faculty in Biology. Being very senior, if this happens, I may just retire. However, younger faculty may leave. Finally, for those faculty on a professional teaching track and those current staff that support the undergraduate teaching in the Biology department, the change could result in their leaving, either voluntarily or through reduction programs. These are highly successful and effective faculty and staff, who form a team that works well together. Biology Performance: Fail rate (DFQW) in BIOL 111 reduced from 40.7% in 2015 to 11.2% in 2020. Improved success and retention for ALL life science majors First year retention of Biology majors at university for same time points increased from 83.9% to 95.9% (> TAMU, 94.3%). Learning outcomes measured in year 2 improved. Confirms that gains in 1st year were NOT a function of grade inflation First year retention for Biology majors is now equivalent for all student groups (1st gen, Pell recipients, underrepresented minorities) Number of BS/BA degrees awarded on upward (+41%) trajectory (207 in 2018-19 to 292 in 2020-21 and 2021 is not yet done) Graduation of 1st gen students on stunning climb (>+80%) (53 in 2018-19 to 95 in 2020-21 and 2021 is not yet done) UG Biology majors are more diverse (56% underrepresented minorities) than TAMU as a whole (42%) Number of UG majors increased 57% since 2016 (from 1238 to current 1942). This growth rate compares to 12% over the university as a whole.

---

The university libraries are key to all departments in the university -- the libraries are what make something a university. Sequestering them within a single college while expecting them to continue to support all of the other colleges doesn't seem to make much sense. Also, the report suggests a number of changes that reverse relatively recent changes based

on the board of education's requirements, the failure of programs to thrive, etc. (the music department, for instance). It seems as if the writers of the report needed to do a little more careful investigation into the past of certain programs or departments before making their recommendations.

Regarding Finding #6 Regarding "Faculty-librarians are well-suited to teach students skills in acquiring, evaluating, and using information as they already teach through library consultations": Not all "faculty-librarians" are suited to teach and many have no teaching experience at all. That said, Subject Librarians teach research skills (among many other topics) not only in consultations (where students, staff, and faculty either make appointments for a one-on-one or group meeting or potentially walk in the library asking for assistance), but are embedded and teach hundreds (likely 1,000+) of classes per year. Subject librarians are invited into classes, depending on their discipline/expertise, to teach a class (anywhere from 15 minutes to 4 hours) relevant to the particular course. There is a librarian for every academic college and department on campus. For example, librarians from the Business Library & Collaboration Commons (BLCC) teach many one-shot classes (invited to teach for an hour in class) for the Mays Business School, but also in other relevant areas, such as Engineering (for market research and entrepreneurship components), AgEcon, Psychology, and Veterinary. Regarding "Librarians fulfill their teaching-equivalent function by leveraging their expertise in research methodologies and platforms through a series of resources": The job of a librarian differs from position to position. - Subject librarians may do any of the following: collection development (assessment and ordering of materials, including books, journals, and databases), liaison and outreach (being a constant point of contact with the academic departments they support), consultations (meeting one-on-one or with groups to guide students or faculty with their research and connecting them with resources they need), teach library instruction as a guest speaker in credit-bearing classes to which they are invited, Scholarly Communication (advocate for open access resources, the institutional repository, etc, assist faculty with resources that show their impact), Systematic Reviews (numerous subject librarians have developed an expertise to support those doing this kind of research), and much more. -Information Resource librarians are essential in providing access to the materials library patrons need to perform research, teach classes, and complete assignments. This includes the acquisition and processing of books, journals, and databases as well as our special collections materials. -Digital Initiatives librarians are crucial in the development and maintenance of electronic resources that allow materials necessary for campus research to be accessed. -Special Collections librarians are archivists, curators, catalogers, and more. They acquire, prepare and preserve, create metadata, store and display appropriately, and teach about their collections. -The "teaching-equivalent" for "Faculty-librarians" is so much more than teaching information literacy. Librarians already dedicate so much of their work to the teaching mission at Texas A&M University. Regarding "Identifying and dedicating undergraduate core curriculum courses for the development of skills in information sciences elevates the faculty-librarians as teachers" and pointing out that "University of Oklahoma offers a BA in Information Studies and a BS in Information Science and Technology": A look at the University of Oklahoma School of Library and Information Studies Faculty page (<https://www.ou.edu/cas/slis/faculty-staff>) will show you what you will find around the country when looking at equivalent programs: those who teach LIS courses are PhDs whose chosen careers are to teach library and information science courses. Librarians with an MLS or MLIS chose those degrees so they could pursue their career of being a librarian, which leads to being tenured faculty at many universities, such as ours. Regarding Recommendation #6: Merge the University Libraries into the newly created College of Arts and Sciences and create a new Department of Library Sciences: -Academic libraries around the world exist outside of individual colleges as they support the entire campus, and in many cases, the community. Confining a library to a college limits their impact and could give implied bias to the college in which it sits. Library administration should continue to have a direct line to the Provost and a seat at the table with the rest of the deans on campus. There are too many important discussions that the Libraries should be a part of as they support the research, innovation, and teaching that occurs daily on campus. -Regarding "Faculty-librarians will have faculty status in this new department": Librarians already have faculty status and are nationally known as the most productive researchers in their discipline. -Regarding "Dean of the Library will become Associate Dean of Arts and Sciences and University Librarian": This move would send a message of a lack of importance of the University Libraries on campus and would negate the progress that academic library administrators have made over the years and take away the voice and impact the Dean of Libraries currently has. University Libraries at peer institutions from around the country who are members of the esteemed Association of Research Libraries (ARL), where only the top research libraries in the U.S. and Canada are admitted, all have either Dean in their title and/or Vice Provost, demonstrating the importance of 1) having the Libraries as an entity separate from an individual college and 2) having Libraries leadership in an elevated position on campus. The following is a list of library peers at ARLs with their associated titles: The Ohio State University - Vice Provost and Dean University of Illinois at

Urbana-Champaign - Dean of Libraries and University Librarian Clemson University - Dean of Libraries University of Michigan - University Librarian and Dean of Libraries University of Florida - Dean of University Libraries University of Georgia - University Librarian and Associate Provost Duke University - University Librarian & Vice Provost for Library Affairs Michigan State University - Dean of Libraries Pennsylvania State University - Dean of University Libraries and Scholarly Communications University of Colorado Boulder - Dean of the University Libraries, Senior Vice Provost of Online Education University of Alabama - Dean of Libraries University of Texas - Vice Provost and Director of the University Libraries Auburn University - Dean LSU - Dean -Regarding "Associate Dean would continue to lead librarians in excellence in teaching": Again, Libraries do so much more than teaching. -Regarding "The Department of Library Sciences will create a new and innovative academic program that seeks to teach and do research to support students who are learning and researching in new and different ways.": I am in favor of a Department of Library Sciences within the College of Arts & Sciences, however, like other bachelors, masters, and PhD LIS programs throughout the country, this should be an academic program with PhDs teaching. The Libraries should remain under the Office of the Provost, where they may continue to focus on student success. Having worked at a university with both a library and a separate LIS program, I can speak to the benefits of having such programs in place and benefiting each other. The LIS program can provide graduate assistants to the library as a way of preparing future librarians for their careers while the libraries gain needed assistance. At the same time, librarians are invited as guest speakers in LIS courses where they may speak to real-life experiences and how theory taught in class pertains to their chosen career. Faculty in both the Libraries and LIS Program would also likely find research projects on which to collaborate. -Regarding "Opportunity to design and deliver a learning commons model": The Learning Commons model has been around for many years, having come from the prior Information Commons model. The idea has been to bring together numerous services on campus that work well with the Libraries in helping patrons achieve their goals. At both the Evans Library and the Business Library & Collaboration Commons (which changed its name recently to reflect this model), there exists a Writing Center, and we also work together with TAMU IT to provide computing services.

Implicit in the report is the notion that TAMU should have highly-ranked programs in some key areas (Architecture being one of them). I wonder, though, what is really achieved by a top ranking. Top ranking by whom? Ranked by what? Again, VALIDITY—are these rankings capturing characteristics that are important to us? The focus on rankings is misplaced. Let's focus on EXCELLENCE. Clearly, Excellence is one of our Aggie Core Values, and I am wholly invested in creating excellence in our academic programs. But what does excellence mean? What does it mean specifically for our university, for our college (Architecture for me), for our programs. The report has called out Architecture (not clear whether that refers to the college or department of the same name) as needing to rise in "the rankings". Again, what rankings? I believe we are better off pursuing excellence in areas where we can be the best. We are never going to produce "Starchitects", nor are we going to attract them as faculty. We will never compete with the Northeastern or West Coast elite university programs. Starchitects are cosmopolitan, they won't live in College Station, Texas. And if they do, they won't teach or engage meaningfully with our students. And they won't stay. We've tried. I would recommend that we focus on achieving excellence in producing architects (also landscape architect, planners, and developers) that serve people and places. Students that firms want to hire. Students that can design sustainably and resiliently, and that create places for all Texans, not just elite ones. Designers that design schools, hospitals, civic buildings, academic buildings, and even housing—maybe even affordable housing—which is a CRITICAL NEED. Let's be excellent at that. There is no doubt that we can be better than we are. This report, and the academic realignment that it suggests, can and should catalyze big change, and move us toward excellence. My favorite recommendation from the report is the recommendation that we create a School of Visual and Performing Arts. I absolutely concur. This has been a gaping hole in our offerings for many, many years. HOWEVER, I would recommend that instead of anchoring it on the Department of Visualization, in a College of Arts and Sciences, we anchor it in the College/School with Architecture, Landscape Architecture, and Urban Planning, if not Construction Science. All three of those existing departments are rooted in the Visual Arts. All three departments currently have artists and art historians among their faculty. What arts there are on campus originated in Architecture. This makes Architecture a more appropriate place to launch a new set of programs in the visual and performing arts. Keeping the college of Architecture intact and charging it with the responsibility (and resources) to build a comprehensive visual and performing arts college (perhaps the College of Fine, Performing, and Applied Arts—see the University of Illinois, Urbana-Champaign) would strengthen both that effort, as well as the effort to elevate architecture as a discipline. Construction science would be better off staying with Architecture. Construction science is about the delivery of buildings. It is actually more business-oriented than engineering-oriented. Moving it to Engineering would likely kill it—turning it into something that it is not. Currently, it has extraordinary demand for its

students, and the employers (300 of which PAY US to have access to those students) want those students trained the way they are. They don't want "engineering-lite" students.

Kinesiology is the study of human movement. It is an umbrella for several applied sciences like exercise physiology, motor control, and biomechanics. In addition, kinesiology includes programs/disciplines associated with dance science, sports psychology, coaching, athletic training, physical activity, physical education, sports medicine, and sports management. At many universities, kinesiology is in a department or school with health education. It should be noted that health education is not public health. The MGT report does not convey that the authors understood the unique structure of kinesiology. As the largest department on campus, HLKN (Health & Kinesiology) provides a wealth of services to our students. We service 17% of the total undergraduate enrollment at TAMU College Station. Out of those students, only 21% of these are HLKN majors. Thus, a large number of students taking our courses are from other colleges. Further, 22% of TAMU athletes are HLKN majors. The vast majority (74%) of students taking ICD/CD courses offered by HLKN are non-majors. Here at TAMU, our HLKN department includes health education, kinesiology, sports management, and the physical education and activity program. We consider ourselves one cohesive unit and do not wish to be split apart. Further, placing us in the School of Public Health will not allow us to continue to grow and develop our program. On the final two pages of the MGT report, there are several "peer" institutions that are stated to have kinesiology programs within a School of Public Health; however, these data are wildly incorrect. Many of these institutions are not peer. And second, the data are incorrect. For example, University of Illinois does not even have a public health program. The University of Utah has a Kinesiology program in the College of Health, which does not offer any degrees in public health. These data should not be considered as they are faulty. I advocate for Health & Kinesiology to be their own School, preferably within the College of Arts & Sciences or AgriLife. Kinesiology is a unique program and is often not understood by leadership. We are the ultimate STEM program. For example, the discipline of biomechanics, which is historically a kinesiology-based discipline (not engineering), will become the 21st Century science. To support this growth, Health & Kinesiology will need strong leadership that understands the unique, multi-disciplinary work that is done in this discipline. Since no one from HLKN was interviewed or asked to complete a survey regarding this report, I strongly encourage leadership to meet with our faculty to understand our unit before making any decisions. We are fiscally strong, growing in student majors, and have made incredible gains in our research dollars over the past two years. We deserve to be placed in a college that will provide us the freedom and opportunity to continue to be leaders on the TAMU campus.

The College of Education and Human Development (CEHD) at Texas A&M is ranked #39 overall and continues to increase in rankings annually. Individual CEHD departments/programs in Curriculum and Instruction, Educational Administration and Supervision, Educational Psychology, Higher Education Administration, Secondary Teacher Education and Special Education are highly ranked. Contracting HLKN to SPH and the Technology Management Degree in the Department of Educational Administration to the Department of Engineering Technology will effectively cut the size of CEHD in half. This no doubt will have an adverse effect on the remaining programs/departments. It is my sincere hope that leadership does not intend to dissolve CEHD as this would surely result in a "brain drain" loss of faculty, grant funding, and donor dollars. Most of the functions of CEHD are unique and aren't duplicated in other units on campus. For example while it may seem to those outside the profession that Educational Psychology (EPSY) duplicates Psychological and Brain Sciences (PBS), this is not accurate. First of all, EPSY is ranked #16, PBS is ranked #66. I'm not sure of the funding situation in PBS but EPSY brought in 20 million+ in new external funding this year already. EPSY has 6 divisions/programs that are not represented in PBS. If the idea is to push out HLKN and Technology Management so that the rest of CEHD will be divvied up into other colleges excepting teacher prep, it will have an adverse effect on some of the best and highly ranked programs at Texas A&M. I fear that the Texas A&M community will lose world renowned scholars and as previously mentioned, funding and donations. As for peer institutions, most have vibrant colleges of education with high levels of scholarship. If not, some of what we have here in CEHD (i.e., EPSY and HLKN) would reside in a college of human development and family studies (commonly known as HDFS). Re-homing most of the CEHD departments and programs into other present colleges would not be in line with our peer institutions and again would result in low morale, brain drain and ultimately loss of funding. If we want to be the best university in Texas we can not contract CEHD. Look at UT-Austin for reference: <https://education.utexas.edu/>. Is there something about colleges of education that our consultants and our new leadership know that we are unaware of? Contracting Texas A&M's CEHD basically cedes all of our hard work and recognition to other Texas institutions. From what I'm reading these realignments have more to do with efficiency and assumed duplication than about being the best we can be academically. A cursory look at the number and variety of programs in HLKN and SPH here shows little duplication and HLKN has a large number of

undergraduate programs that make sense in CEHD but not in SPH. Clearly EPSY and PBS are very different and both have been successful independently. I came here because I wanted to help grow a developmental sciences program in CEHD and contribute to the great work going on in EPSY, CEHD and at Texas A&M. I trained in traditional Psychology Departments at Boston University (Ph.D.) and at Wisconsin (postdoc) and my first tenure track job was in a Psychology Department. But in less than 5 years in EPSY at Texas A&M I have been very lucky to be part of an excellent unit with exceedingly high professionalism and morale, top-level scholarship and highly ranked programs. It would be a shame for the state of Texas, the Texas A&M community and for our students and colleagues if CEHD, and in particular if EPSY and HLKN were to be dissolved or contracted.

---

Recommendation #1. Combine Colleges to a New Arts and Sciences College Very radical recommendation. Faculty at Statistics Department are concerned that our rankings and efficiency will be affected. I see this recommendation as risky. The rationales are made by cherry picked "peer institutions." The San Diego University is definitely not a TAMU peer institution. True for some other schools from the list. Yet a strong rationale was that "12 of 19 peer institutions use this model." One could propose 20 closer peer-level schools where none of the schools use this model. Instead of "four-legged stool structure: Arts and Sciences, Engineering, AgriLife, and Texas A&M Health" why not have a five-pointed star structure: Arts, Sciences, Engineering, AgriLife, and Texas A&M Health? Collège of Sciences and Geosciences to form a new College of Sciences The College of Arts as a separate college -- this will be more efficient for a school of 70+K students. Recommendation #5. How about argument against "Only 1 of 20 peer institutions use this model." On a serious note, Department of Biology is strongly integrated with the rest of departments in the current College of Science. The existing strong links between departments of Biology and Statistics will be affected. For example, Department of Statistics recently had a SOAR Vision retreat. The Bioinformatics, Biostatistics, and outreach to Biology department was articulated as #1 research recommendation. More than 10 faculty are successful in bio-related research and extramural funding. Examples of close links are now traditional Symposium on Bioinformatics (joint venue of Biology and Statistics Departments) or a vibrant Center for Statistical Bioinformatics My feedback to this recommendation is that a new Institute for Biological Life Sciences is good idea as a research umbrella but the department of Biology should operationally stay in College of Sciences with the rest of science disciplines.

---

A new department of journalism in the College of Arts and Sciences has the potential to duplicate the "agricultural communications and journalism major/minor" in College of Ag and Life Sciences. The University Libraries support student success across all colleges/schools at the University and to continue this work should continue to be their own college and report directly to the Provost. This model mirrors the reporting line of all peer institutions named in the report, which all have the Libraries separate from other colleges and reporting directly to the Provost (p. 116). The listing of universities in the report to justify moving Health and Kinesiology to the School of Public Health only included two peer institutions. There are four peer institutions that do have their departments of Health and Kinesiology within the College of Education. Further analysis would help determine which the degree programs in Health and Kinesiology would best fit in which college/school.

---

Feedback: Recommendation #9d: Consolidate the Department of HLKN in the SPH including clinical research associated with HLKN. I fully support the entire Department of Health and Kinesiology (HLKN) moving to the School of Public Health. I truly think that the department's mission and goals align very well with the School of Public Health and Texas A&M Health. However, it is crucial that the entire department remains intact to ensure the continued success and growth of HLKN and our students. There is such a connection between the divisions and departments in regards to research, teaching, and service. Additionally, we also have a large role and service/research to Texas A&M Athletics within this department through various clinical rotations and research endeavors. We not only see this for faculty and our students, but also for the entirety of students that come through our doors and are a part of Texas A&M University. This is essential in our commitment to our students and their success during their time here. With the support of the department's programs in Athletic Training, Sport Management, Sport Performance, and through the Huffines Institute for Sports Medicine and Human Performance, and researchers in the Human Clinical Research Facility (HCRF), Athletics successfully competes in the SEC. In addition, the tremendous services provided to the university community, as well as local and state occurs interdivisional and interprofessionally between the four divisions in HLKN of Health, Kinesiology, Sport Management, and Physical Education Activities Programs along with the Huffines Institute for Sports Medicine and Human Performance, the Thornton-McFerrin Coaching Academy, and the Human Clinical Research Facility. The other strength of this department staying intact is the fact that students need both their core curriculum requirements and ICD/CD requirements. This is met for again not just our students but is also a service this department has to students across the entire university. We teach a lot of students within our department and courses that help move students

towards their degree completions and doing so faster than if we would be separated. Out of the course offerings, HLKN services about 17% of the total undergraduate enrollment at TAMU. Additionally, about 22% of all student-athletes are HLKN majors. Through our department and it staying intact, we help these students meet their course/credit requirements and also offer various courses during the summer and mini-mester semesters to help them take courses when there are fewer demands on their sports schedules. Not keeping the entire HLKN department together would have a large negative impact on student offerings and student success. In conclusion, I fully support moving HLKN to the SPH as an intact department. I understand that Recommendation #2 moves the Dance Science program to a new School of Visual and Performing Arts. The Dance Science program is a Kinesiology degree so my hope would be if this occurs, that Dance Science is able to maintain its connections to HLKN and Kinesiology since it has been developed very uniquely as a science-based program, versus strictly dance studies or performance program which is not unique within Texas or nationally.

---

In addition to previous comments, the Dance Science Program would like to see HLKN moved to the College of Arts and Sciences as that would help facilitate our Dance Science Kinesiology degree without needing to approach the coordinating board about a new degree plan that would most certainly have overlap if Kinesiology were moved to School of Public Health. In this way, we can maintain the unique degree plan we offer as one of the few programs in the US to offer a Dance Science degree as well as build the artistic and performance side of our program.

---

Reading recommendation 1: Geoscience and Science make sense. Arts bring completely different view, understanding and may slow the progress for Science colleges which already have high potential. Reading recommendation 2: Visualization is an important department may fit under science (not with art together) but may also has better resources if under engineering. Reading recommendation 3: Journalism was closed and the faculty have been moved to other departments. It does not make sense to establish again. Reading recommendation 5: Institute of Biological Sciences sound great but this needs to be under College of Science NOT agriculture due to the progress of Biological Sciences. Many strong faculty applied or stayed with this department because it is under Sciences not Agriculture. Students have the same sentiment applying for this degree. Reading recommendation 6: this goes together with the recommendation 1. Geoscience and Science make sense under Science and Library sciences make sense under arts but not together.

---

The initial report mentioned the realignment of the Health program within Health & Kinesiology (HLKN) to move to the School of Public Health. However, there was no mention of the other academic programs within HLKN - specifically Sport Management (SPMT). Sport management certainly evolved from physical education but has since become its own distinct academic discipline which is represented by the research focus of the 10 tenured/tenure track faculty in SPMT. The sport management discipline focuses on the business management, marketing, and social aspects of sport in society. Our research faculty are directly involved with sport organizations ranging from Texas A&M Athletics, the International Olympic Committee, Dallas Cowboys to grassroots programs in Africa that seek to leverage sport to provide educational opportunities and economic advances to women. Granted this research may seem broad, but 6 of our 10 tenured/tenure track faculty have been recognized as Research Fellows of the premier sport management academic society - The North American Society for Sport Management. Two of these faculty have also received the society's highest award. Our faculty as active researchers and strongly represent Texas A&M at conferences and in industry. This is to say, that Health and Kinesiology is not the strongest fit or alignment for the Sport Management program. The sport industry is a service-based industry and our graduates seek vastly different employment opportunities than other students in HLKN. Our program better aligns with RPTS or other entertainment/service-based industries. The research that our faculty produce is also aligned with RPTS or service-based disciplines. Sport Management does not belong nor does it align with the College of Education and Human Development nor well in the School of Public Health. It rather has greater synergies with Recreation, Parks, and Tourism whether that is housed in the College of Agriculture or under a different pillar of campus.

---

**Academic Realignment** Although there is much to comment on in this section of the document I shall restrict myself to comments regarding my colleagues within the College of Science/Biology. Finding #5 Confusion – I agree that having undergraduate and graduate biology courses in multiple departments and colleges is confusing, but that mirrors the breadth of the biological sciences. Where does “biology” end and BioChemistry/Medicine/Veterinary Sciences/Horticulture/Bioengineering “begin”. All academic institutions across the world have to deal with this issue, moving all the biological sciences under one college will not change this. I am sure that moving Bioengineering into the College of Agriculture would not be popular. Competition – The statements in Finding 5 regarding “competition for resources” misses the point. Having a broad faculty in multiple departments is actually a benefit for cross-pollination of ideas between departments and sub-disciplines. Metrics – If the move to consolidate biology programs is driven by

metrics, then the report would have been more helpful if a cost-benefit analysis had been presented for consideration. Perception of the Biology department – “Based on comments during the interviews, there is a perception that the current Department of Biology is under performing..” I find this statement perplexing. Over the last 5 years the Biology department has been on an upward trajectory, driven by a Strategic Plan (which has since been exploited by other departments across campus). The quantifiable metrics show that for both teaching and research the Biology department is not under performing. As an example, even a cursory analysis of research funding, as assessed by the analysis of NIH Reporter data, the Biology department has 15 current R01/R21/R35 grants generating ~ \$5.5 million dollars for the current fiscal year. The whole of the School of Medicine with 100 + research active faculty across 9 departments only has a combined NIH funding of ~ \$7.5 million. Perception is not fact. Page 30 – “Most peer institutions do not have a stand-alone biology department,” This statement is clearly false. See below. In addition on page 125 of the report – “Biology Review of Peer Institutions” is the statement – “Biology programs are predominately in separate schools and colleges.” These statements are clearly at odds. An analysis of “Appendix 3: Peer Institution Review” on page 118 indicates that the Peer Public Land-Grant Universities DO have stand-alone Biology/ Biological Sciences/Cellular Biology/Cell and Developmental Biology departments or programs, all within Colleges of Arts and Sciences or Natural Sciences. The only exception to this is Cornell which is a private University. Also Biology departments and programs are not placed within Colleges of Agriculture, except Cornell. Recommendation #5: Investment – “Of note, there will need to be significant resources committed to facility renovation to ensure that the Institute faculty and students have the adequate infrastructure to succeed.” If this report is to be implemented upon, I would hope that the President would be able to provide the resources, but as discussed elsewhere, as there are no indications of costs this is difficult to determine.

---

The Dance Science program is deeply rooted in the Dept. of Health and Kinesiology. This degree integrates the art and science of dance providing students with the training necessary for performing and choreography and with the information to keep a dancer's body trained and free of injury. This program was the first Dance Science program in the United States and has become the standard other programs use to develop their programs. We would love to continue to grow our program and begin to use complex motion capture laboratories. Our students are also very engaged in performances. Currently, the only space available to us is a black box theater that we designed and built in the Physical Education Activity Building. This program is integrated in the PEAP program as well. We offer Pilates Apparatus Training for our student and teach them how this information can be used to condition and rehab dancers. We would love to expand our offerings in Pilates as well. Our goal is to have a Pilates Center that would certify college students prior to graduation. We have created curriculum for this minor that students could add to their studies but we have not had an opportunity to submit this work. We have designed the Kinesiology: Dance Science track degree to offer different avenues for our students from pre-PT to education in K-12. With our current degree our students have been very successful being accepted to professional schools and obtaining jobs in K-12 in dance and science. We believe movement analysis is a crucial skill for all dancers and having an intellectual command of muscular systems and how to train them is essential. Our program is a beautiful balance of Science and Art.

---

Recommendation #1: The Department of Performance Studies is well-positioned to serve the needs of a combined College of Arts and Sciences, given the Department’s commitment to interdisciplinary arts and humanities scholarship. Performance Studies is a voracious discipline, and bringing it into contact with even more units in the Arts & Sciences, can be phenomenally productive for generating new interdisciplinary work. Indeed, even before the report was published, discussions among Performance Studies faculty had begun to imagine a new phd program in interdisciplinary arts and humanities research - such a program would contribute much to a newly combined College of Arts and Sciences. Recommendation #2: Establishing a School of the Arts would be truly transformative to this campus, I would love to see a greater emphasis put on the arts across all our curricula at the university, and a commitment to foregrounding the arts that a School of the Arts could provide. It is essential that Performance Studies maintain its disciplinary identity as Performance Studies, whether it is located in the College of Arts and Sciences or the School of the Arts. On page 25, the authors of the report note that the strengths of the department of Performance Studies “lie in emphasizing performance as research and research methods to examine the performing arts.” These strengths would certainly be enhanced by being housed alongside traditional departments of Theater, Drama, and Dance; of Music; and of Art and Design. What Performance Studies is and does is different from each of these, however. To best serve the goal of increasing effectiveness and transparency and contributing to overall student success, the Department of Performance Studies must continue to grow as a leader in its field and as an independent department. Performance Studies is an arts and humanities discipline that uses performance as a lens to study a wide range of phenomena. For example, my own research looks at the work of diplomats (in speeches, debates, treaties, etc.) as a mode of

performance. While at many schools Performance Studies is housed in theatre departments, communications departments, American studies departments, or other places, the dedicated Department of Performance Studies at Texas A&M is quickly developing a national reputation for its interdisciplinary scholarship, and as a leader in undergraduate education in Performance Studies. Performance Studies is a unique research discipline, and the faculty in our department will continue to do ground-breaking research wherever they are located, but they do not have the credentials or training necessary to populate and deliver competitive conservatory programs in Theater or Music. The programs recommended by the report will require extensive new hires among creative faculty in order to be successful. Maintaining our vibrant department of Performance Studies alongside these new departments of Theater and Music would be mutually beneficial, however, and would help ensure their success. Our programs in Performance Studies would attract students who find that the narrow training a conservatory provides does not serve them well, and we could push the work of our creative colleagues in exciting and innovative ways. For the new School of the Arts to be competitive in the state and nationally will require innovative approaches to arts education; I think that maintaining and highlighting the approach of the Department of Performance Studies, where performance serves the university's research mission, is one way the new School could develop a unique identity. The report argues that "there is an opportunity for TAMU to create a niche in the state that emphasizes STEAM education." The Department of Performance Studies is already pursuing this goal, as is evident in publications like Dr. Leo Cardoso's *Sound Politics in Sao Paolo*, or a recent issue of the *International Journal of Performance Arts and Digital Media* co-edited by Dr. James Ball. The interdisciplinary nature of Performance Studies will allow it to contribute much to a School of the Arts conceived with STEAM in mind. Recommendation #9a: Performance Studies is by definition an interdiscipline – it began as a fruitful collaboration between a theatre scholar and an anthropologist, and as it has grown it has incorporated many other interdisciplinary connections (again, my own work lies at the intersection of theater studies and political science). At Texas A&M, the core faculty of the department brings together ethnomusicologists, dance scholars, film scholars, and theatre scholars. Our faculty include members who are co-appointed in Religious Studies and Africana Studies, and several affiliated with Women's and Gender Studies. These interdisciplinary affinities make Performance Studies an ideal home for the University Studies degree program in the College of Arts and Sciences. As a department we see ourselves as the most committed to interdisciplinary work at Texas A&M, and extending that approach to guiding undergraduates through their own interdisciplinary curricula would be a natural fit. Indeed, it would be worth considering the value of renaming the department to the Department of Performance and Interdisciplinary Studies and making it the formal home for interdisciplinary scholarship in the College of Arts and Sciences. Recommendation #6: As a faculty member with both research and teaching responsibilities I find that the work our libraries and librarians do is essential to my success. It is very important to me that the librarians I work with each day are faculty members and peers at this institution. It is also important to me that they be allowed to continue to focus on their work as librarians, without added teaching burdens that might be required in a new Department of Library Sciences. Each semester I work closely with my subject librarian and specialized librarians at Cushing Library to advance research projects (e.g. taking advantage of the Science Fiction collection for an article on robot performance) and to enhance my classrooms (e.g. workshops with the maps collections or on book history). These engagements are only possible because we collaborate as peer faculty, and because I recognize the value of the librarianship they practice each day. Any changes to our libraries must continue to emphasize that value. Recommendation #9b: A renovated or new small animal hospital is sorely needed. As a client of the hospital, I have seen how cramped and increasingly obsolete those facilities are becoming. The care my pet receives is excellent, but should be matched by the quality of the facilities.

---

One of the reasons why I chose to work in a department of Geography is the fact that this department is part of a College of Geosciences. Geography departments can sometimes have a strong emphasis on humanities. I would like to suggest the creation of a School of Geosciences under the umbrella of the new College of Arts and Sciences. Some of the main concerns include our Environmental Sciences Program and the IODP grant.

---

The Department of Economics has no interest in being part of the Bush School. It is not where we belong and our focus is sufficiently different from the Bush School's that it would lead to a serious degradation in the quality of the Department. Much of this reorganization is reasonable; there is far too much duplication of senior administration on campus. But Econ does not belong in the Bush School.

---

Although I am new faculty, I am in the Biology Department and have had experience at previous institutions so will provide comment here. Recommendation #1: I am supportive of the plan to create a new College of Arts and Sciences. This is indeed an integration of foundational disciplines that is sensible and provides a coherent framework for the mission of those departments, the production of foundational knowledge. Recommendation #2: I whole-heartedly

support the recommendation to invest in the arts and to create a School of Visual and Performing Arts. As a scientist with an undergraduate degree in visual art, I have long believed in the power of integration between art and science and the potential for growth of the arts at TAMU is an exciting prospect to me. Recommendation #3: I am not an expert on journalism, but you don't have to be one to know that it is an essential component of our society and democracy. I see no downside to the recommendation to establish a Department of Journalism. Recommendation #4: I do not have input on the recommendation to expand the Bush School. Seems like a worthwhile investment but I am relatively uninformed on this topic. Recommendation #5: As new faculty in the Biology Department who has already established some synergy with other departments in the current College of Science, I sincerely ask that the administration reconsider this recommendation to move the Department of Biology out of the new College of Arts and Sciences. When I recently went to the faculty and staff meeting for the College of Science and listened to a summary of research programs of new faculty in other departments, I was deeply saddened to imagine being in a separate college from Physics, Math, Chemistry, and Statistics. Within the tradition of higher learning, these foundational disciplines are essential cohabitants. There is a new math/bio program that is being developed and my lab is already becoming part of that inter-departmental collaboration. I was surprised to read in the report that most peer institutions do not have a stand alone Biology department. In fact, all of the institutions I have been affiliated with have one. (University of North Carolina, Duke, and Indiana University). I was also surprised to see that, evidently among some, there is a perception that the Biology Department is underperforming. My observation is quite to the contrary of that--the department has successfully recruited strong new faculty (myself included) and the success rate for federal grants is quite high. I believe our department is currently projected (based on award notices and funding scores) to receive > 10M in federal grand dollars this year. It also is very clear that the department is functioning at a very high level in terms of undergraduate education. Based on casual conversations I have been part of or listened to in my short time here, this is something that faculty in this department have invested in heavily and are very proud of (as I believe they should be). Recruitment and retention of first-gen students and students from underrepresented groups is quite high and, unlike many departments and institutions as a whole, the Biology Department does not have an achievement gap in terms of graduation rates. In fact, I have not seen a single metric that supports the reported perception that the Biology Department is underperforming. I can also just share my personal perception that it is a highly functional department. This does not mean there are not disagreements or differences in perspectives among faculty at times! Indeed, by my standards, the most functional organizations are ones where disagreements can be shared (though with civility of course). This capacity for periodic--not chronic--disagreement among civil and reasonable people has been demonstrated among faculty already. I am on a search committee right now for 5 new faculty hires and am eager to contribute to the ongoing growth in a functional and productive department. The Biology Department, by all objective measures and by my own subjective perception, is on a steep upward trajectory. With its demonstrated record of producing substantive returns on institutional investment, I hope that the administration will reconsider it's plans to shuffle the structure of this department. Recommendations 6-9: I have no input to provide on these recommendations.

It is unclear where the poor perception of Biology comes from with respect to education: 1. The average time to degree for the Department of Biology BA/BS programs is just under 4 years. 2. Significant changes have been made to Introductory Biology courses, and DFWQ rates have gone down from 41% to 11% from Fall 2015 to Fall 2020. As, these courses are the gateway courses for all life sciences majors, this reductions means 731 additional students will make progress towards their degree in 2021. 3. Increased success in these introductory courses has not come at the expense of student learning. Assessments at the beginning of year 2 have remained constant or improved slightly in the different categories. 4. University retention of first year Biology majors from fall 2015-2020 has gone from 83.9%-95.9%, which is greater than TAMU's overall rate of 94.3%. 5. Biology eliminated the retention gap between high risk groups (first generation, Pell grant recipients, URM) and the rest of the student body. 6. UG majors in Biology have increased 57% since 2016 while overall growth for the university was just 12%. 7. Graduation of first generation students has increased over 80%. This increase tracks with the implementation of the BioFirst program in the department that targets incoming, first generation students. Part of this program helps students integrate into the department and make connections to the faculty they will be interacting with as they progress. If students are placed into an umbrella program, these personal interactions are lost. 8. As someone who teaches First Year Experiences, students are having no difficulty changing between the life science majors across colleges. It is unclear what would be gained from an umbrella program, as these students are already taking the same biology and chemistry classes. Furthermore, the math that is required for the different disciplines is different (and needs to be different for future courses). Thus many students could actually increase time to graduation because they took the wrong math and now need to take additional courses. If the problem

is changing majors, fix that. Additionally, all peer institutes house Bio departments (whatever they name them) in the CoS or equivalent. Only Cornell is in Ag. Biology majors require courses in chem, physics, math and stats which are CoS. The only courses required in Ag are biochem and genetics, which in most other institutions are part of their CoS. Thus, it makes sense to keep Biology in CoS.

Academic realignment is a matter that requires input from faculty, data-driven analysis and careful consideration, but this was not the process used here. Recommendation #1 proposes that the Colleges of Science, Geoscience and Liberal Arts merge to form a College of Liberal Arts and Science. This is based on "findings" that many other peer institutions use this model. There is no cost/benefit analysis as far as proposed cost savings in administration, no input from stakeholder faculty and staff and no consideration of the differing missions of these individual colleges. Establishing a School of Visual and Performing Arts in Recommendation #2 is a reasonable idea, but again suffers from no cost/benefit analysis, no input from stakeholder faculty and staff and no consideration of the differing missions of the affected units. The proposed Department of Journalism in Recommendation #3 seems to be an antiquated idea. Print media is dying and journalists can't find jobs, which is why the department of journalism at TAMU died years ago. In 2021 there is no good justification for a new department of journalism. Recommendation #4 seems to have merit. Of course there should be buy-in from stakeholder faculty and staff, who should decide how such a merger would occur. Recommendation #5, the creation of an Institute of Biological Life Science by moving the Department of Biology and the Biomedical Science program into the College of Agriculture and Life Science, is based on factually incorrect information, slander of the biology department by one or more of the unnamed people who were interviewed by MGT, and the adoption of model life science organization that is not used by ANY peer institutions in the USA. The report claims that "most peer institutions do not have a stand-alone biology department", which is factually incorrect. Among the 20 peer institutions used to produce the MGT report, 11 have stand-alone Biology Departments and the remaining nine institutions have two or three departments comprised of biological science disciplines. The report asserts that "based on comments during the interviews, there is a perception that the current Department of Biology is underperforming and there would need to be a significant investment to bring the productivity up to an acceptable level." The facts do not support this assertion. In 2019 the Department of Biology used a Strengths, Opportunities, Aspirations, Results (SOAR) strategic planning framework to develop a 10-year strategic plan. Since Biology enacted its strategic plan eleven faculty have been hired, including a new Department Head, and new and pending (i.e. those being transferred to TAMU plus applications with fundable priority scores) federal grant awards to Biology for the first 10 months of 2021 are in excess of \$20 million. This level of success in attracting talent and federal support is not consistent with an underperforming department. Biology has led the way in decreasing DFQ rates (without inflating grades) and increasing retention, particularly among first-generation and underrepresented students. This also isn't the mark of an underperforming department. Many other examples of excellence emanating from the Department of Biology could be included. The Department of Biology is on a definitive upward trajectory, and a pathway towards increased rankings is clearly described in the strategic plan. Removing the Department of Biology from the College of Science would deprive the College of a fundamental natural science. There is not a single peer university in the USA in which biology/biological sciences is not represented as either a stand-alone department or as multiple departments in a College of Science or a College of Arts and Science. The report presents the organization of life sciences at Cornell University as a model for TAMU. Cornell is the only university in which Biology is housed in the College of Agriculture and Life Science, and even at Cornell Biology is shared with the College of Arts and Science. Even with Biology partially in the College of Agriculture and Life Science at Cornell, the College of Arts and Science at Cornell has three biological science departments (Ecology and Evolutionary Biology, Molecular Biology and Genetics, and Neurobiology and Behavior), thus having Biology in a College of Agriculture and Life Science is an outlier model and the organization at Cornell doesn't deprive the College of Arts and Science from having biological science departments. 4. The report also asserts that the new Institute of Biological Life Sciences "will allow for easier collaboration for the biologically oriented faculty in the College of Agriculture and Life Science to collaborate with faculty throughout the university working toward similar interests." Collaborations in the biological sciences are based on mutual scientific interest, not on administrative structure. There is little evidence that administrative structures or proximity of labs (other than groups studying the same problem) produces a greater level of collaborative research. Importantly, the mission of Biology is different from that of the life science departments in the College of Agriculture and Life Sciences. The Department of Biology conducts basic research to reveal fundamental principles underlying biological systems and processes, whereas life science departments in the College of Agriculture and Life Sciences apply the basic understanding of biological systems and processes to improve crop and animal health/production. These differing missions suggest that moving Biology to the College of Agriculture

and Life Sciences would result in a mismatch at the most fundamental level while separating Biology from departments in the College of Science that conduct fundamental research in chemistry, physics, statistics, and math. The report claims that splitting the undergraduate biology “programs between three colleges creates confusion for students about appropriate majors and creates barriers to changing majors which results in increased time to graduation”, which would be solved by combining Biology and Biomedical Science programs with life science students in departments in the College of Agriculture and Life Science to create the Institute of Biological Life Sciences that would administer a unified first year curriculum. Biomedical Science and Biology undergraduates represent 69% of incoming life science students, with the other 31% coming from multiple College of Agriculture and Life Sciences departments. Biomedical Science and Biology students already follow the same curriculum in their first year. The most straightforward solution to the problems noted in the report would be for all life science students in the College of Agriculture and Life Sciences to follow the curriculum used by Biology and Biomedical Sciences. This can be most easily accomplished under the current administrative structure, where the first-year curriculum would be administered by the Department of Biology as they developed the curriculum and teach the core first year biology courses. Given the false data, slanderous opinions and the unjustified/unprecedented life science organizational models being proposed, I am confident that the teaching and research missions of TAMU are best served by the Department of Biology remaining as a core department within the College of Science, where the research mission is primarily oriented towards fundamental discovery rather than applied science. Recommendation #6 is to create a new Department of Library Science in a new College of Arts and Sciences. This may be a reasonable idea, but again suffers from no cost/benefit analysis, no input from stakeholder faculty and staff and no consideration of how such a department would fit in a College of Arts and Sciences. Recommendations #7 and #8 seem reasonable as long as there is a detailed cost/benefit analysis and buy-in from stakeholders. Recommendation 9a concerns moving the university studies degree program to a College of Arts and Sciences. I see no justification for having a university studies degree at all and believe that it should be eliminated. I agree with recommendation 9b to refocus the College of Veterinary Medicine to its core mission and to construct a small animal hospital. All other colleges should also be allowed to refocus on their core missions rather than dilute those missions as is proposed for the creation of a College of Arts and Sciences. I also agree with recommendation 9c to refocus the College of Architecture to its core mission. Again, all other colleges should also be allowed to refocus on their core missions rather than dilute those missions as is proposed for the creation of a College of Arts and Sciences. I agree with recommendation #9d as long as a cost/benefit analysis and input from stakeholder faculty and staff support such a recommendation.

---

Recommendation #9d: Consolidate the Department of HLKN in the SPH, including clinical research associated with HLKN. I fully support the entire Department of Health and Kinesiology (HLKN) moving to the School of Public Health (SPH). I feel that the department’s mission and goals align well with SPH and Texas A&M Health more so than with College of Education and Human Development (CEHD). However, it is imperative that the entire department remain intact as the evidence-based success of the department is due to the essential interconnections that exist between all areas of the department in regards to teaching, research, and service. These interconnections not only support HLKN students, but also provide tremendous support campus wide in our undergraduate course offerings, which serve 17% of the total undergraduate enrollment at Texas A&M–College Station in addition to providing essential courses to fulfill the ICD/CD requirements. Separating our units will negatively affect student offerings and student success. The interconnectivity of the department also provides essential services to the Texas A&M Athletics Department by way of clinical and research support as well as providing undergraduate and graduate interns and fellows to support their programs. With the support of the department’s programs in Athletic Training, Sport Management, Sport Performance, and through the Huffines Institute for Sports Medicine and Human Performance, and researchers in the Human Clinical Research Facility (HCRF), Athletics successfully competes in the SEC. In addition, the tremendous services provided to the university community, as well as local and state occurs interdivisional and interprofessionally between the four divisions in HLKN of Health, Kinesiology, Sport Management, and Physical Education Activities Programs along with the Huffines Institute for Sports Medicine and Human Performance, the Thornton-McFerrin Coaching Academy, and the Human Clinical Research Facility. In conclusion, I fully support moving HLKN to the SPH as an intact department. I understand that Recommendation #2 moves the Dance Science program to a new School of Visual and Performing Arts. The Dance Science program is a Kinesiology degree so my hope would be if this occurs, that Dance Science is able to maintain its connections to HLKN and Kinesiology since it has been developed very uniquely as a science based program, versus strictly a dance studies or performance program which is not unique within Texas or nationally.

Because I work for the Department of Health and Kinesiology, my comments will focus on Recommendation #9d: Consolidate the Department of Health and Kinesiology in the School of Public Health, including clinical research associated with the Department of Health and Kinesiology. Moving the Health division from the HLKN department is understandable, but it'll be problematic with all other divisions included, i.e., Kinesiology, Sports Management, and PEAP because these divisions can be standing alone without associating with the SPH. I heard someone proposed breaking the HLKN apart and moving to separate sections. However, as a unit, our department has worked together to build our curricula and develop our mission and vision. Breaking it apart will have to force many faculty members realign their curricula with the receptive section. Based on the number of students and faculty, I'd suggest upgrading the HLKN department to School of Health & Kinesiology while integrating the existing SPH. This way, we can consolidate the sections while keeping the integrity of both HLKN and SPH.

---

Many of the findings/proposed realignments seem fine to me. However, I am a bit concerned about the proposal for my department. I am in the sport management division within HLKN. The thought of realignment is attractive for our program but our program (sport management) would be miscast in the college of public health. Frankly, we do not fit well in our current department anyway. Our program focuses on advancing scholarship and creating practitioners in the sport industry. In that regard, much of our program focuses on business aspects of sport (i.e. event operations, managing organizational structures, marketing and promoting sport events). Thus, I'm not sure we fit within a department or college that largely focuses on figuring out exercise and health interventions. If the goal of this report/consultancy was to figure out how to best align programs and departments where they make sense, the sport management program (which currently serves 1000+ students in our university... and houses some of the top researchers in our field) does not fit with HLKN as a whole nor would it fit with school/department of public health. Last note... our sport management program is generally considered one of the top programs in the country/world. From a scholarly standpoint, we have two Zeigler award winners (the top researcher award in our field) and 6 of our 10 tenured/tenure-track faculty members are research fellows in our largest sport management association (North American Society for Sport Management). We have partnerships all over the world and have multiple robust academic program offerings. Thus, academic realignment is a good thing...especially for our department (we do not fit with the College of Education and Human Development)... I would like the president and whomever is involved in realignment decisions to understand that our program is the black swan in our department and would fit better with other units across the university (e.g. Rec, Parks, and Tourism, or even the new performing arts college as sport is an entertainment endeavor).

---

I am full support of the proposal in regards to Academic Realignment and support for a new Visual and Performing Arts School. I believe it is important to look to our peer institutions to stay competitive and relevant as a leading R1 institution. Art and Science Initiative: A&M is well positioned to be a leader in the Art and Science Movement. Although there are some current A&M programs and departments that engage in this area (ie. Visualization), the institution could be much more forward thinking in this area. The Visualization Department currently focuses on "Computer Science" and Art - however, the "Science and Art" movement is so much broader than this - such as Bioart, Ecoart, etc. While there are many great Art Programs across Texas colleges and universities, the focus is mostly general in nature. We could set ourselves apart from these other institutions by having a strong focus on Science and Art Collaborations. Note: There are other institutions across the nation that are opening up majors in the area of Science and Art, (such as SVA, NY) but these institutions do not have the resources that we have in regards to world-renown research, facilities, funding, and perhaps a new Natural History museum. Creativity is a critical quality that we need for the 21st century in order to help solve some complicated challenges that we face. The arts can help nurture and develop this in our students, no matter what field or discipline. Many other local institutions are seeing the value in investing in the arts - Rice (traditionally a school not recognized for a place to major in Art) is now creating a large Art Complex on campus in hope of growing in this direction. There is talk that UT will be opening a satellite Arts Campus in Houston in the next ten years. I believe that it is not optional but necessary for A&M to move in this direction to remain a relevant, leading institution or it will be left behind. Again, in all of these initiatives, finding the right experts to help us move in this direction will be imperative. Otherwise, efforts could be futile. Recommendation #2 I believe that it is in the Department's best interest to move to College of Arts and Sciences and be part of the newly formed School of Visual and Performing Arts. We have much to gain in this initiative, such as new faculty, resources, facilities, etc. There is a strong hesitancy in the department about this proposal, mostly because there is a fear of change and growth, and the "Computer Scientists" in the dept are fearful of the programming swinging too much in the art direction. Many are claiming that they "like" being in the COA. However, I feel like while being associated with the College of Architecture

seems strategic in theory, it does not translate well in practice. The reality is that there is not a lot of cross-pollination or partnership in regards to programming between the departments. While change is always challenging, I see us having more potential for cross-disciplinary opportunities and global exposure than what currently exists in COA. Again, Texas A&M is well-positioned to be a leader in the Science and Art Academic Movement - other schools are currently investing in this direction but do not have the same resources and ground-breaking research that A&M has in this area. "Science" is so much more than "compute science". Visualizations can be broader than industry, business, and entertainment. I see this new initiative as a way to facilitate necessary change, think larger, and to position VIZ and A&M to be leaders in the 21st century. As a professional artist who teaches at A&M, I frequently get comments from friends, family, and colleagues such as "Why are you teaching at A&M? There is no art community or programming over there?". This is somewhat embarrassing for me and I have to back peddle and explain that there are efforts/projects related to the arts (ie. the new Engineering building). But A&M is a R1 University, this should be a point of pride for our school, on par with our football team. I am very excited about this study. I think it is overdue and time for A&M to invest in the Arts, be forward-thinking and leaders in this field as we are in Engineering and the other Sciences.

I would like to address the move of Construction Science to Engineering specifically. I honestly have tried to think of all sides of this decision and weigh the pros and cons in a logical, un-biased manner. There are probably some areas I haven't thought about and I acknowledge that as well. Overall my thoughts are that the Construction Science Degree is FAR more aligned with a Business Degree than an Engineering one. Had anyone asked our faculty I believe they would have discovered this. Our degree is one of managing the Business side of the construction industry, not designing it. Our graduates work with engineers, but the vast majority of the contracts they administer are with architects. It is far more important to be able to understand and work with architects than the engineer side. If any move made sense, business would, but not engineering. I think we should stay in architecture and work on perceived and real problems here. The reality is that once these students graduate, it is the architect who plays the biggest role on the sites.

What is the percentage of the current VIZ faculty who are in favor of realignment?

I am not sure what academic realignment is and I am awfully worried about what I read in the report. The report starts with saying that things are decentralized at Texas A & M and they need to be centralized. Well, in the college of engineering, the president (who was then the dean of engineering) said the same exact thing and centralized many of the resources we have in the departments. Things have gotten worse over the last 6-7 years than what it was before she was the Dean. We had more resources for students, the cost of education for students was much lower and faculty also had more resources to help the students before. Now, what she is trying to do is to replicate this at the University level which is not definitely the right direction to go. To me, it seems like the President has already decided what she wants to do and using this whole process like a gimmick. When she was the dean, she never got input BEFORE making the key decisions and this is exactly what she is planning for the University also. I am very skeptical of the directions outlined in the report.

I am opposed to the idea of creating a new College of Arts and Sciences. There is no common ground among arts and sciences, and in peer institutions this usually comes from historical reasons. Currently, the College of Science (CoS) has been very successful by its own, and there is no evidence nor rationale that suggests having the college merged into a bigger one will bring any advantages to the CoS. In fact, by losing a Dean who is totally dedicated to science, it can actually hurt the departments that belong to the CoS. I would like to see a more careful cost-benefit analysis before any decision on this is taken. Instead, I support the idea of creating an Institute of Data Science. This is something that several peer institutions have been doing recently since data science is becoming very important these days. This can have benefits both in creating a specialized unit for students who might be generally interested in this field and for which careers are in high demand), and also to strengthen research in this multidisciplinary area, both within departments working on the fundamentals of data science as well as collaborations across the university since everybody needs to use data.

It is easier to break something than to build something. Justification for changing and consolidating departments and colleges seems to be focused on alignment with the mission of the colleges impacting. The mission of the College of Veterinary Medicine AND BIOMEDICAL SCIENCES has for over 50 years been veterinary medicine AND BIOMEDICAL SCIENCE, for instance. The mission seems to have been redefined by fiat, and then realignment justified in part by misalignment of academic programs with the core mission of the college. This approach to change does seem to be a dangerous loophole in university rule 2.01.99.M1 (University Statement on Academic Freedom, Responsibility, Tenure, and Promotion), specifically section 6 (POLICIES GOVERNING THE LOSS OF TENURE), which can allow tenured faculty to

be terminated (Section 7 The Reduction or Discontinuance of Institutional Programs not Mandated by Financial Exigency), when justified in terms of the mission of a college or department: Section 7.2.2 "Such decisions shall reflect educational considerations based on long range judgments. Those judgments shall be made in consultation with appropriate faculty representatives, including the Faculty Senate or its designated representatives, and reflect the view that the EDUCATIONAL MISSION of the DEPARTMENT or COLLEGE affected or that of Texas A&M University will be enhanced by the reduction or discontinuance." Tenure, arguably one of the pillars of the University Statement on Academic Freedom, Responsibility, Tenure, and Promotion, is meaningless if the mission of a department of college can be redefined by an external consulting group, in absence of due process. The argument for enhancement of the mission of Texas A&M University at the cost of the mission of a College has not been fully justified, neither by examining the written and longstanding mission of the College of Veterinary Medicine AND BIOMEDICAL SCIENCES, the rather focused mission of COALS, nor from consultation with the Faculty Senate. Removal of the Biomedical Sciences Program, focused on health, from the College of Veterinary Medicine AND BIOMEDICAL SCIENCES must be justified in terms of enhancement of the education of students studying Biomedical Sciences and faculty engaged in biomedical research. Arbitrary redefinition of Mission, especially in absence of justification based on data including evaluation of student learning outcomes, lack of consultation with appropriate faculty representations and Faculty Senate, means that tenure can be revoked at whim. It is not only the Biomedical Science Program that can be harmed, but also the system of tenure and the ability to attract world-class scholars and instructors that have the necessary degree of academic freedom needed to innovate. Without a deliberative, data-driven, approach, the trust in Texas A&M as an institution can be damaged. It is easier to break something than build something. First do no harm.

---

The College of Arts and Sciences is a very good idea.

---

President Banks, Thank you for allowing us to provide feedback on the possible changes occurring at Texas A&M University. This process is an excellent way to better ourselves as an institution by more fully recognizing each program's impact on the students at TAMU. I want to take this opportunity to better explain my [REDACTED] program to you in an attempt to add to your understanding of who we are and what we do. Please feel free to reach out if you have any questions or need additional information [REDACTED]. Our Sport Management program is multifaceted; providing leadership, instruction, and scholarship is the vast area of sport. Our Sport Management program trains and mentors future sport organizational managers and global citizens for sport careers and beyond. These careers include, but are not limited to, management, marketing, environmental sustainability, sales, promotions, fan behavior, facility and event management, leadership management, business planning, financial management, and sport communication. The Sport Management undergraduate curriculum was recently redesigned and developed with industry feedback to provide the knowledge, skills, and values graduates need for marketability and success (discipline-specific and transferable). Our courses are delivered in a manner that enhances our students' problem-solving and critical thinking skills so they can apply what they learn in their courses to industry practices. The sport industry is highly competitive, so we seek to provide multiple opportunities for our students to gain experience in the industry. These experiences come through the College Sport Lab (Cotton Bowl Experience and FCS) and the Culminating Experience all undergraduate students must complete for graduation. The Culminating Experience creates opportunities for students to customize their education based upon their future career plans. Culminating Experience options include 1. Internship, 2. Capstone (Entrepreneurship and Consulting), 3. International Experience (Study Abroad, Foreign language development), and 4. Undergraduate Research (Data Analysis, Graduate school preparation, enhanced research skills).

---

I am concerned about the comments in finding #5 which revolved around the Biomedical Sciences Program. I come from a highly esteemed Biomedical Sciences Program (UTGSBS) and did all of my graduate, postdoctoral training, and had my first faculty position in the Texas Medical Center. I DO prominently human based research studies, but utilize animal models for translational medicine and comparative biology applications. One thing that attracted me to be part of the BIMS program based in the CVMBS (and convinced me to make the transition to a tenure-track faculty position here just two years ago), as opposed to being part of the Biological Sciences or College of Medicine was a number of things, but some prominent reasons are the strong curriculum that is directed toward understanding health and disease that builds a strong foundation whether the students are going to med school, dentistry, nursing, or vet school. The BIMS program is a very distinct program from other undergrad and grad program, BIMS educates students in a strong basis of animal sciences, human sciences, translational sciences, biomedical innovation and discovery, global service, and outreach, and looks at the "big picture". The students are largely successful, and I believe part of this success IS ABSOLUTELY attributed to the fact it is housed in the CVMBS and its dedicated faculty. The success, diversity in expertise and research, caring

for training and education of this program's faculty is something that is unparalleled across campus (particularly the administration and service of its Dean's particularly Dr. Mike Criscitiello and Dr. Bill Murphy who care IMMENSELY about the faculty, research, grad studies, and undergrad programs) . And I think if you were to centralize this program, it would be an absolute detriment to its success. In addition, there are some items that are not unclear to me and appear that they would directly affect someone like me who is housed in the CVMBS, but I do NOT do Veterinary Medicine. I do biomedical research and I teach and train students in biomedical sciences.

1. How would the BIMS program would be administered in the proposed Institute of Biological Life Sciences, which also includes the Department of Biology. What would be the distinction?
2. Would CVMBS faculty like me who teach in the BIMS program move to the new institute?
3. Does the proposed move of the BIMS program include our BIMS graduate program or just the large undergraduate component?
4. With that being said, I also teach graduate students, so how does this effect faculty who teach in the BIMS graduate program and train them in research?

Recommendation 1: I support the creation of a unified college of arts and sciences. It is in line with many other institutions, and would house the majority of fundamental science research in the university, promoting interactions and collaboration across departments. Recommendation 2: I strongly support the of Visual and Performing Arts with new departments in music, performing arts, and fine arts, and relocate the Department of Visualization to anchor this new school. This will truly elevate the university to match similar schools and draw diverse students/ faculty to campus

Recommendations 3-4: I do not have comments Recommendation 5: I strongly disagree with housing the Department of Biology within AgriLife! The proposed institute is a good idea, but it should be housed in the college of arts and sciences. There is no precedent in any schools in the country (and outside the US), where Department of Biology is not housed in the college of science (or arts and science). As a department housed in the college of science it draws in students and faculty interested in biology as a diverse fundamental discipline. Moving it to the college of Agriculture, which emphasizes applied research will diminish recruitment and retention, and strongly hurt the image of both the department, and the college of science. Not to mention, it will undermine the other disciplines in the college of sciences who rely on close collaborations with Biology, such as Psychology, Statistics, Chemistry. Thus removing the Biology Department from this college will hurt a number of other Departments, their students, and faculty. As a molecular neuroscientist in the Department, this is particularly the case. Being part of the college of arts and sciences, I am able to interact with other leaders in the neuroscience field in the college. These collaborations and interactions will not be possible in AgriLife. Recommendation 9: I support these initiatives

I am a tenure track faculty member in the Department of Biology. My comments will focus on the section of the report that suggested that Biology is underperforming and that our department may, in part or whole, be realigned towards The College of Agriculture. The claim that my department is underperforming was supported with zero data. I challenge this statement along several lines: 1) Since I was hired in 2017 14 new faculty have joined my department. We are a productive and dynamic group of young scientists. Together with a core of existing mid and senior career faculty, we have become a department exceeding TAMU averages and our historical performance in both research and teaching. 2) Our performance and promise are broadly recognized. Just since the beginning of this year, we have secured over \$20,000,000 in external funding for research! In 2021 we recruited the largest and most qualified cohort of graduate students since my arrival at Texas A&M. Our faculty searches now regularly attract the very best postdocs worldwide, and we have successfully recruited these faculty to join our department. We are recognized for our excellence in several fundamental subdisciplines including biological timing, evolutionary biology, microbiology, and spinal cord injury. 3) We have made remarkable strides as the hub of undergraduate life sciences education at Texas A&M. We have implemented an array of best practices in freshman-level courses leading to a drastic reduction in DFQ rates with no decrease in rigor. Through an innovative BioFirst program (first-generation support system) our first-year retention rate is now greater than 95%. Since 2016 biology undergraduates have increased by 57% compared to the university's growth of just 12%. We have worked across departments (Math and Statistics) and colleges (College of Engineering) to customize course content for non-majors students in BIOL classes and to make sure that life science students taking courses in other departments get the education they need. The last item I will address is the home of Biology. The report is vague in its wording but has been interpreted by many to mean that the Department of Biology may be moved to the College of Agriculture and Life Sciences. This would be quite simply a huge impediment to continued success, faculty retention, and undergraduate education. A great deal of my success as a junior faculty member (\$1.3 million in grants, 18 manuscripts, 5 Ph.D. students, 27 undergraduate researchers all since 2017) has been predicated on the existing structure of my department and college. I have been a member of several departments thus far in my career and it is exceedingly rare for a biology department to be part of a school of agriculture. These colleges have

fundamentally different cultures, and Texas A&M would be an outlier if it placed Biology in the College of Agriculture and Life Sciences. Texas A&M's Biology Department is focused on fundamental research and as such it belongs with other fundamental fields of science like math, physics, statistics, and chemistry. Movement out of the College of Science would also hinder my ability to attract students to my lab. My very best undergraduate researchers from outside my department have come from math and statistics. Each published first-author manuscripts as undergraduates and now are Ph.D. students at Berkeley and UW-Madison. I fear that placing Biology in the College of Agriculture will negatively impact my securing federal funding. I do not do applied research. Many of the mechanisms to which I apply do not allow applied research. Our close connection to math and statistics is fundamental to me having a quality environment for the execution of my research. Finally, the Biology Department works closely with Chemistry, Statistics, and Math to harmonize undergraduate stem education. Placing us in separate colleges would create additional barriers to communication and collaboration in Texas A&M's mission to provide quality STEM education. A true data-driven analysis of departments on our campus would reveal that the Department of Biology is a department to be emulated and invested in, not a department in need of reorganization.

---

I will focus on Finding #5. A number of comments are incorrect, and these drive the recommendations. First, despite what is written, nearly all schools in the top 150 (and all peer institutions) have stand-alone Biology Departments, or Departments split between molecular and evolutionary biology. It is critical for the institution to maintain a strong-stand alone Biology Department. Second, it is unclear why the Institute for Biological and Life Sciences would be housed in COALS. Currently, the vast majority of Life Science students (including all of BIMS, Biology) take freshman and sophomore courses through Biology. In addition, all other major service courses (Physics, Math, Chemistry, Statistics) are housed in the proposed College of Arts and Science. Therefore, it would make the most sense to house this Institute in the new college of Arts and Science. It is important to note that Biology degrees (and Departments) are almost exclusively run through Colleges of Arts & Science, or its equivalent. This is true for all peer institutions and SEC schools. The only exception in the top 150 ranked schools is Cornell, where students can major in Biology through Arts and Sciences or Agriculture. This is a reflection of Cornell's unique public-private partnership, and therefore may be less applicable to TAMU. Despite the noted 'perception' that Biology is underperforming, it is one of (if not the) top life science department across campus. It is rapidly growing, with a 41% increase in majors over 4 years, with similar growth in research. Therefore, it is positioned to lead any consolidation of life sciences that might occur.

---

I write as a tenured faculty member in the Department of Biology. I will address two aspects of the NGT report that stand out as being particularly ill considered and detrimental to the educational and research missions of Texas A&M University. The first, the centralization of advising, is a campus-wide issue that would adversely impact nearly every TAMU undergraduate. The second, the removal of the Department of Biology from the College of Science (or Arts and Sciences) and the likely break up of the Department and the dispersion of its faculty in the College of Agriculture and Life Sciences, or into premature forced retirement, would wreck havoc on a Department that successfully balances both its research and teaching responsibilities, and do little to improve the research and teaching missions of the University. The proposal to centralize undergraduate and academic advising seems so obviously wrongheaded that one wonders whether it was included in the report as a bargaining chip, a section that was intended all along to be eliminated as part of a "compromise" that would provide evidence for give and take in any negotiations about the implementation of the report. Rather than highlight the flaws inherent centralizing academic advising, I will refer to the short presentation made by Dr. Heather Ramsey of the Math Department at the Friday Oct 30 forum hosted by the faculty senate (The session was recorded). In just a few minutes, Dr. Ramsey, using her experience as instructor and academic advisor, pointed out the mistaken assumptions in the report, the adverse consequences of the proposed changes, and the superiority of an approach that appreciates the need for specialization in advising. It was a remarkable presentation that quite simply eviscerated the report's recommendation. I urge those who will evaluate the report to watch Dr. Ramsey's presentation, both for the specifics but also as a model of how to present a clear and effective critical argument. My main purpose in writing is to suggest that the transfer of the Department of Biology to COALS is a mistake. If one were to create an Institute of Life Sciences (Biological is redundant in the title) from scratch, it would certainly not be placed in a College of Agriculture. Rather it would be housed in a localized College of Science (or Arts and Sciences) that is dedicated to the principle of fundamental basic scientific research. The Institute would have divisions or departments that might include Cell and Developmental Biology, Molecular Genetics and Genomics, Biochemistry, Microbiology, and Ecology and Evolution. The divisions would not be strict, because such fine divisions have broken down in modern science, but would cluster generally similar research programs to concentrate talent and resources and facilitate collaborations. It would by necessity have strong connections to other fundamental sciences:

Chemistry, Physics and Mathematics. Importantly the divisions would be located in close physical proximity, as physical distance is a strong barrier in practice. The institute because of its concentrated focus could develop an undergraduate program along the lines of what the MGT report imagines. An organized common core, and later specialization to a program most inline with student's interests. At TAMU, we can't realistically build such a program from scratch, so the question is how best to create one that manages to achieve excellence in both research and education. I think the best strategy would be to consolidate strengths. The current Department of Biology has strong, successful programs in many of the areas that would be central to an Institute of Life Sciences. The Department of Biochemistry does as well. If the faculty of the Departments of Biology and Biochemistry formed the core elements of the new Life Sciences institute under the umbrella of College of Science it would be an strong foundation for expansion and development. Some expansion would be from consolidation of current TAMU faculty, specifically COALS faculty who belong in such a Life Sciences Institute but who are currently thinly scattered and isolated in a large number of Departments whose missions are often distinct from those of a Life Sciences Institute. But most expansion would come from attracting new faculty into a program and College dedicated to excellence in the basic life sciences. The MGT proposal takes a different approach, one that would dilute a strong Biology program by mixing it with the far broader and, mostly, weaker programs currently present in COALS. A Life Sciences Institute under COALS would likely suffer from a split personality in administration. One that is dedicated by history, and practice, to an Agricultural focus but cognizant that a modern Life Sciences Institute must shed that focus to a considerable degree. Split personalities do not lead to focus and success. Dismantling a program, like Biology and incorporating its best elements into a large set of weaker parts would not make a stronger whole. It would likely lead to departure to other universities of many of the most successful faculty and a overly broad life sciences institute that lacks sufficient focus for real success. I do not think it necessary to maintain the Department of Biology in its current form over the long run. Sensible splits along a small number of obvious research divisions could work well in a new research institute provided there is sufficient proximity to permit continued interactions among friends and colleagues. Combining strong programs from Biology and Biochemistry and from disparate parts of COALS into a concentrated research institute dedicated to basic science would be the building blocks of success for Texas A&M.

1. Problem: none of the stated "peer institutions" in the report are land-grant institutions. Your report compares apples to oranges to such a degree that it undermines its credibility. 2. Regarding the report's claim on page 25 that creating some uber-college of arts and sciences (CAS) somehow "creates a stronger advocacy for the liberal arts education at a STEM-focused university," the stated justification makes no sense. If anything, such a STEM-dominated uber-college will overwhelm the humanities which have suffered greatly in the 24 years I have been here. There is a grave danger in humanities scholars being given short shrift or denied tenure and promotions because their professional standards are so different from a colleague in math or chemistry or oceanography. DON'T DO THIS!!! 3. Pages 31-32 suggest making the TAMU Libraries a subdivision of the proposed uber-CAS. There are multiple problems with the proposed ideas. A) The TAMU Libraries serves the entire university, TAMU system, and State of Texas. Currently, the Dean of the Libraries has a seat at the table at the Council of Deans meeting; this is very, very useful for the library to be aware if changes in the curriculum are in the offing, and the Dean of the Libraries can disseminate important information to her/his fellow deans. If subsumed by a single college, there will be too much opportunity to claim ownership of the resources upon which other TAMU departments, colleges, and extension agencies depend. B) The same pages in the report recommend creating a bachelor's program in library and information science. I don't care that Univ. of Oklahoma offers a bachelor's program in library science. It is NOT a viable degree! The State of Texas already has three (3) ALA-accredited MLS programs, and I do not see the Texas Higher Education Coordinating Board approving another one. C) Most librarians at TAMU do not hold a doctorate degree (I am one of the exceptions). Our MLS degrees are mostly an applied degree, not a research-oriented degree. While I applaud the report's concern that finding high-quality information is so important, most existing TAMU librarians are not trained, nor do they have the talents required, to teach full-credit classes. This is setting good people up to fail. It also shows me the authors of the report have no clue about how libraries actually function, and that their conclusions cannot be trusted. 4. As I understand the report, the College of Liberal Arts, College of Science, and College of Geosciences will become one uber-college. What will become of Mays College of Business? The College of Architecture? The College of Education? Why are they not being swept into this monstrosity? Are they being excised? IF TAMU is reduced to only four units, where are these? Also, since you are robbing the College of Architecture (which the report claims is so highly ranked, see page 37) of two core departments, how is it to go forward as a viable separate college? Or does it also get swept up into the ginormous College of Arts & Sciences? 5. If other land-grant, peer institutions actually have colleges of arts & sciences with a similar collage of programs, why does

the report not list those institutions? I could see some regional university like Sam Houston State, or University of Alabama-Birmingham having a CAS, but a comprehensive Carnegie 1 flagship such as Texas A&M deserves better.

I have no problem with merging science and geoscience, but the notion of a college combining liberal arts and mathematical/physical sciences but with no life sciences is bizarre! Differences in culture and funding mechanisms will lead to serious problems. The report's attempts to rationalize alignments seem strangely selective. They are concerned that physical education is not part of public health, but have no comment on the existence of a biochemistry department separate from both chemistry and biology. There is also no comment on the anomaly of two computer engineering departments in the same college! Do I smell some sacred cows in the room?

[REDACTED] SUBJECT: DEPARTMENT OF JOURNALISM My department houses journalism. I strongly support continued growth and consolidation of journalism at TAMU, including the creation of a department of journalism. This is an exciting idea. It is my view that there is a bolder and faster approach to achieving this end, and here I wish to describe this alternative approach and how my department will work constructively to help with this realignment. I believe that my alternative proposal has far wider support at TAMU than the MGT approach, as I have collected 22 letters of support for it key friends of journalism at TAMU. [REDACTED]

My alternative approach is to concentrate TAMU journalism in a renamed/rebranded Department of Communication & Journalism, with a longer-term goal of situating a new Department of Journalism in a new School of Communication. In the immediate term, I will work with TAMU to carry out this rebranding/renaming and build to journalism here in my department. This is an approach that can work because it does work at aspirant programs. As noted in the MGT Report (p. 137), placement of journalism programs in schools and colleges of communication are common at other large, research-intensive institutions (e.g., UT-Austin, U. Colorado, U. Miami). The advantage of this configuration is that it concentrates departments focused on issues of communication, media, technology, and data visualization/information science in an academic unit that fosters collaborative and interdisciplinary research and teaching. Here I briefly provide a brief history of journalism in the Department of Communication (addressing two misleading statements in the MGT Report), outline my proposal, and list what I believe to be its advantages over the MGT recommendation.

BACKGROUND The Department of Communication absorbed Journalism Studies in 2018. We now administer a University Studies degree in journalism, as well as a journalism minor. In just three years, we have grown journalism from 35 to 68 majors. (The MGT Report noted that in 2019 – 2020, we only awarded 14 Bachelor of Arts in Journalism Studies. All of those were students we inherited from the prior and failed Journalism Studies program.) The way that we have achieved this rapid growth is through through cross-University partnerships and wide-ranging initiatives. (The MGT Report suggested some of these partnerships/initiatives as possibilities that should be considered; p. 28. We have already enacted their recommendations and more.) We have forged alliances with 12th Man Productions and negotiated paid internships with Texas A&M Athletics. We now provide practicum support for The Battalion and other off-campus media partnerships. Our successes can be measured by the many journalism students who won 2020 Associated College Press awards for their Battalion bylines (in the face of competition from larger journalism programs). We hosted recruitment events that gave our students contact with national professional journalists, notably the Diversifying Journalism Conference and the 2020 State of Texas Barbara Jordan Media Awards (at which our students also won prestigious awards). In short, the Department of Communication is rebuilding Journalism at TAMU. We will do this at a faster pace and build a far more exciting program if we have university support and so I am excited by the possibility that may have opened with the release of the MGT Report. In spring 2020, [REDACTED], Prof. J. Kevin Barge, commissioned a review of our journalism program. The external review committee commended the Department of Communication for reviving journalism. Obstacles to growth it identified were the absence of the word "Journalism" on our graduates' USLA degrees, the fact that we directly compete with a larger journalism department in the College of Agriculture, and constraints due to our small size and limited resources. I agree with these analyses. [REDACTED]

One area is our historic strength, the Communication Arts ("Humanities and Critical/Cultural Studies"). A second area is targeted for strategic growth consistent with growth in the field, Communication Sciences ("Social and Media Science"). The MGT Report recommendation to merge three colleges into the College of Arts and Sciences maps cleanly onto these

two areas, and so I am excited about this innovation as well. The third area of concentration was created to provide students professional and marketable skills in communication, media, and journalistic disciplines, as well as build media literacy and competence ("Journalism and Media Practices"). To solidify this area, the Department of Communication has prepared paperwork to rebrand our B.A. and B.S. degrees in "Telecommunication and Media Studies" with the new name "Journalism and Media Studies." These rebranded degrees can be available in fall 2022 and would be paired to a 3+2 Master's degree program. PROPOSAL (1) As a first step, immediately rename/rebrand the Department of Communication as the Department of Communication and Journalism. (2) Consolidate TAMU journalism (faculty, programs, degrees, and resources) in this rebranded department and provide other investments, as needed. (3) Remove the journalism track from the University Studies degree. (4) Support the development of journalism and other communication, information, and media concentrations within this new department, to grow into semi-autonomous academic units. (5) After sufficient growth, create a new School of Communication from this department. This new school might reside in the College of Arts & Sciences or it might become an independent unit. IMMEDIATE ADVANTAGES (1) TAMU's journalism program will continue refabricating within an existing and supportive department, now with necessary resources. This home for journalism will eliminate the short-term need to create leadership and administrative structures for a new journalism department. (2) Communication's new department title, our rebranded degree options, and the concentration of TAMU journalism faculty and resources in a single department will send a clear message to our students, alums, stakeholders, and Texas: Texas A&M Journalism is Back. (3) As noted in the MGT Report, "media literacy and communication skills are key for students to develop and implement in any career." Also key, I would argue, are the needs for science literacy and grounding in the humanities and ethics. The Department of Communication and Journalism will have greater capacities to provide such multifaceted education to our students than a Department of Journalism that is placed in the College of Arts and Sciences or a Department of Communication that excludes journalism studies. LONG-TERM ADVANTAGES (1) Journalism and communication disciplines share overlapping needs to adapt to quickly changing media, information, and technology landscapes. The proposed configuration consolidates hiring and strategic planning to address future challenges and opportunities. (2) A future School of Communication will position TAMU to be a national and international leader in the interrelated arts, sciences, and professional practices of communication, journalism, and media, creating opportunities for the development of new departments, initiatives, and majors that share these concentrations. (3) A world class, interdisciplinary School of Communication at TAMU will create far greater opportunities for generating extramural support and foundation investment than will the two disconnected, stand-alone departments recommended in the MGT Report.

I am a tenure-track Assistant Professor in Biology.

My concerns about the MGT report are almost exclusively focused on the issues pertaining to Biology and the potential creation of a new "Institute of Biological Life Sciences" (Finding #5 and Recommendation #5). The perception that the Biology Department is underperforming is simply not true. It is totally unclear what data this perception is based on. This may have once been the case (i.e. 10 years ago or more) but in the last 5 years, our department has been on a tremendous upward trajectory with regard to our teaching and research missions. It seems that not a single member of the Biology Department, nor the Dean of the College of Science, was interviewed in the generation of this report. It is apparent that our department is being unfairly singled out with zero data to justify it. Research: I am one of 14 new faculty members who has joined the Biology Department since 2017. This is a new, highly competitive crop of scientists who are showing success in bringing in research funding from federal agencies. For example, this year alone we have brought in upward of \$21 million in new external funding. Together with established, highly successful mid-career and established senior faculty, our research trajectory is on a solid upswing. We also have extensive collaborations within the College of Science. The Biology Department is also recognized on an international stage for our excellence in key research areas, including Biological Clocks, Spinal Cord Injury, Evolution & Ecology, and Microbiology. We are attracting world-class, ultra-competitive new faculty members because of our department's "brand". We are not simply performing at an "acceptable" level but we are excelling in our research. Teaching: Here are some statistics that clearly demonstrate the effectiveness of the Biology Department's teaching mission. (1) The DFQ rate of BIOL 111 reduced from 40.7% in 2015 to 11.2% in 2020. (2) The first year retention rate of Biology majors increased from 83.9% in 2015 to 95.9% in 2020. (3) The number of bachelor's degrees in Biology awarded in 2020-2021 is already over 40% higher than the last academic year (without factoring in 2021 graduates). (4) The number of 1st-generation college students graduating with Biology degrees is already over 80% higher than the last academic year (without factoring in 2021 graduates). (5) The number of Biology undergraduate majors has increased 57% since 2016 (currently 1942

undergrad majors). This compares to 12% over the university as a whole. These are just some statistics that demonstrate we are far exceeding an “acceptable” level of teaching. The benefits of the proposed restructuring of the Life Sciences are wholly unclear. A restructuring of this magnitude seems ill advised without systematically studying how the proposed changes would affect grants, ranking, and existing collaborations of Biology faculty within the College of Science. It is clear that such an analysis has not been done. Additionally, Biology departments are almost never in Agriculture schools, and such a move may hurt research and disrupt ongoing initiatives in the College of Science. If Biology is asked to move to the College of Agriculture & Life Sciences, I am convinced that this would have an enormous net negative impact on the University. It would negatively impact morale and make it much harder to attract additional new “star” faculty to the University, because it would destroy our “brand”. There are no obvious benefits to such a restructuring.

---

I do not see the benefits of throwing departments from the College of Science, the College of Agriculture, and the College of Liberal Arts all together in one mega-sized catch-all "College of Arts and Sciences". The "cultures" of the departments involved are highly varied in teaching, research, and service. The reorganization is bound to generate a proliferation of associate deans of varying competencies, with the result of an incoherent, uneven administration of policy. I do not see either academic or research advantages to such hyper-centralization. One of the most troubling proposals to centralize advising university-wide. Advisors need to have expert knowledge of students' majors, and they need to remain in close contact with the departments whose students they are advising. Why does advising need to be under the thumb of the upper administration? That would not be in the interests of either students, or faculty, or departments. It would simply transfer more power to upper administration. The idea of sending the Department of International Studies to the Bush School is incongruous, since the Bush School does not have an undergraduate program and since INTS is not focused on geopolitics, but global languages and cultures.

---

Yes, I agree there is overlap in the life sciences across campus. These overlaps were created well before I got here in 2008 (going back to the 80 and 90's I believe). Yes, I agree that College of Veterinary Medicine and Biomedical Sciences should no longer have an undergraduate program. They should concentrate on their graduate and professional programs. However, given the funding models, I suspect they will no longer be able to support all their research faculty. There are many excellent faculty in the Depts. of Vet. Integrative Biosciences, and Vet. Pathobiology. I argue that many of these faculty conduct human related health research and thus, can easily be incorporated into TAMU Health. There are also many faculty that do basic non-veterinary research and could easily be moved into what I proposed to be the new Department of Biological Sciences (discussed next). The College should be renamed to the College of Veterinary Sciences (or School of Veterinary Sciences). In relation to the Life Sciences, I propose an alternative realignment structural plan and justify my reasons based on logic and NOT “perception”. 1) The Department of Biological Sciences would be housed in the College of Liberal Arts and Sciences (CLAS). Biology is one of the three foundational sciences (Physics, Chemistry, and Biology). These foundational sciences are themselves interdependent with the basic fields of Math and Statistics. Hence, these 5 areas should be departments in the CLAS. 2) There are 2 basic life science departments in the College of Agriculture and Life Sciences: Ecology and Conservation Biology, and Biochemistry and Biophysics. Both of these should be moved to be housed as Divisions within the Department of Biological Sciences (which is in CLAS). The reason is that these departments contain faculty that do largely basic research and teach basic life science courses. Biochemistry and Biophysics also has the GENE courses and Biochemistry courses required for most of the life science majors on campus. The College of College of Agriculture and Life Sciences has an applied mission (and hence different funding sources) and just as the Vet school should focus on its specific mission, so too should this college. I propose renaming it to the College of Agriculture. 3) The new Department of Biological Sciences in CLAS would contain 5 Divisions: i) Ecology and Evolutionary Biology (oversees the Museum of Natural History) ii) Genetics, Cell and Molecular Biology (oversees TIGGS) iii) Microbiology (oversees Center for Phage Technology and Institute of Virology) iv) Neurobiology v) Biochemistry and Biophysics 4) The structure presented in point #3 would lead to a streamlined undergraduate curriculum that would encompass the old BIMS program, current Biology majors, Biochemistry and Biophysics majors and the Ecology and Conservation majors. In total, this would be around 5300 undergraduate students. It would be a juggernaut to rival any Biology department across the country! 5) The current Department of Biology already teaches all of these life science majors in their first year and many in their second. Hence, it only makes sense to move these units to Biology and to let Biology oversee this new program. 6) Each Division would be led by a within-division Division Leader that rotates out every 3 to 5 years. Each Division offers an undergraduate and graduate major according to its given division name. Each Division has autonomy with respect to hiring decisions, and promotion and tenure (enables equitable comparisons). Each Division has autonomy for their graduate degree curriculum as well as

graduate recruiting (though graduate recruiting can be coordinated and rotation systems can allow students to rotate between divisions). 7) The Department Head of the Department of Biological Sciences oversees all Division operations to make sure GAT lines and faculty lines are equitable as well as administers and oversees undergraduate curriculum (enabling any and all student transitions to go smoothly). The Department Head oversees all APT faculty. There would be 3 Associate Heads (Academic Affairs, Faculty and Graduate Affairs, Research Operations). 8) The divisional structure in point #3 makes obsolete three interdisciplinary degree graduate programs. There is no longer a need for the Ecology and Evolutionary Biology IDP (now that there is a division devoted to these faculty). There is no longer a need for the Genetics IDP (again a division for this). There is no longer a need for the Institute for Neuroscience (again a division for it). 9) Currently a pre-med major might be taking classes in 3 Colleges to get their degree. Now they would taking all their classes in one simple, cohesive, logical, and powerhouse department! There are MANY research oriented benefits along with the undergraduate education benefits that this structure provides. I am more than happy to discuss with whomever the finite details of my plan.

[REDACTED]

[REDACTED]

The wording of the report is unclear; it could be interpreted as suggesting that Biology be moved to COALS. Such a move would be a disaster for me; to get my Federal grant funding, I need to be in a College of Science (or a College of Arts and Sciences). I work on the basic physics of developmental biology, and I present myself as being in a College of Science with the obvious advantages of having chemists and physicists in the same college. If I were to be in an agricultural College, the grant reviewers would see me as being in an inferior intellectual environment with respect to the sort of work that I do compared to being in a science-oriented college. This would hurt my grant funding. I beg you to please let Biology stay in the College of Science. The proposed consolidation of Liberal Arts and Science and Geoscience however is an interesting idea, and I am not at all against that!

Recommendation #5 is disturbing and, frankly, misguided. Colleges of science, natural science and liberal arts and science possess a particular culture with regard to mission, particularly in the preparation of the next generation of scientific leaders. Many students, academics and industrial scientists, including myself, were trained in liberal arts and sciences environments. We tend to live our lives and engage our world with a specific nature of thinking and a broad appreciation for the interconnectedness of the nature of things. Individuals with more applied educations, manners of thinking and appreciative views have often experienced colleges with quite different missions and cultures than the liberal arts and sciences. Moving the Department of Biology or its educational mission away from an arts and science culture will, over time, diminish the recruitment, retention and success of our undergraduates, graduate students, postdoctoral trainees and faculty at Texas A&M University, thereby diminishing the whole. The MGT report itself stresses the importance of 'cultural assets [that] will allow TAMU to contribute to community-building' and 'a more well-rounded university.' I believe that the loss, or even the perception of loss, of a culture of science in the biological sciences will be a mistake and have negative long-term impact on Texas A&M and the State of Texas with regard to its teaching and research into the fundamental nature of life. The National Academies of Sciences, Engineering and Medicine have championed a transformational approach to the education of future life scientists. This approach stresses the importance of building strong foundational competencies in chemistry, mathematics, physics and engineering, and information sciences, thus preparing students for careers that will be increasingly interdisciplinary in character. Such an educational transformation, they posit, requires even deeper connectivity between science fields. Any recommendation that leads to greater separation among the foundational sciences and their shared missions of instruction and discovery, such as the placement of TAMU's biological science missions into a college of agriculture, is misguided and contrary to expert views of life science education. The MGT report states that 'there is a perception that the current Department of Biology is underperforming'. On the contrary, the facts are that the Department of Biology's teaching and research endeavors are thriving. It was only six years ago when in its own 2015 self-study Biology reported its annual extramural research grants equaled to some \$5.5M. In new 2021 grants alone, this funding is above \$10M (and likely to be above \$20M). If factoring in total current research grant expenditures, the faculty of Biology have increased their research funding many-fold in a very short time. This trajectory positions them as a premier life science research group at TAMU and will certainly raise the rankings of TAMU in the biological sciences. Therefore, regardless of perception, Biology is a very strong department. Importantly, faculty hires (both tenure track and instructional lines) have aligned with the National Academies' recommendations as they interconnect with the strategic plans of other college departments, such as bioinformatics in Statistics, biological computation in Mathematics, biophysics in Physics and Astronomy and synthetic biology in Chemistry. Additionally, preserving Biology in a College of Arts and Sciences would enhance

collaborative efforts in the neurosciences housed in the Department of Psychology and Brain Sciences, particularly in the departments' focus area of neural regeneration and repair. There is a clear and cultural premise for why 19 of the 20 peer institutions used in the MGT report have biological sciences or some form of biology department housed in a college of science, natural sciences or arts and sciences. The MGT finds that 'Cornell University shares the management of some biology programs between the College of Arts and Sciences and the College of Agriculture and Life Sciences.' It seems odd to find merit in a management organization that 95% of the universities MGT reviewed have chosen not to embrace. I suggest that it is because these research universities appreciate the recommendations of the National Academies, that stronger linkage among the foundational sciences, and not less, is essential to the future of teaching and research in biological sciences. This is also true at Texas A&M University.

---

My focus will relate to the proposed changes for the College of Veterinary Medicine and Biomedical Sciences (with emphasis on the latter), though there are criticisms of several themes that emerge that impact other areas of campus. Recommendations 5 and 9(b), in particular, seem directed towards removing a highly valued and complementary set of programs in exchange for a one-time investment in bricks and mortar. Compared with the old idiom about teaching a man (or woman) to fish and feeding them for a lifetime, versus giving them a fish and feeding them for a day, this exchange of BIMS for a small animal hospital may be even shorter-sighted than the latter since the building itself comes with maintenance and operating costs. Of course, these can well be covered through an excellent hospital serving Texans every day; but, without the critical core teaching base of BIMS, supporting the 5 thematic core research missions of the college, the initial infrastructure investment may well become a burden. The BIMS program (undergraduate and graduate) was built up decades ago from within the (then) CVM, and was geared specifically towards creating professional school ready applicants and those whose careers could take them into post-graduate biomedical sciences programs. It has a tremendous reputation and a high success rate of placement in professional colleges statewide. Why punish the veterinary college for success when other programs in biology and COALS have seemingly lost their way, lacked subscription and support by students, and perhaps lack direction? To strip successes from one college and hand them to a non-existent institute (typically, these are directed at research and not core teaching) within an agriculture college that has suffered for an identity (and is still seeking a renewed purpose now that public involvement with agriculture has diminished as a proportion of total population) seems short-sighted and perhaps even petty. The research grant routing through Agri-Life is fine as seen by any reasonable person, but it is telling that the MGT report seems to favor the vice-chancellors of super-sized colleges rather than trying to better the whole of the university. Many of the proposed changes in the consultant's report seem geared towards entrenching those three super colleges that have vice chancellors often also as deans (+1 for Arts and Sciences) at the expense of the smaller specialty colleges. In the report, these latter entities are derided for their rankings, then their prime assets are divided up and given away to others while advising them to increase the quality of their products. On the other hand, does the consulting group even know that the journalism program was shut down 15+ years ago for the same reason that journalism programs are shuttering all over the country? Do they still watch network television and have a print newspaper delivered to their door? This sort of advice of restarting such a program with little chance of success, while dismantling those with a proven track record, strikes me as misdirected and out of touch with A&M history. In the report, the 'other' colleges have been plundered for their assets that yield regular income and those spoils divided among the more powerful units. Criticisms of the smaller colleges and demands to increase rankings and productivity are ill-served by stripping state funding formula sources (and ultimately faculty lines and budgets) and placing them under a structure that does not fall within a traditional academic unit. A cynic might suggest that such a move (housing a BIMS teaching mandate inside an institute of biological sciences) would bolster the institute's ability to recruit research faculty lines while providing a modicum of undergraduate teaching. Hopefully, that is not the case.

---

The document points out that 12 out of 19 campuses similar to ours have switched to this model with a college of arts and sciences, but does not list any of the advantageous results of switching from separate arts and sciences to a combined arts and sciences model. I am concerned about the consequences this may have for the sciences at TAMU: in particular, arts and sciences work very differently, and I'm not sure this move makes sense. I would agree with merging geosciences with sciences, but as for arts, I think it might make more sense to move Computer Science into the College of Science instead. Also, if there is a College of Arts and Sciences, it should definitely contain Biology and Life Sciences--I would be surprised if the 12 of 19 campuses that the document cites as having a College of Arts and Sciences did not file Biology/Life Sciences under College of Arts and Sciences. Also re: Journalism: Didn't TAMU have a Department of Journalism before but it didn't work out? Did the writers of the document analyze why it didn't work back then and what changed? I feel there should be more data supporting all of these changes than just "other universities are doing this".

(See my comments on HR.)

---

There appears to be no clear rationale or data supporting the creation of the new Institute of Biological Life Sciences (the name is absurd!). The current BIMS program has been highly successful. It seems quite surprising that the recommendations are based on "comments" and "perceptions" rather than actual data demonstrating inefficiencies (if any). The report mentions that "there will need to be significant resources committed to facility renovation to ensure that the Institute faculty and students have the adequate infrastructure to succeed". The new Veterinary Medical Complex is an excellent facility for instructional purposes. The centralized academic advising to biology/biomedical sciences undergraduate students appears as a recipe for disaster.

---

The Texas A&M University Libraries have had tenure track faculty librarians for more than 40 years with full faculty status appointments of "professional assignment", research and service in a de-facto college of University Libraries. Since attaining faculty status we have held academic ranks of Assistant, Associate and Full Professor. In the last 20 years the leader of the University Libraries has had the fitting title of Dean. At university wide convocations the University Libraries have their own college gonfalon like all the other colleges. The Dean of Libraries is a member of the Council of Deans. But the professional assignment of librarians' manifests in a wide diversity of duties much more than just teaching. While library instruction in guest one shot instruction sessions to university classes is the most similar teaching function, library instruction also includes the creation and maintenance of informational websites, online tutorials and one-on-one subject consultations (both remotely and in person). The public service subject specialist librarians also do collection development selection of new library materials, answer reference questions in consultation sessions, act as liaisons to assigned academic departments, and interact with non-library faculty in a normal collegial manner. Information resources faculty librarians engage in a wide variety of processes such as metadata cataloging of new materials, ordering and acquisitions of new materials, conservation and preservation of existing materials, and supervision of classified staff who are also engaged in these processes. Librarians at the Cushing Memorial Library and Archives deal with technical processing of archival materials including digitization, processing and preservation of audio-visual materials, supervision of access to archival materials and supervision of the Cushing classified staff. In addition to professional assignment duties faculty status librarians also actively engage in research and publication in librarianship and professional service in local, national and international library associations. At the most the already packed curriculum of 120 hours in most majors will only allow for a one credit hour course in information literacy and that probably given up grudgingly for the major department. With the degree program cap of 120 hours the notion of three credit hour library science courses is impractical. At present the Texas A&M University Libraries already effectively serve the current 97 Texas AM University departments and programs with our existing structure, please leave well enough alone and do not implement Academic Realignment Recommendation #6.
